Another illustration of the complexity of inspection can be taken from the same factory: The breechblock of a shotgun, at the beginning, is a piece of metal weighing twenty-two ounces. When it is finished about fifteen ounces of the metal have been machined and grou away. There have been one hundred and three se rate operations upon it, accompanied by fourteen spections. It is accurate within five one-thousand of an inch, and yet it is only one part in a shot that must go through twelve hundred separate insp tions from start to finish.

Along the line of such a process, of course, there innumerable chances for defects and errors to slip A little variation in material or tool, or deficient brication of a machine, or momentary oversight the part of a workman, or even a touch of indigest in an inspector, and a defect develops. It is built in shotgun and hidden from sight until the weapon i the hands of a purchaser, who may write in to that if the gun had been any good he would h bagged a dozen rabbits.

Our modern factory processes are so largely au matic that some of the details of inspection can made automatic too. A good illustration of this i be found in a shot tower, where the cooled shot sent rolling down a gentle plate-glass incline made to take a little jump over a gap. The per round shot makes this jump easily. But missha shot cannot roll fast enough to get impetus, so they into the gap and are remelted.

The Human Element in Production

BUT it is the human element that is eventually chief concern of the inspector. Men make m mistakes than do machines. Almost any inspector agree with Edison, who once said that he had alw been able to improve machinery much more ea than men. The old idea in factory inspection was set a policeman to catch the erring worker. If latter made a mistake the inspector was satisfied detect him, haul him into the front office, and him the cost of his error. If the employee made a few m mistakes discharge followed. That was a simple syster so simple that it did not really work.

Inspection for defective production nowadays ta more things into account. A cripple is only a symptom must be run down to the real cause. The worker in wh hands it is found may not be responsible at all. So shortcoming in material or a mistake made in anot part of the plant may have been passed along, intenti ally or otherwise. Or the defective part may have or nated outside the factory altogether.

The treeing department of a certain shoe factory turning out so many spoiled shoes, which had to be sol a loss, that the superintendent tried to correct the trou by imposing penalties on the operators. This made it h to keep good operators in the treeing room. The man trees shoes has to clean them up after all the other dep ments of a factory have completed their work, wash spots from shoes, removing wax and shellac, ironing w kles out of the leather, touching up finish and color correcting surface blemishes. Investigation disclosed most of the cripples originated the purchasing department of factory, which had been maki splendid showing lately. This record had been attained by department's substituting che grades of leather, saving a few c on each pair of shoes. But the c washed out of this leather, so shoes had to be recolored in treeing room.

The first step in eliminating fects is to take every precauti regard to the raw material use the plant. Unless this materi carefully watched the factory be purchasing cripples outside, awares. Therefore the enginee department or the purchasing ag draw up specifications for each of material needed, stating wh wanted in the way of qua strength, weight, color, finish mensions and the like, whether brass rod, or steel castings, or ton yarn, or what not. This ou furnishes a measure for mate like a yardstick for cloth. specification terms are written

The Inspector Must Have Human Qualities, for the Mere Faultfinder Doesn't Get Very Far

(Concluded on Page 45)

Twenty-Four Hours in June

By SINCLAIR LEWIS

ILLUSTRATED BY CLARENCE F. UNDERWOOD

They Talked Great Poetry, Though it Was Couched in "No," and Shy "Yes," and Whispered "Isn't it Corking?"

BERT MICHADO was a very up-and-coming young man. His salary as assistant to the buyer at Grafenheimer rothers, the notions jobbers, was only eight-en a week; but Bert attended the elegant ancing academy of Monsieur Browne and ore his Alpine hat with cocky amiability. Ie was going to make his mark in buttons, hich are a necessary ware and more poetic han thread or needles. He had his eyes on ie Boggs Button Works. In the notions ade George Boggs is the Edison, the Wag-er—Hans or Richard—the blue-eyed angora buttons. Mr. Boggs has reformed the ethods of sorting and grinding Mississippi iver clamshells, and from Davenport he ontrols a generous share of the pearl-button arket.

Bert, after canvassing his possibilities as viator, movie actor, Red Cross hero, and dis-ict attorney of New York City—for all of hich occupations he knew himself to have cret gifts—had decided to become future anager of the Boggs Button Works.

But he could not get nearer to the head fices, at Davenport, than Mercer Street, ew York, where the Boggs Eastern Agency cupies a floor in a neat cast-iron Corinthian ilding. Bert's chief often sent him to the oggs offices, and he yearned over the rows buttons in the display cases, but never met nyone more job-bestowing than a young use salesman.

For more than a year Bert did not even e the Boggs Eastern representative, Mr. verett Vibels. He was excited when Mr. ibels was at last pointed out to him; he as thrilled by the button viceroy's air of aving had a bath, a shave, a shine and a raise salary—not more than ten minutes before. ert felt that if he could impress his person-ity on Mr. Vibels he might be allowed to go t to Davenport and learn the trade.

He ambled up to His Excellency's secretary, nded her a priceless smile, and said:

"I'd like to see Mr. Vibels."

He became aware that this was no ordi-ry secretary. The young woman was a itten-minded maid, with large gray eyes, uch delicacy of waist and hands, and a quiet stiness of demeanor. She condescended:

"Why?"

"My dear young lady ——"

"I am not your dear young lady. You me from a jobber, don't you? One of the lesmen will be glad to attend to you. Mr. bels does not bother with small individual counts."

Bert could not say to the contemptuous fair "I want a jo." He looked her over slowly, amusedly, from her shoes her Bronx coiffure, and observed:

"Well then, somebody's dear young lady, permit me to y that you seem too intelligent not to know how rude u are."

He expected her to throw away her dignity and quarrel erestingly. But she also looked him over, from his shoes his coiffure, in a manner that made him feel as though s shoes had a large patch and his hair needed cutting; d made answer:

"Ah?" And returned to typing.

Bert left the Boggs offices in love. He was delighted to d a girl who resisted his charms and determined to make r like him, which, at twenty-three, is a sound first step falling in love. Also, he seemed to be slightly nearer the nagership of the Boggs Button Works, being in love with e regal secretary of the imperial Eastern representative the cosmic Boggs.

Whenever he went to the Boggs offices thereafter he olled over to Mr. Vibel's secretary and renewed his mand to see the great man. She always had some new nner of insulting him. She was a *grande dame* in sateen eve protectors.

All he could learn about her was that her name was Miss ibble. It is doubtful that she had any first name. She s probably born with a knowledge of stenography, with imly dressed hair, and with the name of Miss Pribble. e didn't mind Bert's hanging about. It gave her the ance to be snippy.

Though Bert presently so impressed the stony heart of e Grafenheimer buyer as to be raised to nineteen dollars week, and to be assured that he was showing signs of most human intelligence, he could make no effect on Miss Pribble, not by wearing an aster or by being manicured; not by speaking of belonging to Monsieur Browne's class in ballroom deportment or by mentioning a box party at a regular theater. He had to do something startling. Youth in love is always going to do something startling. It has a preference for rescuing the maiden from large bands of thugs. But if Miss Pribble was ever waylaid by thugs on her way home Bert never knew it, as he was busy in the Grafenheimer office from four to six P. M.

When December came Bert said to Miss Pribble:

"Gosh! Going to be a cold winter! Believe I'll sneak in a vacation and go down to Palm Beach."

"Huh!" said Miss Pribble.

"Well, I guess I could if I wanted to!"

"Sure! That's what they all say."

Every time he went to the Boggs offices Bert mentioned the indisputable fact that the winter was cold and the much less probable fact that he was going South. The fourth time Miss Pribble snapped:

"Well then, why don't you go? I live in a boarding house, and I know all about these ten-a-week Florida visitors. But always they were there last year or are going next."

"But me," said Bert calmly, "I'm going now; next week. I'll send you a picture post card of me there."

"Yes, when you do I'll frame it."

"Well, by golly, I'm going." And he went!

It must not be supposed from a certain lack of wisdom in his admiring Miss Pribble that Bert was a pathetic case of youthful dementia. He was a valuable junior at Grafenheimer Brothers'. He demanded and received a week-end vacation. He had two hundred dollars in the savings bank. He drew out one hundred and one dollars—the dollar was for unexpected expenses—and when a blizzard was edging about New York he started for Palm Beach and June. That is, for one day in June. He had not stipulated to Miss Pribble how long he would be among those present.

II

MR. ALBERT MICHADO, recently "Hey-you-Bert!" of Grafenheimer Brothers, was taking his first gorgeous meal in the land of palms and luxury. He had arrived at Palm Beach at seven P. M. and it was now seven-seven. Though he was thrilled by actually having made this pilgrimage of love, he was decidedly interested in food. Florida is noted for its food, you know. Envy Bert, then, as you follow him, course by course, through his first repast among the millionaires.

He had a wholesome vegetable soup; and when the soup was half consumed, and the waiter's back was turned, he reached for the catsup bottle—and then he had a full plate of soup again, and that soup had become tomato soup. After this Bert indulged in a quite tropical hamburger sandwich, a cup of coffee, and a hunk of apple pie, lighted a cigarette; and on his high stool he lolled as one can loll only in this halcyon land. His check was thirty cents, which shows how economical you can be, even in luxurious surroundings.

Then he left the internationally famous café, which is called the "Seminole Lunch Room—Gents' and Ladies'," and wandered about Palm Beach—that is, about West Palm Beach, which is to the rest of Palm Beach as Hoboken is to New York.

The fact that he had to run down to Florida to warm the heart of Miss Pribble did not imply that he had to buy the place. He had come cheerfully down in the day coach of the train. For meals he had consumed thirteen bananas, two boxes of peanut bars, four apple pies, two ham sandwiches, nine bottles of assorted pop, and a large private can of deviled chicken. And here he was under practically the same buzzards and palm fronds as the people who had come down in private cars; and already he was privileged to send post cards that ought to awe even Miss Pribble.

Though it must be admitted that there were neither palms, Seminole Indians nor girls bathing, to be observed from the West Palm Beach Curio Shop, at it he obtained excellent photographs of all these aristocratic subjects, and informed Miss Pribble that he was "Having nice trip. Wish you were here!"

"Now," said Bert, "I'll pound my ear, and make up for that day-coach seat. To-morrow I s'pose I might as well see something of the place, too, being as I'm here for the day."

He slept the sleep of the up-and-coming at Mrs. Wizzle's Tourist Hotel, in a room that had all the advantages of a room in a high-priced hostelry—that is to say, it contained a bed, a chair, a bureau, and running water—which ran when you tipped the dainty hand-painted pitcher.

III

WHEN he woke to a golden Florida day, with roses at—well, not exactly at his window, but perfectly discernible at the back of a house less than a block away—Bert devoted considerable care to dressing up to his new social station, in white flannel trousers, a blue coat, a three-dollar shirt, a Panama hat—or at least a Nicaragua hat—and canvas-and-leather shoes. Simplicity, he felt, was the thing.

At breakfast at Mrs. Wizzle's hotel Bert wondered whether he had been mistaken about this simplicity motif, when the whole dining room raised its collective head and panted at the entrance of a young man clad after this fashion: A bottle-green coat, with belted back; a Panama, with a parti-colored band; a tie of purple and red and green and orange; striped flannel trousers; liver-colored shoes; tortoise-rimmed amber sun glasses, with a black silk ribbon bearing a monogrammed silver slide; a large rose; a large initial belt buckle; a large bang above the right temple; and a perfectly enormous walking stick.

"Gee-whiz!" Bert worried. "I wonder if I've hit it wrong. Maybe Old Ribbon Counter, there, has the right idea. Hate to admit it to little Pribble, but I've got about as much idea of how millionaires dress as I have of whether the King of England calls his wife 'May' or 'Dearie' when they're playing double solitaire."

He went rather uneasily through Florida streets characterized by such exotic features as houses with porches, stores with glass fronts, and hotels of particularly tasty

tin brick. His new flannel trousers suddenly seemed scanty and plain. He wished he had bought that nine-dollar pair instead of these for seven. He took off his Panama and regarded the black band with severity. He thought that two girls on a stoop were laughing at him, and suddenly he became feeble and loose about the knee joints. Just as he was beginning to feel superior again, he came out on Lake Worth. He looked across to Palm Beach proper, and his pride went out of him, his feet became almost useless for walking, and his Panama but a mockery.

A strip of oily water, scattered with white steam yachts, with express cruisers and catboats and silk-curtained launches. Across the water a line of palms and magnolias, from amid which rose a hotel like a range of hills, a palisade of lemon yellow with white pilasters—the Royal Poinciana. While Bert stared, a hydro-aëroplane rose from the opposite shore and casually whirred above the hotel. Bert's eyes drifted from it to a buzzard circling in the dome of the sky. It seemed to him that the bird was an insolent sentinel of this still, glistening luxury; that it was watching him, asking him how he dared intrude.

He took the ferry across to Palm Beach in a state of panic. He wanted to flee back to West Palm Beach and hide in the first train north. He was admitting all the contemptuous things Miss Pribble's look had ever said. He wished he were in his New York furnished room, reading a comic section and gently waving his feet in the air.

Now the ferry was grounding in the chaste slip on the sacred precincts of Palm Beach. The wing of the Poinciana makes a shining court, with shadowy places among the palmettos and avocados, magnolias and wreathed live oaks, and the coconut palms that rise above all. Bert, the New Yorker, tried to be sniffy about a mere six stories, but the hotel ran along in a wall that shut him in—and shut him out; a wall pierced with a thousand windows of the rooms of wealth. On the high roof were perched buzzards. He didn't know they were buzzards. He didn't, he felt, know anything.

He went along the walks muffle-footed and pious of demeanor. Pretty girls in sports coats and striped linen skirts, and altogether delightful silk stockings, went by on bicycles. For Bert the bicycle became an almost too aristocratic conveyance. A foreign-looking man and woman, smooth, brown, passed in a double wheel chair. The man leaned on his stick and surveyed Bert superciliously. He said something to the woman, and laughed. Something about Bert ——? Bert felt like a banana peel.

"Rats!" he growled, utterly without conviction.

With a consciousness that his feet were making an inexcusable racket on the wooden floor, Bert crossed a wide porch, ambled down some miles of hallway, past arcaded shops with cobwebby gowns on display, and came to the lobby and two-thirds of the Social Register. Society was demanding mail, inquiring about baggage, talking in twos and threes about tables, circulating in a colored mob—young men with college air and hair; vivid girls; old, shrewd-looking men and women. They were gossiping, nodding, laughing at one another—and at him no one glanced for more than a second. He felt damp about the hatband. "Must get out of this horse show or some mere duchess will come up and kiss me; and then I'll be queered with all the princesses," he sighed.

A mahogany writing room, a very carpeted and polite writing room, was discernible. He bolted into it.

"I'll write Miss Pribble—good letter; then beat it outdoors, where the Four Hundred can't ambush me," he resolved.

He found a desk; he reached out a hand for stationery in the breezy manner of a well-traveled man who has stayed at hotels in quite important towns in New Jersey. He took his hand back and looked foolish. There was no stationery in the racks. With enormous pains to appear casual, he glanced at the racks on other desks. The only stationery in sight was under the elbows of people writing.

"Course!" he sighed. "They give out the stuff at the office to keep outsiders from butting in and writing to dear Cousin Jenny that they're staying at the Poinciana—X marks my room. And me—Albert J. Outsider is my real name."

He was aware that the man at the next desk, a weighty, outdoorish, amused man, with a round bland face, was watching him sit before a useless desk. Bert scrambled in his pockets for an envelope and made figures upon it; and these were the cryptic figures he made:

$$\begin{array}{r} 2 \\ 2 \\ \hline 4 \end{array}$$

He repeated this accurate but not very valuable calculation several times; rose with pontifical dignity and left the writing room, saying to himself: "There now; I guess old cantaloupe-face realizes I did have some writing to do!"

He crawled out on the porch again. It extended before him, miles long and acres broad, dazzling and dangerous, with throngs of persons who would laugh at him. He made his way past them. He apologized to people for walking in front of them—he almost apologized to the subtropic sun for daring to share its beams without having registered at the hotel—or, at least, wiring to engage a beam. He avoided the shaded and popular sections of the porch, and trotted on till he found a hot stretch where the only view was of a not very enlivening laurel bush. He did not wish to occupy space desired by decent, right-minded people. He felt that the Poinciana did not clasp him to its lemon-colored bosom.

"I Live in a Boarding House, and I Know All About These Ten-a-Week Florida Visitors"

In this deserted hot space of the porch Bert was beginning to feel slightly secure and to expand in the warmth after the long tedium of the Northern cold. He was reaching in his pocket for his last box of cigarettes when he stopped, not daring even to take his hand out of his pocket.

Someone had taken a rocker near him and was observing him. Bert made himself as inconspicuous and innocent as he could. He tacitly assured the observer—he assured the sun, the palms, and the entire management of the Royal Poinciana Hotel—that he hadn't really been thinking of being so bold as to take out a cigarette and light it. He edged his eyes round till he could get a glimpse of this new spy. He remembered. It was that most colorful of tourists, the young man with the green coat and amber sun glasses whom he had seen taking a twenty-five-cent breakfast in West Palm Beach.

"Huh!" considered Bert. "He doesn't belong here any more than poor old Bertie does."

He felt safe again; and, though he did not go so far in recklessness as actually to smoke that cigarette, he looked coldly at the fair young man. He wondered: Was his own costume really less proper than this splendor? He hadn't dared to examine closely any of the genuine guests of the hotel, but he had an impression that they were not gaudy.

"Beastly outsider!" he reflected about the broken colorist. "Regular bourgeois—that's what he is."

Down the line of rockers came a darky servant, straightening the chairs. The green-coated one started from his chair, looked self-consciously at Bert and at the servant, tossed his head and stalked away. His timidity made Bert a very lion. Himself, he wasn't afraid of a servant! He sat still. The servant carefully did not disturb him. Bert was filled with a new consciousness of his own high standing.

"What is that bush?" he said to the servant.

The servant replied that it was a bay—which it wasn't—with such deference, such a prolongation of the "sir," that it occurred to Bert that he didn't wear any large sign saying "I do not belong here. I am a humorous object."

He waggled his head in comfort. He boldly plunged his hand into his pocket again. He brought out his box of cigarettes. He counted them, careless of who might see his system of economy. There were all of seven, and he lighted one as though for more than a hundred years he had done nothing but sit about in large rockers on porches in Palm Beach, the Bahamas, the Riviera, and smoke cigarettes—lots of cigarettes—and scatter ashes on the porch if he felt like it.

When two men drifted to rockers beside his, he did not care, though a glance at their knife-edged faces and Vernon Castle hair told him they were the Accepted—really I He peeped at them; he listened for the utterances of th Gilded Youth. One of them wore a gray jersey coat an white trousers, and a Panama with a plain blue band; th other a suit of white flannel.

"By golly, dressed simply—like me!" he rejoiced. "O I knew they'd all be copying me! Bet the fashion edito are wiring their newspapers. Oh, they stood out; but the all had to come to it when old Bertie said 'Simplicit ladies; simplicity!'"

Both of the scions of our new American Nobility pr duced copies of that aristocratic periodical, Scandal Scra ings, and read with a concentration that showed th advantages of college training in making our Better Class superior to the common herd.

"Old Tommy will be sore," said one of them—uncon scious that his liquid music was being wasted on one of th common herd. "All about his divorce!"

Both of them laid down their papers, completely e hausted by their studious application, and stared moodi at the laurel bush.

"Let's play some tennis before bathing hour."

"Tennis!"

"Well, let's go down to Bradley's and have a drink."

"Oh, well ——"

"I say, I believe I'll engage a wheel chair by the week

"Oh, d' yuh really think it's worth it?"

"Yes; running clear down to Bradley's, two-three tim a day."

Yawn. Tired rising. *Exeunt omnes*, bearing their ow corpses.

The common herd, as represented by Bert Michad stared after them. He had learned that Bradley's, that fa distant point to be reached by wheel chair, was about hundred feet from the end of the Poinciana.

"Bet they have escalators to get from their motor ca to the sidewalk," he grunted; and again: "Well, o Bertie, you're a fool, as usual! Awed of that! Why, n son, you may be ignorant, but if you couldn't sound mo intelligent than those swells, Grafenheimer's would fi you in twenty-four minutes."

He walked blandly, spaciously, down the porch. As passed the group of initiates who had previously awed hi he beheld them with a cold and anarchistic eye. With air of occupying the royal suite and having four footm and a court poet awaiting him, he rolled into the lob and up to the desk. He looked level-eyed at a clerk, magnificent and highly cynical clerk, and suggested:

"Stationery."

"Yes, sir," implored the clerk, and whisked a whole p of embossed linen into his hand.

He received it with marked calm, condescended acr the lobby to the writing room, and sat happily down transcribe his heart's young passion for Miss Pribble.

He gradually ceased to keep up an appearance of gra deur. He leaned on his elbow and carefully scratch different places on his scalp. He resolutely crossed h legs, seized a pen, wrote "Dear Miss Pribble," hesitate laid down the pen, and crossed his legs the other way. I picked up the pen and glared at the nib with surprise a extreme dislike. He tilted his chair and rocked in it tent tively. He uncrossed his legs and squared his shoulders, though he was done with all this nonsense. He picked the pen sternly and wrote:

I can hardly believe I am here in Fla., & it is still hard to believe that up in N. Y. it is probably snowing, it is warm & bright here.

He stopped. He tapped with the pen. At last he rea became busy—in drawing, with great attention to deta the portrait of a can of beans. Somewhere about the mid of this study in *genre* he made his discovery.

Having come hundreds of miles to write a letter to M Pribble and pour out all the ecstasy he had never been a to voice in her immaculate presence, he had nothing to s to Miss Pribble. He didn't want to write to Miss Pribb He was bored by the thought of Miss Pribble.

While all the world reeled about him and ancient temp were shaken like clothes on the line, while the sky w darkened and his expenditure of seven dollars for flan trousers seemed a bitter waste, Bert continued to dep the can of beans. He could not get any picture of M Pribble into his mind. She was a gray blur 'way off i gray New York. He couldn't remember anything she h ever said to him. Had he ever loved her?

He carefully put all of the stationery in his pocket a staggered away, bearing the world's whole burden of dis lusion. What was life worth, when he had come clear Palm Beach, at vast expense to himself and considera inconvenience to Grafenheimer Brothers, on a pilgrima of purest love, only to discover that he wasn't interestin in love at all?

Little did the people about think that the good-looki young man in an ordinary blue coat was the modern L Byron, with a heart of ashes and dust!

Despite the blackness of his state of soul, Bert reme bered that he had only one day at Palm Beach, and th if he missed the famous bathing period, beginning

even, he might never see it again. He bore his cosmic dness along the pine walk toward the ocean beach. But walked as one aloof. It is probable that he did not look ry carefully at more than six or seven pretty girls on the ay over.

He sat on the sand of the bathing beach a little way from e line of awning chairs. He tried to forget his unmanning ief in the sight of the splash of indigo sea and a steamer at wallowed down the horizon, bound for magic lands—for maica or Costa Rica. He began to envy the throng—an-shouldered brown young men in bathing suits, their t arms shining; girls in satin bathing suits of blue and een, with white collars that cut the outlines of their roats; older men, tanned and deep-breathing, with the sured manner of executives. Laughter and a murmur of ppiness came from the crowd on shore; shouts and ippings and tremendous splashing from the crowd thing.

Suddenly Bert saw the picture as a whole, as joy in blue d gold, and he forgot the hauteur of Miss Pribble, forgot e tragedy of finding that he could forget Miss Pribble, d looked among the kaleidoscopic groups for somebody th whom he could play through the bright end of his venture in June.

IV

ERT was impressed by a dozen girls in the downy groups, but the girl he most noticed was with none of e groups. She sat alone, even farther than himself from e social precincts in front of the line of hooded chairs. could not understand why so appealing a person was ne. She was a girl to play with, a light little fairy figure a white net frock, with a suggestion of slim ankles below lls, head held up, as though she was accustomed to ention, and a small whimsical nose, as though she was ustomed to laugh. But it was a dolorous nose now; its dge was wrinkling and its little tip was quivering with ger, after the fashion of a cottontail bunny in the presence a stirring lettuce leaf. She was ging a white lace parasol im-tiently into the sand.

Despite her dignity of twenty d a new net frock, Bert wanted pat her round cheek and ask What's matter, honey?" He cided that she was waiting for a catory suitor. He was sorry for t young man when he should ne.

For twenty minutes Bert tched the lone girl—watched h and liked her, and wanted to n and play with her. She be-ne tired of active anger. She still and gazed out to sea. She s touching to Bert—she who s made to be the center of ghter, alone and melancholy. saw her eyes follow enviously a l girl who came dripping from surf, slipped into a bathrobe d by a perfect suitor with a nocle, and sat down in the midst a welcoming group.

'Poor little kid!" thought Bert. he wants to be mixing, too, like t big bruiser of a girl. I bet s's like me; doesn't know a soul a Palm Beach, even though she is such a swell. Why, the poor ile kid!"

He went to sit near the fairy gl. But he was embarrassed. He voted himself to constructing a d castle, while he assured an aginary policeman that his in-tions were entirely proper; and any man said that Albert R. chado was a masher, that man—h jiminy—lied!

He fancied her repulsing him h "How dare you address me, s!" He confined himself to a rely mythical conversation, in ich he made a number of witty servations on bathing, the opera son in New York, Charlie Chap-, motor cars, artichokes, and er moral topics. He heard him-f inventing startling epigrams, l he was in the midst of the most ceful inquiries about her state health when a large, serene male, d in a tight brown bathing suit, ggered by them.

'The dogs'll get that sausage y!" Bert said, unconsciously ud, looking after the plump o.

He discovered that his eyes had met those of the fairy girl. He flushed, and expected to be called "Sir!" directly; but:

"Yes!" she said.

"Wond'ful day!"

"Yes."

"Sea's a beautiful blue here—'course there aren't the cliffs you get on the New England coast." He wished to give her every opportunity to refer to the old family place at Newport or Bar Harbor.

"Oh, is it all cliffs there? This is the first time I've ever seen the ocean—here in Florida."

She didn't seem to intend to call him "Sir!" at all. She looked at him with eyes that were beginning to light up.

"Honestly? Oh, you can't be a Westerner!"

"I am so! You New Yorkers —— You are a New Yorker aren't you?"

"Yes. How can you tell?"

"Because of the way your coat is cut; and you have such nice funny broad *a*'s."

Bert tried to look like a person whose coats and *a*'s were always cut smartly, while she raced on:

"You New Yorkers always think that anyone who comes from west of Pittsburgh must wear chaps and a gun."

"No, we don't, because we see Westerners on every corner. You can't go into a café without running into the California or Wyoming Club singing about how they hate New York and want to be back West; and you expect them all to take the midnight train. But if you go back to the same place a year later there's the same bunch, still talking about the dear old buttes, and still sticking right on in New York. Honestly now, wouldn't you like to see Fifth Avenue?"

She looked angry once more and jabbed the sand with her parasol.

"I used to think I wanted to be naughty and go to a Broadway cabaret, but now I don't ever want to see the East again. The people here are perfectly horrid. So cold ——"

"I knew there was something the matter. Tell me about it."

"Oh, you wouldn't understand; you New Yorkers, with your social cliques ——"

"But I'm very unimportant. I—uh—I go to scarcely any of the smart dances."

"That shows you really are in society—to say that! I can tell that, even if I have been here only a week."

"Only a week here?"

"Yes; that's all daddy could get away for. He and I are going back to-morrow. I suppose you're here till way into March."

"No; I've dropped in just for a day."

"Then you're on your way to Havana or the Bahamas. Worse yet!"

"But what is the matter? Tell me."

"Honestly, do I look like a plague, or a leprosy or something?"

"Not to me!"

"Then why am I a wallflower here? Back home—why, there was sometimes as much as a boy and a half wanted to dance with me in an evening! Here—the dance last night —— Ugh!"

"Yes; I guess you probably managed to dance a few times at home! But here—I know how it must have been. You went to the big dance and nobody looked at you, and you saw nice young men making a fuss over girls that weren't a quarter so pretty or light on their feet as you are; and you were so angry that when your father tried to comfort you, you wouldn't listen, but just flounced up to bed."

"How did you ever guess? Oh, you didn't see me, did you? I don't remember seeing ——"

"No; I wasn't there. I went to bed early. These big crushes at the Poinciana always bore me. I—I just guessed it. But we New Yorkers—you see the beastly town is so big that you can't know all the people, and you get so many invitations that you simply have to protect your precious spare hours; and it's easier to cut out strangers than friends."

"Yes; I suppose so. You must lead a dizzy whirl—my! Still, I'd just like to try it once."

"You won't think I'm presumptuous, will you, if I invite your father and you to lunch? I'm here for such a little while, it really doesn't matter if I pick up the social threads or not; and I sort of feel as though I ought to make it up to you for the rudeness of the other Easterners, and return some of the hospitality you Westerners are so famous for. May I?"

"Why, I guess so. I'm just terribly grateful to anybody that thinks I'm still a good-hearted little fool ——" Her gay voice became tragic. She forgot shyness of the stranger. She dropped her parasol and looked at him imploringly. "Honestly, it's the most terrible week I've ever had! I must look like a horse thief. Out home I did think people liked me—I really did; but here —— Once I was day-dreaming here and I saw a boy who looked so much like Mark Halverson, back home, that I nodded to him; and he just stared at me and cut me dead. And once I was sitting on the piazza beside a girl—why, she was younger than I am, and she wore the most awful tessy dress—and I said 'It's a nice day.' And she said 'Yes'—as though I was awfully fresh in speaking about her friend, the day; and right away she got up and left me.

"Hon-est-lee! I feel as if I had a little bomb hidden in my glove, and they had caught me with it! Oh, I don't want to know their horrid old society! I used to; but now all I want is to play a little. I should like to go to a dance, and have one of your Easterners commit himself about the weather being warm, before I go all that long way back to the West. It's such a long trip—and I was so happy coming down; I just danced on the observation platform, and

Towing the Large Man, She Came Panting Back

Borrowing From Your Uncle

The Farmer's New Friend—By Herbert Quick

THE writer has just completed a tour of the United States for the purpose, among other things, of learning what he could of the farm-loan needs of the United States. These journeyings have covered some twenty thousand miles of travel, and the expenditure of some fifty-three solid days of hearings, at which men of all occupations—farmers, agricultural students, county agents, professors of the extension departments of agricultural colleges, landlords, tenants, landowners, real-estate agents, bankers, loan agents, abstracters of title, rural workers along sociological lines, officers of life-insurance companies, editors of farm papers—men and women of all walks of life that relate to our farms and farming, have testified as to agricultural conditions. These hearings have been held in forty-four of the forty-eight states of this Union, and have pretty well covered the farming conditions in all of them. Any mind that takes to such an experience some little knowledge of the matters dealt with cannot fail to receive from it a good deal of enlightenment.

One thing stands out in bold relief as a high light in the picture of the complex series of problems that must be solved if farming is to be properly financed in this country, and the rush of competent farmer material to the cities lessened. This is the urgent need of some way for the proper financing of men of agricultural efficiency, ability and integrity who can farm well, wish to farm, and cannot get land for want of money. No such condition exists in the city. A Charles M. Schwab, a Henry Ford, an Andrew Carnegie or a J. Pierpont Morgan might serve as an illustration of the sort of men who are ever on the lookout for business efficiency, coupled with the right sort of ability and integrity in city affairs; but any business man who reads this is a better one. The crying need of city businesses is not for money, but for brains and trustworthiness.

I know of a farm hand who had never made over three hundred dollars a year in his life until he was picked up by an editor, who was attracted by his writings, as a promising fellow for the publishing business, and given a position in an editorial office at twenty dollars a week. Within three years that young man refused an editorial position at five thousand dollars a year, because he was already earning several times his initial nonagricultural wage, and had on hand work so attractive that he would not leave it, thus retiring from what he called "a fight half won." He had been a good farm hand. He loved the soil. If he could have acquired a farm and a home in the country he would never have dreamed of quitting it for the city. He would have lived in his rural neighborhood and been a powerful force for making it a good place in which to live. He would have earned far less than he now receives, and, you may say, would never have achieved so high a plane of success; but that is by no means certain.

There are broad fields of usefulness, public and private, opening to the farmer with a talent for public life and extraordinary skill in farming. But the point is that rural life had far greater need of him than did city life. Editors there are in plenty; but great farmers are few.

DECORATIONS BY GUERNSEY MOORE

The Riddle of the Sphinx

YET, after all, that is not the main point. The main point is that he ought to have been financed as a plain business proposition. He was strong, honest and efficient. If he could have been placed on a farm and given a chance to pay for it he would have done the trick. If there had been some system by which money could have been supplied to him with which to acquire land, he would have paid for the land and rendered a profitable rate of interest to the lender of the money.

His case is extraordinary with respect to the unusual ability shown by him in his city occupation. But all over the country there are young men who can succeed on the farm, but will fail in the cities, or will make only humdrum, moderate urban successes. Such are the young men who are yearly being turned out by the agricultural colleges, either as graduates or quite as good as graduates, so far as are concerned the needs of practical farming, and who cannot obtain farms, though they are filled with that enthusiasm for their chosen pursuit which fills the young graduate in law or medicine, and which makes so strongly for success. The pinfeathered lawyer or doctor may rent an office and, if he waits, is pretty sure to get some business. Very few of them, so far as can be observed by one who has been through the professional sweat, actually fail. Waiting does their business for them.

With the penniless farmer, the case is woefully otherwise. The longer he waits, the higher goes the price of land. He cannot get a farm by degrees; it must be acquired as a whole. He is in the same predicament as a young doctor, who must obtain a flourishing practice all at once or never. In other words, he is in an almost impossible position. The result is that he gives up in despair and takes a position as a teacher, or enters some business in which ability can be financed by employers.

The loss to country life of the able and ambitious farm laborers and agricultural students is only a part of the drain under which rural life is suffering. The farmer with two or three sons loses all but one of them to the city, almost as a matter of course, unless he is exceptionally well-to-do. The farmer's son who has shown by years of efficient farming that he can make good ought to be able to marry the girl of his choice and have the chance to make good as a farmer. He has grown up on the farm, and has occupied the position of a farmowner by his part in the management of his father's farm. To drop to the status of a farm hand may not be a social lowering, but it is something worse—it is a distinct descent in financial prospects. As a farm hand, he simply cannot marry and support a wife; and he is too proud to ask any girl to marry such prospects, even if any girl would be so foolish as to accept him. He drifts to the city; or he accumulates an outfit of horses, tools and equipment, and rents a farm.

And this brings us to the largest class of farmers possessing farming ability and integrity—the skillful farm tenant. All over the United States the best men speak of the increase of farm tenantry as a sort of national Riddle of the Sphinx, not to answer which is for the nation to be destroyed. Landlordism has come upon the United States in a form worse than the landlordism of Europe, even before the last remnant of the public domain has been reduced to private ownership—that wonderful domain out of which it was once vauntingly sung that "Uncle Sam is rich enough to give us all a farm."

Wherever land is rich and valuable it is passing into the hands of renters under a system of tenantry that amounts to a conspiracy to rob, first, the soil; next, the tenant, who has no abiding place save from year to year; and finally, the landlord, who finds his farms getting poorer.

These tenants are, many of them, as good farmer as America possesses. Surveys show that in th Corn Belt the tenants make larger labor incomes o the average than do the owners of lands who operat them for themselves. The tenants do not receive s large incomes as the owners, for the accepted metho of reckoning farm-labor incomes allows five per cer interest on the land value and capital value befo wages are reckoned; but in strict labor income th tenants, on the average, make more out of the lanc than do the owning operators—this owing to th excessive value of the land. They could not do th if they were shiftless ne'er-do-wells, as they ar often unjustly described. They sometimes labor s effectively that by skinning the land they are able t buy it. Not one in ten, however, who should in som way be financed for that purpose, is able to buy lan

Everybody gains when the tenant becomes a farm owner under circumstances that enable him to pa out. He gains by becoming a fixture in the neig borhood. His family gains in standing and sel respect, and in the opportunity of finding permanen in the neighborhood society, in school and in churc School and church and Grange and Society of Equit and Farmers' Union, and all coöperative effort, ga by this new accession to their ranks of a real farm and his family.

How the Farm Hand is Helped

THE landlord gains in the long run by having fixed security substituted for waning fertili and deteriorating buildings. The land gains passing into the hands of a man interested in upkeep and improvement, instead of in the mini of the soil for this year's profit. The nation gai in the character of its citizenship. Nothing is mo remarkable than the testimony of prominent Sout erners as to the desirability of making landowne of the negroes.

"Give a negro a farm of his own," they say, "a he becomes a good citizen at once. From the m ment that he becomes a landowner he ceases to a dangerous man. If we could make every decent neg a landowner one of our greatest problems would be neari solution."

The reason for this is plain. The transformation in t negro is more evident, perhaps, than in the white ma but the same thing takes place in both. What takes pl is the steadying and uplifting effect of having a stake the land.

The United States Government has undertaken, throu the Federal Farm Loan Bureau, to finance the long-ti needs of the farmer. The Federal Farm Loan Act, wh fully in operation, will make it possible for any farm complying with its provisions, anywhere in the Unit States, at any time, to borrow any sum, from one hundr dollars to ten thousand, for any term of years from five forty, at reasonable rates of interest, up to half the va of his land plus one-fifth of the value of the perman insured improvements upon it.

This is the greatest job of loaning on real estate e undertaken in the history of the world. But it has f quently been asked:

"How will this benefit the farm hand who may b perfectly safe business risk but hasn't the money to p his way to within reach of a loan? How will it help the t ant farmer who has equipment but not enough cash make a first payment on the farm? How will it help ambitious young man with farming skill and educati either of the classroom laboratory sort or of the fields, get a farm when he is provided with nothing but the sentials of success—given land—but lacks what, after should be less important, money?

"The Federal Government is organizing twelve gr land banks to cover in their operations the whole of continental United States—exclusive of Alaska—to l money to whom? To people who can put up two doll s or more of security for every dollar advanced! Isn't t s a sort of Barmecide feast for the farm hand, the you farmer without land or money, and the tenant who s ready for a farm and can't buy it? When was there a ti e when any man had any difficulty in buying a farm if e had half its value in cash? Isn't this another exemplifi- tion of the text: 'Whosoever hath, to him shall be give ? How are integrity, ability and efficiency in farming to e financed under this new law—unless they possess fo hundred per cent in collateral? And do you call loan g

two hundred per cent security helping the under dog? looks a good deal like the old bad deal!"

This is nowhere near so true as it sounds. There are rmers in astounding numbers all over the country who vn their lands and are yet very poor. They possess lands at will yield splendid returns for money invested in their ore adequate financing, but are outside the scope of e old loaning system. Farm loans as now made exert a rong pressure in favor of the large farm and against the all one.

In the Corn Belt, and elsewhere in regions of high land lues, money-loaners discriminate, for perfectly proper asons, in favor of the loan of five thousand dollars or ore; and the farmer who wants to borrow on farm rtgage a sum less than this is not much better off than if he lived in the high-interest zone. In some of the best rming regions of the country, where money to loan on m mortgage is supposed to be plentiful at five or six per nt, the man who wants a long-time loan of a thousand llars or less does not know where to get it, though the ge farmer may be courted by the loan agents with offers funds.

In other parts, like New England, the financial institutns have had their attention directed to the West and e cities so long that farm loans all about them are negted. The president of a Connecticut insurance company ated at one of our hearings that, though his concern had nething like a hundred million dollars loaned on farm rtgage—I do not remember the exact sum—not one dol- was loaned on a Connecticut farm. And yet there is r better land than some in Connecticut, and there is no ste in which money for farm development could be re profitably or safely used in very considerable volue. The eyes of the mortgagee have been turned away m New England, and similarly from many other regions. e New England farmer stated that in his county the erage farmer would not have the nerve to ask a farm n of a bank or trust company—or of anyone, in fact, ept the village capitalist.

Good Land That Needs Financing

STATES possessing a "spotty" soil—that is, a soil which varies widely with locality—it has not paid the n companies to work out an organization for safe loaning; al so these regions, larger in extent and quite as great in nional importance as the broad stretches of lands which a so uniform that a man might land in the night from a achute and pay for the farm on which he alighted with fect assurance that he could not be much deceived in l land values, are not financed at all, in any systematic wy, as to their farm loans. These farmers are without ney on farm mortgage, even though they own their ms. In other regions—immense regions—the business rnishing abstracts of title has not been developed; and l loan company must either send a skilled man at great ense to make a "search," or rely on the opinion of the age lawyer. It does not pay to make loans, especially all loans, under such conditions. In other places the ndaries of the farms must be established by surveys.

Videly spread over the United States are lands the ues of which are low, though constantly rising, and the ns required are small. Loan companies cannot profitbly handle their needs. It costs money to make a fn loan; and it costs no more to make one of five thousd dollars or more on land covered by an abstract of tie made by a bonded abstracter than to loan two hundd and fifty dollars on a bit of a farm described by rses and bounds—"from a spring at the foot of Dead Mn's Hill; thence in a northerly direction, twenty degrees est, to a sycamore; thence due west, to a stone," and so on.

This matter of boundaries is one in wch east is east and west is west, and nver the twain shall meet. A Western layer bought a tract of land in the Appalachians. He took th muniments of title an struggled with them fo a day to discover—if suh a thing might be—whether the land conveyed was of the area and description of the tract sold him. He was used to abstracts referring to quarters, sections, townships and ranges, under the rectangular system devised by the United States Land Office many years ago, under which the wayfaring man, though a fool, may drive to the exact spot mentioned in any deed from any county seat in the West. These old metes and bounds were a Chinese puzzle to him; so he sent the papers to a legal friend in the East.

"Please look these over," he wrote, "and see whether I am buying any land in any particular locality or not. I am accustomed to a different mode of description, and where the lines are described as running from a hole in the ground, thence in an upperly direction to a state of mind, it puts me up in the air!"

And all these things—small loans, queer descriptions, boundaries rendered uncertain by the death of the sycamore, the drying up of the spring since George Washington ran the line, or the removal of the stone, sharply varying values from farm to farm and from hillside to hillside, lack of legal ability or bonded abstract companies—all these put the loan companies up in the air, too, and place on the farm-loan black list millions of acres of farms the values of which are just as stable and loans on which are just as safe as are those of Grundy County, Iowa—and, as Mr. Peggotty might say, "I can't say no fairer nor that." But all these problems the Federal Farm Loan Bureau must, as a matter of legal duty, work out. Wherever loans may safely be made, the work of making them must be systematized and perfected by a Federal Bureau.

It seems quite within the bounds of possibility that within a few years this work will develop not hundreds of millions but perhaps thousands of millions of choice farm loans, which the present system does not reach at all; and will also add new empires to the areas open to lenders outside the Federal System. And all the farmers so reached, and a multitude of others, are quite as needy as the moneyless farm laborer or the tenant who lacks the wherewithal to pay fifty per cent of the purchase price of a farm.

The new system is not one that gives solely to him who hath. It operates also in the interest of him who hath not. But if it leaves the laborer, the young man starting out in life and the tenant farmer altogether without help, it will not have reached the bottom of the pile of superimposed canines. Let us see about this.

At Topeka, Kansas, a man who has won great prominence among the bankers of America made the statement that in his opinion the Federal Farm Loan System will make it possible for such of our tenant farmers as possess some capital and the equipment a tenant farmer must have, together with a little money, to buy farms in far greater numbers than is now possible. He stated that in his country—the Missouri Valley, where land is high—he would, as an investment banker, regard it as good business to finance such purchases. The Federal Land Bank mortgage, he pointed out, may be for as long a term as forty years, and is made upon the amortization plan—that is, it must be paid off gradually in annual or semiannual installments.

If made for thirty-six years, for instance, the annual interest plus one per cent will extinguish the debt in the time mentioned. The rate will scarcely be higher than five per cent; so that an annual payment of six per cent will take care of the debt, principal and interest. A second mortgage subject to such a lien is a thing entirely different from the second mortgage hitherto known to and contemned by investors. Such a first mortgage has few of the characteristics of the ordinary mortgage. It does not worry the debtor or the owner of the second mortgage by falling due and demanding payment or renewal. It may be paid off at will after five years; but it may be carried on for a generation as an annual charge of much the same character as a tax or a water rate.

The law requires that whenever it is not made for the refunding of outstanding indebtedness the loan must be for the improvement of the farm—for livestock, fertilization, draining, leveeing, for buildings like silos, barns or better houses, fencing, clearing or otherwise reclaiming; so that the security of the Federal Land Bank loan is in most cases increased by the expenditure of the money loaned, and the second mortgage is made better. Moreover, the tenant who becomes an owner begins to build and improve. The farm gets better, instead of running down.

The annual amortization slowly reduces the first lien, while the farm grows better. Round it grow up the loves and traditions that bind the owner to his home. If he is a good man it will take an agricultural convulsion of Nature to eject him from that farm—provided, as our banker friend cannily stated, the annual charges against him are not too high. He figured out for us what he meant by this—and in doing so he made a computation of the greatest importance to the tenant farmers, the landlords and the whole people of the United States.

Sound Second Mortgages

"SUPPOSE," said he, "that a tenant farmer, a good man, comes to me and says that he has the equipment to farm eighty acres of land, and can raise, from funds saved or by making a sale, fifteen hundred dollars. He can buy the eighty acres for eight thousand dollars. He can join the nearest National Farm Loan Association and borrow from the Federal Land Bank half the value of the farm—four thousand dollars—and turn this sum over to the seller of the land. This leaves the sum of two thousand five hundred dollars to be provided for.

"I should figure that if the interest on the first mortgage—the amortization charge, the interest, taxes, insurance and upkeep—did not amount to more than a fair rental for the land it would be a safe loan for an investment banker. I should not think so if the first mortgage had only three, five or ten years to run; because I should figure that it would take him about ten years to pay off my second mortgage. I think seven per cent would be a fair interest for the second mortgage to bear and that it would be good paper to handle."

That this gentleman from whom I quote from memory has won the prominence among the bankers of America that I have accorded to him is proved, I believe, by the fact that, within a week from

(Continued on Page 81)

CAPPY RICKS, WHEAT BARON

Wherein J. Augustus Redell Scores a Knock-Out

By PETER B. KYNE

ILLUSTRATED BY F. R. GRUGER

"Friend of My Heart, I Love You! Damn Eet! I Say Eet!"

SEÑOR FELIPE LUIZ ALMEIDA, secretary-treasurer of the West Coast Trading Company and familiarly known as Live Wire Luiz, gazed a moment in dumb popeyed admiration at his partner, J. Augustus Redell. The latter watched him suspiciously, for he knew from experience what was coming. He was not disappointed.

"Friend of my heart!" the little Peruvian cried excitedly, and held out his arms to Redell, inviting a fraternal embrace. "I love you! Damn eet! I say eet! You are one wezard weeth the money-making schemes!"

Mr. Redell cautiously compromised on a hearty handshake; to avoid a kiss he was careful to keep the table between himself and Live Wire Luiz.

"Shall we empty the corporate sock and climb aboard for every cent we can beg, borrow or steal?" he demanded.

"Sure, I bet you!" Live Wire Luiz cried; for, though a featherweight physically, he was possessed of the courage of an Alexander.

J. Augustus Redell put on his hat, took from a pigeonhole in his desk the last trial balance of the West Coast Trading Company's books and departed for a conference with his banker. Half an hour later he returned, and the expectant Luiz promptly noted a cloud on Mr. Redell's sunny countenance.

"I can't arrange for a loan," he reported disgustedly. "The limit, in view of our present obligations, has been reached."

"On margin of ten cents," suggested Live Wire Luiz, "take a chance, *amigo*. Thees is not speculation. It ees what you call the ceench weeth the copper reevets."

"I figure it that way; nevertheless, copper-riveted cinches sometimes aren't properly cinched and Fortune backs out of the packsaddle. I dare not take a long chance on this, Luiz.

"If something went wrong we'd be sadly embarrassed. We dare not take a chance up to the limit of what money we have on hand, because we need those funds for other things."

Live Wire Luiz swore mournfully in Spanish. Redell nodded and retired to his own office, where for an hour he sat with his head in his hands, searching his agile brain for a bright idea that would lead him out of his dilemma. Suddenly he leaped to his feet, tossed his hat to the ceiling, and caught it again as it came down.

"Cappy Ricks is my meat," he declared aloud. "Besides, I owe Cappy one for making a monkey out of me on that lath deal. He hoisted me on my own petard—whatever a petard may be. Now I'll hoist him, and incidentally annex a profit for the West Coast Trading Company."

He rushed out into California Street and for the major portion of the day was very busy among various shipping offices. When he returned, late in the afternoon, to the offices of the West Coast Trading Company, his alert young face wore a pleased and confident smile. Live Wire Luiz noted this and took heart of hope.

II

CAPPY RICKS, president emeritus of the Ricks Lumber & Logging Company and the Blue Star Navigation Company, was, for the thousandth time since his voluntary retirement from active business some ten years previously, overwhelmed with his ancient responsibilities. Mr. Skinner, his general manager, in charge of the lumber end of Cappy's vast interests, had, under the insistent prodding of his wife, consented grudgingly to a vacation and had gone up into the Sierras to loaf and fish.

Scarcely had Skinner departed when one of the Blue Star steamers ran ashore on the Southern California coast, and Captain Matt Peasley, Cappy's son-in-law and right bower, in charge of the shipping end, left immediately for the scene of the disaster to superintend the work of floating the stranded vessel. This left Cappy riding herd on the destinies of the Blue Star ships, with Mr. Hankins, Skinner's understudy, looking after the lumber.

Prior to boarding the train, Matt Peasley had ventured the suggestion that Mr. Skinner be ordered by wire to return to town at once; but this veiled hint that the Blue Star ships could not be managed by the man who had built up the Blue Star Navigation Company had been received very coldly by the president emeritus of the Ricks interests.

"Young feller," Cappy informed his son-in-law testily, "I'll have you know I was managing the Blue Star Navigation Company quite some years before you quit wearing pinafores; so I guess, while you and Skinner are away from the office, we can manage to stagger along after a fashion."

"But I don't like to have you worried with business after you've retired ——"

"Retired!" Cappy hooted. "Swell chance I've got to retire! I'll die in the harness whether I want to or not. Tut, tut, my boy! Don't be afraid to put me in as a pinch hitter for this organization. The worst I can do is to single—and I might clout a home run."

"But Skinner has been away two weeks ——"

"Enough! It would be a bad thing to obsess Skinner with the notion that we can't get along without him. Then he never would take a rest; and I don't want any martyrs or neurasthenics round my office. You got anything on the fire that's liable to burn or boil over before you get back?"

"Nothing to worry about, Cappy," Matt answered. "Our five-masted schooner Mindoro is the only vessel requiring immediate attention. She arrived at Sydney yesterday with lumber from Grays Harbor, and as yet I haven't been able to get a satisfactory return cargo for her."

"What have you been holding out for?"

"I want to get a cargo for delivery in San Francisco if possible. The vessel will be ready to go on dry dock by the time she gets back here; and besides, I'm planning to put a semi-Diesel-type engine in her."

"Not by a jugful! She wasn't built with a shaft log, and I won't have you weakening my Mindoro by cutting away her deadwood ——"

"Tish! Tush! You're a back number, Cappy. They don't cut through the deadwood any more. They run the shaft over her quarter and hang it on struts."

"She'll carry a helm ——"

"She'll not; but if she does, let her. It'll give the helmsman something to do."

Cappy subsided, fearful that if he persisted he might be given new evidence of the fact that times had changed a trifle, here and there, since he had ostensibly gone on the retired list.

"Well, I'll take care of the Mindoro," he assured his son-in-law. "Early in life I adopted the woodpecker as my patron saint. Ever since, whenever I want anything I keep pecking away, and pretty soon I bust through somewhere."

The following morning, bursting with a sense of responsibility, Cappy came bustling down to the office and got o the job at eight-thirty. After looking through th mail he called up all the freight brokers in town an urged them to make a special effort to line up a Sa Francisco cargo for the Mindoro; then he summone Mr. Skinner's stenographer and was busy dictating whe Mr. J. Augustus Redell was announced by a youth fro the general office. Cappy went to the door to welcome h beloved young friend and business enemy.

"Come in, Gus, my dear boy," he chirped, "and re your face and hands." He turned to the stenographe "That will be all, my dear, for the present. I can't dicta business secrets in the presence of this—ahem!—harumph h-h!—er ——"

His desk telephone rang. Cappy took down the receiv and grunted.

"J. O. Heyfuss & Co. are calling you, Mr. Ricks," h private exchange operator announced.

Cappy smiled and nodded. J. O. Heyfuss & Co. we ship, freight and marine insurance brokers.

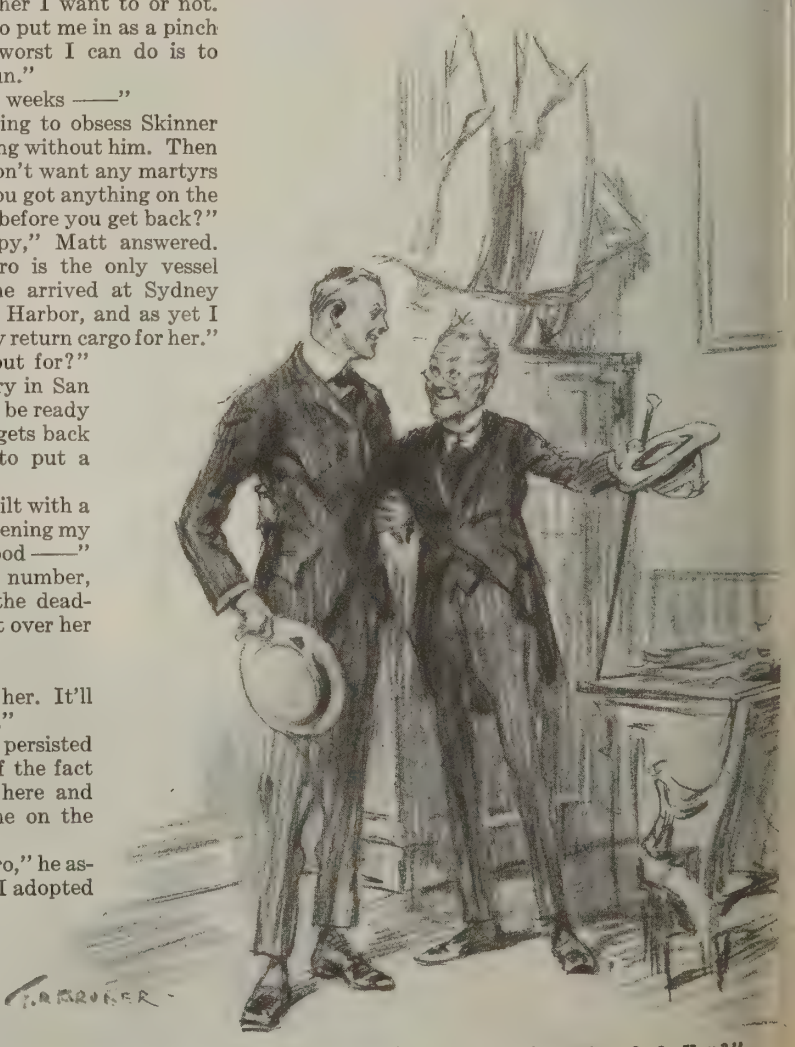
"Something doing for my Mindoro," he soliloquiz aloud.

"Mr. Ricks?" a voice came over the wire.

"Hello there!" Cappy replied at the top of his voi For some reason he always shouted when telephonin "Ricks on the job! Whatja got for my Mindoro, Heyfus . . . Zinc ore? Never carried any before. Don't kn what it looks like. . . . Yes; that freight rate is acce able. We should have more, but God forbid that should be considered human hogs. . . . Yes. . . . St it's for discharge in San Francisco? . . . All right. Cl for it. . . . Good-by! . . . Hey there, Heyfuss! Do close in a hurry. See if you can't get the charterers to p the towage over to her loading port. If they won't pay strike 'em for half."

He hung up without saying good-by.

"Well, that's out of the way," he declared with sat faction. "Just closed for a cargo of zinc ore from Austra to San Francisco ex our schooner Mindoro. Matt Peasle been hunting wild-eyed for a cargo for her—scouring market, Gus—and nothing doing! And here the old mas comes along and digs up a cargo while you'd be saying J Robinson. By the Holy Pink-Toed Prophet, if you can sh me how the rising generation is going to get by ——"



"My Dear Boy, Suppose You and I Go Out and Pin One On? Hey?"

He paused suddenly, leaned forward, and pointed an ·cusing finger at his visitor.

"Gus," he charged, "you're up to something. I can see in your eyes. You look guilty."

Mr. Redell hitched his chair close to Cappy and with s index finger tapped the old gentleman three times on ıe right knee—three impressive taps.

"Alden P. Ricks," he began with equal impressiveness, I have a scheme ——"

Cappy chuckled and slapped his thin old thigh.

"I knew it! By the Holy Pink-Toed Prophet! Gus, if ou ever come into my office and fail to pull a scheme on e I'll think you aren't enjoying your usual robust health. hat are you going to start now? A skunk farm for cor-ring the market on Russian sable?"

"Cut out the hi-city. This is seri-s business, Cappy. can show you ere you and I can ltz into the Chi-go Pit, make a ling on December eat, and escape th a sizable wad fore our identity discovered."

Cappy, caught off guard, blinked the enormity of e prospect; but, membering his nity as a business n, he shook his ad sadly and re-ed:

'Wheat! Wheat, ? A lumber and pping man mon-ying with wheat? t for little old len P. Ricks! No, ! When I go spec-ting I stick to my cialties—lumber l ships. Did you er hear of a nbler, winning a tune at faro, who din't drop his nnings on the nies?"

'But this is a utiful layout."

'I don't know ything about weat and I'm too o to learn. Be-ies, I don't trust yı, Gus. You're a infernal scoun-l; and experience h, taught me that y time I take r tip and go in on a deal I have to step lively to keep m being walked on."

'But this time I'm free from guile. I won't stab you, Cppy."

'No use! The last boat just left, Augustus."

Mr. Redell, however, was made of rather stern stuff. H was a young man who never took "No" for an answer. Psistence was his most striking characteristic.

'Now listen," he implored. "Let the dead past bury itlf. I give you my word of honor, Cappy, that this deal is n the level. Just let me put all my cards on the table wle you take a look; then, if you don't want to come in, all ask is your word of honor that you'll stay out while I rnd up a partner with red blood in his veins."

Cappy pricked up his ears at that. He saw that Redell w serious; he knew that once the latter passed his word honor he never broke it. Still, Cappy did not wish to pear precipitate in his surrender; so he said weakly:

I'm against speculation."

You mean you're against foolish speculation," Redell rected him. "I take it, however, that you have no jection to playing a sure thing."

Well," Cappy admitted, "in that event I might be psuaded. Nevertheless, I'm afraid of you. There's a fly n he ointment, even if I cannot see it. You owe me a ce, and you'll never rest until you've squared the aount between us."

Mr. Redell held up his hands in abject distress.

,Cappy," he pleaded, "don't say that. You wrong me erlly. It is in my power to stand idly by and let you asmilate a poke right now; but, just to show you I hen't any hard feelings, I'll do something nice for you in ead."

What do you mean—nice?"

"I'll save you money—not only to-day but for years to come; and I'll save your self-respect."

"Shoot!"

"Call up J. O. Heyfuss & Co. and tell them to take their cargo of zinc ore in bulk for your schooner Mindoro and go to the devil with it!"

"But, good gracious, boy, I have to get something for her homeward trip!"

"In this case nothing is better than something. Do you know anything about zinc ore?"

"Yes; as much as an Eskimo knows about the doctrine of transubstantiation."

"I thought so. Well, I'll enlighten you. Zinc ore is blamed near as heavy as lead, and it's as fine as cement. Load it in a ship in bulk and, what with the pitching and rolling of the vessel on a long voyage, she opens up every seam and crack in her interior; then this powdered ore sifts into the skin of the ship and down into her bilge, and you'll never be able to get it out without tearing the ship apart. Why, after a vessel has freighted a cargo of zinc ore there may be as much as fifty tons left in her after she's supposed to be discharged; and, of course, thereafter she'll carry that much less cargo than she did before. Besides, the consignees are liable to send you a bill for the shortage; you can gamble your head they'll deduct it from the freight bill."

"Holy sailor!" Cappy was appalled.

"Why," Redell continued, "I'm surprised at your ignorance, Cappy!"

"And I'm amazed at your intelligence! Where did you get all this zinc-ore dope?" Cappy challenged. "How do I know it's true?"

"I got it from Captain Matt Peasley. I heard him give it to J. O. Heyfuss on the floor of the Merchants' Exchange two weeks ago, when Heyfuss tried to sneak up on his blind side and hang that cargo of zinc ore on him. I guess they weren't importing much zinc ore when you were active in business, Cappy, or you'd be hep without being told. You see the plot, don't you? As soon as Heyfuss learned that Matt Peasley and Skinner had gone away, leaving a defenseless old man on the job, he organized himself to spear you."

"The shameless son of a sea cook! By gravy, Gus, you're my friend!"

"Need any more proof?"

"Not a speck."

"Then I'll give you some. Call up Heyfuss and declare that ore cargo off; after you've done that I'll tell you where you can get something better. Moreover, you can close the deal yourself and save the brokerage."

"I Don't Know Anything About Wheat and I'm Too Old to Learn. Besides, I Don't Trust You, Gus. You're an Infernal Scoundrel"

Cappy Ricks called up J. O. Heyfuss and in a few terse sentences told that individual where to head in.

"Now, then ——" he began, facing round on Redell once more.

Again Mr. Redell's index finger tapped Cappy's knee. Dramatically he pronounced a single word:

"Wheat!"

"Wheat?"

"Wheat!"

"What kind of wheat?" In his amazement Cappy was rather helpless.

"Number One white Australian wheat."

"You jibbering jackdaw! Wheat? Don't you know blamed well that wheat is one of the commodities Australia never exports to these United States? Why? Because we don't need her dog-goned wheat! We grow all the wheat we need and a lot more we don't need; we export that, and it's just as fine wheat as you'll find anywhere. Moreover, any time our crop is a failure, our next-door neighbor, Canada, is Johnny-on-the-spot, ready to make prompt delivery. So what in thunder are you talking about?"

For answer J. Augustus Redell drew from his pocket that morning's paper and pointed to the headline of a front-page story. Cappy adjusted his spectacles and read: Bakers Announce Six-Cent Loaf!

"Hum-m-m!" said Cappy.

"You bet! And it's a smaller loaf, by the way. Doesn't that argue that there is something doing in wheat, when the price of bread goes to six cents for a half portion?"

"Well, there might be something in that, Gus. Crack along and tell me some more."

"Until the identity of the real culprits is fixed, Cappy, we must blame the war in Europe for the six-cent loaf; likewise for the fifteen-dollar shoe that formerly cost our wives six or seven; for the eleven pounds of sugar for a dollar, when twenty to twenty-two pounds was the standard in the good old days. Europe is too busy fighting to pay much attention to farming; the wheat farmers of Canada are somewhere in France, instead of being at home tending to business; and it has been up to Uncle Sam and the Argentine Republic to feed the world, you might say. Naturally speculators have seized upon this condition to shoot the price of wheat to the skies, and in desperation the millers have been casting about to buy cheaper wheat. Investigation discloses the fact that Australia has an enormous quantity of wheat on hand; some of it is the surplus of the 1915 crop. Of course she has exported all she could to England; but, at that, she has been handicapped."

"How?"

"Because when a ship sails from Liverpool with goods for Australia, it is a rare case when that same ship promptly loads with Australian goods and puts back to Liverpool. She takes a cargo of coal, say, from Newcastle up to Manila; a general cargo from Manila to Seattle or San Francisco; thence to a West Coast port with a general cargo; thence to New York with nitrate; thence to Europe with foodstuffs or munitions. Australia hasn't had the tonnage to export her wheat and it's been piling up on her. Now they've simply got to sell something to get some ready money."

"This is perfectly re-markable!"

Redell took a document from his pocket and gravely handed it to Cappy, who examined it and discovered the same to be a charter party, consummated the day before between the West Coast Trading Company, owners of the barkentine Mazeppa, and Messrs. Ford & Carter, a well-known export and import firm whose principal business

was done in grain. Cappy read the charter party carefully and even verified the signatures, with all of which he was familiar. The vessel was to carry a cargo of wheat from Melbourne to San Francisco at a freight rate of —— shillings.

"Re-markable!" Cappy declared. "Pre-posterous!"

"Seeing is believing. Call up Ford & Carter, and they'll jump over themselves to give you a cargo of wheat for your Mindoro."

"Im-possible!"

"Well, I'm telling you. Why, it stands to reason, Cappy! Canada and the United States are so much nearer Europe than is Australia it has been cheaper to use our wheat, and the result is we've been cleaned out; and the newspapers are filled with dismal stories of the sufferings of the poor due to the increased price of bread."

"Come to think of it, Gus, there has been a lot of that stuff in the papers lately. But, of course, when a fellow's stomach is full and he isn't in danger of being attached for debt, he never thinks of the less fortunate brother. Yes, Gus, I dare say the demand for our wheat now exceeds the visible supply."

"Is it any wonder, then, that this condition of affairs should come to the attention of the Australian exporters? Just because Australian wheat has never been shipped into the United States is no reason why it shouldn't be shipped—particularly when the price of flour goes up daily. Why, we pay two and a half for the fifty-pound sack of flour that formerly cost us a dollar and a quarter! Eggs are up to seventy cents a dozen—by jingo, Cappy, what's going to become of us?"

"God knows!" Cappy answered dismally.

Redell had him hypnotized. Already Cappy could see the gates of the poorhouse opening to receive them all. Redell's voice brought him back to a realization of his peril.

"You'll find, Cappy Ricks, that for months to come every sailing vessel that carries lumber to Australia from the Pacific Coast will come back with a cargo of wheat while these war prices are maintained."

"Great Jumping Jehoshaphat! How'd you get next to all this, Gus?"

"The early bird gets the worm, and success comes to the man who creates his own opportunities. I thought it all up out of my own head, Cappy, and then tried it out on Ford & Carter. It knocked 'em cold for a minute; but that was only because the proposition was so unusual. When I explained the situation to them, however, and gave them time to digest it, both offered to take me out to luncheon. You can see for yourself they've chartered our Mazeppa at a fancy freight rate."

Cappy licked his lips.

"The Mindoro is sound, tight and seaworthy," he murmured. "She could carry wheat."

"Come on in, Cappy. The water's fine!"

"I'll do it! Gus, you're a mighty good fellow, if I do say it that shouldn't. I have five windjammers en route to Australia this minute, and, by the Holy Pink-Toed Prophet, if I can get wheat charters for all of them on the return trip I'll accept, if it costs me money. Gus, something has got to be done about this high cost of living or we'll all go to hell together. There comes a time in a man's life when he must put aside the sordid question of 'How much is there in it for me?' and ask himself: 'How much can I put in it for the other fellow?' Gus, it's our Christian duty to furnish tonnage to import this wheat. We should, as patriotic citizens, make it our business to boom Australian wheat in the United States and give these dog-goned pirates that gamble in the foodstuffs of the country a run for their money. Food prices should be regulated by this Government. The Chicago Pit should be abolished by legislative enactment ——"

"Well, they won't do it this year, Cappy," Redell interrupted dryly. "Still, it occurred to me that I saw an opening where two high-minded philanthropists—to wit, Alden P. Ricks and J. Augustus Redell—might strike a blow for freedom and at the same time give these wheat speculators a kick where it will do them the most good. When one cannot annihilate his enemy the next best thing is to take some money away from him; and you and I, Cappy Ricks, can take a young fortune away from these fellows, while at the same time depressing the price of wheat and doing our fellow countrymen a favor. Are you prepared to volunteer under my banner? If so, hold up your right hand."

Cappy held up his right hand.

"Out with it, Gus," he ordered; "out with it! This is most interesting."

"Ah! You're interested now, are you? Well, bearing in mind the fact that your specialty is lumber and ships, I will give you an opportunity to withdraw before it is too late. Besides, it occurs to me that I have already done enough for you to-day."

"Don't be greedy, Gus. Remember there is an exception to every rule. Besides, I'm getting old and—er—ahem!—hell's bells, boy, I've got to have my fling every once in a while. Come now, Gus! Out with it! I believe your proposition embodied the coupling of both our names in the betting, did it not?"

"It did, Cappy. Still, come to think of it, I really ought not come in here and tempt you into speculating ——"

"How much money do you want?" Cappy shrilled impatiently. "Cut out this infernal drivel and get down to business. Unfold your proposition; and if it looks to me like a winner I'll take a flyer with you if it's the last act of my sinful life."

"On your own head be it, Cappy. Here goes! However, before laying my plan before you, perfect frankness compels me to state that my visit to you was not born of an overweening desire to do you a kindness or make money for you. Philanthropy is not my long suit—in business hours; and my interest in you to-day is purely a selfish one."

"Go on; go on, boy! Am I a child in arms?"

"I have made a ball, Cappy," Redell continued, "and I want you to fire it. I have a splendid prescription to make a clean-up in December wheat ——"

"Give me your prescription."

"Well, sir, my prescription lacks one small ingredient to make it a standard household remedy. You can supply that ingredient—to wit, cash of the present standard of weight and fineness. Every spare dollar that Live Wire Luiz and I can get our hands on is working overtime in the legitimate business of the West Coast Trading Company; every loose asset with a hockable value has been hocked, and we dare not strain our credit with our banker by borrowing money with which to speculate. If I apply for a sizable loan, without putting up the collateral, he'll ask me what I want to do with the money—and if I answer truthfully he'll throw Luiz and me and our account out of his bank. And I never was a very successful liar. Therefore, in consideration of the valuable information I can furnish, I suggest that you carry me for a quarter of million bushels of December wheat."

"How much will that cost me?" Cappy queried warily

"We'll operate on margin. I think a margin of ten cen a bushel will do the trick; of course, if wheat should go u a point you'll be asked to come through with more mone However, I have a sneaking notion that a well-know financial heavyweight like you can place his order with ar of the local brokers without having to put up a sing cent; at the most, they might ask you for five thousand ten thousand dollars. But they know you're good for ar engagement you may make; they'd be tickled to death have your promissory note. I suggest that you get in touc with a sound brokerage house in this city—one that is member of the New York Stock Exchange and the Chica Board of Trade—and sell, for my account, two hundr and fifty thousand bushels of December wheat at t market."

"What'll I do for myself?"

"Go as far as you like. You know your own limitatio I'm desirous of selling a quarter of a million bushels at t market; and, as I am furnishing the plans and specific tions for this raid, I suggest that you sell at least a quart of a million yourself."

"Funny business!" Cappy murmured. "Selling a qua ter of a million bushels of wheat you do not own and nev will! Hum-m-m! Ahem! Harumph-h-h! Then what'

He bent his head and gazed very severely at Mr. Red over the rims of his spectacles. For reply Mr. Redell to from his pocket thirteen sheaves of paper and handed the to Cappy, who investigated and discovered them to thirteen forty-eight-hour options on thirteen sailing vess bound to Australian ports with lumber, and not as y provided with a return cargo to the United States.

"By to-morrow morning I shall have exercised th options and closed for thirteen cargoes of wheat," Red explained. "You have five vessels bound to Australia al Give me an option on them for their return cargo and th will make eighteen."

"Yes, yes. Then what?"

"I will charter all of the eighteen to Ford & Carter, w will load them with Number One white Australian wh for Pacific Coast ports. Before doing so, however, Ford Carter will have closed contracts with Pacific Coast milli companies for the sale of every grain of it, in order to p tect themselves against a falling market."

"Naturally. And the market is ——"

"December wheat closed in the Chicago Pit yesterd at $1.89½, and the market has been very stiff for quit while. The bulls are right on t job."

"Will not the advent of all t Australian wheat depress the m ket?" Cappy shrilled excitedly

"Not unless the bears hap to find it out, Cappy," Redell torted gently. "It is our job bring the matter to their att tion, for it so happens that Al P. Ricks and J. Augustus Re are the only two people in United States who happen know about it. Ford & Car know; but they are v conservative, and I do that the tremendous p sibilities of this inform tion have occurred them. At any rate, w probably be first abo the lugger."

Cappy nodded sag

"Are you sure, Gus, dear young friend, t we are not too conservat in selling but a quarter c million bushels each? The such a thing as playing too close to the vest, know."

"We'll try selling hal million bushels first; if t doesn't depress the mar we'll just keep on selling u something happens. Th right, isn't it?"

"I think so. The bulls l probably grab that first l million bushels to hold up market; they may even sorb a million. We'll try at any rate. What next?

"Having sold all we ca the market, Cappy, our n move will be to kick the m ket to pieces."

"How?"

"That Will be All, My Dear, for the Present. I Can't Dictate Business Secrets in the Presence of This—Ahem!—Harumph-h-h!—er ——"

THE HOUSE OF CRAIGENSIDE

By Richard Matthews Hallet

ILLUSTRATED BY HENRY RALEIGH

VIII

THE ornithologist was absent but a brief while. Then, with the force of an explosion in our midst, thing came to pass so utterly odd, ıd so bound up, as it transpired, with the estiny of the Craigensides, that I feel ıliged to describe it in detail.

This event took its rise in the return of ır. James Smith with the act known as an or Mechanism. This act, as was to be ferred from the handbills, had to do with sort of Frankenstein's monster, a thing the likeness of a man, which would ake seemingly independent movements, nether electrically energized or inspired th the very breath of life its proprietor ould not take it upon himself to say. hat, in short, was what he left to the criti-l judgment of his audience to determine.

The baggage of the new company came to the Glade late on Monday afternoon. : that hour I was sitting with my senior d colleague, Mr. Bag Fuller, on the canoe at presided over by the boatman Sturgis. ır. Fuller pointed out with his pipe stem ıe huge black box which in his opinion mprised the Man or Mechanism act. I d only time to take note of its brass cor-ırs and heavy construction, when it was -ended and urged sidewise onto the ıge. The expressmen were straining and outing curses underneath it, as if the ling were a grievous weight on their oulders.

"Funny what will amuse people," said ller.

He was of the opinion that the act was ake act, as nearly everything in life was wadays.

"Ain't no more real than those needles," said mournfully.

The needles he referred to were pine ıedles, and were being strewn from carts, along the roots of weary, bald-headed nes.

Sturgis stirred sleepily, rubbed the bowl his pipe against his nose and uttered:

'I think it will turn out to be a man, not anechanism."

'Man nothing!" retorted Fuller. "Ain't likely a man would be given away first ack out of the box. He would cough or a cinder in his eye."

'There are people with remarkable rve control," said Sturgis. "I knew a n who went twenty minutes without aking his eyes, for example."

My fat colleague was an opinionated n. He waddled away unconvinced.

The policeman at Silver Glade had, in addition to his ıer duties, that of taking tickets at the theater gate. It ıs, as I had pointed out, a sapping of his authority and awering of his dignity to give him a job beyond that of rely towering impassively among his fellow citizens. But t management that year was bent on economy. Already t road was a squeezed lemon, about to be thrown into ne financial gutter.

And thus it happened that on this Monday night at ven-thirty I was "on the gate," as they used to say at Silver Glade.

As darkness fell the arc lights shone more boldly among t debilitated pines. I heard the torturing creak of wooden ngs, and the sound of lobster shells snapping when trod o—this in the lucid intervals between the whirls of the rry-go-round.

At a quarter to eight the manager of Silver Glade thrust h sweating face anxiously over the gate.

'It's a good house, isn't it?" he said nervously. "I hope thing goes wrong with these acts. Outside the Man or Mechanism thing they don't amount to much, I tell you fl. Mostly silent acts, curtain raisers. They've made kg jumps too. Slapped together at the last moment. Tat's what they get, fighting for cheaper acts. These acts h e come from five different holes—they don't know each o er even."

He went off grumbling.

. then became conscious of the figure of Mr. James Smith lumbering up the center aisle. His head swung like a bull's, rht and left; he seemed to be taking stock of the few p ple who had come in.

Reaching the gate, he stood back in the deep shadow b ind me, with only a muttered word or two, and there he remained until the audience was made up and the first act well started. He then went through the gate and made for the dressing rooms. A full minute had not passed when Jane Craigenside presented her ticket.

"Where is Captain Craigenside?" I inquired.

"Wild horses wouldn't drag him here," she replied. "He's not the man to want to be amused."

My thought was that, in her present mood, she wasn't the kind of girl to be amused either, if it came to that. I had never seen any young woman in my life whose eyes gave less assurance of a likelihood of being entertained by what was going forward.

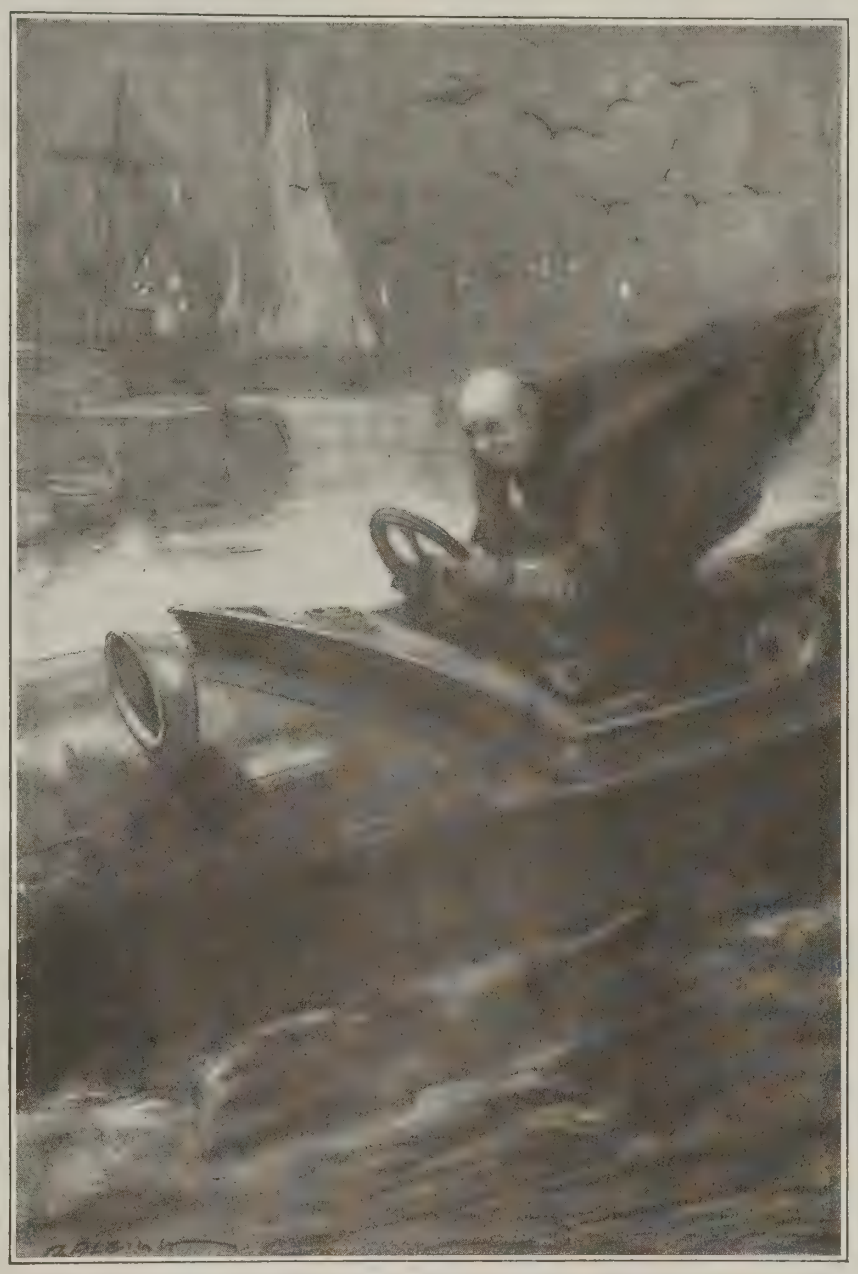
I showed her to a seat myself, and later, getting my colleague, Mr. Fuller, on the gate, I summoned courage to take the empty seat beside her. I was conscious of an agitation on her part which made her reluctant to talk. But if this was how she felt, why had she come to Silver Glade at all?

I confess she puzzled me.

The first act was silent—a pair of acrobats. The second was of the sort technically known as slapstick. One man played a concertina while the other pummeled him systematically with a barrel stave.

Stealing a look at the girl by my side from time to time, I saw that she was watching with a rigid face and that her mind was otherwhere.

Then the Man or Mechanism act was announced, and now the audience shifted on those wooden benches, for this was the act that had been featured, and with the mystery of which even philosophers and sages, it was averred, had not been ashamed to concern themselves. Out of the tail of my eye I saw the girl beside me sink forward and put out one hand to the iron chair back in front of her.



Mr. James Smith Was Standing Hatless at the Wheel, Heading for the Open Sea

An attendant appeared, rolling out from behind the wing-screen an immense black box studded with brass nails which I had caught a glimpse of earlier. This he placed at the left of the stage and withdrew.

Next appeared a tall, pale man robed in black, with a black skullcap on his head and long straw cuffs at his wrists. This was Mr. James Smith. The ex-ornithologist was certainly master of strange trades as well as a manufacturer of omens. He stood viewing the audience like a man lying in wait, his pale eyes oddly lighted. Indeed, so haunting was this light that judgment was instinctively passed against his experiment before he could so much as open his mouth. This prejudice was heightened also by the molelike protuberance on his forehead.

"Ladies and gentlemen," he unctuously said, "I am a man of few words, and I prefer that you should judge my manikin rather by its own actions than by my account of it. It is the work of my own hands; whether alive or not, you shall judge for yourselves. If motion in the limbs be once granted, you see for yourselves it would only be necessary to simulate the digestive and peristaltic processes to have a completely functioning organism—in short, man. Ladies and gentlemen, I now disclose to your eyes the manikin. Is it man or mechanism?"

He bowed low. Then going to the black box he took the lid entirely clear of the front face of it. Many nervous sighs were heaved in the obscurity below him; a noise arose of divers feet pressing hard on lobster claws and peanut shells.

They were looking into the staring eyes of a waxen figure nearly six feet high, reposing on a half couch of palest rose. The black hair was slightly curly, the nose aquiline, the chalklike features those of a man of perhaps thirty and of great personal beauty. This figure was clothed in black velvet slashed with scarlet stripes.

The face was weird and trancelike beyond words. It was not human, it is true, but neither had it the insipid quality of a face of wax.

And now this strange circumstance was superadded to the others: The girl beside me strained forward in her seat and whispered "It is he!"

Could I believe my ears? Had she recognized this corpselike figure? "It is he!" Who then? And what might be his real relation with the uncanny ornithologist? There was about all of this a child's magic, a fantastic Orientalism, that yet held me spellbound. I leaned forward, expecting I know not what, perhaps that the whole parcel of them would disappear into the gaping jaws of the dragon painted on the canvas wing.

My hand fell on Jane Craigenside's. As before when I had taken it, it was cold; and again I experienced a vague shock that this should be so. It seemed certain that the cold fingers of some horrid fear had fallen on her. And yet in the moment when she had said "It is he" I could have sworn that a note of relief, and even immeasurable gladness, had mingled with that other note of strain and terror.

"It is who?" I said gently, hoping that in that moment of rapt attention the word might fall which would make all clear.

I was disappointed. She shook her head slowly, her eyes riveted to the mechanism, to which the fat operator had now turned back.

"I show you now his inward part," he said suavely, twitching at his straw cuffs. "I trust that it is not all wickedness."

There came a click; a door in the small of the figure's back opened, revealing a collection of springs and cogs—about enough to fill an ordinary alarm clock.

"It must be reflected from the sides—by mirrors," said the girl in the same curiously absorbed whisper. She was quite oblivious of me. I began to see that she wished this thing to be a man—that her whole soul cried out that it should prove a man. Her steady eyes flared with the fierce light I have already noted; the line of the jaw, the pouted lip, the slope of the lashes, all went to emphasize the strain of the barbaric and imperious which was her inheritance

from that grim line of seamen who had sprung from the house of Craigenside. She breathed stormily. The black ribbon slung about her neck moved; one point fluttered on my cheek.

But my own attention returned to the stage. Our friend, Mr. James Smith, had flung out on the bare boards a system of wires ending in what appeared to be small bulbs of black rubber.

Speaking slowly, in his thick, grating voice, which seemed to have been long unused, he called the attention of the audience to the fact that the man—or mechanism—was now about to move.

"You will observe," he continued, "that when I press this bulb he walks alone. I have provided him with the floating principle of equilibrium, You all know that the thing which keeps the balance of the human body is afloat in an inner compartment of the ear. This principle I sought to imitate in vain for many years, and I discovered my method only by chance, through feeding domesticated pigeons on bread crumbs soaked in brandy."

A murmur came from the audience.

Mr. James Smith pressed the bulb. There came a whirr, a clack, the left hand of the object shook, the fingers remaining rigid. In another instant, with a faint sound of clicking, the thing stepped out of its box and took a stiff step or two along the stage, its crimson-clad arms dangling.

Mr. James Smith dropped the bulb he had been holding. At once the Man—or Mechanism—came to a halt. The arms twitched spasmodically, and the head canted a little to one side, the eyes, however, continuing wide open and utterly without expression.

"It is necessary," said its proprietor, "to simulate by electrical impulses the effect of muscular contraction and expansion. It is plain that if the peristaltic and respiratory impulses could be similarly simulated, the organism would differ in nowise from man's. It would be possible to nourish it, as a system of normal reflexes."

He then drew from his pocket a small package, and uttering pleasantly the words "Red pepper," slashed it through the air.

Several gentlemen in the front row sneezed. Smith sneezed himself; but the figure in striped velvet remained unaffected. There was something severe and statesmanlike in its profile, actually the same look of cramped greatness which you will see, for example, in the portraits of William H. Seward.

As to the authentic nature of this miracle, people were about equally divided. Some were saying that of course the pepper would not have its effect on sawdust; others averred that the figure was a man who had schooled himself to endure its ravages.

But the girl at my side sat white-faced and silent, following with all her soul the least movement of that perplexing manikin. Useless to recount its bag of tricks. It sat in a chair, it picked a handkerchief from the floor, it raised a china cup to its lips, it put a derby hat on its glossy head. The range of its performance was, of course, narrow; the fact of mere movement on the part of such a contrivance was what was remarkable to those of us whose minds habitually swung open on hinges of wonder. Once when the current of its being was cut sharp off the thing fainted dead away, and lay limp in the arms of its creator, still with its miraculous eyes wide open in that impenetrable glassy stare of which it was past master.

I did not once see the quiver of an expression there. There was not the slightest movement of the lashes, not the least flutter of a lid or wrinkling of skin round the eyeball—movements which chiefly control and determine the expression. I did not so much as detect the pulse of an artery in the neck or an expansion of the lungs, and yet there was a lurking, underlying something there like human personality.

"Has it a soul?" breathed Mr. James Smith in one place. "Ladies and gentlemen, I do not know."

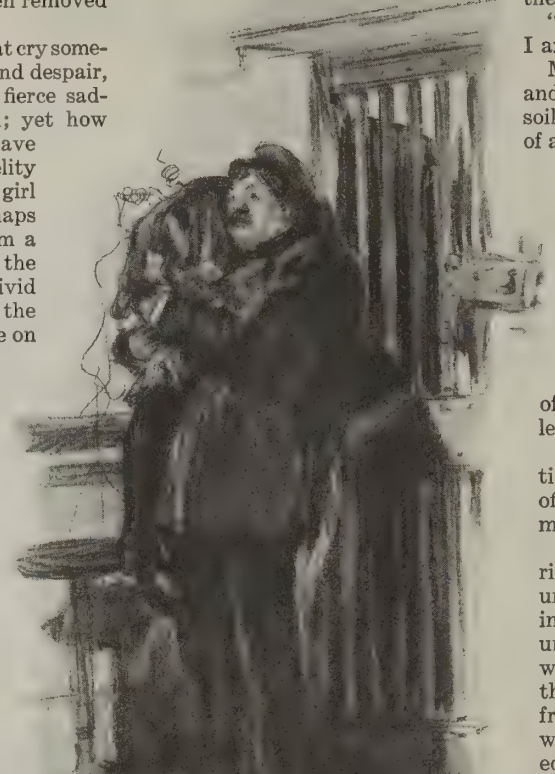
In the very moment of deciding that the thing was a mechanism I had called to mind those swiftly whispered words of the girl at my side, "It is he!" when the lid had been removed from the box.

I seemed to read into that cry something between yearning and despair, a note of unconquerable fierce sadness. It was recognition; yet how should the man Smith have modeled with such fidelity the face of a man this girl had known? Had he perhaps copied these features from a living model? Or was the man himself behind this livid mask? I remembered the trepidation of Craigenside on seeing the ornithologist's bag, and it began to be plain to me that this was no haphazard business.

As these reflections crossed my mind the proprietor of the act said in his suety voice that, for the benefit of those whose eyes might be dim or whose judgment was yet undetermined, the figurine would walk into their very midst and undergo the closest scrutiny possible to be given it.

A runway was brought, a wooden chute, with cleats nailed across it, which we had made use of the week before in connection with the performing horses.

"He is coming down," whispered Jane Craigenside. "We shall see."



"It's Only a Straw Man After All, and Pretty Well Drowned Too"

The manikin hesitated on the verge of the descent, tottered, put out a foot in exact accordance with the elaborate leg action laid down for it, and began the descent.

The strangest feelings flooded through me as I beheld the uncanny contrivance approaching at its precise, shuddering stride. I heard the soles of its boots tap in the wooden aisle. I saw the graven face loom closer; there was a fixed light in the eye, which seemed frozen in the socket, and not the slightest movement of the lids, although a swirl of dust just then passed over the theater fence which set everybody coughing.

With the same mechanical accuracy it came on, dragging its wire, until it was within ten feet of where we sat. At this moment a soul-stirring change came over it. I do not aver that there was so much as a quiver of a facial muscle—the lids were as before, there was no breath in the nostrils—and yet I could have sworn that the look of yearning and despair which I had seen in the girl's face was now reflected in these dark eyes, which only a moment since had seemed as impenetrable as stone.

It was all in a second; a thrill passed through me as my sense of this interchange of profound emotion grew more certain. Already the girl was rising in her seat, her clenched hand pressed into her cheek—when there came a click which had hitherto been no part of the action.

The manikin reeled in its tracks, and I heard the fat Mr. Smith lumbering down the runway. As he wrapped his immense arms hard about the scarlet body of the mechanism he shouted hoarsely:

"The sea wind. Ladies and gentlemen, the air has proved too heavy for it. I ask your kind indulgence ——"

He was back on the stage with the agility of a spider, and in a second had clapped the figure into the box and replaced the lid. At this moment, and before the ornithologist could make his apologie the girl whispered to me:

"Mr. Weymouth, will you take me out I am not well."

My hand was already at her elbow and I hurried her up the aisle, past m soiled and shuffling colleague, whose ey of a boiled codfish bulged with curiosity and so into the deep shadow cast b the theater fence.

Her white dress was all that wa now visible. The dark plumes the aged pines hung over us lik brooding murderers. Step by step followed her as she made the circu of the fence. She moved like a slee walker, one slim arm outthrust, u til at length we stood at the botto of a rickety flight of outside steps whi led into the dressing rooms.

"You can be certain of my discr tion," I remember saying. "I am officer of the law, but I am first of all man."

The tension was so great that t ridiculous flavor of this assertion pass unnoticed by her. She took her skir in her hand and began the ascent of t uncertain outside staircase. When s was in the act of turning the knob the door at the top a loud outcry aro from within—a chorus of voices which fear and accusation seem equally blended. It must have be audible even to those sitting in t theater seats.

In one bound I was at the girl's sid and had thrust hastily past her into t alleyway which ran the length of t dressing rooms and separated them fr the stage proper. The place was thi with the bodies of partly denuded p formers. A sweating strong man barred my way; eloquent arm shook with soft and complicated muscl His was a silent act, but he proved to me that he did r lack a tongue.

"I tale you," he shouted, "I haf heard 'eem cry ou

He pointed to a wooden door on which was stenciled black paint the figure 3, and now I saw that my colleag Fuller had been before me. He must have run across t stage itself. He was kneeling before the door and star through a crack in the panel.

I turned to a pale-faced, scintillating young woman, wife of the strong man, whose dress was hung to her fre led shoulders by the veriest threads of scarlet. She cr madly in my ear that murder had been done in there, a that the other officer refused to break the door down.

Mr. Fuller in truth looked not a little pale. He had co mitted the fatal intellectual folly, for an officer, of read too much law; and he was now besieged by a hide doubt of his legal right to enter without a warrant.

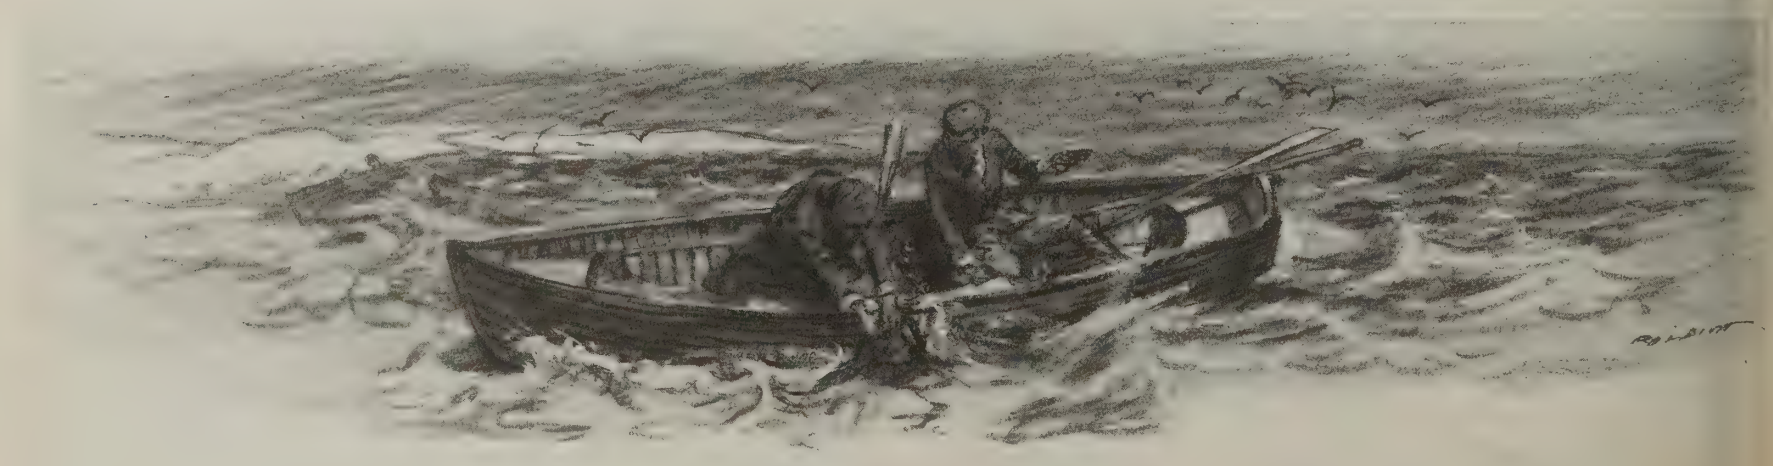
"This woman says she heard a sound like someth had fell into the river through the trap," he mutte "But that ain't nothing more than hearsay."

He glared at the insistent woman with a resentful which said plainer than words that she had manufactu this story on purpose to embarrass him. It was, howe perfectly true that the whole place overhung the ri The tide was now running out strongly, and we co plainly hear the piles grunting and squealing toget underneath. Flashes of moonlight from the water c through cracks and knotholes in the floor.

"Who is in the room?" I shouted.

"The Man or Mechanism act."

I hesitated no longer, but put my shoulder to the fli door and burst it in.



Sturgis Threw Down His Oars and Brought the Thing in Dripping, With a Piece of Kelp Clinging to It

Directly opposite me, on a ruined chair, sat Mr. James ith, his skullcap awry, his hands fumbling with a curi- s nickel-plated pipe which I recognized at once as an ium container. His eyes were calm, but his chest rose d fell strongly, as if after violent effort by one not in the st of condition, and the knoll of flesh on his forehead was oded with a sinister scarlet. But there was not the slight- trace in the room either of the black box or of the leous and questionable shape that had lain within it. ly in the center of the floor yawned a hole, made by a ed trap, two-feet square, disclosing the bright chaotic ver of the running tide ten feet below.

"He's dropped him in the river!" quavered Fuller.

"Then search at once," I cried; and closing with Mr. nes Smith, I added: "You are under arrest. In the me of the Com- nwealth I arrest u."

He mouthed the m of his pipe, and glistening astral uble lids drew ck slowly with ir infernal snakish tion.

"What's the urge?"

"You are charged h the murder of unknown man— r assistant."

The ornithologist e trailed some gabol in the air h his pipe stem. At the same time I ed that the lump his forehead had its red glare and recovered that uliar and even thsome iridescent iteness.

"My assistant?" said with a nasty e. "I had no as- iant."

The thing in the , then."

"Ah," said James ith, "if you close to call a figure tffed with straw an sstant ——"

His face was as en as the face of one god and his ed eye gleamed.

The thing you rer to was a toy, a mechanism," he sal in even tones. failed to work in a crucial moment, as you have seen. In rage I destroyed it and threw it in the river. Who had better right?"

I stood aghast at the smooth and horrible plausibility of th assertion. It was a mechanism—and he had destroyed it What proof had we that it was not a mechanism? We we accusing him of murder, and yet not only the iden- ti, but the living reality of his victim hung in doubt. If it was indeed a thing of rags and wires I should be the laghing stock of a county.

But even while I hesitated Jane Craigenside stood at m elbow. With her hand at her throat she cried fiercely, w fully:

"He lies! He lies! It was a living man. Oh, why do you al stand there talking! Let the river be searched. It may n be too late even now."

These words broke the spell which the assertion of the orithologist had laid on all of us. I called to Sturgis and Fuller to take boats and proceed along the river's bank, fol- loing the tide and keeping an eye out for the black box ar its unlikely occupant. I reserved to myself the duty of scorting the prisoner to the jail. Our jail consisted of a dble cell, screwed to the floor of a log cabin which had se service as a lunchroom.

A yellowed sign, "Ham Sandwitches 5 cents," still lin- ged on the wall.

As soon as Smith was fairly in the cell a shadow of mis- ging crossed his bloated face. He gripped the bars.

"Gentlemen," he said earnestly, "I swear to you that wt I have told you is the truth."

"I hope for your sake it may prove so," I returned gr ly.

While waiting, I held an inquiry among the members of th troupe, but nothing of a positive nature was to be le ned. As the Glade manager, Wakefield, had already to me, the five acts had come from five different houses. They had come late, and had hastily occupied the dressing rooms assigned to them. On one point they were all agreed: None of them had seen the supposititious partner of Smith lingering in the alleyway, nor had any of the Glade em- ployees seen him in the Glade. All the others had been seen, and were now identified; but this man—or mechanism—had not been seen. Strange fact! It occurred to me that per- haps the make-up of the man, his utter lack of expression as he lay in the box, had deceived them.

"You see," said James Smith, "there was no such man."

Sweat stood in large beads on his shining brow.

"You may be right," I said; "but I am not convinced of it. You are no fool. Man alive, why should you destroy your means of livelihood? How can you expect me to believe you so infernally childish? It's nonsense!"

"Oh, Why Do You All Stand There Talking! Let the River be Searched. It May Not be Too Late Even Now"

"Truth," he murmured. "I am subject to fits of rage."

He sank back on the stained mattress, and precisely then I had another thought.

"And why—why should you drop box and all in, if I may ask? You had no quarrel with the box, I should imagine."

He did not answer. But then in the very moment when, as it seemed to me, confession trembled on his lips, I heard outside among the pines the noise of a crowd of people coming toward the jail.

"Now, then, Mr. James Smith, we shall see," I said.

In the faint light of the cobwebbed lantern his face was darkened by a horrible uncertainty. He clutched the bars, he swayed, he glinted, he breathed with a hoarse catarrhal rattle in his throat. I assure you I wished myself well rid of him and of the case as well. I was as certain as of any- thing in this world that the man facing me there was guilty of the most damnable atrocity—the murder of a hypnotized subject.

And suddenly Sturgis burst in with a limp, draggled body slung over his shoulder. The head hung down; some of the pallor had soaked off in the water, but there was no mis- taking the hawknose, the black hair, the wide staring eye, and the scarlet trappings of the manikin which had just now paraded upright before our eyes. A system of tangled wires hung from its thigh.

"Here we are," said Sturgis. "It's only a straw man after all, and pretty well drowned too. Man or mechanism, hey? Well, neither, just at present. Not even a good don- key's breakfast."

I glared at Smith. He had entirely recovered his self- possession.

"I suppose I may ask you to unlock this," he said inso- lently, rattling the door of his cell.

Now in strict truth it was beyond my power to release, of my own accord, a man whom I had once arrested in the name of the Commonwealth. But I thoroughly disliked the notion of being laughed at in open court, and the idea of confessing to that rat-faced little judge, with his feazing goatee, that I had arrested the prisoner on the charge of drowning a straw man made no appeal to me. I there- fore unlocked the door to the cell.

"Sorry to have detained you," I mumbled, crestfallen.

My hatred of the man in that moment was as extreme as my puzzlement.

"I suppose I may take my property," he said with a gesture toward the scarlet figure.

I nodded, lowering the lantern. He stooped, picked up the manikin, and in another moment we heard his huge feet crunching among the pine cones and lobster shells. Instantly Sturgis closed a moist hand over mine.

"Quick! Follow him, but at a dis- tance," he said in a shaking whisper. "We are not through with this man yet."

"What the devil ——" I began, star- ing through the black pines.

"Come, quick," said the boatman. "We have him safe enough, if we follow on."

I followed my friend in amazed silence. The crowd had evidently tired of waiting in the en- virons of the jail. The curious features of this business had not been noised abroad, and it was thought to be noth- ing but some sort of drunken brawl of a kind with which those who fre- quented Silver Glade were only too famil- iar. The lower part of the Glade was empty when we came into it, and the arc lights were out; but still we could see ahead of us the mov- ing shadow of that mysterious man who carried a scarlet puppet slung over his shoulder.

"He will go into the hotel," whispered Sturgis.

He was wrong. The ex-ornithologist did not go into the hotel. He first came out of the thicker growth of pines behind that building; and then with the moon shining on him, he began to run toward the boat landing as if an imp were in his heels. Once there, and with the same unexpected agility he had displayed in coming to the rescue of his mechanism in the theater, he darted aboard a long, shark- like motor boat which was tied up there, the Fra Diavolo.

The Fra Diavolo was a speed boat, shining in brass and mahogany, and stuffed full of luxurious divans and wicker chairs. It belonged to a youth called String Fortescue, who haunted the Glade as if its nymphs were sacred.

Mr. James Smith cut the painter with a knife. Next we saw him stoop and turn the flywheel over. We heard the engine sputter, we saw the ornithologist straighten up and seize the wheel.

"He will escape after all!" groaned Sturgis, breaking into a run.

"Escape?" I said stupidly. "Escape? But we have let him go."

Sturgis made no answer. He ran forward, only in time to catch in the face a dash of spray from the sheer of the Fra Diavolo, which began to move fast toward the mouth of the river. Mr. James Smith was standing hatless at the wheel. The moon sparkled on his polished dome, and we saw very well that he was heading for the open sea.

"Quick—oars," cried Sturgis, fumbling with the painter of a boat equipped with two sets of rowlocks.

I had never seen him so disturbed. The water slapped over his shoulders, but he paid it no heed. He stared back into the Glade; there was no sound of following footsteps.

"You are crazy as a loon!" I yelled. "How are you going after that thing with oars?"

"Lame engine," puffed Sturgis. "Don't argue. Come on. He may stop any minute."

The New Utopia

PRESIDENT WILSON'S address to the Senate in January was damned with faint praise—or, just damned. To many distinguished preachers, politicians and business men his proposals were "Utopian"; "beautiful ideals"; "desirable, of course, but not practical." To one of our historians they were "asinine."

There was a time in the history of this nation when we made ideals come true by believing in them. America was discovered, settled and preserved by faith in such "beautiful ideals" as are embodied in the Declaration of Independence, which in its day was quite as Utopian as President Wilson's proposals. Nothing is so practical as an ideal in which men believe.

A Call to the Nation

PRESIDENT WILSON'S address is the most important and the most admirable public utterance that has been heard in the United States in many years. It expresses the supreme interest of this country in its foreign relations. The country, we believe, is ready to support it heartily.

We want peace, first for ourselves, but also for the world. This war has made it doubtful, at several junctures, whether we could have peace for ourselves. Through trade, travel, investments, and so on, common world interests interlace more and more closely. Opposing alliances of nations to secure a dubious balance of power grow more and more extensive. Any future war is quite certain to be a great war, and to affect more rigorously those nations that seek to stay out of it. Presumption is all in favor of the President's declaration, some time ago, that we could hardly hope to keep out of another world war.

Peace now depends absolutely upon the will of any nation. If it asserts that its honor or vital interest is involved, the world has no recourse save to submit to an ordeal by battle, even though the whole world may be involved in it. In the present state of the world's development that is a ridiculous situation. There must be some organ to express and assert the common interest as against any particular national interest. No other arrangement contains a reasonable guaranty of peace.

The United States is pretty well agreed as to that. It should be willing, then, and glad, to take its share in establishing and supporting an organ of the common interest. To declare that we want lasting peace, and then sit back and merely advise Europe how it may secure lasting peace, without being willing to take our share in securing it, would be a contemptible rôle. There may be differences of opinion over details; but details are unimportant now.

The idea that President Wilson expressed to the Senate ought to receive the country's hearty indorsement.

Centralized Bank Power

THE Federal Reserve Act became law a little over three years ago. What chiefly recommended it to many people was that it theoretically reduced or neutralized the power over bank reserves which the big banks of Wall Street had long exercised. Evidently, however, it was not concentrated power itself that these people feared; for this act probably concentrated in the hands of a few men greater power over banking than any like number of men had ever exercised anywhere else in the world.

Last September, without much opposition or discussion, the act was amended in a way that increased the power of the central board. At this session of Congress other amendments are proposed that would still further extend the board's power. They would require all national banks to deposit all their legal cash reserves, except five per cent—which is only till money—with the Federal Reserve Banks. They would empower the board, by a vote of five members, to increase the banks' reserve requirements by one-fifth at any time, thereby drawing that much more bank money into the central reservoirs.

Amendments adopted last September or proposed now would increase the central institutions' discretionary powers in handling the reserves deposited with them and in issuing circulating notes. Broadly speaking, half a dozen men could expand or contract bank credits at will, merely by pressing a button.

Not that the amendments adopted last fall or those proposed now are necessarily obnoxious. They may be very useful. But we are always talking about the danger of centralized power; yet in various cases we cheerfully hand over to a few men centralized power to a degree hardly known elsewhere; which finally means that our practice is better than our preaching.

Burying Dead Languages

THE General Education Board, backed by thirty-five million dollars of Rockefeller money, proposes, in coöperation with Columbia University, to try a series of experiments that look toward reorganization of elementary and secondary education. The experimental school will ignore Greek and Latin, and stress modern languages. It will try to find a method of teaching mathematics in connection with the ordinary practical uses of mathematics. Science, industry and the domestic arts will be prominent, and increased attention will be given to music, drawing and the arts.

Every effort will be made to keep the pupils in constant contact with their natural, industrial, social, economic, vocational and domestic environment, so as to derive the basis for their school work from real situations and thus make school work constantly real to them. The theory of education known as formal discipline will be discarded and an attempt made to secure mental training through the study of subjects that are valuable in themselves, and not merely useful as means of discipline.

A highly praiseworthy and promising undertaking, we should say; frankly experimental, with no implication that public schools or other institutions of learning shall adopt this school's recommendations until at least a strong probability of their usefulness has been raised.

Yet we find the proposal ponderously assailed as a blow to culture; an opening wedge to a merely sordid materialistic scheme of education, which, ignoring æsthetic and moral values, will presently make us a race of efficient Hottentots.

The notion that a boy going to sleep over his Cæsar is still traveling in the high road to culture, while a boy all excited over an account of how the Wright Brothers invented a flying machine is in a blind alley, dies hard. All the same, it is dying.

Law and Sense

IT FREQUENTLY happens that after a case has traveled for some years through the courts, and the lawyers have buried it under a whole mountain range of precedents, technical points, ingenious theories and supposititious perils to life, liberty and the pursuit of happiness, the Supreme Court brushes all that aside, looks simply at the essential elements of the case, and decides it according to sound common sense.

Its recent decision upholding the "blue sky" laws of Ohio, Michigan, South Dakota and—inferentially—some twenty other states, is an illustration. These laws were designed to stop an extensive and peculiarly detestable form of swindling. They vest large discretionary powers in state boards. Those powers might be abused. They might be applied in a hidebound, vexatious way, so as seriously to embarrass legitimate investment business. In any event they would impose some trouble and expense upon legitimate business. So lower courts declared them void, as an undue interference with interstate trade in stocks and bonds.

The Supreme Court expresses the kernel of it in few words by saying that the prevention of swindling is within the police powers of the states; and if that does incidentally impose some burden on legitimate business it is for the state to say—within reasonable limits, of course—whether or not the object in view is worth the burden.

Intelligently administered, these laws need burden legitimate business but little. It is for the states to see that they are intelligently administered, with an eye singl to keeping out the swindler. We have always believe that precisely the best thing for legitimate investmer business was to keep out the swindler.

Investment Tendencies

LIFE-INSURANCE companies—mostly mutual—an mutual savings banks have about ten billion dollars invested assets. This is much the biggest concentrate investment fund in this or any other country. The inves ing is done by experts; and the changes that occurred in ten-year period, as disclosed by a recent report, should b interesting to individual investors.

The biggest item, footing up four billion dollars, co sists of real-estate loans, and the next biggest—about ha as large—consists of railroad bonds. These two are th prime investments; and the great preponderance of loar over railroad bonds must be viewed in the light of the fa that these investors have well-organized facilities for mal ing mortgage loans.

In ten years loan investment increased more rapidl than railroad-bond investment, especially in the case life-insurance companies. Their investment in mortgag loans, in fact, increased a hundred and forty-four per cen while their investment in railroad bonds increased onl sixty-seven per cent. At the same time their investmer in municipal bonds increased two hundred and twenty seven per cent.

As the freer agents—investments of savings banks beir strictly prescribed by law—the life-insurance companie changes are the more significant. The fact that the increased their investments in mortgage loans, municip bonds and public service-company bonds by almost billion and a half, while increasing their investment railroad bonds by only half a billion, is not a wholly sati factory sign; for it suggests a disparagement of railroa investment.

Commercial Failures

TAKING it all round, 1916 was the best business ye the United States ever experienced; yet there we seventeen thousand business failures. Compared wi twenty-two thousand the year before, this is encouragin but practically one out of a hundred of all concerns business failed, and, year in and year out, through go times and bad times, the proportion of failures nev varies very far from one per cent.

In only two hundred and sixteen of the seventee thousand failures did the liabilities exceed one hundr thousand dollars. Nearly all the failures, in other wor were of small concerns.

Credit men assign many reasons for these failures, su as lack of experience, insufficient capital, injudicio extending of credit, overbuying—which merely mea unwise buying—and so on. But we venture to guess th one cause was present in nearly all of them—to wit, pc bookkeeping. They did not keep books so as to kn exactly what it cost them to do business and precisely h they stood all the time.

We recommend again to every business concern accounting system that will show costs accurately.

A Growing Idea

AGRICULTURAL and labor coöperation have be formally sanctioned by Congress. The Governm has long informally sanctioned joint rate making by r roads. The new Shipping Act provides that certain agr ments among water carriers to restrict competition shall valid when approved by the board. The act to perr coöperation by manufacturers for export trade will dou less pass.

We are steadily giving statutory acknowledgment to t plain fact that in various cases unrestricted competiti is harmful.

Now the Chamber of Commerce of the United State urging coöperation that would restrain competition certain industries based directly on natural resources known supply of which is strictly limited.

There is abundant evidence that unrestricted compe tion in soft coal mining works badly, for it leads direc to great waste. A recent report by the Department Agriculture shows that timber is in somewhat the sa condition. With keen and unlimited competition am lumbermen, many of whom are holding great areas timberland that will not be available for market for ye but upon the capital investment on which interest m somehow be earned, there is wasteful overproduct every now and then; the most conservative methods cutting are not followed, and there is very little atten to reforest the cut-over areas, though, as consumpt exceeds Nature's growth of the forests, this is bound time to lead to shortage and still higher prices.

The Forest Service recommends coöperation am lumbermen—not extending to the fixing of prices or lin ing of output—as a partial remedy.

WARM DOLLARS

By Frank Goewey Jones

ILLUSTRATED BY CHARLES D. MITCHELL

A STOCKY young business man strode resiliently down lower Woodward Avenue and wheeled into a cross street near the river. John Kent's brisk walk in the September sunshine had splashed his smooth, lean cheeks with pink. His brown hair crinkled moistly along the edge of his forehead. Vitality bubbled in his blue eyes.

He approached the entrance to a low, short building. 'Gordon Machine Shop—George Gordon and John Kent, Proprietors," was painted in sooty white on the red bricks. The tread of the junior partner had been elastic; but as he opened the office door his whole body became taut. He marched in self-consciously and spoke a formal salutation to the only other occupant of the little room.

"Good morning, Mr. Gordon!"

The tall figure that stood near a side window twisted about at Kent's entrance. The bent broad shoulders stiffened. The brooding gray eyes instantly turned hard. The shock of grizzled tawny hair and the crisp beard seemed to bristle, all at once, like an old lion's mane. A leonine voice growled from the deep chest:

"Good morning!"

The bookkeeper and the stenographer were not due to arrive until half past eight. The partners continued alone in the cramped plain office, but they exchanged no speech after greeting each other. Kent sat down at a flat-top desk. He swiftly opened and sorted the pile of mail on his blotter. Gordon stood, almost rigid, beside the window until the young man crossed the room and set a tray of letters on the big table in the farthest corner. Then the head of the firm walked to his place.

Kent unlocked the safe and stuffed a handful of customers' checks into the cash drawer. He turned and looked wistfully at his partner. John had racked his wits for the last nine weeks trying to determine why his business associate and foster father had altered suddenly in mid-July from paternal affection to cold dislike. A dozen times he had begged or demanded the reason. The dour Scotchman always refused to explain. Yet now Kent longingly repeated his question again:

"Spit it out, dad, won't you?"

The stern, proud old face gave no sign that the veteran master machinist had heard the appeal. The stony gray eyes were not lifted from the letters on the corner table.

Though Kent felt innocent of any dereliction, he hung his head as if he bore a shame. For half a minute after his puff the young man quivered in front of the safe. Then he trudged heavily from the office into the little shop.

The moment the junior partner closed the door between Gordon and himself his resilience began to return. He greeted the workmen cheerily as he traversed the aisles lined with closely set machine tools. The first smell of oily metal was an elixir to John every day. His blood raced now like the belting. His pulses throbbed in harmony with the rhythmic jar of the punch presses and automatically shifting turret heads. His eyes held such sparkles of lighting as danced on the bright commutators of the motors.

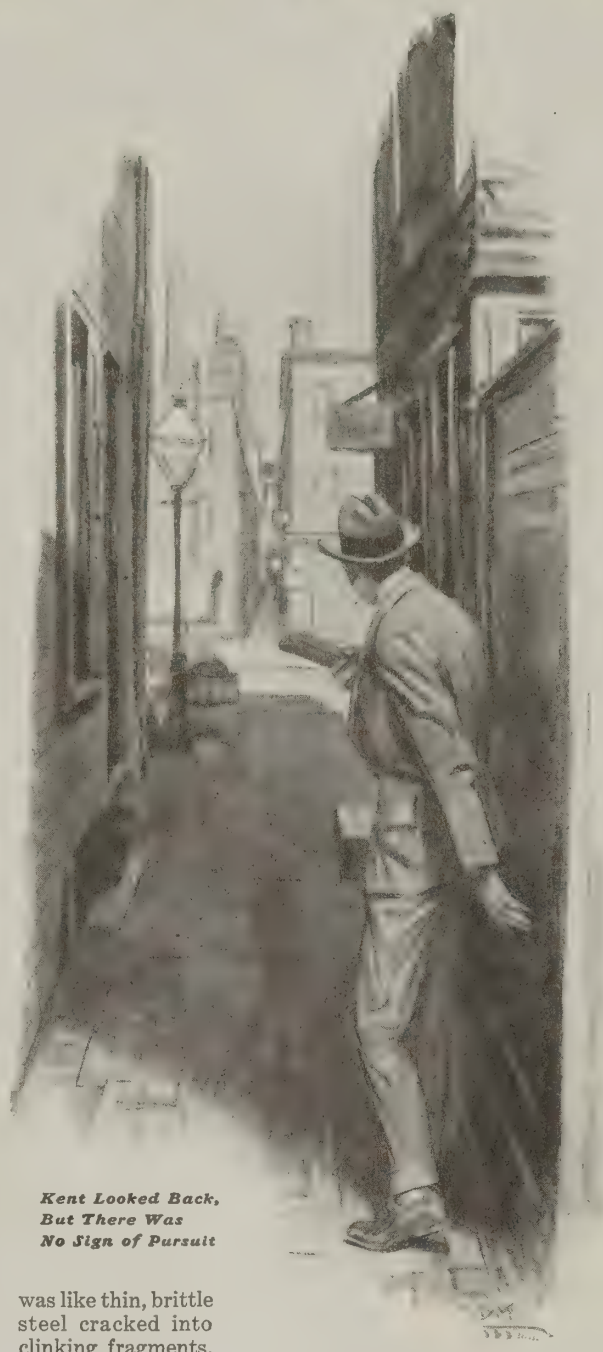
But this morning his tingle of satisfaction in the busy shop dulled very soon to an ache of lonesomeness. Kent missed more than ever before the stalwart, kingly old fellow he had left in the office. Each successive day of the last two months he had yearned increasingly for the comradely presence of "dad" beside him whenever he made the rounds of the factory. They had been like father and son for years. Gordon had taught Kent his trade. The pain of their estrangement had grown unbearably poignant to the young man.

John did not want to return to his desk, though the familiar clatter of the shop no longer soothed him but jangled his tense nerves. He impulsively decided to call Walling instead of later, as he had intended, at the Walling Engineering Works down the street, where he was having built the first model of a carburetor he had invented recently. Kent left the Gordon Machine Shop by a rear door. Five minutes later he entered the dingy big office of Henry Walling.

The automobile engineer, a prematurely bald, barefaced man in rusty black, squatted behind a low drafting table. His long neck and narrow shoulders were stooped close to some blue prints outspread under his fingers. He peered above his steel-rimmed spectacles as the door unlatched. Then, with hurried furtiveness, he scrolled the papers and straightened. Walling acted as though he had come close to detection in guilt. He laid the blue prints stealthily on the drawing board and creaked a greeting meant to sound cordial:

"Well, well, John! I'm certainly glad to see you! I didn't expect you to come over the very first thing. This is fine!"

His fulsome words and hoarse tone rasped incongruously, as if the oil of geniality had been so unfamiliarly applied that the harshness of his natural expression grated in his voice despite the copious lubricant. His metallic chuckle



Kent Looked Back, But There Was No Sign of Pursuit

was like thin, brittle steel cracked into clinking fragments.

Walling minced round the draftsman's table and effusively clutched the palm of his visitor. Kent pulled his hand away from the bony fingers after the briefest grip in return.

"I just dropped in, Walling, to tell you I appreciate your proposition on my new carburetor; but I prefer to swing it in the Gordon Machine Shop, along with my other automobile specialties."

The disappointed sycophant turned vicious in a second.

"So you refuse my offer of fifteen thousand dollars," he snarled, "and intend to present half of your latest invention to that fossilized partner of yours!"

"Cut out slurs at Mr. Gordon!"

The warning was snipped off as if Kent's lips had been shears. His eyes hardened to the blue of tempered steel. The engineer, in trepidation, blurted a hasty palliative.

"I respect the old gentleman as a first-class machinist. Everybody does. For twenty-five years George Gordon has been generally recognized as Detroit's best independent master mechanic. But you know as well as I do that he's prejudiced against the automobile business. Even now he thinks it's just a craze, which will die out pretty soon. Why, if you give him a half interest in your carburetor he'll choke all its chances to death in his dinky machine shop."

Walling dropped disgustedly into his chair behind the littered desk. Then he made a sudden fresh attack on Kent's purpose. He swiveled about and swung forward like a rapid-fire gun.

"You've never mentioned your latest invention to your partner, have you?" he shot out.

"No; I'm going to surprise him with my carburetor as soon as you get the model done."

"Well, you won't!" Walling denied bluntly. "He's known all about it for months."

Kent rushed across the room and crouched in menace before the desk.

"You told him!" he accused. A flash of intuition had given the junior partner his first glimpse of a reason for his associate's resentful coldness of late. "You wanted to cause trouble between dad and me so you could drive us apart and get me to hitch up with you instead. You let him know I was having you build a model that I'd never mentioned to him. Of course he misunderstood my purpose in ordering the carburetor made here secretly."

"I didn't tell Gordon anything!" Walling hotly repelled the charges. "I hadn't spoken to him for six months until last Wednesday. He came up here to my office that afternoon and asked me point-blank about the carburetor. I've no idea how he learned I was building the model—unless he picked up a hint from some workman."

"I apologize!" John made hasty *amende;* then he put an eager request: "Tell me everything Mr. Gordon said."

He smiled in anticipation of hearing the cause of his partner's recent hostile behavior.

"What are you laughing at?" Walling demanded indignantly.

"Why, dad hasn't spoken a civil word to me for two months. I couldn't imagine why. I see now that he's been grouchy because he thought I was underhanded about the carburetor. It makes me laugh to think how he'll look when I tell him the real reason I kept it secret from him."

Walling leaned back in his seat. A grin wrinkled his crafty face, as if the unaccustomed inward warmth shriveled the dry skin. A chuckle of satisfaction rustled harshly from his throat.

"You're all wrong, John!" the engineer croaked. "You don't savvy Gordon any better than he understands you. I knew you both were tangled. That's why I phoned you to come over. I'll get you straightened out; then I'm sure you'll change your mind about giving him half of your carburetor. You'll accept the proposition I made you, instead, and become my partner. Sit down. I'll tell you some things you ought to have known long ago."

Kent's buoyant new hope for restored affectionate relations with his foster father was punctured. He collapsed in a chair.

"What do you mean?" he cried fearfully.

"Gordon doesn't want a share in your carburetor!" Walling exulted. "Probably he did feel hurt because you kept it secret; but that is only one reason he's sore at you. What he bitterly resents is your jamming his old shop full of 'newfangled contraptions.' That's what he called your automobile specialties. He still expects the motor-car business to blow up any day, and it made him wild to find out you are going to take on another device in which he has no faith.

"He told me your inventions monopolized the machine tools—that the firm was handling practically no custom jobs nowadays. It drives him frantic to think that you intend to crowd from his old shop more of the familiar work he has done for a quarter of a century, which he knows is safely profitable, in order to run additional chances by manufacturing a new carburetor. The old fogy declared he'd be glad if every one of your specialties was out of the place."

Kent stared blankly; yet he was not so stunned by surprise as he appeared. John seemingly looked at Walling, but he saw only the loved face of the crotchety "old fogy." His eyes were fixed because his thoughts were concentrated on his personal problem in its new light. The engineer misconstrued Kent's silence. He seized the apparently favorable opportunity to urge his own plans again.

"Gordon would be a great deal more contented if you'd give him back his shop to potter round in with jobwork for his old customers. Now I've offered to organize a fifty-thousand-dollar corporation with you to make the carburetor. I'll put up twenty-five thousand cash for half the capital. For the other fifty per cent of the stock you invest ten thousand dollars of your own as a guaranty of good faith, and assign your rights as inventor in exchange for the remaining fifteen thousand.

"In addition I'll give my technical knowledge as an automobile engineer to the company for a merely nominal salary—say a thousand dollars a year—while you'll draw five thousand. You'll soon be a rich man if you come in with me. Our company can take over your other specialties, too, a little later, if you're willing. We'll issue additional capital stock to cover them. Now what do you say?"

While the voluble engineer expatiated on his program Kent was comparing in his mind the greedy little fox and the stalwart old lion of the machine shop. All at once John's filial respect and love for Gordon surged overwhelmingly from the depths of his heart. On the crest of the wave curled the froth of his dislike for cunning, sordid Henry Walling. At the avid question Kent leaped to his feet.

"What do I say?" he foamed. "That I'd rather give up all my specialties and earn five warm dollars a day as a machinist at the bench beside Dad Gordon, as I used to

do before he took me into partnership, than to share a hundred times that much with you! You're just a money-making machine! He's a regular Man!"

When the swelling billow of his feelings broke into the spume of speech Kent had backed with repugnance from the desk. At the conclusion of his outburst he whirled to the door. As he turned suddenly to leave the room his hand struck the drawing board. The blue prints the engineer had furtively scrolled when he first caught sight of his early morning visitor dropped to the floor. John bent to pick them up. The roll loosened in his fingers. His eyes glimpsed the fine print in the upper left-hand corner of a sheet:

K–W Carburetor
John Kent and Henry Walling
Inventors
March 7, 1916

Kent's scornful words seemed to have paralyzed the astounded engineer. He had acted confidently in renewing his corporation proposal. When his scheme was flung aside with aversion he huddled behind his desk like a clutter of rusted junk. But as Kent stooped to retrieve the fallen blue prints Walling sprang from his chair as though animated by sudden terror.

"Get out of my office!" he shrieked.

John was dumfounded when he saw his name on the drawings joined with that of the engineer as co-inventor of the carburetor. He did not comprehend yet what the caption signified, but he was enraged, after the first shock of astonishment. Like a menacing bulldog he faced the little man behind the table and snarled his ferocity:

"What's the meaning of this?"

Instead of answering, the panic-stricken engineer bolted through the rear exit of his office to his model-making room and slammed the door. John leaped in chase, but a lock barred pursuit. He shook the knob savagely; then he heard the rush of many feet and Walling screaming frantically to his workmen:

"Kent's got some of my drawings! Take them away from him! Quick!"

John bounded across the office to the front door and clattered down the stairs. He darted round the corner and up the street toward the Gordon Machine Shop. He looked back, but there was no sign of pursuit. Kent slackened his gait to glance over the roll of papers he gripped.

The blue prints constituted a complete set of drawings of his latest invention. With the exception of the extraordinary notation on them, John was familiar with everything in the dozen sheets. Walling's model-makers had been referring to such drawings for their guidance while they constructed the sample carburetor. The detailed original tracings of Kent's new motor specialty had been made by the engineer's draftsmen as part of the work on the order the inventor had given for the building of his first model. John had seen many similar blue prints before; but on none of the other had there been the corner notation, in fine print: K–W Carburetor—John Kent and Henry Walling, Inventors. March 7, 1916.

Kent hurried back to the Gordon Machine Shop. He intended to explain away in a jiffy his partner's misunderstanding about the carburetor; then to ask the shrewd old Scotchman whether he could guess the meaning of the words which indicated that Walling had some villainy afoot. John never before had felt so urgently in need of counsel from his foster father. But he found that in his absence Gordon had left the office. The bookkeeper did not know where he was.

The junior partner hesitated a few moments, undecided what he should do. Then he rushed from the shop to consult his patent attorney. He poured out his story. The lawyer listened with grave attention, asked a great many questions, and at the end shook his gray head portentously.

"Walling has schemed to get a half interest in your carburetor by fair means or foul, Mr. Kent. I surmise that every employee of his who worked on your model received blue prints like these, with your name and Walling's in the notation to indicate you were joint inventors.

"Probably the carburetor is commonly known as the K–W at the Engineering Works. Your frequent consultations with Walling about it at his office in the presence of various workmen supported the general assumption that you and he are partners in the device.

The Bank Had Refused to Cash His Check, Because Gordon Had Drawn Out All But a Few Dollars of the Firm's Balance

"You say you have seen many blue prints without the K–W label. Walling doubtless printed those before he had the heading put on the tracings for the special purpose of hoodwinking you. It was necessary sometimes for you to refer to a blue print when instructing mechanics at the Engineering Works. On such occasions I assume that Walling produced from his private safe, for your inspection, drawings with the corners blank.

"The omission of the inconspicuous label was not apt to attract the attention of the model-makers present, intent on the orders you and Walling were giving them about their work. If those employees should be questioned in court they would swear in perfect good faith that the prints you handled in their presence did bear your name and Walling's, to designate the joint invention of the carburetor. In all other respects such prints, of course, were exact replicas of those used by the workmen at their benches in the experimental room. By handling the drawings, though they actually had no labels, you seem to have acquiesced tacitly in Walling's brazen claim to equal rights with you to the new device. The rascal will perjure himself in the Patent Office; his workmen and the circumstantial evidence will support him."

"But he offered to buy a half interest!" Kent reminded him desperately.

"Yes; he'd rather not run the risk of perjury if he can accomplish otherwise his object of participating in the rich profits of manufacturing your carburetor. He hoped you would accept his offer to form a corporation.

"His crooked scheme was the second string to his bow."

"What would you advise me to do?" John appealed to his counsel. He realized his predicament now.

"There seem to be only two things you can do," the attorney replied. "You must either fight a long, expensive interference proceeding in the Patent Office, or assent to the sale of a half interest in your invention to Walling. He has made you a pretty good offer, in my judgment. It appears to me, also, that Mr. Gordon does not want to have anything to do with manufacturing the carburetor. I know how you feel about being held up; but, after all, you'd not be a loser by going into the proposed corporation with Walling. You'd still have fifty per cent of the profits you've expected to keep for yourself."

The client instantly flared to rage at the advice of the lawyer. He grabbed the roll of blue prints and strode abruptly to the door. John's wrath exploded over his shoulder toward the astounded attorney.

"I'll see him in hell first! Good-by!"

Kent went back to the Gordon Machine Shop. His partner was still out. John locked the roll of blue prints in his desk and sat down to ponder his problem alone. He cudgeled his wits for an hour; then he decided there was only one answer. A fight in the courts would likely be futile, as the lawyer had warned.

Action followed immediately after decision. Kent returned to the Engineering Works and opened the door of the private office. He found Walling seated at the desk in the farthest corner. As John walked in the engineer sprang to his feet; but Kent stopped just inside the entrance to the long room.

He acted only sullen now, as if his recent violent rage had been spent.

"I won't touch you. I've come back to do business," he announced curtly, like a beaten man surrendering with very bad grace.

"Do you mean you'll accept my proposition to buy a half interest in the carburetor?" asked Walling suspiciously. He edged toward the rear door.

"Yes; I see you've got me foul. I've consulted my patent attorney and he says it's about an even bet if I should fight you, with the odds in your favor. Besides, I'm convinced now that Mr. Gordon doesn't want to manufacture the carburetor.

"He and I can't continue doing business the way we have been pulling against each other lately. I'm compelled to make a new arrangement of some kind. I admit frankly that I don't want an expensive patent litigation with you. I might take the satisfaction of breaking your neck; but I've decided I can't afford that luxury, either. I do not believe it ever will be to your interest to skin me again. You think I can make more money for you if you give me square treatment hereafter. So I've concluded to drop the idea of getting even personally, and look at the matter from a strictly business standpoint."

"That's the right view to take!" Walling interjected eagerly.

"It's the only sensible view I've thought the whole thing over. I believe that when you say we'd both get rich if we should join forces you realized it would pay you to play fair with me."

"We'll not have a bit of trouble," the engineer avidly assured.

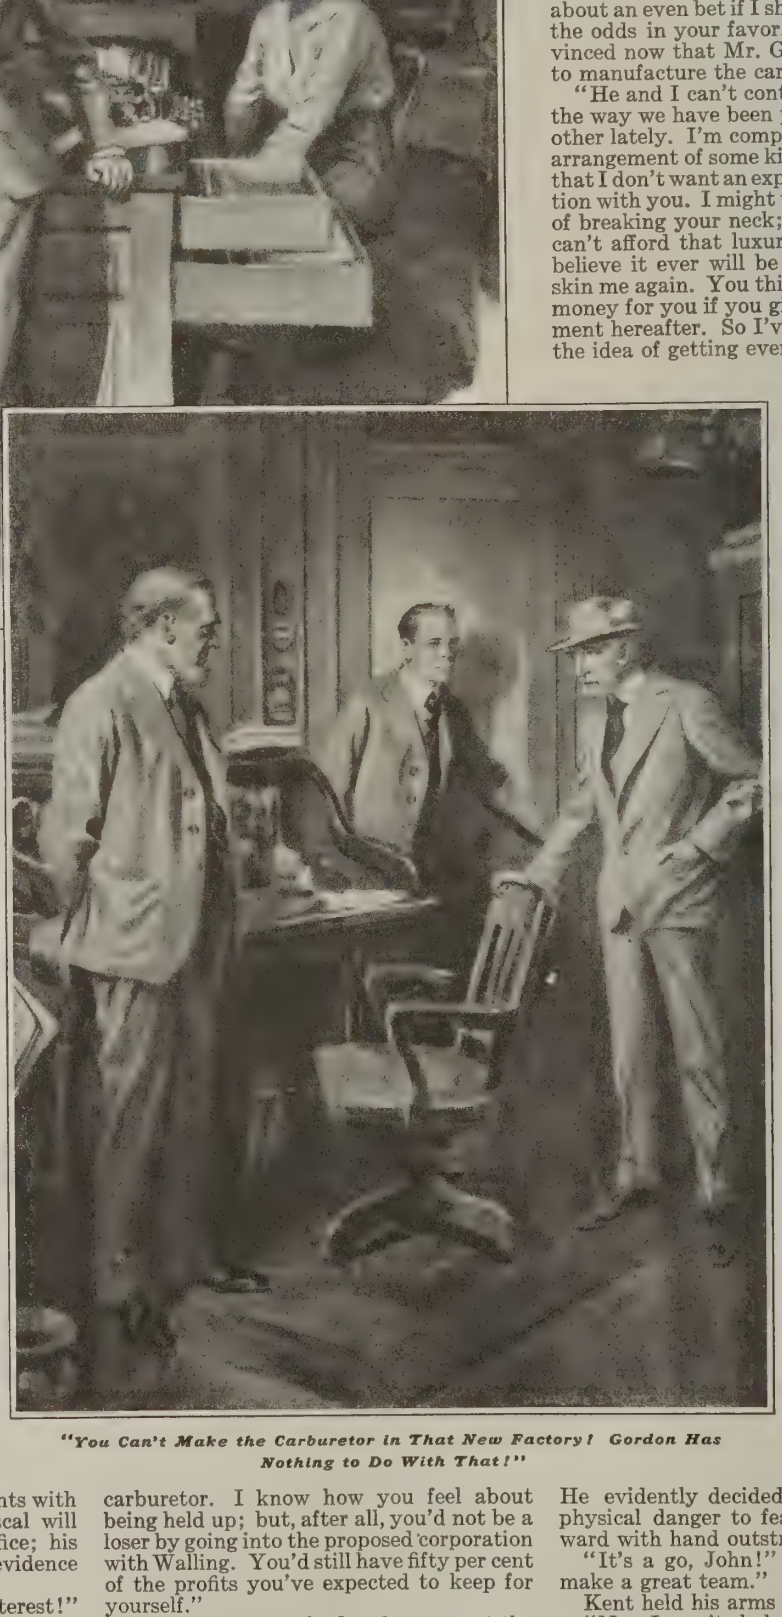
"I think the same. Now let's get down to brass tacks: I'll agree to assign all my rights in the carburetor to the corporation you proposed. We each take half the stock. You are to put up twenty-five thousand dollars cash, and I'll put in the thousand. My carburetor rights are to go in for the remaining fifteen thousand dollars of my share."

The engineer stared half a minute searchingly at the grim face confronting him. He evidently decided there was no menace of physical danger to fear; so he came forward with hand outstretched.

"It's a go, John!" he exulted. "We'll make a great team."

Kent held his arms stiffly at his sides.

"No; I won't shake hands," he refused. "I'm willing to let bygones be bygones, but I don't mean to act friendly just because of our own stock in the same corporation. I was sentimental when I talked to you early this morning." John affected to sneer self-contemptuously. "I spoke of warm dollars! But this deal is simply cold business



"You Can't Make the Carburetor in That New Factory! Gordon Has Nothing to Do With That!"

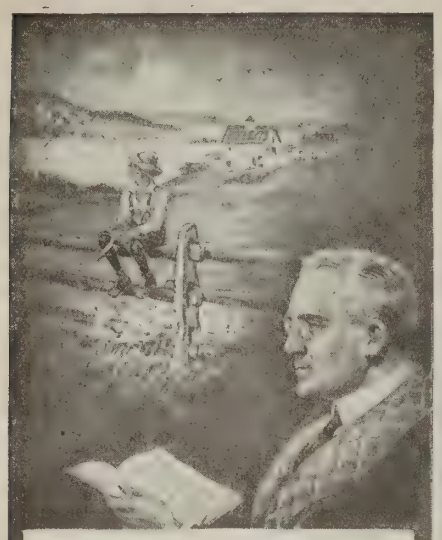
ARROW
form-fit
COLLARS

THIS IS AN IMPROVEMENT of recent introduction that collar wearers will appreciate. Both the top and the band of ARROW *form-fit* COLLARS are curve cut to fit the form. It is an exclusive patented feature. The form-fit collars sit better, look better, and feel better than ordinary collars. *2 for 30 cents*

CLUETT, PEABODY & CO., INC., *Makers*, TROY, N. Y.



Are Your Eyes

as good as your memory?

Sometimes you look up from the Present into the Past, with all its memories. It is easy to do that.

But, here in the Present, are you able—

to look up from near objects and, without changing or removing glasses, see distant objects clearly?

Have you lost, with the passing years, that splendid eyesight of youth which could instantly adjust its vision from near to far?

KRYPTOK GLASSES

THE INVISIBLE BIFOCALS

Enable you to see both near and distant objects as clearly and distinctly as with the eyesight of youth.

KRYPTOKS *(pronounced Cryptocks)* end the trouble and annoyance of removing your reading glasses every time you look at objects more than a few feet away. They free you from fussing with two pairs.

They are making the old-style bifocals, with the disfiguring seam or hump, a thing of the past.

KRYPTOKS keep your eyes young in *looks*, as well as in *usefulness*, because they do not have that age-revealing seam or hump of other bifocals. When you are wearing KRYPTOKS, they cannot be distinguished from single vision glasses. Their surfaces are clear, smooth and even—free from line, seam or hump.

Ask your oculist, optometrist or optician about KRYPTOK Glasses.

Write for Booklet, "Eyesight Efficiency"

It contains important information for every man or woman who needs glasses for near and far vision. When writing, please give (if possible) name of your oculist, optometrist or optician.

with me. The less there is of anything else the better—so far as I am concerned. The question now is: Are you ready to sign an agreement?"

Walling was not disconcerted by the rebuff. He instantly met the other man on the ground of business.

"Yes," he replied crisply.

"All right, then," responded Kent. "I want our understanding in black and white at once, so I can go back and settle my affairs with Mr. Gordon too—right away. I'm going to pull my specialties out of his machine shop and let him have the old place to potter round in all he wants. You hit the nail on the head about him."

John's tone seemed bitterly scornful. It had the intended effect.

"Gordon never appreciated you!" Walling exclaimed. "I do. Maybe I did mean to go after you pretty strong on the carburetor, but it was only because I realized what a lot we could accomplish together." The crafty engineer followed this attempted extenuation of his crooked design by showing his greed. "I hope," he urged, "that you and I can handle all your automobile inventions in our corporation."

Kent stiffened as if he drew back from a scented danger.

"First, I wish to see whether or not you really mean to give me a square deal," he declared bluntly. "I don't trust you, and make no bones about saying so. I'm willing to start on the carburetor; then I'll consider putting my other specialties into the corporation. One thing, though, I'll say now: I'm going to take my inventions out of the Gordon Machine Shop just as soon as I can make satisfactory new arrangements. And, of course, I'd prefer to have all my specialties manufactured at the same place as the carburetor."

Walling seemed satisfied. He rubbed his hands zestfully.

"Let's go down town and have our lawyers prepare the necessary papers at once, then," he proposed.

Kent impatiently shook his head.

"I haven't time to wait while a couple of attorneys fuss over technical contracts. What I want now is positive assurance that you mean business, so I can go right back to the Gordon Machine Shop and complete arrangements to pull my specialties out of there immediately. That is even more important to me than the carburetor deal. It will take lawyers several days to organize a corporation and to attend to all the details of the proposed agreement between you and me. I'm going to have a settlement with Mr. Gordon at once; but, first, I need to know just what I can count on with you.

"Walling, I want you and myself to sign now a rough statement of what our agreement is to be. We both know what you proposed, but I intend to have it in writing before I notify Mr. Gordon that I'm going to leave his machine shop with my specialties. So that I'll be sure you won't back down, I insist that we both put up our checks at once with a neutral bank, to be exchanged for capital shares as soon as the corporation is organized. I will agree now, too, that I'll assign all my rights in the carburetor to the company for fifteen thousand dollars of the stock. I wish to know exactly where I stand with you before I quit the Gordon Machine Shop with my inventions. And I mean to give my present partner notice of my withdrawal immediately."

"But how can we make an agreement that will be binding without our attorneys to draw it up?" Walling demurred. "Neither of us knows how to prepare a legal contract."

"Oh, bosh!" Kent scoffed. "What's difficult about putting down in writing the things we've talked?"

He strode to the engineer's vacated chair and sat down at the desk. He pulled a sheet of paper toward him and snatched up a pen.

"I'll show you what I mean," he declared. "Our lawyers can embody our understanding in formal contracts later, if necessary; but I haven't time to monkey round waiting. If you mean to be fair you won't have any objection to signing your name to precisely what you offered orally. And you can't blame me for being unwilling to pull out of the Gordon Machine Shop just on the basis of your word that you'll go in with me on the carburetor, as you proposed. I'll test your intentions right now, Walling. If you have anything more up your sleeve I'll make you show it."

"I haven't!" the engineer protested earnestly.

"Then you'll sign this with me," insisted Kent.

He began to write and in a few minutes had filled two sheets with a hurried scrawl. He stood up to read the paper.

"Henry Walling and John Kent, in consideration of their mutual promises and benefits hereunder, agree:

"FIRST. As soon as possible they will organize a corporation under the laws of Michigan, with a capital stock of fifty thousand dollars. Henry Walling agrees to pay twenty-five thousand dollars cash for one-half of the corporation stock. John Kent agrees to pay for the other half of the stock as follows: Ten thousand dollars cash and fifteen thousand dollars by assigning to said corporation as soon as it is organized, which shall be within thirty days after this date, all his right, title and interest in an improved carburetor he has invented, of which Henry Walling has been building a model and has complete drawings. The two parties agree that John Kent's right and title in said invention are worth fifteen thousand dollars and that fifteen thousand dollars of the capital stock of the corporation to be organized shall be issued to John Kent when he makes the assignment above mentioned.

"SECOND. The parties agree that immediately after the corporation shall be organized John Kent shall be employed by said corporation, at a salary of five thousand dollars a year for five years. Henry Walling also shall be employed, at a salary of one thousand dollars a year for five years. Each party shall have exactly equal power with the other in the corporation management so long as he continues to own or control one-half of the stock.

"THIRD. As evidences of mutual good faith, John Kent agrees to deposit with the Motor Trust Company, of Detroit, Michigan, forthwith, ten thousand dollars; and Henry Walling also agrees to deposit with said Motor Trust Company twenty-five thousand dollars. Both parties agree that said Motor Trust Company shall hold said deposits in escrow until the corporation above mentioned shall be organized. Then said Motor Trust Company shall pay the entire sum of said deposits into the treasury of said corporation, and shall receive for the same thirty-five thousand dollars of the stock of the corporation—twenty-five thousand dollars in the name of Henry Walling and ten thousand dollars in the name of John Kent.

"FOURTH. All the stock herein mentioned shall be full paid and nonassessable; and the assignment by John Kent of his carburetor rights, as above provided, shall entitle him to receive fifteen thousand dollars additional of the capital stock, the same as if he had paid for the same in cash.

"FIFTH. Henry Walling admits that John Kent is the sole and exclusive inventor of the carburetor, a model of which Henry Walling is now making in his experimental department. And Henry Walling admits that he himself has no claim on said carburetor as a joint inventor thereof."

Kent finished his reading and handed the sheets to the engineer.

"That's in the rough, of course, Walling; but it's perfectly plain, isn't it? I'm willing to sign that. If you mean to be square with me you'll sign too, just as readily as you talked the proposition. Then we can go right over to the Motor Trust Company and deposit our money."

The engineer evidently was disinclined to being hurried into a written compact; yet obviously he also feared to demur, lest impulsive Kent should misconstrue his hesitance. Walling read and reread the paper. He tried again to persuade the other man to wait until their lawyers could prepare a formal contract. John stubbornly demanded that Walling show him wherein the present draft did not state their agreement exactly. The engineer was unable to deny that the written proposition was precisely what he himself had urged. He did not take any exception at all to the last clause, in which he would confess that Kent was sole inventor of the carburetor. That was not a debatable point, as Walling seemed to recognize.

"If I've written just what you said, why aren't you willing to sign it?" was the question Kent hurled back at every objection.

Finally, when the engineer could make no more specious excuses for a delay that he seemed both to desire and to fear, he agreed to Kent's ultimatum. He called a stenographer and two copies of the document were made. Thereupon both men

$7.50

IN CANADA $10.

"It's a crime to take your money"

(But $7.50 prevents that crime)

IT'S a crime to take your money laughed a famous check-raiser as he demonstrated his art. A stroke of his pen—and $8 was $8,000! A drop of acid in the right place—and there was plenty of room to change "Eight" to "Eight thousand"! No wonder check-raising attracts so many criminals. "It's a crime to take your money"—a cinch of a crime to commit—desperately hard to detect because your checks pass through so many unknown hands.

Formerly devices giving Standard Protection were expensive. But now that day is passed. Now you may stand better with your banker by giving your checks standard protection at a price you can afford to pay

Now the Dimunette gives you Standard Check protection for $7.50—less than you would lose by having one $1 check raised to $10. Can you afford *not* to invest $7.50? The oldest makers of check protecting devices now bring standard check protection within the reach of all.

If you have the slightest difficulty in securing the Dimunette of your stationer or office supply dealer, send check, money order or draft to us, and we will gladly supply you, charges prepaid.

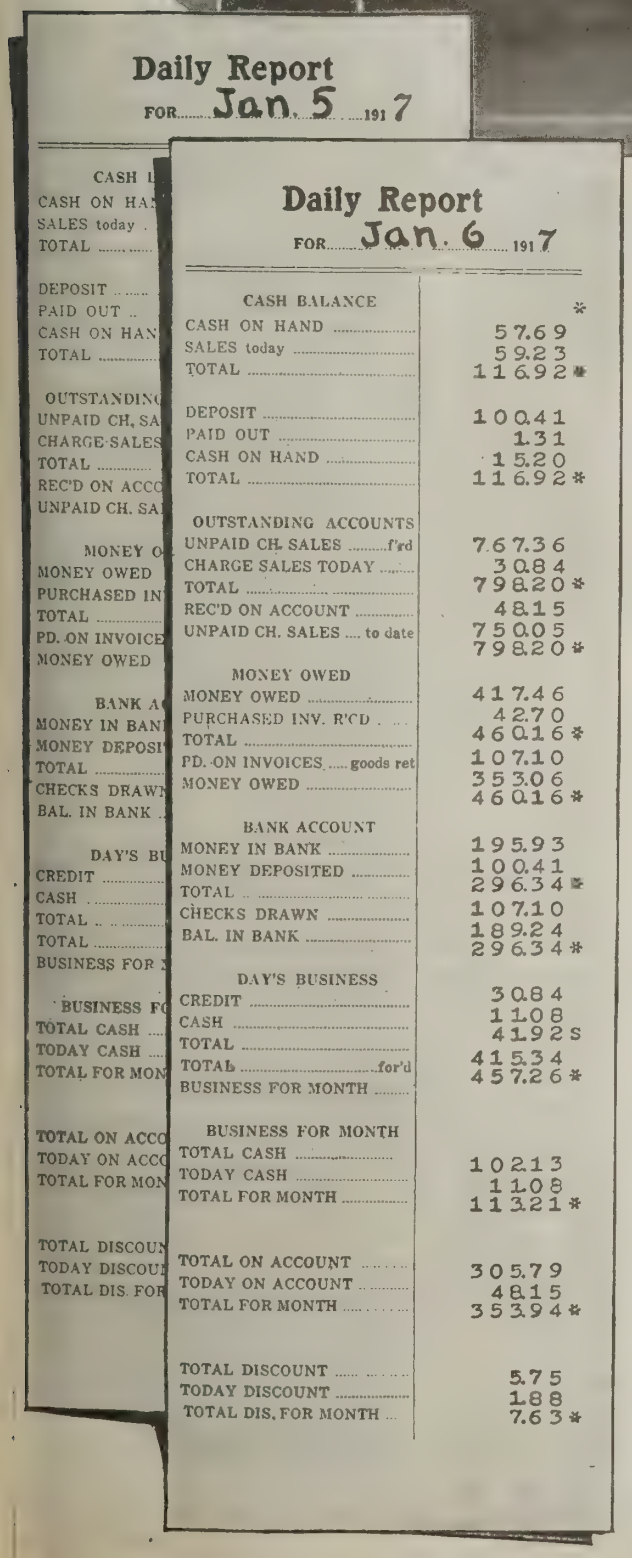
Gold-Mining in a Grocery



I "pan" figures for profit in my Seattle grocery the same as I used to pan "pay dirt" on the Klondike

By
A. E. ANDREWS, of the Park Grocery Company

When I left the Klondike hills to go into the grocery business I didn't give up all my former methods.

I wanted to know how my labor "panned out" in profits, and I wanted to know this *every day*.

But my first records were like those of many other grocers—they didn't tell me where I stood.

The facts were there—like nuggets in the gravel—but they had to be brought to the surface.

I got a Burroughs Figuring Machine to do the work of reducing my ore, as it were, to tell me how I was making my "claim" pay.

I Had to Reduce Items to Totals

To get the facts I had to add items and get totals—and that's where the Burroughs first proved invaluable. It added rapidly, and the totals, computed automatically, were always right. I never could have secured the results quickly enough with pencil and pen.

My Daily Report Should Interest Every Retailer

The slip shown at the left is made out daily. I get these figures with the Burroughs in less than half an hour. Think of it!—all this vital information obtained in only a few minutes each day.

I have a credit register for taking care of charge sales and a cash register for handling cash transactions.

Each day the charge sales are totaled, the cash received on account subtracted from this total, and the balance added to the previous day's total of outstanding accounts.

Accounts payable are handled in the same way.

By adding checks drawn each day, and subtracting this total from the balance brought forward plus the day's deposit, I keep the amount of my bank balance to date before me.

The charge slips are made in triplicate. One copy goes to the customer, one to the credit register, and one to the figuring machine. It is only a few minutes' work to add the charge and cash sales for the day, obtaining total daily sales.

The Burroughs is Always on the Job Somewhere

When I have completed my daily report the machine is free for general use about the store. For instance, it is used to check each account before the bill is paid. Customers like to receive the machine slip, for it is their protection against overcharges.

By detecting undercharges that would have otherwise got by, the machine has more than paid for itself.

I'm a better buyer for having my daily report always before me. I can see what I owe—what I have in the bank. I keep my outstanding accounts carefully checked and have had very few losses from bad debts.

My clerks are careful in adding up sales slips, because they know that each slip is later checked over mechanically with the Burroughs.

The Burroughs Machine is doing more than "pan" the ore of my figures for facts. It is putting organization and accuracy into my business and creating customer good-will.

There's a Burroughs Machine for every business. The Burroughs Company has 170 offices in the United States and Canada. Your banker or telephone book will give you the address of the nearest.

Who won that $3000?

The Question on Half a Million Tongues

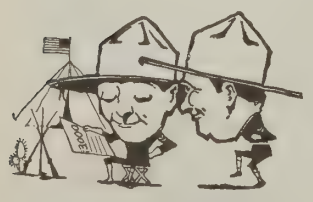
WHO won that $3000 for a better name than "flashlight"? From city, town and hamlet throughout the United States—from Central America, Cuba, Morocco and even China is heard the echo of this question. Everywhere interest is at high pitch and while half a million people wait, the Eveready organization is working day and night to find the winner and the winning word.

Never before has a contest for a new name met with such generous and enthusiastic response. Suggestions have poured in at the rate of 10,000 to 25,000 a day. On the last day of the contest 50,000 were received.

The Post Office at Long Island City was forced to call for help. Eveready automobile trucks were pressed into service to deliver contest mail. It took ten days after the close of the contest to finish opening the mail. It took six weeks to transfer to entry blanks the thousands of suggestions received in letters written to the company. It took one entire week to sort out all the names beginning with the letter "L."

Fifty *extra* employees have been necessary to handle the purely mechanical details such as opening mail, sorting, filing, etc.

College students were specially recruited to handle some of the more important routine. Salesmen from the Eveready organization were taken off the road to speed up the search for that $3000 word.



Scores of suggestions came from the boys on the border

Two days from here to Guantanamo, Cuba, but we got his suggestion in time

Now we are just as anxious to know who won that $3000 as you are; but we have simply been snowed under.

Up to the official date set for the close of the Eveready Contest (Nov. 7th, 1916) over 530,000 suggestions had been received and at this moment the judges have before them the 50,000 best suggestions from which the choice will be made.

To settle this question fairly we must ask for more time. On its settlement depends not only the fulfillment of our obligation to pay $3000 but a decision on that name which is best suited to our needs.

April 5th is the date now set for the award announcement. Watch your Eveready dealer's windows. The announcement of the prize winner will be made through our dealers as well as through the newspapers and magazines, because we can thus place the news before the greatest number of people with the least possible delay.

If the judges decide sooner, the announcement will not be held back. We are not going to keep half a million people waiting any longer than we can help.

50,000 Eveready dealers all over the United States and Canada are ready to flash the message when the judges decide.

Out in the sagebrush—80 miles from the nearest dealer—so we sent our western friend a contest blank.

(Continued from Page 30)

went to the Motor Trust Company. They deposited their respective checks on their own banks and signed the escrow agreement in duplicate. Then they separated, shortly before eleven o'clock.

John hurried from the Motor Trust Company to the machine shop, but Gordon was still absent. Kent restlessly attended to various routine business matters while he waited for his foster father's reappearance. Just after noon the bookkeeper, who had gone downtown ten minutes earlier to get the money for the weekly pay roll, rushed back to the office in great excitement. He told the junior partner the bank had refused to cash his check, because Gordon, at half past eleven, had drawn out all but a few dollars of the firm's balance of over eighteen thousand dollars.

Kent was startled and dumfounded. He could not imagine the specific reason for his partner's unprecedented surreptitious action; but he was sure it had a direct relation of some kind to Gordon's mistaken umbrage regarding the carburetor. John stood aghast after he heard the bookkeeper's story. The uncertified check for ten thousand dollars, which he himself had deposited in escrow with the Motor Trust Company at eleven o'clock, was made on the firm's account in the Wolverine National Bank. Over ten thousand dollars stood to the personal credit of the junior member on the partnership books, and Kent had drawn against this balance.

If now his escrow check should be presented at the firm's bank and repudiated, the Motor Trust Company would notify the automobile engineer at once. He would immediately stop payment on his own check for twenty-five thousand dollars. Gordon's act in drawing out all the partnership money, therefore, had imperiled and, at any minute, might invalidate Kent's contract with Walling. The consequences would be disastrous if the ten-thousand-dollar check should be protested.

John was half frantic. He sent the bookkeeper to scour the neighborhood for the veteran mechanic, who sometimes visited acquaintances in other machine shops near by. Kent himself started a frenzied search by telephone for his partner; but he could find no trace of the old Scotchman. Meantime precious time was passing. John expected the Wolverine National Bank to call him up any second and announce that his ten-thousand-dollar check had been presented for payment.

Shortly before half past twelve Gordon stalked into the little office. He was scowling blackly, but Kent hardly noticed his expression. With a cry of relief, mixed with acute anxiety, John rushed across the room.

"I've been looking for you everywhere! I want to explain to you about the carburetor, and ——"

"I know already what you've done!" Gordon snarled in a towering rage. "I met Henry Walling an hour ago. He showed me the contract you'd just signed. He said, too, you were going to take all your automobile specialties away from here and manufacture them in partnership with him. I tell you right now that you can't get 'em out of my shop any too quick to suit me!"

Kent tried to break in, but the old lion roared him silent.

"You needn't make any excuses! I understand why you're leaving me. Don't be a hypocrite and make believe you're sorry. I used to think you had high principles, but I've found you out to-day. You're like the majority of young fellows in these times—just a dollar worshiper. Get out! It will be good riddance for me. I never wanted your contraptions in my shop. Pack your stuff! Don't palaver! I know you can make more money with Walling."

The old master machinist half choked. He seemed beside himself with scornful fury.

"I despise a sneak!" he hissed through gritted teeth. "I might have had a little respect for you if you hadn't attempted to hide what you were up to. Why couldn't you come out honestly and tell me you had decided to cut loose from such an old fogy? It would have hurt to hear that, but not so much as it does to know you've been living a lie to me for months."

"I never thought ——" Kent began to protest frantically.

"I found out from Walling what you thought!" Gordon thunderously shut him off. "That I've been holding you back from getting rich! You thought I was a fossil—that I opposed having your specialties monopolize my shop because I had no faith in the automobile business. That wasn't it at all! You made me hate everything connected with motors, because your contraptions shoved me out of my place in the world! You never guessed the real reason I didn't seem to appreciate those profits from your inventions that you shared half and half with me. You think I'm sore now because I won't get anything out of the carburetor. I don't want money! You robbed me of more than you ever can pay back in dollars.

"Until you turned my old custom shop into a factory to make your specialties, most of the expert machine job work in Detroit was sent to George Gordon. I was known as the best independent mechanic in the city and I was proud of that reputation. But in the last few months my customers have been crowded out. I've had to refuse orders because your manufacturing required more and more room, and there was 'bigger money' in the specialties. Now I don't feel at home in the shop where I have worked thirty-two years! It's been so lately I couldn't bear to stay round the place.

"I sacrificed my pride because I thought as much of you as if you'd been my own son. I never would have told you how I felt about being shoved to one side in the old place if I hadn't found out your underhand deal to make more money by tying up with one of the worst rascals out of jail!"

Gordon's gray eyes blazed with contempt. Kent leaped to his partner and clutched his arm.

"Dad!" he cried. "You're wrong! I never intended to deceive you. I'll explain everything later. I haven't time now. Walling means to steal half of my carburetor. I just found out his scheme to-day. I've been looking for you ever since to tell you about him. I have trapped the fox in that contract he showed you! I tried to find you so you could advise me before I signed it; but I couldn't, and I had to act quickly. You endangered my whole plan when you drew that money from the bank. If my check for ten thousand dollars should be protested I'd be trapped, not Walling!"

Kent snatched the telephone and called the Engineering Works.

"Hello, Mr. Walling! This is John Kent. Can you come over to the shop right away? I'm straightening out my matters with Mr. Gordon and I need you here as a witness."

"I'll start this moment!" the engineer agreed eagerly.

Kent banged the receiver back on its hook and turned to his partner again.

"I called him away from his office so he can't get a message from the bank," he explained. "My check may be presented for payment any minute. Walling mustn't find out it isn't good before I spring my trap."

Kent had no time to recount details, but in the course of the next hundred seconds he sketched to dazed Gordon the reason why he had ordered the carburetor made at the Engineering Works. Then he summarized the plot to defraud him of his rights as sole inventor of the new device. He broke off abruptly as he caught sight of Walling through the front window.

"Here he comes, dad! Don't say a word until I give you the tip."

The engineer hurried in and shut the door. Kent quickly stepped behind him to bar the exit.

"Walling," he snapped, "you and I made an agreement this morning about my carburetor; but ——"

"That contract is perfectly legal," the engineer interrupted with instant suspicion. "I showed it to my attorney, and he assured me it is binding, though a little informal."

"I'm glad to know that!" Kent exclaimed. "I meant it to hold. I intend to stick by our agreement; but I didn't take time when we talked before to discuss certain details. So I'll explain now just what my plans are.

"This morning you referred to the fact that Mr. Gordon and myself hadn't been getting along very well lately. I've since learned that my partner and I have been working at cross-purposes. He misunderstood my reason for having you build the model. He has drawn wrong inferences, also, regarding my intentions with reference to the manufacture of the carburetor and my other specialties. On the other hand, I've misjudged him in several ways too."

Gordon leaned forward in strained eagerness as Kent continued to address the engineer.

"I told you, Walling, that I intended to take all my inventions out of the Gordon Machine Shop; but I didn't say where

FOR that logy, after-dinner time on Sunday afternoon—perchance you've eaten just a bit too much—

Wingfoot for an hour or so, and see the change it brings—*wingfoot* and fit yourself for next week's tasks.

Lawson
Odorless Gas Heater

Has Revolutionized Gas Heating

The *Lawson* Odorless is the highest development in gas heaters. Its combustion chamber makes it odorless, economical and a greater producer of heat than gas stoves twice as large.

It radiates only pure, heated air—no smells, nothing "stuffy." Inside the perforated jacket is the combustion chamber, the "heart" of the Lawson, red hot and glowing, burning up all gases under high temperature.

This "red hot" heart spreads a cheering, ruddy glow and makes the Lawson the cosiest kind of heater.

Quickly takes the chill from cold, damp halls or supplies generous warmth to nursery, bath or spareroom. On the flat, open top you can heat water for baby's bath or for shaving. Thousands of "Lawson's" are giving satisfaction in homes everywhere.

Price, $5.00—at Dealers'

TEN DAYS' FREE TRIAL: If your dealer can't supply you send $5 and dealer's name. Satisfaction guaranteed or money back. Write for leaflet on Odorless Gas Stoves and for booklet on Lawson Water Heaters.

Dealers, Attention!

Open territory still obtainable. Write now and place order for fall. The Lawson Odorless is a quick seller and good money-maker. Prices and terms on request.

Lawson Manufacturing Co. of Pittsburgh

We are also makers of Lawson Water Heaters; over a million in use

I expected to do my manufacturing afterward. I realize now that it was unfair of me to crowd Mr. Gordon from his old quarters here, where he made his reputation as a mechanical expert. I've just come to full appreciation of his feelings. I comprehend how selfish and thoughtless I have been. The Gordon Machine Shop hereafter will be devoted exclusively to high-class work on tools and dies and designing, as it used to be. I'm going to pull all the manufacturing out."

Kent turned to the dumfounded Scotchman:

"Dad, I propose that our firm shall erect a factory building on the vacant lot next door to this old shop and do all our manufacturing there. In that way we'll have plenty of room in our present quarters for your expert custom work, and in the new plant for my automobile specialties. Of course we're to be partners in everything."

The veteran master machinist seemed spellbound. He opened his mouth slowly as if to speak; but Walling viciously broke in first:

"You can't make the carburetor in that new factory you intend to build! Gordon has nothing to do with that!"

"Why, yes, he has!" the inventor exclaimed in simulated surprise. "Dad owns half the carburetor, you know."

The old Scotchman looked as amazed as the engineer was astounded; but Gordon stood dumb while Walling shouted a question:

"What do you mean? You agreed to assign all the carburetor to our corporation."

Kent pulled his copy of the agreement from his pocket.

"You're mistaken about that," he remarked with provocative mildness. "I only contracted to assign 'all' *my* 'right, title and interest'—that is, my half of the carburetor. Six months ago, when I filed my patent application, I assigned the other half to Mr. Gordon. I told you, Walling, before we made our agreement that dad was entitled to half of everything I invented."

The fox saw the trap. He gnashed his sharp teeth in his fury.

"It's a fraud!" he snarled.

"I've prevented a fraud!" Kent corrected harshly. "Our contract is valid, Walling. Your own attorney advised you so. I notified you before you signed it that my partner had a right to half of any invention I might make. You were so unscrupulously greedy that you caught yourself.

"My contract is that I will assign all my rights in the carburetor to the corporation. I couldn't have bound Mr. Gordon if I had wanted to. He owns half of the invention. The law gives him the same right to manufacture as if he held the entire patent title." John grinned as he added: "Let me remind you of something here: I put into our agreement, Walling, a clause that provides 'Each party shall have exactly equal power with the other in the corporation management.' I notify you now that I shan't agree to the sale by the company of a single carburetor at the low price Mr. Gordon will make to the trade."

The engineer was frothing with rage.

"I'll fight you in court!" he yelled.

"The risk is too great," Kent retorted. "You have overlooked the provision in our contract that I am to draw a salary of five thousand dollars a year from the company, beginning within thirty days, while you'll get only one thousand dollars a year. I'm ready to go to work for the corporation on that basis.

"You put up twenty-five thousand of the thirty-five thousand dollars cash we have deposited together in escrow as subscriptions for the capital stock. The contract entitles me to receive for my services over twenty-nine thousand dollars in the time you'll get back a little less than six thousand of the money contributed to the corporation treasury. Our salaries have been agreed on. They must be paid whether the company manufactures many carburetors or only a few. You'd better give up the fight idea, Walling. Your methods won't appeal to the sympathy of the courts. I suggest that you compromise with me right now, while you have a chance."

"What do you mean?" the engineer barked.

"I'm satisfied to beat your crooked scheme to steal half of my carburetor. All I want in the contract we've made is the last clause—your acknowledgment, witnessed by Mr. Gordon, that you have no claim to my invention. Sign that statement separately, surrender every tracing and blue print you have, together with all the parts, tools and patterns of the model, and I'll let the corporation off from paying me that five-thousand-dollar salary for five years. I'll cancel this agreement and we'll both get our money back from the Motor Trust Company."

Walling drew a long breath. He did not parley a second.

"All right!" he accepted.

Walling sat down at Gordon's desk and snatched a sheet of paper. He copied the final paragraph of the contract in a minute; then signed his name. Kent read the release carefully and handed it over to his partner. He winked:

"Satisfied, dad?"

Gordon blinked like a man just coming out of a trance. He stared first at the trapped fox and then at John. Then his old eyes shone as brightly as a boy's.

"Satisfied!" the veteran machinist chortled aloud. "I'm just chock-full of satisfaction!"

Suddenly Gordon was alarmed by remembrance. He leaned over and whispered in his partner's ear:

"Jack! That ten-thousand-dollar check! I drew all the firm's money out of the bank just to prevent Walling from getting his claws on any of it. I knew he had a scheme of some kind to rob you. I was afraid the rascal would cash your check before I could warn you what a crook he was. I drew our entire balance to save your ten thousand dollars for you. But you said I'd got you into trouble. Maybe there isn't any damage done yet. I'll hustle over to the bank right off and redeposit the money I took out."

"Good old dad!" Kent choked. "Wait a minute."

He picked up the telephone and called the cashier of the firm's depository:

"John Kent talking. Has my check for ten thousand dollars to the Motor Trust Company been presented for payment yet? . . . Oh, it's just come in! Well, hold it please. The deal for which it was given has been called off. I'll be over and see you in a few minutes."

Kent handed the telephone receiver to Walling:

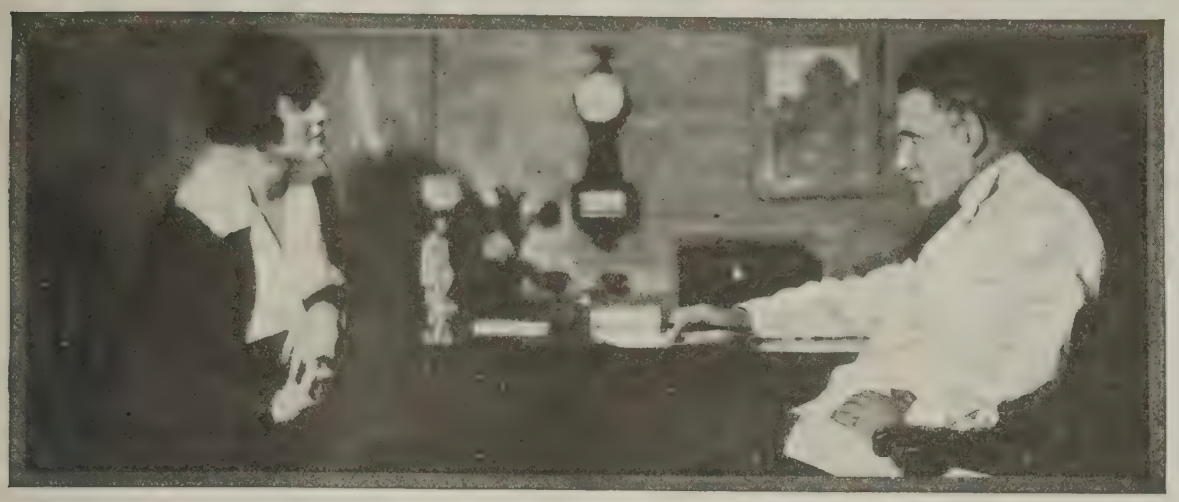
"Call up your bank now and stop payment on your check too; then everything will be straightened out."

A Tribute

WHEN Julia Ward Howe died memorial services in her honor were held in San Francisco, and the local literary colony attended practically en masse to pay by their presence a tribute to the writer.

A municipal officer was asked to preside. Dressed in his long frock coat and his broad white tie, he advanced to the edge of the platform to launch the exercises and introduce the principal eulogist. He bowed low and spoke as follows:

"Your attendance here, ladies and gentlemen, in such great numbers shows San Francisco's appreciation of good literature. This meeting is a great testimonial to the immortal author of Uncle Tom's Cabin—the late Julia Ward Howard!"



Dentists today follow their patients into their homes by means of prescriptions for daily use.

The serious meaning of sensitive gums

More teeth are lost through the loosening of the tissues that hold the teeth in place, than through decay

If at times your gums are sensitive when you brush them; if you have a loose or "tender" tooth; if certain foods set your teeth "on edge," *see your dentist immediately*.

These conditions that seem so negligible, usually portend one far more serious.

Your dentist will tell you that they are the early symptoms which, if not checked, may develop into a loosening of the teeth and their eventual loss. More permanent teeth are lost through this insidious loosening than through decay.

What dentists prescribe

Modern dentistry requires more for the treatment of such conditions than the application from time to time of medicinal agents by the dentist himself. Dentists today follow their patients into their homes by means of prescriptions for daily use. Not otherwise can persistent unhealthy conditions of the mouth be overcome.

At least twice daily must the patient himself supplement the work his dentist has done for him—by applications that will steadily tone up the condition of the gums.

Your tooth paste should be more than a cleanser

Ask your own dentist how you can do this at the same time that you cleanse your teeth daily. Ask him about Senreco Tooth Paste.

Senreco is more than a cleanser. It is a dentist's formula containing, in addition to cleansing properties, agents especially helpful for sensitive conditions of the gums. Because Senreco contains precisely the agents that dentists themselves apply to correct unhealthy conditions of the gums, many dentists use it at the chair, even though it is really a tooth paste intended for supplementary use.

Prevent the accumulation of tartar

As a cleanser, Senreco is wonderful. It polishes the surfaces of the teeth in a new and better way, and it *directly attacks the mucin film which leads to tartar*.

Try it. You will appreciate its medicinal qualities even more than its cleansing properties. It leaves a cool, clean, wholesome taste in the mouth. Notice after a few treatments the gradual strengthening of your gums to a wonderfully sound and healthy condition. You will delight in the brilliancy and whiteness of your teeth, and their cleanly freedom from the beginnings of tartar.

Senreco costs only 25c the large size tube, though it is probably the most expensive tooth paste prepared. You will find it at your druggist's or toilet counter. Get a tube today. Know for yourself what a healthy, cleanly feeling its use gives to the gums. Find out how much better for you is Senreco than any tooth paste that only cleanses.

Send 6c for a liberal sample

For six cents we will send you a sample tube of Senreco; enough to provide you with treatment twice daily for one week. Simply fill in your name and address on the coupon below, and mail it to us with six cents in stamps or coin. Address "Senreco," 1400 Masonic Temple, Cincinnati, Ohio.

Experimental Laboratory; Covington, Ky.

THE TOOTHPASTE THAT REALLY CLEANS

A prominent dentist (name on request) writes:

"*I want to call your attention to a case which will interest you as well as myself. A young man patient came to me in October last with very badly inflamed gums, no deposit around the necks to speak of. I scaled the roots thoroughly, and gave him a mouth wash (which had no effect).* He came in this morning for a filling. I had forgotten about his gums until he called my attention to them. He says they are all right now and feel fine. He bought a tube of Senreco tooth paste, and says it wasn't a week before they were well. They have receded somewhat, but are in perfectly healthy condition. This is positive proof to me that you have *the* right preparation."

Another dentist (name on request) writes:

"What the busy dentist wants most is results. Your tooth paste, 'Senreco' combined with the usual oral treatment does give results. You have an ideal tooth paste."

Use Senreco twice daily.
See your dentist twice a year.

"Senreco"
1400 Masonic Temple, Cincinnati, Ohio

Please send me liberal sample tube of Senreco to provide me with treatments twice daily for one week. I enclose six cents for it.

JOHNS-MANVILLE

Service to you—through Public Utilities

Those who give you water, light, heat travel and communication—use Johns-Manville Products

THOSE great public servants who bring you light, heat, telephone, telegraph and make transportation possible, live by serving. Remarkable as they are in size and scope, they are even more impressive for the sense of tireless diligence they convey.

When you press the switch at 2 A. M., the light must respond. You lift the telephone receiver today or next year—Central is always there. You expect water when you turn on the faucet. Thousands of trains move daily over the rails so that you may take just one—occasionally—any time. Have you ever figured out why this is so? Why it can be?

In organization these companies approach perfection. In mechanical equipment they choose only the best. Every material they use must be dependable and so must the concern from whom they buy.

They buy Johns-Manville products. Conduit for underground wires, Wrappings for cables, Electrical Protective Devices, Cements for boiler furnaces, Insulations for steam pipes, Lagging and Packing for locomotives, Roofs for their buildings, Insulations for steel cars, Linings for smoke stacks, and a hundred other products—all of Johns-Manville.

* * *

What better recommendation to you for the quality, safety and dependability of all things that carry the surname Johns-Manville? What better testimonial could there be of the value of Johns-Manville Service to you personally?

HER DAIRY

(Continued from Page 6)

At seven I rose and with palpatating ngers dressed myself in my best evening Frock, which is a pale yellow. I put my air up, and was just finished, when mother ocked. It was terrable.

I had to duck back into bed and crush verything. But she only looked in and said o try and behave for the next three hours, nd went away.

At a quarter to eight I left the house in a landestine manner by means of the cellar nd the area steps, and on the pavment rew a long breath. I was free, and I had welve dollars.

Act One went well, and no disturbence. lthough Adrian started when he saw me. he yellow looked very well.

I had expected to sit back, sheltered by ie curtains, and only visable from the age. I have often read of this method. ut there were no curtains. I therfor sat, rning a stoney profile to the audiance, and noreing it, as though it were not present, usting to luck that no one I knew was ere.

He saw me. More than that, he hardly ok his eyes from the box wherein I sat. am sure to that he had mentioned me to ie company, for one and all they stared at e until I think they will know me the ext time they see me.

I still think I would not have been recogzed by the Familey had I not, in a very iet seen, commenced to sneaze. I did this veral times, and a lot of people looked oyed, as though I sneazed because I ed to sneaze. And I looked back at them fiantly, and in so doing, encountered the ze of my Maternel Parent.

Oh, Dear Dairy, that I could have died that moment, and thus, when streched it a pathetic figure, with tubroses and her flowers, have compeled their pity. it alas, no. I sneazed again!

Mother was weged in, and I saw that my ly hope was flight. I had not had more an between three and four dollars worth the evening, but I glansed again and Sis is boreing holes into me with her eyes. ly Beresford knew nothing, and was tryg to hold Sis's hand under her opera cloke. y fool could tell that.

But, as I was about to rise and stand jized, as one may say, for departure, I ught Adrian's eyes, with a gleam in their ep depths. He was, at the moment, ying with the bowl of roses. He took one t, and while the leading lady was talking, l eged his way toward my box. There, nding very close, aparently by accident, l droped the rose into my lap.

Oh Dairy! Dairy!

I picked it up, and holding it close to me, lew.

I am now in bed and rather chilley. lother banged at the door some time ago, d at last went away, mutering.

I am afraid she is going to be petish.

JANUARY 22ND. Father came home this rning, and things are looking up. Mother course tackeled him first thing, and when came upstairs I expected an awful time. t my father is a reel Person, so he only s down on the bed, and said:

'Well, chicken, so you're at it again!"

I had to smile, although my chin shook.

'You'd better turn me out and forget ," I said. "I was born for Trouble. My avice to the Familey is to get out from der. That's all."

'Oh, I don't know," he said. "It's pretty veniant to have a Familey to drop on ven the slump comes." He thumped hims on the chest. "A hundred and eighty nds," he observed," just intended for le daughters to fall back on when other ngs fail."

'Father," I inquired, putting my hand nis, because I had been bearing my burdis alone, and my strength was ebing: "do ya beleive in Love?"

'*Do* I!"

'But I mean, not the ordinery atachment bween two married people. I mean le—the reel thing."

'I see! Why, of course I do."

'Did you ever read Pope, father?"

'Pope? Why I—probably, chicken. Wy?"

'Then you know what he says: 'Curse o all laws but those which Love has ade.'"

'Look here," he said, sudenly laying a hnd on my brow. "I beleive you are fevish."

"Not feverish, but in trouble," I explained. And so I told him the story, not saying much of my deep Passion for Adrian, but merly that I had formed an atachment for him which would persist during life. Although I had never yet exchanged a word with him.

Father listened and said it was indeed a sad story, and that he knew my deep nature, and that I would be true to the End. But he refused to give me any money, except enough to pay back Hannah and Carter Brooks, saying:

"Your mother does not wish you to go to the theater again, and who are we to go against her wishes? And anyhow, maybe if you met this fellow and talked to him, you would find him a disapointment. Many a pretty girl I have seen in my time, who didn't pan out acording to specifications when I finaly met her."

At this revalation of my beloved father's true self, I was almost stuned. It is evadent that I do not inherit my being true as steal from him. Nor from my mother, who is like steal in hardness but not in being true to anything but Social Position.

As I record this awfull day, dear Dairy, there comes again into my mind the thought that *I do not belong here.* I am not like them. I do not even resemble them in features. And, if I belonged to them, would they not treat me with more consideration and less disipline? Who, in the Familey, has my noze?

It is all well enough for Hannah to observe that I was a pretty baby with fat cheaks. May not Hannah herself, for some hiden reason, have brought me here, takeing away the reel I to perhaps languish unseen and "waste my sweetness on the dessert air?" But that way lies madness. Life must be made the best of as it is, and not as it might or indeed ought to be.

Father promised before he left that I was not to be scolded, as I felt far from well, and was drinking water about every minute.

"I just want to lie here and think about things," I said, when he was going. "I seem to have so many thoughts. And father ——"

"Yes, chicken."

"If I need any help to carry out a plan I have, will you give it to me, or will I have to go to totle strangers?"

"Good gracious, Bab!" he exclaimed. "Come to me, of course."

"And you'll do what you're told?"

He looked out into the hall to see if mother was near. Then, dear Dairy, he turned to me and said:

"I always have, Bab. I guess I'll run true to form."

JANUARY 23RD. Much better today. Out and around. Familey (mother and Sis) very dignafied and nothing much to say. Evadently have promised father to restrain themselves. Father rushed and not comeing home to dinner.

Beresford on edge of proposle. Sis very jumpy.

LATER: Jane Raleigh is home for her couzin's wedding! Is comeing over. We shall take a walk, as I have much to tell her.

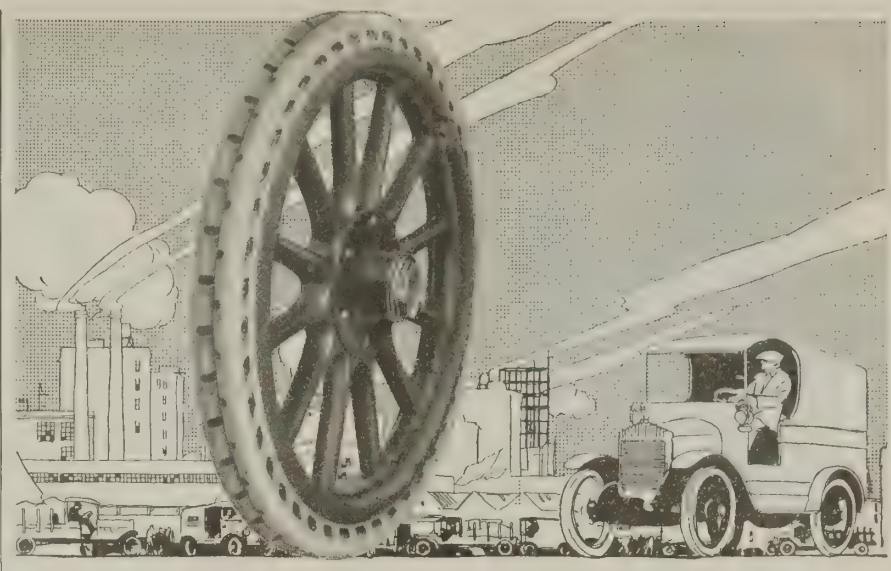
6 P.M. What an afternoon! How shall I write it? This is a Milestone in my Life.

I have met him at last. Nay, more. I have been in his dressing room, conversing as though acustomed to such things all my life. I have conceled under the mattress a reel photograph of him, beneath which he has written Yours always, Adrian Egleston."

I am writing in bed, as the room is chilley—or I am—and by putting out my hand I can touch his pictured likeness.

Jane came around for me this afternoon, and mother consented to a walk. I did not have a chance to take Sis's pink hat, as she keeps her door locked now when not in her room. Which is rediculous, because I am not her tipe, and her things do not suit me very well anyhow. And I have never borowed anything but gloves and handkercheifs, except Maidie's dress and the hat.

She had, however, not locked her bathroom, and finding a bunch of violets in the washbowl I put them on. It does not hurt violets to wear them, and anyhow I knew Carter Brooks had sent them and she ought to wear only Beresford's flowers if she means to marry him.



Motz Tires Cause No Delays

To approximate the resilience of high-grade pneumatics, while retaining the trouble-proof qualities of solid rubber construction—such is the plan behind the making of the high-efficiency Goodyear Motz Cushion Tire.

Most light trucks—up to a ton and a half capacity—are used in delivery service.

Here speed is essential.

But *certainty* and freedom from trouble are just as important as speed.

And Motz Tires deliver *both* speed and certainty.

Moreover these tires are economical, averaging better than 10,000 miles—with records up to 35,000.

And they save power cost.

These facts account for the phenomenal increase in the use of this tire—practically *two* Motz Tires in use now for every *one* a year ago.

Jane at once remarked that I looked changed.

"Naturaly," I said, in a *blase* maner.

"If I didn't know you, Bab," she observed, "I would say that you are rouged."

I became very stiff and distant at that. For Jane, although my best friend, had no right to be suspisious of me.

"How do I look changed?" I demanded.

"I don't know. You—Bab, I beleive you are up to some mischeif!"

"Mischeif?"

"You don't need to pretend to me," she went on, looking into my very soul. "I have eyes. You're not decked out this way for *me*."

I had meant to tell her nothing, but spying just then a man ahead who walked like Adrian, I was startled. I cluched her arm and closed my eyes.

"Bab!" she said.

The man turned, and I saw it was not he. I breathed again. But Jane was watching me, and I spoke out of an overflowing heart.

"For a moment I thought—Jane, I have met *the one* at last."

"Barbara!" she said, and stoped dead. "Is it any one I know?"

"He is an Actor."

"Ye gods!" said Jane, in a tence voice. "What a tradgedy!"

"Tradgedy indeed," I was compeled to admit. "Jane, my Heart is breaking. I am not alowed to see him. It is all off, forever."

"Darling!" said Jane. "You are trembling all over. Hold on to me. Do they disaprove?"

"I am never to see him again. Never."

The biterness of it all overcame me. My eyes sufused with tears.

But I told her, in broken accents, of my determination to stick to him, no matter what. I might never be Mrs. Adrian Egleston, but ——"

"Adrian Egleston!" she cried, in amazement. "Why *Barbara*, you lucky Thing!"

So, finding her fuller of simpathy than usual, I violated my Vow of Silense, and told her all.

And, to prove the truth of what I said, I showed her the sachet over my heart containing his rose.

"It's perfectly wonderfull," Jane said, in an awed tone. "You beat anything I've ever known for adventures. You are the tipe men like, for one thing. But there is one thing I could not stand, in your place—haveing to know that he is making love to the heroine every evening and twice on Wednesdays and—Bab, this is *Wednesday!*"

I glansed at my wrist watch. It was but too o'clock. Instantly, dear Dairy, I became conscious of a dual going on within me, between love and duty. Should I do as instructed and see him no more, thus crushing my inclination under the iron heal of resolution? Or should I cast my Parents to the winds, and go?

Which?

At last I desided to leave it to Jane. I observed:

"I'm forbiden to try to see him. But I darsay, if you bought some theater tickets and did not say what the play was, and we went and it hapened to be his, it would not be my fault, would it?"

I cannot recall her reply, or much more, except that I waited in a Pharmasy, and Jane went out, and came back and took me by the arm.

"We're going to the matinee, Bab," she said. "I'll not tell you which one, because it's to be a surprize." She squeazed my arm. "First row," she whispered.

I shall draw a Vale over my feelings. Jane bought some chocolates to take along, but I could eat none. I was thirsty, but not hungry. And my cold was pretty bad, to.

So we went in, and the curtain went up. When Adrian saw me, in the front row, he smiled although in the midst of a serious speach about the world oweing him a liveing. And Jane was terrably excited.

"Isn't he the handsomest Thing!" she said. "And oh, Bab, I can see that he adores you. He is acting for you. All the rest of the people mean nothing to him. He sees but you."

Well, I had not told her that we had not yet met, and she said I could do nothing less than send him a note.

"You ought to tell him that you are true, in spite of everything," she said.

If I had not decieved Jane things would be better. But she was set on my sending the note. So at last I wrote one on my visiting card, holding it so she could not read it. Jane is my best friend and I am devoted to her, but she has no scrupels about reading what is not meant for her. I said:

"Dear Mr. Egleston: I think the Play i perfectly wonderfull. And you are per fectly splendid in it. It is perfectly terrabl that it is going to stop.

(Signed) The girl of the rose.

I know that this seems bold. But I di not feel bold, Dear Dairy. It was such letter as any one might read, and containe nothing compromizing. Still, I darsay should not have written it. But "out of th fulness of the Heart the mouth speaketh."

I was shakeing so much that I could no give it to the usher. But Jane did. How ever, I had sealed it up in an envelop.

Now comes the reel surprize, dear Dairy For the usher came down and said Mr Egleston hoped I would go back and se him after the act was over. I think a palle must have come over me, and Jane said:

"Bab! Do you dare?"

I said yes, I dared, but that I would lik a glass of water. I seemed to be thirsty a the time. So she got it, and I recovered m *savoir fair*, and stopped shakeing.

I supose Jane expected to go along, but refrained from asking her. She then said "Try to remember everything he say Bab. I am just crazy about it."

Ah, dear Dairy, how can I write how I fe when being led to him. The entire see is engraved on my soul. I, with my ver heart in my eyes, in spite of my eforts t seem cool and collected. He, in front his mirror, drawing in the lines of starv tion around his mouth for the next see while on his poor feet a *valet* put the rag shoes of Act II!

He rose when I entered, and took me the hand.

"Well!" he said. "At last!"

He did not seem to mind the *valet*, w he treated like a chair or table. And held my hand and looked deep into n eyes.

Ah, dear Dairy, men may come and m may go in my life, but never again will know such ecstacy as at that moment.

"Sit down," he said. "Little lady of t rose—but it's violets today, isn't it? A so you like the play?"

I was by that time somwhat calmer, b glad to sit down, oweing to my knees feeli queer.

"I think it is magnifacent," I said.

"I wish there were more like you," observed. "Just a moment, I have make a change here. No need to go o There's a screan for that very purpose."

He went behind the screan, and the n handed him a raged shirt over the top of while I sat in a chair and dreamed. W I reflected, would the School say if it knew! I felt no remorce. I was there, beyond the screan, changing into the g ments of penury, was the only membe the Other Sex I had ever felt I could tr care for.

Dear Dairy, I am tired and my h aches. I cannot write it all. He was p fectly respectfull, and only his eyes sho his true feelings. The woman who is Adventuress in the play came to the D but he motioned her away with a waiv the hand. And at last it was over, an was asking me to come again soon, and I would care to have one of his pictures.

I am very sleepy tonight, but I can close this record of a w-o-n-d-e-r-f-u-l d-a-y — without ——

JANUARY 24TH. Cold worse.

Not hearing from Carter Brooks I fe foned him just now. He is sore about Be ford and said he would not come to house. So I have asked him to meet m the park, and said that there were onl more days, this being Thursday.

LATER: I have seen Carter, and he h a fine plan. If only father will do it.

Carter has a fine idea to help the p He says the Theme is that the world Adrian a liveing, and that the way t is to put that strongly before the peop

"Supose," he said, "that this fe would go to some big factery, and den work. Not ask for it. Demand it. He could pretend to be starveing and say: world owes me a liveing, and I inter have it."

"But supose they were sorry for him gave it to him?" I observed.

"Tut, child," he said. "That would ha be all fixed up first. It ought to be ara that he not only be refused, but what's re that he'll be thrown out. He'll have t

Wearing Durable-DURHAM is Like Money-in-the-Bank

YES, siree, Bob! When the low-cost-of-wearing-Durable-DURHAM flashes on the screen, the high-cost-of-living sneaks out the back door. And, indeed, it *should!* For, as far as we know, Durable-DURHAM is the only complete, *guaranteed* line of *good* hosiery for the entire family selling as low as 15, 19, 25 and 35c the pair.

Only by being situated in the heart of the cotton country, by expert manufacturing in enormous quantities, with rigid factory inspection, is it possible to offer such wonderful value as you get in

Durable DURHAM Hosiery

FOR MEN, WOMEN AND CHILDREN

Made Strongest Where the Wear Is Hardest

Thousands and thousands of substantial American families who formerly paid higher prices for their hosiery have swung around to the common-sense, economical habit of wearing smooth, comfortable, fine-fitting Durable-DURHAM, "The National Footwear."

Romping, marble-shooting school-kids; mothers who like to do most of their own housework; practical American fathers, brothers and sisters—all wear Durable-DURHAM, get heaps of satisfaction in the wearing, and put the difference in the bank. Uncle Sam's soldiers and sailors, too, wear Durable-DURHAM.

The guarantee-ticket means just what it says: If for any reason you are not entirely satisfied with your Durable-DURHAM, take them back to the man who sold them to you, and he'll give you a new pair, or your money back—just like that. Pull on a pair of Durable-DURHAM.

A PROPHECY FULFILLED

Ten years ago the scientist saw in his prophetic crystal, a *greater* motive power—a power so far superior that it would supersede all the motive forces then in general use.

He foresaw Electricity the Giant harnessed to serve every need of man.

It drives the humble but necessary knitting needle. It drives the California, impressive among super-dreadnaughts. It drives the Detroit Electric, equally impressive among motor cars.

It is the *standard* in power. It is *the* smooth power, *the* clean power, *the* silent power, *the* cheap power, *the one power* changeless in quality.

Only such a perfect power united with the finest coach-building art enables the attainment of such a car as the modern Detroit Electric—the supreme expression in motordom of all-year comfort and service.

A single charge in the batteries gives you 80 to 90 miles of trouble-free travel. Beyond charging it needs but the rarest attention. It is dependability itself—and available for service 365 days a year. Prices range from $1775 to $2375.

p a lot, d'you see, so they'll throw him out. nd we'll have reporters there, so the story m get around. You get it, don't you? our friend, in order to prove that the idea the Play is right, goes out for a job, and oves that he cannot demand Laber and t it." He stoped and spoke with excite- ent: "Is he a reel sport? Would he stand ing arested? Because that would cinch "

But here I drew a line. I would not bject him to such humilliation. I would t have him arested. And at last Carter ve in.

"But you get the Idea," he said. "There'll the deuce of a Row, and it's good for a lf collum on the first page of the evening pers. Result, a jamb that night at the rformence, and a new lease of life for the ay. Egleston comes on, bruized and bat- red, and perhaps with a limp. The laber ions take up the matter—it's a knock t. I'd charge a thousand dollars for that a if I were selling it."

"Bruized!" I exclaimed. "Realy bruized painted on?"

He glared at me impatiently.

"Now see here, Bab," he said. "I'm ing this for you. You've got to play up. d if your young man won't stand a bang the eye, for instanse, to earn his Bread d Butter, he's not worth saveing."

"Who are you going to get to—to throw n out?" I asked, in a faltering tone.

He stoped and stared at me.

"I like that!" he said. "It's not my y that's failing, is it? Go and tell him Skeme, and then let his maniger work ut. And tell him who I am, and that I ve a lot of Ideas, but this is the only one n giveing away."

We had arived at the house by that time d I invited him to come in. But he only nsed biterly at the Windows and ob- ved that they had taken in the mat with lcome on it, as far as he was concerned. d went away.

Although we have never had a mat with lcome on it.

Dear Dairy, I wonder if father would do i He is gentle and kind-hearted, and it uld be paneful to him. But to who else o I turn in my extremity?

I have but one hope. My father is like r. He can be coaxed and if kindly ated will do anything. But if aproached i the wrong way, or asked to do somthing ainst his principals, he becomes a Roar- i Lion.

He would never be bully-ed into giveing a man work, even so touching a Personall- if as Adrian's.

LATER: I meant to ask father tonight, b he has just heard of Beresford and is in a errable temper. He says Sis can't marry hi, because he is sure there are plenty of tngs he could be doing in England, if not a ualy fighting.

'He could probably run a bus, and re- lce some one who can fight," he shouted. r he could at least do an honest day's wrk with his hands. Don't let me see hi, that's all."

'Do I understand that you forbid him t house?" Leila asked, in a cold furey.

'Just keep him out of my sight," father s ped. "I supose I can't keep him from s lling tea while I am away doing my part t help the Allies ——"

'Oh, rot!" said Sis, in a scornfull maner. "hile you help your bank account, you nan. I don't object to that, father, but f Heaven's sake don't put it on altruistic g unds."

She went upstairs then and banged her dr, and mother merly set her lips and said nothing. But when Beresford called, later, Tanney had to tell him the Familey was out.

Were it not for our afections, and the necessity for getting married, so there would be an increase in the Population, how happy we could all be!

LATER: I have seen father.

It was a paneful evening, with Sis shut away in her room, and father cuting the ends off cigars in a viscious maner. Mother was *non est*, and had I not had my memories, it would have been a Sickning Time.

I sat very still and waited until father softened, which he usualy does, like ice cream, all at once and all over. I sat perfectly still in a large chair, and except for an ocasional sneaze, was quiet.

Only once did my parent adress me in an hour, when he said:

"What the devil's making you sneaze so?"

"My noze, I think, sir," I said meekly.

"Humph!" he said. "It's rather a small noze to be making such a racket."

I was cut to the heart, dear Dairy. One of my dearest dreams has always been a delicate noze, slightly arched and long enough to be truly aristocratic. Not realy acqualine but on the verge. I *hate* my little noze—hate it—hate it—*hate it.*

"Father!" I said, rising and on the point of tears. "How can you! To taunt me with what is not my own fault, but partly heredatary and partly carelessness. For if you had pinched it in infansy it would have been a good noze, and not a pug. And——"

"Good gracious!" he exclaimed. "Why, Bab, I never meant to insult your noze. As a matter of fact, it's a good noze. It's exactly the sort of noze you ought to have. Why, what in the world would you do with a Roman noze?"

I have not been feeling very well, dear Dairy, and so I sudenly began to weap.

"Why, chicken!" said my father. And made me sit down on his knee. "Don't tell me that my bit of sunshine is behind a clowd!"

"Behind a noze," I said, feebly.

So he said he liked my noze, even although somwhat swolen, and he kissed it, and told me I was a little fool, and at last I saw he was about ready to be tackeled. So I observed:

"Father, will you do me a faver?"

"Sure," he said. "How much do you need? Busness is pretty good now, and I've about landed the new order for shells for the English war department. I—supose we make it fifty! Although we'd better keep it a Secret between we to."

I drew myself up, although tempted. But what was fifty dollars to doing somthing for Adrian? A mere bagatell.

"Father," I said, "do you know Miss Everett, my English teacher?"

He remembered the name.

"Would you be willing to do her a great faver?" I demanded intencely.

"What sort of a faver?"

"Her couzin has written a play. She is very fond of her couzin, and anxious to have him suceed. And it is a lovely play."

He held me off and stared at me.

"So *that* is what you were doing in that box alone!" he exclaimed. "You incomprehensable child! Why didn't you tell your mother?"

"Mother does not always understand," I said, in a low voice. "I thought, by buying a Box, I would do my part to help Miss Everett's couzin's play suceed. And as a result I was draged home, and shamefully treated in the most mortafying maner. But I am acustomed to brutalaty."

"Oh, come now," he said. "I wouldn't go as far as that, chicken. Well, I won't finanse the play, but short of that I'll do what I can."

However, he was not so agreable when I told him Carter Brooks' plan. He delivered a firm no.

"Although," he said, "sombody ought to do it, and show the falasy of the Play. In the first place, the world doesn't owe the fellow a liveing, unless he will hustel around and make it. In the second place an employer has a right to turn away a man he doesn't want. No one can force capitle to employ laber."

"Well," I said, as long as Laber talks and makes a lot of noise, and Capitle is to dignafied to say anything, most people are going to side with Laber."

He gased at me.

"Right!" he said. "You've put your finger on it, in true femanine fashion."

"Then why won't you throw out this man when he comes to you for Work? He intends to forse you to employ him."

"Oh, he does, does he?" said father, in a feirce voice. "Well, let him come. I can stand up for my principals, to. I'll throw him out, all right."

Dear Dairy, the battle is over and I have won. I am very happy. How true it is that strategy will do more than violance!

We have aranged it all. Adrian is to go to the mill, dressed like a decayed Gentleman, and father will refuse to give him work. I have said nothing about violance, leaving that to arange itself.

I must see Adrian and his maniger. Carter has promised to tell some reporters that there may be a story at the mill on Saturday morning. I am to excited to sleep.

Feel horid. Forbiden to go out this morning.

JANUARY 25TH. Beresford was here to lunch and he and mother and Sis had a long talk. He says he has kept it a secret because he did not want his Busness known. But he is here to place a shell order for the English war department.

"Well," Leila said, "I can hardly wait to tell father and see him curl up."

"No, no," said Beresford, hastaly. "Realy you must alow me—I must inform him myself. I am sure you can see why. This is a thing for men to settle. Besides, it is a delicate matter. Mr. Archibald is trying to get the Order, and our New York office, if I am willing, is ready to place it with him."

"Well!" said Leila, in a thunderstruck tone. "If you British don't beat anything for keeping your own council!"

I could see that he had her hand under the table. It was sickning.

Jane came to see me after lunch. The wedding was that night, and I had to sit through silver vegatable dishes, and after-dinner coffee sets and plates and a grand piano and a set of gold vazes and a cabushon saphire and the bridesmaid's clothes and the wedding supper and heaven knows what. But at last she said:

"You dear thing—how weary and wan you look!"

I closed my eyes.

"But you don't intend to give him up, do you?"

"Look at me!" I said, in imperious tones. "Do I look like one who would give him up, because of Familey objections?"

"How brave you are!" she observed.

"Bab, I am green with envy. When I think of the way he looked at you, and the tones of his voice when he made love to that—that creature, I am posatively *shaken.*"

We sat in somber silense. Then she said: "I darsay he detests the heroine, doesn't he?"

"He tolarates her," I said, with a shrug.

More silense. I rang for Hannah to bring some ice water. We were in my *boudoir.*

"I saw him yesterday," said Jane, when Hannah had gone.

"Jane!"

"In the park. He was with the woman that plays the Adventuress. Ugly old thing."

I drew a long breath of releif. For I knew that the Adventuress was at least thirty and perhaps more. Besides being both wicked and cruel, and not at all femanine.

Hannah brought the ice-water and then came in the most madening way and put her hand on my Forehead.

"I've done nothing but bring you ice-water for too days," she said. "Your head's hot. I think you need a musterd foot bath and to go to bed."

"Hannah," Jane said, in her loftyest fashion, "Miss Barbara is woried, not ill. And please close the door when you go out."

Which was her way of telling Hannah to go. Hannah glared at her.

"If you take my advice, Miss Jane," she said. "You'll keep away from Miss Barbara."

And she went out, slaming the door.

"Well!" gasped Jane. "Such impertanence. Old servant or not, she ought to have her mouth slaped."

Well, I told Jane the plan and she was perfectly crazy about it. I had a headache, but she helped me into my street things, and got Sis's rose hat for me while Sis was at the telefone. Then we went out.

First we telaphoned Carter Brooks, and he said tomorrow morning would do, and he'd give a couple of reporters the word to hang around father's office at the mill. He said to have Adrian there at ten o'clock.

"Are you sure your father will do it?" he asked. "We don't want a flivver you know."

"He's making a principal of it," I said. "When he makes a principal of a thing, he does it."

"Good for father!" Carter said. "Tell him not to be too gentle. And tell your actor-friend to make a lot of fuss. The more the better. I'll see the policeman at the mill, and he'll probably take him up. But we'll get him out for the matinee. And watch the evening papers."

It was then that a terrable thought struck me. What if Adrian considered it beneath his profession to advertize, even if indirectly? What if he prefered the failure of Miss Everett's couzin's play to a bruize on the eye? What, in short, if he refused?

Dear Dairy, I was stupified. I knew not which way to turn. For Men are not like Women, who are dependible and anxious to get along, and will sacrifise anything for Success. No, men are likely to turn on the ones they love best, if the smallest Things do not suit them, such as cold soup, or sleaves to long from the shirt-maker, or plans made

which they have not been consulted about beforhand.

"Darling!" said Jane, as I turned away, "you look *stricken!*"

"My head aches," I said, with a weary gesture toward my forehead. It did ache, for that matter. It is acheing now, dear Dairy.

However, I had begun my task and must go through with it. Abandoning Jane at a corner, in spite of her calling me cruel and even sneeking, I went to Adrian's hotel, which I had learned of during my *seance* in his room, while he was changing his garments behind a screan, as it was marked on a dressing case.

It was then five o'clock.

How nervous I felt as I sent up my name to his chamber! Oh, dear Dairy, to think that it was but five hours ago that I sat and waited, while people who guessed not the inner trepadation of my heart past and repast, and glansed at me and at Leila's pink hat above.

At last he came. My heart beat thunderously, as he aproached, strideing along in that familiar walk, swinging his strong and tender arms. And I? I beheld him comeing, and could think of not a word to say.

"Well!" he said, pausing in front of me. "I knew I was going to be lucky today. Friday is my best day."

"I was born on Friday," I said. I could think of nothing else.

"Didn't I say it was my lucky day? But you mustn't sit here. What do you say to a cup of tea in the restarant?"

How grown up and like a *debutante* I felt, dear Dairy, going to have tea as if I had it every day at School, with a handsome actor across! Although somwhat uneasy also, owing to the posibility of the Familey comeing in. But it did not and I had a truly happy hour, not at all spoiled by looking out the window and seeing Jane going by, with her eyes poping out, and walking very slowly so I would invite her to come in.

Which I did not.

Dear Dairy, *he will do it.* At first he did not understand, and looked astounded. But when I told him of Carter being in the advertizing busness, and father owning a large mill, and that there would be reporters and so on, he became thoughtfull.

"It's realy incredably clever," he said. "And if it's pulled off right it ought to be a stampede. But I'd like to see Mr. Brooks. We can't have it fail, you know." He leaned over the table. "It's straight goods, is it, Miss—er—Barbara? There's nothing foney about it?"

"Foney!" I said, drawing back. "Certainly not."

He kept on leaning over the table.

"I wonder," he said, "what makes you so interested in the Play?"

Oh, Dairy, Dairy!

And just then I looked up, and the Adventuress was stareing in the door at me with the *meanest* look on her face.

I draw a Vale over the remainder of our happy hour. Suffice it to say that he considers me exactly the tipe he finds most atractive, and that he does not consider my noze to short. We had a long dispute about this. He thinks I am wrong and says I am not an acquiline tipe. He says I am romantic and of a loveing disposition. Also somwhat reckless, and he gave me good advice about doing what my Familey consider for my good, at least until I come out.

But our talk was all to short, for a fat man with three rings on came in, and sat down with us, and ordered a whiskey and soda. My blood turned cold, for fear some one I knew would come in and see me sitting there in a drinking party.

And my blood was right to turn cold. For, just as he had told the maniger about the arangement I had made, and the maniger said "Bully" and raised his glass to drink to me I looked across and there was mother's aunt, old Susan Paget, sitting near, with the most awfull face I ever saw!

I colapsed in my chair.

Dear Dairy, I only remember saying, "Well, remember. ten o'clock. And dress up like a gentleman in hard luck," and his saying: "Well, I hope I'm a gentleman, and the hard luck's no joke," and then I went away.

And now, dear Dairy, I am in bed, and every time the telefone rings I have a chill. And in between times I drink ice-water and sneaze. How terrable a thing is love.

LATER: I can hardly write. Switzerland is a setled thing. Father is not home tonight and I cannot apeal to him. Susan said I was drinking to, and mother is haveing the vibrater used on her spine. If I felt better I would run away.

JANUARY 26TH. How can I write what has happened? It is to terrable.

Beresford went at ten o'clock to ask for Leila, and did not send in his card for fear father would refuse to see him. And father thought, from his saying that he had come to ask for somthing, and so on, that it was Adrian, and threw him out. He ordered him out first, and Beresford refused to go, and they had words, and then there was a fight. The reporters got it, and it is in all the papers. Hannah has just brought one in. It is headed "Manufacturer assaults Peer." Leila is in bed, and the doctor is with her.

LATER: Adrian has disapeared. The maniger has just called up, and with shakeing knees I went to the telefone. Adrian went to the mill a little after ten, and has not been seen since.

It is in vane I protest that he has not eloped with me. It is almost time now for the matinee and no Adrian. What shall I do?

SATURDAY, 11 P.M. Dear Dairy, I have the meazles. I am all broken out, and look horible. But what is a sickness of the body compared to the agoney of my mind? Oh, dear Dairy, to think of what has happened since last I saw your stainless Pages!

What is a sickness to a broken heart? And to a heart broken while trying to help another who did not deserve to be helped. But if he decieved me, he has paid for it, and did until he was rescude at ten o'clock tonight.

I have been given a sleeping medacine, and until it takes affect I shall write out the tradgedy of this day, omiting nothing. The trained nurse is asleep on a cot, and her cap is hanging on the foot of the bed.

I have tried it on, dear Dairy, and it is very becomeing. If they insist on Switzerland I think I shall run away and be a trained nurse. It is easy work, although sleeping on a cot is not always comfortible. But at least a trained nurse leads her own life and is not bully-ed by her Familey. And more, she does good constantly.

I feel tonight that I should like to do good, and help the sick, and perhaps go to the Front. I know a lot of college men in the American Ambulence.

I shall never go on the stage, dear Dairy. I know now its decietfullness and visisitudes. My heart has bled until it can bleed no more, as a result of a theatricle Adonis. I am through with the theater forever.

I shall begin at the beginning. I left off where Adrian had disapéared.

Although feeling very strange, and looking a queer red color in my mirror, I rose and atired myself. I felt that somthing had slipped, and I must find Adrian. (It is strange with what coldness I write that once beloved name.)

While dressing I percieved that my chest and arms were covered with small red dots, but I had no time to think of myself. I sliped downstairs and outside the drawing room I heard mother conversing in a loud and angry tone with a visitor. I glansed in, and ye gods!

It was the Adventuress.

Drawing somwhat back, I listened. Oh, Dairy, what a revalation!

"But I *must* see her," she was saying. "Time is flying. In a half hour the performence begins, and—he cannot be found."

"I can't understand," mother said, in a stiff maner. "What can my daughter Barbara know about him?"

The Adventuress snifed. "Humph!" she said. "She knows, all right. And I'd like to see her in a hurrey, if she is in the house."

"Certainly she is in the house," said mother.

"*Are you sure of that?* Because I have every reason to beleive she has run away with him. She has been hanging around him all week, and only yesterday afternoon I found them together. She had some sort of a Skeme, he said afterwards, and he wrinkeled a coat under his mattress last night. He said it was to look as if he had slept in it. I know nothing further of your daughter's skeme. But I do know he went out to meet her. He has not been seen since. His maniger has hunted for to hours."

"Just a moment," said mother, in a fridgid tone. "Am I to understand that this—this Mr. Egleston is ——"

"He is my husband."

Ah, dear Dairy, that I might then and there have passed away. But I did not. I stood there, with my heart crushed, until I felt strong enough to escape. Then I fled, like a Gilty Soul. It was gastly.

On the doorstep I met Jane. She gased at me strangely when she saw my face, and then cluched me by the arm.

"Bab!" she cried. "What on the earth is the matter with your complexion?"

But I was desparate.

"Let me go!" I said. "Only lend me two dollars for a taxi and let me go. Somthing horible has happened."

She gave me ninty cents, which was all she had, and I rushed down the street, followed by her peircing gaze.

Although realizing that my life, at least the part of it pertaining to sentament, was over, I knew that, single or married, I must find him. I could not bare to think that I, in my desire to help, had ruined Miss Everett's couzin's play. Luckaly I got a taxi at the corner, and I ordered it to drive to the mill. I sank back, bathed in hot persparation, and on consulting my bracelet watch found I had but twenty five minutes until the curtain went up.

I must find him, but where and how! I confess for a moment that I doubted my own father, who can be very feirce on ocasion. What if, madened by his mistake about Beresford, he had, on being aproached by Adrian, been driven to violance? What if, in my endeaver to help one who was unworthy, I had led my poor paternal parent into crime?

"Hell is paved with good intentions."

SAMUEL JOHNSTON.

On driveing madly into the mill yard, I sudenly remembered that it was Saturday and a half holaday. The mill was going, but the offices were closed. Father, then, was imured in the safety of his Club, and could not be reached except by pay telefone. And the taxi was now ninty cents.

I got out, and paid the man. I felt very dizy and queer, and was very thirsty, so I went to the hydrent in the yard and got a drink of water. I did not as yet suspect meazles, but laid it all to my agoney of mind.

Haveing thus refreshed myself, I looked about, and saw the yard policeman, a new one who did not know me, as I am away at school most of the time, and the Familey is not expected to visit the mill, because of dirt and posible accidents.

I aproached him, however, and he stood still and stared at me.

"Officer," I said, in my most dignafied tones. "I am looking for a—for a gentleman who came here this morning to look for work."

"There was about two hundered lined up here this morning, Miss," he said. "Which one would it be, now?"

How my heart sank!

"About what time would he be comeing?" he said. "Things have been kind of mixed-up around here today, oweing to a little trouble this morning. But perhaps I'll remember him."

But, although Adrian is of an unusual tipe, I felt that I could not describe him, besides haveing a terrable headache. So I asked if he would lend me carfare, which he did with a strange look.

"You're not feeling sick, Miss, are you?" he said. But I could not stay to converce, as it was then time for the curtain to go up, and still no Adrian.

I had but one refuge in mind, Carter Brooks, and to him I fled on the wings of misery in the street car. I burst into his advertizing office like a furey.

"Where is he?" I demanded. "Where have you and your plotting hiden him?"

"Who? Beresford?" he asked in a placid maner. "He is at his hotel, I beleive, putting beefstake on a bad eye. Beleive me, Bab ——"

"Beresford!" I cried, in scorn and wrechedness. "What is he to me? Or his eye either? I refer to Mr. Egleston. It is time for the curtain to go up now, and unless he has by this time returned, there can be no performence."

"Look here," Carter said sudenly, "you look awfuly queer, Bab. Your face ——"

I stamped my foot.

"What does my face matter?" I demanded. "I no longer care for him, but I have ruined Miss Everett's couzin's play unless he turns up. Am I to be sent to Switzerland with that on my soul?"

"Switzerland!" he said slowly. "Why, Bab, they're not going to do that, are they? I—I don't want you so far away."

Dear Dairy, I am unsuspisious by nature, beleiving all mankind to be my friends until proven otherwise. But there was a gloating look in Carter Brooks' eyes as they turned on me.

"Carter!" I said, "you know where he is and you will not tell me. You *wish* to ruin him."

I was about to put my hand on his arm, but he drew away.

"Look here," he said. "I'll tell you somthing, but please keep back. Because you look like smallpox to me. I was at the mill this morning. I do not know anything about your actor-friend. He's probably only been run over or somthing. But I saw Beresford going in, and I—well, I sugested that he'd better walk in on your father or he wouldn't get in. It worked, Bab. *How it did work!* He went in and said he had come to ask your father for somthing, and your father blew up by saying that he knew about it, but that the world only owed a liveing to the man who would hustel for it, and that he would not be forsed to take any one he did not want.

"And in too minutes Beresford hit him, and got a responce. It was a million dollars worth."

So he babbled on. But what were his words to me?

Dear Dairy, I gave no thought to the smallpox he had mentioned, although fatle to the complexion. Or to the fight at the mill. I heard only Adrian's posible tradgic fate. Sudenly I colapsed, and asked for a drink of water feeling horible, very wobbley and unable to keep my knees from bending.

And the next thing I remember is father taking me home, and Adrian's fate still a deep mystery, and remaining such, while I had a warm sponge to bring out the rest of the rash, folowed by a sleep—it being meazles and not smallpox.

Oh, Dear Dairy, what a story I learned when haveing wakened and feeling better, my father came tonight and talked to me from the doorway, not being alowed in.

Adrian had gone to the mill, and father, haveing thrown Beresford out and asserted his principals, had not thrown him out, *but had given him a job in the mill.* And the policeman had given him no chance to escape, which he atempted. He was draged to the shell plant and there locked in, because of spies. The plant is under milatary guard.

And there he had been compeled to drag a wheelbarrow back and forth, containing charcoal for a small furnase, for hours!

Even when Carter found him he could not be releaced, as father was in hideing from reporters, and would not go to the telefone or see callers.

He labored until ten P. M., while the theater remained dark, and people got their money back.

I have ruined him. I have also ruined Miss Everett's couzin.

* * *

The nurse is still asleep. I think I will enter a hospitle. My career is ended, my life is blasted.

I reach under the mattress and draw out the picture of him who today I have ruined, compeling him to do manuel laber for hours, although unacustomed to it. He is a great actor, and I beleive has a future. But my love for him is dead. Dear Dairy, he decieved me, and that is one thing I cannot forgive.

So now I sit here among my pilows, while the nurse sleeps, and I reflect about many Things. But one speach rings in my ears over and over.

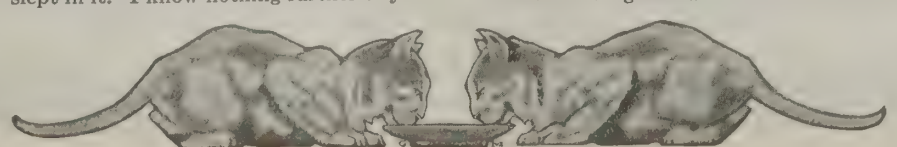
Carter Brooks, on learning about Switzerland, said it in a strange maner, looking at me with inscrutible eyes.

"Switzerland! Why, Bab—I don't want you to go so far away."

What did he mean by it?

* * *

Dear Dairy, you will have to be burned, I darsay. Perhaps it is as well. I have p o r e d out my h-e-a-r-t ——



Everywhere

Everywhere—throughout the length and breadth of the United States—you'll find United States Tires doing day-in and day-out consistent service.

On little cars and big cars—over good boulevards and rutty, rocky country lanes—over city pavements and uncertain sandy roads—up-hill and down-dale—giving the sort of service YOU have always wanted—long mileage and low mileage cost.

There are five types of United States Tires. Ask your dealer which one is best suited for your car and needs.

Good dealers everywhere sell them—wise motorists everywhere use them—that's the story of United States Tires.

'Nobby' 'Chain' 'Usco' 'Royal Cord' 'Plain'

A tire for every motoring need of price and use.

BUG HUNTERS OF INDUSTRY

(Concluded from Page 14)

contracts whenever material is bought, and they must be adhered to by the sellers.

When material is received at the factory the inspection force compares it with the specifications. A shipment of gun rod, for instance, is wanted for making fine screws for apparatus with delicate clearances, like an adding machine. A ton of this gun rod may be worked up into several million screws. But a few pieces of rod that did not meet the requirements of diameter, which may be within one-thousandth of an inch, if included in that ton of material and sent through the plant would make all kinds of trouble and expense. So the inspectors probably go over each separate piece of such a shipment and gauge it from end to end with calipers.

The next item may be a carload of castings. This is not so delicate a job of inspection, but it calls for just as much vigilance. The material must be examined for flaws and weighed to see that it is not running too heavy to the piece. Foundrymen have been known to make their own bills larger by shipping castings overweight. Such parts later on may add to the difficulties and costs of factory departments. So now at the door of almost every factory stands the chief inspector, like a policeman, ready to exclude trouble.

Products have become so complex lately, and promise to become so much more so, that he is absolutely necessary. It has not always been thus.

Once the average factory took most of its materials on snap judgment and guesswork, and the sellers furnished materials in about the same way. When the inspector appeared at the factory door and began sorting right from wrong, with his specifications and tests, there was a loud yell from the fellow whose stuff did not pass. He charged partiality on the part of the inspector, who told the dissatisfied producer to go away and learn something about his own business. But by and by the manufacturers found themselves facing about the same problems. One factory's finished product is raw material for some other factory. They were all in the same boat, so very sensibly they got together to talk matters over. And out of this phase of inspection has grown some of the finest constructive coöperation that exists in business to-day, with exchanges of information and interrelations between industries for the solution of common problems on a common basis.

Quite simple tests of raw material and tools will often decrease the percentage of defective goods produced. A large shoe concern equipped all its foremen with pocket microscopes of good magnifying power, and what they saw through them was most useful in improving the product. An operator on a stitching machine would have trouble with breaking thread. Under the glass the needle often showed a rough eye, and thus was revealed a poor lot of needles. Or a defect might be disclosed in the thread. No fancy finish served to hide defective leather when the foreman could see the grain through a microscope, and what looked like careless work on the part of an operator, viewed just from appearances, was often found to be due to dull tools, when they were examined under the microscope.

Human Inspectors the Best

In his relation to the factory, too, after materials have been started through the works, the inspector is a policeman. His job is to watch all the other fellows, even the boss if necessary, and hold everybody up to standards that must be enforced regardless of whose job or feelings are affected. Nowadays the inspector is often a department in himself. He has a central office with testing apparatus and master gauges, and when an order for so many thousand parts of a certain product is given to the factory he may require that each thousandth one be brought to his office for comparison with the standard. He has his assistants who follow work through the factory, checking up shortcomings of materials and men. A piece of defective work cannot be moved until they have made an investigation and tied a special tag on it.

The fruit growers of this country discovered that such police authority was necessary for a good product when, some years ago, they began packing red apples and bright oranges in fancy ways for fancy prices. At the outset each grower undertook to pack his own fruit according to the standard. But it was found that not one grower in a hundred could see worm holes in his own apples or scale on his own oranges. So the central-packing-house system came into existence, with an expert to pack and an inspector to watch the fruit during growth.

Without this system of impartiality it is well-nigh impossible to maintain a good standard in packing soil produce.

The factory inspector must also have human qualities, for the mere faultfinder doesn't get very far, no matter what his authority. An ideal factory inspector should be both a technical expert and a human being. He has to be an adviser and co-worker as well as a sleuth. He must be interested in helping all departments attain a high percentage of perfect production. Incidentally, he is not an easy man to find.

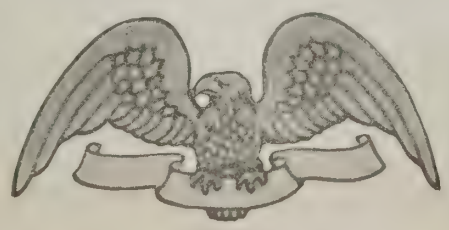
In a big electrical works there was an epidemic of damage to costly apparatus in the assembling department. Trouble seemed to be due to sheer carelessness on the part of workmen, and to stop it the chief inspector, who was a martinet, imposed heavy penalties. That didn't help matters a bit. Workmen grew sullen and silent, shielded one another and smuggled away damaged stuff. Another inspector was appointed. He was a finer kind of human being. His first act was to abolish all penalties and to make the damage problem a get-together proposition. When anything came through in bad shape he went out among the men, reassured them and made inquiries as to how the mishap had occurred. His attitude brought out all the facts that had been suppressed before and showed that carelessness was only a small factor in the problem. It was easier to eliminate even carelessness after all the facts were known, for then all the resources of the department could be brought to bear on the culprit, whereas before he had been scolded, fined and left to lonely self-improvement.

What Was Found in the Dump

Some concerns still charge each worker with the material that he spoils, making no effort to find out if the system is wrong. To add to this injustice, either the spoiled work is sold outright and the proceeds pocketed by the company, or the material in it is actually built into product, after the workman has paid for it, and put on the market.

How far such a system falls short of touching the real problem is shown in a story told by a machine-shop foreman. One of his best mechanics began spoiling shafts during grinding, and he turned out so many cripples that he asked to be put on some other work. He thought that he had lost his nerve. The foreman went back to the machine and watched the operator grind a shaft. Halfway through the shaft departed from true. Right next to that machine was another one, just like it, run by a less skillful man, who was turning out perfect work. The foreman could not account for the error and called an engineer, who was puzzled too. They went over both machines, making a regular doctor's diagnosis by eliminating every factor that was right. Still nothing was found which seemed to be wrong. Finally the trouble was located in a slight difference in the consistence of the grinding compound, a most obscure trouble. When that was set right the mechanic got his nerve back.

If inspection is blindly severe with its penalties, a factory can develop a vast underworld system for eluding them and covering up its mistakes. A new inspector of the human kind took charge of a plant where the other sort had ruled for years. His first step was to make a search of the boxes in which sweepings were carried out of the different departments. More than three thousand pieces of damaged stuff were found the first night—materials and tools that had been spoiled and smuggled out to the dump to escape the notice of the inspector. This had been going on for years, with heavy losses to the company. The new inspector handed to each foreman a list of stuff traced to his department, and this was posted where workers could see it and could compare their records with those of other departments. That started a competition of the old, familiar horse-race kind. Next night there was less dumped material, and in a month the salvage had been reduced practically to nothing.



Even when the trouble was remedied, however, the inspector kept up his nightly sifting of dirt-boxes. For it was found that dumped material would turn up suddenly, and its appearance always gave a clew to something wrong in the factory. Several hundred spoiled parts would come from a single department. Investigation showed that this department was being driven at too high pressure or that something was wrong with equipment.

A similar plan was adopted in an automobile factory in order to reduce the number of defective parts returned by owners of cars. In one month ten transmission countershafts were returned by owners for replacement as defective. The engineering staff studied those shafts to find out which had been defective when they left the factory and which had been damaged by careless owners. Then the facts were posted in the department that worked the countershafts. Ten cripples against an output of one thousand cars gave that department a percentage of one per cent of cripples. The percentage of each department was posted, so all could compare their respective efficiency, in plain figures. It was as clear as a baseball score and led to the elimination of cripples almost immediately.

Cripples are often charged to the carelessness of the men, when they are really due to defective equipment. They found that out some years ago in the shoe factories, when fashions in women's shoes turned to light-colored fancy fabrics. Immediately there was heavy loss from soiled shoes. They came to the treeing room marred by wax, cement, oil, dirt. No system of penalties did much good, and for a while the makers of bleaches and whiteners did a good business in their preparations for taking out stains. Finally the manufacturers tackled the difficulty in a broader way. Rooms were especially fitted up for making white and fancy shoes. Benches were covered with white cloth. Walls and ceilings were painted white. Floors were kept scrupulously clean, and even the machinery was enameled white. This furnished a background against which dirt was quickly spotted and eliminated. It was astonishing how quickly oil and dirt were wiped off a white-enameled machine. Then the shoes themselves were protected by cloth and paper covers, and operators were required to wear clean aprons and cotton gloves. After that the fancy shoes went through with only a trifling percentage of cripples.

How the System Helps the Worker

When downright carelessness and incompetence have been traced to a worker, and spoiled work is plainly his fault, under the new system of inspection he is given another chance. In the first place it finds his mistakes and helps him try to correct them. It keeps his mistakes separate from those of other workers and gives him the benefit of all doubts when machinery or methods are wrong. Then, when it is clear that he is to blame, it studies him personally and usually discovers that he is a good man in the wrong place. Somebody has put him at fine, exacting work, when he is really fitted for rough, heavy tasks, or vice versa.

If the inspection system is intelligent it tries to keep the man on at a more congenial job. One of the biggest problems in industry to-day is that of shifting human misfits round until square holes have square pegs, and round holes have round pegs, and every worker finds himself doing something in which he is interested and at which he can excel. A big job! It cannot be done in a day or a year. But it is being done piecemeal right now, as the necessity for doing it is recognized. Nothing helps more in the appraisal of workers than an intelligent inspection system for running down cripples in the factory.

Editor's Note—This is the first of a series of articles by James H. Collins. The second will appear in an early issue.

Who Says: "I Don't Want Healthy Feet"?

SURELY, nobody in his senses would *say* that. And yet, thousands of people *show* they don't want healthy feet, by wearing narrow, bone-bending shoes, which cause corns, bunions, flat-foot and ingrown nails.

Show that *you* want healthy feet by getting into Educators now—the roomy, comfortable shoes built by experts to "let the feet grow as they should."

Made for MEN, WOMEN, CHILDREN

Get Educators for your whole family today. For children they mean life-long protection from foot-troubles. For you they mean relief or prevention of all foot ills.

But don't fail to look for the word EDUCATOR branded on the sole. It guarantees the correct orthopædic Educator shape.

"Bent Bones Make Frantic Feet" is a free booklet of important information about the feet by orthopædic scientists. Send for it now.

"Two Weeks' Addressing Now Done In One Day"

This Same Speed and Accuracy Await You

"It gives me great pleasure to say that the DIREX-ALL put in our office four years ago has been a most wonderful help in our work. Bills that used to require two weeks to address are now addressed in a day. Our system requires two stubs oneachbillandduplicatenames and addresses on each. By the use of the machine this is easily donewithout the possibility of error and very quickly. I regard it as a very efficient machine and almost indispensable where a list goes up into the thousands as ours does."

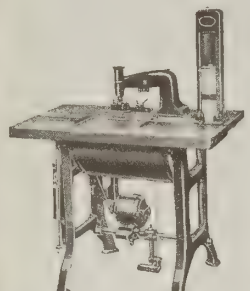
(Signed) JAMES BURTON,
Supt. Fort Scott Water Works,
Fort Scott, Kansas

With a DIREX-ALL you can save time, labor and expense in your mailing, listing and billing departments just as surely as does the Fort Scott Water Works.

And, in addition, the DIREX-ALL will insure an accuracy of work that will add to the efficiency of your office, and the effectiveness of your service.

Whether your mailing list is large or small, or whether your listing and billing is light or heavy, there is a DIREX-ALL for your particular needs —one that combines the threefold convenience of a mailing, listing *and* billing machine.

The DIREX-ALL is the modern addressing machine with typewriter ribbon principle and one-piece metal plates. Filing the imprinting plates gives you a complete index system that takes the place of cards. Operation so simple that a boy or girl can do it all with wonderful accuracy and dispatch—*guaranteed!*



An interesting book, "Doing the Day's Work Better," pictures and describes the particular DIREX-ALL made for you, no matter what your line of business. Free for the asking. Write to our nearest office today.

Royal Chair Co., 1100 Chicago St., Sturgis, Mich.

—and Realize Your Dream of Comfort!

No matter what your occupation during the day, you need a good, comfortable chair in which to relax and *rest* at *night*.

Such a chair is now offered you—a chair of *remarkable* comfort; yet beautiful and artistic as well. And by prompt action you can have it at a saving of $8.00.

Royal Easy Chairs

TRADE MARK — PUSH THE BUTTON—BACK RECLINES — REG. U.S. PAT. OFF.

Royals are famously known as the world's easiest easy chair. When you want to lean back and get extra comfy in this chair, just push the button in the right chair-*arm*—the back reclines!—goes back to any desired angle, locking until released by another finger pressure.

And a leg rest, out of sight when not used, completes your dream of comfort. Complete relaxation—solace for every bone, nerve, muscle—rest, rejuvenation unfindable in anything but a Royal. Durably made and upholstered; push button device silent, out of the way, trouble-proof.

Take Advantage of This Liberal Offer

To further introduce Royals, we offer the two beautiful models shown herewith at a reduction of $7.00. But take the coupon to your Royal dealer, and he will allow you $1.00 for it, applying same on price of either chair illustrated. That means a saving of $8.00. Think of it! Clip coupon now!

No. 1 Special—A big, comfortable easy chair, luxuriously overstuffed, artistic—covered in genuine Spanish Leather, mahogany finish. Push Button, Leg Rest, Brass Feet, Brass Casters. Regular $37.50 value. Introductory price, after deducting $1 Coupon, $29.50. ($3 extra Denver and West.)

Write for "Conscious Rest"

A striking little booklet fully describing "Conscious Rest" and showing many pleasing Royal models. Book also brings name of your Royal dealer. It's free.

All Royals guaranteed. None genuine without the word Royal stamped on Push Button.

No. 2 Special—A low, deep den chair—in Fumed Oak, Spanish Leatherette cover only. Fitted with Push Button, Leg Rest, and Brass Casters. Reg. value $27.75. Introductory price, after deducting $1 Coupon, $19.75. ($3 extra Denver and West.)

TWENTY-FOUR HOURS IN JUNE

(Continued from Page 17)

I was so excited when I saw my first palm! And here, when I got out my new frocks, that had come all the way from New York—some of them—I sang and laughed. And then—the lorgnette squad shot me dead! Oh, am I so—so homely or something?"

"I think you're one of the most—oh, I can't even say it—one of the bulliest—and oh, prettiest and all—girls I've ever seen. Maybe the other women are jealous. Probably the old society hexes tell their sons to steer clear of you; they want them to marry ugly girls with lots of money."

"No; they don't worry enough about me for that! But it's sweet and dear of you to pretend that's the way it is. And thank you for reassuring me that I'm not really covered with rattlesnakes." The daughter of the Wild West rose and made him an ante-bellum curtsy. As she settled down, with a fluff of lace, she sighed: "I don't suppose I ought to be quite so brazen and absolutely fish for compliments from a complete stranger; but I'm so glad to have somebody tell me I'm still an inoffensive little thing."

"Seems to me you aren't very complimentary to say I'm just a somebody. Like saying that I'm kind to my Aunt Alice, but dance like an ice wagon. Am I as bad as that?"

She laughed at him.

"Am I?"

"I think you're a terribly nice boy, with nice eyes and a nice slim waist and good shoulders, and jolly to talk to. Oh, I am brazen! That's what your polite Palm Beach has done to poor modest me!"

They both looked shy, stared at the sea, tried to keep their eyes apart, flushed a little, dug vigorously at the sand—then glanced at each other and laughed aloud, like boy and girl.

"Come help me finish my sand castle!" he cried. "That's a modest game, anyway!"

"'Deed I will! All my life, back where it's prairie gumbo and lakes, I've wanted to build a huge sand castle on the seabeach, and I tried it here; but—it wasn't much fun—making one all by my little self."

"Poor kiddy! Come on."

She came with a smile and a flare of skirts and twinkling slippers; and they forgot they were strangers. They were both at the age when one is fiercely militaristic, and they provided the castle with defense against cavalry, aëroplanes, submarines, poison gas, catapults, bowmen, and the elephants of Alexander the Great.

Bert had never seen such delicate texture of skin as was now agitating his heart when she bent above the sand walls with shining throat. But she was so voluble that he forgot to study her at all—forgot to wonder at her.

When they sat back and admired the edifice he marveled:

"Is this really the first time you've played on the seabeach?"

"Yes. I suppose you were brought here by your folks when you were, oh, just so little. That's the way it is with all these people, I guess. And poor me, here only a week! Maybe that's one reason why I'm such an outsider."

"Oh, no," he said in a blasé manner that would have caused the buyer at Grafenheimer Brothers' to observe "What's matter, Bert? Got the nosebleed?" He comforted her with "No; it's only comparatively recently that I've started coming to Palm Beach." He was recalling the description of Palm Beach he had been studying in the day coach a few hours before. "Have you seen the Jungle Trail or had twilight tea in the Coconut Grove?"

"No; mostly I've just sat round and comforted daddy. He's felt as much out of it here as I have. I started to go through the Jungle Trail in one of those cunning Afromobiles; but I was so lonely I made the darky turn right round and come back. And I never could get daddy to have tea in the Grove with me; he said that he was afraid one of the waiters would ask 'Who was your grandfather?' before he'd let us in. It must be lots of fun to know the place as you do. I suppose you belong to the Beach Club and everything."

"The Beach Club? Bradley's?"

"Yes!"—in the manner of a girl asking a Junior about his fraternity.

"Oh, well, it's a decent place," he stated, with a wave of his hand which dismissed to the caféteria class the exclusive spot that is supposed to have one of the best cuisines between Spuds and Cudjoe. "But the gardens, now! That's what you want to study. Finest in the country. Glad to take you round; and then we'll see about lunch. And—uh—your father, if he'd care to come. But —— I don't want to be a bold, bad New Yorker, but may I ask what your name is? Mine is Albert Michado."

Her incandescent face dimmed.

"I have a horrid name!" she complained. "My first name is after an old aunt, and my last name isn't a name at all; it's just a kind of something so they can send us butcher bills. And we aren't anybody, and you never heard of us; and, as daddy says, our family must have come over on the Mayflower steerage and been missed by the reporters. So, what is the use of knowing my silly name?"

"So I can write you—send you a post card from New York sometime."

"Oh, yes! With 'Having a nice trip. Wish you were here!' on it. . . . Don't you loath people who write that?"

"Yes; idiotic!" assented Bert, it being fully sixteen hours since he had written that message to some grouchy girl—Pribble or some such name.

Then the fairy girl waited for Bert to insist that she tell him her name; and he insisted, and she laughed; and he teased, and she said she was Mrs. Solomon K. Nasty, of the Cross-Bar Y Ranch, Idaho; and he was sure she was the wittiest and most amusing companion in the world; and told her so; and she blushed and said she was really Miss Napoleona Bonaparte; and he seized her hand and declared that he would not let it go till she told the truth; and she tried to get her hand back, but didn't try very hard; and they both blushed and laughed. And ——

"If you must know," she said, "my name is Ocea Boggs."

"Osha?"

"O-c-e-a. Isn't it silly! Aunt of mine."

"Ocea Boggs!" He started; he stared; his voice rose and grew nimble. "Boggs, did you say? Boggs? I say, where do you come from?"

"Davenport, Iowa."

"Say—gee-whiz! Say, tell me, who is your father? Bet I know—know about him!"

"You wouldn't have heard of him. He's just in business."

"What is his business? Tell me!"

"Oh, he just has a silly old factory—the Boggs Button Works. You wouldn't have heard of it, any more than the rest of these people here."

"Heard of it! Why, my dear, I know he's the biggest man in buttons—I mean I have some friends who are interested in dry goods, and they often speak of him."

She leaped up and started running; you know how a cat jumps when it comes on an unexpected frog—sideways in the air, with all four feet spread out at once. So she skipped; though with only two feet in the air at once. Bert gaped after her. She drilled through the lessening crowd. She stopped beside a gray-haired solid man in a gray, dull sack suit. She dragged him up, like a kitten dragging a mastiff. Bert heard her say in her light, eager voice:

"Daddy, come quick! Here's somebody that knows who we are!"

He heard the man rumble:

"But who the dickens are we, Bunny?"

Towing the large man, she came panting back; and Bert rose meekly to greet the Colossus of Buttons, the lodestar of the notions world, the idol of Mr. Albert Michado.

"My daughter tells me you have—uh—what is it, Bunny?" said the large man meekly.

"Pleasure meet you," said Bert with as much manner of grandeur as he could recover from the wreck. "Often heard friend of mine who's in dry goods speak of you—Sid Grafenheimer, of Grafenheimer Brothers."

"Oh, yes," said Mr. Boggs. "Think I've heard of him."

"Nice chap."

"Let's see; they're New York. You from there? Well, sir, you got a wonderful city there! But it's too much for me. Don't go there often. Well, I'm very pleased to meet you, Mr. ——"

"Michado."

"—— Michado. Glad you and Bunny find something to do. We're plain folk

WE are confining our entire production to a single eight-cylinder chassis.

We know it to be most remarkable of all the many Cole achievements.

It is the largest Eight built—but relatively the lightest.

Think for a minute what that means.

Here is a car that rides with the ease of a bird on the wing.

Its motor has the quick response, the noiseless action and the tremendous vitality possible only in an Eight.

Its body has the room and the luxurious comfort that size alone can give.

Yet the light weight of the Cole Eight safeguards your pocketbook. It gives you more miles per gallon of gas than most sixes—more than some fours.

In short, the Cole Eight couples the known advantages of size and power with those of lightness and economy.

No wonder the Cole Eight is a phenomenal success!

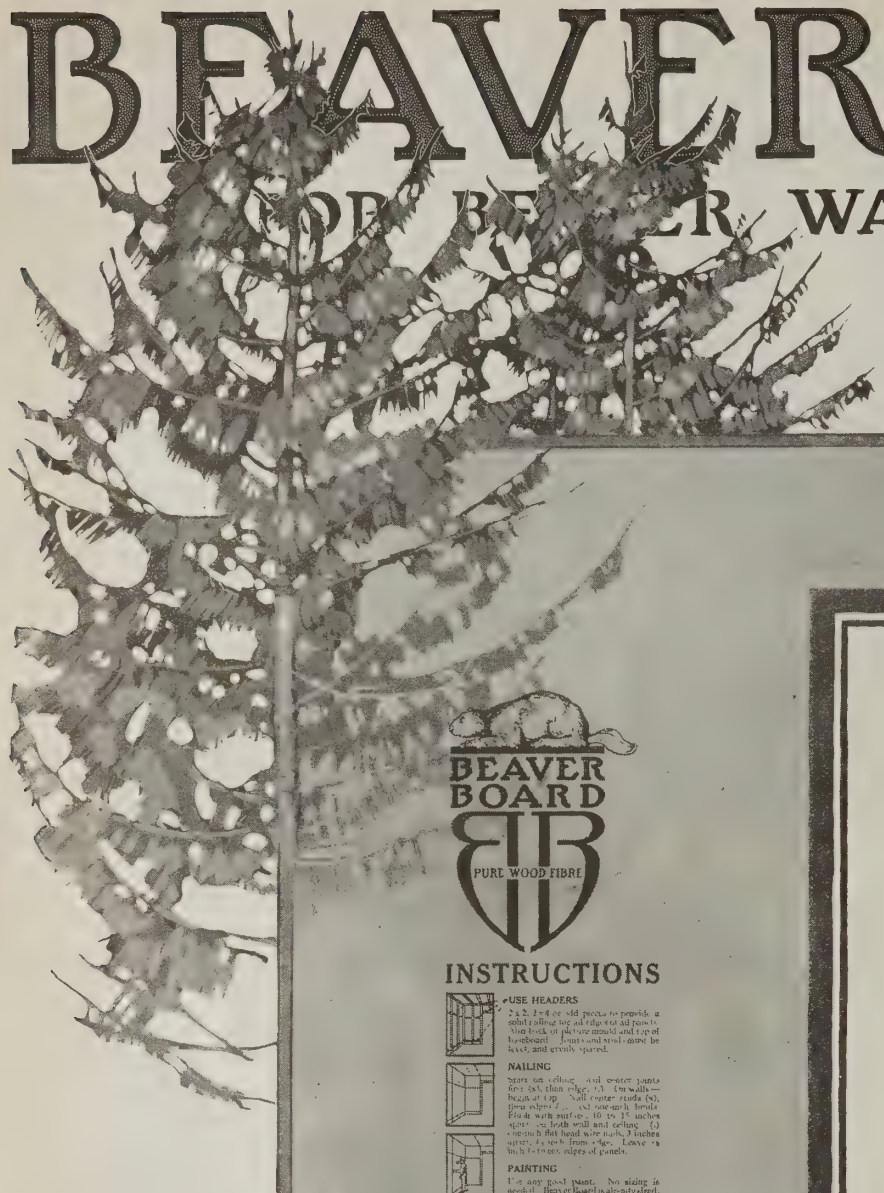
No wonder we are producing three times as many cars as we did at this time last year—and are building nothing but Cole Eights!

Our dealer in your town will gladly demonstrate any Cole Eight model.

Cole Motor Car Company
Indianapolis, U. S. A.

BEAVER BOARD

FOR BEAVER WALLS & CEILINGS



BEAVER BOARD

PURE WOOD FIBRE

INSTRUCTIONS

USE HEADERS

2 x 2, 1 x 4 or old pieces to provide a solid nailing for end edges of all panels. Also back of picture mould and top of baseboard. Joints and nails must be level, and evenly spaced.

NAILING

Start on ceiling. Nail center panels first (a), then edges (b). On the walls—begin at top. Nail center studs (c), then edges (d). (e) one-inch bevels. Fit tight with surface. 10 to 15 inches apart on both wall and ceiling. (f) 1-inch flat head wire nails, 3 inches apart, ½ inch from edge. Leave ⅛ inch between edges of panels.

PAINTING

Use any good paint. No sizing is needed. Beaver Board is air-dry-seasoned. Paint before putting strips over joints. Never paper over Beaver Board.

COVERING JOINTS

Use decorative strips of wood at least 2 inches wide. They should be painted or stained to harmonize with other woodwork.

OVER OLD PLASTER—Nail and paint as above — using longer nails and brads.

OVER BRICK OR CONCRETE—Fur the walls—then covered as above.

Knotless, Crackless, Manufactured Lumber

Nature cannot produce real lumber so free from knots, cracks and blemishes as Beaver Board.

Here, if you please, is a manufactured lumber built up from the strong, clean fibres of the spruce tree into sturdy, rigid panels, ready without planing or dressing, for your wall or ceiling.

All the advantages of the clearest lumber stock, without its blemishes. And in widths which only the mammoth redwood of California could supply in natural lumber.

Is it any wonder that this vastly improved wall and ceiling material is rapidly supplanting lath, plaster or metal wherever particular people are building new rooms or remodeling old ones?

For the ceiling problem, Beaver Board is the one logical solution.

Send for booklet—"Beaver Board and Its Uses."

The Beaver Board Companies
100 Beaver Road Buffalo, N. Y.
Canada: 300 Wall St., Beaverdale, Ottawa.
England: 4 Southampton Row, London, W. C.
Australia: Builders' Exchange, Sydney, N. S. W.
United States Branches at Boston, New York, Baltimore, Cleveland, Detroit, Chicago, Minneapolis, Kansas City and San Francisco.

Manufacturers also of Beaver Blackboard and Beaverbilt Utilities.

BEAVER BOARD

You can't expect Beaver Board results unless this trade-mark is on the back of the board you buy.

(Concluded from Page 46)

from Ioway and kind of out of it here with you gay New Yorkers. Well—uh —— Found a fellow here from Seattle; been talking politics with him." And Mr. Boggs deprecatingly disposed of himself.

Ocea had sunk on the sand, cross-legged, and she seemed waiting for Bert to come back to her.

"You're not a 'plain folks'," he said. He wanted to add, "You're adorable"; but he compromised on "You're a peach!" And he made that sound like what he meant.

"No; I'm not. I'm a useless little hussy; but dad really is a peach. Mother died five years ago; and dad is terribly busy with his factory and trying to make his old processes safe for the workers. But he plays with me as much as he can. He pretended it didn't matter, and he said we were here just for the sunshine; but I know he was terribly hurt when I didn't meet people here or have a good time."

"Wonder if he liked me?"

"Uh-huh! He did."

"Oh, I bet he didn't! Bet he thought I was just a fresh kid."

"No; I could tell from the way he's been smiling from the first."

"How do you mean?"

"He's been watching us from over there ever since you first spoke to me, and he smiled and nodded to me."

Bert felt feeble at being under the observation of the genius, and Ocea was laughing at him.

"For once I have something on a New Yorker," she rejoiced. "Oh, you don't mind, do you?"

"No."

"I'm glad. It's been nice to play with you. And daddy likes it. Poor dad! I suppose he thought somebody like Freddy Witherbee would come right up and ask me to go riding. . . . Doesn't Freddy look like a muff, there?"

All his life Bert had heard of Mr. Frederick Schermerhorn Witherbee as opening balls at Newport and bottles at the Tennis and Racquet Club. He had seen pictures of Freddy in polo costume, motoring costume, and practically no costume at all at Mrs. Fipnogle's cubist ball. But Bert did not move in the same part of the younger set as Mr. Witherbee. His set was both younger and not quite so set, and better acquainted with beef stew than with terrapin. He had never chanced to see Freddy till now, when Ocea's finger indicated a young man engaged in looking vacuous—a task that was a mere bagatelle for the clever Freddy. . . . Yes; he had, too, seen him! Freddy was one of the two Johnnies who had sat near him on the porch and encouraged him to go and take Palm Beach away from them.

"Oh, yes; Old Freddy!" said Bert.

"Oh, do you know him?"

"Very slightly, indeed. Just see him about."

"I'm glad you don't. I've been watching him; and I much prefer Billy Yurka, that I used to play mibs with when I was little. Billy's mother is the best washerwoman in Davenport. But Freddy —— I should love to know how it talks. Is it human?"

"Oh, yes; Freddy isn't a bad sort. Just kind of dull."

"Do make him come and have a drink with us after the bathing time. That's what's made me most lonely of all—all the people so friendly and rosy and excited after bathing, having a snippet on the porch at the Breakers, and the music; and everyone talking and looking so jolly and foreign—like a boulevard. Could you get him to come?"

Her voice was almost down to a whisper and her eyes trusted him.

"Why, of course! Just a moment," he said boldly.

For those dear eyes of the fairy girl he would have tackled three Freddies and a Newport matron with protected daughters. He went and sat down beside Freddy. He yawned, and said in the most bored of voices:

"How-do, Witherbee?"

"How-dee-duh?" said Witherbee; but he didn't really seem to care how Bert did.

Like all well-informed New Yorkers who study the great problems of the day, Bert knew Freddy was a graduate of Yale, where he had made all his athletic records by taking female parts in college dramatics.

"Dropped into the Yale Club just before I came down," Bert drawled, "and chap there asked me to give you his regards and two dollars he owed you."

"Eh? Who was that?"

"Isn't it beastly? Can't remember. Rotten bore, isn't it? Do forget people so. But here's the two dollars." He peeled the money from his roll—his innocent bantam of a roll—and tossed it to Freddy, who took it questioningly. "I'll remember chap's name before I leave and tell you. Better pay now, anyway. Rotten have such a rotten memory—what?" Bert was giving an almost perspiratory imitation of all the English comedies there are. "Ever forget people like that, ol' man—even chaps from Yale? Dear classmates and that sort of rot?"

With some of that financial acumen he must secretly have had to have accumulated nineteen millions on his twenty-first birthday, Freddy put the two dollars away before he answered, almost civilly:

"Oh, yes; in fact, just for the moment I don't recall your name."

"Michado. Don't you remember? Track team? After your time, of course."

"Oh, yes; to be sure!"

"I say, Witherbee, I have a Western cousin of mine here—chap named Boggs; jolly old boy, billionaire; terribly pretty daughter—the girl by herself, over there on the right. If you're toddling up to the Breakers for a drink I wish you'd walk up with us. I don't want to lose you before I remember the name of the chap who paid me the two dollars to give you."

"Why—uh ——"

Freddy looked bewildered. "What the juice was all this about?" his massaged countenance said, so far as it could say anything except "To rent, totally unfurnished."

"Right-oh!" said Bert cheerily. He bellowed "Ocea! Come! We must be trotting up to the Breakers. Witherbee is going up for a drink with us. Come on, Mr. Boggs."

Ocea and her father obeyed; and a wonder as to how he had ever let himself in for accepting an invitation from a stranger spread itself over Freddy's face. When Ocea was introduced to him he became much more interested in her than he had been in that sterling Yale hero, Mr. Albert Michado.

It was not a long walk to the Breakers and Freddy did not escape. He joined them at a table, as though they really belonged. Bert's trouble was not in retaining the only genuine Freddy, but in being at his own party. Ocea seemed absorbed in Freddy; and Freddy, now that he had been canonically introduced to this fair outsider by his old college chum, was willing to smile and haw at her.

"I'm an awful little barbarian!" she was saying. "I've never seen any polo. Won't you tell me how you defeated the California team last year?"

Now Freddy hadn't defeated any California team last year. Freddy hadn't defeated any team any year. Freddy couldn't have defeated a team of pea weevils at croquet. But he was a sub-substitute on a Newport polo team, and he gave an account of the game as played by the Safety First method. Bert discovered that Freddy wasn't a fool when talking to women. When talking to men—especially strange men—Freddy had the vocabulary of a Lithuanian cook and the originality of a compromise presidential platform. But Freddy was used to girls and he had no shyness about looking into their eyes as though he were demanding how far he could go.

He asked Ocea how she liked Florida; he asked her how she liked his "silly, rotten" new ring; he coaxed her and teased her, and apparently he made her oblivious of her forlorn little playmate, Mr. Bert Michado.

In the presence of dear old Freddy Mr. Boggs had nothing to say to Bert except that it was a fine day—really a mighty fine day; and Bert was left to talk to his glass of lemonade, to which he confided that he hated Ocea, desired to scrag Mr. Freddy Witherbee, and, as for Mr. Boggs, he would be dog-goned if he would work for the Boggs Button Works—not if he were offered the New York agency, with Mr. Vibels as office boy and Miss Pribble as window washer!

Between quivers of jealousy he was the victim of financial anxieties. With much care he slipped the bill for their round from under a plate and peeped at it. Freddy had desired a sandwich with his drink, and Bert hadn't desired one but had haughtily taken one; and the bill was two dollars. Plus the two dollars he had given Freddy, that made four. And he wanted to take the Boggses to lunch. Probably eight dollars more. He could pawn his watch in Jacksonville. Though he smiled fashionably, the jolly old Yale athlete could not keep from muttering over and over "Let's see now; two and two and eight—no darn it, prob'ly nine, with tip ——"

But he kept his eyes on Ocea while he had the chance. It began to appear to him that she was not entirely captivated by Freddy. She nodded and blushed at him, but her lively lips seemed to be quivering; and once, when Freddy was slightly boastful about his motor run from Jacksonville to Palm Beach, Bert thought he felt her toe softly kicking him.

He took heart. He devoted himself to getting rid of the Gilded Youth with as much earnestness as he had recently shown in capturing him. He looked at his watch, turned it different ways, and studied the second hand. Freddy seemed to have very little interest in Bert's opinion of the time.

"Now, now!" he was waggishly saying to Ocea.

Bert acted like a great executive. He rose.

"Well"—curtly—"time to get ready for lunch, children. C'm on!"

Freddy seemed bewildered. Sudden changes of base were hard on his brain. Bert pictured him tagging along. He chirped:

"Glad to have seen you, Witherbee. Still can't remember chap's name that paid me the two dollars. See you again."

Freddy nodded, teetered at Ocea and wabbled away. Bert captured Ocea and firmly led her off. Her father followed.

"You're at the Poinciana, I believe?" said Bert formally.

"Why are you so stern about it? We're at the Poinciana; but that isn't naughty, is it?"

"No; but —— I'm glad you liked Mr. Witherbee so much."

Bert spoke with an air of settled martyrdom—like an old, well-trained martyr who has been burned, imprisoned and bitten by ants constantly for years and years.

"Why, you pathetic baby—didn't you understand my kicking you under the table? I'm disappointed in you! Can't you see it will be dreadfully exciting, when I get back home and there's a picture of Freddy in Fashion, to show it to the girls and tell them I met him here? But, like him? Why, I think he's a silly ——"

"Do you like me better?"

"You are nothing but a vain child."

"Do you?"

Just then Mr. Boggs caught up with them and absorbed them in his heavy personality; but she smiled at Bert, and he was content.

"Don't suppose you could take lunch with us, Mr. Michado?" begged Mr. Boggs.

"Why—uh—I hadn't made any plans."

"Then, come—come on, lad! Bunny and I pull out for home to-morrow and we want to have a good time the last day."

V

"SORRY I can't take you to lunch at this Beach Club, but I don't belong," said Mr. Boggs apologetically; "and I guess we'll have to make out with the regular hotel lunch."

"Oh, it's perfectly all right, and not a bad dining room," Bert graciously acceded, glancing over the Gargantuan hall and dropping a condescending look on the menu. . . . He had got over the danger of having Mr. Boggs ask him whether he was registered at the Poinciana and his meal already paid for, by casually stating that he was in Palm Beach only for the day. And he had had time to realize that he was incredibly lunching with the boss of Mr. Everett Vibels, who was the boss of Miss Pribble, who had been too superior even to want to be the boss of Bert Michado. He was fascinated. He wanted to talk buttons, despite his pose of being an idle dog, with inherited wealth. He achieved:

"Oh, I say, I seem to remember that I met your New York representative—a Mr. Wibles or Gibles, or something."

"Oh! Everett Vibels. How'd you happen to meet him?"

"Dropped in there one time with Grafenheimer. Nice chap."

"Yes. Course I've got to admit Evy Vibels will never set the world afire; but he's a good lad."

Bert nodded with aged understanding.

"What business you in, Mr. Michado?" shot out Mr. Boggs. "I suppose, like the rest of you young New Yorkers here, you take it easy."

Bert had a desire to dodge the question. He had so recently been advanced to the position of Heir that he had not as yet learned all the details of his own biography. He said desperately:

"Well, I'm beginning to take an interest in Sid Grafenheimer's place. Believe in chap working ——"

"That isn't so very different from my own line. Buttons. You ought to get out of a congested hole like New York and come out to Ioway and learn the business. But I don't suppose ——"

"Wouldn't mind it a bit!" exclaimed Bert, and waited, trembling; but Mr. Boggs changed the subject.

"Bunny says this most highly respectable sack coat of mine isn't the proper caper for a place like this, and I must say I like you young chaps in flannels. Must I be obedient to my daughter and wear giddy things too?"

Between them—while Bert's chances of the future managership of the Boggs Button Works went glimmering—Ocea and he gave the great man instruction as to what he ought to wear and eat, and think about tennis and dancing and the habitual use of the ukulele. And the Titan almost promised them to take dancing lessons.

Before lunch ended Bert said: "If your father wants to smoke a cigar after lunch, why don't you and I take a spin through the Jungle Trail in a double wheel chair? Let's forget our other duties. Don't believe in cutting a party short when it's going well."

"Let's!" she said.

VI

JUNE'S enchantment of soft light and blossoming green and fluttering wings, of soaring skies and time stopped in its course, while Bert rode by the side of the fairy child. They talked great poetry, though it was couched in "No," and shy "Yes," and whispered "Isn't it corking?" For once he was not playing games.

They dismissed the wheel chair in the Trail; they walked through its wilderness and back to Lake Worth. They sat between huge palmettos and looked over amethyst waters. Twilight was coming and there was a strain between them. They had shared so many confidences—as many as strangers could. He was in a panic. Time had begun to move again—and so rapidly! In no time now he would have to take a train back to winter.

"We might go and have tea in the Grove?" he said desperately.

"Ye-es."

"And then pretty soon I must be rambling North; evening train."

"I'm sorry you're going. I'm—oh, I am sorry we can't play together to-morrow."

"I don't know whether I'll ever see you again. I never did know a girl like you; you're like a silver thread ——"

"But you must know hundreds of girls much nicer than I am, lots of nice little silver threads, in New York and Newport, and all."

"I never saw Newport in my life!"

"But ——"

"Honey, honey, honey, I can't leave you lying to you. I'm not rich. I'm not a swell. I'm a New Yorker, all right; but I'm just a bum little nineteen-dollar-a-week clerk. I haven't any social position and I don't know Sid Grafenheimer—I work for him; and that's just the opposite of knowing him. I never saw Palm Beach before yesterday ——"

"Jiminy, I'm glad!" she cried. "Then you will come out to Davenport and take a job with the factory, and you and I will play every Sunday!"

"Your father would never give me a job."

"You dear old silly—remember daddy spoke to me after lunch? He told me to get you to come out and learn the business. I've been getting up courage all afternoon to ask you. He is looking for someone like you, with New York training, like Evy Vibels; and not so hoity-toity as Evy, but jolly and up-an'-coming."

"Gee-whiz! I've always wanted a job with the Boggs Works."

"Then why didn't you come and ask?"

"Is that the stunt? Honey! Listen! Sometime there will be something else I'll dare to want."

"Then you come and ask!" she whispered. And, jumping up, she went skipping off with him, exclaiming: "Come! Daddy knew you weren't really rich, because you kept looking into your cigarette box, and then not taking a cigarette after all. We aren't so much slower than you New Yorkers."

"Gee!" said Bert.

REFINED AND IMPROVED in many important details, making for betterment in performance and in riding qualities, but essentially the same in design. For We Reo Folk saw to it that this Six was fundamentally right before we let the first one leave the factory.

SINCE THEN WE HAVE incorporated such changes as we thought would enhance the pleasure of riding in this car—longer wheel base: improved spring suspension: improved carburetor: silent spiral bevel driving gears, and other features formerly found only in Sixes of the highest price.

IF YOU WERE TO ASK US how good this new Reo Six is, we'd say, "as good as Reo the Fifth, 'The Incomparable Four'"—and this is a full size, seven-passenger Six, built for the man who wants the utmost of luxury at the intrinsic worth of the same.

BODY DESIGN IS NEW—in keeping with the progress of the art, the vogue and the preference of buyers.

THIS CONCESSION we always make to the buyer—a body made to his taste and in the latest style.

IN THE CHASSIS we give him that which we know he ought to have—if our long experience and engineering ability is worth anything.

IN EXTERNAL DETAILS it is your ideal of a luxurious equipage—in mechanical principles and construction it is our idea of what constitutes a good automobile.

REO 3-UNIT SYSTEM makes what we believe to be "the Most Accessible Automobile in the world"—hence the low upkeep cost of Reo Sixes.

"50 PER CENT OVERSIZE" in all vital parts—such as bearings, shafts, frame, gears, wheels, wiring, radiator, etc.—makes this Reo Six perhaps 1000 pounds heavier than some of other similar "rated" power and passenger capacity.

THAT IS THE BEST GUARANTEE of the quality that is in this Reo Six. For we do not skimp on either the size of parts nor quality of material to meet a price competition.

ORDERS FOR THIS NEW REO SIX must be in your Reo dealer's hands well in advance of the time you desire delivery.

DEMAND IS TREMENDOUS and will increase immeasurably as the big Spring demand opens up and as owners begin to extol the superiorities of this big, beautiful, New Reo Six. For surely at $1250 this is "The Gold Standard of Values" in Sixes.

OUTWITTING THE WOLF

By Enos A. Mills

NE day in Western Wyoming an elk was killed by hunters. It was left lying on the ground all night. Its nly protection was a handkerchief tied to ne of the horns. Tracks in the snow showed iat wolves were about and that they had ircled the carcass, but without going close nough to touch it.

In another instance I knew of, a deer was ft out all night in the wolf country.

"How did you protect it?" someone asked ie hunter.

"By simply rubbing my hands over it," e answered.

A mature wolf will not eat or touch anyiing that has human scent upon it, or that arries the scent of iron or steel, which he ridently associates with the deadly scent man.

A cowboy shot his injured pony and left lying on the plains. The pony was shod. olves did not touch the carcass. On iother occasion and in the same locality a ony was killed by lightning. It was not iod and carried no human scent. Upon is pony the wolves were feasting within a w hours.

The wolf in his struggles with man has ecome an extremely cautious animal. He is inted and pursued with deadly ingenuity id persistence. Guns, traps, poison and ogs are used for his destruction. There is quarter for him—always a price on his ead; and the sum is large. Survivors ust be exceptionally wide-awake and ary. The numbers that still survive show at this exacting price of existence has en met. They have not been beaten. together, the wolves now alive probably e much more destructive than their ncestors were, and far more capable of ving themselves from extermination by an.

Much of the time wolves hunt in coöpering packs. They run an animal down by llowing it in relays; sometimes one or ore wolves lie in wait at a point of vange while others drive or force the victim ito the ambush. On an island in Alaska a umber of wolves in relays chased a deer d at last drove it into the sea. Near the int where it leaped into the water a swimng wolf was in waiting.

Three wolves chased a young antelope rough my mountain camp. Though they arly ran over me, I doubt that either the telope or the wolves saw me. On they nt across the plateau. I hoped that the telope might escape; but just before he ached the top of a ridge I saw a wolf peerig over. The antelope and the wolves disppeared on the other side, where I suppose te drifting clouds and steadfast pines ain witnessed a common tragedy of the ld.

On another occasion I saw three wolves rive a deer from a cañon and so direct its ourse that it emerged where the way was vered with a deep snowdrift. As the deer undered through the soft snow it was unced upon by a fourth wolf, which was ng in wait at this point.

Killers of Cattle

Wolves prey extensively on cattle and seep; and to a less extent on horses, pigs d chickens. Many stockmen think that single pair of wolves may damage cattle rds to the value of a thousand dollars a ar. A single wolf has been charged with lling eighty head of cattle in a year, or en ten head of stock in a month. Occasnally a pair of wolves may kill a number animals in a day. In Texas the red wolf eds on cattle, colts, sheep and goats—the gy mostly on cattle; while the black sows a fondness for pork of a better grade an razorback.

Wolves occasionally capture the young, t stupid and the injured among deer, seep, elk and moose; but the percentage big-game loss from wolf depredations obably is not heavy. These wolf-chased imals have developed a wariness and elurance that usually enable them, except haps during heavy snows, to triumph er this enemy.

Economically the food habits of wolves a not entirely bad. In many localities ey prey freely upon those ever-damaging pits—mice, rats, rabbits and prairie dogs. Tey are also scavengers.

The vast herds of buffaloes used to be constantly followed by countless packs of wolves. At that time the gray wolf was commonly known as the buffalo wolf, and he is still often spoken of by that name. The stronger buffaloes usually defended endangered ones from the wolves, which were watchful to pounce upon any stray, weak or injured animal.

Well-authenticated accounts tell us that often a number of buffaloes would convoy a calf or a wounded buffalo to a place of safety. What a strange thing it must have been, out on the plains, to see a pack of wolves, fierce and fiendish, endeavoring to break through the buffalo line of defense that surrounded a retreating calf! Except while migrating, buffalo bulls appeared to have the habit of standing guard over a sick or injured buffalo until the weak one got well or died.

The cattle-raising country has a wolf population. Formerly wolves followed the buffalo herds in their long drifts and migrations up and down the plains. They now follow the cattle herds in the West; they winter with the cattle in the lowlands, and in the summer accompany the "beef on hoof" up into the high ranges among the peaks.

Clever Teamwork

When they come upon a herd of cattle they isolate one; then one or more wolves systematically attack the head while another or others attack behind. Their powerful jaws snap quickly and cut or crush deeply. They endeavor to hamstring the victim.

On one occasion, in Southern Colorado, I saw a herd of cattle standing in a circle with their heads outward. A number of wolves were attacking them. By leaping unitedly—first at one, then at another—they finally frightened one victim out of the circle of safety. He was at once driven away from the herd, and in a short time the wolves had disabled his hind legs and pulled him down.

On another occasion, in North Park, Colorado, I saw two wolves pull down three two-year-olds in a short time. I watched them through a field glass. One wolf attacked in front while the other kept leaping and snapping at the flanks and legs until the animal fell. These three animals were killed in less than half an hour. As they were not eaten, the killing was apparently for the amusement of the wolves.

In wolf-infested cattle territory it is common for one or more cows to guard the calves while the other cows go to water. At a ranch where I made my headquarters for a few days, the plan was being tried of equipping every thoroughbred calf with a bell. This practice proved only temporarily effective in keeping wolves away.

The wolf has extraordinary endurance, great strength, senses amazingly developed, and exceptionally powerful jaws. He is a good swimmer. I have seen wolves swimming vigorously in rivers, wide lakes and among breakers. They appear to be equally at home in the mountains, in the forest, in thickets or on the prairie. They probably live from eight to fifteen years.

The coyote, or prairie wolf, is a distinct species, much smaller and with more fox traits than his big brother, the gray wolf.

The average weight of a mature gray wolf is close to one hundred pounds. In exceptional cases they have been known to weigh one hundred and fifty pounds. They are, therefore, about twice the weight of the coyote, or prairie wolf, and considerably larger and heavier than the average collie. For the most part those near the Arctic regions are larger than those in the southern United States.

Seen in profile at a distance, the back line is comparatively straight. The ears rise just a trifle above this line; in front of the hips the back sags a trifle; while the tail is extended almost straight, with the point held slightly above the level of the back. With the coyote the ears are more prominent, the back more swayed; and the tail droops at a very sharp angle, with the point turned a little upward.

The howl of the wolf is deep, while that of the coyote is shrill and high-pitched. It appears that wolves have a language and a system of signaling. These consist of howls, snarls and barks of varying length, with varying spaces or accents. Wolves prowl and howl mostly at night; but it is not uncommon for them to hunt or to wander in the daytime.

The gray wolf is known, also, as the timber wolf. He may be gray, grayish yellow or grayish black, occasionally reddish; and now and then he verges on cream color. The color varies greatly, even among the members of a single and perhaps related pack.

Formerly the gray wolf was distributed practically over all North America. Though classified into various subspecies, it really was the same wolf in Florida and Alaska, in Labrador and Arizona. In different localities he varied in size, color and minor characteristics; he necessarily adapted himself to the food supply of his locality and followed the necessary means of getting his food. But everywhere he was really the same gray wolf.

The present wolf population of the United States is not numerous; but it is active, aggressive and destructive. The animal probably has been exterminated in most of the Eastern States and in California. The coyote probably is economically more beneficial to man than the gray wolf, and does less damage to man's cattle.

In common with most animals, wolves live on a fixed or home range. They spend their life in one locality. This has a diameter of fifteen or twenty miles. To a certain extent its area and form are dependent on the food supply and the topography. One wolf that I knew of had a home range that measured forty by ten miles.

Much of the time wolves run in pairs; and, from both my own observation and that of others, I believe they commonly mate for life. Their home is a den. This most frequently is upon a southern slope. It may be of their own digging or a badger or a prairie-dog hole which the wolves have enlarged; or it may be a natural cave. In the woods it may be in a huge hollow tree. Almost invariably single pairs have a den to themselves. I have heard of a few instances where two litters of wolf puppies were found in the same den; but probably the second litter, in an emergency, had been moved into the den for safety.

Painted Wolf Pets

Among Indians wolf pets are common. At an Alaskan Indian encampment I was once greeted by a number of romping Indian children who had several black-faced wolf puppies with faces painted vermilion and yellow.

The puppies are born early in March. The number varies from six to twelve. For the first few weeks they are almost black, especially about the head. For a period after the young cease nursing, the mother stays with them much of the time, while the father hunts and brings food to the entrance of the den or into it. At the age of a year the young wolf is still puppylike, and apparently he does not reach maturity until more than two years of age.

Young wolves are sometimes seized by eagles or foxes; and all wolves are subject to attacks from parasites and disease.

The wolf is closely related to the dog family; in fact, a Husky, or Eskimo dog, is a domesticated wolf. The track of a wolf is almost identical with that of a dog.

Old storybooks are full of tales of wolf ferocity. Wolves pursued the lone horseman, or even attacked the occupants of a sleigh. A fiddler returning at night was forced to take refuge on top of a deserted building or in a treetop; or a mail carrier narrowly escaped with his life after losing his sack. All too frequently we still hear stories of wolves attacking a solitary traveler; but careful investigation of these stories shows them to be sheer fabrications.

Wolves within the bounds of the United States are not ferocious; they do not attack human beings. That they were once ferocious is probable; but years ago they learned the folly of exposing themselves to human beings.

Notwithstanding all this, the wolf is not a coward. He is brave enough when anything is to be gained by being brave. The spectacular, reckless grand-stand bravery that is pretty certain to be accompanied by death does not appeal to the wolf. Instances are on record, however, where numbers of wolves have risked their lives in order to save or to try to save a wounded companion, either from men or from animals.

A man captured and brought home a number of wolf puppies and placed them in a box inside a high picket fence. He thought the mother might come to their rescue and prepared to entrap her. He took off a picket of the fence, and placed steel traps inside and outside the fence and in the gap. On the first night the mother did bravely come to the rescue; but she avoided all dangers and carried off her puppies.

In Montana I once saw a pair of wolves attack a broncho. The horse, which was exceptionally keen-witted and agile, fought the wolves off successfully for several minutes, and finally smashed a hind leg of one with a kick. He then became aggressive and endeavored to stamp the injured wolf to death. Under the brave protection of the other wolf, which fiercely fought the enemy, the disabled one tried to escape; but the horse landed a kick on this fighter, crippled it, and finally killed both.

Quick to Learn

The new environment of wolf life that accompanied the approach of man demanded a change of habit. Many things that wolves had always done—which had been good enough for their ancestors—must be done no more; things that never had been done must be done at once. It was the old, inexorable law—the survival of the fittest; the passing of those which could not change and cope with newly imposed conditions.

Anyone who has had experience with wolves is pretty certain to conclude that they are intelligent—that they reason. A trapper who thinks that a wolf is guided by instinct, who fails to realize lupine vigilance, and forgets that wolves are always learning—ever adapting themselves to changing environment—will be laughed at by a multiplying wolf population.

With astounding quickness the new dangers man introduced into the wolf world were comprehended and avoided. In the decade following 1885 wolves appear to have gained knowledge of human ways more rapidly than man developed in his knowledge of wolf ways. This rapid mental development on their part cannot be called instinct. Plainly it was a case of intelligence and the wisdom of experience. Surviving wolves have simply learned absolutely to avoid those insidious means of death that high bounties have led man to invent for their extermination.

Apparently, too, old wolves promptly educate their children; so that the youngsters avoid these new complex dangers. Whether this education is consciously given on the part of the old wolves matters not. The fact that wolves multiplied in the midst of the concerted and relentless war waged against them by man indicates that the youngsters learned how to take care of themselves from the experience and not from the instincts of their parents. The safety-first slogan in the wolf world appears to be: "Avoid being seen by a man; and never, never touch anything that carries the scent of man or that of iron or steel."

A generation or two ago a wolf took no pains to keep out of sight; now he uses his wits to avoid being seen. Then it was easy to trap him; now he has become exceedingly difficult to trap. Long-range rifles, poison and steel traps brought about these changes. It was about 1880 when wolves began to develop this cunning for self-preservation. Heavy bounties brought numerous trappers and hunters into the wolf domain; but such was their development that, despite this incessant warring, for fifteen years the wolves actually multiplied.

In the cattle country you will find the wolfer—a picturesque character engaged in

(Concluded on Page 56)

The birthplace of American liberty—Independence Hall, Philadelphia

What the Guarantee Promises —These Tires Deliver

If we call the definite mileage guarantee by its real name, what do we have? Nothing more than tire insurance.

You, the tire-buyer, pay for that insurance—just as you pay for any other item in the tire-maker's overhead.

Its cost, as are other overhead costs, is absorbed in the price of the tire you buy.

And in all such tires marketed, overhead fights with quality for place.

Goodyear Cord Tires carry no definite mileage guarantee. *They are independent of any charge whatsoever that does not confer a material benefit upon the tire itself.*

Their capacity for prolonged and economical service is insured by what their maker puts into them, not by what he says about them.

Their broad utility is guaranteed by perfect materials perfectly put together.

And their quality is real and actual—unimpaired by fictitious costs of any sort.

At the last, it must be recognized that the miles a tire delivers, spring directly from the structure and substance that resist the punishment of the road—and not from any written estimate of the virtues such elements may possess.

And it must be admitted, also, that there is small consolation for the man stranded on a lonely road, in the thought of an adjustment counter twenty miles away.

For the guarantee never will be penned that can be fitted to a rim, and ridden upon.

And that, it seems to us, is the final answer in this guarantee matter: not what can be looked for on paper, but what can be looked for underwheel.

To this end, we have built Goodyear Cord Tires in the strictest spirit of the practical—built them not on a chance of what they might perform, but straightway to a service they are sure to perform.

We have stripped the process of their making of every quality-sapping cost.

By perfected organization, by efficient manufacture, by universal distribution and the absence of expensive insurance schemes, we have discounted overhead to the last possible penny.

And every dollar you pay down for a Goodyear Cord Tire buys the good that is in the tire—nothing else.

Beyond dispute, the best fire insurance is a fireproof building. By the same token, the best tire insurance is a flawproof tire.

Goodyear Cord Tires command this enviable designation. And their greater comfort, their lasting strength, their surer security, their uniform quality and downright *goodness*, constitute the best insurance of exceptional service we are able to contrive.

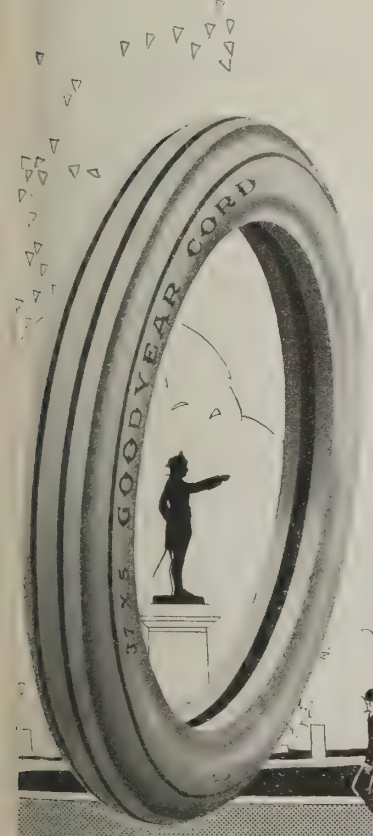
Particularly, when supported by the Goodyear policy that you—the tire-buyer—*must* be satisfied.

It requires a notable product to justify a confidence so profound that its guarantee is measured by no other limits than the patron's satisfaction.

Goodyear Cord Tires *are* such a product. They have proved it to us—they will prove it to you, once you try them on your car.

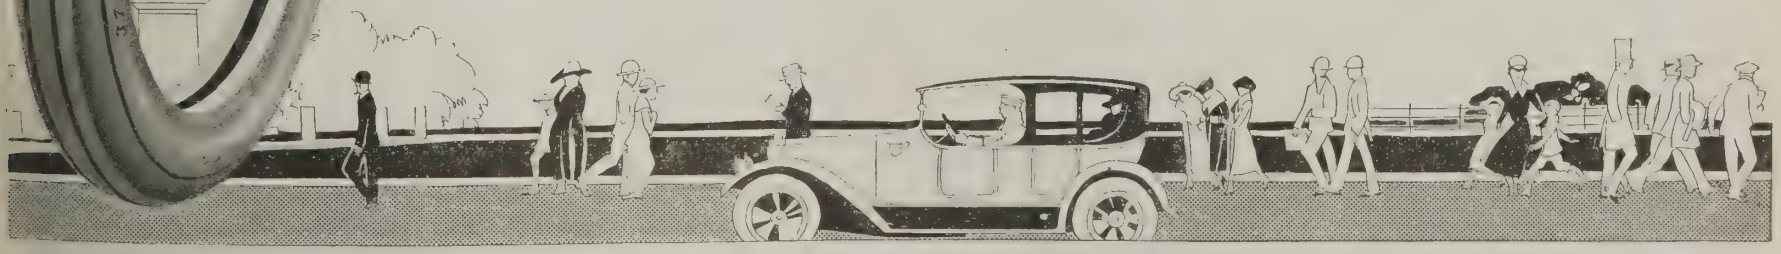
Their quality makes them higher-priced—and *better*.

They come in No-Hook and Q. D. Clincher types, in both All-Weather and Ribbed treads, for gasoline and electric cars.



Goodyear Tires, Heavy Tourist Tubes and "Tire Saver" Accessories are easy to get from Goodyear Service Station Dealers everywhere.

The Goodyear Tire & Rubber Company, Akron, Ohio



CORD TIRES

(Concluded from Page 53)

the peculiar occupation of trying to exterminate wolves. His equipment consists of a rifle, traps and poison. A few wolfers follow their occupation the year round. Many of them are free trappers—some of them old-timers who have seen better trapping days. Many of them enjoy good earnings, chiefly from the bounties paid for wolves, a smaller income being from the sale of the wolfskins.

In some instances a wolfer is employed by a cattlemen's association; in others by a big cattle company. In some cases the free trappers receive board and lodging at a cattle ranch—usually so long as they care to trap in the same vicinity. Often two of these wolfers go together. They have a spring wagon, a tent, a team, a saddle horse and the necessary trapping munitions. They begin operations by going over the territory and placing their traps, sometimes employing as many as three hundred. Often it takes two or three days to make the rounds of all these traps.

When a wolfer meets another wolfer, or when he is discussing business with stockmen and others who are interested, his talk is likely to run to "Three Toes," a wolf that killed so many cattle on the S. S. Bar Ranch; or to "Old Two Toes," which John Jones succeeded in trapping. He is eager to hear how Smith trapped the last wolf. Just as the prospector has faith that he will find the mythical lost mine, many wolfers firmly believe that they will yet compound a scent which will please the nostrils of the most wary wolf and lure him to his doom.

The hunter and the trapper keep bringing forward new and skillful ways of poisoning and trapping wolves. But getting a wolf becomes increasingly difficult. The majority of wolves now trapped are the young or the stupid ones. Many trappers use traps by the gross. These are set in clusters in selected places—in narrow trails, round carcasses, and in the approaches to stream crossings. The traps are concealed; placed in water; they are deodorized, hidden, and false-scented with offal. Whole batteries are placed before or round a stake the top of which is highly scented with something alluring to wolf nostrils.

One day I watched a trapper spend several hours in placing more than a hundred traps round the carcass of a cow. He avoided touching the carcass. This concealed trap arrangement was as complicated as a barbed-wire entanglement. At one place he set the traps three abreast and five deep. On another probable line of approach he set ten traps, singly, but on a zigzag line. Two fallen logs made a V-shaped chute, which ended close to the carcass. In the narrow end of this chute another cluster of traps was set. Thus the carcass was completely surrounded by numerous concealed traps. It seemed impossible for any animal to walk to the carcass without thrusting a foot into one of the steel jaws of this network of concealed traps. Yet a wolf got through that night and feasted on the carcass!

Clever ways have been devised to keep human scent off the poisoned meat. Poison is inserted into pieces of meat without touching them with the hand. Then these choice dainties are taken on horseback in a rawhide bucket and scattered with wooden pincers, the dispenser wearing rubber gloves. Yet most wolves will starve before touching these morsels, evidently scenting the poison!

Forced by poison and traps to avoid most dead stuff that man has touched, the wolf is compelled to do more killing. Then, too, his special development and increased experience, together with his exceptional equipment and opportunity, afford him a living and leave him spare energy and time; so for the fun of it he kills and kills, like a game-hog.

A tenderfoot arrived at a Wyoming ranch where I was staying. He proposed to go wolf hunting, and expressed a hope of being able to make a living by pursuing wolves. He was most heartily laughed at by the cowboys and the old-timers. He finally set off alone to kill a wolf. Wolves were all about the country. He had never seen one, but he had read of their habits. Patiently he searched until he found an entrance to a wolf den. Hiding in a favorable position, he lay in wait. The second day, as the pair emerged for food, he shot both. In less than a month this tenderfoot had found eight wolf dens within a small district. These dens were not known to the three cattlemen and the rancher who lived in that district. But this happened several years ago.

Until recently it was a rare thing to find a cattleman, a rancher, or even a hunter or a trapper, who appeared thoroughly acquainted with the habits of wolves. It was also a rare exception to find one of these men who had searched carefully for a wolf den, or who had actually hunted wolves in a systematic and painstaking manner.

Fencing with woven wire has been recommended by the Biological Survey. In many localities this appears to be practicable. It has been tried with success not only in this country but also against wild animals in Australia, New Zealand and Africa.

There has been a lack of conservation in many campaigns against wolves. Organized hunts, the employment of unskilled wolfers and the payment of bounties have generally been poor investments; and they have not exterminated wolves. Wyoming at one time had a county bounty, a state bounty and a stockman's bounty, averaging in the aggregate from fifteen to fifty dollars. In special cases as much as a thousand dollars has been offered for the pelt of a single destructive wolf. Yet in these times of high bounties wolves actually multiplied. A prominent stockman recently said:

"From now on there will be intensive cattle raising. This includes intensive wolfing—that is, we shall fight wolves with brains."

Even the most conservative figures of the total annual wolf damage to stock and ranch interests in the West go up into millions of dollars. The amount annually lost and the money annually spent in trying to destroy wolves, together with the vast payments in bounties, aggregate an enormous sum. If an equal amount was spent on fences the results would appear to be far more helpful and of more permanent benefit to the stock interests, and perhaps would hasten the destruction of the wolves.

Then, too, stock raising is beginning to be carried on in a more intensive manner. Smaller and more privately owned ranges everywhere, better grades of stock and more care of the grass—all these would help solve the damaging wolf problem by attracting more serious and intelligent attention to it.

To eradicate wolves, then, it appears necessary to understand their life habits and to use vigilance in discovering wolf dens. Vernon Bailey, of the Biological Survey, who probably has studied wolves longer and more carefully than almost an other man, emphasizes the importance o searching for dens. He says:

"A steep south slope is usually selecte for the den, preferably a barren bad-lan slope, but sometimes merely the wall of rocky cañon or a sagebrush hillside, broke by ledges or strewn with large bowlders— locations that afford good sentry post from which the old males can watch for th approach of enemies.

"Knowing the kind of country the wolve breed in, it is only necessary to ride over until wolf tracks are found. Good trackin snow often lies on the ground in Wyoming Montana and the Dakotas during the earl part of the time when the young are in th dens, and this makes it particularly easy t find them; but even where there is no sno it is entirely practicable to locate them b riding along the crests of the ridges an across good wolf country.

"Except for the tracks of an occasiona pack of bachelor wolves which wande through the country in the breeding seaso it is safe to assume that every track eithe goes to or comes from a den. When a trac is found the direction of the den can ofte be told by the lay of the land and the tim when it was made. Since the wolves hun mainly at night, to find the den a trac made in the evening should be followe backward, and one made in the morning forward. As the tracks approach the de they often gather into well-worn trails runways, which become so conspicuou near the den that no mistake can be mad as to its location."

As has been shown by a tenderfoot, b Vernon Bailey, of the Biological Surve and by others, the way to exterminat wolves is to search out their dens. Th finding of the den usually insures the ca ture of the pups and often of the enti family. As the old ones are much abroad the month of March, searching for food f their young, the discovery of the den ma often be made at that time; for the grou is then likely to be covered with sno marked with telltale tracks made by th wolves in leaving and returning to the homes.

The latest and best word concerni wolves in the cow world is that a number cattlemen, ranchers and the boys of settle are carefully combing the territory ne home for the lair of the wolf.

THE CONTROL OF FOOD SUPPLIES IN BLOCKADED GERMANY

(Continued from Page 8)

are determined by the products of their soil—the Italian cooks with olive oil, the German with lard. The adult clings to that upon which the tastes of childhood have been formed. The arts of the cuisine enter with cultivated classes, quite as indispensably as the nature of the ingredients; and service is as important as preparation.

Now these external standards of our diets have an influence upon the utilization of our foods. Foods that provoke distaste do not receive the same treatment by the digestive apparatus that will be accorded foods to which the individual is accustomed. There are, of course, wide variations in these reactions. But foods that must be eaten without appetite and enjoyment do not provoke the same response upon the part of the digestive apparatus which is accorded to foods that are relished.

The average person can force himself to eat almost anything; hunger drives one to eat the most revolting food. But the nervous system that has to tolerate such a situation is likely to develop abnormal reactions, and nutritional disturbances may arise. The nutrition of prisoners of war must be considered from this point of view; the prisoner of war must eat what the country of the captor offers him, no matter how repugnant to his tastes.

These external factors of a diet become problems when a nation has to undergo a generalized rationing. Under blockade, the people of Germany have to do without certain things to which they had become accustomed. In order to be fair to all, the attempt had to be made to give each German the same amount of the same food. Under the regulations they were all to have the same diet; and to this they object, as a natural reaction of their tastes. The fixed ration and the paucity of fats necessitated the cooking of foods in a manner that was repellent to many. A nation under blockade must abandon, in part, the external relations of a diet.

German agriculture has labored under many difficulties. The soil of Germany is of inferior grade, considered as a whole. Prussia, which contains nearly sixty-five per cent of the area of the empire and possesses about two-thirds of the arable land, has relatively little of rea'ly first-grade soil, and nearly one-half of the acres are of distinctly low grade. Large areas of Bavaria, Baden and Würtemberg are mountainous. Much of the soil of Northern Germany is sandy.

The climate of Germany is of indifferent quality, agriculturally speaking. Extremes in precipitation are common, both drought and excessive rainfall being of frequent occurrence. The seasons of 1911 and 1914 presented crop failures. In the summer of 1915 there was drought during critical months; during the summer of 1916 there was excessive rainfall. The temperature inclines to be subnormal; the summers of 1915 and 1916 were unusually cool, and the maturation of crops was placed in jeopardy thereby. The soil requires heavy fertilization and demands intensive cultivation, entailing much labor. Rotation of crops in some sections is made unusually difficult by the chemical composition or physical properties of the soils.

As a whole, the soil of Germany is distinctly inferior to that of the British Isles and markedly inferior to that of France. Nevertheless, agriculture is eminently successful in Germany. This has been due to the fact that the cultivation of the soil has been made the subject of intensive scientific study; farming has been made a veritable chemical industry.

The area of Germany is about 133,580,000 acres. Of this about 82,275,000 acres are under cultivation, using the term in the broad sense. The variations in acreage for the different crops has been slight during the past five years. Notable is the high percentage of grains and carbohydrate crops—sugar beet and potato—sixty-two per cent; and the small acreage under grasses—thirty per cent. In England and Wales two-thirds of the land is devoted to grasses and one-third to crops; in Germany one-third is devoted to grasses and two-thirds to crops.

German agriculture has displayed a progressively increasing efficiency during the past forty years. In the thirty years before 1913 the average yield of wheat rose from 19 to 32, barley from 23 to 36, oats from 25 to 44 bushels to the acre, while the yield of potatoes rose from 3.5 to 5.5 tons to the acre. When the cultivation of the sugar beet was first undertaken between eight and ten tons of beets were required to yield a ton of crude sugar; now less than six tons of beets yield a ton of crude sugar. Seventy-five persons are now fed with the produce of each hundred acres of cultivated land in Germany. This very excellent result has been due largely to artificial fertilization and scientific rotation of crops.

Four fertilizers are required in agriculture—nitrogen, phosphorus, potassium, and the organic substances that are called humus. The last is supplied by natural manures and turned-in cover crops. Under nitrogen are included nitrate and ammonia. In peacetime Germany applied to her soils large amounts of sodium nitrate and the saltpeter of Chile. In the years just previous to the war Germany imported some 750,000 metric tons of Chile saltpeter, of which about 500,000 tons were applied to the soil.

In addition to this, ammonium sulphate, to the extent of 94,000 tons—in terms of nitrogen—was applied to the soil, this being equal to about 650,000 tons of saltpeter, the ammonia having been derived from coke ovens. In addition to these, small amounts of calcium cyanamide were also used. This is very intensive artificial fertilization. Phosphorus, in a state of basic slag, Germany possesses in her iron industries, though obtained in part from imported ores. The amount of basic slag used in 19 was in excess of 1,900,000 tons. Sup phosphates were also imported, largely f use as fertilizer, from the United Stat Algiers, Tunis and the South Seas, abo eight hundred thousand tons having be used in agriculture in 1913.

Germany possesses potash deposits almost unlimited extent, the world's larg source of this chemical. Under these c cumstances potassium compounds ha been lavishly used as a fertilizer. Though is recognized that nitrogen is, on the whc the most important of the fertilizers, f use of potassium compounds and phospha with the nitrogen results in the larg yields; and for certain crops—sugar beet potassium compounds are of particu importance. The average use of th chemicals on the soil in Germany in t years just preceding the war was stated Germany to have been, in metric tons each hundred acres: of nitrogen—as trogen—0.20; phosphorus—as superph phate, thirty per cent soluble—3.65; a potassium—as potassium oxide—0.46; all about six million tons.

The amount of natural manure availa for use depends upon the number of dom ticated animals and upon the extent which concentrated fodder is used in th diet. It is probable that natural fertili is not more used to-day in Germany th thirty years ago. The marked increase yield of crops, of the grains especially, is c to three factors: Use of artificial ferti ers; selection of seed and of strains; a improved cultivation.

Probably half the gain has been due the intensive fertilization; in recent s sons the use of artificial fertilizer l yielded additions to the harvest of gr that may be estimated at from five to el bushels an acre, or from three million to million tons a year, of a total of fr twenty-five million to twenty-seven mill

(Continued on Page 59)

Notable Maxwell Records

IN APRIL, 1916, some interesting economy tests were conducted on the Brooklands track, London, Eng. Several makes of cars were used in testing out a new fuel mixture. Of all the cars entered, a stock Maxwell Touring Car made the most notable record, delivering a mileage of 33.6 on a gallon of the fuel. This performance was witnessed by a representative of "Autocar," the most conservative motor car journal of England, and he wrote as follows:

"In this article we are concerned primarily with the action of the new fuel, but we feel it only fair to give a word of praise to the behaviour of the Maxwell, which, brand new as it was, ran exceedingly well throughout the tests, and showed altogether remarkable acceleration and hill-climbing ability."

IN April, 1916, an economy test was made around Table Mountain, South Africa, which contains two fairly steep grades, and a stock Maxwell Touring Car made 31.3 miles on seven-eighths of a gallon of petrol.

IN August, 1916, tests for the economy of Maxwell Cars were made by Prof. David L. Gallup, professor of gas engineering of Worcester Polytechnic Institute, at the Narragansett Park Speedway, Providence, R. I. The following results were obtained and announced by him.

Speed (Miles per Hour)	Economy (Miles per Gal.)
10	33.7
15	32.7
20	31.2
25	28.8
30	26.1
35	23.0

F.O.B. DETROIT

MAXWELL MOTOR CARS

are designed and constructed primarily for service under the average and usual conditions. They were never intended for stunts, racing speeds or any other extraordinary purposes.

It has simply been our aim to build a light, economical, durable car and to build it exceedingly well.

It is interesting to note, therefore, certain instances which prove that Maxwell Cars are not only performing their specific function—but that they possess, in reserve, a surplus merit which enables them to achieve marked distinction in events *out* of their field and class.

The facts and figures here presented throw some light on why the Maxwell is generally recognized as *The World's Greatest Motor Car Value.*

ENCLOSED CARS

Town Car $915 ***Cabriolet $865***

Sedan $985

All prices f. o. b. Detroit

AT the Virginia State Fair, held in Richmond early in October, 1916, a Maxwell stock touring car won a big economy run in competition with practically all the four-cylinder cars sold in that city. The contestants were started with one-half gallon of gasoline in a special tank provided by the fair authorities. The Maxwell distanced all competitors by a wide margin, covering 13.3 miles on the half-gallon.

IN February, 1916, Ray F. McNamara drove a Maxwell Roadster from Philadelphia to Pittsburgh, 293 miles, in 8 hours and 19 minutes, averaging about 36 miles an hour. The run was made over snow-packed roads and part of the trip was through a heavy snow storm. The run was checked at both ends by newspaper men. The record still stands.

IN July, 1915, McNamara drove a stock touring car from Detroit to Indianapolis and return, 620 miles, in 20 hours.

McNAMARA also established a record for the drive from Portland to Spokane. The distance is 458 miles and the elapsed time was 15 hours, 31 minutes. The best previous time was 20 hours, 30 minutes.

LATE in November, 1916, a stock Maxwell Touring Car was driven out of Chicago and reached LaCrosse, Wis., a distance of 300 miles, in fourteen hours. High speed over icy roads cut into the tires and there were four blowouts. Despite deep snow and terrible roads, the car had no mechanical difficulty.

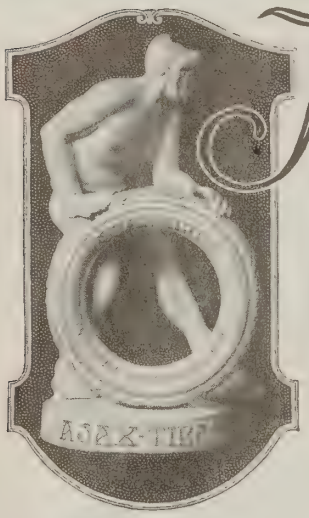
AJAX TIRES

GUARANTEED IN WRITING 5000 MILES

ARE REGISTERED TIRES



AJAX Tires come of fighting stock. They were the first *independent* tires. Twelve years ago, they entered, single-handed, a monopoly-ridden industry—and won. They won the only way they *could* win in the teeth of violent opposition—on *quality*.

Quality was their armament and intrenchment—and their quality-challenge was the *first* tire guarantee.

The Ajax service-pledge in writing—5000 miles—is held inviolate today as then. Ajax inaugurated a straight-away policy of cards-on-the-table dealing with the tire owner. It met immediate and lasting response.

There is no longer a tire monopoly, but the Ajax initiative—the Ajax fight to maintain always-higher inbuilt quality—goes on and on.

In every industry there is a product that lifts itself, by sheer merit, by an actual service-showing above the rest—a product that achieves separate and supreme distinction. In tires, we honestly believe this master-product to be Ajax.

And when you consider the enormous yearly sales of Ajax Tires—the tremendous growth of the business—and remember that Ajax Tires are not regular equipment of the cars they are largely bought for, but the *individual choice* of thinking motorists to replace *other tires*—you have indisputable proof of leadership.

Ajax Tires are still of "fighting stock"—built for conquest in gruelling road test. They have stamina, spring and vitality—rugged resistance. Made of the cream of rubbers and quality fabrics, by the pick of tire-makers to one standard—the highest.

And note that now—in line with the Ajax policy of initiative always—Ajax Tires are *registered* at the home office in the individual tire owner's name as further insurance and protection of the Ajax Guarantee in Writing 5000 Miles minimum service. Consider that this means, based on the implied service of other standard makes, 43% more tire miles, a saving of $3 to $15 per tire according to wheel size.

Ajax Registered Tires prove Ajax determination to serve to the uttermost mile.

Ask your Ajax dealer for a copy of "The Story of Ajax Tires" by Horace De Lisser, Chairman of the Board, Ajax Rubber Co., Inc. It tells an unusual business story of romantic interest and solid fact.

While others are claiming Quality, we are guaranteeing it

(Continued from Page 56)

tons. Artificial fertilizers have alone made it possible to raise the huge crops of potatoes and sugar beets annually produced in Germany. The potatoes yielded pork, and the sugar beets made her an important factor in the sugar market of the world.

Germany possessed large herds of domesticated animals—of horses some 4,500,000; of cattle, from 20,000,000 to 22,000,000; of sheep and goats, 9,000,000; and of swine, from 21,000,000 to 33,000,000—depending upon the time of the year. Since Germany had only one-third of her agricultural land in grasses and two-thirds under cultivation for crops, it is clear that this livestock must have been nourished to a large extent upon concentrated feeds. Germany did not produce enough such fodder to feed her stock; she imported each year from one-fourth to one-third of the requirements of her livestock. This situation was, from the military point of view, the weakest spot in German agriculture. Germany was much more dependent, directly and indirectly, upon imports for her meats and dairy supplies than for her grains.

The economic situation in German agriculture has been one of exceptional strength. About ninety per cent of German agriculturists own the land they till; and, of the total land under cultivation, about eighty-five per cent is in the hands of the denominated ninety per cent of farmers. There are nearly four million holdings under five acres, some ten millions under fifteen acres; and half of the acreage is in holdings of less than fifty acres. Intensive cultivation demands abundance of labor, especially of female labor. Not only do all crops require careful cultivation in Germany, but the sugar beet in particular makes most exacting demands upon hand labor.

Just prior to the war about twenty laborers were engaged on each hundred acres of cultivated land, which, as previously stated, sustained about seventy-five persons. Of these laborers, one-third were not permanently engaged in farm labor, but migrated from place to place and from task to task. Not less than a million Russians were wont to migrate into Germany to work upon the farms during the summer. A large fraction of the native transient farm labor was engaged during the winter in forestry and in factory work connected with agriculture, as in sugar refineries, potato dryers and distilleries. Of the workers permanently employed in farm labor about half were women; of the transient workers in the fields two-thirds were women.

The progress of German agriculture has been greatly aided by the paternal attitude of the government. In every possible way—in schools, scientific experimentation, price control of supplies, financial aid and a protective tariff—the government has promoted the development and intensification of agriculture. This has been done, in part, for economic reasons; in part, however, it was done in order to make Germany self-sustaining in foodstuffs—in short, as a military measure.

The Lack of Fatty Foods

Excellent as German agriculture is, a critical survey indicates that there were several points of weakness in the system. The first was the extreme dependence upon hand labor, the relative and absolute scarcity of machinery for the most efficient handling of the crops. Farming by hand labor cannot respond to suddenly increased demands.

The predominance of female labor was another weakness. Though it was true that women were free of military claims and thus secured as farm laborers, had they not been already engaged in farm work their entrance upon such work in a time of emergency would have meant a positive increment in labor forces. Furthermore, the work of women cannot be speeded up as in the case of men. In a word nearly the total working power of the agricultural population was, in time of peace, already engaged in cultivation of the soil; when the men were withdrawn there were few within that class who could be called into activity, and a tremendous impost of extra work was placed upon the remaining workers, largely women.

Finally, a very grave defect was the lack of fat-bearing crops. This was not a lack imposed upon German agriculture by latitude, longitude or climate. For forty years specialists had been urging the necessity of the cultivation of fat-bearing crops and the pressing need of selection of the most advantageous varieties, several of which had been experimentally shown to be adapted to conditions of soil and climate in that country. But it was so much easier to raise potatoes and turn their starch into lard that German agriculturists neglected this development of their resources.

The agriculture of Austria-Hungary was primitive in comparison with that of Germany. The ratio of arable land to population is much higher in Austria-Hungary than in Germany. Hungary in particular is an agricultural state pure and simple; and Austria cannot be termed an industrial state. The total food production of the dual empire before the war was largely in excess of its own consumption and much foodstuff was exported. But the efficiency of agriculture was low; scarcely more than half a crop of any kind was gathered in Austria-Hungary as compared with Germany. The methods of cultivation were primitive and superficial, and the yields represented largely the natural excellence of the soil. Little use was made of artificial fertilizers and crop rotation was not systematically carried out.

When war broke out it was naturally supposed that the excess foodstuffs of Austria-Hungary would be made available to Germany. But, with the withdrawal of the men from the land to enter the army, the production fell to such an extent that the dual empire no longer produced more than its own requirements, and the world was offered the anomalous spectacle of Austria-Hungary prohibiting by edict the exportation of foodstuffs to Germany.

There has been little improvement for Germany in this state of affairs with the continuance of the war; neglect of production and of distribution have gone hand in hand; and, without any effective control of consumption, Austria has been hard set-to with her own problem of food supply. It is characteristic of the German propensity for efficiency that during the summer of 1916 organizations were established in Austria-Hungary for the purpose of educating the people there in the methods of modern agriculture.

Imported Foods

The diet of the German people was a composite of food produced within their borders and imported from the outside world. Importation of food was both direct and indirect. Germany imported meat directly; she also imported feeding stuffs, from which meat was produced. In earlier times the diet of a people was the direct expression of the production of the land. The development of transportation and the diversification of trade have each decade altered more and more the diet of civilized peoples, so that to-day the differences in national diets are much less pronounced than was the case two or three decades ago. This internationalization of the diet has progressed to a greater extent in Germany than in the other Continental countries.

Bread was the staple article in the German diet, particularly in the southern portions of Germany, as it still is in the French diet. In Prussia, where the potato yields very heavily, the use of the potato was much higher than in South Germany. Sea fish was used to a large extent by the Prussians and in the western sections adjacent to the North Sea. Thirty years ago mutton was used to a large extent in Germany. Year by year this has diminished and the use of pork has assumed greater proportions; the use of beef was limited largely to the well-to-do classes in the cities. Everywhere dairy products comprised a large fraction of the intake, but particularly in South Germany. The use of sugar in Germany was limited until the development of the sugar-beet industry, since which time it has greatly increased, though never to the extent practiced in America.

Up to two decades ago the peasants of Germany consumed in large part their dairy products, and little else than butter and cheese was sent from the farm; the butter consumption for each individual was low. With the advent of the modern centrifuge the German peasant was able, in connection with the excellent transportation facilities that had been developed by the German railroads, to sell his cream to the cities or to dairies operating for the urban trade. The result was a lessened consumption of dairy products on the farm, a larger shipment of dairy products to the cities, and the importation of other food to the farm. The business was profitable, since the inhabitants of the German cities, as everywhere in the world, increase yearly their consumption of dairy products.

Since the amount of cream the peasant could sell was limited only by the amount he could produce, the number of cows was yearly increased; and, to feed these added cows, concentrated feeding stuffs were imported in yearly increasing amounts. In the years just before the war many landholders of Germany conducted extensive dairies operated largely on imported feeding stuffs. The development of pasture land had not kept pace with the increase in livestock; during the past twenty years only a small fraction of an acre had been added in pasture lands to correspond to each additional milch cow, whereby the dependence on imported feeding stuffs had become yearly more pronounced.

The diet of the people in the cities, as everywhere in the civilized world, has developed in the direction of the standards of the hotel cuisine. By this is meant the greater use of meat and dairy products, and the preparation of these according to the standards of the hotel service, rather than in accordance with the native tastes of the people.

The per-capita meat consumption of the Germans has doubled within the last three decades, and this increase has taken place largely within the cities. The peasant of Germany in 1914 consumed little more meat than previously. In order to supply the demands of the cities for meat—largely pork—the stockraisers of Germany followed the example of the dairymen: they increased the number of animals and imported the feeding stuffs required. It must not be inferred that the production of native feeding stuffs had lagged in Germany; on the contrary, the cultivation of grain has been very successful, and in yields to the acre the German farm ranks with the best. But the increase in livestock devoted to dairy products and to meat production was so disproportionate to the increase in grain production as still to leave the meat industry dependent upon importation.

So far as dairy products were concerned, Germany made no attempt to meet the demands of the dairymen for concentrated feeding stuffs. Fat is the ingredient most desired in forced feeding of dairy cattle; and concentrates rich in fat had never been developed in Germany, but were imported, largely from the United States, in the form of oil meal, oil cake, peanut meal, and so on.

Though transportation has tended to erase the distinctions in the diets of different classes and sections, aided always by the instinctive attempts of the poor to emulate the diet of the rich, nevertheless, three class diets were distinguishable in Germany—that of the agricultural population; of the industrial population; and of the well-to-do in the cities.

The peasants of Germany lived largely on the vegetal products of the soil, supplemented by dairy products and a moderate amount of pork and veal, plus cheese in the south and fish in the north. The bread ration was highest in the south; the potato and fat intake largest in the north. Meat was consumed largely during the winter; in summer the diet was almost vegetarian.

Normal German Diet

The diet of the industrial classes—and by this term is meant the workers in the mining and manufacturing sections of Germany—did not present the seasonal variations noted in the agricultural sections; the staples were rye bread, potatoes and pork; butter, milk and cheese were consumed in but limited amounts, and the total intake of the industrial workers was always lower than with the agricultural population. The diet of the well-to-do classes in the cities was the diet of the markets, following the seasonal appearance of domestic and foreign products of the soil, in accordance with price and supply. Large classes of the poor of the cities were annually unable to meet the exigencies of the market, and for several months during each winter every large German city supplied thousands of poor citizens with food.

German agriculture had for forty years enjoyed the benefits of protection by high tariff, aided by other regulations designed to encourage the production and discourage the importation of food. At every session of the Reichstag, conflicts developed between the Social Democrats and the Agrarians; the former desiring easier import of foodstuffs, in order that the cost of living might be reduced; the latter striving ever to maintain their monopoly of foodstuffs. The Agrarians always won out in these contests, aided by the influence of the military authorities, who preached the importance of such development of German agriculture as to make Germany independent of foreign foodstuffs in the event of war.

Shortly after war was declared the German Government called together a commission of scientists, to which was intrusted the preparation of a report upon which the defensive food measures of the empire should be based. This commission, commonly called the Eltzbacher Commission, devoted several months to the study of the production, distribution and consumption of food in Germany.

All considerations of the food supply of a people relate to production, distribution and consumption; but the statistical data available are fragmentary to a surprising extent. The data of production are largely the data of the expert, the assessor and the market, leaving the direct consumption by the agricultural classes, and by the small towns locally supplied, more or less out of the calculations. The figures of consumption are drawn from the data of flour mills, slaughterhouses, customs-house reports and trade journals, leaving large gaps that are filled by only crude estimates.

The Eltzbacher Inventory

There is nowhere any adequate checking up of waste; there is nowhere any clear separation of the proportions of produce that go to the maintenance of domesticated animals and of human beings. Nevertheless, the Eltzbacher Commission proceeded to make an inventory of the food consumption, food production and food needs of Germany in accordance with correct scientific procedure; though it is evident from reading the report that they were not always able to see the forest for the trees. Classified on the basis of derivation, the peacetime food supplies of Germany were naturally arranged as follows:

1. Plant food grown from German fertilizer.
2. Plant food grown from imported fertilizer.
3. Animal food produced from vegetation not fit for human consumption.
4. Animal food produced from nutrients fit for human consumption.
5. Animal food produced from imported feeding stuffs.
6. Animal food derived from inclosed and adjacent fresh and salt waters.
7. Plant food grown in surrounding neutral countries from native fertilizer.
8. Plant food grown in surrounding neutral countries from imported fertilizer.
9. Animal food produced in surrounding neutral countries from fodder native and not fit for human consumption.
10. Animal food produced in surrounding neutral countries from domestic nutrients fit for human consumption.
11. Animal food produced in surrounding neutral countries from imported feeding stuffs.
12. Animal food from fresh and salt waters of surrounding neutral countries.
13. Plant food from overseas direct.
14. Plant food from overseas via neutral surrounding countries.
15. Animal food from overseas direct.
16. Animal food from overseas via surrounding neutral countries.
17. Colonial wares from overseas direct.
18. Colonial wares from overseas via surrounding neutral countries.

A complete blockade would obviously exclude all food under Numbers 2, 5, 7, 8, 9, 11, 12, 13, 14, 15, 16, 17 and 18; but the financial interest of the citizens of the surrounding neutral countries does not coincide with the purpose of the blockade, which cannot be made complete under Numbers 7, 8, 9, 10 and 12. It was the purpose of the blockade to place every contiguous neutral country in an inclosed situation, exportation to Germany being made indirectly impossible.

It was clear to the Eltzbacher Commission at the outset that the direct results of the food blockade must result largely from the abolition of importation of fertilizers, feeding stuffs, meats and fats. An attempt was made to evaluate the foodstuffs produced in surrounding neutral countries independently of their own importations, but the results were very evasive. As a matter of fact, it has been the results of the application of the blockade that taught both the Germans and the Allies the exact

(Continued on Page 61)

This is the Motorweave Man—a national figure—$6.75. Wherever you see him you will find genuine Motorweave

The Motorweave Man is At Your Service

HERE is a man it will pay you to know—the Motorweave Man.

About a year ago he saw an opportunity. He did a big thing. Now he has a nation of friends.

The Motorweave Man first thought of standardizing a quality automobile robe to sell nationally at a popular price—$6.75—guaranteed.

He made it durable, double-woven of fine reinforced woolen fabric with a warm, soft nap. He did not forget appearance. He used pleasing colors and modern patterns.

Motorweave received a truly remarkable sales ovation the moment it was placed in the national market. A tremendous demand came quickly—and everywhere! And the first season's success was built on only *one* design in only *five* colors.

* * *

The Motorweave Man hurried back to the factory for more. He got them to supply Motorweave in an immense line of assorted colors and patterns. He brought out a 1917 stock, more complete and comprehensive than any other robe manufacturer ever offered before.

And, note *this*—with prices increasing in every line of production and woolen material prices going steadily higher, he secured the factory's promise to hold Motorweave during 1917 at the *same standard price*—$6.75. At the same time, 1917 Motorweave will remain the same generous size, 60 x 80 inches, giving plenty of comfortable "tuck-in," even with three in a seat.

So, here he is today at your service.

Motorweave Robes Are Mill-Washed and Shrunk

Thousands of dollars' worth of new and modern machinery are employed in the mill-washing and mill-shrinking of Motorweave. Every atom of surface oil is removed by these latest processes. You may wash Motorweave yourself without danger of your robe shrinking. Simple instructions accompany every robe. Following these directions secures the user maximum satisfaction and long life for every robe!

In size, weight and texture it is ideal for motorists because it is made especially for motorists—the only robe so designed.

But that is not all. You will find Motorweave ideal also for lounging, camping and all outdoor purposes.

Demand to see the label and the guarantee. If your dealer does not stock Motorweave, send us your name and we will send you a handsome catalogue of the big 1917 line and will also see that you are supplied.

The Wallace & Smith Company, La Porte, Indiana

A Word to Dealers

THE Motorweave Man is fast establishing Motorweave Headquarters among dealers throughout the United States. His salesmen are now covering territory.

All dealers who stock Motorweave at this time will receive preferred attention on re-orders throughout the year *at the present standard price.*

Buy *now* and be sure of your year's supply!

Write us at once so that our salesman may call on you.

A Postal Will Do—

extent to which the surrounding countries were able to contribute foodstuffs to Germany.

The Eltzbacher Commission devoted particular attention to Germany's own production of feeding stuffs. The following data had to be determined:

1. How many domestic animals were produced yearly?
2. How many domestic animals were imported and exported yearly?
3. For the animals produced yearly, whence came the feed?
4. How much roughage and green feed were produced yearly?
5. How much pasture had Germany for the different classes of livestock?
6. How much concentrated feeding stuffs were produced each year?
7. How much concentrated feeding stuffs were imported and exported each year?
8. How much concentrate was produced in the surrounding neutral countries?

As a result of their deliberations the Eltzbacher Commission prepared an elaborate report. In this report were tabulated:

(*a*) The amounts of foodstuffs consumed by Germany in a year.

(*b*) The proportions that were produced in Germany.

(*c*) The proportions of the foodstuffs that were produced in Germany from imported fertilizers and feeding stuffs.

The commission enunciated a standard for the food needs of the people of the empire, and the differences between the figures for *need* and the figures for *consumption* were portrayed as *waste*, which it was the imperative duty of the Germans to avoid in wartime. Recommendations for increased production were also formulated, whereby the restriction due to the blockade could be partly obviated.

Consumption and Production

A survey of the relations of consumption and production of concentrates and fodders made it clear that it would not be possible for Germany to maintain, under blockade, the normal number of domesticated animals. In order to reduce the number of animals to the plane of available feeding stuffs the commission recommended, after weighing the relative values of dairy products and pork on the basis of cost of production and availability in consumption, the slaughter of one-third of the swine and ten per cent of the milch cows, the numbers to be held to that level.

In addition to the work of this commission, independent scientists published the results of original investigations, confirming, in the main, the findings of the commission, though differing in essential features. Investigations were also carried out for the purpose of determining the total feed supply of the empire, in order that the subsistence of all domesticated animals might be planned out on a ration basis.

The writer has made an independent calculation of the food consumption of Germany based on official data for the years 1912 and 1913. The following table contains the estimates of four different calculations as stated for protein, fat, carbohydrate and calories per head per day:

CONSUMPTION OF FOOD UNITS IN GERMANY
1912–1913

	TOTAL				IMPORTED				DOMESTIC			
	PROTEIN OZ.	FAT OZ.	CARBOHYDRATE OZ.	CALORIES	PROTEIN OZ.	FAT OZ.	CARBOHYDRATE OZ.	CALORIES	PROTEIN OZ.	FAT OZ.	CARBOHYDRATE OZ.	CALORIES
Ballod	3.10	2.15	14.5	2708*	0.85	0.88	0.8	450*	2.25	1.30	13.5	2480*
Eltzbacher	3.30	3.75	18.7	3642	0.90	1.60	1.5	715	2.40	2.10	17.2	2927
Kuczynski and Zuntz	3.70	3.11	20.1	3550	1.13†	1.06†	1.4†	473†	2.57	2.05	18.7	3077
Author	3.25	2.33	16.0	2790	0.90	1.06	1.4	550	2.35	1.27	14.6	2240

*Lack of agreement due to fact that Ballod estimated exported sugar as a domestic food.
†Direct plus indirect imports calculated by writer.

The food needs of a people cannot be judged by the total food consumption, since this is much too high, including all loss and waste. The per capita consumption is directly misleading, because to divide the figure for total consumption by the number of individuals would mean that the suckling and dotard receive the same ration as the workingman. Scientists allow for the individual variations in what is known as the man ration. The food-need of the adult male is set at 100, the food-need of the adult female is set at from 80 to 90, and the food-needs of the different years from infancy on according to determined standards.

In the Eltzbacher report the German population was taken as 68,000,000. The number of children of each year and the number of adult males and females were known. The figure for the number of children of each year of age was multiplied by the figure for the food-need of that year. The number of adult females and the number of adult males were multiplied respectively by 85 and 100. The final figure for the needed food units—a compromise between several standards—was 51,822,908.

Close Figuring

This figure means that the population of 68,000,000 would be nourished if it received the ration of 51,822,908 adults. Three thousand calories was the figure set for the adult need—100. The caloric needs of the German people were, therefore, determined by the simple multiplication: $3000 \times 365 \times 51{,}822{,}908 = 56{,}750{,}000{,}000{,}000$ calories. When this figure for total calories, determined on the basis of man ration, is divided by the figure for the population, the result is 2280 calories a day; in other words, the per capita ration corresponded to seventy-six per cent of the man ration.

The protein needs of the people were also calculated. Children under six years of age were allotted 1.4 ounces a day; from six to twelve, about 1.75; from twelve to eighteen, about 2.3. The adult men were allotted 2.9 ounces; the adult women were vouchsafed 2.4. The total daily protein needs for the population were, therefore, set at 1,605,000 metric tons a year.

Hindsight has made it certain that the figure set for caloric needs a day—3000—was too low. It was, of course, realized that the workingman would need much more; but this, it was felt, would be balanced by the large number of women, who would need less. But in a great war most women are laborers, not nurses, as the preparedness-for-women movement in this country seems to assume. The units allotted the growing child from twelve to eighteen were too low. A boy of this age has a heat production one-fourth larger than an adult; in fact, an active growing boy consumes as much food as a hard-working man. More important than this, the extra work that must be done in a state at war was disregarded. Practically ten million men have been withdrawn from their occupations. The work done by these men may be fairly stated to have necessitated a thousand calories intake each a day. If the work these men used to do was to be done by the remaining civilians, these must be given a proportional increase in diet. That the work has been done by the extra exertions of the civilians is the testimony of all who have been in Germany during the war. In other words, the fifty-eight million civilians must be allowed ten billion extra calories. As the extra work is done by civilians from twelve years of age, these denominated calories must be divided between some thirty-nine million, or about two hundred and fifty calories a day above the needs of the peace diet. With these considerations in mind, the writer has calculated the protein and caloric needs of the German people in wartime, and reached these figures: protein, 1,524,000 tons; calories, 63,000,000,000,000.

The figures for peacetime requirements in protein and calories adopted by the German commission are higher than competent investigators in different parts of the world regard as necessary. In particular, what might be termed the American school, led by Chittenden, regards as adequate very much lower intakes of foodstuffs; and these figures are based upon extensive tests with healthy men over long periods of time.

Before the war, Chittenden used to be called an *Antieiweiss Fanatiker;* and in the German discussions of diet during the first year of the war this attitude was still apparent. Later results, however, have converted the Germans to Chittenden's ideas. One German humorously observed to the writer: "The Chittenden standard of eating had been almost as valuable as the Hindenburg standard of fighting." It will make the matter clearer to set these figures in a table:

PROTEIN NEEDS

	PER CAPITA	MAN RATION
Eltzbacher	2.30	2.83
Author	2.15—wartime	2.5
Chittenden	1.5	1.8

CALORIC NEEDS

	PER CAPITA	MAN RATION
Eltzbacher	2380—peacetime	3000
Author	2510—wartime	3300
Chittenden	2030	2600

From the data collected by the Eltzbacher Commission it was clear that the peacetime consumption in calories was from one-third to one-half in excess of physiological requirements, and that the calories of domestic production in peacetime were sufficient to cover the needs. The peacetime consumption of protein was fifty per cent in excess of the figure accepted for need; and the domestic production of protein was just large enough to cover the need. It was also apparent from the data that the fat consumption of peacetime was so large as to deserve the term luxurious, and the fat of domestic origin was enough to cover the normal requirements.

On paper, therefore, it seemed clear to the German scientists that if the German people would reduce their consumption to the plane of physiological needs, and maintain the domestic production on the peacetime basis, they would be able to sustain a food blockade without injury. It will be of interest to tabulate the recommendations of this commission, not only because they make the whole question clearer, but because they illustrate the systematic scientific consideration given to the questions.

Food Recommendations

The difference between need and use, the waste of one-third to one-half in protein, fat and carbohydrate, *must* be obliterated, since, if this waste continues under domestic production, want would be inevitable.

All luxurious living to be controlled—especially in public eating places.

The plane of peacetime production must be at least maintained. Necessary to this end is adequate labor on the land, sufficient use of fertilizer, proper rotation of crops, careful garnering and proper storage.

Production to be increased by cultivation of vacant land.

The cultivation of vegetables to be encouraged and the public exhorted to eat more vegetables and cereals and less of animal products.

The use of rye bread to be encouraged; that of wheat reduced.

The raising of hares, goats and sheep to be encouraged.

Exportation of foodstuffs to be prohibited and the importation of foodstuffs from neighboring states to be encouraged.

The use of grain for the manufacture of starch and alcoholic beverages, and for other industrial purposes, to be reduced.

The use of starch for the manufacture of alcohol for technical use to be reduced to the plane of "important uses of alcohol."

Waste in soap to be reduced.

Domestic animals to be reduced in number by slaughter to that number which can be fed on domestic feeding stuffs, the meat thus secured to be conserved for future use.

The prohibition of feeding bread grains to animals.

Regulation of feeding of potatoes to animals.

Reduction of number of milch cows to plane of necessity; no milk to be fed to swine.

Regulation of use of oats and barley in feeding animals.

Control of use of sugar beets as fodder.

Equal distribution of foodstuffs to all.

In reading the report of the Eltzbacher Commission one is impressed with the fact that the commission was composed of competent and conscientious men, who acted high-mindedly and solely in the interests of the consumer. They had, in a manner that was regarded as drastic, recommended the slaughter of one-tenth of the milch cows and one-third of the swine, in order to reduce the number to the plane of feeding stuffs of domestic origin. This ran counter to the interests of the agrarian classes.

Nevertheless, this was done. The recommendations of the commission for the control of bread grains were also placed in effect, and the entire people placed upon a bread and flour ration. From this point on, it was apparently assumed that the people would follow the recommendations of the scientists; it was assumed that producers and tradesmen would carry out recommendations designed to protect the consumer. Had the producers, tradesmen, administrators and politicians of Germany exhibited the same high-mindedness, foresight and regard for the consumer that was evident in the investigations of the scientists, the crucial problem of the nutrition of the industrial classes—which has been second in importance only to the military situation, or possibly equal to it—would never have arisen.

The Three Generals

There is a fable in Russia to the effect that three generals protect Russia from invasion: General Cold, General Distance and General Swamp. The three generals directing the attack on the nutrition of the German people were General Blockade, General Crop-Failure and General Mismanagement; and a review of the situation leads the impartial observer to the conviction that General Mismanagement was not subordinate to the others.

The recommendations of the scientific commission were directed at the problems of production and distribution in the interests of equitable consumption, even at the expense of the commercial interests of the producer and distributer. Though it was important that the producer should continue to find production profitable, it was of greater importance that each individual in Germany should possess a diet sufficient to maintain nutrition. If foodstuffs should be wanting, it was important that the lack be shared by all classes.

After the war had gotten under way, the disquieting fears of scientists were discounted by the public. The average German regarded the war as a promenade to Paris, just as the average Russian looked upon it as a procession to Berlin. Even the entrance of Great Britain awakened no serious apprehensions. With Belgium and France conquered by German arms and the Balkans under subjugation by Austria-Hungary, whatever Great Britain might do could lead to no serious consequences. The capture of large amounts of foodstuffs in Belgium and France was not without influence on the public—meat, 440,000 tons; potatoes, 650,000; flour, 400,000; bread grains, 670,000; butter, 55,000; and other foodstuffs over 500,000 tons.

Faith in the army inculcated an optimism that permeated every tissue of society. The crops of 1914 were only fair, but excellently garnered, despite the war. The check upon the Marne was regarded as a temporary lull; after the winter the march to Paris would be resumed. The report of the Eltzbacher Commission was issued just before Christmas, and appeared upon a scene of Christmas activities that was probably rarely surpassed in Germany. Not only did the civilians celebrate Christmas with all manner of eating and drinking, but the holiday delicacies sent to the front embarrassed the postal service.

When the government permitted the exportation of twenty-five hundred carloads of grain to Switzerland, and later granted permission for the exportation of a million tons of sugar (headed for Great Britain!) these relaxations were interpreted by the people as evidence of the splendid state of German food supplies, despite the protests of scientists and statisticians. The warning of the Eltzbacher report that if the per capita consumption of food continued at the customary figure of ninety units, when only fifty-six were needed and only sixty-seven were available, the supply would soon be reduced from sixty-seven to below the needed fifty-six, was seriously received by one class alone, the Social Democrats, who, as a

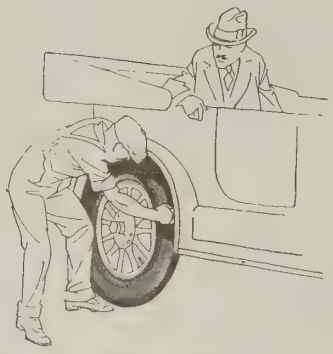
Glimpses of Tire Service given FREE at any of the more than 125 Fisk Branches



Inspecting

Dismounting

Assembling

Air Testing

What *Is* Tire Service?

FREE TIRE SERVICE should include the changing of tires, mounting spares on rims or wheels, inflation, the testing of air pressure and wheel alignment, and regular, frequent inspection.

To be complete, and completely free, this SERVICE must be available to every man who drives a car, regardless of the make of the tire he uses.

Add the intangible but equally important details of SERVICE, such as training, courtesy, consideration and intelligent care for the small things that may so easily make or mar pleasure in business dealing, and you have FISK FREE SERVICE.

SERVICE—real SERVICE like FISK—cannot be established in a week or a month or a year.

To decide to give SERVICE is one thing, to give it is quite another. It takes time to perfect an organization in the spirit of SERVICE.

From the moment one enters the employ of The Fisk Rubber Company, he sees, hears and is trained to think SERVICE. His associates are interested in his initiation into the FISK way of doing business. This spirit can come only after years of effort and continuation of the original members of a company and organization in the work.

Therefore, we say advisedly that FISK SERVICE is built to a policy. It is the product of years of growth, founded on the basic ideal of making the entire FISK organization a power in the development of satisfaction in motor car use.

to TIRE USERS

Moreover, this is direct and uniform SERVICE, given by FISK employees through local FISK branches and service departments in principal cities throughout the United States.

The value and the scope of FISK FREE SERVICE to dealer and tire user, alike, cannot be over-estimated. To the direct benefit of each of them is the fact that with all its attained superiority FISK SERVICE *is offered to Everyone Free.*

Regardless of what tire he uses, a man may drive to any FISK Branch, and without any purchase and without any obligation, he may take full advantage of the exceptional FISK facilities and unique SERVICE policy.

When you get an offer of actual SERVICE for nothing, from a reputable company, it is good business to take advantage of it.

Keep this thought with you! You need not use nor buy a FISK tire in order to enjoy FISK FREE SERVICE. The sooner you get the habit of accepting it, the quicker you will reduce your tire expense. The biggest average mileage on tires is shown through those branches where the most SERVICE is rendered. This is according to actual record and is of the utmost significance to car owners.

Be fair to your tires. Give them the chance offered by expert care and inspection and they will amply repay you in economy and convenience.

THE FISK RUBBER COMPANY

8 Bears with 9 Shots

"I have tested the .250-3000 Savage I got from you last Spring on eight head of bear without a miss, and only shot one of them the second time."

Letter from Mr. James R. Gill, Cascade, Idaho.

Write us for a description of the rifle he used. Price $32.50; cartridges $5.70 per hundred. Gun dealers everywhere will be glad to show you this

.250-3000 SAVAGE

SAVAGE ARMS COMPANY, 72 Savage Avenue, UTICA, NEW YORK

(Continued from Page 61)

class, have proved themselves the most objectively thinking class in Germany. The agricultural population did not concern itself in attempting to measure how far its produce would reach into the industrial population.

The classes of larger means in the cities had faith in the buying power of money. "Each one should cut down; but, since so many others are cutting down, mine will not be missed." The control of bread grains and their products and the reduction in livestock were the only enactments of serious value put into force during the first year of the war. The harvest of 1915 was far below the normal in grains and the sugar beet, though the potato crop was a record crop.

The summer campaigns on the West Front were without decisive results, and convinced the mass of Germans that the capture of Paris had become very improbable. The capture of large areas of territory in the East yielded little booty in food supplies, as the Russians destroyed ruthlessly in their retreat, and had earlier in the year ruined the crops in considerable sections of East Prussia.

The advent of Italy into the war closed one door through which large stocks of supplies had entered. The entrance of Bulgaria and Turkey removed those countries from the position of benevolent neutrals to allied belligerents, who had to conserve their own food supplies for the state of war; as a matter of fact, when Bulgaria and Turkey declared war they became military aids but economic burdens, and the loss of their excess supplies was one of the prices the Central Powers paid for their military allegiance.

Two measures of conservation were enacted during the first year of the war: (*a*) All grains were declared subject to confiscation; the bread grains were reserved for human consumption; a bread ration established; feeding of bread grains to domestic animals was prohibited. The utilization of bread grains for industrial purposes was restricted; the use of barley for the manufacture of malt was reduced one-third; the oats were confiscated for the use of the army and work horses, and the feeding of barley and maize placed under a general regulation.

Unfortunate Waste

This was, in part, a paper regulation only; the grains were subject to confiscation, and such quantities as were needed, weekly or monthly, were taken possession of; but the grains that lay with the producers were not held in reserve in the same manner as though they had been impounded in government warehouses. The millers were instructed to mill rye flour to eighty-two per cent of the grain and wheat flour to eighty per cent of the grain. The flours thus obtained were somewhat more nourishing than the finer bolted flours of peacetime, and the yield in flour was, of course, materially greater; but the lessened residue in grain offal for feeding purposes was a disadvantage, since the fodder calculations had been based upon the normal production of grain offal.

The peacetime consumption of rye and wheat, in the proportion of about two to one, was about one pound a head a day—higher in Bavaria, lower in North Prussia. The bread and flour ration of the empire, fixed in the winter of 1914–1915, was equal to one-half of a pound of flour, which was much less than the flour ration of peacetime. Though ostensibly the bread card was imperial and supposed to be uniform in all portions of the empire, this was not strictly the case; in particular, considerable leeway was allowed in the purchase of flour in different portions of the country.

(*b*) The recommendations of the Eltzbacher Commission for the reduction of swine and cattle were carried out during the first four months of 1915. Approximately one-third of the swine and ten per cent of the milch cows—supposedly about a million and a half—were killed. About the time when the killing of the swine was under way, in March, an inventory of the potato stocks led to the official statement that these were low. Since the potato in Germany was one of the staple swine feeds, it was decided to kill rather more than the denominated number of swine, in order to meet the loss in potatoes. Two months later another potato inventory was taken, revealing the fact that the previous inventory had been in error and that the killing of the additional swine had been entirely unnecessary, since the potatoes were available; and these potatoes were thrown upon the market at a huge loss in price and to a large extent underwent decomposition.

No oxen were killed and the killing of calves was not in excess of the usual number; the slaughter did not extend to sheep and goats, which, on the contrary, were conserved with foresight. The presence of such huge amounts of meat upon the market unquestionably resulted in increased consumption during the first six months of 1915. According to the plan, by far the largest portion of the meats thus obtained was to be conserved for future use, and should have represented a very large stock of conserved meat. The processes of conservation were, however, carried out very inefficiently, with the result that a large portion of this meat underwent decomposition and became a complete loss.

The crops of the year 1914, though rather low, had been excellently garnered; the sugar crop was in excess of the normal; a great deal of food got in, because of the imperfect blockade; and, all in all, the nutrition of all classes of the German people was practically normal during the first year of the war.

Bread Regulations

Preoccupation with military affairs, aided by the tacit assumption that the campaign of the summer of 1915 would terminate the war, resulted in inadequate preparation of the soil for the crops of 1915. There was a definite lack of fertilizer. The basic slag produced in the mills was not sufficient in quantity to cover the phosphate needs of the fields that had always been dependent to a large extent upon soluble phosphate imported from the United States and elsewhere. Potassium, in various forms, was, of course, available in unlimited amounts.

Nitrogen, as nitrate, ammonia or cyanamide, was scarce. The plants devoted to the synthesis of nitric acid, ammonia and cyanamide were small; the conditions of successful manufacture on a large scale had not been worked out and the demands of the military authorities for nitric acid exceeded all expectations. The result was that little nitrogen was available as fertilizer for the soil, and the soil of Germany is directly dependent on fertilization for the production of each crop.

In addition, the season was not favorable; the temperature was low and there was a long period of drought at a time when the grain required rain. The result was a low yield in all grains, in hays, in sugar beets, but with a record crop of potatoes. The acreage of sugar beets had been reduced to about three-fourths, of which the yield was about four-fifths. The total grain yield of 1914 was nearly four million tons lower than in 1913; but the yield of 1915 was five million tons less than the crop of 1914. Four hundred thousand tons had been set aside as reserve for the army.

When the quantities allotted for the flour ration, plus the amounts devoted to industrial uses and reserved for seed, were subtracted from the known amount of grain available from the crop of 1914, there remained some three million and a half tons of wheat and rye to extend over into the new year. But when the inventory of the crop of 1915 was made, this grain had disappeared. During the first winter of the war the use of the potato was made obligatory in bread. Wheat flour had to be used with ten parts of potato, and, also, later contained from ten to twenty parts of rye flour. The regulation rye bread contained ten per cent of potato starch. If the bread contained more potato—from ten to twenty per cent—it was called "K" bread; if it contained still more potato—twenty to thirty per cent, or even more—it was called "K K" bread.

During the first part of the war the consumption of bread occurred largely in the form of the best rye bread. The disappearance of over three million tons of rye and wheat was not only a surprise, it was naturally a great disappointment.

The importation of grain in the two years before the war was between sixteen and twenty per cent of the domestic production. The agrarians had less grain of their own raising; they were denied the normal amount of domestic grain offal by the new milling regulations, and the blockade excluded the grain previously imported. This created for the agrarians a dilemma, despite the reduction in cattle and swine; and this dilemma they solved by the simple

rocedure of feeding the excess of grains that ıad been made liable to confiscation, on ›aper, but had, in fact, been allowed to re-nain in the possession of the producers.

The low crop in sugar beets brought with t, also, another ominous revelation—ıamely: that the sugar supply of the ›revious crop was exhausted. The average ugar production for the two years previous o the war was 2,700,000 tons, of which ıearly 600,000 tons were exported, leaving ›ver 2,000,000 tons crude, or 1,900,000 ons refined. Of the refined sugar 580,000 ons were exported, leaving for domestic con-umption 1,320,000 tons, which amounted o two ounces a head a day. At the out-›reak of the war Germany had 400,000 ons of crude sugar from the crop of the ›revious year; the new crop amounted to bout 2,600,000 tons, so that the huge tock of 3,000,000 tons was available to the ›erman people, under the assumption that one should be exported.

To the amazement of scientists, the gov-rnment, in October, 1914, gave permission or the exportation of 1,100,000 tons. The bject of exportation was explained as ful-lling three purposes: it complied with the ›ishes of the powerful syndicate of sugar ›finers; it gratified the importunities of the ›rrounding neutral countries; and it raised ıe rate of exchange. The yearly demands f Holland, Switzerland and the Scandi-avian countries were not over one hundred nd fifty thousand tons of sugar a year; the ›emainder was headed for the French and ›ritish markets. And this was made clear ı the energetic protests that were made to ıe government.

Regulations for the control of the utiliza-on of sugar-beet residue, molasses, crude nd refined sugars for food, fodders and in-ustrial uses, were established late in the ıll of 1914. These did not include physical ›nfiscation, but did include authorization f control. In order to provide larger sup-lies for livestock, recovery of refined sugar ›om molasses was prohibited. During the ›inter of 1914–1915 the consumption of ıgar was much above normal. Very large ›mounts were consumed in the army, also ı hospitals; and apparently the people in eneral used sugar with unusual freedom. To what extent the total available ıgar was diverted from human to animal consumption cannot be stated, since the sugar beets were not under accurate statistical control. It does not seem probable that the consumption of sugar by each individual could have been in excess of three ounces a day, in terms of crude sugar, which would have amounted to 1,900,000 tons, leaving some seven hundred thousand tons for industrial and feeding uses after the half million tons allotted to exportation were subtracted. All in all, the fact remains that when the sugar-beet crop of 1915 was brought in, the sugar of the previous year was practically exhausted.

In the autumn of 1915 two meatless days—Tuesday and Friday—and two fatless days—Monday and Thursday—were introduced. And this was within six months after one-third of the swine and a million and a quarter of milch cows had been killed!

Maximum prices were placed to control the retail sales, again without correlation and usually without result. Gradually the lines became drawn between the cities and industrial districts, on the one hand, and the country districts, on the other. In order to protect themselves, the country districts went to the length of establishing prohibitions of export.

The authorities attempted in a half-hearted manner to oppose such regulations and to reëstablish the flow of foodstuffs in the channels of trade by increasing the maximum prices; a maximum price once established became, of course, the only price. As opposed to the regulations of the cities and of the imperial authorities, the regulations of the smaller districts were naturally more effective.

A veritable pestilence of restrictive regulations spread over the entire land; and, since it was community against community and the devil take the hindmost, it was soon made apparent that the industrial cities were hindmost.

It was clear that, whatever influence the report of the Eltzbacher Commission might have had, as applied to the consumer—and such was certainly not strongly in evidence—the letter and the spirit of the recommendations were ignored by the producers and the middlemen.

Editor's Note—This is the first of three articles by Doctor Taylor. The second will appear in an early number.

THE STUDY OF FOOTPRINTS

(Concluded from Page 13)

ıey were able to demonstrate by actual xperiment that blows on the sheet-iron sides f the vault would reverberate through the ourthouse like the boom of a bass drum.

One of the best examples of typical crim-ıal investigation in this country is Nor-all's case, in Montana.

The theater of this tragedy was in the ıttle country on the Musselshell River. 'he scene of the crime showed two distin-uishing clews, clearly defined and capable f exact examination. They were, in fact, xamined by a number of persons several ays after the date of the tragedy. These riminal evidences consisted of the foot-rints of a man in the soft earth leading ›om the residence of the victim to a store-ouse some distance away, back again to ıe house, and from there to the river. The ›econd clew was the track of a horse, which ›uld be followed for some distance, leading way from the Musselshell River.

The footprints of the man and the tracks f the horse were clearly imprinted and ›ntained distinguishing characteristics ›hich should have enabled any intelligent ıvestigator to identify both the man and ıe horse.

The persons who discovered the foot-rints saw nothing strange about them. 'our or five days later some witnesses for ıe state examined these footprints. They ıought there was "something peculiar" bout them, but did not know what it was. ›ut later on, with a number of other per-›ns, they measured the tracks, marking ıeir length and width upon sticks. It is gnificant to notice that even these crude ıeasures were not produced at the trial. 'he witness who made them said he had ot kept the sticks because the prosecuting ttorney told him it was not necessary to eep them!

That was about the extent of the exami-ation of the footprints, except that some-›dy among the number of persons who isited the place finally discovered that the ıan who had made the prints had been earing overshoes.

The examination of the horse's tracks was even more careless, if possible. The witnesses who knew something about horses looked at the tracks and said that the hoof mark was queer. They thought it had been made by a horse named Nig, which belonged to Nordall. They tracked the horse pretty cleverly, located the place where the assassin had left it standing while he walked from the river to the house, and followed the trail where the horse had gone in the direction of Nordall's ranch.

There the matter ended. Nothing was done to show the court in what manner the tracks were queer, or how they resembled the track of Nordall's horse.

Upon such an examination of marked distinguishing clews the assassin never could have been located or convicted. It happened, however, that there was an abundance of physical evidence indicating Nordall as the assassin. Among other things the authorities found at his house a pair of overshoes. Both of these overshoes were for the left foot. It was then discovered that the "something peculiar" which the witnesses had noticed in the footprints was that they had all been made by what appeared to be a left foot—that is to say, by some one wearing a left overshoe on each foot. See Figure 10.

An examination disclosed that there was frozen blood on the bottom of these overshoes, between the heel and the sole. The overshoes were given to an analytical chemist to determine whether the stains were human blood. And, to add to all the other amazing inadequacies in this example of criminal investigation, the expert testified at the trial that he was unable to say whether or not the blood on the overshoes was that of a human being!

Is it any wonder that European authorities dismiss the subject of criminal investigation in this country with the single condemnatory sentence:

"Crude, unscientific and careless!"

Author's Note: See Gross; Zenker; Shauenstein; System der Kriminalistik, for diagrams.

ACME RAPID FIRE and 1900 BATTERIES

FIRST -because they LAST

How to Save Battery Bother

Dry Batteries that do their work well and last long without requiring attention are important. They prevent bother.

You get maximum service with the least possible trouble through the use of ACME BATTERIES.

If you want batteries for ignition be sure to buy the ACME RAPID FIRE. It's our *special* ignition battery and is a sizzler!

For telephone and general service, including ignition, the ACME **1900** is a *strong* favorite because of its long life.

The manager of a South Dakota telephone company writes us that he has a number of ACME **1900** Batteries which have been in use more than seven years. Can you beat it?

ELCAR

For Beauty and Quality
The Elcar at $845

THERE are few cars equally beautiful at any price, and few, if any, equally good at as low a price. We put into the ELCAR the style, class and high-grade workmanship that went into our former models selling up to and above $3,000. Our organization has had long training in the production of quality cars, and both beauty and quality are inherent in the

A Few Elcar Specifications

Wheel Base—As long as some cars selling up to $3,000 and more—115 in.
Motor—4 cylinder; long stroke; high speed; 34.7 h. p. at 1,800 r. p. m.
Fuel Supply—Stewart vacuum system.
Ignition—Delco automatic spark advance with manual control.
Starting and Lighting—Dyneto two-unit; double-bulb headlights; Willard storage battery.
Clutch—Dry multiple disk—seven plates, steel on Raybestos.
Rear Axle—Full-floating with roller bearings at each end of wheel hubs.
Differential—Spiral bevel driving gears, with roller main bearings and ball thrust bearings.
Brakes—Internal and external, two inches wide on 12-inch drums.

Three New Models at $845

Five Passenger Touring Car
Four Passenger Touring-Roadster
Two Passenger Roadster

Each model is large and roomy—some would say room to spare, but you want a car that will seat its full load comfortably. Fine in appearance, fine driving and remarkably easy riding qualities, power in excess, economical in upkeep and fuel consumption, a car to give you satisfactory service for years to come—a car that we believe to be as high in quality and as nearly mechanically perfect as any car ever offered at an approachingly low price.

Our Illustrated Catalog

will show you views of all the ELCAR models and the more important mechanical parts, and is descriptive even to the minute details of construction. We will gladly mail it to you upon request.

120-inch Wheelbase

Millions in Extras

Unique to Mitchells—Paid For by Efficiency

Go measure up what the Mitchell extras mean. There are hundreds of them—weigh their value to you.

Then remember that each represents a factory waste which John W. Bate has saved.

These extras cost us millions of dollars. They would be utterly impossible at Mitchell prices under old manufacturing methods.

It is hard to grasp, in the abstract, the value of efficiency. Here you will see the countless results embodied in a single car. Here you will find a wealth of attractions heretofore unknown. And the total will amaze you.

Go see what these Bate methods mean to you, before you decide on a car.

The Double Strength

The latest extra—first announced this year—is 100 per cent over-strength. Our former safety margins have been doubled in three years. All important parts are twice as strong as need be.

That means oversize parts made of costly steel. It requires much Chrome-Vanadium. Over 440 parts are made of toughened steel.

The difference doesn't show now. It may not show for years. But we adopted this extreme standard after 12 years of car building. So you may know you need it in a lifetime car.

Some Radical Tests

The Bate cantilever springs used now are tested for months in our factory. The tests mean more than years of road use. Yet not one Bate spring has broken.

We have used those same springs for two years now, on tens of thousands of cars, on millions of miles of road. Not a single one has broken.

For safety's sake, our steering parts are now vastly oversize, and built of Chrome-Vanadium.

Our gear teeth now are required to stand a pressure of 50,000 pounds.

As proof of endurance, two Mitchell cars have run over 200,000 miles each—full 40 years of ordinary service. Seven that we know of have averaged 175,000 miles each.

TWO SIZES

Mitchell —a roomy, 7-passenger Six, with 127-inch wheelbase. A high-speed, economical, 48-horsepower motor. Disappearing extra seats and 31 extra features included.

Price $1460, f. o. b. Racine

Mitchell Junior —a 5-passenger Six on similar lines, with 120-inch wheelbase. A 40-horsepower motor—¼-inch smaller bore than larger Mitchell.

Price $1150, f. o. b. Racine

Also all styles of enclosed and convertible bodies. Also demountable tops.

The Extras You See

You see in the Mitchell 31 extra features, which nearly all cars omit. Things like a power tire pump, reversible headlights, a ball-bearing steering gear, an easy control, a dashboard engine primer. You see a light in the tonneau, a locked compartment for valuables, a tool box under hood.

These 31 extras, on this year's output, will cost about $4,000,000. Yet they form but a minor part of the Mitchell extra value.

New Luxury This Year

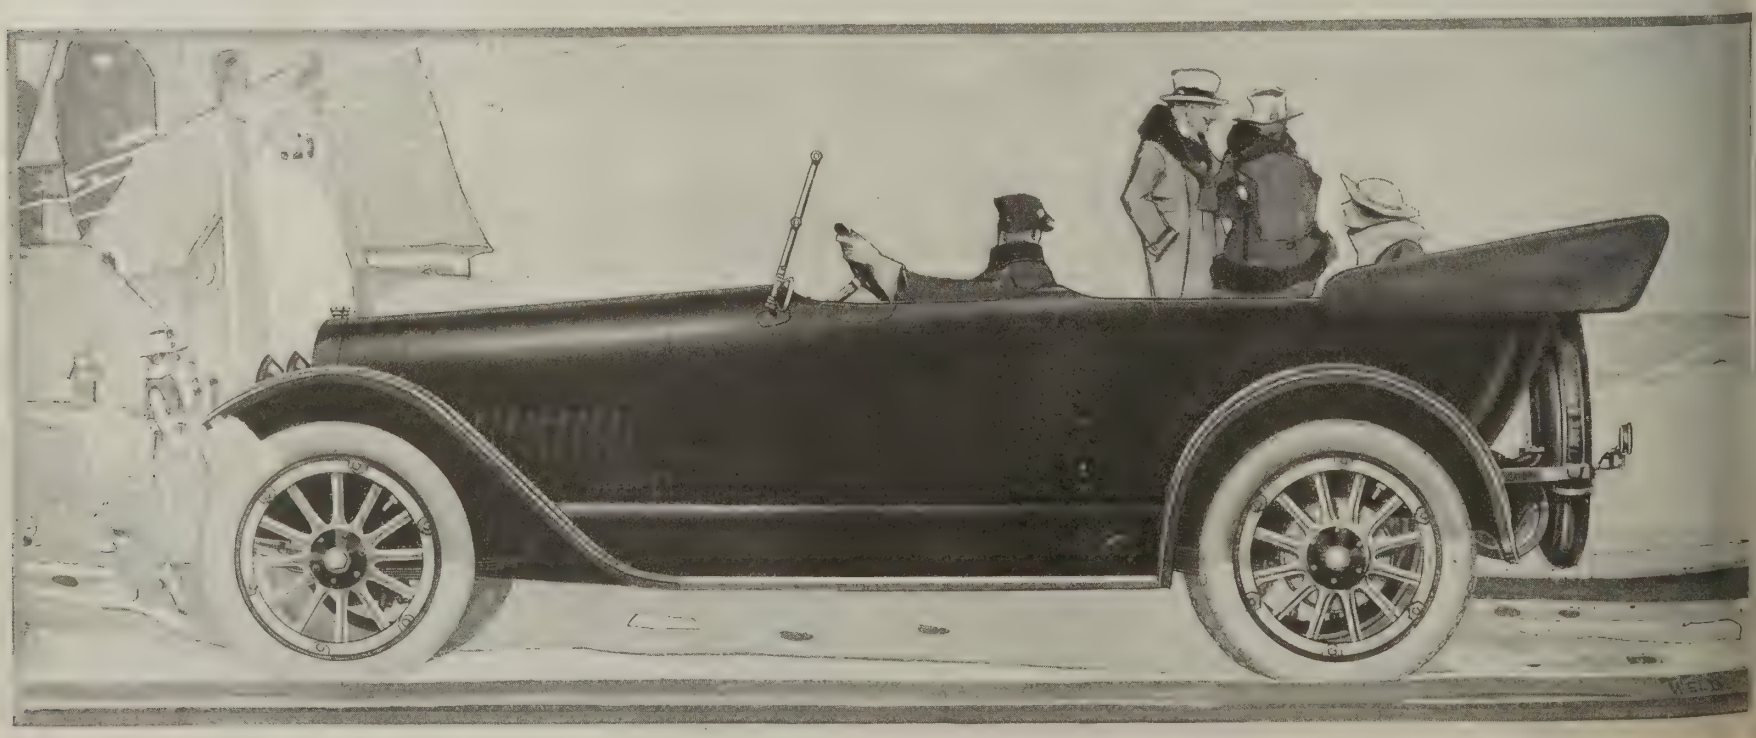
Our new body plant will this year save us a vast sum more. This all goes into extra luxury. It makes the Mitchell the handsomest car you see.

The finish coats are now fixed by heat in enormous ovens. This gives a deep, enduring lustre which almost nothing can affect.

We are using an extra-grade leather. Also new deep cushion springs which cost 50 per cent more than others. The rear seat is wider. We have added a total of 24 per cent to the cost of beauty and comfort.

This is a new, conspicuous extra. And it results directly from the savings our new body plant creates.

MITCHELL MOTORS COMPANY, Inc.
Racine, Wis., U. S. A.



31 Extra Features
24% Added Luxury
100% Over-Strength

Mitchell SIXES

Two Sizes
$1150-$1460
F. o. b. Racine

A New Size—$1150

Offers You Choice of 2 Sizes and 8 Body Styles

Here is John W. Bate's idea of efficiency applied in another way.

The larger Mitchell—127-inch wheelbase—is required for a roomy, 7-passenger car. And to drive it loaded, under all conditions, requires a 48-horsepower motor.

But many men want a 5-passenger car. A 120-inch wheelbase gives ample room, and a 40-horsepower motor is sufficient. That is more room and power than usual, as you know.

So we now make a Mitchell Junior. This year no one needs to pay for room or power not needed.

Both are Sixes—both typical Mitchells. Both are generous models. Both show equal over-value. And, to prove their sufficiency, 2500 Mitchell Juniors have already been driven six months.

John W. Bate Creates a New Factor

The latest Mitchell models typify a new idea in fine cars. Factory efficiency has been applied to cheap cars, and with marvelous results, as you know. Here you see it applied to quality cars, and to the very limit.

John W. Bate, the great efficiency expert, has spent years to attain this result. He has traveled widely—including a year in Europe—to gather ideas from others.

He has spent millions of dollars to build and equip this model Mitchell plant. Every machine, every operation has been adapted to build this one type economically.

He has kept on, until 98 per cent of the Mitchell car is built under his methods here. He has succeeded in cutting our factory cost in two.

He has used all these savings to make the car better and to make it a lifetime car.

Don't Overlook Them

Don't overlook these vital factors when you come to choose a car.

You will see here standards which sometimes bring $1,000 more. And they are worth whatever price they cost. But you find them here at Mitchell prices because of John W. Bate.

Mitchell Models

The Mitchell is built with eight styles of bodies—

Touring Car	4-Pass. Cabriolet
Roadster	Convertible Sedan
Coupé	Demountable Top
Limousine	Club Roadster

***Mitchell Junior* is built with Touring Car and Roadster bodies only.**

Quoted prices, of course, apply only to open models.

You will find exclusive features—dozens of them—which you know a car should have. But, without factory efficiency, they would make the car cost too much.

Will you let wrong methods deprive you of them? Will you pay an extra price to get them? Or will you get them in Mitchell cars?

Demand Has Doubled

These facts will show the answer given by legions of motor car buyers.

Last year—the Mitchell's 14th year—the demand for Mitchells doubled. This year we have multiplied our factory capacity by 2½ times.

The Mitchell used to be known as "The Engineers' Car," because so many great engineers bought it. It is now becoming the average man's car, because more men are finding it out.

It will be your choice for over-strength, if you consider the years to come. It will be your choice for beauty at a glance. And the extra features are things that you will want.

See them at your nearest Mitchell showroom. See them before the spring demand creates a waiting list.

What 15c Will Bring You from the Nation's Capital

The little matter of 15c in stamps or coin will bring you the Pathfinder 13 weeks on trial. The Pathfinder is an illustrated weekly, published at the Nation's Center, for the Nation; a paper that prints all the news of the world and that tells the truth and only the truth; now in its 23d year. This paper fills the bill without emptying the purse; it costs but $1 a year. If you want to keep posted on what is going on in the world, at the least expense of time or money, this is your means. If you want a paper in your home which is sincere, reliable, entertaining, wholesome, the Pathfinder is yours. If you would appreciate a paper which puts everything clearly, fairly, briefly—here it is. Send 15c to show that you might like such a paper, and we will send the Pathfinder on probation 13 weeks. The 15c does not repay us, but we are glad to invest in new Friends. The Pathfinder, Box 98, Washington, D. C.

CAPPY RICKS, WHEAT BARON

(Continued from Page 22)

"Publicity! We'll tell all we know to the bears. The bulls will get panicky; the bears will take heart of hope, and with Number One white Australian wheat they'll beat the brains out of the market and in all probability kick it down to $1.85, at which figure we promptly buy as much wheat as we have previously sold. Thus we cover our shorts, and the difference between $1.89½ and $1.85, less brokerage and interest—if any—will be, roughly speaking, four cents. Four cents on a quarter of a million bushels is ten thousand dollars—not a great deal, truly, in these days of swollen fortunes, but, nevertheless, a nice piece of velvet—eh, Cappy, you sporty boy?"

"It isn't so much the money we make," Cappy replied sagely. "It's the fun we have making it, my boy; the joy of putting over a winner. The instant a man begins to love money for money's sake he's a knave and a fool. Kill him! But—er—ahem—as you say, my dear young friend, ten thousand each is not to be—er—sneezed at."

"Then you're coming in on the deal?"

"I should tell a man!"

After the fashion of the West they shook hands on it and went to luncheon together at the Commercial Club.

III

DIRECTLY luncheon was over and Cappy Ricks had returned to his office, J. Augustus Redell moved into action. He called on Messrs. Ford & Carter, talked the situation over with them, and showed them where they, having the necessary tonnage in hand with which to guarantee delivery, could bring a couple of million bushels of fine Number One white Australian wheat to the Pacific Coast, cut the price a cent, and doubtless unload every kernel of it at a fair profit. There was every probability that wheat would go to two dollars. For his part in producing this profit Mr. Redell desired a commission of five per cent on all sales of wheat imported in the bottoms he had under option and which he stood ready to turn over to Ford & Carter without profit, since the owners of the vessels would pay him the customary broker's commission on the freight money earned on the voyage. Ford & Carter said they would think the matter over; so Mr. Redell tactfully withdrew, stating that he would call up the following day for an answer.

He knew Ford & Carter would promptly dispatch a long cablegram to their agent in Australia, instructing him to get a forty-eight-hour option on the wheat, with a guaranty of delivery to the vessels as they arrived from time to time. Meantime Ford & Carter would quote every milling company in the West, subject to prior acceptance and their ability to deliver Number One white Australian wheat at a price that would be of interest. If the milling companies accepted this rather nebulous quotation and telegraphed orders, and Ford & Carter's Australian agent could purchase at a satisfactory price the wheat to fill these orders, then Ford & Carter would make formal acceptance and purchase the wheat. If, on the other hand, their agent in Australia failed to get the wheat, then Ford & Carter had an "out" with the milling companies who desired to buy the wheat from them, and the entire matter was off, with Ford & Carter merely out a couple of hundred dollars in telegraph bills. That was the bet they had to make to put their fortune to the touch; and right cheerfully did they make it.

J. Augustus Redell gave them all the time he could. His forty-eight-hour options on the vessels then en route to Australia had cost him nothing; that was a courtesy which one shipowner always extends to another, free of charge, unless the vessel happens to be on demurrage at the time the option is given. When his options were within two hours of expiring he called on Ford & Carter.

"We'll take 'em all," Carter almost shouted at him. "They'll be arriving with sufficient time elapsing between arrivals to guarantee us immunity from any undue delay or embarrassment in loading them. We've bought the wheat and sold it; now give us the tonnage to freight it, Redell, and we'll all be happy, and a little richer than we were the day before yesterday."

Redell took up the telephone and called each shipowner, in turn, to inform him

America Is Famous For Better Tools

A great part of America's reputation for making superior machinery rests on American toolmakers. No more momentous improvement in tools has ever been made than in the design of the Gun Tap shown below. In one step the tap has been changed from a continually breaking, expensive trouble-maker to an efficient, modern tool.

The Gun Tap is first the tap that *wears out before it breaks*. (90% is the usually accepted figure for breakage with ordinary taps.) Then it is the easiest cutting tap, and the first type to cut correctly—with a shearing action. It cuts more accurate threads, requires less power, and holds its size longer, than any other type.

Thus the Gun Tap makes possible a production greatly increased in accuracy and quantity.

For further details and reasons why, send for Bulletin on Gun Taps.

t Pays to Have an Expert Repair Your Battery

By the Willard Service Station Man

It doesn't pay to repair a tire when it's given you ten to fifteen thousand miles of service—when it is rim-cut and its casing is torn to ribbons.

But when it is merely punctured it *does* pay.

And batteries are like tires—except that a good battery, well cared for, should outlast a set of tires and costs less to begin with.

Sooner or later both batteries and tires wear out and have to be replaced.

But when it's merely a matter of re-insulation or of replacing a single cell it often *is* worth while to repair a battery.

Don't, however, trust it to the judgment of a man who isn't a battery expert.

Better depend on a Willard Service Station to advise you—and also to do the work.

It's our business. We've been trained for it by Willard factory experts, and Willard Service was established to give you the fullest possible return on your investment.

And Willard Service backing up Willard quality is the reason why over a million cars have been equipped with Willard Batteries.

If I find your battery needs to be repaired, I have a rental battery for your use while yours is in the shop.

Willard Batteries are sold by Car Dealers, Garages and all Willard Service Stations and Factory Branches.

Ask your Car Dealer for addresses of the 850 Willard Service Stations, or write to the Willard Storage Battery Co., Cleveland, O.

Merely an Entrance or an Invitation?

There is a bright quality of radiant friendliness and cheerfulness in a freshly enameled white porch.

Think of placing your outdoor rugs and furniture in such a setting! The brightest, gayest "porch fixings" will look shabby on a painted porch that mud and weather and time have turned a dirty gray.

Enamolin will last. Wind and weather will not affect it, because Enamolin will not crack, check or peel. If it looks soiled next Spring — *scrub it* — with a good strong cleanser, just as you would your bathtub, and it will shine out in all its original whiteness.

As for the floor of the Enamolin-finished porch—there is Namlac Floor Finish — the most durable varnish you can put on a floor. It is proof against rain, snow and the tramp of muddy feet.

Enamolin and Namlac are on sale at the better paint and hardware stores. If you cannot secure them, write us.

Ask for free copy of "The White Spot" booklet.

A sample can of either Enamolin or Namlac Floor Finish sent for 10 cents.

that he would exercise his option on the latter's ship, and for the owner to prepare charter parties and send them up to his office for signature.

"I will have no difficulty in getting the owners to agree to an assignment of these charters to you," he advised Carter. "You and Ford are brothers in good standing, I take it. However, if they insist on doing business through me, in order that they may hold me responsible, I'll simply re-charter to you at the same rate."

"Lovely!" cried Messrs. Ford & Carter in unison.

Ten minutes later J. Augustus Redell burst into Cappy Ricks' sanctum and wakened the old gentleman from his afternoon siesta.

"The trap is set," he announced. "Come on, Cappy! We're going up to the broker's office now and give the order to sell our December wheat. I can't go alone, you know. There wouldn't be an odor of sanctity about the transaction if I did."

"We'll have Gregg & Co. attend to it for us," Cappy announced. "You remember Harry Gregg, don't you? Used to be in the steamship business years ago. Gosh, that boy knows me! He'll take a stiff finger bet from Alden P. Ricks."

Together they motored uptown to the office of Gregg & Co., where Cappy's card gained him instant admittance to the broker's private office. Redell remained in the anteroom on pretense of speaking to an acquaintance, and the instant Cappy disappeared into Gregg's office Redell stepped out into the hall, where he waited until Cappy had booked his order and came hunting for him.

"Well, I've sold my two hundred and fifty thousand bushels at a dollar-ninety," Cappy announced.

"How much margin?" Redell demanded.

"Oh, Gregg didn't sting me very hard. Ten thousand. It seemed like a good bet to him. He looks for a drop in December wheat."

"Met a pest out here and couldn't seem to get away from him," Redell explained. "Take me in and introduce me to Gregg, and I'll give him an order to sell a jag of wheat for me."

Cappy complied and Redell gave the broker his order.

"It will take about twenty-five thousand dollars to margin this trade, Mr. Redell," the latter remarked easily as he wrote out the order and handed a copy to Redell.

"Nonsense!" Cappy struck in. "Mr. Redell is one of our most delightful, trustworthy and popular young men, and to ask him for twenty-five thousand dollars to-day would prejudice his standing with his banker. I guarantee him, Harry. Treat him as you'd treat me. I guarantee him up to a hundred thousand dollars."

"Your guaranty goes with me, Mr. Ricks," Gregg answered promptly, and shoved the copy of the order he had just booked over to Cappy, together with a fountain pen. Cappy wrote: "O. K. Alden P. Ricks." Redell gave his check for ten thousand dollars margin and the deal was closed. When the scheming pair returned to Cappy's office the latter gave Redell his check for ten thousand to reimburse Redell for margining the trade, in accordance with Cappy's verbal agreement to provide the sinews of war.

"Now then, Cappy," Redell announced as he stuffed Cappy's check into his pocket, "the next move is to return to my office, close those charters with the owners and turn the ships over to Ford & Carter. That matter attended to, I shall, with eighteen charter parties in my pocket, drift casually over to the Merchants' Exchange. There I shall find the market reporters for both of our sunrise sheets; if they are not there I shall wait until they arrive. These gifted young men I shall draw to one side; to them I shall, with great gusto, relate a tale of Number One white Australian wheat, shortly to descend upon the United States of America in no less than eighteen vessels, now chartered for that purpose, with more to follow. In proof of this statement I shall exhibit the charter parties; and then ——"

"Front-page story!" Cappy declared, interrupting.

"Not yet—but soon. To get on the front page a story must be rather unusual. A perusal of our daily rags will convince the most skeptical that the sensational, the unusual, the bizarre are what appeal most to the men who make the newspapers. The unusual thing about our deal lies in the fact that this is the first time in the history of Australia or the United States that t former country has exported wheat in the latter—the first time the latter has ev had to call on an outsider for help. The Cappy, it will be a front-page story—a how those boys will hop to it! Why, we get a column about Australian wheat vading the land of the free whose rapaci threatens the very food that goes into t mouths of little children! Little childr and their mouths is good stuff! I'll use th line when slipping the story to the bo They might overlook it if I didn't. I'll mind them of the six-cent loaf of bread, t sufferings of the poor, and how far the i portation of Australian wheat will go knock the Chicago wheat barons galle west."

"Here, here! You're too precipitat Cappy cautioned. "Don't tip this sto off to both reporters. That's coarse wo Tell it to one only. Put him under oblig tions to you by seeming to give him a sco Tell him you won't say a word to his co petitor, and he'll tell his city editor t story is exclusive; then they'll be certain play it up big."

"Cappy, you're a rock in a weary lan Who'll tip off the other reporter?"

"I will, of course. Leave it to me. man doesn't go through the mill of E Business without knowing the way of th singularly useful individual, the newspap man."

Redell sat down and laughed until t tears ran down his merry countenan Cappy thought the outlook sufficien cheerful to warrant that laugh and suspect nothing. He even joined in the laugh.

"And to-morrow morning, when th story appears, the local brokerage firms w be calling up Ford & Carter to verify i Redell continued presently. "Of course will be verified; then—bingo! the story wired on to Chicago. It busts, first, in t Wheat Pit and, second, in the afterno editions. The bears will leap on the mark and kick it to pieces; the bulls will g panic-stricken and hesitate about suppo ing it; all the little fellows who have be going short on December wheat will g cold feet and throw their trades overboa and before the smoke clears away Dece ber wheat will break four or five point

Cappy Ricks put his old arm round young friend and gave him a paternal h He winked wickedly.

"My dear boy," he suggested, "supp you and I go out and pin one on? H How about you, boy? A pint of '98, in or that we may properly drink confusion to wolf of want and damnation to dull car

IV

LATE that afternoon Cappy Ricks g ciously summoned the Chronicle porter to his office and told him in detail al knew about the Australian wheat invasi

"Of course," he added, "this may mere street gossip; but I think the something in it, my boy. At any rat thought you might care to be tipped of the situation. It looks like a corking st to me. I suggest that you call on For Carter and see what they have to about it."

"I wonder whether the Examiner repo has a tip on this?" the Chronicle r queried hopefully.

"Not from me. This story is for y young man. That's why I called you d to my office."

About the same hour J. Augustus Re might have been seen at the press t on 'Change, unfolding a similar stor the market reporter of the Examiner, thought it was a humdinger of a story, so declared.

"All right. Glad you think so," Redell replied, beaming upon him. "I just to show you I'm right, I'll not bre a word of it to the Chronicle man."

Having planted his journalistic bo Mr. Redell glanced at his watch. It exactly eleven o'clock. "I still have tir he murmured, and departed immedia to the office of Gregg & Co., where he pl an order to sell for his account up to h million bushels of December wheat, bu cease selling the instant the market tated to absorb it or the price broke a p At the same moment, in another broke office, Cappy Ricks was issuing a sir order. Before the market closed, C had succeeded in selling a hundred eighty thousand bushels, while Redell disposed of a hundred and thirty. dently the bears took it as it came, fo market closed strong at $1.89.

JORDAN

The Unusual

Distinctive and Irresistible

Ever stop to analyze the reason why people gather around some cars and pay no attention whatsoever to others?

Why don't they stare at all cars? What is it that prompts people to crowd around certain cars—to linger, stare and admire?

Its style. That's all. Clean-cut, genuine, good-looking style. Its smartness—attractiveness. That's the Jordan!

The Jordan custom style bodies are the most distinctively individual bodies in America.

The long, low, rakish, smart lines, plus the attractive mahogany maroon and Venetian green color schemes are a refreshing change.

When you drive in your Jordan you know that every pair of eyes within focus is taking a good long look at your car.

But that is not all.

Beneath the handsome Jordan body are the world's foremost motor car units.

The Jordan contains more of the complete standard specifications of the Society of Automobile Engineers than any other car made in the world today.

There's the famous Continental motor. This big, sturdy, smooth-running, quiet-as-a-mouse six-cylinder brute slides along with the ease of an eagle. It's "there" in every sense of the word.

Then there's the Bosch ignition system—Bijur two-unit starting and lighting system—Stromberg carburetor—Vanadium steel springs—Timken axles and bearings—Fedders radiator—Boyce Motometer—Brown-Lipe transmission—Willard batteries—Stewart-Warner vacuum system.

All top notch first water units.

So with a chassis as sound as gold specie you can now get a distinctive and attractive style body at a very attractive price.

Whether you own one or not, the Jordan is the car you'll always admire.

The most distinctive car on the road.

The Jordan Motor Car Co., Cleveland, Ohio

THE HILL-SMITH METAL GOODS COMPANY

82 Brookline Avenue, BOSTON, MASS., U. S. A.

(Concluded from Page 70)

Neither Cappy nor Redell reported at his office the following day. At the hour when the market opened in Chicago both schemers appeared on the floor of the Merchants' Exchange and bent their anxious gaze upon the only blackboard on 'Change they had not heretofore honored with their scrutiny—the board in back of the Grain Pit, which carried the quotations on the Chicago Board of Trade, already beginning to come in by wire.

For an hour the trading was inactive. Then suddenly the price broke half a point as somebody tossed a lot of fifty thousand bushels on the market. Cappy and Redell each wondered whether he might not be the responsible party; and while they pondered somebody unloaded a hundred thousand bushels at $1.88. Cappy gasped as the quotations appeared on the blackboard.

"Something doing, Gus!" he whispered; Redell nodded.

And now commenced a period of wild trading. The price crept back to $1.89, only to be assaulted and beaten back to $1.87; then, fraction by fraction and point by point, the price fell; and J. Augustus Redell wagged his head approvingly.

"They have received our message," he said. "The riot is on!"

When the price had been beaten down to $1.83 Cappy turned to his associate.

"I'm through!" he said. "Time to cover my shorts." And he trotted away to a telephone booth.

As for Redell, he would not intrust his fortune to a telephonic order, but sprang into his runabout, parked at the curb outside the Exchange, and scorched uptown to Gregg & Co.'s offices, where he learned that he had sold four hundred and ten thousand bushels of December wheat. One hundred thousand had been sold at $1.90, two hundred and eighty thousand at prices varying from $1.89 to $1.88⅛, and the remainder at $1.88.

"Buy me four hundred and ten thousand bushels at the market," he ordered.

Before he left the office the sale had been confirmed and Mr. Redell's shorts had been covered at a price ranging from $1.83 to $1.83⅝, whereupon he closed out his trade and received a check for his margin and his profits. An hour later he met Cappy Ricks again on 'Change.

"Well, Cappy?" he queried.

"I cleaned up, thank you," the old gentleman informed him. "Sold, bought, and got the money. This is one time it rained duck soup and I was there with a bucket."

He prodded Mr. Redell playfully in the short ribs and the incident was closed. They had made a profit of more than twenty thousand dollars each; and when each returned to his office he forgot all about December wheat until half past five that evening, when both met on the deserted floor of the Exchange to scan the blackboard. December wheat had closed that day at $1.83!

Two days later J. Augustus Redell called Cappy Ricks on the telephone.

"That you, Cappy?"

"Yep!"

"Redell speaking. Read the story on the front page of the Chronicle this morning?"

"No; what was it?"

"The British Government has placed an embargo on the exportation of wheat from Australia; so all those eighteen charters I negotiated with Ford & Carter are knocked out."

"You don't say so!"

"Surest thing you know, Cappy."

"Well, say! That makes it hard on Ford & Carter, doesn't it? All those ships on their hands and no wheat! They'll have to hustle like the devil to dig up new business for them."

"Not at all! There's a clause in the charter parties that saves them. You know, Cappy—that line about fires, floods, strikes, lockouts, the acts of the public enemy, and other causes beyond their control. Consequently the ships are back on their owners' hands. I wish you joy of your five, Cappy."

"Well, that's all right. Considering my winnings in December wheat I won't hold it against Ford & Carter; so you needn't inject that note of malice into your conversation. Those boys are stuck hard enough as it is, I dare say. They've contracted to deliver a lot of Australian wheat to various milling companies; they can't do it, and I'll bet they'll be sued out of house and home for breach of contract."

"On, no, they won't! They hedged on their quotations when making them; all those telegraphic orders were placed with Ford & Carter subject to Ford & Carter ability to make delivery and to prior sal Before Ford & Carter could make them fir orders and get in over their heads, I tipp them off to the possibility of this gover ment embargo."

"You tipped them off! How did y know the British Government was going clap an embargo on Australian wheat?"

"Why, I didn't know," Redell confesse "I just guessed it would; so I advised Fo & Carter to lay low a day or two and awa developments. Said developments appe to have arrived according to schedule, everybody's happy. I have even rei bursed Ford & Carter to the extent of two-hundred-and-eighty-five-dollar te graph bill they incurred. You see, Capp I gave them the wrong steer, and I kn it was wrong when I gave it to them; cons quently my conscience wouldn't let me re until I'd squared myself."

"You in-fer-nal scoundrel! Well, y didn't give me the wrong steer; and I surprised at that. For once in your l you're on the level."

"Don't cheer until you're out of t woods. Do you remember that Germ steamer, the Valkyrie, that you skinned out of last year?"

"Yes."

"And do you remember how you us to send me statements of her earnings a write me ironical letters about the Iri dividends I was getting from her?"

"Yes-s-s, I remember."

"And do you remember how, when tried to get even on you by inducing you short the lath market, in order that I mig sting you for about ten thousand dolla while I made twenty, you outgeneraled and made a star-spangled monkey of me

"Ah!" Cappy chuckled; "you bet I member that! Maybe after a while, dear young friend, you'll get enough of t funny business and lay off on the old ma

"I'm off you now. I've had enough you, Cappy Ricks. I've made fifty tho sand dollars off you in the past week; a that satisfies me."

"Gus, don't lie to me! You didn't ma a cent more than I did—and I made a tri more than twenty-four thousand dollar

"Is that so? Well, listen to me tell When you and I cashed in that day our d was closed, wasn't it?"

"Yes."

"And I'd played fair with you?"

"You certainly did, Gus."

"Then I was freed from any further ol gations to take you into partnership w me, was I not?"

"That's how I figure it, my boy."

"That's how I figured it also, Cap Consequently, being morally certain t the British Government would place embargo on the exportation of Austral wheat—Cappy, you must admit that British Government would have been ab lutely crazy if it didn't—I just called Gregg & Co. and bought another half lion bushels of December wheat at $1.8 $1.84 a bushel. Then I sat tight and wai for that embargo story to break. Cap do you know that story just raised hell the Chicago Pit to-day? The bears w caught napping; and the bulls got b and kicked the price up to $1.90 again which figure I unloaded and took my pro

"You amazing rascal! Why didn't tip your partner off to that deal?"

"We were no longer partners. You l mitted that a moment ago. When I outlined this scheme I didn't have a d to spare with which I could specul Every last buffalo nickel was tied up in business of the West Coast Trading C pany. So I schemed to take you in partner on one-half of the deal; and you only financed me but guaranteed me to broker! Your introduction was all I wan After that my credit was as good as Dec ber wheat; in consequence of which, w out a cent invested, I was actually ena to carry a trade for half a million bush Much obliged to you, Cappy. You're a old sport, and I like you—particularly that I've collected those long-deferred dividends! I wouldn't be surprised if laid off on me after this—eh, Cappy?

"Gus," said Cappy Ricks, "one of t days the Democratic party is going to up and discover that America isn't w they left it the night before! And that happens they're going to ask about it, you—you—infer-nal ——"

The phone clicked. J. Augustus R had hung up.

"Drat it! —— God bless him!" murmured Cappy Ricks—and hung up too

Yes, a Monopoly
IN HUDSON SUPER-SIX
But Note How We Employ It

It is true, as some say, that the Super-Six motor constitutes a Hudson monopoly. We control it by basic patents. One must buy a Hudson to get it. But note how far the Super-Six under-sells many cars which it out-performs.

We must expect that every possible argument will be used against the Super-Six.

The arguments used a year ago have all been disproved and abandoned. Over 28,000 Super-Six owners have proved every suspicion baseless.

Now some say, "We also have an improved Six." Some argue Eights and Twelves. And some reflect on the Super-Six monopoly.

Mark the Hudson Value

But remember that Hudson has won by performance the pinnacle place in Motordom.

The Super-Six motor has added 80 per cent to the car's efficiency.

It has proved an endurance which is yet beyond measure—probably a doubled endurance.

Against all other types, however costly, it has won all the worth-while stock-car records.

And a year has been spent to make this car, in every detail, worthy of its front-rank place.

Yet note now many rivals—all without the Super-Six motor—sell above the Hudson price. Every buyer of the Hudson Super-Six gets a value of performance which can't be matched.

Why Another Type?

Then why consider another type of motor in buying a high-grade car?

Not because of performance. The records of the Super-Six prove it supreme in that.

Not because of endurance. The Super-Six excelled—as high as 52 per cent—in the feats which prove that.

Not because of smoothness. The whole Super-Six supremacy comes through minimized vibration.

Not because of anything. If any other motor type were better, don't you know that Hudson would adopt it? Rival types are not controlled by patents.

The Friction Question

The only question is, What motor best reduces friction? For that is the aim of all.

It is motor friction that wastes power, that limits performance and that causes wear.

Friction was the limitation of the old-type Six. Friction caused the trend toward Eights and Twelves. And the solution of this problem is what stopped that trend. The Super-Six invention, by reducing friction almost to nil, gave the crown to a new-type Six.

It isn't speed, or power, or hill-climbing ability which makes the Super-Six supreme. It is endurance, due to lack of friction. That is what won those records. If that is important the Super-Six is important.

A New Gasoline Saver

The latest Hudsons have a new gasoline saver which adds greatly to their economy. They have bodies which show our final attainment in beauty, finish and luxury.

To own a Hudson Super-Six means to rule the road. And this car, in any crowd, looks the monarch that it is.

HUDSON MOTOR CAR COMPANY, DETROIT, MICHIGAN

YOU and *Everyone* Would Eat Peanut Butter if it were *ALL* made like Beech-Nut

WE firmly believe that if all peanut butter were made in the Beech-Nut way, far more people would be users of peanut butter today. Because more people would realize what a finely flavored food peanut butter is; how nourishing; how handy.

"What are the reasons why the flavor of the Beech-Nut Brand is different from that of any other?"

Reason No. 1: Only No. 1 quality (choicest grown) peanuts used. This quality commands the highest price. Peanuts that cost one-third less would make a fair peanut butter. But they could not make *Beech-Nut* Peanut Butter.

Reason No. 2: The flavor is *blended.* Rich Spanish peanuts and flavorous Virginia peanuts are combined in just the right proportion to give perfect peanut taste plus richness of flavor.

Reason No. 3: Uniform roasting. Correct roasting is determined solely by *color.* We roast our peanuts under great North skylights, so that the roasting expert has an unvarying light by which to see just when the nuts have reached the right light brown color.

Reason No. 4: Beech-Nut Peanut Butter is absolutely *free from grit.* We have devised ingenious processes that remove all skins, defective kernels, the little bitter "hearts" and grit.

Reason No. 5: Uniform crushing and seasoning. Remarkable machines crush the nuts and salt them evenly at the same time.

Reason No. 6: Careful packing. The finished butter pours directly into the jars, filling from the bottom first, to exclude air. Careful vacuum-sealing completes the process. This is why Beech-Nut Peanut Butter always comes to you pure and sweet—*never rancid.*

Thus you see that the making of fine peanut butter is not a simple process, and that to obtain delicious flavor and goodness, *infinite* pains must be taken.

Mothers: Children love Beech-Nut Peanut Butter dearly. Give them all they want, for a sandwich of Beech-Nut Peanut Butter contains all the Strength, Heat and Energy that a glass of rich milk does.

Don't forget that grown-ups like it too. Have Beech-Nut Peanut Butter on the table at every meal. Spread it on crackers, bread, toast—it is fine on saltines. Order a jar today.

FELIX

(Continued from Page 11)

"No one has accused you of stealing a dog, Monsieur De Brancheville."

"Then what in heaven's name am I here for?" he demanded.

"Monsieur De Brancheville," said Le Febre, "let us make this interview as little unpleasant as need be. I assure you that this kind of thing is wholly useless. You are a gentleman. I should prefer to talk to you as one."

"As a gentleman," said De Brancheville testily, "I assure you that if my arrest is not over the matter of a dog I have no idea what it is for. If you will be good enough to tell me, in spite of your conviction that I already know, we shall get on faster."

"But for what purpose?"

"Merely to oblige me, if no other reason occurs to you."

"Very well," said Le Febre indulgently, "we will play the comedy out. I have, therefore, to inform you, Monsieur De Brancheville, that a certain quantity of radium, duly tested and certified, was delivered on Monday to Professor Rochefort, director of the government laboratory, by one George De Brancheville, and payment made therefor by the French Government to the amount of one and a half million francs."

He paused and De Brancheville looked at him in perplexity.

"Owing to the circumstance that the laboratory staff was engaged upon work of an urgent nature," he continued, "this radium was at once placed in the vault. The combination of this vault is known only to Professor Rochefort and to his assistant, Monsieur Claude Dubois. So far as is known, the vault was not opened again until this morning, when the leaden containers were removed, examined and found to contain particles of zinc instead of radium. Now Professor Rochefort is positive that he received the radium from Monsieur De Brancheville. He is equally positive that neither he nor Monsieur Dubois effected the substitution. Monsieur Dubois, it appears, was so much affected by the responsibility of knowing the combination of the safe that both evenings, upon leaving the laboratory, he insisted upon being searched.

"Under these circumstances you will see that it was necessary for the police to consider all possibilities. One of these possibilities was that, by some means known only to himself, the person ostensibly delivering the radium to Professor Rochefort, in fact delivered containers filled with crumbs of base metal. It is my desire to find out how this substitution was effected, and that I may state is the reason for this interview."

"But this is outrageous!" cried De Brancheville. "Without a scrap of proof, you charge me with a crime and bring me here to be insulted!"

Le Febre gazed at him over his spectacles and drummed thoughtfully on the desk with an ivory paper knife.

"Is it possible, Monsieur De Brancheville, that you do not yet know that the radium has been discovered in your apartment at your hotel?"

De Brancheville sat speechless, staring at the speaker.

"Discovered in my apartments?" he said at last. "Is this some practical joke or am I crazy?"

Le Febre shrugged his shoulders. From a drawer he took four small leaden boxes, each about an inch long by three quarters wide, and laid them on the desk.

"There is, of course, the possibility," he said, weighing his words with a shade of irony, "that this is not the stolen radium. Would you care to examine it?"

De Brancheville opened one of the boxes and dumped a flake of metallic substance on the table. He looked at Le Febre in stupefaction. He examined the contents of the other three containers.

"This is the radium I sold the laboratory," he said. "There are no pieces of equal size in Europe. The containers are too light for such large quantities," he added irrelevantly.

"Then you identify the radium, but not the containers?"

De Brancheville nodded.

Le Febre remained in thought for some moments, then took from the drawer a crumpled sheet of white tissue paper and ten inches of narrow blue ribbon.

De Brancheville started. The paper and ribbon were similar to the paper and ribbon that had wrapped the dog collar. He saw, with the eye of his mind, the four leaden boxes, piled two on two, making the cubical package which the clerk had described. I it had not come with the collar, where had it come from? If Primavera had sent it how had she obtained it? What was her motive in sending it? What did it al mean?

"I see the wrappings of this little package interest you," observed Le Febre.

De Brancheville made no reply.

"You have nothing to volunteer?"

De Brancheville shook his head.

"Well," continued the police official pa tiently, "let us suppose that this packag was conveyed to your apartment, while yo were absent, and recovered by our agent before your return. Suppose also that yo had never laid eyes on the package, thu wrapped and tied. What, therefore, is th association of the ribbon and tissue pape which so obviously interest you?"

"I must decline to answer that," sai De Brancheville.

"It is natural," said Le Febre, "and ye I advise you to answer."

"You have my answer," said De Branche ville.

"Monsieur De Brancheville," said L Febre, "the evidence against you is com plete. Most police officials would conside the case closed. Curiosity, however, is weakness of mine. I am more interested i the details of a crime than in making record for convictions. Now I know tha this package was sent to you by a woman, fo the reason that the bow in which the ribbo was tied could only have been tied by woman. It is creditable to you that yo should refuse to disclose her name, bu your refusal can, at most, but delay the di covery of her identity. Why not be fran with me? If she has acted innocently, I think is not improbable, you have my wo that she will not be drawn into the case

De Brancheville was silent, turning th matter over in his mind. Finally he said:

"Monsieur Le Febre, because I am co vinced that whatever part the woman question may have played in this stran transaction is unquestionably an innoce one, and because apparently the one chan of getting at the truth of the matter depen upon your assistance, I will tell you I know of the affair, though that is inde little."

"Who then is the lady?" asked Le Feb

"Her name I cannot tell you," said Brancheville.

"But that is the point of my questio

"For the reason," De Brancheville co tinued "that I do not know it."

Le Febre shot a surprised look at him

"Proceed, Monsieur De Brancheville he said in even tones.

"About eleven o'clock this mornin began De Brancheville, "I was walki through one of the short streets that r into the Rue Faubourg St. Honoré, not from the Avenue Hoche, when my attent was attracted by an automobile runn over a dog. The car stopped and a wom perhaps thirty-five but younger in appe ance, sprang out. I ran to her assistance immediately perceived that she took me be the owner of the dog. It is enough to that I did not undeceive her."

Le Febre smiled.

"It is conceivable," he said, "that a n should practice such a deception."

"This lady," continued De Branc ville, "was on the way to the banking ho of Carruthers & Grimshaw, and it suggested that, before taking me to y hotel, she keep her appointment. I th upon got into her car with the dog."

"I see," said Le Febre.

De Brancheville then went on with narrative, describing his interview Carruthers, the invitation to visit the the departure of the automobile withou address being given, his efforts to find ruthers, the discovery of the advertisem the arrival of the collar wrapped in w tissue and tied with ribbon, and finally return of the substituted Airedale.

"I was on the point of telephoning Carruthers' address in London," he cluded, "when I was arrested and bro here."

Le Febre remained in thought, tap softly, with the paper cutter, upon the d

"Well Monsieur De Brancheville," he said at last, "your story compares in p ability with the history of the fisher

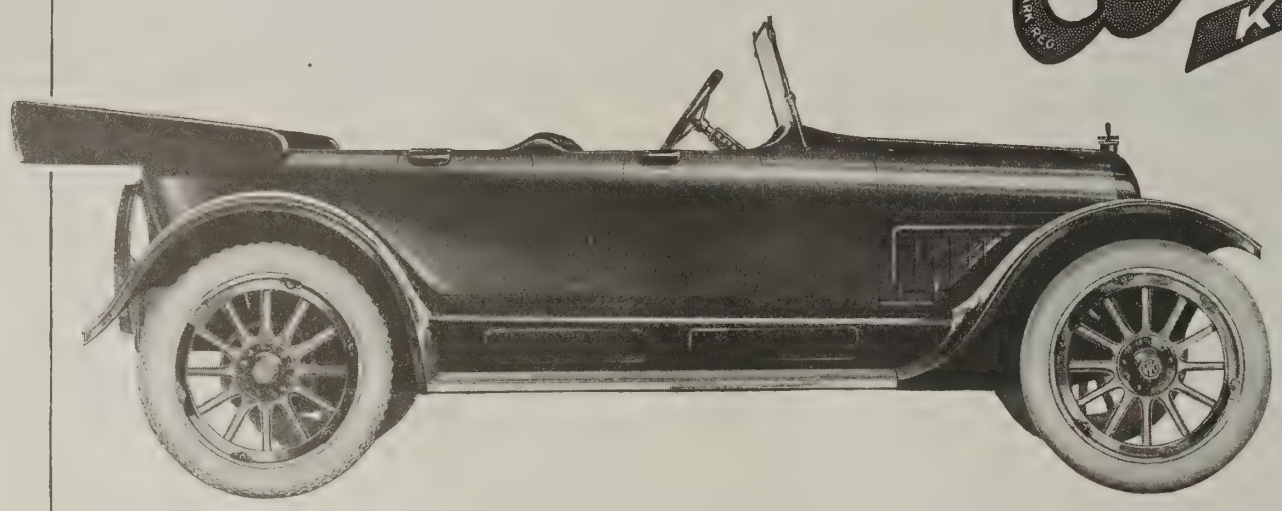
Willys Knight



Concerning—

Carbon

To you—to every experienced motorist, carbon means lessening power, increasing fuel consumption, engine "knock," valve grinding, cylinder cleaning and recurring loss of the use of your car.

It is the conspicuous enemy to the joy of motoring.

Carbon accumulates in the cylinders of the Willys-Knight Motor as it does in other types of motors—but in lesser degree—and with exactly *opposite* results.

The sleeve-valve construction of the Willys-Knight motor enables it to make *beneficial use of carbon.*

As carbon accumulates on the metal surface of these sleeves, it is evenly distributed by their sliding action, and becomes a polished smooth-as-glass coating,—smoother than it is mechanically possible to polish any metal.

Instead of unseating the valves, carbon seals the fit of the sleeve-valves of the Willys-Knight Motor.

And the result is *a gain in compression and power* for the Willys-Knight Motor instead of a loss—*increasing quietness, smoothness, flexibility and fuel economy* instead of a decrease.

Carbon is in this manner the reconstructing life which builds up and sustains the efficiency of the Willys-Knight Motor.

So instead of deteriorating, the Willys-Knight Motor *improves with use* and instead of succumbing to carbon troubles it *thrives on carbon benefits.*

This is one of the many reasons why the Knight motor has been standardized for the steady hard usage of the London Omnibuses and the Fifth Avenue Buses in New York.

This is one of the many reasons why the Knight motor is used by the leading manufacturers of Europe. — Daimler of England, Panhard of France, Minerva of Belgium, Mercedes of Germany and nineteen other European producers.

This one of the many reasons why twelve thousand discriminating American buyers purchased Willys-Knight Motor Cars during 1916 and drive them with steadily increasing respect.

and the ring in the Arabian Nights. But perhaps the most extraordinary thing relating to it is the fact that I am inclined to believe it."

De Brancheville rose impulsively, but Le Febre restrained him with a gesture.

"Slowly," he said; "my belief is my personal conviction; that is all. The evidence against you, as I have said, is complete. Men are guillotined every week on less. As the case stands, you face twenty years in the galleys. I have no right to release you. But I am warranted in experimenting to this extent. I will give you twenty-four hours to discover the identity of the lady and report to me where she obtained these four containers. It would not be difficult," he added, "to make the investigation myself, but I have my own reasons for doing otherwise. Even a police official has his whims."

Their eyes met and De Brancheville thought the shadow of a smile lurked in the police official's.

"However," he added, "you understand that you will be under surveillance and that it will be impossible for you to leave Paris." He touched a bell and an attendant appeared. "Show Monsieur De Brancheville to the street," he said.

Two minutes later De Brancheville hailed a taxi and drove to his hotel. Entering his rooms he took off his hat, mopped his forehead and rang for a brandy and soda. Presently he felt better and telephoned Carruthers' house. He learned that Carruthers had left no London address, but was to wire after he arrived. Thereupon De Brancheville went to bed.

III

AT TEN o'clock the next morning no word had come from Carruthers. De Brancheville then drove to the bank and asked for Grimshaw, the junior partner. It would entail an embarrassing explanation, as he did not know Grimshaw, but there was no time to be squeamish. Grimshaw, however, was engaged in an important conference and could not tell when he would be at liberty.

De Brancheville started back to the hotel on foot. The cards were running against him, and there was nothing to do but wait. Suddenly he remembered his promise to visit Raoul's fiancée at eleven. He took the note of introduction from his pocket. It was addressed to Mademoiselle Ann Pendleton. The envelope was unsealed and he read the contents. It said:

Dear Ann: This is Raoul's cousin, George De Brancheville, who wants to talk to you. He is very amiable. Be good to him! I am explaining to your mother about his coming.

De Brancheville called a taxi, gave the street number to the driver and got in. The taxi stopped before an unusual looking house, the frontage of which was extended by a high wall, indicating a courtyard. As he rang the bell he saw a man on a bicycle slow down, half a block beyond, and turn back. He had noticed the same man passing Carruthers' bank.

Obviously Le Febre was keeping track of his movements.

A footman opened the door, ushered him into a small reception room and took the letter of introduction. In a few moments he reappeared, led him through a passage opening upon the court, across this and through a wicket gate, into a garden. His first glimpse took his breath away. There was a mimic winding lake, along the grassy margin of which clumps of tulips and narcissi bloomed. On a miniature island a great willow trailed its festoons of new green. In one corner the ground rose and became a little hill, surmounted by a temple masked in cedars; in the other an ancient apple tree, a mass of bloom, towered above the shrubbery. The air was sweet; the sound of bees mingled with the play of an unseen fountain. He seemed to have stepped into an enchanted paradise. He thought of Le Febre's allusion to the Arabian Nights.

His guide led him down a winding path in the direction of the apple tree. A dozen paces and they entered a little formal garden fenced with high cedars. At the farther gateway the footman stood aside. De Brancheville had a view of green grass, a glimpse of water where the lake ended, and then, on a marble bench, the drifting apple bloom about her, an Airedale at her feet, sat Primavera. His heart stopped beating. This was Raoul's fiancée. This was the end of it all.

The cake of Pears' Soap you'll buy next February is aging now for you.

Hurry and rush never spell perfection. Pears' could not be the Perfect Toilet Soap were it made and handled like ordinary soaps.

First, it is made of the purest materials skillfully blended, with the century-old experience of the largest manufacturers of high-grade toilet soap in the world—

Then every cake is laid away in racks to age a full year before it is offered for sale.

You would call it good soap if you bought it within a few weeks (as you do other soap), but the makers of Pears' know that 12 months' curing will make it better. Every drop of moisture is lost and Pears' comes to you not only as the perfect toilet soap but the most economical soap.

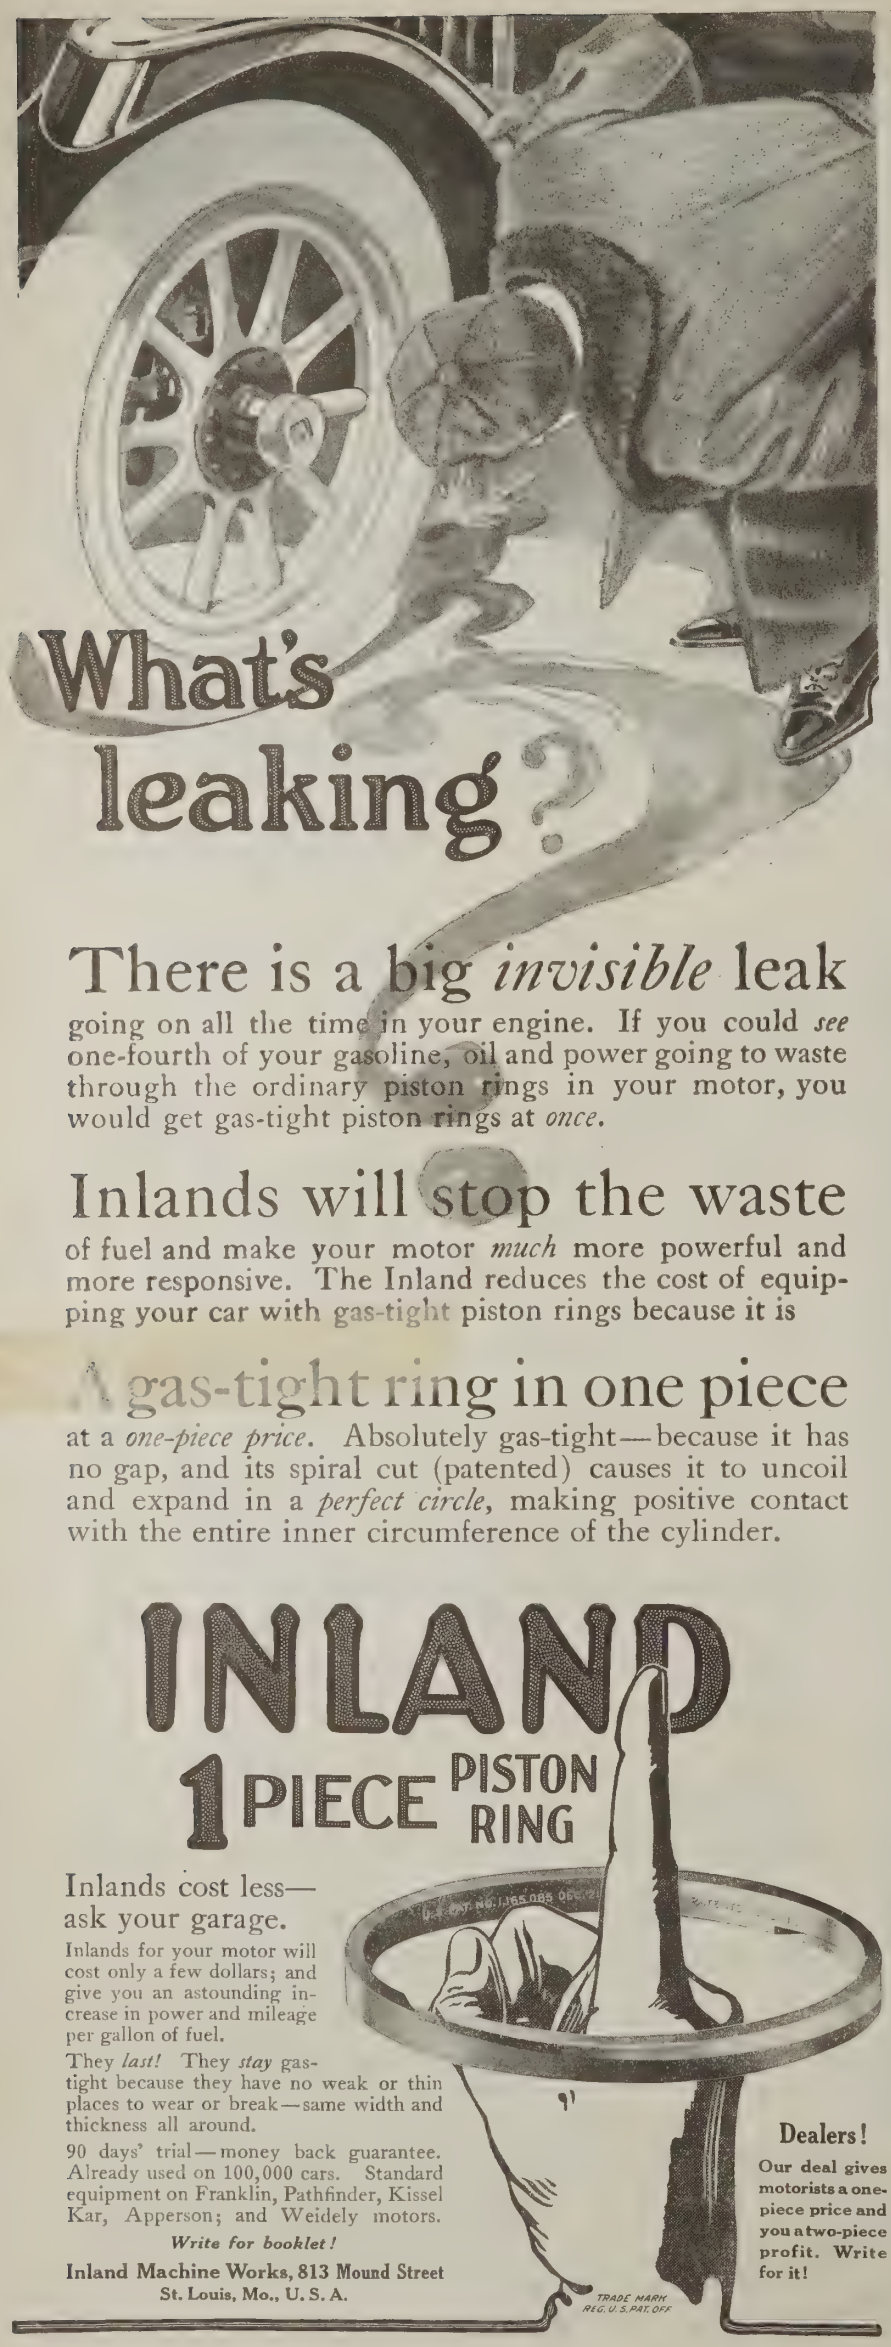
Do you appreciate such care? Your complexion will, if you do not. The tenderest skin welcomes the soft, cleansing effect of a daily bath with Pears'.

Your dealer has Pears' of course.

Pears' (unscented) is 15c a cake; box of one dozen, $1.50. Its only odor is the refreshing fragrance of the choice oils from which it is made.

Pears' Glycerine Soap (scented) is 20c; box of three cakes, 51 cents.

If you wish to test Pears' for little expense, Walter Janvier, 419 Canal Street, New York, (Pears' United States Agent) will send you a trial cake of the unscented for 4c in stamps.



What's leaking?

There is a big *invisible* leak

going on all the time in your engine. If you could *see* one-fourth of your gasoline, oil and power going to waste through the ordinary piston rings in your motor, you would get gas-tight piston rings at *once*.

Inlands will stop the waste

of fuel and make your motor *much* more powerful and more responsive. The Inland reduces the cost of equipping your car with gas-tight piston rings because it is

A gas-tight ring in one piece

at a *one-piece price*. Absolutely gas-tight—because it has no gap, and its spiral cut (patented) causes it to uncoil and expand in a *perfect circle*, making positive contact with the entire inner circumference of the cylinder.

INLAND
1 PIECE PISTON RING

Inlands cost less—ask your garage.

Inlands for your motor will cost only a few dollars; and give you an astounding increase in power and mileage per gallon of fuel.

They *last!* They *stay* gas-tight because they have no weak or thin places to wear or break—same width and thickness all around.

90 days' trial—money back guarantee. Already used on 100,000 cars. Standard equipment on Franklin, Pathfinder, Kissel Kar, Apperson; and Weidely motors.

Her eyes danced as she saw him. She rose and held out her hand.

He bowed and took it.

"Is anything the matter?" she demanded. "You look as if someone were dead."

"It's a bit of a surprise," he said.

She burst into a peal of laughter.

"Do you mean you didn't know?" she cried. "You didn't find out from Carruthers?"

He shook his head.

She laughed again.

"Then I can understand. When I read your name on your walking stick I was dumfounded myself. You see Raoul and your aunt had talked about you, and I knew they hadn't an idea you were in Paris. I wanted to surprise them, get them here to meet you or something; but when you went into the bank for me I thought, of course, you'd find out. I want to thank you again for what you did," she added; "I didn't realize at the time all it meant!"

"Please ——" he protested. He stood gazing at her dumbly.

"You are a strange man!" she exclaimed. "Aren't you glad to see me again, to see Felix? Aren't you excited over it all? To think it was your dog I ran over!"

"To tell the truth," he answered, "my capacity for excitements is giving out. Just at present I'm out on bail, preliminary to spending twenty years in jail."

"Jail?" she replied. She looked at him skeptically.

"It's the truth," he laughed mirthlessly. "What is going to happen to me depends a good deal on you."

"On me?"

He nodded.

"What I want to know is where you got the four leaden boxes that you sent me with the dog collar."

"Why, those," she said, "were in Felix's collar. You know the four little pockets in the heavy leather. Julie, my maid, took them out herself and wrapped them up separately."

De Brancheville exclaimed softly.

"Was anything in them that has been lost?" she asked.

"Those little boxes," he said, "happened to contain the radium which I sold the French Government two days ago, and which was subsequently stolen. As the police found them in my rooms the consequences have been embarrassing."

She looked at him blankly.

"But how did they get in the collar of your dog?" she demanded.

"It isn't my dog," he answered dryly.

"Not your dog!" she gasped. "But why did you say it was?" Suddenly she stopped and dropped her eyes. He saw the color deepen in her temples.

"My dear Miss Pendleton," he said, "we must remember that I am here on an embassy. Raoul's mother must have written your mother."

She began to laugh.

"Ann hasn't come in yet," she answered. "I am Miss Pendleton's mother."

It was De Brancheville's turn to gasp. But even gasping was beyond him. He gazed at her speechless. Hundreds of years seemed to fall from his shoulders. As his emotions registered—as they say in films—she blushed furiously and bent down over the dog.

"Well," he said at last, "I can only say ——"

His sentence was never finished, for a man servant appeared with a silver tray, on which lay a letter.

"For Monsieur De Brancheville," said the man.

De Brancheville took the letter wonderingly and the man departed.

"Who can be writing me here?" he said. "No one knows I am here."

She made no answer, but glanced up at him from her defenses.

He tore open the envelope and looked at the signature.

"Ah! it is from Le Febre, my jailer. May I read it?"

"Of course."

"'I am sending you the final chapter,'" he read aloud. "'It appears that the person who advertised the lost dog, upon recovering his property at the newspaper office, insisted that certain objects had been removed from the collar. I daresay by this time you have ascertained who it was that removed them. As it was known that Monsieur Dubois had been accompanied to the laboratory, on the days in question, by an Airedale terrier, it was not difficult to obtain his admission that he had employed the dog to convey the radium out of the building.'"

"Then it's all right," she exclaimed. "You knew, of course, it would be. But tell me what happened! How did you send his dog back when Felix was here?"

He told her.

"Really," she said, "for a grown man to ——"

"There's more to the letter," he suggested. "Do you want to hear it?"

She nodded.

He read on:

"'Permit an unromantic police official to express his congratulations and the wish that the considerations which prompted Monsieur De Brancheville to steal will be found to justify his crime. Unofficially I advise you to present the stolen dog to madame.'"

As he finished, she was bending even closer to Felix. For a time neither spoke. De Brancheville broke the silence.

"I have revised my ideas about the mirage," he said. "It does come true. The only question is ——"

She lifted her head and met his eyes unflinchingly.

"Think," she said; "I have a daughter seventeen."

"What has that to do with it?" he demanded.

She looked away in silence for a time. Then she faced him and seemed about to speak, when voices were heard beyond the cedars.

"It is your aunt," she said, "and your grandfather."

She rose hastily and glided through the gateway to meet them.

"We came," De Brancheville heard his aunt say, "to tell you that the young people have composed their differences. I don't suppose George De Brancheville has put in an appearance?"

"Monsieur De Brancheville is already here," Vera answered.

"I see him," cried the old man; "he is there underneath the apple tree. Come forth, villain!" he called.

De Brancheville went through the little gateway and stood beside Vera.

Madame De Courville-Rochers raised her lorgnette and glanced sharply from one to the other.

"Papa," she said, "I should judge that we were interrupting. I thought you two were strangers?"

"Hardly that," said Vera; "we met yesterday morning."

"He never mentioned it yesterday afternoon. Did Raoul bring him here?"

"Not Raoul—it was through Felix ——"

"Felix?" she repeated questioningly, at the same time searching her memory for the bearer of the name.

There was no answer to her question, for the duke, a spry excitable little old man, suddenly shouted:

"They are blushing! Even George is blushing! *Ma foi*, but they are making game of us!"

"Behave yourself, grandpapa!" said De Brancheville.

"Embrace me," cried the old man. He clasped his grandson, kissed him on both cheeks and whispered, "But how did you know I had selected her?" Receiving no answer he turned to Vera. "My dear," he said, "with much greater pleasure I embrace you. If I were young again there would be no George! As it is ——" He shrugged his shoulders. He was turning away when he stopped. "You are all dining with me to-night. Remember there shall be veal for the prodigal and roses for the fair."

"You ridiculous grandfather!" said De Brancheville.

"Not a word from you, sir!" answered grandpapa. "And now, Suzette, I must take you away." Seizing Madame De Courville-Rochers by the hand, he proceeded to do so.

"Well," said De Brancheville when they were alone, "they seem to have arranged it."

"There is Felix trying to walk on three legs!" she answered and, smiling back at him, ran through the opening in the cedars toward the apple tree.

Brighten Up, America!

WITH

SHERWIN-WILLIAMS PAINTS & VARNISHES

What a wonderful country we would have if every surface everywhere were brightened up with paints and varnishes! Think of the saving; the added comfort, cleanliness and beauty; increased values!

IT is not a big undertaking, if every property owner does his little part. Paint your house inside and out; protect and beautify every surface in and around your home. It will benefit your country, your city, your neighborhood, and most of all it will benefit *you.*

There is a Sherwin-Williams Paint, Stain, Varnish or Enamel for every surface that requires protecting or beautifying. There is a Sherwin-Williams dealer in practically every city and town in America where these products can be bought. They are worthy of consideration in connection with every Brighten-Up movement because they produce results that are satisfying and lasting.

Our text book of painting instructions for the home owner will be sent free on request.
Our Decorative Department offers free helps to all who desire expert advice and suggestions.

FOR TWENTY YEARS OLDSMOBILE HAS EPITOMIZED AMERICAN IDEALS

A primary force in our national leadership today is the American sense of values. Here in this "melting pot" of civilization is born the balanced judgment.

Consciously or unconsciously our men and women who come to the car-buying plane measure truly. They weigh values with rare accuracy.

So it is that the Oldsmobile has come to be counted as that car which is truly American, reflecting all that is finest in our industrial and social progress.

A car for those who are uncompromising in demand for quality and efficiency, and by the same token have no patience with artificial values.

That genius which created the Oldsmobile at the dawn of motor vehicles has, for twenty years, kept it in the vanguard of pleasure car achievement.

Created for the discriminating, the cost of material has never counted. One seeks in vain for a car of truer design, finer metal, better cushioning, better leather, stronger wheels, and so on through all parts.

Art is there, too, in its subtle grace and refinement, its quiet beauty, its inbuilt dignity.

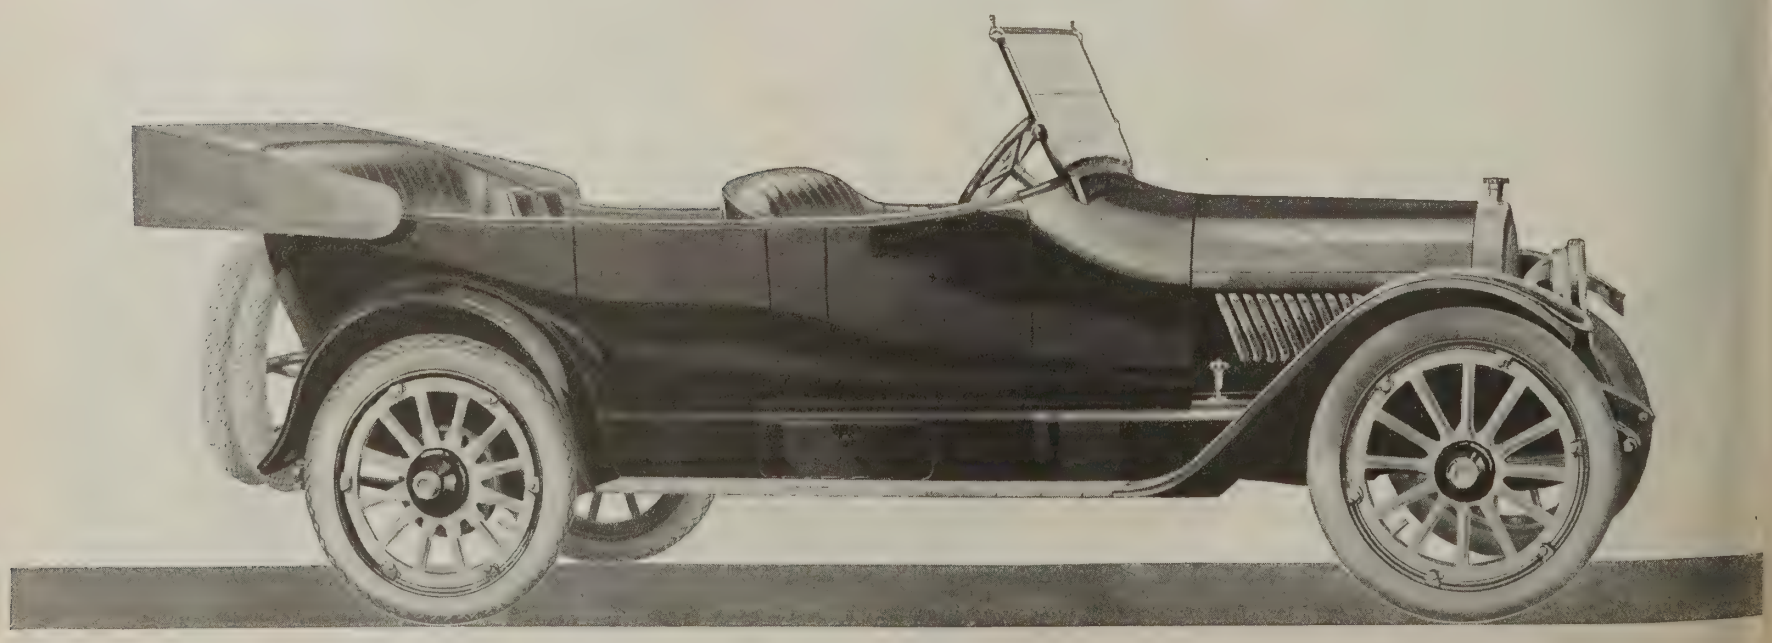
And as the car epitomizes American ideals as a finished machine, so does the Olds Motor Works epitomize American ideals in manufacturing efficiency. That is why the Oldsmobile is counted the car of American Ideals—more so than ever for 1917.

If you contemplate the purchase of an automobile at any price, see the Oldsmobile dealer. He will demonstrate, as you request, Sixes, Eights, Runabout, Roadster, Cabriolet, five or seven passenger Touring Car or Enclosed Type.

The Prices Range from $1095 to $1850

OLDS MOTOR WORKS, LANSING, MICHIGAN

Established 1880 *Incorporated 1899*



BORROWING FROM YOUR UNCLE

(Continued from Page 19)

the day on which he appeared before the Federal Farm Loan Board, at Topeka, he was elected president of the American Bankers' Association, a position which he now holds. If he stood alone in his opinion of the facility which long-time, amortized first mortgages will offer to men who cannot pay half the value of the farms they desire to buy, the mere fact that he is a prominent banker would not prove the case; but he agrees with most bankers who have studied the matter.

Mr. Gordon Jones, of Denver, an authority on both rural credits and banking, states in a little booklet issued by him that, in his opinion, perhaps the most noteworthy effect of the Federal Farm Loan Act will be to enable tenants to buy farms under the method outlined. Bankers from Central Kansas testified that fifty per cent of the tenants in their neighborhood will buy farms on this plan with the proceeds of their dollar-and-seventy-five-cent wheat this year.

The same state of things was testified to in the South as a result of eighteen-cent cotton. Corn Belt tenants do business on rather a large scale and, as a rule, possess resources sufficient to enable them to use this plan in purchasing farms if they remove to regions where the price of land is a little lower—if they can have some security against the overvaluation of the land in the new country. The valuations of the Federal Land Banks will give them a safer estimate of land values everywhere than they now possess; and will save them from some, at least, of the traps and pitfalls set for them by real-estate enthusiasts—not to use stronger words.

In Baltimore there came to our hearing a gentleman who seemed greatly interested in the new system. A member of the Board asked him, after the hearing, whether he felt repaid for his attendance.

"I surely do," he replied. "I see how it will help me out. I have three thousand acres in farms on the Eastern Shore of Maryland. It is beginning to show signs of decreasing fertility under the tenant system in vogue; and I can see in the future nothing but poorer farms, poorer tenants and finally a poorer landlord. I am especially interested in the landlord's end of it; though, as a good citizen, I hope I am not entirely oblivious of the desirability of maintaining the fertility of the lands of the nation, or to the welfare of the tenants. What is it the poet says?

"But a bold peasantry, their country's pride,
When once destroy'd, can never be supplied.

"All right; I'm not going to destroy 'em any more. I shall go home and prepare to sell my lands. I can within a year or two find thirty farm tenants who are the right sort of men; and, having organized a National Farm Loan Association, I shall deed my plantation away in thirty tracts, take that half of their value which my purchasers may get under the Federal Farm Loan Act, take also anything they can pay me without sacrificing their equipment, and second mortgages for the balance at six per cent."

What Land Owners Must Do

"I shall insist that they all take out forty-year mortgages ahead of me, and I shall not worry as to their digging out. They will dig out in a few years if they have good luck; and if any of them fall down it won't hurt me much. I shall have plenty of time before the first mortgage falls due in which to find other purchasers."

This man is a fair type. America has thousands of just such landlords.

At Nashville the writer, after the hearing, sat at meat beside a gentleman who turned out to be the possessor of a great tract of cut-over timberlands in the alluvial districts of Western Tennessee. These lands are of enormous fertility, but the clearing of them is no small job. Therefore, they are low in value and slow of sale.

"I came to the hearing this morning," said he, "out of curiosity; but I have been blessed with a big idea, born while the farmers were testifying. I shall sell my land out to tenant farmers—to any farmer or farm hand who can get the equipment for carrying on the development of the farm—and take a second mortgage for every cent of the half they can't pay for out of the Federal Land Bank mortgage."

"At what valuation?" he was asked; for there is no doubt that there is many a canny landowner in these states of ours who plans to sell to the Federal Land Banks by dint of doubling the price of his land, letting a buyer borrow half of the doubled price and pay it over.

"I see your point," said he. "Of course the Federal Land Bank wouldn't fall for any funny business. I'll take the Land Bank's valuation as the basis of the deal."

"You'll have to do better than that," he was assured.

"How much better?" he inquired.

"You'll have to make those tracts into real farms. You'll have to clear enough so that your buyer can make a living on the place; and you must furnish some fencing, and a house, a well, a barn, and the like. Each man should have a cow, some fowls and a couple of swine. Then it would be such a farm as the Federal Land Bank could loan upon—actually under cultivation."

"Well," said he, "all those things, except the chickens and livestock, would add to the value of the land, wouldn't they?"

"Yes."

"And form the basis for a little larger loan?"

"Yes."

"Well," said he, "I'll do it, then!"

"And," went on his informant, "if your buyers will then go on and do more clearing, thus adding to the value of the land, they can return to the bank for reappraisement, as the value increases, and get enlarged loans, so long as they do not ask for more than fifty per cent of the value. That's what the Federal Farm Loan Act is for—'To provide capital for agricultural development.'"

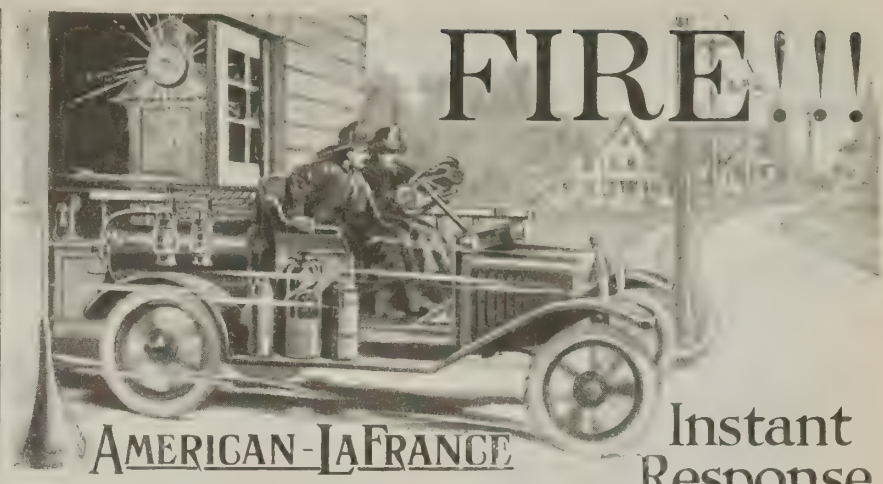
The Wisconsin Land Bank

This matter of negotiating loans for the development of land by clearing and then making reappraisements as the clearing progresses as a basis for larger loans to clear more lands, and so on, has been worked out for years in Northern Wisconsin by a land bank organized under a law of that state. Here, too, is shown the capacity of the Federal Farm Loan System to finance the poor man into farming affluence. This portion of Wisconsin is a cut-over region of rich lands splendidly adapted to stockraising—and this usually means, in Wisconsin, dairying. The people located on these lands were mostly foreign families whose breadwinners had worked in factories, some of them for as long as twenty years, during which time they had accumulated from two to five hundred dollars each by the slow process of laying one dollar on another in an unceasing struggle with the problem of living.

Each family had a small clearing and some such start in necessary farm animals as was suggested to the Nashville lumberman. But their clearings were not large enough to furnish a living for the family. The man of the house was obliged to "work out" in order that the family might live; and the clearing went on at the slow rate of not more than an acre a year to a farm. This is too slow for the twentieth century. Such slow progress it was that forced our ancestors to spend seventy-five years in reclaiming Indiana and Ohio; but there are too many other opportunities open to willing hands in 1917.

The cut-over lands, constituting the bulk of the remainder of our untilled area, must yield quicker returns or they will remain waste. The Wisconsin land bank has been for years financing these families in such a way as to make it worth while for the man of the present day to subdue the wilderness the lumberman has left.

When these farms were once occupied, and so far reclaimed as to give the settler a home and a mere toe hold, values went up a little. The man who owed half the value of his farm three years ago now owes only a third of it; therefore, he is able to go to the land bank, show that he is eligible for a loan of two or three hundred dollars more, and secure it by executing a new mortgage and retiring the old. This little margin of cash he uses in clearing more land, partly by dint of hiring labor or buying dynamite, and partly by using it to support his family while he stays at home and works. Ten acres more cleared, and his farm is worth five hundred dollars more; and the reappraisement is repeated.



FIRE!!!

AMERICAN-LAFRANCE CHEMICAL *On Standard Ford Chassis*

Instant Response

THE safety of your own dear ones, your responsibility as a good citizen, demand that you get complete information about this wonderful motor fire-fighter at once. Be up-to-date and SAFE. "Chemical" has 40 times the fire-fighting efficiency of water. The outfit herewith is the product of the world's greatest manufacturer of fire apparatus.

These American towns have already bought American-LaFrance Chemicals on Ford Chassis, and the list is incomplete:

Anthony, R. I.
Antioch, Cal.
Arcade, N. Y.
Arlington, Texas
Averyville, Ill.
Battle Mountain, Nev.
Berwick, Me.
Boothbay Harbor, Me.
Bowie, Texas

—that feeling of SECURITY in an emergency

A lace curtain. A spark. A flame. A telephone. A woman, tremulous—yet trusting. The clanging bell in the town firehouse. The American-La France Chemical tearing along the road like a hound unleashed, snorting in encouraging response to the woman's S. O. S. The timely arrival, discrediting the fastest horse-drawn apparatus. The fire put out before it got under way. The woman's gratitude. The return to the fire-house.

Your turn may be next. Don't wait for the fire alarm, with consequences no man can foretell. Your town now, this very minute, needs the protection of this trusty, speedy, economical life-saving apparatus. Write at once for further information. Your turn may be next.

AMERICAN-LAFRANCE FIRE ENGINE COMPANY, INC.
THE LARGEST BUILDERS OF FIRE DEPARTMENT APPARATUS IN THE WORLD
Elmira, New York

Paint to the last drop in the can

Buy less often, use fewer gallons and get a better job that'll wear longer.

DEVOE contains no barytes, no whiting, no silica, no clay. Such stuff may *look* like lead and zinc—but they only make "*half-paint*" paint. DEVOE is *all* paint—paint to the last drop in the can.

The best dealers sell DEVOE. The best painters use them. They have learned that the DEVOE Guarantee of Purity and Satisfaction protects them and their customers, too.

DEVOE

The oldest manufacturing concern in the United States. Founded in New York in 1754.

F. W. DEVOE & C. T. RAYNOLDS CO. NEW YORK

PAINT DEVOE PAINT

The loaning of money on second mortgage is not a hazardous business when wisely conducted, even subject to the ordinary first mortgage. It may be that the people managing the well-known organization for aiding Jewish back-to-the-landers are more than ordinarily efficient; but they are conducting it under peculiarly disadvantageous conditions. The Jewish farmers are mainly typical greenhorns. The Jews have been for ages divorced from farming. The traditions of agriculture have departed from their blood.

The risks of the business are widely scattered, and inspection is enormously difficult as compared with the same work in the case of the Wisconsin land bank or the prospective loans of the Federal Farm Loan Bureau. The loans are, many of them, made to farmers who are absolutely insolvent. Instead of second mortgages, the Jewish concerns loan on third and fourth mortgages as well; and in some cases have advanced funds in sixth place from the bottom title! Anyone would say that they ought to have lost a lot of money; but at a gathering of Jewish farmers in New York in November, attended by nearly three hundred Children of Israel from eight states—veritable spies sent to spy out the Promised Land and the advance guard of who knows how mighty a host!—I was informed that these losses, incurred through aiding over three thousand families, have been only 2.82 per cent in sixteen years.

Had these loans been made subject only to forty-year amortized loans, and on second mortgage only, it is difficult to see how any losses at all could have been made. As a matter of fact, the debt at low interest on forty years' time is shown by the Texas school-land experience to amount to very little as an encumbrance. The Lone Star State sells its school lands on forty years' time at three per cent interest, on receiving an initial payment of ten per cent. These mortgaged lands sell in the market for very little less than unencumbered lands; and second mortgages subject to them are scarcely inferior as securities to first mortgages.

Four Per Cent Philanthropy

I have hitherto written of the financing of rural integrity and ability as a business to be done by the local capitalist only, or by the seller of lands as a means of retiring from landlordism. It was in the state of Massachusetts, however, that the first suggestion came to us that such a thing as a legally organized system for doing this work might be expected as a result of the enactment of the Federal Farm Loan Act. In that state, as in the rest of New England, there is special need of some more liberal system of farm loans in order that the agriculture of New England may be rehabilitated. A state land-bank law was passed just before the Federal Farm Loan Act became a law; but little has been done under it. It is now on the tapis in the Bay State to amend the state law so as to make it the agency for aggregating second mortgages and making them the basis of issues of bonds.

Thus, if this project bears fruit, a second land-mortgage law will be built under the first, in order that the man with little money may have credit with which to buy and time in which to pay. The plan is to deal in those second mortgages only that are subject to long-time amortized first mortgages. From North Dakota comes a rumor that a million-dollar company is organizing to deal in second mortgages of the same sort. Doubtless there will be many more projects of both kinds. Many more were mentioned at our hearings as among things planned.

And, lastly, one cannot but think of the great field which lies open here for some such philanthropy as that of the late Mr. Mills, of hotel fame. I am informed that the Mills' hotels, built for the excellent purpose of furnishing clean lodgings and meals for the almost penniless, have paid dividends at the rate of about four per cent. Where is there a better field for four per cent philanthropy than that of turning farm tenants and farm laborers, country-minded city people, and young men with farm experience and agricultural educations into actual owning farmers by giving them the money they lack at four per cent on second mortgage?

Whatever may have been the risks attendant on such a project in the past, the day seems now to have come when such a work may be entered upon with safety. In what other way can wealth serve its country so well—and yet earn four per cent?

The Road To Happiness

On the first guide-posts along this road the words "Good Health" are written. And you can never come to good health without sound teeth—the guardians of your digestion.

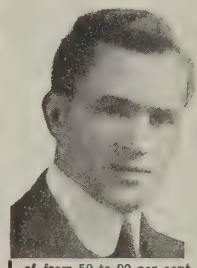
"A Train Load of Books"



What Clarkson is Doing for the Book Buyer

IN several hundred thousand Libraries in the homes of people in every walk of life—from the day laborer to the college professor and high government official, from the persons who buy a few books of popular fiction, to the persons who pride themselves on having the complete works of all the standard authors in De Luxe Sets artistically printed and bound—**almost every book was bought from me. WHY?** Because **I have no agents** and **sell you just the books you want—all new—many at a saving of from 50 to 90 per cent.** You examine the books in your own home for five days before paying for them. If not satisfied, return at **my expense**—and **owe me nothing.**

Sample Prices:

Eyes of the World. 39c.
Famous Pictures. $6.00; $1.45.
Encyclopedia of Quotations. $2.50. My price, 89c.
What All Married People Should Know. $3.00; 73c.
Buffalo Bill's Own Story of His Life and Deeds, $1.50—85c.
Famous Orators. $2.50; 95c.
Law Without Lawyers. Pub. price, $2.00. My price, 45c.
Shakespeare. 24 vols. 24mo. Limp Leather, $2.65.
When a Man Comes to Himself—Woodrow Wilson. 50c.
Jiu-Jitsu, or Art of Self-Defense. $1.25; 60c.
Key to the Bible. $3.75; 98c.
Library of Wit and Humor. $1.50; My price, 52c.
Huckleberry Finn and Other Mark Twain Books. $1.75. My price, $1.23.
Brann: The Iconoclast, 2 vols. Complete; My price, $2.25.
History of the World, 3 vols. $12.00; My price, $2.95.
Memory: How to Develop. 85c.
Century Book of Health. $5.50; My price, $1.50.
New Americanized Encyclopedia, 15 vols., ¾ Leather. Publisher's price, $75.00. My price, $14.75.
Century Dictionary and Cyclopedia, 12 vols. ¾ Leather. Publisher's price, $120.00. My price, $39.50.
New American Encyclopedic Dictionary, 5 vols., ¾ Leather. Publisher's price, $21.00. My price, $4.75.

Here are De Luxe Sets, Morocco bound, complete works, many of them at less than 25c on the dollar. Hugo, Kipling, Poe, Eliot, Dickens, Thackeray, Stevenson, and scores of others.

Get My Big, New Catalogue

My new catalogue, sent free for the asking, tells you **how to save 50 to 90 per cent on thousands of books.** It is a course in literature, giving nationalities, date of birth and death of authors, the author's life and standing in literature, etc. Hundreds of sets and thousands of single volumes listed.

I sell more books direct to the booklover—the individual reader—the rich man who insists upon his dollar's worth—the man who watches his pennies—**and sell them for less money**—than any other man in America. Every book new and fresh, and **guaranteed** to please **you**—you to be the judge. I do not quibble, and would rather have a book or set of books returned at my expense than to have a dissatisfied customer.

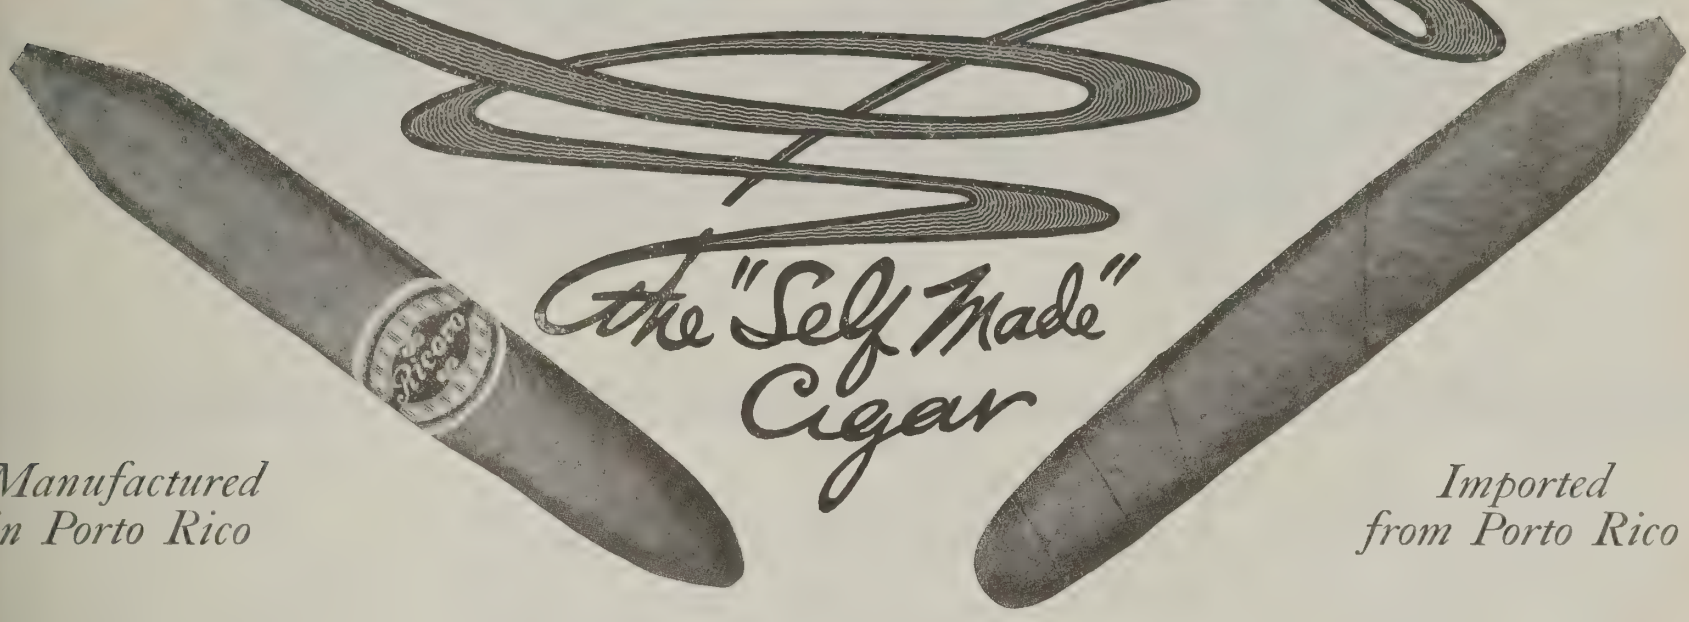
RICORO



the "Self Made" Cigar

Manufactured in Porto Rico

Imported from Porto Rico

EXCEPCIONALE SIZE
10 cents each. Box of 25, $2.50

CABINET SIZE
3-for-25c. Box of fifty, $4.15

SARATOGA SIZE 6c each. Box of 50, $3.00

Conditions—Prices—Values

Structural steel sold before the world war at $25 a ton. Today that same ton of steel would cost $70. No more metal, no more value ton against ton. Conditions have set the price.

Eggs last winter sold at 50 cents a dozen in many parts of the country. Since then they have brought as high as 75 cents. No more value egg against egg.

So it goes all down the line. Every breath we draw levies a higher tax in higher prices for necessities and luxuries alike. Conditions over which no man can stand are ruling, and rule with an iron hand.

Only here and there is there an exception. One is the price of RICORO cigars.

We make this announcement with pleasure.

The old prices hold. Certain conditions favor the smoker in this—conditions which set aside extra cost in the raw material and labor—principal among which are our long-time contracts for the manufacture of RICORO.

RICORO is imported—*but pays no duty*—that is one secret of its price. If it were imported from anywhere except Porto Rico—from Cuba for instance—it would have to pay duty and you would have to pay about double.

RICORO is sold only in UNITED CIGAR STORES and UNITED AGENCIES. We take the entire output. (That is another thing which helps make the price.)

RICORO now sells more than a half million a day. Every fourth man who buys cigars in United Stores, now buys RICORO.

RICORO is made in a dozen shapes and sizes to suit every taste and sells at six, seven, three-for-a-quarter and ten cents each, and up to two-for-a-quarter.

THANK YOU!

UNITED CIGAR STORES COMPANY

Any car in which quality proves to have been sacrificed to meet a predetermined price.

Not for This Kind of Car

If a car-builder is insistent on having his car sell for a certain fixed price, he must, of course, make his selection of parts on a price basis.

Figuratively speaking, it becomes an auction where the lowest bidder, irrespective of quality, gets the business.

And that makes Timken-Detroit Axles out of the question—

First—Because it costs money to put Timken-Detroit engineering, absolutely reliable materials, and uniform, finished workmanship into motor-car axles.

And, therefore, Timken-Detroit could not hope to come out lowest in a bidding contest.

Second—Because we will not enter such a contest under any circumstances. The character of the cars that are equipped with Timken-Detroit Axles is good evidence of Timken-Detroit quality—just as their use of Timken-Detroit Axles is evidence of the car's high standard of quality. We cannot afford to jeopardize our own reputation or that of our customers for protecting the safety of the car owner.

Building a good axle first and pricing it afterward, is not, however, an *expensive* policy. It results in more value for dollars expended. It produces axles at the lowest cost consistent with the highest quality. It saves repair expense for car owners.

Nine years of exclusive devotion to good axle building has proven that that is what the most prominent and progressive car-builders are after.

As we look back over the years and recall the names of cars that have vanished, and of others that have won the confidence of the great public, there is one thing of which we are rather proud—

Timken-Detroit Axles have been subject to continuous improvement. They have never claimed perfection—but they've always been the very best we could build.

And that is why they have always traveled in mighty good company.

TIMKEN-DETROIT AXLES

THE SHRINKING DOLLAR BILL

II

By Forrest Crissey

AS MAY be imagined from the present startling prices of poultry, there have been distressful doings in the great American henhouse. When the market man in the small country town charges thirty cents a pound for cold-storage broilers and twenty-four cents a pound for plain "stewing hens" it is evident that something has happened in the neighborhood of the chicken roost. The fact is that the aforesaid great American henhouse looks like a temple of race suicide. It is depleted to the lowest point known in years, if the opinions of the experts count for anything.

As the financier would phrase it, the fowl is decidedly a liquid asset and responds with extreme sensitiveness to fluctuations in demand. It is by no means so much of an undertaking to place the feathered meat in the henhouse on the market as it is to convert the cattle and hogs of the feed lot into cash. Again, the hen is not exclusively a farm creature; the country villages and the provincial cities of the United States normally shelter several millions of them, in all probability. This makes the question of "chicken feed" a sensitive one; and when the high cost of living for the hen goes above a certain point the village poultry roosts begin to depopulate rapidly. With corn close to the dollar point, wheat at nearly two dollars, and the household economist keeping a zealous eye on kitchen waste, the movement of our feathered friends from roost to market has been almost unanimous—at least so far as the village henneries are concerned.

Poultry prices naturally reflect meat prices; and the offerings of the poultry packing houses preceding Thanksgiving were so attractive that even the farmer "cleaned out the henhouse" to an extent seldom if ever known before. One of the best-informed poultry experts in America, who is able to speak from a wholly disinterested viewpoint, says:

"The poultry which has been coming to market in such enormous quantities has gone to the storage warehouses very largely. We have no public reports of the holdings of poultry in warehouses, either public or private, in this country; but we know that all broilers for the entire year's supply are produced between July and October; all soft-meated roasters for the whole year are produced between September and December. There is never a time on any market when one cannot obtain these strictly seasonal types of chickens provided one is willing to pay the price for them. Therefore, it may be assumed that a sufficient amount of broilers and roasters go into the warehouses to supply the demand throughout the nine months during which each variety is not produced."

A Lesson for Poultry Shippers

"In 1913 warm weather prevailed throughout the poultry-dressing season, which is from about the middle of October to Christmas. During this season the highest prices are paid for birds that are chilled in cold air rather than in ice water or fine ice. It is, therefore, the aim of poultry dressers to chill dry and so ship. The man who is not provided with mechanical refrigeration depends upon the weather—when the weather is decidedly undependable. This results in completely chilled poultry—and there is always a large amount of it at best—which is almost sure to be 'green struck' when it arrives at the market, or will be of such altered condition that it is also lowered in eating quality, and decidedly lowered in storage ability.

"An enormous amount of this low-grade poultry went into freezers in 1913. This meant that the high-quality seasonal birds—that is, broilers and roasters—were represented during the next nine months by low-grade stock. The consuming public got tired of this poor poultry and refused to buy. The whole poultry industry, in general, had one of the worst years, commercially speaking, that it ever experienced. The following year commercial conditions were very different, due to a cold poultry-dressing season. Every effort was also made by a number of agents to insure good poultry reaching the market. The result was that poultry in excellent condition went into the warehouses and poultry in excellent condition came out. Prices were high and the poultry industry experienced one of its best years.

"This experience taught poultry shippers and dealers many useful lessons—with the result that to-day poultry is handled with an intelligence that has improved its quality all along the line. The cold-storage bird of to-day—dry-picked, dry-cooled and dry-packed—is a real delicacy and has remarkable keeping powers."

For one who has "kept chickens," and then finally reformed, a store sign bearing the simple legend, "Fancy Eggs, Eighty-two Cents," has a melancholy fascination. Lately I looked upon such a sign in a New York retail grocery and engaged in a brood of reflections upon the perverse way of hens, eggs and markets. The wind itself is not more wayward than the hen—the universal emblem of the spirit of contrariness. Yet this whimsical creature has a secure place in the affections of the people, because she is the author of a popular breakfast food—the most perfect piece of "package goods" ever put out. The meaty egg is not only the most delicious of foods but is the most perfectly protected from the despoiling and adulterating hand of man.

Doctor Pennington's Information

Probably there is no person in America who knows more about the egg of commerce in all its stages of perfection and imperfection than Dr. M. E. Pennington, the head of Uncle Sam's Food Research Laboratories in Philadelphia. Doctor Pennington has played the searchlight of scientific investigation upon all the dark secrets of the egg and the egg trade, and there is little in the lore of the hen and her relation to human nourishment and to the commerce of the United States that is not an open book to this authority, who says:

"What has happened to our egg crop? Certainly a whole lot! In the first place, the eggs laid last spring were not an excessive crop. Then the buying power of the country had risen and the demand for eggs was so great that, instead of the usual percentage of the spring lay going into storage, it went down the throats of the people. Apparently almost everybody in the country—man, woman and child—wanted two eggs for breakfast, could pay for them and got them. Anyhow, this was true of the average wage-worker who, before the war, was content to get one breakfast egg, say, three days a week.

"As a result, the fifty-four warehouses reporting stored eggs on August 1, 1916, when the storage stocks were highest, were nearly nine hundred thousand cases short as compared with the previous year. These fifty-four warehouses covered about sixty-eight per cent of the entire warehouse holdings of the United States. That meant a shortage of considerably more than a million cases of eggs in the whole country.

"Now the New York market reports on eggs show that the consumption in 1916 throughout the whole season was unusually heavy. From March 1, 1916, to October 1, 1916, New York used 320,829 more cases of eggs than it used during the same period in 1915. From March 1, 1916, to November 30, 1916, it increased this difference still further, using 331,794 cases of eggs in excess of the 1915 consumption. The same trend is noticed to an even greater extent in Chicago.

"About November 20, 1916, active trading showed that fancy varieties of early packings went, at wholesale, from 37 to 38½ cents a dozen. The reserve stock in Chicago, New York, Boston and Philadelphia was less during 1916 than any year since 1913. In Chicago, in 1913, storage eggs sold for from 29½ to 32½ cents wholesale, while fresh-gathered ranged from 31 to 37 cents. If the consumption of eggs continues at its present rate the visible reserve in the four centers mentioned must be exhausted before February 1, 1917. The trade output in New York for November, 1916, was about 91,500 cases weekly against 97,100 cases weekly in October, 1916, and 93,600 cases weekly in November, 1915.

"In 1914, sixteen million dozen eggs were exported; in 1916 twenty-six million dozen were exported.

"On November 29, 1916, in New York, 'fresh extra' wholesales were from 47 to 48 cents and the total receipts for the week were 29,716 cases. The receipts for the same week in 1915 were 39,799 cases. Prices in Worcester, Massachusetts, were 75 cents a dozen during Thanksgiving week. Near-by eggs in New York—the finest lots—ranged from 55 to 58 cents a dozen wholesale. The values of the greater part of the supply ranged from 45 to 55 cents, because many lots are mixed more or less with shrunken eggs. Near-by hennery browns are still very scarce, and a few buyers pay full prices for them when all new and of good size—say from 50 to 55 cents. Which means that on the New York market white eggs are very scarce, because the white egg ordinarily commands a big premium in New York, just as the brown egg commands a big premium in Boston."

This authority calls attention to the fact that the United States Department of Agriculture, Office of Markets, reports cold-storage holdings of eggs on December 1, 1916, in 238 cold storages as 2,103,869 cases as compared with 3,984,534 cases in 254 storages on November 1, 1916. The 193 storages that reported holdings on December 1, 1916, and December 1, 1915, also showed a present stock of 1,794,740 cases as compared with 2,787,802 cases in 1915, a difference of 993,062 cases, or 35.6 per cent.

Apparently there is plenty of reason why strictly fresh eggs have become almost precious.

The bloated pay envelopes of the wage-workers and the general business prosperity, resulting in greatly increased consumption, are sufficient causes.

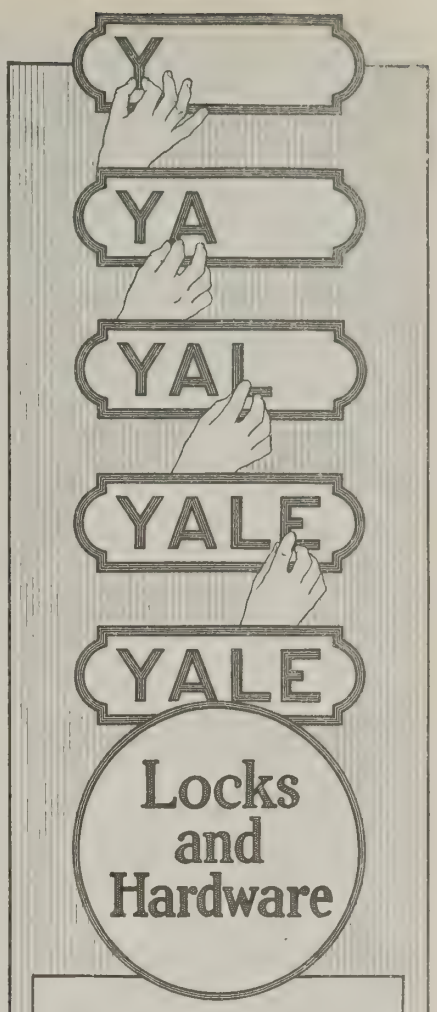
"Last spring," says Doctor Pennington, "was an unusually long, cold spring. The egg-storage man has a habit of storing eggs whenever the weather is cool. During the summer of 1916 he stored eggs much longer than usual. Had there not been the excessive demand for eggs, we should have had our usual storage stocks."

The Federal Egg Campaign

"The quality of the egg during the past year also increased enormously by the enforcement of the Federal food laws last summer in interstate commerce. A large number of Corn-Belt states, from Dakota to Tennessee, coöperated with the Federal officials to keep the rotten egg out of commerce. This means that the large supply of low-grade eggs, which ordinarily reaches the big consuming centers and which tends to keep prices as well as quality low, did not last year reach those centers, but was disposed of back in the country where it originated. One result was that the receivers in the large markets had fewer but much better eggs. One receiver in New York stated to me that he had saved seventy-five per cent of the usual loss due to hot weather. A shipper in the West says that, according to his observations, not more than twenty-five per cent of the low-grade eggs that ought to stay in the producing section were getting into commerce. These men were absolutely unknown to each other. The concordance in their statements, which were based on general trade observation alone, is striking.

"Undoubtedly the egg campaign waged by the food officials last summer operated to increase quality and to decrease the large numbers of low-grade eggs that come out of storage warehouses during the wintertime. That was the first season of the egg campaign, but it served to show the shippers that the Federal Government meant what it said about rotten eggs in interstate commerce, and that they must candle eggs and ship only good eggs if they proposed to stay in the business. Shipper upon shipper, at the close of the season, began to look round for egg-candling devices and egg-candling knowledge, and some method by which he could refrigerate his eggs as soon as they were brought in by the farmer, and so prevent the largest proportion of deterioration, which occurs between the receipt of the egg by the shipper and by the consumer. He will also educate the farmers to gather eggs more promptly and handle them better."

Of course the springtime—when the hen turns to thoughts of filling a nest for maternal purposes—is bound to bring a measure of relief, so that the man on the moderate salary may increase his breakfast portion of eggs, like the laborer in the steel mill. This help, however, will not be of normal volume, for the reason that high poultry prices and



The name "Yale" is an accepted synonym for Quality and Service in increasing degree each year.

For nearly a half century the same principles standing for honesty and integrity have upheld Yale prestige and developed the Yale ideal—an ideal that rests upon the essentials of better goods, produced in a better plant by better workmen, under the highest standards of manufacturing practice.

The name "Yale" is on every Yale product — the maker's visible guarantee of mechanical excellence and the certainty of enduring, satisfactory service. Look for the name "Yale."

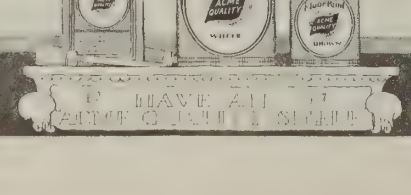
Have an Acme Quality Shelf

For the many "touching-up" jobs about the house, keep always on hand at least a can each of Acme Quality Varnotile, a varnish for floors, woodwork and furniture; Acme Quality White Enamel for iron bedsteads, furniture, woodwork and all similar surfaces; a quart of Acme Quality Floor Paint of the right color.



the high cost of chicken feed have caused thousands of henhouses to be swept comparatively clean of pullets which are ordinarily carried over for the spring egg harvest.

When we consider that no other country in the world is capable of producing so much "green stuff," and of spreading this supply so completely over the entire year, it must be admitted that we have developed the art of living out of a can to a high degree. The American people are immense consumers of canned foods; and when a calamity overtakes our crops which are logically destined for the cannery, the housewife of this country is sure to be heard from in protest.

To-day, however, the consumers of canned foods face a seeming contradiction of this statement. The calamity descended in full force upon the crops grown to be sealed in tin—and still, in thousands of stores throughout the whole country, the prices asked for foods in cans have not kept pace in price advance with the other necessities of the table.

In the line of contradictions it would be hard to find one of a commercial or economic character that is able to outrank this: In thousands of communities the retail grocer will sell you a can of corn, peas, tomatoes, or other "tinned" foods, at a lower price than you could buy that identical food, in a similar package, from the wholesaler if you took a carload or a trainload. In all probability this very thing is taking place in your own purchasing. If you are not buying at least some canned foods at a lower price for a can than they could be bought for on the wholesale market today, then your storekeeper does not do his business after the manner of the average retail grocer.

The explanation of this apparent anomaly is simple: The retail grocer generally contracts for his canned foods in advance from the wholesaler. If he has confidence in his own judgment and good financial standing, he will provide for all or most of his year's supply in this way by a "future" order. He expects the wholesaler to deliver a hundred per cent too. Generally he deals with a wholesaler who is substantial enough to do this, even when it involves a heavy loss. Retail grocers say that, as a rule, in the principal canned foods the larger wholesalers have kept close to their customary practice of delivering all their futures. With some articles, however, this has been impossible.

Canned Foods at Old Prices

Remember, there has been an immense shortage in all the most popular foods that are put into cans—with several of the most important the shortage has been close to one-half; also, in some of these foods there has been extensive export buying. Naturally the wholesale price has been pushed up to unprecedented points. Logically the retailers' price should have kept pace with the advance; but it hasn't—except when the retailer has stripped his shelves of cans of a certain food and has been compelled to get in a new supply on a current market basis. With the goods he bought on future, however, his attitude is quite commonly this:

"I've had to push up the price on so many things not contracted for in advance, but bought from hand to mouth, that I'm tired of explaining to disgruntled customers. Here's a chance to give them the benefit of a lucky stroke of buying ahead—and that's what I'm going to do as long as my stock of future-bought goods lasts."

Therefore, in thousands of instances the retailer is shoving cans of foods across his counter at a price for a can of several cents less than that food could be secured from the wholesaler or canner in carload lots. You may charge this to the timidity, the consideration, the shrewdness or the stupidity of the retailer—just as you please to put it; but the fact remains that, as a rule, he has not passed the advance in the price of canned foods over the counter to his customers. He is standing between the consumer and a market depleted by a short crop, an uncommon domestic demand and considerable buying for foreign nations.

Even on goods of this kind which he has been obliged to buy outside his fortunate future price he is not adding the normal margin, as a rule. The contrast between the price at which he is selling his contract stock of other canned foods and has been selling these identical goods would be too great, he thinks, to add even the profit—so he adds none. Besides, his competitor may have a few cans of the same food left from the original stock, and, therefore, this competition must be met.

It is interesting in this connection to raise the question of what has happened to the wholesale grocer and to the canner and "packer." Usually the contract or, rather, the future order by which the wholesaler agrees to deliver to the retailer a certain number of cases of canned foods within a specified time is positive, and constructed without any clause by which the wholesaler may escape in case of emergency.

The attitude of the large wholesale merchant is substantially this:

"I'm selling to a regular customer, whose trade I expect to keep from year to year. He buys not only canned foods from me but scores of other articles. Though my contract with the consumer says that in case of crop failure I shall receive my *pro-rata* share only, I can't pass this safety-first clause along to the retailer and furnish myself with a way of escape, because he would neither understand it nor stand for it. It's up to me to look out for myself when the price is made, and then take my medicine in case of trouble. He expects me to know what I'm about when I do my buying and to protect myself and him too. So I'm going to do it."

The Case of the Blushing Tomato

As a consequence more than one wholesale food merchant is filling futures in canned foods without profit, at a positive loss.

Not all wholesalers are doing this, however; probably by far the larger number of them are simply making their stock, secured from the canners under a *pro-rata* contract, go as far as possible in satisfying the future orders of their own customers, and then stopping there. At the same time there are large wholesalers who are delivering one hundred per cent on the future orders they have taken, regardless of the cost involved in "piecing out" short lines after their own deliveries from the canners have been exhausted.

Mr. Frank Gorrell, secretary of the National Canners' Association, who has a broad and intimate view of the whole field of canned foods, confesses that he is obliged to take the rôle of a kill-joy when looking into the future of this favorite source of American food supply. First, he points to the fact that the surplus left over from former stocks on the shelves of most of the wholesalers and retailers has practically been wiped out by the pressure of two years of phenomenally acute demands.

"Take the tomato as an example, because it is one of the most popular foods put into a can," says Mr. Gorrell. "The average pack in this country is about fifteen million cases. In the spring of 1915 it rained for two months straight, and then for the next two months there was practically no rain at all, and the heat was intense. The pollen was washed out of the blooms by the rain, and fertilization and fruitage were, therefore, far below normal. Consequently we had just about one-half a normal crop to put into the cans. Of course these destructive weather conditions cut down every kind of crop destined for a cannery. This shortage was felt very keenly, especially after the prosperity resulting from war orders began to show itself on the table of the American wage earner. These two causes acted as a vacuum cleaner in removing all the reserve from warehouses and shelves of the wholesalers and the retailers.

"When the crop of 1916 came in it was at least two million cases short of the average. This was in spite of the fact that every effort was made on the part of the canner to secure an uncommonly large crop.

"In the course of the 1916 packing season a new element entered into the situation: Either because Canada had a short tomato crop, or else because Canadian buyers were sent to secure a supply of canned tomatoes for the armies of the Entente Allies, buyers from the Dominion appeared in our markets and soon sent the price of spot goods up to $1.35, when futures were bringing about eighty cents. For several weeks these Canadian buyers had a standing offer of $1.35 a dozen for canned tomatoes up in all our principal markets. Naturally this brought our own wholesalers into the competition, with the result that the price went as high as $1.45. Undoubtedly this foreign buying was for the fighting men in the trenches, because it is a matter of common knowledge that the tomato is a striking

Five Layers—Six Processes What It Means to You

NEPONSET Twin Shingles are made of five layers (six processes) pressed into a thick, solid, inseparable mass, impervious to rain, moisture, frost; undecaying and unaffected by sparks or embers. Similar materials in our famous Paroid Roofing are still giving good service on roofs laid 18 years ago when Paroid was new. A roof of these shingles, when laid, being several times as thick, should last as long as the house. But wear is not all. Here are other facts:

Beauty The colors, form, size and slate-surface of Neponset Twin Shingles make as handsome a roof as it is possible to find. It has the look of slate, laid in substantial looking large slabs. Its soft green and red colors harmonize with any surroundings or architectural plan. You can be sure of eye-satisfaction.

Fire-Resistance On a Neponset Twin Shingle roof sparks and flying embers burn out harmless. Most conflagrations spread from roof to roof. These shingles are a very great protection. They are approved by the National Board of Fire Underwriters.

Cost Notwithstanding their great beauty and durability, Neponset Twin Shingles belong in the class of economical roofings. Their uniform shape and double width halve cost of laying, because two shingles are really laid at a time; and also lessen cracks and nail holes.

NEPONSET TWIN SHINGLES

(Patent applied for)

There are three types of Neponset Shingles for every requirement and purse.

For factories, warehouses, barns, etc., similar material is furnished in rolls. It is Neponset PAROID Roofing—a roofing that for service has been unchallenged for 18 years.

There are three types of Neponset Roll Roofing, meeting every requirement and pocket book.

See the Neponset dealer in your town. He can supply you with just the product you need—made and guaranteed by us.

Send for Free Booklet, "Repairing and Building"

It tells about the different Neponset Building Products.
NEPONSET Built-up Roof for Industrial plants.
NEPONSET Waterproof Building Papers.
NEPONSET Wall Board for cottages, attics, ceilings, in place of laths and plaster.
Lumber and hardware dealers sell Neponset Products.

BIRD & SON (Established 1795) 263 Neponset St., East Walpole, Mass.
New York Chicago Washington Canadian Office and Plant: Hamilton, Ont.

Manufacturers of Neponset Floor Covering—sold by department and furniture stores everywhere. Also manufacturers of Special Waterproof Papers, Special Paper Boxes and Fibre Shipping Cases.

When Will You Displace Cruel, Time Wasting, Money Losing Horse Drawn Service and Use Smith Form-a-Truck?

Blinding storms, snow, icy streets and—down go the horses! One delay, one accident, may cause the loss of a valuable shipment or the death of a costly animal. And the money cost will be greater than you would pay for Smith Form-a-Truck.

Pays for Itself

Smith Form-a-Truck takes uncertainty out of hauling—takes high cost out of delivery—puts your hauling department on a profit-earning, time-saving basis that more than pays for your Smith Form-a-Truck equipment in the first few months of use.

Twice the Tonnage; 3 Times the Area

Smith Form-a-Truck hauling costs are lower than for any other form of service—accurate records show that one Smith, working the same number of hours as horses, will cover three times the area and haul twice the tonnage. Can you afford to delay installing this remarkable service in your delivery?

$8 Repairs in 4 Years

Smith Form-a-Truck service is reliable under every condition of work. The first Smith Form-a-Truck ever used has gone 20,000 miles—carried an average load of 2050 pounds and cost $8 for repairs in its four years of work. Where can you duplicate this record except in Smith Form-a-Truck itself?

Use These Power Plants

Smith Form-a-Truck combines with any Ford, Maxwell, Buick, Dodge Brothers, Chevrolet or Overland power plant. Makes a permanent, strongly built one-ton truck, fully guaranteed, with every feature of construction adding to endurance, long life, low cost and good speed of delivery.

Thousands of Users—352 Lines of Work

10,000 users of Smith Form-a-Truck in 352 lines of business all over the country are building new standards of motor truck efficiency and delivery economy in all their work. Equipments range from large fleets used by many of the biggest corporations to single units that are bringing a new idea of real service to small users.

$350

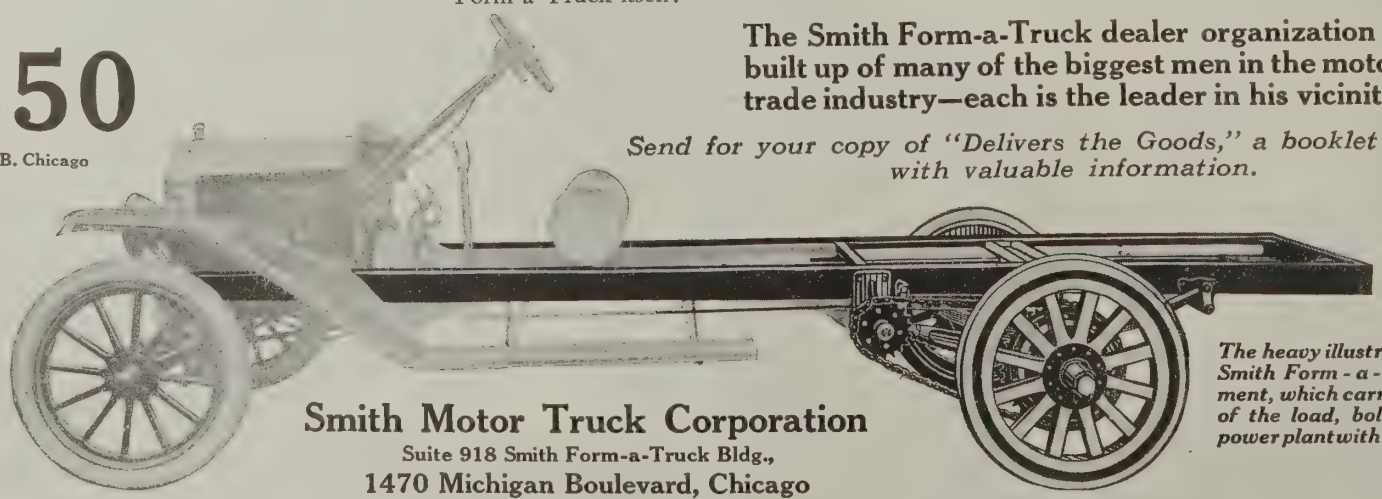
F. O. B. Chicago

The Smith Form-a-Truck dealer organization is built up of many of the biggest men in the motor trade industry—each is the leader in his vicinity.

Send for your copy of "Delivers the Goods," a booklet crammed with valuable information.

DEALERS

Our proposition to you is the biggest ever offered—get full details of our wonderful sales developing co-operation. Wire before it is too late.



The heavy illustration shows the Smith Form-a-Truck Attachment, which carries 90 per cent of the load, bolted to the car power plant with a vise-like grip.

discourager of scurvy, shingles and beriberi, and other disorders of a similar character that often assail men when they are herded together in large bodies.

"Of course these export orders were withdrawn after a few weeks; but they certainly put a stiff backbone into the market while they were here. Incidentally it should be remarked that the canners, or 'packers,' as we call them, who sold futures at the average price of eighty cents swapped dollars, and some of them were not even fortunate enough to get out on this basis.

"For one thing, the packer's labor and operating costs were considerably higher. Probably the average increase was not far from twenty-five per cent. Certainly in some localities where the canning industry is extensive the increase was much greater than this. His cans and his labels, like his labor, were decidedly more costly."

This authority declares that he has no consolation to offer the American housewife, so far as the future prices of canned foods are concerned. For cans in which to put the crop of 1917 the packer will be obliged to pay ten or twelve cents more a dozen.

Again, the agricultural situation, so far as the canner is concerned, is without precedent. Crops for canning are decidedly delicate and they also call for an immense amount of labor. From his 1916 experience the farmer knows full well that, so long as the European war continues, the wage of the hired hand is bound to bear a disagreeable resemblance to a king's ransom; and that in the most crucial moment of crop making and crop harvesting he is likely to find himself with insufficient help, even though he is willing to pay a reckless price for his labor.

With wheat at practically two dollars a bushel and with corn at close to a dollar a bushel, the farmer who has previously supplied canneries sees an easy way out of his difficulty through the growing of these crops, which are far less delicate and uncertain than those destined for the can. Especially in the case of wheat the amount of labor required would be extremely small compared with that of cultivating the same acreage of tomatoes, peas, beans or other canners' crops. Because high wheat and corn offer the farmer an easy way out, with less risk than he would run growing for the cannery, the packer sees plenty of trouble ahead, so far as securing anything like an adequate supply of raw materials is concerned.

"The future of the canning situation," comments Mr. Gorrell, "is about the most serious thing we have to consider to-day in the matter of foods. There is no question whatever that the price of all canned foods must be advanced very decidedly. There is no escape from this in view of the fact that it is morally certain that prices have increased fully thirty cents a dozen above 1915, and very likely more than that. Will the irresistible increase in cost put canned foods up to a price that will decrease consumption? That is a mighty big and vital question, and one which I cannot even attempt to answer."

The Increased Cost of Cans

"In this matter we are going to find ourselves in a situation where there are few precedents to serve as guideposts. Of course the answer to this question hinges on whether our wageworkers are going to continue to receive steady employment at high wages. The canner is now certain of only two things: That his costs are going to be immensely increased in 1917; and that when the labor reaction comes the question of his survival will depend very largely upon whether it catches him with a supply of goods on hand.

"I do not know of one canner, who is substantial and has a good standing, who is now willing to name a price at which he will furnish goods in the season of 1917. He looks at the price of tin plate—six dollars and a half as compared with twoxty for the season of 1915—reflects for a moment upon the increased cost of labor, of labels, and the inclination of growers for the canners to go into grain raising, and then concludes that he is going to feel his way very cautiously this year. Why, it is almost impossible for the canners to buy tin plate at all to-day. I am told that no tin-plate manufacturer will guarantee deliveries after July. Bessemer steel has gone up out of sight in price. Bessemer is the basis of tin plate, and not long ago it was obtainable at fifty dollars a ton, as against about a hundred and twenty now. Tin—the pure stuff—has kept pace with this advance; in fact, we are really at the mercy of the British Government for our tin and must take what it chooses to allow us to have.

"As for the price of canned foods for the immediate future, there is not a single crumb of comfort to offer the consumer. As a general rule, thus far the merchants—both wholesale and retail—have been holding the bag for him and have not passed the price increase over the counter to him. This is especially true of the retailers, and they should have the credit for it."

When it was suggested to this authority that the public was inclined to the opinion that there had been a large volume of speculation in canned foods, he answered:

"Undoubtedly there was some speculation in tomatoes in 1915; but I do not know of any speculative buying in 1916—and it would naturally have come to my knowledge if it had existed. It is important for the consumer to appreciate the fact that the attitude of the canner is naturally against speculation in his products. The reason for this is entirely simple—the speculator stimulates a false demand and confuses the market. Again, when it comes to selling he is a demoralizing factor. The selling of legitimate futures to wholesalers, who, in turn, sell futures to their customers, is absolutely necessary and the only practical system by which the demands of the consumer may be met."

The Part of the Speculator

"This, it seems to me, should not be called speculation. Speculation occurs when a man who has not a clientèle which depends upon him year after year for its supply of canned foods jumps into the market, buys a big lot of goods, and puts them away in a warehouse until he thinks the psychological moment for dumping them has come. Then, instead of dealing them out to an established trade, which will forward them along on their way to consumers, these goods hit the market with a dead weight; and the result of the blow is bad for the whole canned-food industry from start to finish. For this reason the canners are strongly opposed to the speculator. I do not know of a single high-class canner who will sell goods to a speculator if he knows it.

"I know of a man, for example, who decided a few years ago that tomatoes offered a good chance for speculation. He had plenty of capital and could pay cash for all he could buy. He received the jolt of his life when he took his money into the market and could not buy the big block of goods he was after. There is no 'Welcome' on the doormat of canned-food industry for the speculator; his confusion and unsettling influence are not wanted there."

Remember, the tomato has been taken merely as a type of all canned foods in the vegetable and fruit lines. The destructive weather conditions which cut down the tomato crop devastated all other crops intended for the cannery, and in some cases wrought a havoc greater than that which reduced the tomato production of 1916 to about fifty per cent.

There may be an optimistic consumer who is inclined to suggest that, as fish do not grow from the soil and are not influenced by either excessive drought or rainfall, the tin can containing salmon ought to afford a cheering exception to the general atmosphere of gloom. But the answer is that it does not. According to the authorities the salmon pack of 1916 was just about one-third short of what it should have been. The one ray of consolation in sight is that the big run of salmon is due this year. In other words, the sockeye salmon runs every four years, and the last run was in 1913.

The baked bean is one of the most popular of canned foods, and Nature was just as unkind to the bean crop in 1916 as to all the other cannery crops; and in addition to this there has been an immense exportation of dry beans to the fighting men in the trenches. The navy bean in its natural dry state is a very condensed and extremely portable food, and for this reason export demand has been almost insatiable; and beans normally bringing a few cents above two dollars in Michigan can now command about six dollars. One country grocer went behind his counter and brought out a quart sack of navy beans, took out a handful and, as he poured them back into the sack, remarked:

"At the present price they are something like pearls! At the beginning of the season I placed a future order with a wholesale

Nick and Pull!

See the point?

With a Blaisdell pencil just "nick" the narrow strip of paper between perforations and "pull." Your pencil is sharpened, quick as a wink and clean as a whistle. No time nor lead is wasted by whittling. No soiled hands nor littered floor.

And *such* pencil satisfaction!

The perfectly balanced, friendly "feel" of the Blaisdell makes writing a joy. With minimum pressure the Blaisdell writes clearly and wears slowly. Superior, gritless leads mean quicker, cleaner work, and happier workers.

"Nick" and "Pull" will work for you and pay you well for the privilege.

"Nick" and "Pull" are efficiency experts—they guarantee better pencil service at lower pencil cost. They are eliminating fuss and muss, and are saving money, for millions of Blaisdell users. *Why not you?*

Blaisdell Guarantees PENCIL Satisfaction

Are the world's largest pencil buyers all wrong?

"Nick" and "Pull" are cutting down pencil costs for practically every large business house in America. Here are a few large users of Blaisdells:

And What *Is* Good Tobacco?

That may be largely a matter of opinion, but how does this strike *you?*

A cool, slow-burning tobacco. A tobacco mild enough to be smoked pipeful after pipeful, yet not "tastelessly" mild. A tobacco smooth and *mellow.*

Well, *that* is VELVET.

To begin with, VELVET is the choicest tobacco from Kentucky. And pipe smokers of long standing agree that Kentucky tobacco has more all around good pipe smoking qualities than any other kind.

Kentucky tobacco reaches its full, mellow maturity only after two years' ageing.

VELVET is mellowed and matured *naturally* for not less than two years.

house for a large quantity of navy beans. The other day this quart sack came, with the information that it was my *pro rata* from the stock in the hands of the wholesale house with which my order had been placed."

The family milk bottle has by no means been immune from the fearsome attacks of the H. C. of L.; in fact, everything in the food line for which the cow is responsible has suffered a boost of price well calculated to make children shudder and household providers hide on the first of the month. With the ordinary milk of commerce selling for nine cents a quart in the city and eight cents in country towns, it is evident that something has happened in the cow stable as well as in the tomato, the potato, the wheat and the corn field, and on the cattle range.

The high cost of living for the cow is no mere figure of speech. The writer happens to live where spotted Holsteins are the prevailing landscape decorations and the menu of the milking herd is a standard and exciting topic of conversation. Just now a mention, for example, of the feeding grains is enough to drive a dairy farmer to strong language. Thirty-six dollars a ton! And when he buys he invariably remarks that it seems only yesterday when twenty-four dollars was a top price for this bovine breakfast food.

The Sensitive Milk Market

Brewers' grains that brought twenty-four dollars a ton in 1914 are now costing the farmers of Kane County, Illinois, about thirty-three; and wheat middlings have advanced at least nine dollars a ton since the war began. Certainly this should be sufficient to suggest why the nation's milk, butter and cheese bill has become swollen to its present sensational proportions. So far as diligent inquiry is able to reveal, there are no two dairy farmers in America who are agreed upon how much it costs to produce a quart of milk, with feed at the present prices. One farmer, who keeps careful records and is an able manager, is able to show by his books that it cost him, as a year's average, an invisible fraction of a penny less than five cents a quart to make milk when he bought brewers' grains for winter feeding at twenty-six dollars a ton.

Probably there is no other food necessity that responds more sensitively to a change in general financial and labor conditions than does milk. When times begin to tighten a very large body of consumers cut their allowance of milk in half, making a pint serve where they formerly used a quart. This is the statement of the largest milk retailing concern in America. This means that in the period of the fat pay envelope and the munitions orders from warring Europe the pressure of domestic demand has been beyond all precedent. Though the volume of this demand has been immense, it by no means represents all the pressure that has been put upon the American milk bottle. The call for canned milk for the fighting men in the trenches has been loud and insistent. The president of one company puts it this way:

"Right now there is a demand from Europe for half a million cases of condensed milk—most of it for army use. Exports have, of course, been very heavy."

One of the keenest observers of the American butter market is Mr. William Taber, of the New York Price Current, who makes this interesting comment:

"The butter industry of this country is constantly following the advice of Horace Greeley and the Star of Empire, and moving westward. To-day we get very little butter from New York State. Practically all of this supply comes from the Middle West and the Far West. Last week, for example, we had five carloads of butter here from California, and it was as good and golden as the state from which it came. Colorado, Idaho and Montana are fast joining the ranks of the commonwealths that contribute butter for Manhattan's bread. In 1915 forty-five new creameries were started in Montana.

"When the American wageworker is getting good money, and getting it regularly, he wants to see a good share of it on his table; and he is especially inclined to celebrate his prosperity by spreading yellow butter over his bread. Consequently in our present period of the loaded pay envelope the pressure of increased home consumption has been keenly felt in the butter market. This led to a most interesting development—the determination of how high a price we shall pay, at a time of high-tide prosperity, for good creamery butter.

"I have been watching this market for thirty-nine years and have never before known butter to reach forty-two cents and a half before the break came. Then it fell five cents in seven days. Literally hundreds of stores took out licenses to sell oleomargarine and butterine; and this sudden stampede to the standard of the butter substitutes signalized the fact that the point had been reached at which the consumer would not stand for another cent of increase. This breaking point in butter has often been determined before, but it has never been at so high a price as that recently found by the prosperity test of 1916.

"Before the outbreak of the European war we were importing Danish butter of wonderful quality. To-day England is coming to the United States for butter. For example, between the first of September and the latter part of December, 1916, we sent 235,000 tubs of butter, averaging sixty pounds to the tub, across the water from this port. Large quantities have also gone out from Boston, St. John's and Montreal. In short, we have exported more than 23,000,000 pounds of butter inside of three and a half months.

"On December 1, 1916, the volume of butter in fifty-four associated warehouses was 52,586,000 pounds, or more than nine million pounds short of the previous year's reserve on that date.

"Is it any wonder, in view of all these facts, that butter, in big lots, reached the record price of forty-two and a half cents? This seems almost unbelievable, however, when I recall a period at which, for ten consecutive weeks, the price of the finest creamery butter in this market stuck at fifteen cents a pound. This means that the farmer received only eleven or twelve cents a pound for his product. As a rule, the jobber to-day takes a toll of about two cents or two and a half cents a pound for his service and investment in distributing to the retailer, who, in turn, adds four or five cents for his labor and investment. These margins appear to me to be entirely reasonable."

The Sugar Situation

The whole story of the sugar situation may be suggested by the statement that Europe has made continued and heavy raids upon the American sugar barrel. Our average annual export of refined sugar for the years 1907 to 1913 inclusive was 31,910 short tons. In the calendar year 1914 the United States' export of refined sugar amounted to 195,205 tons; in 1915 it amounted to 481,669 tons; and in 1916 the Department of Commerce estimates that 800,000 tons of refined sugar were exported from this country. In 1907 the United States consumed 3,353,256 short tons of sugar and exported 11,662 tons—that is, we exported but 0.35 per cent of the amount of sugar we consumed. In 1916 the United States consumed 4,097,741 short tons and exported 800,000.

When we analyze the figures which show that in 1916 we exported twenty-five hundred per cent more sugar than the annual average of seven years prior to the outbreak of the war, we cannot fail to realize that this large increase in our exports must necessarily increase the price of sugar to the American consumer.

Before the outbreak of war in Europe about one-half the world's production of sugar, exclusive of India, was derived from beets. The world's crop of beet sugar is produced almost exclusively in Europe and the United States. The leading European countries engaged in the production of beet sugar are Germany, Russia, Austria Hungary, France, Belgium, Holland and Italy. Cut off by the war from 73.5 per cent of her annual sugar supply, England turned to the nearest available market New York City, to supply this deficit. Within a few days British buyers raised the world's market price of sugar three cents a pound and bought almost two hundred million pounds of raw and refined sugar.

As a consequence of this action on the part of Great Britain the New York wholesale price of sugar rose from $4.16 a hundredweight on July 30, 1914, to $7.35 a hundredweight on August twentieth, an increase of more than three cents a pound in three weeks. Early in October, however, England began to withdraw from the buying market and the wholesale price declined until, in December, it dropped to $4.75 a hundredweight—only a little higher than the average normal price.

We Have 95 Per Cent of the Business

Innovations come in the Speedometer business—and innovations go.

And through the haze of new ideas, new schemes, and new failures, the wonderful success of the Stewart Speedometer is even more conspicuous than ever.

Today the Stewart Speedometer is used as standard equipment by over 95% of the car manufacturers. And this—in spite of the fact that the Stewart is the most expensive speedometer built.

No other automobile accessory has ever received so unanimous an endorsement.

Motorists have learned the value of having the best equipment on their cars. They have found it worth while to be protected by Stewart workmanship, Stewart quality and Stewart nation-wide service.

Take the Stewart Vacuum System—*the* system that insures a smooth, positive flow of gas to the carburetor. It is now used on over 70% of all makes of cars and will soon be on every car built.

The Stewart Tire Pump is also standard equipment on many well known cars. And thousands are sold each week to individual car owners. It does away with that laborious, back-breaking work of pumping by hand, and makes it easy to keep tires properly inflated.

Stewart Warning Signals—motor-driven or hand-operated—are the best known and most used signals on the market. They are absolutely dependable—always ready to warn with loud piercing commands. They have no superiors in finish and appearance.

The Stewart V-Ray Spark Plug—the newest Stewart Product—is already in great demand. Its four sparking points mean four times longer life and a big, fat spark under conditions that would put ordinary plugs completely out of business.

The Stewart Speedometer for Fords is the most popular of the many Ford accessories now built. It costs $10—or mounted in a handsome special cowlboard of enameled steel—$11.25.

Such successes cannot be excelled in any line of business. Each Stewart product has won instant popularity on its own merits.

Insist upon having Stewart Products on the next car you buy.

Stewart Products are for sale by leading jobbers, accessory dealers and garages everywhere.

Stewart-Warner Speedometer Corporation, Chicago, U. S. A.

Quality Without Extravagance

LIKE two railroad trains—both all-steel, modern, all-Pullman, running over the same roadbed, the same rails, under the same safety and efficiency. The National Twelve is an extra fare train with slight advantage in speed. A difference in power is there, but not enough to affect the popularity of either. The Six is a highly developed, wonderfully quiet, flexible, smooth riding car of sumptuous accommodations.

The Twelve, if you want a greater volume of power and the fun of taking the "extra-fare-Pullman."

Equal in style—same wheel base—same wonderful new bodies—same endurance—same easy riding—both typical National quality—in fact, identical throughout with exception of the motors.

Six Motor—303 cubic inches, 56 horsepower. Twelve Motor—370 cubic inches, 77 horsepower. Both cars 128-inch wheelbase.

National Highway Sixes and Twelves will out-perform and out-demonstrate any other team of motors on the market today.

IT is a *permanent* pleasure to spend the cost price of a National "Highway." After the first flush of having the new car delivered to your home, there are no after-regrets; no doubt about the wisdom of your choice; no wondering if you suffer in comparison to your motoring friends.

Mother and daughter cannot ask for more beauty, luxury or social prestige; the son cannot ask for more power, speed and thoroughbredness; while for father who pays, it is endless satisfaction not to have over-spent. Even more important is the conviction that grows the longer he drives his National that it was cash-wisdom not to *under-spend.*

Furnished in Touring Car, Four Passenger Roadster, Phaeton, Coupé and Touring Sedan, in both Six and Twelve Cylinder Models

THE HOUSE OF CRAIGENSIDE

(Continued from Page 25)

We were off, plying the oars like madmen. A choppy sea swelled under us; we were soon wet through. From time to time Sturgis turned to catch again the direction of the chase.

"He's turning the point," he said; "going beyond the dunes. The tide will be horsing it again in half an hour. Now—take purchase."

Again we bent to it, and after much buffeting rounded the Horn—so we referred to the outermost dune.

"There he is," said Sturgis, standing up in the boat. "His engine has stopped—he is nearly aground."

The Fra Diavolo had blown broadside toward the dunes.

"Why, he's not in her!" I shouted.

"Have your gun handy," returned Sturgis. "He knows he is pursued. He may be crouching in the bottom. Look out for him—I believe he is deadlier than a king cobra."

I drew out my revolver—a present from the county. Sturgis took a few more strokes with the oars, and in loud tones I called upon Mr. James Smith to surrender his person.

There was no answer from the Fra Diavolo. If he were still aboard he must be lying flat in the bottom of her. Again I shouted to him that he must give himself up. But on the heels of that Sturgis struck his oar against some half-submerged object in the water. He cried out, breathlessly, and I had an instant's vision of the thing as it slid off the blade of the oar. It was the head of Mr. James Smith's scarlet puppet.

Sturgis threw down his oars and brought the thing in dripping, with a piece of kelp clinging to it.

"Fool—fool that I was," cried Sturgis, staring at that hideous chalk-white face, which he clutched in both hands. "Why didn't I examine this mechanism before we let him take it! But who could have foreseen that he would slip away like this? Look for the rest of the body."

We looked in vain. The thing was neither on the surface of the water nor in the Fra Diavolo. That boat we found empty; more, we found the flywheel gone, unshipped and flung overboard, of course.

"Sunk with the manikin," muttered Sturgis in a gloomy voice. "We shall never get to the bottom of this now."

"The man has drowned himself!" I cried, astonished.

"I don't know," returned the boatman. He pointed to the dunes in a terror-stricken way. "He may have gone ashore. Be quick! I am in a terrible predicament for certain."

The boatman was as white as the head which he still held twisted in his nervous fingers. He looked hauntedly at the empty sea, at the great dunes shining under the moon, at the motor boat rolling in the trough of the sea.

"Put her nose in the sand," he cried.

We grounded a moment later, towing the Fra Diavolo, and shoved both boats high up on the beach. The tide was at the slack, and there was a wide margin of wet sand on which the surf pounded and lashed out traces of footsteps in a twinkling. The dry sand beyond was so soft as not to take a definite imprint. Nevertheless, on impulse we began to run in opposite directions along the shore; but we saw no track of our quarry, and presently came together again.

The wind was coming in heavier and heavier gusts, with a great thrashing sound among the sea goldenrod as it came breezing through the lowermost ravine. Particles of sand were driven into our faces with stinging force. Wrathful by reason of this, we loped back and forth, like hounds fairly off the scent.

"Let us strike inland," panted Sturgis. "That is a chance at least, and better than standing here like fools."

"As you please," I said. "You seem to have made a great fool of me already."

"It is a long story," he said over his shoulder, beginning to run.

"And a tall fool, no doubt," I said viciously, plowing up the sand in his wake.

We ran first up a great seaward slope of marvelously sifted sand, quite free of shell particles and gravel and very yielding to the foot. Reaching the summit, we saw far to the left the white columns of the Craigenside house, and the rough blue surface of the river, flecked with white caps under a sky perfectly clear and at the same time stormy with wind. At our feet the leading features of the dunes lay spread, obscured and made a whirling ground for miniature sandspouts which moved off the tossing crests in rapid succession. The lines of the dunes, however, when we could see them plainly between these assaults of the sand, had the distinctness to be expected of their barren bulk, and so the shadows cast by them were sharp and black and of the weirdest possible design. From this vantage point those sphinxlike eminences seemed to have been deluged in a sea of ink. With their long ravines, odd distorted shoulders and fissurelike cavities, they lay at our feet like the shining ghost of Arizona bad lands.

"The jig is up," Sturgis said despairingly. "Even if he came ashore, we two shall never find him here alone."

He pointed a shaking finger at the three major folds or convolutions in the sandhills, where lone vegetation had found sufficient holdfast to thrive. In these folds three separate forests had established themselves, growths of pine, poplar, birch and scrub oak, which had thrust down their roots here through many generations with the automatic tenacity of things doomed to periodic extinction. These trees, where they were still normally above the sand tide, stood in shallow bogs or lagoons. The water glimmered among their dark boles scarcely ever ruffled, for they served as a windbreak; and the presence of this water anchored to some extent the sand below it. But nothing could permanently check the onward march of the dunes. The sand action had before now made itself felt on woods as thick as these and destroyed children of its own nourishing, throttled them by rising gradually so as to girdle them high up the trunk and rot the bark away. The pine needles to be seen here were for the most part red, the cones black and shriveled; scarcely anywhere was healthy growth to be observed. The prematurely devastated boughs served as vast rookeries for herons, cranes and crows, which were dislodged in raucous thousands at the first step of the intruder.

The trees were in three typical situations: Those still rising to a good height out of the protective film of water; those which by the resistless swelling of the sand had been almost wholly buried, their blasted tips alone remaining to show the process of suffocation which had gone on below; and finally, those which had emerged, in places where the wave had passed, revealing, as the bones of a once-living vegetation, regiments of ghastly rotted stumps with foreshortened limbs crazily gesticulating. The first would still afford a very tolerable shelter, and nothing but an energetic posse would suffice to run to cover any quarry which had sought concealment amid the damp glooms of its complaining rookeries.

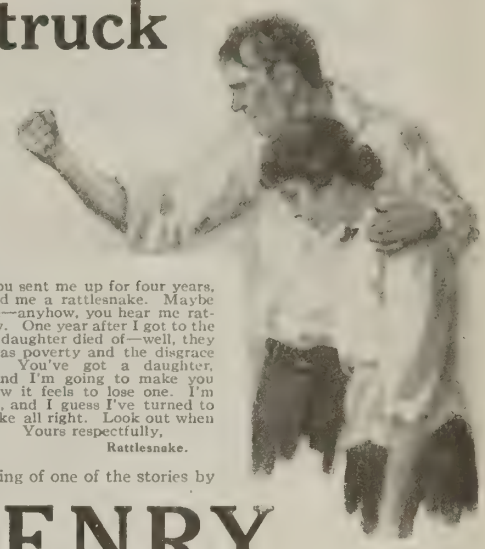
"He has slipped through our fingers pretty handily," said Sturgis, pausing with something like a sob in his throat. "I am at my wit's end, I tell you. I don't know which way to turn. Going it blind, we are certain to betray ourselves to him."

"Still, there is no help for that," I said. "Suppose we take a line for the lighthouse, and trust to blundering on him in one of these hollows."

My extraordinary boatman groaned "As you say," and began to run forward at a breakneck pace, through a tangle of straggling vines, now crashing through dense growths of sea goldenrod, and again running on sheltered white flanks of the purest sand without vegetable features of any sort. Here the impress of the wind was plainly discernible; its revelries were stamped in flowing lines expressive of untrammeled speed, like mænadic lines of streaming hair. In places, too, the action of the fierce rains, which from time to time drove across the dunes, was visible. These rains, rushing in freshets from the tops of the dunes, had sifted out the sands, and evolved long bronze striations running toward the pools which lay between them. In calm weather these pools lay like flashing mirrors; the sand, dark and damp at their edges, by insensible shadings growing white near the rim of the bowl which contained them. At each instant I expected we were to come within striking distance of that sinister figure, brought to bay at last; but always I was disappointed.

"It's no good," said Sturgis, pulling up at length. "He must have drowned himself after all. And yet—I wish I could be sure of that. I tell you, Weymouth, I am

When the Rattlesnake Struck



Judge!
When you sent me up for four years, you called me a rattlesnake. Maybe I am one—anyhow, you hear me rattling now. One year after I got to the pen, my daughter died of—well, they said it was poverty and the disgrace together. You've got a daughter, Judge, and I'm going to make you know how it feels to lose one. I'm free now, and I guess I've turned to rattlesnake all right. Look out when I strike. Yours respectfully,
Rattlesnake.

This is the beginning of one of the stories by

O. HENRY

For years now you have read of O. Henry—you have read these advertisements and thought that some day you would own a set for yourself. And you have put off the sending from month to month. The time for that is gone. **Now—today**—you must order your set of O. Henry to get the low price and the Kipling FREE.

So great is the popularity of O. Henry—so enormous is the demand for his books—that we should like for all time to offer you the sets at the present low price. But we can't. It costs forty per cent. more to make the sets now than it did. Paper costs more—ink costs more; binding costs more. So the price has to go up. But to give you one more chance to get the present price, we have put off the raise in price till March 5th. **That is the last day. Send the coupon now and be in time. Never again will you get a set of O. Henry at the present price.**

MARCH 5th Last Day of Low Price on O. HENRY

"These are O. Henry days. With so much else that should absorb us—with Emperors dying almost unnoticed, with twenty million men struggling on a dozen 'fronts,' with the cost of living gripping at our vitals, and with the mad diversion of the New Luxury to hold us back from thinking of anything at all—we are all thinking and talking of the man who called himself O. Henry. Our neglected author is dead in his grave, with scarcely a publisher to walk behind his hearse, and lo! six years after his death he is bursting upon us afresh, as it were, with all the splendor of a rising genius."—*Stephen Leacock.*

Don't get him to read him once—you'll read him a hundred times—and find him each time as fresh and unexpected as at the first. He puts his finger on the pulse-strings of your heart and plays on them to your delight and your surprise. That is the mystery of O. Henry—his power beyond understanding.

KIPLING 6 Volumes 179 Stories FREE

Before the war started Kipling easily held place as the first of living writers. Now we know him to be greater than ever. For in his pages is the very spirit of war. Not only the spirit of English war, but the spirit of all war regardless of nation or flag—the lust of fight, the grimness of death, and the beating heart of courage.

451 Short Stories—2 Long Novels

O. HENRY 12 volumes bound in green silk cloth and gold. Gold tops; illustrated; 274 complete stories; one long novel.

KIPLING 6 volumes; 179 stories and poems; one long novel; red silk; gold tops.

Only a Few Days Left

Up—Up—up—goes the sale of O. Henry—higher and higher every day. 1,600,000 in the United States alone. How many thousands in Australia, France, England, Germany, Africa and Asia, we cannot tell. And you can have the books on approval, at the low price—with Kipling free.

This is your last chance to get O. Henry at the low price. Don't miss it. Remember one day's delay may make you too late. Be sure your coupon is mailed on or before March 5th. And the best way to make sure is to mail this coupon right now.

Don't wait. Send the coupon now.

Safety for Over Half a Billion Passengers

PENNSYLVANIA SYSTEM

The Steel Car Route

For years the Pennsylvania Railroad System has been conducting an energetic campaign of safety.

Only all-steel cars have been built. Efficiency tests have been established; safety-first expositions have been held for the education and instruction of trainmen; safety committees have been organized; and over 120,000 safety text-books have been distributed to employees.

It is the logical result of this safety movement that during the past three years over half a billion passengers—553,890,063—more than five times the total population of the United States—have been carried over the lines of the Pennsylvania Railroad System without the loss of the life of a single passenger in a train accident. On the Pennsylvania Railroad east of Pittsburgh a perfect record for four years has been made, during which a total of 616,626,957 passengers were safely carried.

With the continued co-operation of our faithful employees, to whom great credit is due, we hope to maintain the record we have established.

PENNSYLVANIA RAILROAD

The Standard Railroad of the World

Be sure to get the genuine. Always in glass bottles; red and gold paper cartons.

NEWSKIN CO., NEW YORK

in an ugly fix; and you, too, for that matter, by my fault."

The creaking limbs of a choked pine threw down shadows on our faces; our own shadows went streaming out across a patch of billowing whiteness at our feet.

He looked about him warily. We were in an angle sheltered from the wind, but the sand still hissed on the crests of dunes and rose in tawny plumes against the pale night sky.

"Well," I said, "what is this mystery? We have evidently hunted a man to his death; and if he has drowned himself, that is evidence enough of guilt. But in God's name, then, in what did this guilt consist? Why did you let him go, only to close with him again? The thing he threw in the river was certainly of straw."

"Was it so certainly?" said Sturgis.

He passed a hand across his face. We stood motionless, confronting each other, and the moon floating over those dunes seemed as large as a washtub.

"Was there nothing strange about this business?" he demanded, facing me with his legs well apart and his arms folded. Our situation by night among those rival dunes made his low voice portentous. His smoky eyes were full of smoldering blue fire. The student, the dreamer, was at last awake. He appeared shaken to the heart and yet absolutely certain of himself.

"The agitation of that girl—was this nothing? I turned several times in my seat to watch her. You were beside her. Had she the look of a woman watching a thing of straw?"

I sank my fingers in his shoulder.

"Do you know," I cried, "the words that fell from her lips when the lid to that infernal box was removed? 'It is he!'"

"'It is he!'" breathed Sturgis exultantly. "This makes for certainty. 'It is he!' Who, we do not know; but at any rate a living man. She saw in that ghastly countenance the features she instinctively recognized—the partner of Smith; and we know that she thought herself in deadly peril from that fellow."

"But—man alive—the puppet! You have fished it out yourself. What remained for us to do? What possible alternative——"

"I tell you frankly I do not know," said Sturgis in a somber voice. "We ought to have examined the mechanism, of course. We might have ascertained in a few minutes whether that thing could be worked—I mean, whether it was even plausible. It may have had no works at all inside it. I was naturally in a hurry."

He hit his forehead sharply with the back of his hand.

"There is some deeper and darker solution to this business than we have any notion of as yet. Deep below deep. It is conceived with the infernal cunning and with the deep simplicity of a mind essentially Oriental in its nature—a man that lays hold of the fantastic to mystify and to befog the issue. As soon as I saw that this chap to-night was our ornithologist, and no other, I was on my guard at once. I watched the face of that manikin like a hawk, because I knew that under the influence of hypnotic suggestion the features would be absolutely rigid. You might have thrown a double fistful of cayenne into the thing's face, and, assuming it to have been a man in a trance, it would not have so much as blinked."

"And yet ——"

"Wait!" said Sturgis. "My fascination got the better of me, do you see? when I saw the deadly interest that dark woman behind me took in the performance. It seemed to me that we had something here beyond common—I couldn't guess what. Now I had been playing with a little penknife. On impulse—— Well, as the thing passed me in the aisle I jabbed it in the leg."

I gasped.

"You jabbed it? With what result?"

"Not a quiver. Not the slightest expression of pain."

"You see? Damn it ——"

"But when I drew back the knife *there was blood on the blade.*"

He held out to me a small penknife with the blade open. There was a dark stain on the tip. Ice was in my veins then. I stared stupidly at my companion.

"Blood? Blood? Then it was a man?"

"What were the words of the girl? She cried out 'It is he!'" said Sturgis. "Now I come to another point: That girl, you notice, didn't follow you to your confounded lunch counter. She followed Fuller and me in her canoe. I was not aware of this until just as I was pulling that scarlet mockery out of the water at Hodder's Point. She came out of shadow like a flash, and cried, 'Is he dead, then?' And I never want to hear more despair in any human voice. 'Dead?' I said to her. 'Yes, dead enough. It's made of straw.' I held it out to her, and I tell you she was as genuinely amazed as any of us. Up to this point she had known something—she had the advantage of us; but this puppet threw her off the scent entirely. She gave me a wild sort of stare, and said 'Why, so it is.' Then she turned the head of the canoe toward the Craigensides' pier."

We stared at one another.

"I'm a scared man," said Sturgis in a trembling voice. "I ought to have spoken of this. I ought to have warned you not to let him go."

"You had," I rejoined grimly.

"But I wanted to see," pleaded Sturgis, "where he was going—what he would do if he thought the shadow of suspicion lifted. It didn't seem possible that he could streak out of our clutch like that. I never gave that motor boat a thought."

"Well, the horse is out of the stable," I said. "And here's another thing: Having arrested him in the name of the Commonwealth, I had no right to let him go. You understand that, I suppose. It would take a court order to free him legally. I shall be facing a serious charge when this transaction comes to light."

"Still, he must have drowned himself."

I came closer.

"Sturgis, do you think for one instant that that fat jellyfish has thrown himself overboard?"

"I do not," he replied, lighting a cigarette with shaking hand.

"Nor I."

"Then he must be here."

"We have failed to find him."

"Perhaps he was met off the horn in another boat."

"A submarine then. The coast was clear when we came on the scene. There hadn't been time for the fastest power boat to disappear."

Sturgis looked toward the jagged cliffs beyond the dunes.

"He has dodged us through these sand cracks," he said. "And now I suppose we have got to set half the county on him to root him out."

His eyes fell on a black bulk rising against the white line of the dune.

"What is that thing?" he whispered.

"The tomb of the Craigensides."

"Ah! That old devil in his tomb may be behind all this. I bet you this affair had that old ghost anchorage fairly at the bottom of it."

He glared at the house, whose white pediment rose over the shoulder of the dune. I turned my head in time to see that flock of fat gulls pass over the roof of the house, shrieking. I thought it strange that they should fly by night, and I fancied I saw at their head that grisly bird with the loop of black cord hanging from its neck.

That crimson knife end was too much for self-constituted detectives to carry on their consciences. On the following morning we made a clean breast of the matter to the authorities at Dockport; and in the afternoon a slim, clean-shaven little man presented himself, with a card from the county attorney. The name of our detective was Hawley.

"Young men," he said, twinkling, "I don't mind telling you that you are in bad odor at headquarters on account of this delay in notification. You let the fellow slip, I understand, under the Cat and Mouse Act—intended to nab him right away again, of course."

"Of course," assented Sturgis with a gloomy brow.

"Excess of zeal—what? Excess of zeal."

Sturgis began to explain, but our gentleman waved his hand.

"The facts," he said; "first and before everything, the facts. Have a conscience for the facts."

So we told him the facts. As he listened he tweaked his nose from time to time and tapped pencil on pad.

"Have you grappled for the body of the supposed victim?"

We had, with the first tide that served.

"Without success?"

"Without the slightest."

"And no further trace of this curious straw figure, I suppose?"

"Not any. The flywheel was probably securely knotted to it."

That Film on Teeth

The Source of All Tooth Troubles

By William M. Ruthrauff, A. B., A. M.

All Statements Approved by High Dental Authorities

Why Teeth Discolor and Decay

Why Germs Breed Around Them

What you already know is this: Despite all your brushing, your teeth still discolor. Tartar forms on them, so they need frequent dental cleaning. And some teeth still decay.

You know that what you do, and what you use, fail to really keep teeth clean. The old methods don't protect you. So there must be something wrong.

The trouble lies in a slimy, ever-present film which you feel with your tongue.

That film is where the stains lodge, spoiling the teeth's whiteness. That film is what hardens into tartar.

That film is what holds food particles. There they shortly ferment and form acid—the cause of all tooth decay.

And that film is where the germs breed—the germs which cause countless troubles, including pyorrhea.

Thus the chief object of teeth-cleaning is to keep rid of that film. And that is where old methods fail.

Feel your teeth with your tongue, however often you brush them, and you find that film still there. Every discolorment proves it—every evidence of tartar. But between the teeth and in crevices is where it accumulates most.

It is now known that alkali hardens it. So many applications do more harm than good.

And we can't combat the acids or destroy the germs while that film remains to protect them.

That is why many methods of teeth-cleaning fail. They remove only the loose débris. That is important, but water alone will do that. The great need of a dentifrice is to attack that film. For, day and night, harmful things are being held by that film to the teeth.

That, in all probability, is your situation unless your dentist has already told you of Pepsodent. You rely for your protection on periodic dental cleaning. But Pepsodent now assures you clean, safe teeth—teeth that long stay white.

For now science has solved this film problem. And this is to ask that you prove it by a one-week's pleasant test.

Now There's a Way To End It

To Keep Teeth Really Clean

Three years ago a way was found to keep the teeth free from this film. Those three years have been spent by dentists in proving the fact beyond question.

There have been many false theories of teeth-cleaning. Many ways which seemed good have proved worthless—in fact, are now known to be harmful. So we waited three years to let dental authorities prove that this method was right.

The film is albuminous matter. That fact suggested pepsin, which is albumin's digestant. Pepsin is known to digest albumin, and that means its dissolution.

But pepsin is inert until activated. And the activating agents are acid. The usual acid is destructive to the teeth. So pepsin for long seemed barred.

Then an acid salt was found—a neutralized acid—which does not harm the teeth. In fact, the teeth themselves are largely formed from it. This acid salt will activate pepsin. It is this discovery which has solved the problem of that film.

Pepsodent combines pepsin with this activating agent. The purpose is to dissolve the film so that brushing will remove it. Five governments already, by granting patents on this combination, have recognized its newness and efficiency.

Pepsodent is now supplanting all former methods of teeth-cleaning. It has been subjected to thousands of clinical tests. Its results have been proved beyond question.

It has won the endorsement of authorities who are recognized all over America. And countless dentists in their practice have proved that it does what they seek.

Now, on their advice, we are telling the facts to you.

This is to urge you to make a one-week test. The coupon below will bring you Pepsodent for it. See what it means to you.

Note how clean your teeth feel, even after one application. Note how quickly the slimy film disappears, how your teeth grow whiter. And how they soon feel as they feel after a thorough dental cleaning.

Mark how pleasant its use is, how unique and complete its effects. One week will forever convince you. You will never return to any method which leaves your teeth coated with film. Cut out the coupon now.

3,000,000 LETTERS

Butterick receives 3,000,000 letters a year.

That means 10,000 letters every working day. This very hour a thousand people are writing to Butterick.

This is our American mail alone and does not take into account our vast foreign correspondence handled by our branch establishments in foreign capitals.

Thousands of letters reach us each month from the readers of our three women's publications—The Delineator, The Woman's Magazine and The Designer. They ask advice on all the important problems of the home. Each letter receives a personal reply from one of the expert editors in charge of the fifty practical departments of these magazines.

The confidence of our readers and the variety of subjects on which they seek our help is impressive evidence of the influence of Butterick magazines with the women of a million and a half American homes.

THE DESIGNER | THE Delineator | THE WOMANS MAGAZINE

(Continued from Page 94)

"And you had not taken the precaution of having a look at its inwards?"

We shook our heads sheepishly.

"The fact is," I burst out, "I was so taken by surprise —— Well, I was convinced out of hand. Who could have thought ——"

"Yes, sufficiently bizarre," said our friend. "Still, your friend with his bloody knife point—his knowledge might have warned him, I should think."

"Oh, I'm a fake detective, I grant you," said Sturgis bitterly. "And yet, look here: I was convinced that he had killed a living man. I was as sure of it as of anything in his life. But what was the evidence? We had no body, and what is more, we might not succeed in finding one. The tide horses out, just there, at an incredible rate; if that box had been adjusted to float just submerged, it might have been carried out to sea with its occupant. To have ripped open that puppet would have been to put the man upon his guard. To let him go off with it unsuspected might lead him into some betraying action. If it hadn't been for that cursed motor boat ——"

Hawley nodded sympathetically.

"As it stands then," he said, "everything that gave rise to this excitement has vanished like the mist of morning: the criminal and his victim, and all his apparatus—in short, the crime itself."

"Do not forget this," said Sturgis grimly, advancing his knife with the blade open.

"No, certainly not," said Hawley. He extended his hand for it.

"We ought first to submit that to an analytical chemist, to see if it is in truth blood. This puppet may have had some animating fluid in its veins, for all we know."

"But, then," cried Sturgis, "do not forget the strange behavior of the girl."

"Ah, the little Craigenside," said Hawley. "No, I do not forget her. We shall talk with her presently."

"It's the worst mystery in my young life," groaned Sturgis.

"Come, come," said the detective cheerily, "you are not afraid of mystery, I hope. Everything in life propounds a mystery. Man, a dark mystery. Woman, a delicious mystery. Without mystery, by heaven, his life would be insupportable."

"Really?" muttered Sturgis. The philosopher in him had been touched.

"It would be madness," said Hawley calmly. "Look over your heads. The sanity of the blue sky itself resides in its infinity—which is mysterious. That is why man establishes the headquarters of the soul here. It's the concrete things we stumble over that drive us mad."

The little detective's eyes blazed like blue crystals.

"You know what it is to be held in suspense by a mystery story," he snapped out, and you know how you drop back to earth when the solution comes. Of course. In the nature of things the solution is inferior to the mystery itself. The beginning savors best. Put it another way. Two and two make four. You know it and I know it; but do we get any pleasure out of it? Not I, by your leave. What we don't know—that's what interests, that's what captivates. Yes, yes, you will see that the solution of the very business in hand, for example, will not be in any degree comparable to the present mystery, in the hold it has over our mind. I prophesy that it simply won't measure up at all. It never does. Nothing competes with mystery itself, least of all the solution."

"In that case," said Sturgis, "the bitter moment for the detective is when he puts his hand on the shoulder of the criminal."

The little man laughed.

"Just after that," he agreed. "Give him a pitiful margin of triumph. But wait, have we in this instance even so much as the shoulder of a criminal?"

"You think then he may have drowned himself?"

"My friend, I do not have thoughts in advance of an occasion for them. I do not say that he drowned himself—no. Before I consider the criminal I consider the victim. And before I consider the victim I must know that there is a victim. Now it seems to me that there is one very simple method of ascertaining the true quality of this Man or Mechanism: We ought to consult the theatrical agent who sent you the bet."

"Dennison?"

"Precisely."

The little man drew his watch.

"And so I wired him to come at once. If I do not mistake that was the whistle of the train I heard a few minutes back. Mr. Dennison is an old friend of mine, and I think in this instance will humor me. Why, yes, here he comes now."

We were joined by a burly, keen-faced man, dressed in a heavy sack suit and smoking a malodorous cigar.

"In trouble again, I see, John," he said, shaking Hawley by the hand.

"Your testimony may be the beginning of it," said Hawley placidly.

But strangely enough Dennison, on strict questioning, proved to be no better equipped to testify than any member of the audience on that evening. He had booked the act after a very partial exhibition on his private stage. He had seen such acts before—they were always played by living men; and he had assumed that such was the case here. Yet he had to admit that he had had no speech with that scarlet figurine; and at the conclusion of the act Smith had fitted the lid on the box and caused the thing to be conveyed away.

"I thought that was a little strange," said Dennison; "but I was up to my neck in business, and it dropped out of my mind."

"Do you think it possible," Hawley asked, "that a mechanism could be constructed to play such a part?"

"Have a heart, Harry," said his old friend derisively. "I've been in the show business thirty years, and I've never seen one yet."

"Your view is, then, that this was a man, thrown into a trance for the purposes of the act."

"Most assuredly."

"But you offer no proof that it was a man."

"No more than horse sense affords," said Dennison.

He could not say where the man Smith had come from or whether he had had other theatrical connections. This agency appeared to have been the strange man's one point of contact with the world of affairs. Here for an instant his shadowy activities had taken definite shape. He had applied for work, had signed a contract—we saw his signature written in an even, flowing hand; and this had been the last that Dennison had seen of him.

"I kept him making long jumps," he explained. "He was a first-class attraction everywhere."

This was all that Dennison could say, beyond giving the officers the names of the cities and houses at which James Smith had played. One after another we got these houses on the long-distance telephone, but always with the same result. The man Smith had had a whim that not even his associates should know the true inwardness of his act; and his assistant, if indeed a living assistant, had in no case been seen apart from his act. It was general opinion that the unfortunate man must have spent most of his time lying in a trance on the rose-colored cushions of that hideous casket.

Hawley then ordered the sea to be dragged at low tide at the place where Sturgis and I had overtaken the Fra Diavolo. It was always possible that Mr. James Smith had drowned himself; but certain massive doubts of the correctness of this position persisted. If he had drowned himself why, for one thing, had he taken the trouble to sink his betraying manikin with a weight attached to it? A man hunted to his death would not naturally be thinking of such mystifying trifles. Why, if he meant to make away with himself, should he care what evidences of his crime he left behind him? He certainly could not expect to be tried in another world on the evidence which men might produce in this. Again, if he had drowned himself at the spot where we had found the Fra Diavolo the tide, which then was horsing in, would almost certainly have cast him up. Yet we waited in vain for him or any part of him.

"No, no," said Hawley; "the chances are that he hid among the dunes and has since made his escape. There may be something to be picked up across the river, however, even now. Let us repair to the Place of Pirates."

The girl received us on the porch, where introductions were made.

"There are a few questions," said Hawley smoothly, "which I should like to put to you, Miss Craigenside, with regard to the odd disappearance of a—mechanism from the theater dressing room at Silver Glade."

"Why should you come to me?" said the girl almost sullenly.

Hawley raised his brows.

"We must come to all whose testimony might have a bearing on the case," he said.

How I Raised My Earnings from $30 to $1000 a week

The Story of a Young Man's Remarkable Rise, as Told by Himself.

THREE years ago I was earning $30 per week. With a wife and two children to support it was a constant struggle to make both ends meet. We saved very little, and that only by sacrificing things we really needed. Today my earnings average a thousand dollars weekly. I own two automobiles. My children go to private schools. I have just purchased, for cash, a $25,000 home. I go hunting, fishing, motoring, traveling, whenever I care to, and I do less work than ever before.

What I have done, anyone can do—for I am only an average man. I have never gone to college, my education is limited, and I am not "brilliant" by any means. I personally know at least a hundred men who are better business men than I, who are better educated, who are better informed on hundreds of subjects, and who have much better ideas than I ever had. Yet not one of them approaches my earnings. I mention this merely to show that earning capacity is not governed by the extent of a man's education and to convince my readers that there is only *one* reason for my success—a reason I will give herein.

One day, a few years ago, I began to "take stock" of myself. I found that, like most other men, I had energy, ambition, determination. Yet in spite of these assets, for some reason or other I drifted along without getting anywhere. My lack of education bothered me, and I had thought seriously of making further sacrifices in order to better equip myself to earn more. Then I read somewhere that but few *millionaires* ever went to college. Edison, Rockefeller, Hill, Schwab, Carnegie—not one of them had any more schooling than I had.

One day something happened that woke me up to what was wrong with me. It was necessary for me to make a decision on a matter which was of no great consequence. I knew in my heart what was the right thing to do, but something held me back. I said one thing, then another; I decided one way, then another. I couldn't for the life of me make the decision I knew was right.

I lay awake most of that night thinking about the matter—not because it was of any great importance in itself, but because I was beginning to discover myself. Along towards dawn I resolved to try an experiment. I decided to cultivate my will power, believing that if I did this I would not hesitate about making decisions—that when I had an idea I would have sufficient confidence in myself to put it "over"—that I would not be "afraid" of myself or of things or of others. I felt that if I could smash my ideas across I would soon make my presence felt. I knew that heretofore I had always begged for success—had always stood, hat in hand, depending on others to "give" me the things I desired. In short, I was controlled by the will of others. Henceforth, I determined to have a strong will of my own—*to demand and command what I wanted.*

But how shall I begin? What shall I do first? It was easy enough for me to determine to do things—I had "determined" many times before. But this was a question of will power, and I made up my mind that the first step was to muster up enough of my own will power to stick to and carry out my determination.

With this new purpose in mind I applied myself to finding out something more about will power. I was sure that other men must have studied the subject, and the results of their experience would doubtless be of great value to me in understanding the workings of my own will. So, with a directness of purpose that I had scarcely known before, I began my search.

The results at first were discouraging. While a good deal had been written about the memory and other faculties of the brain, I could find nothing that offered any help to me in acquiring the new power that I had hoped might be possible.

But a little later in my investigation I encountered the works of Prof. Frank Channing Haddock. To my amazement and delight I discovered that this eminent scientist, whose name ranks with James, Bergson and Royce, had just completed the most thorough and constructive study of will power ever made. I was astonished to read his statement, "The will is just as susceptible of development as the muscles of the body"! My question was answered! Eagerly I read further—how Dr. Haddock had devoted twenty years to this study—how he had so completely mastered it that he was actually able to set down the very exercises by which anyone could develop the will, making it a bigger, stronger force each day, simply through an easy, progressive course of Training.

It is almost needless to say that I at once began to practice the exercises formulated by Dr. Haddock. And I need not recount the extraordinary results that I obtained almost from the first day. I have already indicated the success that my developed power of will has made for me.

But it may be thought that my case is exceptional. Let me again assure you that I am but an average man, with no super-developed powers, save that of my will. And to further prove my contention let me cite one or two instances I have since come across, which seem to show conclusively that an indomitable will can be developed by anyone.

One case that comes to my mind is that of a young man who worked in a big factory. He was bright and willing, but seemed to get nowhere. Finally he took up the study of will training, at the suggestion of Mr. W. M. Taylor, the famous efficiency expert of the Willys-Overland Company, and in less than a year his salary was increased 800%. Then there is the case of C. D. Van Vechten, General Agent of the Northwestern Life Insurance Company, Cedar Rapids, Iowa. Just a short time after receiving the methods in will development suggested by Prof. Haddock, he felt that they would be worth from $3,000 to $30,000 to him.

Another man, Mr. H. D. Ferguson, residing in Hot Springs, Ark., increased his earnings from $40 a week to $90 a week in a remarkably short space of time after he began the study of will training. These are but a few—there are many other equally amazing examples which I personally know about. And aside from the financial gain, this training has enabled thousands to overcome drink and other vices almost overnight—has helped overcome sickness and nervousness, has transformed unhappy, envious, discontented people into dominating personalities filled with the joy of living.

Prof. Haddock's lessons, rules and exercises in will training have recently been compiled and published in book form by the Pelton Publishing Co., of Meriden, Conn. Mr. Pelton has authorized me to say that any reader who cares to examine the book may do so without sending any money in advance. In other words, if after a week's reading you do not feel that this book is worth $3, the sum asked, return it and you will owe nothing. When you receive your copy for examination I suggest that you first read the articles on: the law of great thinking; how to develop analytical power; how to perfectly concentrate on any subject; how to guard against errors in thought; how to drive from the mind unwelcome thoughts; how to develop fearlessness; how to use the mind in sickness; how to acquire a dominating personality.

Some few doubters will scoff at the idea of will power being the fountainhead of wealth, position and everything we are striving for, and some may say that no mere book can teach the development of the will. But the great mass of intelligent men and women will at least investigate for themselves by sending for the book at the publisher's risk. I am sure that any book that has done for me—and for thousands of others—what "Power of Will" has done—is well worth investigating. It is interesting to note that among the 150,000 owners who have read, used and praised "Power of Will," are such prominent men as Supreme Court Justice Parker; Wu Ting Fang, Ex-U. S. Chinese Ambassador; Lieut.-Gov. McKelvie of Nebraska; Assistant Postmaster-General Britt; General Manager Christeson, of Wells-Fargo Express Co.; E. St. Elmo Lewis; Governor Arthur Capper of Kansas, and thousands of others.

As a first step in will training, I would suggest immediate action in this matter before you. It is not even necessary to write a letter. Use the form below, if you prefer, addressing it to the Pelton Publishing Company, 17-B Wilcox Block, Meriden, Conn., and the book will come by return mail. This one act may mean the turning point of your life, as it has meant to me and to so many others.

PELTON PUBLISHING COMPANY,
17-B Wilcox Block, Meriden, Conn.

I will examine a copy of "Power of Will" at your risk. I agree to remit $3 or remail the book in 5 days.

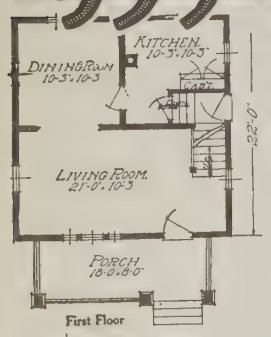
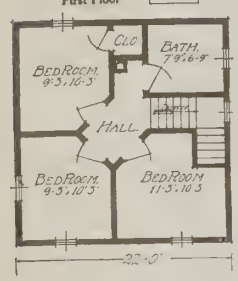
This LEWIS-BUILT HOME Ready Cut

The Rosemont

$955



First Floor



Second Floor

One of America's Most Popular Houses

Because of its charming appearance—its ideal proportions—its convenient floor plans—and, above all, its generous value at the price, this Lewis-Built House, "The Rosemont," has proven one of the most popular of the 100 homes pictured, described and priced in our 1917 catalog.

These 100 carefully chosen designs represent the cream of the country's best architectural knowledge. Before our board of experts decided on these 100 selected homes, literally thousands of designs were studied, sifted and rejected. Many of our customers have thought the Rosemont best of all, but among the entire selection, there are many of different styles, prices and plans, so that you can easily find in our catalog just the home that will suit you and your family.

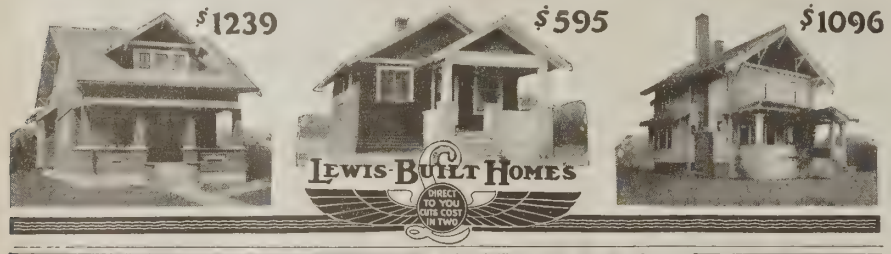
Our catalog explains the Modern Method of Home Building, by which this house can be made yours, complete, for only $955; specifies exactly what is furnished; offers money-back guarantee of satisfaction.

Machine Cutting Saves 40%
of carpenter labor; avoids waste; prevents costly mistakes in building. Modern factory methods replace old hit-or-miss practices; science and efficiency substituted for guesswork.

Get the Inside Price
Our mills, warehouses and lumber yards are stocked with materials at 1916 costs; we give you the benefit. Buy from the **source**; keep the saving yourself.

Send 4c stamps for catalog of 100 Houses, Cottages, Bungalows, $300 and up; a book of building information you need.

LEWIS MANUFACTURING COMPANY, Dept. 291, Bay City, Michigan
(Western Branch: Portland, Oregon)



Grand $225

YOU, of course, will want to get the best phonograph for the amount you decide to spend. The Sonora with its rich, pure tone, its merited reputation and splendid qualities will appeal to you strongly.

THE INSTRUMENT OF QUALITY
Sonora
CLEAR AS A BELL

The jury at the Panama-Pacific Exposition "recommended that Sonora be given a marking for tone quality higher than that given to any other phonograph or talking machine."
Sonora is guaranteed. It plays all types of disc records perfectly. Hear the Sonora.

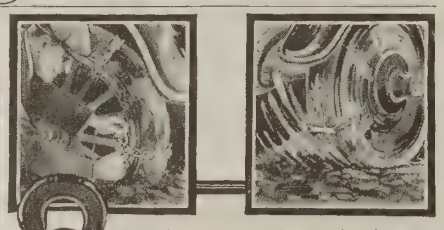
SONORA PHONOGRAPH CORPORATION
George E. Brightson, President
Executive Offices: 57 Reade St., New York

Sonora is licensed and operates under basic patents of the phonograph industry.

THE HIGHEST CLASS TALKING MACHINE IN THE WORLD



In Ag'in—Out Ag'in—Gone Ag'in!

The easy way to get a sure grip on the road is to carry a set of Easy-On-Chains. Even after you're stuck, Easy-On's are attached in a moment, without jacking or moving the car.

Easyon Chains

Grip like a Mud Hook
Ride like a Bare Tire

Easy-On-Chains are the latest idea in chain construction. The gripping link is perfectly smooth and rounded next the rubber and does not injure the tire. The spoke fasteners are leather-covered and do not mar the paint.
Every car owner should carry a set of these double-duty chains. They are packed in small bag, eight to a set, four for each rear wheel.

Made in Three Sizes
Size 3½ fits 3 in. or 3½ in. tires $3.00 per set
Size 4½ fits 4 in. or 4½ in. tires $4.00 per set
Size 5½ fits 5 in. or 5½ in. tires $5.00 per set

Sent parcel post or express prepaid to any part of U. S. or Canada. If you are not satisfied, return at our expense and we will refund full amount.

DEALERS—Write for quantity prices. Ask also about Easy-On Truck Chains for solid tires.

Rose Auto Supply Co., 1765 Broadway

"I am afraid I can tell you nothing," replied the girl.

Nevertheless, she groped for a chair back and tilted it against her body. In the intervals of talk I heard the heavy tread of Captain Craigenside within. He seemed to be pacing up and down.

"I am sure you will see," continued Hawley gently, "that complete candor now may save us all a world of embarrassment later."

Jane Craigenside looked up at the gulls which were wheeling over the house.

"Put your questions," she said wearily.

"In the first place, then, had you any object beyond mere amusement in going to the Glade on the night of July seventeenth?"

"None at all."

"You had no suspicion, no forewarning, that the thing to be exhibited in the guise of Man or Mechanism was other than it seemed?"

"None whatever."

"You had no acquaintance with the operator, Mr. James Smith?"

"I had not."

"Then will you kindly explain to us the meaning of your assertion, made in the hearing of a dozen people, that it was a living man—and that after the disappearance? You remember crying out 'Let the river be searched'?"

Jane Craigenside nodded; her lips moved. Suddenly she seemed to gain courage.

"I was mistaken," she said calmly. "The features of the puppet were very like those of one I had known in the Orient; it seemed to me that some monstrous trick was being played. Then when I saw the thing close up I knew I was mistaken."

"Yet you had fancied a resemblance?"

"Yes."

"A strong resemblance?"

She nodded again.

"So strong," continued Hawley, "that you all but fainted, and had to be assisted out of the theater by Mr. Weymouth, I understand."

"Is that so much to be wondered at?" she cried piteously. "I am all unstrung; the sickness of our old housekeeper has prevented me from getting sleep."

"Of course," said Hawley sympathetically. "I do not wish to press you too far. A last question: Was this person whom you fancied the manikin resembled an intimate friend or a mere casual acquaintance?"

"A mere acquaintance," said the girl.

"What profession or trade had he?"

"He was second mate aboard my uncle's ship."

"Ah, the Asphodel!"

The little man's eyes glowed and crept round to the ship lying in the river:

"He was second mate. And where did you last see him?"

"In Nagasaki."

"He left the ship?"

"Yes."

"Of his own accord?"

"Yes."

"Was there any unusual reason for his going?"

"No, he merely tired of the ship, as sailors will."

Hawley stared at her intently, and she dropped her eyes. Her last answers had been barely audible. It seemed to me that her least movement, her slightest word, were like parts of a subtly organized defense of the House of Craigenside.

Hawley stood up, clapped his hands sharply behind his back, and began to pace back and forth along the porch, as if considering. Then he put out a white hand and stroked the head of the nearest dragon.

"The old lady who is sick," he began again—"she has been long a member of your household?"

"Longer than I have myself," returned the girl with a faint smile. "But you must not question her," she went on with a serious intentness. "You must not really. Her condition is so bad that the doctor fears she may go with any tide."

"Ah, yes, with the tide," said Hawley. "A very poetical notion. Poor lady, her testimony might be valuable, but we will not force ourselves upon her."

He had been looking about him, and now he rubbed his hands together briskly.

"This is a noble old house," he said, as if his questioning were over. "These ferocious animals make a good guard for it. They were brought from the East?"

"Yes."

He moved toward the door, inspected the brass mermaid there, and turned as if to go. But then the clock inside struck four, and he wheeled about.

"A grandfather's clock!" he exclaimed with a note of genuine pleasure, as it seemed. "Well, well, I am repaid for my visit surely. I have made them a subject of special investigation."

The door behind him creaked and Ruel Craigenside stood on the threshold of the great double parlors.

Hawley put out his hand.

"Captain Craigenside, I believe? I am just examining your clock. It is a curious specimen, sir. The head is common enough; the tin ship is rather oftener met with than the background of the sky with a moon rising in it, perhaps. But the case—I think it is the oddest case I ever saw. Bless me, it has every appearance of ——"

"Time and Eternity," muttered Craigenside in his beard.

"Exactly," said the little man; and with an unforeseen gesture he snatched open the lid of the clock. The interior of the case was empty. The vertical slats had been ripped away, and no trace of the god remained behind the tarnished pendulum.

"Yes, gone, as you see," said Craigenside.

"Gone?" said Hawley pleasantly. "What is gone?"

"You well know, or you wouldn't have opened the clock. The jade is gone."

"Was it there yesterday?" continued the little man, whose inquisitiveness seemed to flow out and fill every crack and cranny of suspicion like a fluid.

Without answering, Captain Craigenside lumbered through the doorway and began walking toward the dunes.

"You must excuse him," said Jane Craigenside. "He's not himself at all. This was an heirloom, a little figure that he prized very highly. I can't understand who can have taken it."

"Suppose we say," said Hawley amiably, "that Eternity has taken leave of Time. Don't you think, my dear girl, that it would be as well to make a clean breast of the whole matter?"

"I will say nothing more," cried the girl.

"As you please," said Hawley. "We will come at it another way."

As we crossed the river I said glibly: "If mystery is what you crave you should be satisfied with this."

The little man said absently:

"*Finis coronat opus.* We shall see. We shall see. And now, my dear boys, one further question in regard to the bag which our friend the ornithologist made use of—or rather to the lens of his camera: Did you note closely the character of the flashes you have described?"

"Their character?"

"Yes. You have described them as intermittent. Now, did they intermit regularly or irregularly? In your judgment, was some intelligible communication being made to the man on the housetop?"

"I should say not. The flashes were regular. Furthermore, in my opinion the brain of Craigenside during those few moments was in no condition to remark an intelligent sign. His face was emptied of all expression, the eye fixed, the jaw slack."

"In one word—tranced?"

"If that were possible."

The little man fell back against the tiller of the boat we were rowing.

HAVOLINE OIL

Reg. U. S. Pat. Off.

"It Makes a Difference"

Did you say **Havoline** the last time that you ordered oil for your automobile?

Havoline-oiled cars seem to enjoy bigger cash values when trading-in time comes.

Furnished by responsible dealers, in original packages—any quantity. You know what you get.

Indian Refining Company, Inc. . . . . . New York

Producers and Refiners of Petroleum

***Sold at Actual Cost*—This Big, Convenient Orange Juice Extractor**

Illustrated Above—8 Inches from Handle to Spout

Ten cents at retail stores or 16c direct by mail east of the Missouri River—15c at stores west of the Missouri and in Canada or 24c direct by mail. We make this offer to those who use Sunkist Oranges merely to make it easier for them to serve the juice of this luscious, healthful fruit.

"Drink an Orange"

If the liver is sluggish or you feel "out of tune," drink an orange or two daily. Try it ten days, for better digestion. The results are almost certain if this practice is made a habit.

These *natural* ways to insure health are being advised by physicians more and more every day. Organic salts and acids in rare combination are present in California oranges. And the best of it is that nature has made this beneficial treatment alluring by delicious flavor.

Sunkist

Uniformly Good Oranges

Sunkist Oranges are luscious, tender and heavy with glistening juice. And this pure juice, with nothing added, is deliciously refreshing, as a year-'round early morning, afternoon or evening drink. In combination with ginger ale, carbonated waters and sugar, you have almost endless variety.

Send now for an extractor. Get your recipe book. Learn the many other ways to use this healthful fruit.

Two Power Ranges

Extravagant Performance With Economical Operation

Peerless

"All that the name implies"

NO longer need you forego—for reasons of economy—the pleasure of owning a big super-powerful car o the utmost class and distinction.

For now you may have power and speed in rar abundance without the expense it formerly took to operat the super-powerful cars in ordinary driving.

Two separate and distinct power ranges make the Peer less Eighty Horsepower Eight a car of "dual personality"

It has a total range of performance which hitherto ha been possible only in totally different and opposite types o cars—both highly desirable but not previously to be had i combination.

A "Loafing" Range

In its "loafing" range the Peerless Eight gives you that quiet, smooth, flexible, distinctive performance which you would expect of a car of real class.

But in this "loafing" range it is operating on half rations—consuming fuel so sparingly as to put many a lesser powered six to shame, even many a four.

A "Sporting" Range

And when you want or need super-power or emergency speed, it's yours in this same Peerless Eight which serves your ordinary requirements with such grace, distinction and economy.

You have only to open the throttle wider to release the double poppets and give her full fuel rations and utterly change the whole character of your car.

For in her "sporting" range she is a brute of a car capable of a brush with any contender no matter what its class.

See the Peerless dealer and let him show you how mea urably two power ranges increase the pleasure of driving y meet the requirements of economy.

The Customary Two Weeks

By FREEMAN TILDEN

ILLUSTRATED BY F. R. GRUGER

IT WAS Vibert's boast that when it came to firing an employee he never shirked, sparred or minced the ultimatum. Therein Carl Vibert differed from most ffice managers; for ; is one thing to ake your pencil in and and figure eadly percentages gainst the poor evil who isn't aking good, and ite another thing call that same or devil in and n the blue badge freedom to his pel. Such a job kes away the erage man's ap- tite and gives him ddle-aged nerves. mebody has to do to be sure. Like- se, somebody has t turn the switch tat connects with te electric chair; lt you don't notice y pushing or shov- g or standing in le for the position.

But Vibert liked i And whether he amitted it or not, itwould have been ca enough. Some- t ng triumphant al even malicious s lled itself on his li when he fired a m n. It was as though he was en- fcing a superior- it—publishing it; a d making his pwer felt. And, w se than all, he a ally passed the hin sign with a kind of neer.

"George! I Know You Don't Mean What You Say. But We Must Go—at Once!"

The office of the Eclipse Tool Company was in the north end of the factory. It was a succession, on two floors, of little boxes, built when wood partitions were cheap and nobody dreamed of opening up a whole floor and letting the manager have a look. On the lower floor, east, was the office of the president, Harry Burnhart. The president's office was locked whenever golfing was good; and for a man who has the carfare there are few days in the year when golfing isn't good somewhere in the United States. Directly overhead was Vibert's office. Somebody called it the "dark room," and the name stuck.

The dark room it was, though it had four windows. It had in it the shadow of hatred—the hatred, unspoken but as living as the radio, of the office force for the manager. It had Vibert's own dark, suspicious eyes, and over them Vibert's heavy black eyebrows and hair. He usually wore dark clothes.

There was one bright spot in the room. It was the gleam of a lamp in a cellar. She sat directly facing Vibert, and her gorgeous hair, shading to a gold that you sometimes see at sunset, and her bright, witty eyes fought the somber shadows across the desk—and won. It was only truly the dark room when Muriel Clemm was away.

It was the best stenographic job in the office, so she had been glad to get it, in spite of Vibert's personality. To do him justice, he evidently tried to be wholly decent to her. But Extell, the advertising manager, who worked in the adjoining room, suspected him of deep motives, and was in a jealous rage half the time.

Located, as the Eclipse people were, in a town where the factory was practically the whole town life, it was almost pathetic to observe the isolation of Carl Vibert. As he walked back and forth from his boarding place to the factory four times a day, the office force passed him with scarcely a nod of recognition. Some of the younger girls deliberately crossed the street when they saw him coming. In the office they were bound to be respectful; outside they felt they could do as they pleased.

Now all this is on the minus side of Vibert. A man doesn't hold a job, under any régime, on the minus side. There must have been something plus—and there was. When Vibert fired a man he had two justifications. One was that he was acting, as he saw it, in the best interests of the firm. There wasn't a question of his sincerity on this point. The other was, as he once loosened up and said, that when the time came for him to get his own medicine he wanted it handed to him in exactly the same manner. He may have been equally sincere about this. Still it was rather an easy thing for him to say, after all. He felt secure, with a lot of years ahead of him. Just as you sometimes hear lusty gentlemen talking about the advantages of euthanasia for the unfit.

But Vibert was a plugger. He was a glutton for work. You could see a light in that corner upstairs office when the Montreal sleeper roared across the bridge just under the windows, about half past ten at night. He had that patient, persistent kind of mediocrity that had made a deep impression on Harry Burnhart, soon after Old Man Burnhart died and the youngster took charge. He knew how to dictate a straightforward, minutely detailed letter to Harry Burnhart, that the latter, reading on the veranda of a Palm Beach hotel, construed almost as a personal compliment. He was a driver, with the defect of a driver—that when he let the reins go loose for an instant the horses slowed up. He was a martinet, with the defect of a martinet—that he got the hand without the spirit. He had a great head for details, with the defect that goes with this merit—that when you look for little things you often miss the big. He was the sort of man that could pick out Keokuk on the map of Iowa at a glance—and never see the big IOWA that stretched across the state.

Unloved, then, was Vibert; but nobody hated him quite so bitterly as George Extell. Had there been no other reason, this would have been enough: Muriel Clemm was Vibert's stenographer, and George Extell was in love with Muriel Clemm.

"Pop" Grinnell was the oldest old employee. He must have been in the game from the day Old Man Burnhart started making tools in a room over the wheelwright's—of ancient memory. He started as a woodworker, became a correspondent, and remained one. The old man would have cut off his right hand, on principle, before he would have ever let Pop go. He ought to have left Pop a few thousand when he died; but he forgot that. Young Harry ought to have pensioned Pop when he took hold; but he didn't. And so Pop was left to the mercies of Vibert, who had no sentimental interest in him, and watched the old fellow's honest efforts with a hawklike eye.

One day Pop Grinnell went into Vibert's office—and when he came out he staggered like a drunken man. His clean old face and bald head were as white as paper, and the tears were in his eyes. He went to his desk, fell into the chair, tried to clean the pigeonholes, failed, and dropped forward on his arms and wept like a child.

George Extell, looking in at the door, saw the old man, went over to him and shook him.

"What's the matter, Pop?"

Pop raised his head, gulped and said:

"I'm through, George. I—I've been discharged." He looked vacant a moment, and then went on as though talking to himself: "I—I've been expecting it. No surprise. But it was the way he said it, George."

Extell asked with a burning sensation in his throat:

"What did he say, Pop?"

"Oh, it was the way he said it," repeated the old man. "The cur—the cur grinned at me. 'You're not live enough, Pop,' he said. 'You can have the customary two weeks.' That's all he said: 'You can have the customary two weeks.'"

George Extell exploded with the lyddite of youth.

"He said that, Pop?" he cried. "You're right, he is a cur! Pop, don't you worry! Harry Burnhart'll never stand for that, never in the world. Vibert'll find out he isn't quite the whole show, Pop. You wait. Don't you pack up a single thing. I——"

Somebody gently touched Extell on the sleeve. He turned and faced Muriel Clemm, who was looking earnestly at him and shaking her head, with a finger at her mouth. But Extell was angry, angry on account of the old man, angry, no doubt, on his own score.

"Don't you move a single thing, Pop!" he went on, lowering his voice.

"Please, George!" whispered Muriel Clemm.

The young fellow looked into the clear eyes, hesitated, and then went into his own room.

She followed him, probably afraid he wouldn't understand her motive. With an uneasy glance at the door she hurried over to his desk, where he had sat down, and whispered:

"I mustn't be here but a minute, George. I didn't want you to misunderstand me. To make a scene—that would hurt both you and Pop. I—I feel just as you do about Pop Grinnell. It's a shame. But——"

"I'm going to see Harry Burnhart," interrupted Extell belligerently. "If he thinks anything of his father he won't stand it. Why, Muriel, Pop Grinnell was working faithfully here when that pup——"

"Please, please, George!" the girl begged.

She was looking into the young fellow's face with her full red lips parted and her eyes a little moist with solicitude.

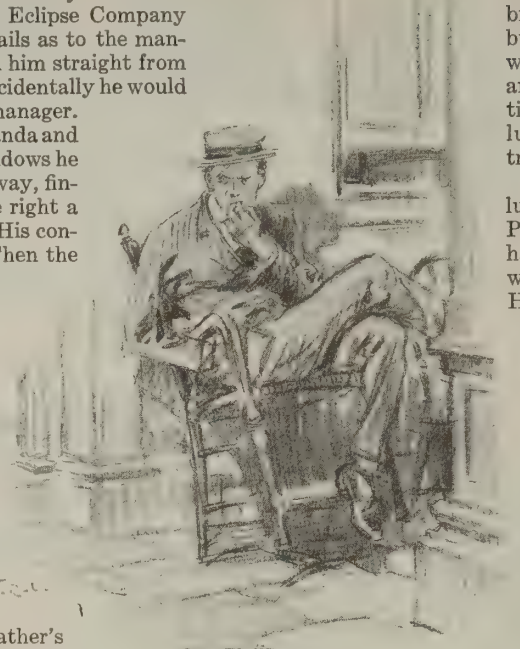
"I am going to see him," he reiterated rather unnecessarily.

"Do so then," said Muriel Clemm. "Do as you think best, George. But do be sensible—here."

She hurried away and left Extell stewing. He picked up some page proof sheets of a new catalogue and tried to read them. His hand shook with excitement and he couldn't fix his mind on the printing. The catalogue should have been sent out two weeks before. It was no fault of Extell's; the printer and the engraver had dawdled; but Extell, as advertising manager, was responsible. Yet he felt that this afternoon he couldn't be trusted with any work. He closed his door, strode over to the window and stood for a long time looking out.

That night after supper he went to see Harry Burnhart, who was making one of his brief visits to Milledgeville. With the dramatic spirit of youth—Extell was turned twenty-four, but from having never been away from Milledgeville for more than two weeks at a time he was quite lacking in sophistication—the advertising manager rehearsed his little speech as he made his way toward the big Burnhart mansion on a maple-shaded street near the outskirts of the village. Without once suspecting it his vanity was fairly oozing from him. He honestly thought that he was making a vicarious sacrifice for Pop Grinnell; yet in the back of his head, all the while, there was the thought that Harry Burnhart would be impressed with the magnanimity of Extell's conduct. The young president of the Eclipse Company would undoubtedly sound him for details as to the management of the office. Extell would tell him straight from the shoulder, without fear or favor. Incidentally he would tell him what sort of man he had as a manager.

He went up the broad steps of the veranda and rang the bell. Through the long side windows he could see the magnificent hall and stairway, finished in polished hardwood, and to the right a library with elegant leather furniture. His confidence deserted him for a moment. Then the door opened. He went in, after telling the maid who he was, and stood crumpling his hat with nervous fingers. A moment afterward the owner of the Eclipse Company came toward him. Harry Burnhart was an athletic, clean-cut fellow, only three or four years older than Extell. The usual type of college-bred man, of the kind who has lived on the Gold Coast at Cambridge and never known the want of a roadster of foreign make, there was still nothing of superiority in his tone and manner in greeting Extell. On the contrary, he showed clearly that he had taken to heart his father's democratic attitude toward the men who worked for him. He held out his hand and gripped Extell's frankly.



He Began to Hang Round the Mansion House, Planning How He Should Some Day Get Even With Vibert

"Come right in, Extell," he said. "Sit down. You smoke, don't you?"

A moment afterward George Extell was on the excusably wrong end of a cigar, and wondering how to begin. His host waited discreetly.

Extell's prepared speech disappeared in a mist. His errand was the gainer for the fact, for he blurted out, with unquestionable honesty of purpose:

"Mr. Burnhart, Pop Grinnell has been fired by Mr. Vibert!" If Extell had expected that the news would make the president "take a fall," as they say in the comic movies, he was disappointed. He did not clutch at his heart with emotion, nor did he rise and rage up and down the room. What he did say, however, was perfectly genuine. In a tone that showed his surprise, he asked:

"You don't mean it, Extell? Not Pop?"

"Yes, sir; this afternoon."

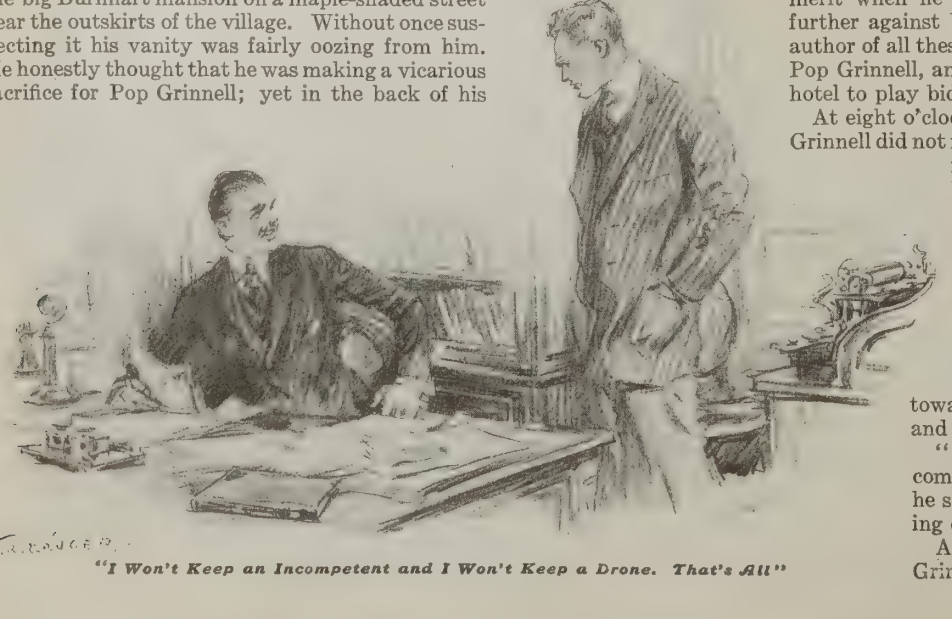
"There must be a mistake," went on Burnhart quietly. "Of course Pop stays with us as long as he lives—or as long as he wants to stay. I dare say Mr. Vibert didn't think about Pop's long services. I'll see Mr. Vibert about it in the morning. Er—was there anything else, Extell?"

There was nothing else. The interview was obviously at an end. The young fellow rose, somehow chagrined. Burnhart didn't seem in the least interested in Extell's ideas as to the conduct of the factory. But he said politely as he went to the door with him:

"Thank you for coming up, Mr. Extell. Always glad to see you. Good night!"

From the Burnhart house Extell walked rapidly to Muriel Clemm's. He was wounded in his *amour propre*, and he was feverish to be consoled. Mrs. Clemm, a sweet-faced woman of fifty with snowy hair, greeted him with almost maternal affection, and told him that Muriel had gone out without saying where she was going. But would he come in? Perhaps Muriel would be back soon.

Extell turned away with undisguised petulance. He muttered "Never mind" ungraciously, and started away. He felt that the world had turned against him. He was angry with Muriel for being away; disillusioned in his belief that Harry Burnhart could discern merit when he saw it; and enraged further against Vibert for being the author of all these shocks. He forgot Pop Grinnell, and went down to the hotel to play bid whist.



"I Won't Keep an Incompetent and I Won't Keep a Drone. That's All"

At eight o'clock next morning Pop Grinnell did not ring in as he had done for so many years. Neither did Extell, who got in half an hour later, looking sleepy in the corners of his eyes. Extell rang the clock and looked into Pop's room as he passed. Then he looked toward the corner room and grinned.

"There's something coming to you, Mr. Man!" he said to himself, thinking of Vibert.

At one o'clock Pop Grinnell returned to the office with a look of mingled fear and joy on his face. He brought with him the little bundle of personal effects which he had taken away, and started in with his patient, slow, and not absolutely sure instruction to travelers.

Extell, coming back from lunch ten minutes late, saw Pop in his room, waved his hand at him meaningly, and went to his own desk to gloat. He had not been indulging in that pastime long before Vibert entered. Extell's heart beat fast as he saw the manager. He felt sure that he had come to talk about Pop Grinnell.

He would give him as good as he sent!

But Vibert said nothing about Pop. Instead he pulled up a chair, favored Extell with a ghost of a smile that made the young fellow's spine cool and began blandly:

"About that catalogue, Extell? You know we want to use it this year."

"It isn't my fault, Mr. Vibert, if the engravers can't get out the half tones on time," began Extell with a manner that his excitement rather than his intent made unfortunate.

"I take it the engravers aren't running this office," replied Vibert. "However, I don't want to be unjust to you—of course delays are bound to happen. By the way, Extell, you don't call that a very snappy ad, do you?" The manager thrust an advertisement, clipped from a trade journal, on the desk in front of the advertising manager.

Extell did not reply. He gazed at his work wonderingly.

"That ad," went on Vibert, "from my point of view has about as much life as a mummy. It hasn't as much punch as a Sunday-school program. And I'll tell you why, Extell. I'll tell you why your ads don't pull. It's because you don't understand selling. You want to write something pretty. I don't say you couldn't write swell poetry, Extell. I s'pose you know more about grammar than the rest of the office put together. But I've had travelers, Extell, that can hardly write their name, ignorant as horse jockeys, that could put over an ad—dictate it—that would sell something. Now we're not doing the advertising we should. I've worn out my voice trying to get Mr. Burnhart to see that we ought to give our men on the road some backing. He doesn't see it yet—but he will. But the stuff you turn out, Extell, wouldn't sell peanuts to the bleachers."

Extell, crimson, did not reply. He wondered how he was able to restrain himself from choking this malefactor. After a moment's pause, to let the words sink in, Vibert rose and stood at the door. Then he added:

"Another thing, Extell. I wish you would get round to the office the same hours as the rest of us. Look at your card for this half month. It looks like the social visits of a banker. It won't do, Extell. Think it over."

When Vibert had gone out Extell sat stunned. He felt as though he had been deftly relieved of all his vital organs; in the pit of his torso there was a gnawing void. Nobody had ever talked to him like this before. True, Vibert had mentioned the matter of Extell's being late once or twice, but not in a way to carry conviction to a young man who had been more or less the petted child of the office.

Extell had gone directly from high school into the employ of the Eclipse people. His father had been a friend of Old Man Burnhart, and his way had been made comparatively easy. And, inasmuch as John Burnhart, founder of the business, had held the old-fashioned view of advertising—that it was a sort of necessary evil—Extell had had no criticism worth the name.

The young fellow had considered his advertisements exceedingly fine. He used hackneyed catch phrases with a naïve belief that the waiting world would find them seductive. He had begun by toiling ardently over his copy, but during the past two years he had been loafing, partly without knowing it. It wasn't entirely his fault—the office simply hadn't taken the job of advertising manager seriously.

As to being late at the office, he had to admit the validity of that charge. But he had come to endow himself with a sort of artistic temperament—he felt a little beyond the rules.

If it had been truly an awakening—if Extell could have seen that Vibert, no matter what his underlying animus, was really telling the simple truth—the young fellow might

ve avoided what followed. But he phrased the thing
st as he saw it when he went over to Muriel Clemm's that
ght and purred himself into a sleepy self-content:
"Vibert didn't know of any other way to get back at me
r going over his head in regard to Pop Grinnell, Muriel.
he had to try to find a flaw somewhere."
To a young man not befogged by indulgence toward
mself, the girl would have appeared doubly charming
at night. For she showed not only the tenderness she
t for Extell, but the solid common sense with which she
uld temper that affection. She looked at him with eyes
l of wistful interest; and she let her hand lie between his
th this unspoken thought—which she prayed he could
ad: "Here is my hand, dear boy. But—make me think
you as dearly as I feel toward you."
He couldn't read that. He was too engrossed in the
ject of Vibert's ill-will toward him. He rattled on,
infully cocksure:
'He'd fire me to-
rrow, Muriel, if he
red to. But he
ows that Harry
rnhart wouldn't
nd for it. I do my
rk, and he knows
If I don't happen
get to the office
t on the dot——"
'George," inter-
ted the girl in
deftest manner;
on't be angry, will
u? You want me
be reasonably
nk with you, don't
? I think—you
ght to get in on
ie. I really think
u should. It's
re, it isn't the
st important
ng in life; but
't you think, by
ng little things
k that slide, peo-
l grow slack in
ers?"
e saw it. He re-
lied thoughtfully:
You're right,
riel. I'll make
ffort to be on
e. But Vibert
ein't think it's
e use I'm afraid
f im!"
e took confi-
ence from this.
And about Mr.
irt, George," she
ve on cautiously:
I onder if perhaps
ou don't think too
uch about him. Please don't think I'm defending him.
Some ways I think just as you do. I—I like you more for
nything that prompted you to go to Mr. Burnhart about
ear old Pop; in a way, I was glad you did it. And yet
just think—put yourself in Mr. Vibert's place. You went
ver his head. Of course he wouldn't like it. No, please
don't interrupt; you went over his head, and somehow—
somehow nobody ever quite forgives that. Do they?"
She knew, in her wise young head, that this sort of
shoulder talk must be accompanied by a special display on
the personal side; and she put her head close to Extell's,
as they sat on the sofa, and breathed her fragrant loyalty
upon him.
The young man had not come to be enlightened. He
had come to be stroked. The richest nuggets of wisdom
would like iron pyrites to him just then. The inherent
boy nature and rugged sense and boyish ingenuousness—
all those things in his character that had given him the
preference in the girl's heart—deserted him.
"I should think you might see my side a little more
easy, Muriel," he said.
She sighed. All her caution and pains had been wasted.
He went away peeved, and she saw him go with a sharp
pain in her soul.
He went down to the hotel and played bid whist savagely,
not dreaming that a certain pretty and much-desired girl
was rocking back and forth in her room and sobbing im-
potently, sobbing partly for a reason unknown, and
partly because she loved a young man who chose to ride
on a toboggan.
That night Extell met a crew of good fellows at the hotel,
who were going up-river in a launch in the moonlight. He
went along and got to bed at quarter to four in the morning.
He had the fervent notion, as he took off his clothes, that
he would just take a nap and be at the office at eight sharp.

The Young Fellow Looked Into the Clear Eyes, Hesitated, and Then Went Into His Own Room

He woke up at eleven, fell asleep again, and woke up again at half past twelve. By going without his luncheon he was at the office at one.

Extell's interior telephone rang. Vibert would like to see him. He went to the corner room with a combination of misgivings and defiance.

The office manager was brief. And he accompanied what he said by that peculiar half-sneer that had made him a hated man. He said:

"Extell, you were probably sick this morning?"

The young fellow didn't choose to lie. He replied that he was not sick; but he advanced no reason for his absence.

"A sort of sleeping sickness," went on Vibert ironically. "I haven't been hasty with you, Extell. Some ways you're a likable chap. But I won't keep an incompetent and I won't keep a drone. You can have the customary two weeks. That's all."

Extell looked at the manager with wild incredulity. The customary two weeks! Those words—to him! Without explanation! Without preamble! The stern stuff of self-respect that was in him told Extell to supply a smile, say "Very well, sir," and quit the office. But he weakened again and justified Vibert's sneer to some extent as he said with feeble defiance:

"We'll see about that, Mr. Vibert!"

Vibert went on writing without replying. He knew the strength that lay in silence, if Extell didn't.

Before he had reached his own room Extell had made up his mind just what to do. But he stopped in the hall, just in front of his door, as Muriel Clemm came along toward him with her hands full of letters. She saw his white face and guessed unerringly. Her breath came fast as she whispered "What is it, George?"

Extell gulped as he replied with an assumed airiness:

"Oh, Vibert thinks he's fired me. He thinks so. He thought he fired Pop Grinnell; but it turned out he hadn't. Next thing he knows he'll fire himself."

The silken eyelashes closed over the wistful eyes, and opened wet. She shook her head, not trusting to words, and started along. But she turned and whispered:

"It's the best thing that could happen. You will win, George."

He thought she meant that he would be able to defeat Vibert's purpose, and it gave him confidence. If he had known what she really meant, he would have collapsed.

Extell found that Harry Burnhart was leaving for French Lick at five o'clock. He went up to the house as soon as he could pull himself together. The president of the Eclipse was obviously surprised to have the same visitor again so soon; but he greeted Extell just as cordially, and at once said:

"Oh, that's all right about Pop Grinnell, Extell. I saw Mr. Vibert, and Pop is reinstated. Didn't you know it?"

Extell went scarlet. Somehow the platform fell from under his feet when Harry Burnhart assumed that he came again philanthropically. But he had to say something now. He stammered:

"It wasn't about Pop I came this time, Mr. Burnhart. I—I have been unjustly discharged by Mr. Vibert. He has never liked me, and since I came to you about Pop Grinnell ——"

Harry Burnhart's lips came together with a different expression. He regarded Extell in a not unfriendly way, something of pity and a little of contempt in his glance. But he shook his head and replied:

"I'm sorry, Extell; but you've created a bad situation. I don't mean I blame you, because I don't know the facts; but I mean that you've somehow managed to raise an issue between Mr. Vibert and yourself. Now in such a case as this one or the other always goes. I don't want to let Mr. Vibert go. I hire him to run the business. In Pop Grinnell's case—well, that was almost a family affair. I say, Extell, you're young! Jump out and show Mr. Vibert that he made a mistake—eh? Nobody dependent on you, is there? Well, well, Extell, hit the trail for the West and make good. This town's half asleep anyway. If I can be of any assistance, let me know. I'll give you a good recommendation—but recommendations are no good. Good-by and good luck!"

Extell found himself halfway to his room before he wholly came to his senses.

"The dirty crowd!" he kept repeating to himself. "The dirty crowd!" What galled him most was that Vibert had beaten him. It was evident that the manager had apprised Harry Burnhart of his intention. At half past five he went down to the office, bundled up a few things of his own, rolled up his linen duster and jammed it into his pocket, and left the place without telling anyone that he was through. It gave him a measurable satisfaction to believe, as he passed Pop Grinnell's door, that he was martyred to save Pop. He couldn't help wondering if Pop appreciated it.

The next day was Saturday. Extell had to go to the office to draw the customary two weeks' salary to which he was entitled by Vibert's sardonic custom. It was a perfect day. Extell and Muriel Clemm had planned, the previous week, to go canoeing up-river in the young fellow's canoe. They were both skillful paddlers, and this was one of their most joyous diversions on the Saturday half-holidays.

The excursion proved to be only the skeleton of a pleasure that was. After a period of straining to speak of other things than this biggest thing, they both broke down and faced the necessary. Halfway to their destination Extell steered in toward the bank, and they pulled the canoe up under a canopy of hemlocks that grew down to the water's edge. Then they sat down on the brown carpet. She spoke first.

"Tell me," she said, looking at Extell anxiously, "what you are going to do."

"Oh, I'll find another place easy enough," he replied.

Reflectively the girl lifted the folds of her blue-dotted skirt and smoothed them all out. She was looking down at the ground now. Finally she went on:

"If I didn't know that you would do something worth while, George, of course I couldn't care for you as I do. I'm glad you are out of this—this office. I keep my eyes open, George, and I can see that the Eclipse isn't making a bit of progress. I wouldn't tell that to anyone else in the world, and you mustn't say a word. But since John Burnhart died everything has been going backward. You'll say it's Mr. Vibert's fault. I don't know—but I don't think it

(Continued on Page 69)

HIGH FINANCE'S RECRUITS

By WILL PAYNE

AT THE beginning of the year a new member was admitted to the firm of J. P. Morgan & Company. This new partner, Thomas Cochran, was born in St. Paul forty-six years ago and grew up there to the age of sixteen, when he went to a preparatory school; then to Yale. At college he was more distinguished, in good healthy fashion, by devotion to athletics and ingenuity in pranks than by feats of scholarship.

In his third year at college a crisis overtook his father's business. When the word reached young Cochran he dropped his studies and hurried home to lend all the help he could. In the final casting up of accounts some debts were left unsatisfied, which the college student romantically assumed. As his economic status at the moment was that of a liability rather than an asset, one may surmise that the creditors derived little comfort from his assumption of the debts.

He returned to New Haven, applied himself diligently and completed his course; then went to New York and turned his hand to teaching—tutoring candidates for Yale—as the readiest means of making a living. Presently he went back to St. Paul and took a job in a wholesale hardware house, where he remained about six years, until he found a more promising opening.

That opening brought him to a small town in New York State, where he had charge of the construction of a trolley line. Seventeen years ago he went to New York City, without money or influential connections, and there presently was employed by a real-estate company, of which he became the treasurer at a modest salary.

All the while he had actually been hacking away at those assumed debts, and a few years after going to New York he paid off the last of them. As treasurer of the real-estate company he had the handling of certain realty that brought him into contact with downtown bankers. Among those whose acquaintance he formed were Henry P. Davison, a vice president of the Liberty National Bank, and Thomas W. Lamont, a vice president of the Bankers Trust Company. Ten years ago these two were interested in the organization of a new banking institution, the Astor Trust Company. They needed officers for the new concern and by that time they thought very well of Mr. Cochran; so he was put in as a vice president, at the age of thirty-six.

Buying for the Allies

NATURALLY he made more influential acquaintances; impressed more people with his character and ability. Some years later there was a shift in the management of the Liberty National Bank and Cochran was elected president. Meantime his friends, Davison and Lamont, had been made partners in the Morgan house. The business of that house has expanded rapidly of late—with these boom times and especially with the enormous war financing and munitions purchasing which it handles for the Allies. It has taken in three partners since July, 1914, and six since the beginning of 1911. Wanting another man who measured up to its requirements, it took in Mr. Cochran.

That is the way high finance gets its recruits. It is getting them all the time. They come from all parts of the country. Almost invariably they are men who have made their own way from just about the average fairly comfortable American lot—not really poor, but with little or no inherited advantage of money and influential connections. Almost invariably they are men of abundant physical vigor and have won a big job while round the age of forty—somewhat before that age oftener than somewhat after it.

A few months before Mr. Cochran was taken into the Morgan firm, Edward R. Stettinius was made a partner. He was born in St. Louis, where he attended public school and began rustling for a livelihood at the age of eighteen. Presently he was taken into a small manufacturing concern that made water-tube boilers. O. C. Barber, president of the Diamond Match Company, was interested in this concern. In 1906 it went into a consolidation, and the same year Mr. Stettinius was made a vice president of the Diamond Match Company. Three years later he was elected president. He spent considerable time in New York, and people who became acquainted with him got an impression of force, ability, and extensive experience in merchandising.

War came along and the Allies began buying supplies of all sorts on an immense scale in this country. There was a good deal of confusion, lost motion and waste—perhaps with one Ally bidding against another, and so on. So a great part of this huge business was put in the hands of J. P. Morgan & Company—undoubtedly the greatest job in its line ever handed over to a private concern. Of course it needed capable supervision, and the firm picked Mr. Stettinius to do the supervising. He must have done it to their satisfaction, for after about a year he was made a partner in the house. He was fifty-one then; but he had held a big job for at least eleven years.

Technically he was an employee of the firm at the time, and this is the only instance in which an employee has been made a partner; but he was an exceptional employee, and the circumstances were altogether so exceptional that his case can hardly be regarded as breaking the rule—if it can be said there is a rule.

Probably there is not exactly a rule. The firm takes in a new partner because it wants additional horse power of talent and energy. Of course if a man is employed by the house it already has his horse power of talent and energy. Possibly—though nobody in a position to speak with authority would dream of admitting it for publication—there is a somewhat aristocratic flavor in this institution, and it would just a little rather have an outsider than an employee at the table.

But, though it certainly has not been the rule to promote employees to membership, it is a fact that employees rarely leave to go into any other similar institution. It pays, on the whole, no higher salaries than other big banks. Perhaps salaries in some others are even rather higher. But there are many pleasant conditions of employment.

In the first place, the house gives its employees a substantial bonus at the end of each year. At the end of this last prosperous year every man got seventy per cent of his year's salary; and it is said a f higher employees got considera more. There is no announced r about it. The bonus may be o thirty per cent. But the emplo knows he is going to get a very t Christmas present, its size depe ing on the year's profits.

Handing the bonus money c in a lump at the end of the yea a better encouragement to th and saving than apportioning out monthly or weekly during year.

Working conditions are pr ably as agreeable as any conditi that involve clerical toil can This sanctum of high finance, a cuit's toss from the feverish St Exchange, with Broad Street su ing and shouting on one side Wall Street swarming and swe ing on the other, is as quiet a village store on a rainy Mon morning. Going through the g doored vestibule, you run pl into two very tall and bra gentlemen in everyday clot your first step inside bringing figuratively right into their ar They are very courteous, smilin the most affable manner as t inquire whom you wish to see, your card, and show you to a se the seat being directly under t amiable eyes.

Nothing could be more pe All the same, you perceive the there to discourage any mere t dering about. As a matter of there is little coming and go no confusion; you may listen n minutes and hardly hear a so It impresses you as being a s undistracted sort of place in w to work. And the house, in takes very good care of its m

But it goes outside for partners. Running over th shows where they come from and indicates how. years before Mr. Stettinius was made a partner, D W. Morrow was admitted to the firm. He was born Pennsylvania town, his father being a school principa went to Amherst; then through the Columbia Law Sc and was engaged by a big New York law firm that good deal of business for Morgan & Company. At one he was made a partner in this law firm.

The 1911 Crop of Partners

FOR some years Charles Steele has been the l member of the Morgan house. Of late he has no so active as formerly, and the law business has grown with other branches. So in July, 1914, Mr. Mor already for some years member of a law firm that did business for the house—was made a Morgan pa going in rather as a lawyer than as a banker.

In 1911 three members were taken in—Thom Lamont, William H. Porter and Horatio G. Lloyd. Lamont was born in a New York village, went to P Exeter and to Harvard, struck into the banking bu in New York City, and advanced rapidly. He was Morgan partner at forty-one and had been a man of in the financial district for several years before that Porter was born in a small town in Vermont; went th high school and to an academy. His first e ment in New York was in the office of a small ra then he went into the Fifth Avenue Bank, as a clerk, age of eighteen. Seven years later he went to the National in a much more responsible position, thirty-eight was made a vice president of that big Mr. Lloyd came from Philadelphia. While workin as a clerk he studied law in the University of Pennsy and was admitted to the bar. He was a clerk in company, and after a while was made secretary company. A new trust company was organized. elected treasurer, then vice president, then presider and so progressed into partnership in Drexel & pany, which is the Philadelphia connection of Mo Company.

In 1909 Henry P. Davison was made a Morgan p He was born in Troy, Pennsylvania, and went to paratory school, but not to college. He taught sc

teen and worked on a farm during vacation while he s in the preparatory school. After a little experience a country bank he went to New York City and got a job messenger in a bank there. He worked up to paying er and resigned to take the job of receiving teller in a all uptown national bank. He got to be paying teller of t bank and at the age of twenty-seven was made an istant cashier of the Liberty National Bank. The next r he was made cashier; then vice president; then sident, at the age of thirty-two. From that vantage und he went on to the Morgan partnership.

)lder members of the firm are E. T. Stotesbury and A. Newbold, of Philadelphia, Charles Steele, the lawyer, W. P. Hamilton, son-in-law of the late J. P. Morgan. he twelve partners, only the head of the house inherited osition in high finance; and if he had not measured up he opportunity either he would not be head of the house he house would not be the important affair it is. The newest partners were brought up in the West—Min-ota and Missouri. Five others were born in country ns. All of them won an important position round the of forty—under that rather than over it. Eight of n were college men and four were not.

low did they get to this top story of high finance? n what principle or according to what formula were v invited to seats at the first table?

The Stuff Bankers are Made Of

) GET an answer we might look a little farther than he Morgan firm. Twelve national banks and trust panies in Wall Street hold assets that foot up three ion dollars and a half. They, with the big private houses n various collateral institutions, are about what people ally have in mind when they speak of high finance.

o take them in the order of size we should begin at the tional City Bank, with assets of six hundred million ars. Its president, Frank A. Vanderlip, was born at ora, Illinois; went to public school and for a time he University of Illinois; worked in a machine shop n while so engaged taught himself shorthand. Going hicago, he got a job as a newspaper re-er, and presently won the position of fi-ial editor of the Tribune. That naturally ght him into frequent contact with bankers. r of them was Lyman J. Gage, then a vice dent of the First National Bank. President cKinley appointed Mr. Gage Secretary of reasury; and a Secretary of the Treasury t have a private secretary. Among many ng men whom he knew, and who might be cted to fill that comparatively easy posi-o satisfactorily, he chose Mr. Vanderlip.

hat was not because the candidate had had experience as a private secretary. It was because he knew anything in particular t the duties of a private secretary to a cretary of the Treasury. If the award had made on the Civil-Service plan, with a lot candidates answering carefully prepared uctions, which were designed to bring out he knowledge of ie business a goes on in office of the cretary of the reasury, some th candidate ould undoubt-dl have got heob. It was n a all-round mpression of the an.

rst of all, without doubt, t as because Mr Gage per-onlly liked this particular oung man and thought he would be an agreable per-son o associate ti It was be-au he per-ceived in this young man a certain weight and force which impressed itself upon the people he came in contact with, alon with a cordiality that made friends readily and kept ther He struck Mr. Gage as a person having the knack of dling with men.

N doubt successful men of affairs instinctively know thei own kind—the sort of well-oiled, aggressive ability that an make its way among men with the maximum of spee and the minimum of friction. Some time before this a company of Chicago's weightiest captains of industry mad an excursion to the South. So much of the city's commercial leadership could not be permitted to go off on a special train by itself. The press must have a representative along, and the young man on the Tribune was at once chosen for the post. Any company of successful business men, having to choose one among the reporters known to its members, would quite certainly have picked him.

As private secretary to the Secretary of the Treasury, Mr. Vanderlip so well satisfied his chief that in a year or so Mr. Gage had him appointed an Assistant Secretary of the Treasury. The Treasury Department always has more or less dealings with Wall Street, as the center of the country's banking system; so the new assistant secretary began making acquaintances among bankers there. James Stillman, president of the National City Bank, was one of those whose acquaintance he made, and the qualities that had recommended him to Mr. Gage also recommended him to Mr. Stillman, who presently invited him to become a vice president of the bank.

Again, it was not because Mr. Vanderlip knew anything about the banking business in detail, for he had never been behind a bank counter in his life—except possibly as a visitor. It was not primarily because he understood the theory of banking and the principles of finance. In the economic departments of our colleges Mr. Stillman might easily have found fifty men who could talk circles all round Mr. Vanderlip on the theory of banking and the principles of finance—and it is safe to say the president of the City Bank would have been aghast at the suggestion of appointing any of those men a vice president of his institution.

It was because he liked this Assistant Secretary of the Treasury personally, and saw in him the sort of genial, forceful ability that attracts men, makes friends, impresses itself. He judged that Mr. Vanderlip would be a useful instrument in extending the reach and influence of the National City Bank; not because of his exact, technical knowledge of banking—much less because of his money, for, as he had been employed all his life at a modest salary, first as newspaper reporter, then as private secretary and assistant secretary, there can be no disparagement in guessing that he had none to speak of—but because of his personal qualities.

Henry P. Davison

Frank A. Vanderlip

PHOTOS. FROM BROWN BROTHERS, NEW YORK CITY

Gates W. McGarrah

In fact Mr. Vanderlip himself has confessed that when he went into the bank as a vice president he found to his surprise that there was nothing in particular for him to do.

He had a fine job at a fine salary, and his only definitely appointed duty consisted in drawing the salary. Evidently it was just a personal equation that Mr. Stillman had wanted in getting him into the bank. In order to get himself anything in particular to do the new vice president had to strike out on his own motion and organize a bond department.

For some time before Mr. Stillman retired from the presidency it was a foregone conclusion and an open secret that Mr. Vanderlip would succeed him. Now, as chief mover in the City Bank, the City Company, the fifty-million-dollar American International Corporation, and other enterprises, he is picking out young men for seats up near the front, in the same way that Mr. Gage and Mr. Stillman picked him.

There are thirteen vice presidents of the City Bank, most of whom Mr. Vanderlip has selected—four from the Middle West, a couple from the Southwest, and so on. He picked them because he liked them personally and found in them certain forceful, genial personal qualities that are easy enough to recognize but hard to describe. Whether they knew anything in particular about banking was a secondary consideration, and whether they had any money to speak of was no consideration at all.

Next in size after the City Bank comes the Guaranty Trust Company, with half a billion dollars of assets. Its president, Charles H. Sabin, was born in a town in the Berkshire Hills and went to school there, but not to college. At seventeen he went to work with a concern that dealt in flour, but two years later started in banking, as a clerk, in Albany, New York. Two years more and he was promoted to the teller's cage, and at thirty was elected cashier. A few years later he moved up to a vice presidency. The next step was to the vice presidency of a comparatively small bank in New York City; but he kept on going.

Thomas W. Lamont

James S. Alexander, president of the National Bank of Commerce, which counts for about three hundred and fifty million dollars, was born at Tarrytown, New York, and began his business career at eighteen as a clerk in the bank there. Two years later he went down to the city as a clerk in the big bank of which he is now president. It was not until he was thirty-four that he won his first official position—an assistant cashiership. Since then he has moved up steadily to the top.

This, it will be noticed, is about the traditional case of the young man who starts at the bottom of the ladder and works his way up step by step until he arrives at the topmost rung of the identical ladder on which he began.

Great Men's Orbits

A SOMEWHAT similar case is that of James N. Wallace, president of the Central Trust Company. He was born in a Connecticut village and went to work at the age of fifteen in a private banking house of which F. P. Olcott was a member. Mr. Olcott, an eminently successful and finally very rich banker, took a liking to the lad and, when he was made president of the Central Trust Company, carried young Wallace along with him as a sort of personal office boy. Mr. Olcott's liking continued and the youth had the stuff of success in him; so at the age of thirty-nine, Mr. Olcott retiring, Mr. Wallace was made president of the big concern.

But these traditional cases are exceptional. In most cases there is considerable skipping about from one ladder to another. There is Seward Prosser, president of the Bankers Trust Company, a creation largely of the late J. P. Morgan. He was born in Buffalo; but his parents moved to Brooklyn, where he attended public school. He went to work for a life-insurance company and after a while formed a partnership for the purpose of writing life insurance. He made acquaintances among influential men, who thought highly of his capacity; and at the age of thirty-six he was elected a vice president of the Astor Trust Company. A few years later he was made president of the Liberty National Bank, and from that went to the Bankers Trust.

The Morgan influence is powerful in the Bankers Trust Company; in fact, it is usually called a Morgan concern. It may be noted that Mr. Cochran, the new Morgan partner, graduated into his present position by way of the Astor Trust Company and the Liberty National Bank; and that Mr. Lamont, another Morgan partner, also came from the Liberty National Bank. Neither the Astor Trust nor the Liberty Bank is among the bigger financial institutions, but the cases of Messrs. Prosser, Cochran and Lamont suggest how the lines of promotion run. It is primarily a question of making the right impression upon a man who has high financial positions to dispose of, which means that you must somehow get into the great man's orbit. If you are so fortunate as to be in an institution that is in his orbit your chance of advancement to high command is that much better.

To illustrate another point we may take two more big bank chiefs. First, Gates W. McGarrah, president of the Mechanics and Metals National Bank, whose assets foot up a quarter of a billion dollars. He was born in a small

(Concluded on Page 86)

THE LAST THROW

By Maximilian Foster

ILLUSTRATED BY F. VAUX WILSON

JUST after the market's opening on the day preceding the big boom in Furnace Common, the customers' room at Rooker, Burke & Co.'s New Street brokerage house framed for a few brief moments a scene surprising even for a locality where surprises are a daily event. Startled by the happening, the crowd seated before the quotation board turned in their chairs to stare.

There were two principals in the affair. The first was Mr. Buck Rooker, the head partner of the firm; the other was a tall, shabbily dressed person, a visitor whom the crowd recognized as once having traded in the place. Emerging abruptly from his private office at the rear, Mr. Rooker was seen to be propelling the caller rapidly toward the street door.

"Beat it!" he directed; and, giving the man another energetic shove, Mr. Rooker added heatedly: "You come in here again—you panhandler—and I'll turn you over to the cops!"

Rising idly, Mr. Pincus as idly yawned.

"Vell," he remarked, the remark addressed to no one in particular, "I guess I go up to Frank's place and buy myself a cigar." Then he yawned again.

For years Mr. Pincus had been a trader in the place. He was a short and stout nearsighted gentleman, with Oriental features, whose specialty was deals in Chicago futures—pork ribs and shoulders, as a rule; and that he was a person of ironclad calmness and repose he had shown clearly during the commotion. Perched on a stool before the stock ticker, Mr. Pincus had sat there coolly scanning the tape. A bronze Buddha, squatted on a mantelpiece, could not have seemed less concerned.

The man, that visitor whom Rooker had ejected, was not the first, however, Mr. Pincus had seen thrown out of a brokerage office. In his years of experience in Wall Street, more than once he'd beheld that sight. Usually when the market cleaned out some dabbler the victim went quietly enough; but now and then one of the unfortunates made a row. Whatever the case, though, whether the victim went passively or had to be escorted to the door, Mr. Pincus made it a point to ignore the happening; in fact, to remain calm, not to say unfeeling, was invariably his pose. "Business is business!" was Mr. Pincus' favorite remark; for, as he said, if a fellow was playing the market the market needed all his mind.

Not that Mr. Pincus professed a love for the market, though. It was a "bum *Geschäft*" he'd tell you; and all he asked was a chance once to make a killing—then to get out of it for good. Whenever he said this, however, the men about him invariably winked. Pincus give up trading? "Rats!" was the usual remark.

But once Mr. Pincus had nearly quit the market. What's more, it was willy-nilly too. Only chance, it seems, had saved him; and curiously—all the more curious in view of his present calmness, his air of easy aplomb—that chance had come through the very man Rooker had just ejected.

Blake was his name. Blake had lent Mr. Pincus the money to tide him over the crisis; and now, indifferent, unmoved apparently by what was going on, Mr. Pincus had sat there stolidly, idly scanning the tape. It was callous. It was, indeed, so callous that, even in face of the fact that indifference was invariably Mr. Pincus' pose, one would have marveled at the gentleman's inhumanity.

Again yawning, he was moving toward the street door when the man nearest him, a Mr. Thurlow, nudged him in the ribs. Something in the scene of that recent happening seemed to have tickled Mr. Thurlow's risibilities, for a grin was spread on his face.

"Say, did you see that, Pink?" he tittered.

Mr. Pincus gazed at him queerly. Mr. Thurlow, too, had long been a trader at Rooker, Burke & Co.'s, but in that time cordiality between the two had never been what one would call effusive. It was Mr. Pincus' opinion of Mr. Thurlow that he was "A couple of two-spots, just."

"Did I see vat?" he interrogated.

"Why, that fellow Blake," returned Mr. Thurlow; "he's back again, trying to get in on the market. He wanted Rooker to stake him."

Mr. Pincus' eyes narrowed slightly.

"Stake him for vat? A haircut or a shave?"

This, though he didn't say so, was Mr. Pincus' estimate of the extent of Rooker's liberality. What Blake, however, had asked was that Rooker should stake him to a hundred shares of something or other on margin. It was a last chance, a final effort for the man to get on his feet again; and, having related this, Mr. Thurlow giggled:

"Think of that sucker trying to break in again!"

"Sure!" nodded Mr. Pincus. "All the suckers wish to come back. When you bust you'll want to too."

Mr. Thurlow scowled sharply.

"Hey?" he inquired.

Mr. Pincus, however, having briefly sucked his teeth, was now staring at the floor; so, after the scowl—that and a sudden glance—Mr. Thurlow shrugged his shoulders.

"Oh, well," he drawled, "I've got no time to waste over any has-been like Blake."

Then, having added sagely that Wall Street was too full, anyway, of hobos and down-and-outs to worry about, Mr. Thurlow changed the subject. Had Mr. Pincus noted the activity in Furnace Common? Mr. Thurlow had a tip on it. The tip was a hot tip. He had it direct from a friend who got it direct from another friend. This friend of his, it appeared, was a director in Ingot Furnace Company; and, if Mr. Pincus was willing to do "the regular thing," Mr. Thurlow might be willing to let him in on it.

For some reason, Mr. Pincus did not seem to hear him. He was gazing at the street door, the exit through which Blake had just departed; and, thoughtful now, his air reflective, he was uneasily scratching his chin. After waiting a protracted moment, Mr. Thurlow began to betray a hint of annoyance.

"Well?" he inquired.

"Vell, vat?" returned Mr. Pincus.

"I said," rejoined Mr. Thurlow, "that if you were willing to come across—pay me a percentage of what you win, you know—I'd let you in on the tip I have."

"Oh, you got a tip, have you?" remarked Mr. Pincus.

A grin lurked on his jaw. Mr. Pincus, in fact, had his opinion of tips and tipsters; a view that more than once he had aired in the customers' room. If only you asked for it, he'd said, you could get a tip on anything—the next dividend on Bay State Gas; the millennium, either; or when they'd cut a melon in Hocking or retire Rock Island's bonds. Perhaps Mr. Thurlow now recalled this, for he began to color pinkly.

"Say, this ain't the sort of tip you thi it is!" he said sharply. "I got it straight fro the inside, I say."

"Sure!" nodded Mr. Pincus geniall "That's where they all come from—the i side. Blake, when he gets cleaned out last year, he gets tip from the inside, too, I guess."

"Blake? What's Blake got to do with it?" demand Mr. Thurlow bewilderedly; and Mr. Pincus grinned.

"It's a secret—nothing! Only all of us gets cleaned o some time; and mostly it's off a tip. I get cleaned out well, maybe; and you get cleaned out—yes; for su Then we hunts up a job; or, if we don't get it, some tw spot of a crab has a chance to call us a loafer or a stre bum. Sure; for a tip, yes!" said Mr. Pincus.

"Say, what're you driving at?" demanded Mr. Thurlo darkly; and, again sucking his teeth, Mr. Pincus on more idly smiled.

"I was saying it was a fine weather for ducks—sor ducks," he replied; and, abruptly turning on his heel, M Pincus left Mr. Thurlow snorting indignantly, and hurri toward the cashier's cage at the rear.

Beeks, a round-faced, pudgy personage, the office ma ager, was standing there, laughing and joking with t cashier; and, his air insinuating, Mr. Pincus nudged hi on the arm.

"Say, Handsome," said Mr. Pincus, "what's this th feller Blake now asks Rooker to stake him for? A hunne shares of something, was it?"

Beeks nodded indifferently.

"That bum? Oh, sure! It was a hunnerd shares, fir but before Rooker threw him out it was a meal ticket a the price of a room he was begging."

Mr. Pincus gave a start.

"Vat? He don't eat, and he sleeps in a park, maybe

It was so for all Beeks knew—all Beeks cared, eith one had thought. Rooker, Burke & Co.'s was not tramps' lodging house; besides, Rooker was tired—s and tired of supporting panhandlers like Blake. Enlarg on his topic, the subject of his employer's open-hand liberality, Beeks was telling how, only the Saturday bef they'd slipped Blake a couple of bones; and here hobo was back for more—when all at once Beeks woke the fact that he was addressing empty air. Mr. Pin had departed.

Of a sudden that air of his, that show of easy, idle in ference, had seemed to vanish; and, with a mutte exclamation—"*Himmel!*"—that and an tated grunt, Mr. Pincus had darted across office, bolting through the throng to the st door.

The next instant, jamming his hat down his ears and without umbrella or overcoa protect him, Mr. Pincus scuttled up New St in the rain.

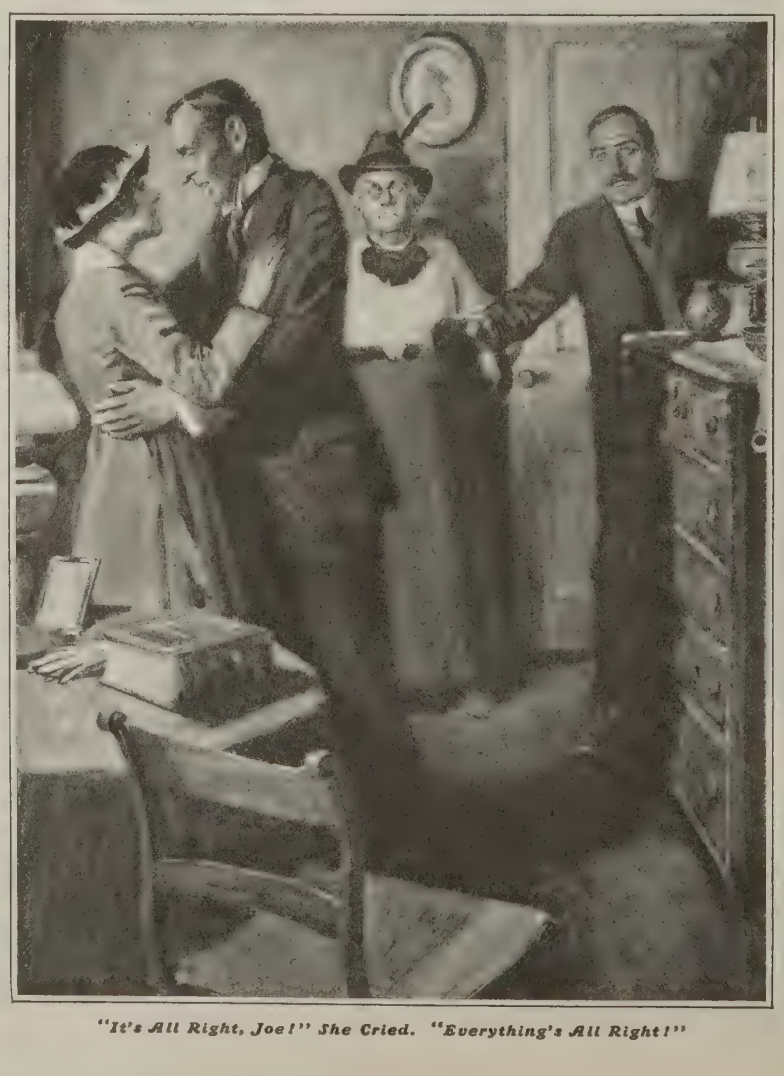
It was true, indeed, that Blake—no wreck, a battered stray—had once saved Pincus from disaster. But for him, Mr. Pin day in Wall Street would have come to a sud end.

Mr. Pincus did not wish it to end. L of all did he wish it to end like that. plans, like the plans of every dabbler, invo a different, more exhilarating exit. This the killing he talked about; but even t even if he did make this killing, the clea that all the dabblers dream of, that did n necessity mean he'd quit the Street for g If he liked he could still take an occasional f The flyer would be just for amusemen course—just to pick up a little lunch m or to buy his wife a Christmas present. to go broke, to be chucked out, penniless— was different!

The calamity, as expressed, however, a not limited only to this. In Mr. Pincus' it seemed to invoke in train certain reflec concerning the Bleecker Street dress-li trade, a business, it appeared, with which Pincus once had been connected. Some the mere thought of it made him shu Return to that! Go back to that grubby p the loft in Bleecker Street!

"*Ach!*" ejaculated Mr. Pincus, the g expressive.

It had been touch and go, however. chance had saved him. Just when Ro Burke & Co. had been about to sell him Blake had come to his rescue. The loan h made Mr. Pincus voluntarily had saved th for Mr. Pincus.



"It's All Right, Joe!" She Cried. "Everything's All Right!"

But chance, it appeared, a stroke of strange good fortune, had not intervened for Blake. A year later Blake himself had been cleaned out. Mr. Pincus had been absent at the time—away at Atlantic City, where every year at astertime Mr. Pincus, accompanied by Mrs. Pincus, took ıe air. When he'd returned Blake was gone. Even so, Ir. Pincus had only nodded.

"Vell," he'd said cynically, "the feller goes back to his ıb now, vat?"

Briefly Blake's job had been that of New York agent for large manufacturing concern in Ohio. In salary and comissions the firm had paid him twenty thousand dollars a ear; and as Mr. Pincus said: "If twenty t'ouzand a year feller has, for him play the market is a sucker!"

But Blake, it appeared, had not ne back to his o. He had no job. is employers having heard of his reculations, Blake ıd been discarged. Here he us, now, walking le streets, a tramp.

"*Himmel!*" exclaimed Mr. Pincus; d, jamming his lt down farther on ir ears, he sped on ı way up New reet.

The man, the fellv he pursued, had jıt turned westvard into Wall reet. His clothes, hif rags, flapped al fluttered in the gsts that came vooping down the hl; and as Mr. Ihcus scuttled aft him he eyed the cthes and wonded how long their warer had slept in tlm in the park. Tere was something else, too, that Mr. Pincus wondered. It was: What had become of the scarecrow's wife? Where was Ms. Blake?—for, as Mr. Pincus knew, there had been a Ms. Blake. Had she, too, been sleeping in the park?

"Hey, you!" cried Mr. Pincus.

With a sudden spurt he ranged alongside and gripped th man by the arm; and Blake, at the touch, leaped as if he had been struck.

"Leggo! I ain't done anything!" he vociferated, his voice a startled whine. Then another cry escaped him. His ctor he had recognized. "Pink!" he gulped. "Oh, Pink!"

Mr. Pincus gazed about him uneasily.

Sure, it's Pink," he acknowledged; "only for you don't y it so loud." Explaining apologetically "Should they her you, somebody thinks Pincus himself is carrying the biner too!" he beckoned Blake into a near-by doorway. Tere, after a brief glance at Blake's attire, Mr. Pincus sucked his teeth. "Vell, how's tricks?" he inquired ıually.

Blake all at once began to shake. The once dapper, plisant fellow Mr. Pincus once had known was hardly recognizable. His hands outstretched, convulsed and trembling, he begged wildly for a quarter—a dime even; the price of a cup of coffee and a slice of bread. Mr. Pincus scowled.

"Say, nix on that panhandle stuff!" he directed roughly. "Nix on that dime-for-a-cup-of-coffee game! I don't fall for that!"

Blake gave a gasp.

"Pincus!" he ejaculated.

Again Mr. Pincus shook his head; and Blake gave another cry.

"You won't?"

"I vill not!" said Mr. Pincus.

Then, having sucked his teeth a moment, Mr. Pincus gave Blake a dig in the side with his elbow.

"No; I don't give you no dime," said Mr. Pincus; "but what'd you say to a nice fat sirloin and fried *kartoffel?*—thin and a few cakes, hot, right off the griddle, vat?"

But Blake seemed to have forgotten the hunger gnawing at him.

"Listen, Pincus!" he babbled hoarsely. "Listen!"

Mr. Pincus paused.

"Vell, I'm listening."

Blake clawed at him with trembling paws.

"Do you want to be rich? Rich!" shrilled Blake.

"Do I vant to be vat?" inquired Mr. Pincus.

"Rich! Rich!" shrilled Blake. When Mr. Pincus, grinning slightly, lightly admitted he had no objections, Blake pawed at him again. "I can do it, Pink! I can make you rich!" cried Blake again; and, sniffing slightly, Mr. Pincus took him by the arm.

"Come along, feller; you feel better after you eat," he was saying, when Blake snatched his arm away.

"Say, listen! D'ye hear?" snarled Blake. "I mean it!"

His eyes fierce, roaming everywhere as if he feared someone might hear his secret, for a full minute he poured into Mr. Pincus' ears a flood of fierce, impassioned words.

"You Come In Here Again—You Panhandler—and I'll Turn You Over to the Cops!"

Idly Mr. Pincus listened. It was as if he humored Blake, placating him as anyone would placate a man crazed by his privations. All at once, though, Mr. Pincus' air of bored benevolence suffered a sudden change.

"Vat?" he ejaculated.

Again Blake poured into his ears the fire of his impassioned eloquence; and, with a gasp, Mr. Pincus gaped. Blake again went at it. He was in the midst of it once more when, with a start, another ejaculation, Mr. Pincus gripped him all at once by the arm.

"Vat!"

"I pledge you my word!" said Blake; and, at that, excitement seemed to burst within Mr. Pincus' breast.

"Here!" he cried; and, shoving a hand into his pocket, Mr. Pincus dragged out a single rumpled bill.

The bill was a dollar bill; and, this in hand, he was thrusting it on Blake, bidding him to go eat; he must get a jump on and get back to Rooker's; there was not a moment to lose. Mr. Pincus was darting away, when he paused, with a sudden cry. It was a loud cry too. The bill falling from his hand, fluttered to the floor.

"Why, what is it?" ejaculated Blake.

His face blank, his air of a sudden abject, Mr. Pincus bent down and picked the bill from the floor.

"Oh, nothing," drawled Mr. Pincus, and he sighed—"nothing; only I guess for you and me, Blake, we go jump off the dock in the river!"

"What's wrong?" Blake demanded hoarsely.

Mr. Pincus told him:

"I'm bust, Blake! I ain't got a cent in the world! This week again the market cleans me out."

It was so. Once more Mr. Pincus was on the rocks. That was why, when Blake, desperate, had appealed to Rooker, and Rooker had thrown him out, Mr. Pincus had sat there, to every appearance callous and indifferent. He could not help Blake. He could not even help himself. Bleecker Street and the fancy dress-linings trade beckoned him anew.

What is more, it beckoned when, with a little cash, a little capital, Mr. Pincus could have saved himself. With money to back him, he could have jumped into the market and made a clean-up—that killing he so long had dreamed about. For Blake's tip was a knock-out. It was one tip in a thousand!

How Blake, too, had come by the tip was as much a nightmare as all the rest of it.

Blake, it seemed, had fallen very low. Unable to find work—the sort, at any rate, he was suited for—the man had gone from bad to worse. Finally, to save himself and his wife from want, he had become a porter in a downtown office building. There he had swept out offices and emptied wastepaper baskets. There, it happened, too, he'd fallen on his tip.

One night, broom in hand, Blake had opened an office door. To his surprise, he'd found the room filled with men. It was a directors' meeting, Blake had seen; and at the meeting something big was happening. An hour later, after they'd gone, he'd slipped back to the room; and there the papers in a scrapbasket had given him his clew. The meeting was a meeting of the Ingot Furnace Company. Blake's tip, in fact, was on the same stock that Thurlow, that "two-spot," had been tipped.

There was this difference, though: Thurlow had been tipped to sell. Blake's tip was to buy! In other words, the company's directors, getting together, planned that well-known financial diversion—namely, jobbing the stockholders out of their stock.

Armed with the tip, for five days Blake had hurried from place to place, hunting up former friends and begging each for a loan. To each he had told his tip and each had laughed in his face. Buy Ingot Common? Put money into a cat-and-dog like that? Desperate, Blake at last had gone to Rooker. In turn, Rooker, too, had laughed at him; after which Rooker had thrown him out of the place.

Mr. Pincus, however, had not laughed. Instantly he had grasped the significance of what Blake had told him. It was to little purpose, though. Mr. Pincus was broke—"bust," indeed, as he'd expressed it. Unless luck, another chance, happened to save him, one sure thing stared him in the face. It was Bleecker Street and the dress-linings trade.

Late that night, long after dusk had fallen and an hour or more behind the time he usually arrived at home, Mr. Pincus climbed the stairs of the modest West Side flat house where he dwelt; and, arriving at his door, for a moment he halted irresolutely, his latchkey in his hand. Doubt, an air of unwonted concern, seemed at the moment to engulf him; and, gazing at the door, he took off his hat and scratched his head reflectively. He looked, in addition, a little feverish.

All that day, his eyes afire and the fever growing in him, Mr. Pincus had been rushing about the town. Like Blake, he, too, had sought out friends of his, begging and beseeching them to advance him enough to play the tip on Ingot Steel. Most of the friends were centered in a certain quarter—Bleecker Street and the dress-linings trade; and each of the friends, as was also the case with Blake, had laughed in Mr. Pincus' face. What! Lend money to dabble in stocks? Lend money, especially, to play that cat-and-dog Ingot Furnace Common? Pincus must be crazy with the heat!

That gentleman, however, had one string left to his bow; and jamming on his hat, with a sudden air of resolution, he opened the door and stepped boldly into the hall.

At once a voice as well as a gust of aromatic vapor came wafting toward him from the kitchen, at the rear. The vapor was that of fried fish and cauliflower, while the voice was that of his wife. Instantly an artful smile spread on Mr. Pincus' face.

"Vell, Minnie?" chirped Mr. Pincus dulcetly.

"Vell, Benny?" responded his wife.

Like her husband, the lady was short and rotund—roly-poly, in fact, with a round, smiling face at once as shrewd as it was good-natured. As she came down the

hall, wiping her hands on her apron as she came, the good nature was for the moment uppermost. It was only for a moment, though. Reaching up, Mrs. Pincus delivered a chaste salute on Mr. Pincus' still artfully beaming countenance, after which she backed off a step, her air of a sudden shrewd. "Vell?" she inquired.

"Vell, vat?" inquired Mr. Pincus.

In response Mrs. Pincus put out her hand, its palm open.

"Fifty-fifty, Pincus!" she directed; at which instantly the smile was stricken from Mr. Pincus' face.

He seemed to grasp clearly what she meant. The fact is, few knew better than Mrs. Pincus the hazardous nature of her husband's occupation; so for several years now, every night when he came home, his wife had made it her habit to extract from him a certain percentage of his winnings. What he gave her, of course, was not the fifty-fifty she demanded; but often she got ten per cent, and sometimes even twenty. Lately, however, it appeared, Mr. Pincus had given her little.

A grumble escaped him; and he was turning away when, with a deft movement of her upturned palm, Mrs. Pincus jabbed him in the waistcoat.

"You don't win something again?" she demanded.

Mr. Pincus' look grew uneasy. Evidently, this reception was not at all as he'd planned it; and he was mumbling uncomfortably, his manner awkward, when Mrs. Pincus returned to the charge.

"If you don't win something," she demanded, "how is it I should pay bills for the house, I ask you? Is it on wind, Pincus? Vat?"

At once a crafty look leaped into Mr. Pincus' eye.

"Vell, you got that nest egg, ain't you?" he suggested.

It was true that Mrs. Pincus had a nest egg. From what she'd extracted from Mr. Pincus she had laid by three thousand dollars in the bank. The reference to it now, however, seemed to produce in her an effect that also was not in the least as he'd anticipated.

"Sure, I got it!" she returned; adding instantly: "That nest egg, too, stays where it is—right there on the nest!"

Starting violently Mr. Pincus blinked.

"Vat! You mean you don't loosen up from it nohow?"

"Not a stitch!" affirmed Mrs. Pincus flatly; and Mr. Pincus gasped.

"Yes; but what if it was to help out a feller, y'r husband?" he persisted. It was all one to Mrs. Pincus.

"You c'd holler y'r head off!" she replied.

What! Give up her nest egg? Give up that money she'd scrimped and labored to save? Snorting indignantly she went off down the hall, her shoulders working expressively.

Mr. Pincus, however, was not one to submit readily to defeat. All that evening, the fever glittering in his eyes, he sat gazing appealingly at his wife. But Mrs. Pincus did not seem to heed him. She was engaged, it seems, in turning a last-year's hat into a this-year's model.

This she managed by pulling out the feather, which was upright, and, with a pair of shears, cutting off the brim. Then, when she had crushed the crown together, afterward denting in the top, Mrs. Pincus sewed the feather on it lengthwise, its end sticking out behind. The effect it gave was Scottish; and, remarking this, she was again admiring herself in the glass, when Mr. Pincus rose abruptly. As if unable to restrain himself further, he suddenly threw out both his hands.

"Minnie," he appealed, "you c'd be a good feller, couldn't you?"

Mrs. Pincus gave the hat another dig.

"I could not!" she replied; and emotion at this point got the better of Mr. Pincus.

His arms waving and speech bursting from him in a flood, he poured forth into Mrs. Pincus' ears all he had learned that day from Blake. The Ingot Company was booming. War orders were what had done it—the company, with these orders behind it, was working day and night; and now, having cleared millions, the directors were about to cut a melon.

What a chance! What an opportunity! With Minnie's money, the three thousand she had in the bank, Mr. Pincus could make a clean-up, a killing epic in its slaughter! There were thousands in it—"T'ouzands *und* t'ouzands!" Mr. Pincus averred; and, his face aflame, his arms all the more wildly waving, he vowed that if Minnie only this once would "loosen up" he would quit the Street, give up dabbling for good, never again take a flyer in stocks.

He was in the midst of it when a grunt escaped Mrs. Pincus.

"Vat? You quit stocks?" she echoed.

"I swear it!" cried Mr. Pincus; and again Mrs. Pincus gave her hat a dig.

"*'Raus mit* you!" said Mrs. Pincus brusquely. "Ven you quit it is because you are dead or you go bust, either." And Mr. Pincus, gaping, stared at her.

"Vat? You don't loosen up then, Minnie?"

It was so. Not even if from Rockefeller himself he'd had that tip would Mrs. Pincus do so; and, hearing this, Mr. Pincus threw all caution to the winds.

"If you don't," he cried, "all that happens is, we bust!"

The prophecy—a threat, rather—seemed to fall as flat as his appeals.

"No; we don't," retorted Mrs. Pincus. "You bust, maybe; but we—we don't bust." Then, giving the hat feather another yank, the hat itself another dig, Mrs. Pincus again calmly glanced at herself in the glass. "And ven you bust, too, Pincus," she added blandly, "you go back to work—that's all!"

A muffled cry leaped from his lips.

"Vat! Go back to the fancy-linings trade? A feller c'd be dead as well!"

"Makes no difference, Pincus," she rejoined. "Better you are a nice funeral than you waste my money and your time down in that loafer business, Wall Street. As well you c'd play *Stütz* or pinochle for a living, dealing cards, as to gamble in them stocks—yes! . . . Vell," added Mrs. Pincus vehemently, "for seven years you hang out in that feller Rooker's place; and for seven years your wife, which is me, she tries to get you out of it. Now she does it—that's all!"

"Yes; but that tip!" cried Mr. Pincus frenzied. "T'ouzands! T'ouzands *und* t'ouzands! And we lose 'em!"

"Makes no difference," answered Minnie; and a last, a despairing cry burst from Mr. Pincus.

"You von't, Minnie?"

"Not if you was to choke, Pincus!" was her reply.

Mr. Pincus indeed choked. An hour later, tossing fitfully among the feathers, he was, in fact, still choking. Then a curious thing occurred. A groan, a hollow note of despair, had just escaped him, when a hand reached out and jabbed Mr. Pincus in the side.

"Listen, Pincus," said Minnie; "if you gamble, playing stocks, how much is it them fellers, your broker, charges you?"

"Vat?" ejaculated Mr. Pincus.

Minnie repeated the question; and, startled, a gleam of hope springing into his heart, Mr. Pincus babbled the information. What a broker charged was an eighth for each transaction. Also, with three thousand dollars, one could margin three hundred shares. Eloquent now, his fever rising anew, Mr. Pincus gave her all the details. Then, his heart in his mouth, hope trembling high, Mr. Pincus wet his lips.

"Vell, you make me a check out, vat?" he suggested.

A grunt was heard.

"Go to sleep, Pincus," directed Mrs. Pincus.

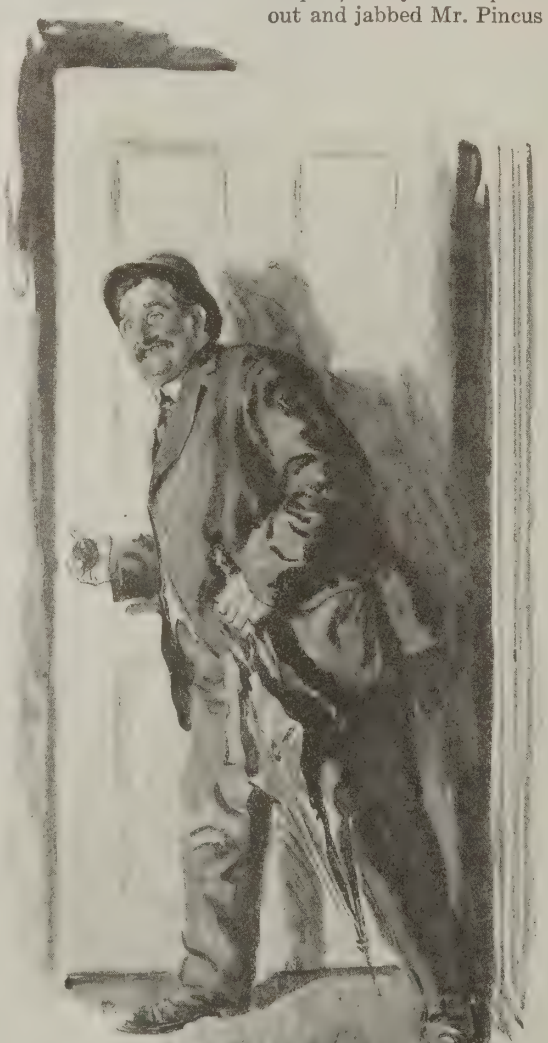
"Vat? You make a fool of me, then?" roared Mr. Pincus.

Minnie only gave another grunt.

"If you are a fool, Pincus," she replied calmly, "that is your affair."

Then, turning her back to him, Mrs. Pincus slept.

The tip, that pointer worth a fortune, was destined, it seemed, to die on Mr. Pincus' hands.



Instantly an Artful Smile Spread on Mr. Pincus' Face. "Vell, Minnie?" He Chirped

Those familiar with the doings of that crop of singular securities, the War Babies, to which Wall Stree has of late given birth, will recall that it was on a Tuesda morning, just after the market's opening, when Ingot firs began to splutter and buzz. That day more than one for tune was made in Wall Street. In train with this, mor than one fortune was lost there too.

But then, that is always true of Wall Street. What on man wins is of necessity what some other man has lost Only a few, however, the chosen few, had ever won any thing on Ingot. Almost invariably outsiders always ha lost.

Always in trouble, the quarry always of that Wall Stree wrecking crew, who feast and fatten on disaster, the con cern's career before the war was a succession of refunding receiverships and reorganizations. Now, however, the wa had changed all that. The Ingot Company was about t cut a melon. However, before the melon was cut, the dire tors meant first to secure for themselves the largest, th most juicy of the slices. Consequently, having picked u almost every share available, the instant the news brok the stock soared skyward with a rush.

At ten o'clock the market opened. Ingot was the firs quotation. Having closed at 34 bid, a quarter asked, i opened with a whoop. The first transaction, a block of tw hundred shares, was snapped up at 35. The next transac tion was another three-quarters up. Five minutes late uproar raged in the market. The whole Street fought t get aboard; and in every brokerage office—Rooker, Burk & Co.'s among them—the uproar on the Stock Exchang was instantly and as wildly reflected.

"Ingot, a half—three-quarters! Five hundred Ingot a seven-eighths! Ingot, thirty-nine! A quarter! A half Five hundred Ingot at forty! Ingot, forty-one!"

Mr. Thurlow, his mouth agape and his face now of startling pasty pallor, stood gaping at the quotation boar The day before the gentleman's mood had been merry When Blake, that stray, that has-been, had been ejecte from the place, Mr. Thurlow had lightly laughed. Bu then, why not? Had not Mr. Thurlow had a tip? Wa not the tip a hot tip too? In anticipation of the mone the riches that would accrue from it, there had been evel reason why Mr. Thurlow should take things pleasantl Now, however, the dream seemed somehow to have bee shattered.

Tipped to sell, Mr. Thurlow had sold. That, in fact, w what the Ingot Company's director had expected when he given out the tip. Consequently, having sold at 34, M Thurlow now looked as if he meant to faint.

His face moist and his lips wetting themselves togeth he was still staring at the quotation board when Rook tapped him on the shoulder.

Rooker's face wore a smile. The smile, however, w purely professional.

"Say, Thurlow," he said, "if it's convenient, I'd like little check from you."

When Mr. Thurlow, a bit whiter, mumbled he'd let h have the check the next day, Mr. Rooker shook his hea He must have a check at once, he said; and, his face co vulsed, Mr. Thurlow made an exclamation.

"What! You'd close me out?" he cried.

It was as he said. Unless he came across at once witl check, the firm indeed would close him out; and, his vo rising, Mr. Thurlow began to protest. It was not for lo however. "Here, you," ordered Rooker, his jaw ugly; you have any squealing to do you can't do it in here!"

Mr. Thurlow, however, did not heed. He had raised voice even higher, shrill now in his misery, when Rook assisted by Beeks, the office manager, briskly escorted h to the door. Exit Mr. Thurlow, still squealing.

This commotion, however, had hardly subsided whe was succeeded by another. Ingot had just crossed 50 wh with a stifled cry, Mr. Pincus rose and launched him across the room. Then, throwing open the street do with another cry he bolted out into New Street, waving arms as he went.

"Say," said one of the crowd, addressing a fellow tra in the chair adjoining, "what's biting Pincus? Crazy w the heat, huh?"

"Search me," replied the other gentleman. "Loo like he was tearing his hair!"

If so, Mr. Pincus had cause to tear his hair. At se o'clock that day Mr. Pincus had risen. In moody sile having dressed himself, he had then repaired to the bre fast table. There, in the same submerged gloom hav consumed a dish of prunes, a saucer of breakfast food, f slices of toast, a couple of eggs and two cups of coffee had kicked back his chair and lumbered to the door. wife inquiring then whither he was bound, Mr. Pincus turned on her with a savage glare—that and an equ savage answer.

"Vat's it to you? If it's to the river I go and jump vat do you care, anyhow?"

"Vell, don't get your feet wet, Pincus!" she had rejoi

And, jamming on his hat, Mr. Pincus had turned on again.

"Vell, I fool you, anyway!" he cried excitedly. "I b maybe! Just the same, I don't go back to them d linings."

Beau-tee-fu' shaw."

without reason was Lee Sing remembered and re- tl as the prize backslider of the Chinese Christian ssn, where good women, whose husbands should have w better, labored long and hard to snatch yellow n from the burning.

Hsing first acquainted himself with the educational uof apostasy, Lee Sing had embraced Christianity, and l mained an ardent and enthusiastic convert for just lo a time as it had taken him to learn to read and te ne-syllable English. Then, having laid the founda- n f a successful commercial career, Lee Sing had ceased ea in prayer and had fallen from grace with a dull thud; Cinese Christian Mission knew him no more. He had ur d to his idols, his joss houses, his red-spotted dice, o asional nips of fiery rice brandy, his semioccasional iffi from a bamboo pipe, and, last but by no means st, he two-a-day drawings of the Quong Hop Lottery mpny.

Lee Sing was a gambler. Outwardly a laundryman, he sh dirty linen only to secure the means wherewith to tif a consuming passion. Even as he imparted a ssyshine to collars and cuffs, Lee Sing saw himself, ayl in a plum-colored blouse of brocaded silk, loafing out the ill-smelling gambling dens of Fish Alley, and nso ing with the *jeunesse dorée* of the Chinese Quarter. Sor day he hoped to catch a ten-spot and break the on Hop Company, or strike a lucky streak at four- e-si and force old Sam Wing to turn the big blue dice wl side down. This was Lee Sing's vision of the Sweet an By—a vision that kept his irons flying and his pock- empty. A dime is a piker's bet, but he who stakes lasten-cent piece earns the right to be called a plunger. Lee Sing lived and worked in a community where big was the rule rather than the exception. From e widows of his shack he could see the high board fence rrounding the race track where white men gambled on e sped of horses. The smell of easy money was in every o breeze blowing in from the broad Pacific, the betting fever as in the very air; but Lee Sing stuck to the games at h knew about and paid little or no attention to his rf neighbors, save when he met them in a business way. Experience had taught him that horsemen were good stoners, often given to sudden, inexplicable bursts of nerosity. It had also taught him that California stable ys ere vest-pocket editions of the devil himself—unte imps who threw stones at Chinamen and cursed th aluency far beyond their years.

"*In uh swee-ee-eet . . . by um by . . .*"

The front door opened with a bang, and a short bow-legged youth entered abruptly.

"'Lo, Lee!"

"'Lo, lilla kit!"

The visitor scowled and twitched a shabby cap lower over his eyes, which were gray, deep-set and older than they should have been. Fringes of yellow hair seemed to bristle behind each ear, and the muscles of his small but sturdy torso tightened under a ragged blue sweater.

"Aw, cut that 'little kid' stuff! . . . Is my shirt done yet?"

Lee Sing's loose slippers clipclapped on the floor as he moved over to the rack that contained his finished work. Selecting a small flat package from the pile, he examined the hieroglyphics scrawled upon the linen tag.

"Me ketch 'um," said Lee Sing, grinning pleasantly. "You ketch 'um dolla hop?"

"Now where would I get a dollar'n a half?" demanded the youth. "How many times have I told you the hoss ain't started yet?"

Lee Sing's face became perfectly blank; he took refuge behind the phrase at which the entire West has battered in vain.

"Me no sabby," said Lee Sing stupidly. "No sabby hoss. You no ketch 'um dolla hop, no ketch 'um laun'ly. Fo', fi', sixsa week—alla time you foola me. Alla time you say not yet—jusha one week maw. You hip no-o good!" He replaced the small bundle on the pile.

"Aw, listen, Lee!" begged the youth. "I know I've had to stand you off for a month or so, an' I'm sorry; but I've got to have that shirt. I've got to have it to-day!"

"Dolla hop, you ketch 'um," replied Lee Sing, unmoved.

"But I got to take my sister down town to see a doctor," pleaded the boy, "an' I can't go lookin' like a tramp! Have a heart!"

"Umph!" grunted the Chinaman. "Sista, she sick?"

"She coughs all the time, an' she's kind o' weak an' run down. I can't take any chances, lettin' it go too long. I want a doctor to find out what ails her, an' mebbe give her some medicine. That's why I need the shirt. I got to look as if I can pay a doctor's bill, anyhow!"

Lee Sing reflected for some time, his slant eyes half closed.

"When you ketch 'um dolla hop?" he asked.

"Next Friday!" said the boy desperately.

"Umph!" remarked Lee Sing, still far from conviction.

"Friday I got Ninespot entered in a race," persisted the boy, "an' I'm goin' to bring him home in front by a city block. He'll win sure, Lee!"

Lee Sing showed the yellow stumps of his teeth in an incredulous grin.

"Mebbe so; mebbe so not," said he, shaking his head. It was not the first time that a race-track customer in straitened circumstances had offered Lee Sing feed-box information in lieu of coin of the realm. "Mebbe so loosh 'um!"

"But he can't lose!" argued the boy, drawing nearer and lowering his voice to a confidential pitch. "You know how long I've waited with this hoss, just to get him placed in a soft spot. Well, Friday's the day; an' there ain't a thing in there for him to beat—not a thing! I'll have money Friday night—all kinds of money; but I got to have that shirt now!"

"Dolla hop," murmured Lee Sing, weakening.

"But Jennie can't wait till Friday," urged the youth, pressing his advantage.

"She ought to see a doctor this afternoon an' get something to stop that cough! Aw, be a good feller, Lee!"

"You no foola me?" demanded the Chinaman, with a shrewd glance out of the corner of his almond eyes. "You no tell 'um lie?"

"Cross my heart!" cried the boy with sudden passion. "Cross my heart an' hope to die if it ain't the truth! Jennie's sick, I tell you; an' I got to take her to the doctor. You think I'd lie about a thing like that?"

Lee Sing sighed heavily and picked up the small bundle again.

"Aw light," he grunted. "Nisha time aw light. . . . Me hip dam' fool! . . . Fliday, you ketch 'um dolla hop?"

"You bet your life!" The boy snatched the bundle from Lee Sing's hands and moved toward the door; the Chinaman followed him swiftly.

"You hoss," said he, "what him nem?"

"His name's Ninespot, I told you; an' he goes in the sixth race, Friday. Ninespot—sixth race—Friday—got that?"

"Ni'spot," repeated the Chinaman, and a sudden smile bisected his grave countenance. "Ni'spot, Chinee lottelly, him plitty dam' good; ten-spot mo' betta!"

"Gee, but you're a bug on that lottery stuff, ain't you?" asked the boy, pausing at the door. "And say, you got as much chance to land a ten-spot as—as I have to win the American Derby with the awful oat-hound I got in my barn!"

"Bimeby ketch 'um, git plenty money," replied Lee Sing, grinning vacuously. "Ten-spot losh money, kit; all sem lich!"

"Lots of money, eh? Well, go to it, Lee; I'm for you. You're a good feller at that!"

"Uh-huh," was the dry response; "jusha now me dolla hop good fella. Me sabby you. You come back Fliday?"

"Just as sure as the sun shines!"

The boy leaped out into the chill December breeze, hugging the flat bundle to his breast.

"Billy," said he to himself, "what's goin' to become of you? You lied like a common tout—lied to a Chinaman to get a shirt an' make a front so's to stand off a doctor! Ninespot! They flattered him when they named him! An' you said he'd win sure! I'm ashamed of you!"

Inside the frame shack Lee Sing continued to wad damp garments into little balls, and the quavering melody rose and fell, while the swaying queue marked time:

"In uh swee-ee-eet . . . by um by . . .
We sha' lest on 'at beau-tee-fu' shaw,
Beau-tee-fu' shaw."

"Haw!" chuckled Lee Sing, and followed his chuckle with an avalanche of guttural sounds, which being interpreted into pidgin English gives us the following bit of wisdom:

"Ni'spot, him plitty dam' good; ten-spot, mo' betta!"

II

WHEN old Tom Randolph closed his eyes on a world of change and chance he left an estate consisting of a spotlessly clean record on the American turf, an excellent

split-second stop watch, which he had carried for thirty years, and a heavy-headed, blundering chestnut colt named Ninespot, which had never faced the barrier. He also left two children—Jane Marcum, aged nineteen, and William Churchill, "seventeen, goin' on eighteen."

Time was when the Randolph Stable amounted to something in prestige and dollars and cents; but the owner's latter days had been evil ones, and the glory of his faded racing colors had departed.

"It's a mean trick, Billy," Old Tom had said after the doctor had told him the truth; "yes, a mighty mean trick, leavin' you like this—you an' Jennie. You'll have to watch her pretty close, my boy. She's inclined to be delicate, like her mother was, an' she'll need lookin' after. . . . I ain't askin' you to promise me, sonny. I know you'll think of her first always. . . . The racin' game ain't what it used to be before bookmakers began buyin' stables of their own; but if you stay with it, Billy, run your hosses on the square—I expect you'll be ridin' a couple of seasons yet. Don't never ride for a man that wants you to do wrong, an' remember what I told you 'bout makin' a low weight if it hurts you. It ain't worth while ruinin' your health. . . . And now, if you'll bring Jennie in. . . . I'm in the home stretch, sonny, an' finishin' fast."

For two years Billy had preserved his father's estate intact. Old Tom's turf record had not suffered by any act of his son; the split-second stop watch had not left the Randolph family for as much as an instant, and the worthless Ninespot had a roof over his head and oats to eat—oats he had not earned. By riding for other owners Billy had been able to keep a horse of his own—not much of a horse, to be sure, but still a thoroughbred and the sole survivor of the Randolph Stable.

And now, at the end of the second year, Billy Randolph sat on the porch of a three-room cottage in the rear of the barns and faced a crisis all too serious for his years.

It was night, and a dense fog had drifted in from the ocean, swallowing up the stable lights and blotting out the low even lines of the buildings where the thoroughbreds were quartered. A medley of sounds came to the boy out of the thick gray pall—some of them amazingly close at hand, others muffled and indistinct—snatches of camp-meeting melodies crooned by negro hostlers and roustabouts; shrill cries of youthful gamblers, bending over the dice in some near-by but invisible tackle room; occasional bursts of loud laughter, marking the point of some rude joke. Billy Randolph heard these things but did not heed them. He sat with his chin in his hands, while the fog slowly took the stiffness out of the bosom of his clean white shirt.

A door creaked behind him, and a girl's voice caused him to turn his head.

"Billy, you mustn't set out there in the fog! You'll ketch your death o' cold!"

"Shucks, Jen! I'm warm as toast! Run along to bed, an' don't bother about me. I'll be in after a while. I'm waitin' for George th' Greek."

There was a short silence. The door creaked in an undecided manner but did not quite close. A pencil of yellowish light still glimmered through the fog curtain.

"Billy?"

"Well?"

"You ain't worryin' about it, are you, dear? You know you can't do any more'n just your level best. I'd rather stay here with you, Billy, than go down there among strangers. Don't let it bother you."

The boy laughed harshly. "Bother me? I should say not! Didn't the doctor tell me you'd be all right once you get out of this damp foggy climate? Well, we're goin' to get out. I'll land you in Arizona if I have to make Ninespot carry double. Right at present, I'm figurin' ways an' means—mostly means. . . . Hike, now—here comes somebody!"

The door closed softly as a figure loomed through the fog.

"That you, Billy?"

"What's left of me, Greek. Set down; I want to have a talk with you."

Now George the Greek was really not a Greek at all, neither was his first name George. The alias had been bestowed on him because of an olive complexion, dark dreamy eyes, and a mop of blue-black hair, inclined to curl. When he had money, which was seldom, he could be found vibrating between the paddock and the betting ring, and he had once been four hundred dollars ahead of the game for almost half an hour. When he had no money he worked and earned it, in this respect differing from many turf followers.

The Greek was a gentle, kindly soul, and a very handy man about a racing stable. He loved good horses and understood them and would have made an ideal groom, but would have fought the man who dared to suggest such a thing. Billy Randolph was his only close friend, Jennie the only girl of his acquaintance; the Greek loved them both devotedly.

"What did the doctor say?" George was a youth of few words.

"Plenty. In the first place, it's her lungs. That was my guess all along."

George the Greek made a clicking noise with his tongue and shook his head sorrowfully. Because he found nothing to say, he patted Billy's knee.

"Cheese!" said the head of the Randolph household. "It ain't as bad as that! It's only in the first stages. The doctor says I got to get her out of this foggy climate."

"Sure!" said George the Greek, and swore softly at the fog.

"Go as far as you like!" said Billy. "You don't hate it any worse'n I do—on her account. It's the fog that brings on all her coughin' spells. . . . Arizona or New Mexico—that's what he said. Might as well ask me to take a trip to the moon! Arizona's a long ways off."

"We'll do it somehow," said the Greek.

"But it's got to be done quick. If we take it in time she can beat the game yet. If she stays here ——"

"No 'if' about it. You got to get her there in a hurry."

"But how? That's what stops me—how?"

George the Greek rolled a cigarette and blew a cloud of smoke into the fog.

"Couldn't you sell Ninespot?" he asked.

"Humph!" grunted Billy. "That big hound? Why, I couldn't give him away! He ain't worth thirty cents. . . . I tell you, Greek, I feel like goin' out with a gun an' stickin' up some fat bookmaker!"

"I know," said George. "I've felt the same way lots o' times."

Billy Thoughtfully Guided Ninespot Well Into the Middle of the Track

"I got Ninespot entered in a race next Friday," said Billy. "It's a Burglars' Handicap if ever there was one—all the bad hosses at the track are in it. The route is a shade longer than he likes—seven-eighths; but if he runs up to his best work he stands an outside chance. Jim Barlow has got his big black hoss in there ——"

"Ace of Spades?" asked George.

"That's the baby. Ace of Spades is quite a hoss. He outclasses this bunch—can win in a walk if Barlow's tryin' with him. Trouble is, you never know what Jim's doin' till he's done it; an' by that time they're payin' off. He's been cheatin' with the black hoss lately—waitin' to get a price, I reckon—an' he may not be ready to cut him loose on Friday.

"If he ain't it's anybody else's race, an' Ninespot'll have as good a chance as most of 'em. . . . If I only knew about Jim ——"

"Maybe I can find out," said George the Greek hopefully. "I know a couple of swipes that are working for Barlow."

"Jim's too foxy to tip his mitt to stable hands," said Billy.

"Well, you never can tell. They might have he something. Won't do any harm to nose round an' see. Suppose you do win with Ninespot?"

Billy Randolph solemnly knocked on wood three tim

"After payin' what I owe," said he, "there'd be ab two hundred left of the purse. That would get us th an' I don't ask no more. It's a hoss country; an' wh there's hosses I can always get a job—if it's only drivi delivery wagon."

"You goin' to take Ninespot out in front?" asked Geo the Greek.

"Yes; an' if anybody beats that barrier next Fri it'll be me. The only good races the big hound ever were the ones when he had the jump on the bunch. ain't got no heart, Greek. He quits as soon as they co up 'longside of him. . . . A big yellow hound! An' that's the only hoss left to run for the Rando Stable—in a pinch like this!"

"He might not quit Friday," said the optimistic Geo the Greek.

"He better not!" was the savage rejoinder. "If he d quit it'll be after the worst lickin' a race hoss ever got hear Jennie movin' round inside. Reckon I ought to in an' talk to her—cheer her up a little."

"Is—is she scared, Billy?"

"She wouldn't ever let me know it if she was," repl the boy. "I wanted her to go in the next room whil talked with the doctor alone. Think she'd stand for it? N in a thousand years! It was the truth she was after. A game? She's so game that I kind of choke up when talks about the little cold on her chest. . . . Tha what she calls it—a cold on her chest. Can you beat he

"Listen!" urged George the Greek, with a sudd inspiration. "You tell her I had an aunt once that was ful sick—lungs all shot to pieces. They had to carry to the train on a stretcher—that's how bad she was; now—now she weighs a couple of hundred pounds, an' wouldn't know there was ever anything the matter w her! Honest, you wouldn't! That's what zona done for my aunt; you tell Jennie."

"Is this aunt business on the level?" deman Billy sternly.

"Aw, what difference does t make?" growled George the Gr "You tell her anyhow. It may do s good!"

III

THERE are great souls to who little luck is only an aggravat Not content to accept the small fa flung them by the blind goddess, satisfied to touch the hem of her ment, these bold and greedy adventu essay to pick her pockets and loot her of capital prize as she passes them by. A few believe that this can be done. As a eral thing, the belief costs them money heartaches.

It was on a Thursday afternoon that Sing "caught a ten-cent seven" in the light drawing of the Quong Hop Lot Company, and thus found himself riche the sum of eighteen dollars and seventy cents. Another lowly dabbler in soap might have rejoiced; but Lee Sing sneered as he wound his queue about his and prepared to board the street ca Chinatown. He regarded a ten-cent s as very small fish indeed—fit for nothin to be used as bait in the snaring of a levia

From the lottery headquarters it wa a step to the establishment of old Sam W ostensibly a respectable merchant, rea pillar of the gambling trust. In his basement, where a million shopworn fought for mastery, and some were def but none died, Sam Wing defied a city ordinance by erating a dice game known to the initiated as four-fiv

Night and day the ivory cubes rattled and spun i big blue bowl; and the stakes changed hands, some with amazing rapidity, for four-five-six is the sort of where the speculator gets action for his money.

Lee Sing clattered down the basement stairs, wi nose in the air and many silver dollars clinking i pockets. To-night is always the night when a Chin has money he has not earned.

Sam Wing, a frail little mummy done in wrinkled parchment, peered through the smoke of cigarette and rank Chinese-made cigars and nodded at Lee Sing who nodded politely in return.

About the large round table were the gamesters—ite, black, yellow and brown. Plump, smooth-skinned C dandies were jostled by negroes and Mexicans; men, their dead eyes and sallow cheeks marking th as opium smokers, made room for coolies and Japanese table growers. Lee Sing saw at a glance that it was game, with plenty of money in sight. He edged hi in to the table, thus inconveniencing a white bo

ssenger's uniform, who s feverishly watching his enty-five-cent bet.

'Hey, quitcha shovin'!" owled the youth. "Now n, come on, ace!"

Lee Sing made a few small s, with varying success; when it came his turn to ndle the dice he emptied pockets into the small dish Sam Wing held to him. A mutter of ment ran round the le.

'Plenty money now," avered Sam Wing. vlybody bet 'um—bet up!"

he other players placed their wagers front of them, in amounts ranging n a dime to a dollar. Lee Sing waited il the last coin was staked; then he ked up the three dice and examined m carefully.

All the spots are on 'em!" grumbled messenger boy. "Shoot!"

ee Sing rolled up the right sleeve his blouse and extended his arm il his closed fist was directly over bowl.

'Got nothin' to deceive us, eh?" said the boy. "Why 't you shoot?"

Heh!" cried Lee Sing, releasing the dice with a quick nward jerk of his wrist.

hey fell, spinning, into the blue bowl. A deuce ap- ed, then a trey; and from the entire circle went up a fled ejaculation, almost a prayer, and addressed to third die, which was spinning like a top. It wavered ast, rolled halfway across the bottom of the bowl and e to rest. A grunt of relief rose from the players.

Acey, him come—too bad!" said Sam Wing calmly, dipped his talons into the tin dish.

ee Sing had thrown one-two-three, the lowest possible , and must pay every bet, so far as his money would o Beginning with the messenger boy, Sam Wing dis- uted the contents of the dish, making change with lost incredible swiftness, and permitting no arguments. n he had finished he flipped three dimes out on the ale—all that remained of Lee Sing's fortune.

'Nother good man gone wrong!" said the messenger o' pertly, rattling some small change into the tin dish. Come ride with me, gents! I'll give you something to not at—tell you that now!"

Aw, you alla time talk!" said old Sam Wing wearily. Ish talk; not much money!" He shook the tin dish fully. "Eighty-fi' cent—humph!"

ee Sing picked up the three dimes, glanced at them arlessly, tucked his hands under his long blouse and ded for the stairs. A white man would have cursed his ; a negro would have mentioned the amount of his s a Mexican would have snarled at the winners. Being Chinaman, and coming of the race that produces the e losers on earth, Lee Sing made his exit in dignified dece, carrying with him into Fish Alley a wooden expres- o of countenance, which had not changed by as much e flicker of an eyelash.

Little later he shuffled into the back room of the Chow on Company—the same being the respectable alias of Quong Hop enterprise—and, seating himself at a table, ced up a square slip of flimsy paper. On this slip were ri ed eighty Chinese characters, ten to the line, and ared in columns—a copy of the first page of a hese book considerably older than Christianity, mprising twenty sentences of four characters ch, some of them rich with wisdom, as the follow- ng samples will show:

'The sun, at times, is not in the center; and the on, at times, is not full."

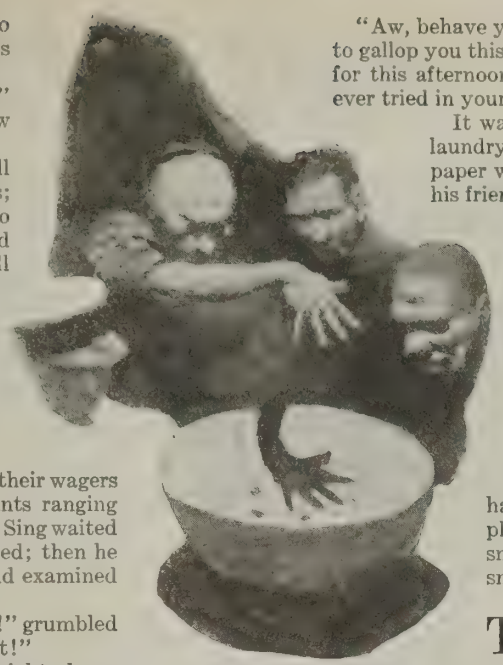
'When the clouds appear the rain will come."

'Ocean water is salty and river water is fresh."

Lee Sing was not in search of information about the nmoon or stars. He selected a camel's-hair brush, ped it in blue indelible ink and thoughtfully pro- eed to obliterate ten of the characters, apparently t random. He then marked a duplicate for future ref- rence and tucked it inside his blouse. The original he anded to a sleepy attendant, together with two of h dimes, and once more his fortunes were at the mely of the midnight drawing of the Quong Hop Lotery Company.

Erring the third dime, reserved as car fare, Lee Sin was "all bloke."

Friday morning dawned raw and cold, and Billy Ran- dolh's teeth chattered as he opened the door of a stall and looked in at a large chestnut horse, which did not seem par- ticularly glad to see him.



"Heh!" Cried Lee Sing, Releasing the Dice With a Quick Downward Jerk of His Wrist

"Aw, behave yourself!" scolded the boy. "I ain't goin' to gallop you this mornin'. I'm saving everything you got for this afternoon, you ornery oat-hound; an' oh, if you ever tried in your life, try for us to-day!"

It was also cold in Lee Sing's shack, and the laundryman shivered as he picked up a folded paper which had been thrust under his door by his friend See Yit, an early-rising vegetable peddler. It was the same sort of slip that Lee Sing had marked the night before, but twenty of the characters had been punched out—the lucky twenty, which had been drawn by lot at midnight in the cellar of the Chow Loon Company.

Lee Sing's sleepy eyes widened as he examined the "drawing." Hastily he compared it with the duplicate preserved for that purpose, and an explosion of strangled gutturals escaped him. The next instant he snatched his slouch hat from its peg and dashed out of the place, his queue streaming behind him, snapping this way and that like a blacksnake whip.

IV

THE day continued raw and cold, with a hint of rain in the air. The rain did not come, but the afternoon breeze brought the fog in from the Farallones—only a shred or two at first, driving low across the infield; then a pearl-gray haze, clinging close to the ground; lastly the main body of the fog bank itself, rolling swiftly in from the sea, obliterating landmarks, obscuring the sun and hastening the dusk of a winter evening.

The fourth race was run through scudding patches of mist; the fifth, in a haze which almost hid the upper turn; and when the bookmakers posted the prices for the last event objects fifty feet away were blurred and indistinct, and rapidly becoming invisible.

George the Greek, acting as hostler for the Randolph Stable, brought Ninespot to the paddock, where fourteen other horses were waiting for the saddling bell. The Greek scowled as he recognized several of the owners.

"Billy called it!" thought he. "Burglars' Handicap is right. Every thief on the track has got a horse in this race. Question is, How many of 'em are tryin'? . . . Jim Barlow ain't—that's one good thing. . . . Ace of Spades looks fine, though—looks ready."

The bell brought Billy from the jockey's room—a stocky little figure in the shabby colors of the Randolph Stable. George the Greek saddled Ninespot under the critical eye of the owner, and the boys engaged in low-toned conversation as they waited the signal to mount.

"My—oh! What a fog!" said Billy. "Jen wanted to see the race; I'm glad I told her to stay home."

"Nobody'll see this race," said George the Greek. "It's thicker than soup out there. . . . Fine chance for rough stuff on the upper turn; the judges can't see any fouls. Better look out for some of these fellers."

"They better look out for me!" said Billy, fumbling in the leg of his boot. "I'm desperate enough to do most anything."

He straightened up and showed the Greek a twenty-dollar note folded small in the palm of his hand.

"Where'd you get that?" demanded George.

"I borrowed it on the watch," replied Billy. "I'm takin' a chance that you got the straight dope on Ace of Spades."

"Both of Barlow's boys told me Jim wasn't tryin' to-day," said George the Greek. "They told me the black horse wouldn't be anywhere."

"I hope you're right," said Billy; "an' I'm goin' to gamble that you are. Stand over here and I'll drop this in your coat pocket. I don't want anybody to see me slip it to you—it might start a lot of pikers to playin' Ninespot. . . . Now this is what you do: Wait till the very last minute, an' then slip into the ring an' get me the top price on him to win. He'll go up in the bettin', sure; you ought to get fifty or seventy-five to one."

"Hadn't I better put ten on the nose an' ten on the limb?" asked the cautious George.

"Put it all on his nose!" ordered Billy. "Every nickel! He'll win or he won't be nowhere; an' if it comes to a cleanin' I might as well be cleaned right. What good will a stop watch be to me—in Arizona?"

"There's something in that," murmured George the Greek.

"I haven't told Jen," continued Billy; "so be careful an' don't spill it. She'd feel bad if she knew I hocked the watch. If Ace of Spades is in the morgue to-day I got as much chance as the rest of 'em; an' this big hound will certainly get a sure-enough ride, no matter where he finishes."

Somewhere in the fog a bugle blared shrilly.

"Good luck, ole pal!" said George the Greek as he hoisted Jockey Randolph into the saddle. "If wishin' was winnin' ——"

"I know," said Billy; "but it ain't. That's the hell of it."

The fifteen thoroughbreds passed the grand stand in a ghostly procession, invisible to all but the judges and the spectators near the fence. Even at this close range it was difficult to read the numbers on the saddlecloths, and the presiding judge shook his head at his assistant.

"I don't remember ever seeing it quite so thick as this," said he.

"Nor me," remarked the other. "It'll be just our luck if about seven of these skates take it into their heads to finish noses apart. That'd be lovely, eh? Better run through those colors again, I think. Let's see—red jacket, white sleeves, white cap—that's Harrington's horse; purple jacket, green sleeves, purple and green cap—that's the Denver Stable ——"

Billy Randolph, jogging along at the extreme end of the line, urged Ninespot a bit and soon found himself touching elbows with Jockey Sanderson on Ace of Spades. Sanderson, who was young in years but nevertheless an able business man, was cursing several things, among them Jim Barlow, his heirs and assigns forever.

"What's it all about, Sandy?" asked Billy.

"Barlow crossed me," answered Sanderson, and continued to free his mind.

"Crossed you? How?"

"He told me he'd let me know when he was goin' to turn this one loose, so I could bet some money on him. . . . Barlow never bet a dime for a jock in his life."

The cold seemed to strike Billy Randolph through and through.

"Why," said he, "I—I understood Ace of Spades wasn't—wasn't ——"

Jockey Sanderson interrupted him with a savage oath:

"So did a lot o' people! So did I! Last night Jim Barlow told me this race was just goin' to be another one of 'them things.' Then, at the last minute, when there ain't a chance for me to flag my bettin' c'missioner, Jim breaks it to me that the stable money is down, an' gives me orders to take this baby out in front an' never look back! I leave it to you if that ain't a rotten trick!"

Billy Randolph did not answer. He could not speak.

"It's all right to job the bookmakers an' the public," complained Jockey Sanderson; "but a guy ought to be on the level with his stable c'nections. Here I been grabbin' this bird every time out, messin' him all over the track, bringin' him home outside the money, takin' a chance on bein' set down by the judges; an' now, when Jim gits ready to send him for the checks, he don't even tell me! He's a fine stiff, he is! Why, if I ——"

Out of the fog bank ahead boomed the hoarse voice of authority:

"You boys goin' to be hangin' behind all day? Come on—walk 'em up to the barrier! Walk 'em up, I said! . . . Take it easy now—easy! Bring—them—hosses—up!"

"Me No Sabby. You No Ketch 'um Dolla Hop, No Ketch 'um Laun'ly"

UNCLE SAM IN FAIRVIEW

DECORATIONS BY H. DEVITT WELSH

I HAVE come to the end of these sketches of the history of recent changes in rural life in Fairview. I cannot finish, however, without telling something of our experience with Uncle Sam's farming missionary—the county agent. I suppose I have delayed speaking of this because I have been depicting the Fairview Idea, and we can't claim the county agent as a part of that; in fact, we are not very proud of our original attitude toward the county agent.

You may remember that the Reverend Frank Wiggins tried hard to have us hire one early in the movement, and had offered Tom Whelpley as his candidate for the job. I was responsible, in the main, for having Tom rejected by the farmers—and then Frank turned on me and got Tom elected to the position of principal of the Fairview Consolidated Rural School, in which position he has heaped coals of fire on our heads by making that school the best in the state, we think, and winning renown all over the nation as the master of a prize rural school, in which teaching is, from the first day to the last and in all branches, knit into the life of the community.

It was a fine thing for us that we rejected the county-agent stone so that it might become the head of the corner in our educational edifice; and I wish to predict that at some time not far in the future all really progressive communities will have the teaching of the A B C of farming, to which the county agents now so largely devote themselves, done in the rural schools. So, as a matter of fact, we accidentally took a leap toward the better by and by when we put that work into the Fairview Consolidated Rural School—where it belongs.

But, though the county agent is not a part of the Fairview Idea, it is a part of that idea to make the best possible use of good things—like the Little Country Theater of North Dakota, and the rural drama of that state and Minnesota—no matter whether they originate with us or not. And the county-agent movement in the United States is too big and revolutionary a function of the National Government to be ignored by any community that is trying to march forward and is even halfway open-minded.

I wonder how many of the readers of this weekly know how great, how vital and how potent a thing for growth the county-agent movement is. I wonder whether there are not many of them who are very hazy in their minds as to what it is, even in a general way. How many know that the United States Government, through the Department of Agriculture, sends missionaries of skilled farming, salesmen of agricultural prosperity, into any county in the United States that fulfills the conditions, pays a part of their salaries—if the state and county will pay the rest—and hires state managers to keep these men in the field and see that they do good work? And that after these men are on the ground they become active organizers of better agriculture, working with and for the farmers instead of on them, and becoming, in fact, County Superintendents of Agricultural Education under United States Government and State Agricultural College management?

A Lesson in Crop-Rotation

MANY know these things; but few, save farmers who have actually worked with these farm experts, know them as one of the great and growing things in our new rural life. Few know that out of the twenty-five hundred or three thousand counties in the United States, nearly half, and of those which are farming counties much more than half, already have these salesmen of good farming. Yet such is the fact.

As I have said, we felt that we knew more about farming in this county than any pinfeathered kid from an agricultural college could know. You see, we misunderstood these kids, and also the attitude of the county agent toward the farmers. We thought he was coming out to do things for us or to us. Really the agents do things with us, and become community hired men who perform a lot of work that we all have long known to be good and even necessary, but which men cannot do alone. Take Freeman Clay's chinch-bug campaign, for instance.

It grew out of our ignorance or lack of practice in growing wheat. Not that we oldsters weren't veterans in wheat growing; we all went broke on wheat in the sixties and seventies, when these prairies fed the world with bread. Then we grew spring wheat exclusively. We used to break the prairie sod in April and May of one year and sow it to wheat the next spring. We knew of no crop that would grow on the freshly broken sod; and we thought the furrow slice, a long ribbon of black earth, had to lie and rot for one season before it would make a crop of anything. To be sure, we used to plant corn in holes chopped through the sod with an ax, but sod corn was the synonym for nothing much. Also, we raised our winter's potatoes, turnips, pumpkins and squashes on the new sod, and scant crops of buckwheat for our winter's cakes; but nothing of much value in money.

What we grew helped us to exist, and that is about all. After the earliest flight of pioneers had roughed it through, the later comers found that they could grow a crop of flax right after the breaking plow and make good money on it; and farther west many a man paid for his land with the first crop of flax. Then, in Western Canada the landowners became wise to this possibility and sold the land on the basis of a crop the first year; so that the new knowledge was capitalized in the price of land—just as all knowledge, new or old, inevitably becomes so capitalized sooner or later. It's a law of land values.

After the first crop of wheat, which was the second year of plowing, we sowed another crop of wheat; and then another and another—and so on. The Corn-Belt prairies were golden seas, rippling in the sunshine and the winds—a magnificent sight; as different from the Corn-Belt summer landscape of to-day as Alaska is different from Florida. It was black soil in fall and spring—bare black soil as far as the eye could reach. It was the faint green of sprouting grain in April, deepening into lush greenery in May and June, now beginning to wave in dark ripples in the wind. It was green and gold in July. And in August came the great self-rake reapers, the old droppers and the harvesters, each with two men binding and riding at the same time, and the headers spouting geysers of wheatheads into great board boxes.

And then the prairie became freckled with shocks, which soon gathered into groups of hive-shaped stacks, after which the threshers went about filling the air from daylight till after dark with the hum of the cylinders, rising and falling like the voice of no other machine, in a long, wavering, musical pæan of triumphant plenty. Then came the days of burning straw piles, and the stubble fields were again scored with broadening black ribbons of plowed land—broadening until all was black again; and the wagons wore deep grooves in the earth as the crop went to the railway, sometimes as much a forty miles off. And then in the spring there went into those fields another crop of wheat.

Not for too long a time, however, would Nature allow this to go on. There came a time when something mysterious was seen to be the matter with the wheat. It came up as rank as ever, it grew as tall as ever, its heads were as long as ever; but the straw, which used to turn to gold from green, now bore black specks and turned brash, so that the heads would pull off the bands when we cinched up the sheaf before tucking it in. Sometimes, too, our boots would be red with rust from the wheat straw, and at other times the wheat would stand shoulder-high and filled with kernels, when some terrible thing would shrivel the grains almost to chaff.

We waded through deep waters in those days. Nobody knew what the trouble was, though we had all sorts of theories. Now the professors in the colleges of the spring wheat states have found out that when wheat is sown after wheat, as we sowed it, there are fungi and bacteria which fill the soil and pervade the country. But, though we suffered from them, we did not know they existed. Nobody knew then. Such knowledge belongs to the age of the college of agriculture and the county agent.

We quit growing wheat, finally, and corn became our great crop. Then our states became the Corn-Belt States. Now one may see as much corn as then we saw wheat. It is as beautiful as the wheat, but it is different. We warned by Nature's protest against a one-crop system, we planted corn after corn. And recently we have begun to see that this, too, is a mistaken policy. Then wheat came back; but this time it was not spring wheat.

In my young manhood, here in the Corn Belt, we had no winter wheat that would resist the severities of our winters. But twenty-five years or so ago Russian immigrants brought to Kansas varieties of winter wheat which are more hardy; and these have gradually made their way north until they are now grown in Alberta, where the season is so short that this year's harvest must be taken off after next year's seed is sown.

Young Men With New Methods

THIS wheat has been perfected by the plant breeders of the colleges until it is better than when the Russian immigrants brought it over. It brought wheat back to Fairview. We began slowly to adopt the Ohio Valley rotation—corn, then wheat, then clover.

Now this new system found us all out of practice in wheat growing. We had never been much troubled with chinch bugs and not at all, to speak of, with Hessian fly; but now both these pests were upon us. About the time that I, at least, had come to the conclusion that I had forgotten a lot about wheat, and that there was another lot I had never known, a county agent was hired for our county.

We in the Fairview neighborhood took very little interest in him and his work. We thought we had in Tom Whelpley and the school, and in Frank Wiggins and Dan, his wife, and the Fairview Meetinghouse, a good deal more than the county agent could give us in the way of aids to rural progress. We were, perhaps, a little uppish and conceited in the matter.

But the county agent didn't feel that way about us; in fact, he disarmed us by coming to our meetings every Sunday and levying on Tom and Frank for help in his work. He said it was not often that a county agent came to a county in which his work was so well started in an influential neighborhood. If he could just get the Fairview spirit and the Fairview Idea, he said, spread all over the county, he would consider his work there a success.

Now what can you do against that sort of approach! Nothing but turn in and help. And after a while we discovered that not even a Tom Whelpley knows everything; and that the keen young fellow who is making a business of gobbling up every bit of new knowledge, as soon as it is knowledge, is sure to be a few laps ahead of the best of us—except in the general and old-established practice of farming, in which, of course, we old stagers naturally know more than anybody else.

The county agent's name was Freeman Clay. He wasn't so very youthful after all, though we called him, disparagingly, a kid. He had an office in the courthouse at the county seat, and kept a little gasoline runabout, in which he burned up the highways of the county all summer long. On Saturdays he was in his office; and the farmers, and their wives and children, too, got into the habit of dropping in to see him pretty often. I understand this is the way most of these fellows do. Going from farm to farm, as he did, he kept posted on matters of interest; and the first favor he did me was to tell me where I could get three brood sows of the breed I like best, and which I wanted.

He sold fifty dollars' worth of seed corn for Wilson Beebe, because Wilson's boy had been taught in school how to select it, save it and test it; and it was a good variety of corn. He organized boys' and girls' clubs all over the county, and used to come in his little car and take Tom Whelpley ten or fifteen miles about every week, to tell some backward neighborhood how much good we had got out of some community function in Fairview. He was always organizing parties of visitors to attend our Fairview meetings; and localities that still had only the old-fashioned one-room schoolhouses began to simmer with the Fairview ferment.

He always carried a book with him in which he set down notes of anything any farmer wanted to buy or had to sell. He was a sort of universal sales agent and commission man, with the commission eliminated. It wasn't long before every farmer in the county would stop at the turnrow by the road and wait if he saw the dust of Clay's gasoline bug approaching.

I did that one day and complained, when Clay arrived, that the chinch bugs, after ruining my wheat, had attacked the outer rows of corn.

"Too bad!" said he. "I'm from a chinch-bug country myself, and have had considerable experience with them."

"Where?" I asked.

"Kansas," said he.

"Do any farming down there?" I asked.

"Born and raised at it," he answered; "and have an interest in a wheat farm there now. That's how I learned about tackling the chinch-bug evil."

Anti-Chinch-Bug Crusade

NOW I am firmly convinced that he learned about the control of chinch bugs in college; but if he had said it and called it "the control" of chinch bugs instead of "tackling" them, he knew I should have refused to accept any advice from him. He led me to believe he had picked up his knowledge in farming, just the way I have picked up mine, so I would talk with him as farmer to farmer.

We farmers are such fools sometimes—almost as big fools as the American banker or the American manufacturer. In a business in which only the expert can possibly earn anything above the wages of unskilled labor in other fields, and in which many of us are so inexpert that we actually earn less than do our hired men, there are thousands of farmers who sneer at experts. I have done so myself. I shall no doubt do so at times in the future; but I have learned this much, anyhow: I shall sneer only at the men who are, as I shall for the moment believe, imitation experts and not true ones. The real experts—experts in theory as well as in practice—will always observe me in the act of taking my hat off to them, even if I did earn the reputation of being the prize mossback of the Corn Belt by having a whip socket put on the dash of my first motor car.

Moreover, I am willing to concede that perhaps most of the real farming experts of the country, aside from the successful farmers, are found in the ranks of the county-agent force of the Bureau of Farm Management of the Department of Agriculture at Washington, working with the farmers in the various counties to which they are accredited under the Smith-Lever Act.

All that can be done to check the ravages of chinch bugs after harvest Freeman Clay showed me how to do; I had read of it of course, but it had gone into my brain at the eyes and oozed out at the back of my head, as most things do that we read. That's the value of the county agent to the fairly well-informed farmer: he makes real the things which otherwise remain wrapped in the haze of matters only read of. Only scholars really visualize things that are merely read.

Old Dr. Seaman A. Knapp, father of the county-agent movement and, I think, the greatest educator America ever produced, once said to me: "When a man reads a thing he doesn't know it. When you tell it to him he doesn't know it. When you actually do it before his eyes he still doesn't know it. He never actually knows a thing until he does it with his own hands and brains!"

On the other hand, a friend of mine in New York, who likes to deal in contradictions, is fond of saying that you can't teach any person anything he doesn't already know.

Both these men are absolutely right. I knew, in the way one of them meant, how to check the invasions of chinch bugs marching from the stubble into the corn; but I never really knew it in the way meant by the other until after I had worked it out with Freeman Clay, and found out how far too late it is to tackle these pests after they have got their big summer start.

"Anyhow," said Freeman, "this is no time to start on chinch bugs. Over in Lincoln Township the farmers are going to go after next year's bugs this fall."

"So am I," said I; though I hadn't thought of it until that moment.

"Good!" said Freeman. "You can get most of 'em that way."

"Um—how would you advise going about it," I asked cautiously—"er—under our conditions?"

"Well," he answered, "there's no use fighting them individually. It's a community proposition. They're going at it on a township scale over in Lincoln."

"So are we," said I—for I'd be darned if I'd admit I was plumb ignorant of the whole business after beginning with a bluff. Not that we didn't both know I'd been bluffing; but he is so young and I'm so old, you see. "Can you come over and help us organize the movement?"

"Sure!" said Freeman. "That's what I'm paid for. And I harbor a bitterness toward chinch bugs that makes me feel a savage joy in such a frolic."

Well, with the help of Tom Whelpley, Frank Wiggins and the leaders among the boys and girls, we did have a frolic—and we cleaned them out for the next year. We raked and burned over all the roadsides, so there were no wintering places for eggs of the bugs. We left no batch of weeds uncut or unburnt. We scourged the swales of matted vegetation as with fire and sword; and gave a shampoo to a lot of lawns and orchards which had not been under the barber's care once in their whole history. We went through groves and hedges with fine-tooth combs; and for two or three days the smokes of our holocausts ascended to heaven like Indian signal fires.

We divided the country into sections of two square miles each, and chose squads, which were scored by a committee composed of Doctor Faville, Jeff Sharpe and Ethel Wyatt Fisher, fifty points each being allowed for speed and efficiency. The best three squads got badges, which we sent off for, to be won three years in succession in order to be permanently possessed. And we had a dance and feast at the schoolhouse when it was all over. We were that much to the good, no matter what the effect on the bugs; but I really think it did a lot of good. The next year we had no chinches to speak of; and they had a good many in sections where no bugging contest was held.

I suppose, too, we destroyed a great many other bad insects, of which we knew nothing. You almost always do better than you expect by being thorough. I reckon the San José scale has been a good thing for the fruit industry; when you spray for scale you rid the orchard of pests of which you never had any suspicion.

Practical Coöperation

THIS started a kind of intimacy between Freeman Clay and me, and gave me a new slant on the county-agent business. I began taking rides with him in his car or mine, in which we pretty well explored the county. I never realized before how ignorant the average farmer is of what is going forward on farms within two hours' run; and I came to believe that we haven't yet really domesticated the automobile as a farm tool. It lays all the farm skill of the countryside under contribution for the farmer who likes to know what the real, practical farmers—not the theorists—are doing.

It began by excursions with Freeman Clay to see what other neighborhoods were doing in the anti-chinch-bug crusade; and I found that he was carrying that war into Africa pretty well all over the county. I calculate that in this thing alone he saved the county several times his salary; for we should never have done it if we hadn't had a county hired man to do the drudgery of dragooning us into it.

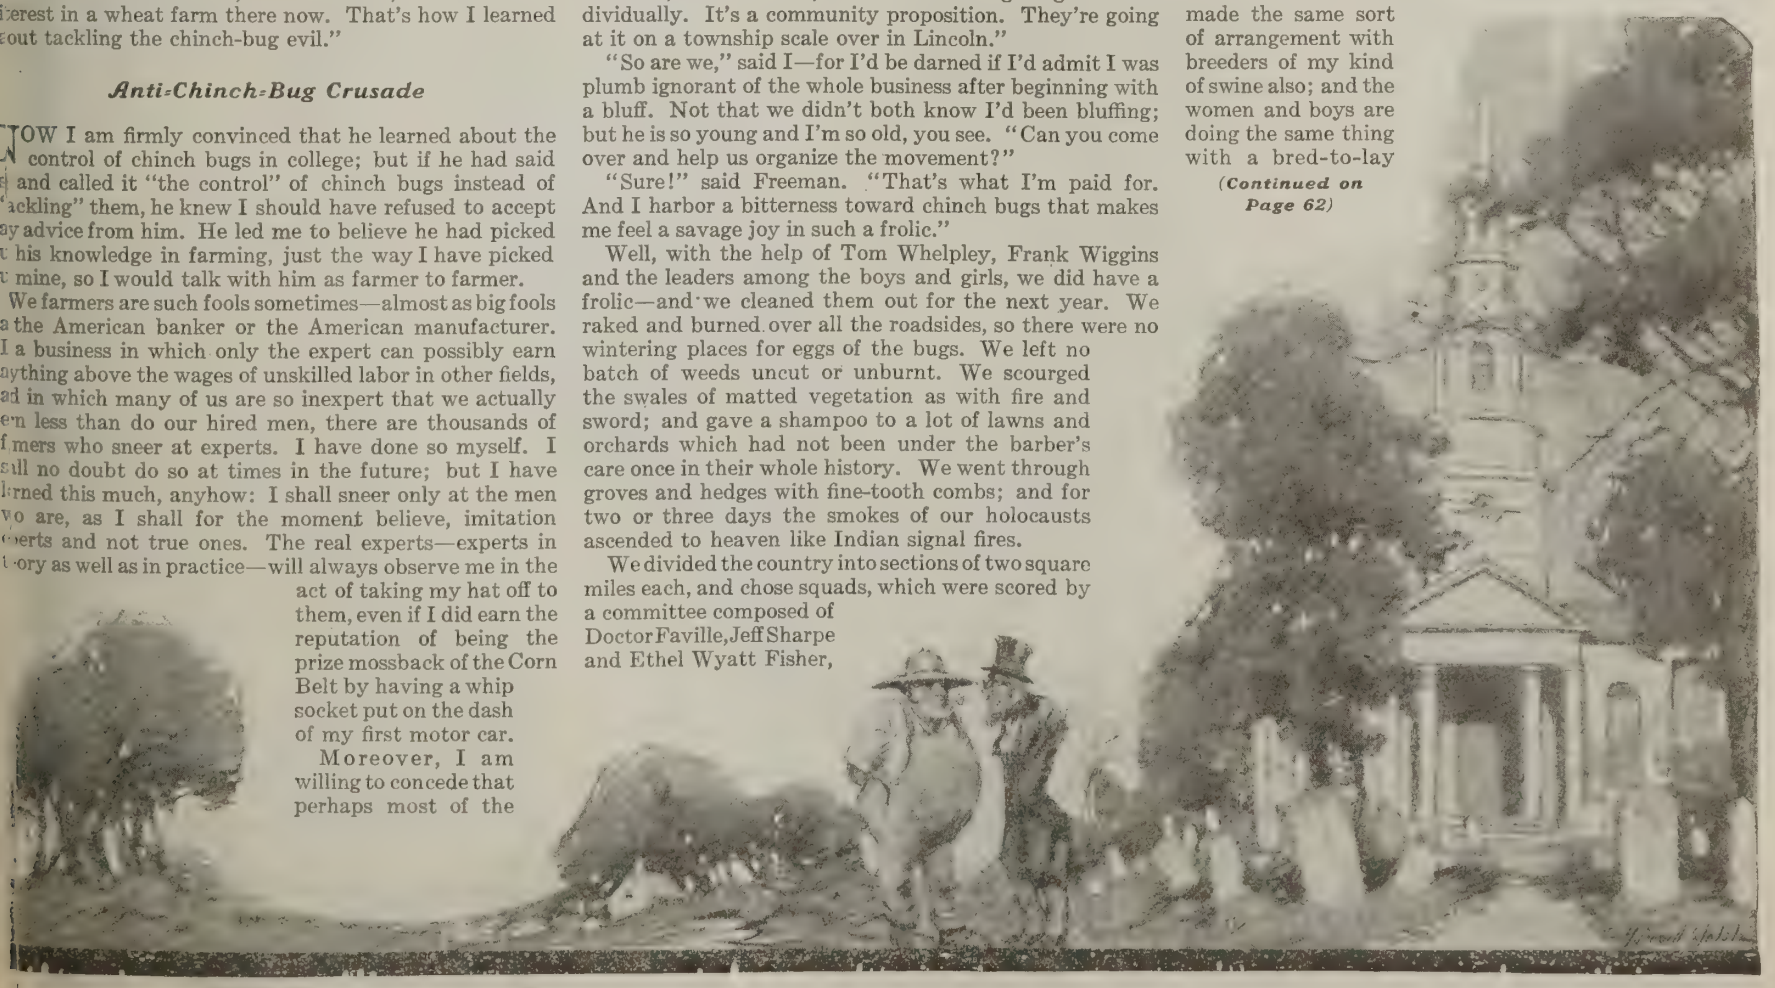
Pretty soon, however, he began showing me other things. Before I knew it I had joined with six others to buy bulls coöperatively. You must understand that the bull is just exactly half the herd, so far as improvement is concerned; and, as it is cheaper to buy good blood in one animal than in ten or twenty or forty, he is really a good deal more than half from the practical viewpoint.

"Do you know," said Freeman to me, "how many grand sires are never recognized as such until after they have gone to the block?"

He went on and told me of scores of great cows whose sires had been dead before it became known what great and valuable animals they were. So we organized this bull club to get good animals and keep them, passing them from farm to farm among us until they were aged and tested. Some of these days we'll be found showing the Missourians what's what in breeding—all by the exercise of a little common sense in doing things together instead of separately, and saving on overhead charges all the time.

Since then I have made the same sort of arrangement with breeders of my kind of swine also; and the women and boys are doing the same thing with a bred-to-lay

(Continued on Page 62)



MACAROONS

By Meade Minnigerode

ILLUSTRATED BY T. D. SKIDMORE

BILLY MANNERS had a pleasant way of arching his eyebrows and he stammered a little when he was interested suddenly in something—or more usually someone. Chaperons had a habit of stopping him on the stairs at dances to tell him he reminded them so much of their own boys—the highest praise a mother can bestow.

Billy went to a little town where they still have hitching posts in the sidewalks—and met a girl. It was at a reception on Easter Monday. It was a very fine reception indeed and Billy was very bored. He was not at all a ladies' man, which is perhaps one reason why the ladies, young and old, all liked him so much.

This reception was the great annual social event in that little town. It took place in a big house on the hill; and, of course, the hill had been there long before the town, socially as well as geographically. His hostess was a very ancient lady who insisted on having the young people around her in spite of the protestations of her rather angular maiden nieces, on whose rebellious shoulders fell the labor of preparing for these festive occasions.

Her house was filled with furniture of the solid variety and her cabinets were bursting with Oriental curios begging to be knocked over and broken. Many of them were, annually. She owned three cats and a spaniel of uncertain age, who joined with the maiden nieces in objecting to these social functions and contrived, with exemplary self-sacrifice, to be stepped on at every turn. In a corner of the library she always had a silver bowl of champagne punch for the gentlemen, presided over by a toothless butler.

No one ever partook of the champagne punch; it was not that kind of town anyway, and the old lady was much relieved every year to find it so. But she felt it her duty to have it, just as she tolerated the new dances, or such emendations of them as had reached her secluded neighborhood. Agamemnon, the most enterprising of her three cats, was the only person—if indeed cats are persons—who had ever been known to sample the punch; and that had been years ago. Really good champagne is so hard to get in a little town where they still have hitching posts before the gates.

On this occasion the rooms were crowded with what the society editor—herself not present—would refer to the next morning as the élite of the town. The tables and sideboards were loaded down with chicken salad, and chocolate and whipped cream, and macaroons made by the maiden nieces, their yearly personal contribution. They were not good macaroons by any means, but they achieved a certain *succès d'estime*, due to their exalted parentage. All these things required to be passed around, and it seemed to Billy that the responsibility of this duty presented itself to him with unending monotony.

Moreover, all the windows on the ground floor were closed. Once he meditated helping himself from the punch bowl, being unversed in the ways of that community; but the butler looked so surprised that he retired hastily, with the vague feeling of having committed a breach of etiquette—and stepped on Agamemnon's tail. Billy was very bored.

He finally came to the conclusion that his duty to his aunt's neighbors had been more than satisfied, and took steps to escape from that reception. But just as he was slipping out of the door there were loud outcries from a group of young ladies near the front windows, and two of them swooped down upon him with detaining hands.

"Why, Mr. Manners, you're never going so early!"—"Why, the idea! I suppose this is too dull for him after the gay life of New York."—"You know, really, we couldn't think of letting you go before you've seen Pepita!"—"She's coming now; she's coming now!"—"There she is! Oh, goodie!"—"Now you'll see!"—"Pepita! . . . Pepita!"

A long cheer for Pepita!

And who was this Pepita? Billy made careful inquiries and was breathlessly informed that, in the first place, Pepita was Pepita, and there were no other girls but Pepita. And in the second, third and fourth places—he lost track after that—she was the best-looking girl, and the cleverest girl, and the duckiest girl—whatever that might portend—in the three adjacent counties. Apparently Pepita was a whiz; and not to stay and see Pepita would be a crime against humanity. She would make him wish he lived where he could see her every day—see if he didn't!

Billy decided to stay.

It Can Hardly be Said That His Heart Was in the Work

In the midst of an impressive hush Pepita came into the room. She stood framed in the doorway, a magazine cover of a girl, all in pink, with brown curls clustered behind her ears. Her lips were parted in a smile, and she contrived to look surprised and timid. It was known as the Pepita look and had many imitators. In her own way she came near being a raving beauty. She was simply delightful to behold.

Billy took a violent dislike to her on the spot.

The hush lasted long enough for Pepita to look around the room, leaving a morsel of her glance, like a benediction, with each one of her devotees. She held her pose in the doorway without faltering until a rising murmur around her warned her that the limit of endurance, so to speak, had been reached. At the same moment she completed her ocular circuit of the room—and her gaze fell on Billy. For just a second she focused the full power of the Pepita look on his person; and then, lowering her eyes, she stepped out of her frame and came to life in the room.

Instantly the spell was broken. A cloud of Easter gowns and bonnets fluttered around her and a multitude of little sounds filled the air, such as emanate from a gathering of enthusiastic young ladies. Billy turned noiselessly and made for the door. There was nothing about this Pepita that he cared to investigate further.

"Oh, Mr. Manners!" Retreat was cut off as, for the second time, he reached the door. One of the two young ladies who had detained him before now came running after him, clapping her hands. "Oh, Mr. Manners," she cried, "I do believe you were trying to run away—you naughty man! But I shan't let you go until you have met Pepita."

"Oh, I was just going to see whether the street door was closed," said Billy, somewhat at random. "I'm dying to meet your friend. Where does the line form?"

"Oh, aren't you funny?" exclaimed his captor. "Seeing it's you, I'll take you right up now and introduce you."

"Slick!" remarked Billy; but she did not hear him—nor did he intend she should.

She propelled him toward the center of the room, uttering shrill exclamations of "Pepita! Oh, Pepita dear!"—which attracted the attention of everyone and served to clear a space for them. So he found himself face to face with Pepita, and the circle closed in behind him. Once again a hush fell on the assemblage. Obviously this was a great moment. For one thing, Pepita was about to speak, and undoubtedly she would say something awfully clever; and then Mr. Manners—well, there was no telling what Mr. Manners might do. The moment was crowded with possibilities.

"Oh, Pepita dear!" chirped his sponsor, fully aware of the importance of her function—it might well be that in days to come she might say "Why, yes; I introduced them to each other"—"I want to present Mr. Manners. Miss Farragut, Mr. Manners."

Their eyes met.

The entire gathering held its breath. Bang!

Alas, not the tiniest pop of a bang! It was rather disappointing.

"Mr. Manners?" said Pepita. "So glad to meet you. You'll pardon my left hand, won't you? Nearest the heart, you know!"

A titter ran its discreet course around the circle. Trust Pepita to say something bright.

"How do you do?" said Billy—not that he cared a whoop, at that.

They shook hands, and Pepita's fingers twined around his own like the tendrils of a vine; and Billy hardened his heart.

"What do you think?" chimed in the mistress of ceremonies. "Mr. Manners is so shy! I caught him trying to run away—now didn't I?"

Billy looked at her coldly, but without rancor. She was too young to die; it was quite out of the question.

"Not running away from poor me, I hope!" said Pepita. "I'm sure, Mr. Manners, I should never wish to drive you away!"—accent on the you.

She flashed the Pepita look at him at one-second intervals. She had found it most effective in the past.

Billy felt that something was expected of him. He was always so conscientious. Without any warning, he came a step nearer and arched his eyebrows. Pepita was startled.

"Oh, Mr. Manners!" she exclaimed; and the circle shivered with anticipatory delight.

"You see," said Billy, "I have never met anyone quite like you before!"

Perfectly true; he never had. He had always managed to avoid doing so before.

"I'm afraid you're making fun of me," said Pepita in a go-on-do-it-again tone of voice.

"Who, me?" said Billy. "I couldn't make fun of you!"

"I don't know about that," said Pepita. "I think you're a dangerous man, Mr. Manners; and I'm afraid of you."

"Don't be afraid!" said Billy, as though he were addressing the last girl in the world. "Let me call you Pepita!"

"From what I've heard about you, I don't believe I ought to—Billy!" she replied very softly, turning from the Prologue to Act I, Scene I.

But Billy missed his cue. He had no intention of going on a conversational joy ride with Pepita.

"May I get you something to eat?" he inquired, and she closed the book of the play of Pepita and Billy with a snap.

Something had gone astray and they were lined up for the Prologue again. Pepita was annoyed.

"If you wouldn't mind," she said, turning away. "I am simply starved, Mr. Manners."

Billy proceeded toward the dining room and provided himself with the first thing that came to his hand. It happened to be a plate of macaroons. It can hardly be said that his heart was in the work.

On the way back he suddenly became aware of a girl sitting in the corner—a jolly-looking sort of girl, prettily dressed and with frank eyes. Billy looked at her once and then promptly retraced his steps to the table. He walked around it once or twice, getting glimpses of her as people came and went between them; then he absently took up a second plate and started off again. It was another plate of macaroons.

This time he looked at her very carefully; and the sight pleased him, for unconsciously he began walking more and more slowly until finally he came to a dead stop before her with a plate of macaroons wavering precariously in each hand. And then the girl looked straight into his eyes and smiled. Billy was delighted—not because she had smiled at him, though that was pleasant enough, but because the smile reminded him of all sorts of lovable things.

Then very suddenly she tilted her head and began to laugh. Billy came back with a start from some place very far away and realized that he was pouring a cataract of macaroons into her lap.

"Oh, dear!" he exclaimed; and then his laugh answered hers. "H-have some m-macaroons!"

'Thanks awfully!" she tittered. "And please excuse me laughing, Mr. Manners. I'm afraid it was very rude."

So she knew who he was, thought Billy; probably some- he had met in the receiving line and failed to notice ough some mischance. Certainly he had no idea who might be; but he was determined to conceal the fact rn her.

"I'm terribly sorry!" he said. "Lucky it wasn't ice am; it would have spoiled your nice dress."

"Do you think it is nice?" she asked. "I made it self. Won't you sit down?"

Billy stammered again. This girl was not like other girls.

"M-may I s-sit down?" he said, and did so at once.

At the same time he managed to peep around the cur- ns. Pepita was established at the farther end of the om, surrounded by local swains who seemed to be more n amply ministering to her wants.

He turned to the girl by his side, and for a time they were y, smilingly eating macaroons out of her lap. She now ned very timid all of a sudden, and all he could see of s eyes was the beautiful long dark lashes. It was a ier plain little face, except for the eyes; but the mouth nice when she smiled. And she had lovely dark hair, n no curls at all. Billy looked particularly to make sure.

"Kind of nice, isn't it?" he said at last, without knowing tly what he meant. "Aren't they? I mean—the aroons, you know."

"Oh, yes," she said. "I like it—them, I mean."

Billy was not quite sure. Any girl might have said that.

"I meant it was nice being with you, really," he said, n waited.

"Oh, thank you!" she exclaimed. "That was a compli- t for me, wasn't it? You know, people don't usually e compliments to me."

The answer pleased him. He felt sure Pepita would have something quite different.

"Why is that?" he asked.

"Oh, I don't know," she replied. "They don't pay much ttention to me. You see I'm very young and I'm not y very clever yet. I think some day I shall be if I I think it's splendid to be able to interest people. I'm really not old enough to be very interesting; usually just sit and listen, and people don't notice I don't mind it a bit. I'm not used to being grown quite. I always want to laugh, and you know one n't when one is a young lady. It's very difficult, n it? Oh!"

She stopped very suddenly, as though frightened at length of her speech; and he could not coax her to look at him. "Y-yes; it's v-very difficult," Billy. "You do it so much better than I do. I'm you never spill macarooms in people's laps!"

"Oh, no!" she exclaimed with a sudden rn of animation. "But only yesterday tickled my little brother's feet when he was ing his prayers—and—oh, I shouldn't told you! I must go now, I think. Good-by, Mr. Manners."

She was gone before he could swallow the aroon he had in his mouth. He jumped still holding the plate, and followed her rough the door; but the room was in a ur oil of departures. Pepita was leaving was doing her farewell scene in the door- Billy went up to her, feeling that he must say something. "Oh, are you going?" remarked. "I've been looking all over r ou. Do have a macaroon!"

She graciously took the plate from him; at that moment he caught sight of his nway friend of the dining room, standing in all. He abandoned Pepita, plate and all, urned to his cousin, who was passing.

"Say, Buck," he whispered, or he meant to hisper, "who's that girl out there? No; in the al-no; right there, there! Do you see her?"

"Why, that's Miss Farragut, you boob!" said Buck. "You'll see her at the dance to-night."

Then he escaped to find his own particular divinity.

Pepita had disappeared, which was of no con- quence; but the mysterious little lady had disappeared, and it seemed to Billy that something r fresh and pleasant had gone with her.

What became of the plate of macaroons is not recorded.

It was the unwritten code in that little town that young men should be late in arriving at dances, and Buck, being the leading local dandy, made a point of being later than most. Billy found it very irksome; and when his cousin began a game of pool after dinner he quietly slipped out and went off to the dance alone. And therein he made a grave mistake, for he was the first young man on the scene; and to his horror he discovered that it was a card dance. He was hopelessly outnumbered and hemmed in on all sides, and by the time his card was filled with names he began to see reason in the unwritten code of the young men of that town.

At the first opportunity he retired to the smoking room, to give expression to a few bitter thoughts, and surveyed his card: Miss Mortimer, Miss Ashmead, Miss Ferris, Miss Anne Ferris, Miss Gertrude Ferris—grand slam for the Ferris family—Miss Lawrence. . . . Names; nothing but names. He tore the card into little bits and threw them into the fireplace. Young men came and went; but he was a stranger and they paid no attention to him, after the manner of local young men at a dance. There was an outburst of sounds at the front door and Billy understood that Pepita had arrived. Then the music began, and he knew that the first dance was under way and that he was cutting it.

Billy felt very mean. It was only a step for him to feel very sick. He must feel sick. He did feel sick. Must have been those macaroons! In a moment someone would probably come looking for him in the smoking room. He must look sick. He moved over to the window. As he passed the fireplace it annoyed him to see in the mirror how extremely well he was looking. He tried holding his breath to make himself look pale, but he succeeded only in getting very red in the face. He stared gloomily out of the window and heard the applause for the first encore.

The dance was at a hotel and the smoking-room window looked out on a veranda—a deserted veranda, dimly lit by the glow from the ballroom windows. Billy viewed it without interest, except as a possible avenue of escape. And yet the veranda was not actually deserted. In the shadow of one of the pillars a girl was standing, and when Billy opened the window above her she saw him. She said "Oh!" very softly and stood very still in the shadow, watching him.

One is not told what passed through her mind. One can only judge from her actions. In her right hand she held a macaroon—a trifle crumbled, to be sure; and one wonders why she had it with her. She had not brought it to eat, apparently; and, anyway, under her dark cloak she had on a simple but very pretty evening gown, and it is not to be supposed that she had gone without her dinner. She watched Billy for some time without moving. She seemed to be waiting hopefully for something very special to happen. Her eyes were open very wide and she was biting her underlip with the tips of two very small white teeth.

"Mr. Manners Is So Shy! I Caught Him Trying to Run Away—Now Didn't I?"

But nothing happened. Billy just stood there by the window, looking at what he supposed to be the empty veranda. With every moment that passed he felt meaner, and he tried to convince himself he felt sicker. And finally the girl grew tired of waiting.

"Oh, you silly billy!" she observed—but whether she meant Billy in particular or someone else—possibly herself—is not known; then, with a swift little motion, she threw something at the window.

Billy knew nothing until he felt some small object strike his arm and heard it fall to the floor beside him. He looked down and saw the fragments of what had once been a macaroon. For a moment it conveyed nothing to him, though it did seem odd that someone should be throwing macaroons around. Then it occurred to him that it had been thrown from the veranda and presumably at him. Who on earth could be throwing macaroons at him? Good Lord! Who on earth, indeed, but one person! He leaned out of the window.

"Hey!" he exclaimed. "Wh-where are you?" No answer. "Might as well tell me!" he insisted. "Sure to be caught—throwing things around like that!" Still no answer. "Of course you know I can see you perfectly well!" he lied hopefully.

"Oh, no," came a sudden answer in a voice that set Billy smiling. "You can't see me at all now. You're not even looking in the right direction."

"Wait and see!" said Billy. "I'm coming down."

"I'll be gone when you get here," she teased. "It's a long way around."

Ah, but he had no intention of going down by the stairs! It was not a long drop onto the veranda. He put a hand on the sill. "No, you won't," he laughed. "I'm coming now!" And he did.

"Oh, oh!" she exclaimed, stepping out of the shadows. "Aren't you hurt? You couldn't do it again, I expect; but then, it's not necessary, is it?"

"No; it's not necessary," said Billy. "Did you throw that m-macaroon at me?"

"Yes, I believe I did," she replied. "I mean—yes, I know I did. Do you mind? I'm very sorry."

"Are you?" asked Billy.

"Oh, I can't say," she hedged. "I don't believe I have to answer, do I?"

"No, you don't," said Billy. "Why did you?"

"Oh, dear! You ask a great many questions, don't you, Mr. Manners?" she complained.

"I beg your pardon," said Billy. "Please tell me."

"Well," she replied, "I came to see the dance. I couldn't go to it, because—well, never mind why. I don't have to tell you everything, do I? So I came to look through the windows; it's kind of fun. And then I saw you upstairs in the window; and—and I thought perhaps you'd like to talk to me, and—and I threw it."

"I know why you can't go to the dance," laughed Billy. "It's because you tickled your little brother's feet last night, I'll bet! Well, tell me, how did you happen to have it with you?"

"What?" she asked, looking startled.

"The macaroon," said Billy.

"The mac—oh, dear!" she exclaimed. "I didn't think —— You're awfully grown up, Mr. Manners, to ask so many questions. I had it—oh, dear! I'm going now. Good night!"

She turned and ran down the veranda like a little ghost and disappeared around the corner. "Hey! W-wait a minute!" said Billy, and lost valuable seconds before starting in pursuit.

He reached the end of the veranda and caught a glimpse of her flitting across the street, and followed breathlessly, his coat-tails streaming out behind him. She went down the street and turned a corner well ahead of him; but he got there in time to see her run up the steps of a big old-fashioned house set back from the roadway. He stormed after her and heard the front door bang before he was halfway up the path. His pumps clattered on the wooden porch and he hurled himself at the door.

"Say!" he panted. "Let me in! Gosh, let me in!" No answer. "Oh, come," he shouted; "be a sport! You can't run away like that."

Profound silence. He began pounding on the door with his fists. It opened about an inch and he tried to push it farther; but it seemed to be fastened on the inside in some way.

"Please go away!" said a small voice, breathless as his own. "Someone will come if you go on making that noise. I shall be very embarrassed."

He stopped pounding. "Won't you let me in?" he pleaded. "We hadn't half begun to talk." No reply. "You're not sulking, are you?" he asked, hoping for a rise.

(Concluded on Page 81)

The Control of Food Supplies in Blockaded Germany

The Second Year of the War—By Alonzo Englebert Taylor

IN THE first article in this series the writer described the extremely unsatisfactory state of affairs that existed when he arrived in Germany, late in the winter of 1915–16. A few days after his arrival he was discussing the food situation, then the universal topic of conversation—except at the table!—with an old acquaintance, a university professor of unusual knowledge and attainments. The writer ventured to ask what the trouble was. The reply ran something as follows:

"Each nation possesses just so much efficiency; it has a limited number of independently efficient men. This is true, even of Germany. Up to the present time our efficient men have been occupied with other vast problems that confront us; the control of the food supplies has been neglected. What is necessary to be done? The first thing to be done—and that the sooner, the better—is to hang Delbrück politically to the highest pole on Unter den Linden!"

Clemens von Delbrück was Secretary of Internal Affairs, and in his department lay whatever control Germany, as a nation, possessed over the business affairs of the citizens of the component parts of the empire. Delbrück was by nature and temperament unqualified to understand or solve the new problems the war had created for his department. He was, and is, highly esteemed as a critical economist—he now occupies a chair in Jena, striving, like Eucken, to draw a little of the historical mantle of Goethe over his shoulders; as to constructive economics his administration was a fiasco. Of the results of many of the Delbrück enactments it was said that "the principle was saved, but the object was sacrificed."

At the same time, justice to Delbrück, even in his inefficiency, demands that the existing limitations in the powers of his department be recognized. The German Empire is a collection of some twenty-six states, grand duchies, duchies, principalities, free towns and one imperial territory. Binding them together is a constitution that even Germans, trained as they are in metaphysics, regard as obscure, equivocal of construction, and, by reservation of rights to the component parts, difficult of application under abnormal conditions.

The solution of the food problem belonged to the department of Delbrück. His hands were tied, it is true; but a strong man would have broken the fetters, or resigned and raised such a commotion as to force reform in procedure and organization. Delbrück sat helpless, surrounded by turmoil, half-heartedly defended by his friends, who protested against the responsibility being laid at his door. The writer overheard the following conversation between two educated Germans:

"Delbrück is squealing very loudly!"

"Yes; he is being pinched."

"Pinched by whom?"

"He is being pinched between the efficiency experts and the Social-Democrats."

"Then, God help him!"

Batocki's Mighty Task

THE fall of Delbrück was deferred until all plans for the reorganization of his department were completed and the new machinery created that was necessary to do the work. When Delbrück resigned, "on account of boils," with the decoration of the Order of the Black Eagle, the very capable and modern Helfferich was appointed Staats-secretär des Innern, and a separate department created directly under the Chancellor, though coöperating with the Department of the Interior—that of the War Nutrition Office.

The new organization included the acquirement of original authority in its affairs, and the creation of a complete set of legal and technical machinery. The individual units of the empire relinquished—presumably for the period of the war—their control over the business affairs of their own citizens, and the Controller of Food Supplies (President of the War Nutrition Office) was given police powers, under martial law, that are absolute in their scope.

The appointment of food controller went to Adolph von Batocki. Of him four things were said: That he had an exceptional record as an efficient administrator; that he followed the method of getting facts first and formulating policies afterward; that he was not self-opinionated; and that he possessed the rhinoceros hide, highly desirable as the skin of a food controller. Later developments showed that Von Batocki possessed powers of conciliation, but also resoluteness of purpose. He has the vision and he has the "punch"—and he is devoid of metaphysics!

Surrounding the controller is a standing committee of experts, who represent the various interests of producer, transporter, middleman and consumer, and army. But it does not include an expert in nutrition! The board consisted of the president; Groener, head of transportation; Von Falkenhausen, under secretary of agriculture; Von Braun, counsellor of the Bavarian Department of the Interior; Dehne, mayor of Plauen; Reusch, an engineer; Stegerwald, an economist; Manasse, general consul in Stettin; and Mueller, Social-Democrat member of the Reichstag from Hamburg.

Under the new organization, the powers centralized in one department authorize the following procedures:

The produce of the soil, plant and animal, may be confiscated in toto.

The amount of his produce that is to belong to the producer for the use of the producer class is determined by the authorities.

The feeding of all livestock is governed by regulation.

The acreage and rotation of crops may be regulated.

The use of fertilizer is under official control.

The use that the grower may make of the crop allotted to him is specified.

The price for produce to the producer is fixed by regulation.

The milling of grain, the composition of flour, the composition of bread and the disposition of grain offal are determined by regulation.

The amounts of grain that may be used in the manufacture of alcoholic beverages is limited by order.

The manufacture of industrial products from produce of the soil—such as starch, alcohol, soap—is limited and regulated.

The disposition of livestock is under regulation; so much and such stock is prepared for market, set apart for the dairy, and so on. The slaughtering of animals for food is under central control.

The uses to which milk is put are determined by regulation. The importation and exportation of all foodstuffs and fodders are under central control.

The number of middlemen that may handle a food is limited by order.

The number of wholesalers and retailers that may engage in the sale of foodstuffs and fodders is limited and specified.

The selection of retailer by consumer is under regulation.

The hours of doing business in sale of foods is under control.

The prices that may be charged by wholesalers and retailers, and the numbers of dealers in any line, are matters of regulation.

More Regulations

THE amount of the several foodstuffs that could legally be in one's possession is limited.

The menus that are to be served in restaurants, eating houses and hotels are limited by regulations.

The ration of the entire people is subject to limitation and specification; so much of this and that article of diet per day, week or month, for each infant, child, adult, hard-working laborer, for the sick, and so on.

It is incumbent upon the controller to see that equality is maintained in the food supplies and fodders allotted to the agricultural classes; that waste is eliminated; that transportation is facilitated; that the prices are not elevated by manipulation; that the prices of all foods are kept to the level consistent with the increased cost of production and the increased scale of wages; and that absolute equality in distribution and consumption is attained.

There were metaphysical distinctions between conditional and unconditional confiscation, and limited and unlimited control; for practical purposes the power of the food controller is absolute.

The new system was installed, with the appointment of the food controller, on June 1, 1916. Under this system Germany passed into a state of communism surpassing the visions of Marx and Lasalle. But it was communism from without, not from within. It did not represent altruism, merely repression of commercial interests of individuals and classes under stress of military necessity. Nevertheless, the workings of the system will illustrate to the world how men may be expected to react to the operations of a communistic system of government.

It is interesting to recall that France in 1792–94 passed through an experience quite like that of Germany to-day. The government seized foodstuffs and attempted to regulate amounts, prices, distribution and use upon a socialistic basis. The experiment failed, according to French historians, because of the impossibility of making the producer, the peasant, play square. The German system profited by experience in one direction, and the work of the food controller was classified as executive, and not legislative. The food controller does not have to go to the Reichstag for authorizations. Otherwise each procedure of the Kriegsernährungs-amt—War Nutrition Office—would provoke a struggle between the Agrarian Group and the Social-Democrats—and both know how to filibuster.

One feature of the German regulations that roused much opposition was the control of prices all along the line—

PHOTOS. FROM PRESS ILLUSTRATING COMPANY, NEW YORK CITY

German Soldiers Cultivating the Enemy's Land

ıer words, limita- in of profit. But iitation of profit ıder these circum- ınces should not ɔ judged from the ındpoint of social ɛislation; it was ır legislation. Lim- ttion of profit is ı hing more than ɔscription of cap- t. In all wars ɔ ı have served for ninal pay and ed their lives in bargain; in all ɛs industry has ɔsued its search gain, capitaliz- the exigencies of the emergency. It is an index of ıher morality that in this war, on both sides, cap- t is being made to serve the state—if not for nom- ı returns, at least for far less returns than would ɔ e accrued through the operation of the laws of ply and demand.

Another feature of the new system that was ɔngly opposed was the taking of complete inven- es of livestock and foodstuffs, including those the householder. But it was the foundation of structure of regulations. The worst mistakes of the brück régime were due to trying to regulate the and use of a food without knowing how much of existed. The inventory not only furnished the sis for the unit of consumption, it also enabled the ce to enforce the regulations for distribution and Whenever it was announced that the sale and con- of a particular article would be centralized the supply ıat commodity in private hands would at once disappear ɔn the market; only a search could recover it.

The thing most hoped for from Von Batocki by the con- ıer was the abolition of the polonaise. The Berliner is ol of dancing; but there was a great difference between ıcing in the Palais de Danse and dancing in front of a ıter shop. The word "polonaise" was applied to the ıting in front of shops for the sale of foodstuffs. For ıths in the cities of Germany, under the régime of Dbrück, literally millions of women spent hours daily ıding in front of shops, the police keeping the line. The ir shoppers came hours before the time set; often they ıle the evening before.

The End of the Polonaise

THE reason was that the food card did not carry any guaranty. It was, therefore, first come, first served; when the supply for the day was exhausted the remaining shop- ɛ were turned away. The bread cards were obligatory; ıre was no dancing in front of the bread shop. But the ıdwalks in front of shops for the sale of meat, sugar, but- ɛ milk and fats were more or less continuously thronged. Disturbances of the peace were inevitable and frequent. Yet the women were withdrawn from occupation for ıcıs was a grievous injustice.

Under Delbrück no one knew how much meat, butter, mi or sugar would be available for sale on a day or within ı ɛek. Cards were issued, but the organization was, in reality, only a paper organization. The total value of the food card, outside the bread card, was that it gave the holder the right to stand in line for hours and take the chances. During the month of May, 1916, the householder in Berlin who desired any of the following articles had to stand in line for purchase: Meat, sausage, oil, butter, margarine, milk, flour, sugar, coffee, potatoes, eggs and sauerkraut. The results were appalling in loss of time and energy. Rubner made the amusing calculation that the woman who remained in bed for six hours would have more fat than if she stood in line the necessary time to secure the amount allotted on the card.

This state of affairs was particularly onerous for the mother in the family that had no servant. One of the first acts of Von Batocki was to state the principle that no article of food should be announced for sale until the amount available was known; this amount would then be divided into the population pro rata and fixed time for sales abolished. The Social-Democrats charged, week in and out during the Delbrück régime, that the wealthy were permitted to purchase food outside the regulations. Von Batocki promised equality before the food counter, but stated that months would be required to bring it into effect.

A review of the development of the problems that confronted the new food controller resembles a description of a game of hide-and-seek. The producer class desired to consume, convert or dispose of their produce in accordance with their own interests, as in time of peace. The trading class desired to have the distribution to the consumer pass through the ordinary channels of trade and subject to the customary scope of manipulations. The industrial classes demanded that food be furnished to them in adequate amounts and at commensurate prices. The people had been officially advised at the outset of the war that consumption of wheat, meat and fats would have to be restricted; that of rye, potato and sugar increased as equivalent.

When the inventory of grains was taken in the fall of 1915, revealing a total of less than twenty-two million tons as against twenty-seven millions the year before, the fact also came to light that nothing remained of the excess of bread grains of the previous year. Under these circumstances the authorities paid particular attention to the control of wheat and rye, and were able to maintain the allotted bread ration—seven to eight ounces of flour—despite the restrictions of the small crop, but only by the free addition of potato to the bread. During the winter of 1915–16 some fourteen hundred thousand tons of grains were imported from Rumania, half of which were bread grains. Efficient management in the army effected a saving of some two hundred thousand tons; so that, with the addition of those two amounts, the bread grains available for the year 1915–16 lacked only three hundred thousand tons of the crop of the previous year.

A calculation on the basis of bread-card and flour allotments, including the heavy bread ration of the army, indicated that a million bushels remained as reserve. The importance of this reserve became apparent in the spring of 1916, when the scarcity of potatoes and sugar made an increase in the bread ration highly desirable. The reserve, as in the previous year, had largely disappeared; and, though it was possible to enlarge the bread ration to certain groups of workmen in industrial districts, the fact remained that a million tons of bread grains had again disappeared.

Bread Grains Fed to Cattle

THE statement of the Social-Democratic Party, made in the Reichstag, to the effect that eight million tons of bread grains had been deflected from food to stock feed, was an exaggeration; but there is apparently no doubt that, in all, between three and four million tons were thus diverted within two years. As time passed the unfortunate results of the original establishment of the bread ration have become more and more apparent. Had the flour ration, as flour and bread, been set at the outset at nine-tenths of a pound, where it should have been established, that ration could have been maintained, since the control would have been elaborated to that end. Then, when other articles of food became scarce, the deprivations would have been less severely felt.

The crop of wheat and rye of 1916 was larger than that of the previous year, equaling that of 1914—over fourteen million tons. As soon as this was assured the food controller announced an added ration of one ounce and eight-tenths of flour for children between the ages of twelve and seventeen, increase in the bread ration to nine-tenths of a pound for all manual laborers, and to one pound and

PAUL THOMPSON, NEW YORK CITY

Soldiers Harvesting Apples

Using the Threshing Machine in France

one-tenth for workers in mines and other places requiring unusual exertion. The maintenance of this ration depends upon the physical possession of the grain by the controller; and it is believed that the process of confiscation has been made effective.

Not only was the bread ration increased, but the quality of the bread has been very much improved by the withdrawal of potato. The grain crop of 1916 was relatively larger than the potato crop; so, in the interest of efficiency, the food controller withdrew the potato and restored the normal bread to the people. The potato bread was unpalatable, prone to produce indigestion, and, weight for weight, materially less nutritious. The control of the bread ration has been the model to which the control of other foodstuffs has vainly attempted to attain.

The harvest of 1915 yielded very small crops of barley and oats—only eight million tons, some five million tons short. Since the potato crop was very large, potato could be used as surrogate; and, assuming that ten million tons were used, these corresponded to some two million tons of grain, reducing the deficit very materially. When one considers that one-third of the swine and a million milch cows had been killed six months prior to the harvesting of this crop, it would seem as though the feeding grains, plus potato, should have been sufficient to cover the nutrition of the remaining animals. That this was not true was due to two additional factors: The swine killed were large and the feed demands of the remaining swine included, therefore, growth rations. More important than this, the season of 1915 was very unfavorable for grasses and hay, and the crop of roughage was far below the normal. Therefore, during the winter months increased demands were made upon other feeds, with the result of scarcity before the winter was past.

How the Hay Crop Helped

FOR the crop of 1916 the soil received much better cultivation and much more liberal fertilization than was possible the previous year. This, together with more favorable climatic conditions, resulted in a relatively normal harvest for 1916. The total yield of grains was a little over twenty-six million tons, almost as large as the crop of 1914. It was accompanied by a huge yield of grasses, so that a large hay crop was gathered. From the standpoint of feed requirements for domesticated animals, the large hay crop and the normal crop of oats and barley probably make up for the low potato crop.

Under these circumstances it ought to be possible during the present winter to raise the bread ration for each person to one pound a day, if the exigencies of the situation with other foodstuffs should make this desirable or imperative.

In view of the experience of the previous years, however, the industrial classes will not be convinced that the distribution of grains has been equitably made until the increased bread allotments are upon their tables. Increased utilization of barley and oats for human food has been already inaugurated. In several directions the authorities have secured increase in production of fodders. Some four hundred thousand acres have been added to cultivation; woodland that previously was closed to livestock has been thrown open to pasturage; plants that had been ignored are now being utilized; and the large crop of hay of the past summer was, in part, the result of efforts in this direction.

The problem of the synthesis of foodstuffs has been solved in a positive sense through the investigations of the scientists of the Commission for Fodder-Surrogates. If yeast be grown in a medium of sugar, ammonia and the necessary mineral salts, the ammonia and sugar will be converted into protein through multiplication of the yeast cells. When the culture is dried the powder contains over forty-five per cent of protein. This yeast powder has been used as addendum to the human diet. The powder can be obtained on a larger scale as fodder, and cheaply. The water of pulp mills, containing considerable carbohydrate, is made alkaline by addition of the washwater of gas works, which contains ammonia. The mixture is then inoculated with yeasts; the cells multiply, converting first the carbohydrate into sugar, then with the ammonia into protein of the yeast cell. The cells are washed free of sulphites—from the pulping process—and dried for stock feed. One part of yeast powder equals four parts of grain as carrier of protein.

It has been stated that thousands of tons of such powders are being produced monthly. It is relatively expensive if sugar be used, as there is a large loss by combustion of sugar; prepared from the waste waters of pulp mills and gas works, the gain is almost total. Other fodders are being prepared by action of alkali on straw, the cellulose being converted into sugar. A hundred thousand tons of this feed are being made during the present year. The product has the value of crude sugar, and, mixed with yeast powder or with protein meal, makes a feed equal to ground oats. The residue can be fermented, and alcohol, acetone and glycerine recovered. The food value of the crude sugar is eight times greater than that of the straw from which it was prepared; the alcohol, glycerine and acetone are very valuable.

Meals are made by grinding up different forest plants, to which protein can be added as concentrate. Mixtures of ground oats, straw, chopped hay, straw sugar and protein meal have been formed into briquettes for easy shipment. Kitchen waste and table scraps are subject to collection in cities of over forty thousand inhabitants; and special wagons are provided for this purpose. The collected materials are dried and pressed into cakes and then delivered to communal authorities, who allot them as fodder for milch cows. It has been estimated that the per-capita waste thus saved amounts to over one ounce a day, and that the milk derived therefrom was equal to a million quarts a day. Animal waste matter has been utilized to the practical exclusion of all loss. Slaughterhouse refuse, bones, bodies of dead animals—including bodies of animals killed in the war zone—fish and mussels are dried, pressed and used as fodder, alone or with carbohydrates. Such materials used to go to the soil as fertilizers; to feed them directly means saving time. The control of sale and use of feeding stuffs and fodders of all kinds is now under the charge of the Feeding Permission Bureau, which determines how, where and to what extent livestock shall be fed.

The Pig-Fattening Company

OPERATING in connection with this bureau is the Pig-Fattening Company, which directly or through communals contracts with swine or cattle owners to send to them feeding stuffs against agreements to return certain numbers of fattened animals of specified weight within a stated time. These arrangements, of which the large cities have made especial use, have worked out to the satisfaction of all concerned. The risk is taken from the feeder, capital is advanced to him and the result cannot be deflected. It would have been better had the state in the beginning confiscated all fodder, feeding stuffs and livestock, reduced the latter to the plane of the former, and fattened them, by contract with the peasant, with the confiscated feeding stuffs. It would have been better to pay the peasant his price rather than to lose the units of human food; if a guard had been placed upon every farm in Germany he would have saved much more than his board and wage.

When the small sugar-beet crop of 1915 came to the refineries these were practically empty of the huge crop of 1914. The exact sugar crop of 1915 was not then announced, beyond the statement that it was about two-thirds of the crop of the previous year. It was later announced as fifteen hundred thousand tons. This should have sufficed to cover the normal consumption of sugar plus the excessive demands of the army. There was paper regulation of sugar during the winter of 1915–16, despite which the peasants fed beets freely, and also molasses; and the consumption by distilleries was probably in excess of the normal.

In January, 1916, sugar had become very scarce. Then the feeding of beets and molasses to livestock was prohibited and the recovery of the sugar from molasses again permitted. Sugar cards appeared in March as local regulations, the allotment was not guaranteed, maximum prices could not be maintained, and during the spring and summer months sugar spelled confusion.

A survey of household consumption indicated that this had been abnormal. The authorities had evidently calculated that the people would consume the usual

(Continued on Page 35)

AT THIS point we were nearing the Asphodel on her port side, and looking up I caught sight of Goddard staring at us over the rail. He beckoned mysteriously and disappeared.

"'Who is that?'" cried Hawley quickly.

"'The watchman of the ship.'"

"'Ah, the fellow with the story about bells. Bring me Craigenside, Mr. Weymouth, if you please.'"

The detective went up a knotted monkey rope like a sailor. His method with Goddard was direct and downright. He correctly gauged him from the start. Like all sailors, Goddard supposed that some natural right existed on the part of the police to clap him into jail as soon as one stuck a leg ashore. He had no intention, he told us earnestly, to foul his anchors by reason of his lingering there aboard the Asphodel.

"I'm a seafaring man," he said, "and I'm accustomed to speak out what's on my mind, and that's a fact. I was brought up by Black Dan, of Salcksport, and he was one of the finest sailormen under the canopy of heaven, between you and me and sidewalks of New York. 'Joe,' he says to me—if he says it once he says it twenty times—'in time of danger,' he says, 'a dogfish swallows her pups,' he says. 'But don't you do nothing of the kind. Spit it out,' he says, 'brace, bolt and shackle. Don't you hold nothing in your brooding-sack,' he says, 'nothing at all, because you got to remember there ain't much consideration showed sailors, by and large, in any port that ever I sailed out of.'"

"Black Dan is a man after my own heart," said Hawley.

"One of the finest sailormen under the canopy of heaven," replied Goddard.

He then proceeded with his story. It appeared that about a week prior to the appearance of the act, Man or Mechanism, at Silver Glade, Captain Craigenside had transferred his watchman from the ship to the house. It became Goddard's duty to come ashore at nine o'clock in the evening—at which hour the captain usually retired—and patrol the front porch until relieved. This was as a rule about dawn.

The captain was very nervous all this while, and Joe often heard him pacing overhead in his sennit slippers. Sometimes he would lean down from the wrought-iron balcony over the head of his watchman, and surprise him with a few guarded words. Joe supposed that at such times one of his old fits had overtaken him, and although never his familiar, he had a good deal of commiseration for the plight of a good seaman. If he had ever had any ambition to lead the solitary life of a sea captain, it would have been put to flight by this prolonged observation of the morass in which his skipper had become involved. If there was such a thing as night terrors Craigenside experienced their bitterness to the full.

"More than once I wondered why he didn't weigh anchor and loose sail on the Asphodel," said Joe, "but this trouble of his he carries under his own hat, I suppose. At any rate, no man could have stuck closer to a house than he did to his."

Then came the night of the fracas in the Glade. This was a night of strange happenings, Joe averred. First, along about eleven o'clock the young lady, who was usually as quiet as a lamb and much more self-possessed than her uncle, came rushing up the terraces like a mad woman with her hair tumbled and her cheeks as pale as death. She went past Goddard without a word and stood leaning a moment against that cast-iron dog on the lawn, and looking back toward the river with heaving breast.

"Do You Not See Its Fearful Eye Staring at Me Through the Wall? Save Me From It!"

Fascinated, Goddard crept up on her, and for an instant, before she turned away from him and ran into the house, he saw the expression on her pale face. Her jaw with its delicate squareness was set, her dark eyes expressed a fiery resolution; but beyond this they were full of a supreme happiness, which seemed to communicate itself to every atom of her body. This transfiguration was so strong that even the rough seaman could not fail to note it.

He stood there wondering in the darkness, and then it occurred to him that if he was to inhale the true savor of this thing it must be through the medium of tobacco. He searched his pockets in vain, and at last remembered that he had left his pouch on a spile at the wharf's end.

He had heard nothing of the captain on this evening; he felt certain that he must be asleep. Whether asleep or no, the pull of the tobacco pouch was too strong to be resisted. Down he went, as speedily as his bow-legged gait would warrant. He snatched the pouch from its spile, filled and lit his pipe, and began to reascend the terraces at a more contented pace.

Then when he was about level with the second terrace he heard behind the rose bushes there the noise of some sort of scramble. There was a hollow sound, as if a man's ribs had been severely thumped; then a more ominous sound yet, as if a skull had been splintered by some sort of bludgeon.

Joe Goddard snatched his pipe from his mouth and rushed forward, only in time to see Captain Ruel stretched his length on the turf, and a rill of blood sprawling on his cheek. He stood aghast, but before he could collect his wits to look about him for this mysterious night assailant he received himself from behind a crashing blow on the head which tumbled him senseless across Ruel's body. When he opened his eyes Craigenside was standing over him, staring at his hand, which was crimson with blood where he had put it to his head.

"What's all this?" he said in a dazed way. "What's gone on here, Goddard?"

"We've been knocked out by some sort of thug or other," said his watchman. "Did you get a glimpse of him, I wonder?"

Ruel shook his head stupidly; then struck by a sudden thought and with a frightened oath, he wheeled in his tracks and began lumbering toward the house. Goddard, staggering after him, was in time to see him snatch open the lid of the clock, mutter "Gone!" in an agonized voice, and sink to his knees in a kind of lethargy. As to what might be gone, Goddard did not know; he had never monkeyed with the clock itself.

Hawley and I were not so much at a loss.

"It looks as if the jig was up," I said. "The man has got what he wants; he must be off by this time."

"Not so sure," said the little man. "We do not know yet into whose possession the jade actually came. We do not know who delivered these two very skillful blows."

"Who if not the ornithologist?"

"Assuming that he had a living assistant, that man must have had an interest in the thing. Otherwise why should he have tried to murder him?"

"Have tried ——"

"We have no proof of actual murder."

My brain reeled.

"Neither have we proof of an actual victim," I reminded him.

He acquiesced.

"We have first to construct a man; we have next to contrive his escape from the power of this mesmerist. But, assuming the criminality of Smith, this is certainly one of the possibilities; and if we do not assume his criminality we might as well give over effort at once."

Turning to Goddard, who had stood listening in a puzzled way, he said curtly:

"Did you see the young lady again that night?"

"In about ten minutes she came by again, and there was Captain Craigenside standing beside that cast-iron dog with blood on his cheek and his eyes bulging out of his head. It was just after his looking into that clock for something that wasn't there. But she seemed to take no notice of him at all, but into the house with her and up the stairs at one bound."

"Did she retire then?"

"No, sir, she was on the roof of the house with her uncle's glass for a good hour. Then down she came, and said to me she was going over to spell the girl with the old lady."

"You did not attempt to follow her, I suppose?"

"I was too sick and sore," replied Goddard. "I had all I could do to hang onto my head."

"So that you do not know whether the young lady actually did as she said she was going to?"

"Well, now, I think I do. For the next day I says to the Crooker girl: 'You look peaked. Were you sitting up all night with the old lady?'

"'No,' says she; 'I was spelled at the usual hour by the young lady.'"

"And what time did she come back?"

"Along sun-up. She was as fresh as a daisy then, and came along singing. That's the first time I've heard that girl sing, too, to my knowledge."

"She was happy," said Hawley reflectively. "Now what an odd circumstance, gentlemen, was that! You will agree with me that the sight of her uncle, bathed in his own blood and half demented by the approach of some creeping horror, could not have been the cause of this singing; nor is the bedside of a dying woman usually a cause of cheerful reflection. Yet after such a night she sings—she sings. Not out of sheer callousness or indifference surely."

He mused. Arching his brows he stared at the house, which seemed to pose for him defiantly its eternal mystery.

"What a race!" he muttered.

Then to Goddard: "You know nothing of the old lady who lies yonder, I suppose?"

"Nothing more than she's not long for this world," returned the watchman. "They say she's a sort of witch with a devil in her closet and fire on her tongue, if she likes."

"What sort of a devil precisely?"

"That I don't know."

"Nor any man, most likely. One thing I had very nearly forgotten—the instrument with which you were struck. You, of course, do not know what that was; but if you will take off your cap I may be able to determine something from the wound."

"That won't be necessary," said Goddard, "because, as a matter of fact, I know exactly what hit me."

"Ah! He left his weapon."

"It was lying in the grass the next morning."

"You have it?"

"I took it back to the ship, where it belonged. It was a wooden belaying pin, which had been taken from the fife-rail round the mizzen."

"Ah, a belaying pin!"

Hawley opened his eyes wide:

"Is there another man on the ship?"

"There wasn't to my knowledge," said Goddard. "Of course he might have been there all the time and I not have known it. But I gave the ship a good going over, and I couldn't find hide nor hair of him. Of course by that time the horse was out of the stable, as the feller said."

"Precisely so. But he had left no trace of his residence on that ship?"

"None that I could see."

Hawley sank his chin on his breast. He seemed in a trance. Then suddenly he flung up his head and eyed those black, jagged cliffs which began where the dunes ended.

"You're likely to prove my star witness," he said, and we went over the side.

"I only hope I ain't quoted against myself," said Joe Goddard uneasily.

"Never fear," laughed Hawley as we floated clear of the Asphodel. "A man can't be asked to incriminate himself."

When we were once more in Silver Glade, Hawley said briskly:

"This is a very curious old lady, I perceive—the one who has a closet demon. I should think it might be an invaluable possession, like that demon Socrates made use of. What do you know of her?"

"Here comes the man who can tell you everything," I answered.

I had seen Doctor Starr picking his way gingerly over the pine roots. The little old doctor used to smoke his pipe on the water front at this time of day, when he was able. He seemed to like to watch the tide himself. So often had he fought against the influence of its ebb that it had become a living spirit to him, or perhaps a great host of spirits flowing over the horizon.

Doctor Starr explained the fate which Amos' calculating humor had enforced on the old lady. Hawley scratched his ear.

"Fate does sometimes take strange twists out of maiden ladies," he said. "What a fund of bitterness there might be there, gentlemen. Yet she goes with him on his last voyage ——"

"She made him agree to take her against his better judgment," interpolated Doctor Starr. "Fairly swam aboard, and sat in his forechains," continued Hawley. "Acted as stewardess all through that voyage of which we know nothing, and finally prepared him with her own hands for those last rites."

"She will soon follow him now," said Doctor Starr gently.

"Is she so very low?"

"She may go with any tide."

"Ah, yes—again that notion."

"Notion or not," said the little doctor testily, "it comes true nine times out of ten."

Hawley nodded.

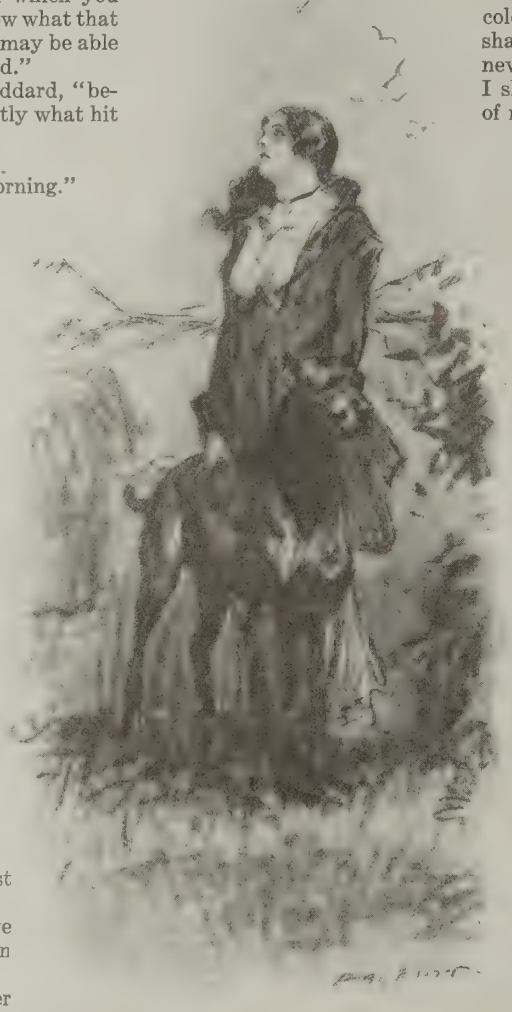
"Is there anything odd about this old house of hers?"

"Odd? How do you mean—odd?"

"In the construction."

"Nothing that I know of. If there is anything secretly constructed, it is that old lady's brain," said Doctor Starr. Turning to me, he added: "She has a strange desire to talk with you, Weymouth, which I see no reason for not gratifying, if you are agreeable."

"With me?"



She Went Past Goddard Without a Word and Stood Leaning Against the Cast-Iron Dog on the Lawn

"Strange as it may seem," he returned dryly, "you have made an impression on her. Medicine must be sent over to-night which I expect by the eight o'clock mail. Will you take it to her?"

"Good," said Hawley. "It's the candy, my boy. This is very opportune. We could not very well have forced ourselves upon her, but I wish to know the lay of the land there. It may be that her closet demon will prompt her to make some useful revelation."

"And you?"

"That is a horse of another color," said the little man. "I shall be busy on my own hook, never fear. As the lawyers say, I shall be off on a little frolic of my own."

He drew me aside and said in a whisper:

"Watch for the ebb."

There was still sunlight left when Hawley departed. To calm my mind and bring it out of its confusion, I took oars and went up the river in a little punt belonging to Sturgis.

What strangeness there was in all this business! It seemed certain that there was a connection between the disappearance of that scarlet puppet and the secret history of the Craigensides; and what could this connecting link be if not the god which had been stolen from the shelf in that upright teakwood coffin? But if that was it, then vengeance had been consummated; and what likelihood was there that the criminal still lingered in this neighborhood? I for my part had privately made up my mind that I should never again in this life clap eyes on Mr. James Smith. He had gone as he had come, without fuss or feathers, perhaps into the sea, perhaps transmuted into one of those whirling sand devils which fled along the crests of the dunes in vanishing troops. Whether or no he still had length, breadth or thickness, it was my opinion that he had transported himself beyond our jurisdiction.

So musing, I drifted into that region of marshland where Dave Crooker had his little black fishhouse set up on piles. The day was still extraordinarily clear, but a rampart of purple cloud had risen imperceptibly on the horizon to the north, and wind began to come in strong gusts, hurled like clods against the tiny house, rattling the many oars which lay in a heap across the rafters.

"Nothing but wind," said Dave Crooker. He sat outside the door with a black weir net across his knees. "There is no rain in those clouds. But look there! The gulls are drunk with wind."

He peered seaward, and there the fat flock could be seen whirling and tossing their tipsy bodies against that ugly rack of cloud.

"Ghosts, every one," said Dave Crooker. "Man alive, I mistrust those fat, squawking birds. But there they are, and there they'll be when you and I are gone. There's no patience like theirs."

"So it seems."

"There'll be a new one wrangling with them before the week is out."

I understood his reference to poor old Mercy.

"She is near the end then?"

"Well, well," said Dave, "this time I calculate she'll make a die of it. Would you believe it now—her feet are dead already."

I wrinkled my brow.

"Yes, dead and buried," went on the fisherman, paring down a huge cork with his crooked knife.

"Buried?" I uttered sharply.

"Sure enough—in an ungodly lump of clay that I dug myself for her below the gravel pits. She's mortifying fast."

Dave looked mysteriously round him. A late sun was streaming on the dunes. Sea and shore had entered their evening conspiracy of shining silence.

"I hear she doesn't want to go," he said gravely. "Doesn't want to go."

"Do we any of us want to go?"

"Still, where she has lived her life, a man would think she would know enough not to train on as she does. But, dear me, my girl Amanda has waited on her by inches for the past week; and quite often she is out of her head, the old lady, and no sooner is she out of her head than she dreams she is in hell."

"In hell?"

"Yes, sir, with the flames scorching her. Did ever you hear of that? Calling out 'Water! water!' and squirming on the bed like all possessed. She's a strong Methodist, too, strong Methodist to appearance. But now if I was to bet with you about that old lady ——"

He narrowed his eyes. "It's God's truth she and old Amos had some league with the devil. Yes, sir. It would come natural to him; and she was that kind, that she would follow where he led. She wasn't in them Eastern oceans all her life for nothing."

I laughed, knowing this to be normally a spur to Dave's imagination.

He shook his head and rasped his hands together.

"You kin laugh," he said, "but my daughter will tell you that it ain't no laughing matter. She has heard her talking to the devil himself this last day or so, and if it wasn't that she was a mighty sensible, strong-minded kind—she's like her father, takes an interest in things and the like of that, but ain't to be frightened—she'd have fled the house long before this."

"And why?"

"Maybe you ain't heard about the old lady's closet demon," suggested Dave.

The closet demon!

"Explain this thing," I said.

"There ain't nothing that can be explained," Dave answered. "But there's an imp from hell joggling her elbow the moment my daughter's back is turned. She can't be left alone a second."

"And what like is this imp?"

"That's more than I can tell you," said Dave gloomily. "It's not of this world, but still it has a mortal hunger for the old lady's soul."

"And it is this demon which is tormenting the old lady?"

"There ain't a doubt of it. The thing keeps dragging and dragging at her, and won't take 'No' for an answer. She'll go with the ebb."

Dave stood up with his weir net over his shoulder.

"I'm heading for the dunes," he said. "Will you put along with me?"

We began to go toward the sea together. The sun had left the water by that time, but the gulls flashed light as they glided in the upper air, which held a mellowness of last rays. The wind fell away to nothing, and in the stillness we heard the sea droning on the coast. The dunes were like crouching yellow hounds awaiting whatever prey destiny might waft them from that wide horizon. More dazzling and more unstable than the imagination of man itself, they were not the same two days together. They rippled, crawled billowed, uncovering here and burying there. At no great distance from the tomb of the Craigensides the bones of some old ship had come to light, a file of charred rib ends protruding black as ink into the swimming golden lights of the western ridges.

"Look how the sand has sucked her old skeleton in," said Dave.

The great net was draped over his crooked shoulder corks dragged at his heels over the yielding sands. He looked himself like a sea wraith born of that shipwreck and I was following him, smiling a little at the figure he presented, when suddenly he came to a full stop opposite the tomb itself.

This had been cut into a solid rock ledge, at the extreme limit of sand. It was a desolate little place. Granite pillars had been set at intervals round it, linked together by sagging chains which had grown very rusty. At the base of the tomb some sort of tiny flower grew in clusters, and the iron gate had wrought into its pattern a scheme of lyres and weeping willows, much bitten by time and sea salt and driving sand.

Now a strange thing: The little fisherman at my side stared and then bent down with a convulsive movement his nose all but thrust into the sand.

"Come here, boy, come here," he said in a throaty whisper.

The golden coloring had left all those floating wisps of cloud; the dunes lay cold and ashen in a sinking light; and coming up behind my little fisherman I saw with beating heart the thing he pointed out. We were not twenty feet from the front face of that old rock tomb, and there in a patch of firm sand the tracks of a naked foot were sunk deep.

I sank to my knees. Beyond all question I had under my eye the track of a man with six toes on his right foot. I sprang up and stood staring at the rusty door and the purple flowers all about it, and scarcely felt old Crooker twitching my sleeve.

"Let's put her for home," he muttered. "Let's put her for home, boy."

"Wait," I said. "There may be nothing mysterious about this."

"Look there at the six toes. Man alive, it's no one else's

laughed, but not with very great heartiness.

Oh, Dave," I said, "this must be a weary weight of
it to leave a track like this."

I've thought of that," returned the fisherman, "and
this is what I am thinking: It's a weight of sin that
es his track so plain. He carries a load of sin, the old
te, bound fast to his back; and who knows if even hell
an burn it up and purge it away. Stamp out the track
put her for home."

'No," I said.

Took a step forward.

'You're never going into the tomb? "cried Dave, aghast.

'm going into the tomb."

'You're crazy mad!"

Confess to you that in that first moment of discovery I
ot think all the powers of another world would have
ed to bring me to a closer inspection of that grisly
t. The myth of six-toed Amos had been so often in my
l that this impression in the sand came as an eerie
ication of the wildest stories told of that old pirate.
f expected the old reprobate to shape himself dimly in
ling sand. The old fisherman stood away from me.

wouldn't be the man to meddle in the affairs of that
e," he said in a voice hardly audible.

'hen I will," I answered sharply, and I knelt before
omb.

once I found that the heavy padlock had been broken.
discovery had some effect in putting to flight my super-
us terrors; but it had no less the effect of presenting
omb in the guise of a formidable menace. I drew my
ver and swung open the door. I go no further than to
hat my search was thorough, and that there was noth-
ving in the tomb.

Did you think there was something there that you
l put your hand on?" muttered Crooker.

Excitement was rising in me, for I thought now that I
who had found sanctuary in that place. I looked
; the south shore to where the heavy cliffs began and
and ended. There were a thousand cracks and spout-
averns in the face of that giant rampart, where a man
lose himself. Was my suspect even now crouching in
ef them? But why, after so long a time, should he still
in the neighborhood?

left the fisherman still shaking his head, and casting
God-fearing eyes at the flashing gulls. I reached the
scarcely in time to station myself at the theater gate.
when the audience was inside the fence, I ran down to
hore to speak to the two men who were in charge of
raft laden with rockets and colored bombs which had
anchored in midstream. This was the evening of our
d pyrotechnic display. "How will the wind be?" I
to the leader of these two men, a sagacious devil
hollowed cheeks and satirical eye.

"Offshore," he said briefly.

"So you said before," I answered him tersely; "but one of your rockets went through the theater roof notwithstanding."

"That will not happen again. We have set these sticks up at a different angle this time—about eighty degrees. They will all land in the river."

"Make sure they do," I replied. "The first rocket is to go off the moment the five arcs come on under the theater roof. Then wait five minutes and go on with your exhibition."

I left the powder monkey grinning, and went back on the gate. At some time during the second act Doctor Starr put into my hand a bottle wrapped in pink paper.

"Here you are," he said. "The girl will know how to give it."

I pocketed the bottle.

"Any time before midnight then."

He was gone.

I felt that there was no time to lose. I held a deep-seated conviction that some part of this mystery lay locked in that old lady's dying brain. Accordingly I got my colleague on the gate and crossed the river.

Making my boat fast to the Craigenside pier I skirted the lowest terrace, leaped the stone wall, and found myself in Mercy Cobb's estate.

Mercy's house lay to the left of the Craigenside estate. It was far older than the larger place. Long, low and broken-backed, it seemed as if several ripples had been sent through it, like those which attend movement on the part of a caterpillar. Seaweed had been banked all round its foundation the winter before for the warmth, and this rampart, though shriveled and blackened, had never been removed, and straggled away from the house like locks of the dead Medusa. The windows were full of small, wrinkled panes, and the unpainted shingles, dislodged in places, glowed wan silver under the flying moon as I stepped into the yard. It was like an old gray hen that had begun to molt.

Delicate pilasters were set into the body of the house at the front door, supporting the fan-shaped glass transom over it. Into the worn granite flag which served for a step an iron scraper had been sunk and leaded, and on the ground at either side lay vertebræ of giant blackfish bleached marble-white and very porous. The wind that eddied there bearing the strong odor of the flats, testified that already, as I pulled the bell, the tide was running hard.

A sleepy girl, of nineteen or so, with red eyes and flaxen hair, let me into the hall. This was the daughter of the fisherman.

"I've brought the medicine," I said, and handed her the bottle.

She was a tall, broad-shoulderd girl with tousled yellow hair and kindly eyes red from lack of sleep.

"I'm thankful you've come," she breathed, half sobbing. "I've been thinking she might go any minute, and me here all sole alone with her."

"Is there nobody to relieve you?"

"Miss Craigenside was here earlier, but the captain sent for her."

"How is the patient?"

"She couldn't well be worse. Oh, Lordy, I hope I never live to grow old and carry on as she does. It's just wicked that that good old soul should be made to bear it in her last days. It doesn't seem right. Oh, I do sincerely hope I may die young, sooner than come to this."

"She has requested to see me."

"Then come this way, please."

The house had a faint, not unpleasant smell of must, interpenetrated by the odor of straw matting. A week's dust lay about, but otherwise the place was neat as waxwork. Not a rug was turned, not a chair out of its appointed place. Faded pictures in tarnished gilt frames hung against wall paper that had wrinkled and blistered in the corners, and the design of which was of a very ancient date. The stairs and banisters creaked and snapped as I followed my guide upstairs. A hand lamp stood burning dimly on the top step. In another moment I had entered the room, and stood looking down at all that was left of the earthly tenement of Mercy Cobb.

The indomitable old lady presented an extraordinary spectacle. She was propped up in the huge four-poster, her meager body covered by a sunflower quilt, one of these affairs of a thousand pieces, to which such women devote I hesitate to think how much of their lives.

"Ah, you are there," she said feebly. "Sit down, my good young man."

Her black eye held craft and entreaty in it.

I drew near a blue-painted wooden chair, on the back of which a red robin was roughly indicated. She regarded me with burning eyes, clutching the quilt to her chin, the witchlike outthrust of which sickness had exaggerated. And this movement of the quilt revealed, what I would rather not have seen, a great lump of glistening blue clay at the foot of the bed, in which her feet were buried. The angel of death, it seemed, touched her cold by horrible degrees.

"I'm going with the ebb, as I said I should," she whispered, closing her eyes. "Have you seen the captain?"

"Not to-day."

"Ah, he's up to some deviltry. He called the girl from an old lady's deathbed. I never liked that man from first to last. Not from first to last. He's no more like his father than chalk is like cheese."

The girl came in with the medicine in a graduated glass. Old Mercy clutched it in a trembling hand.

Food and Frightfulness

THERE have been many contradictory reports about food conditions in Germany, and in palliation of the ruthless acts of the Central Powers their sympathizers have claimed that women and children are being starved to death. The results of Doctor Taylor's six months' scientific inquiry into the control of food supplies in Germany, now being published in THE SATURDAY EVENING POST, seem to establish conclusively that up to the last of the year, at least, Germany, while it had had to tighten its belt, was not starving or threatened with starvation.

That the German nation as a whole is living on short rations, and rather uninviting rations, appears to be the fact; but that any condition approaching actual starvation exists in any class is not true. Germany cannot plead that extenuation for lawlessness and ruthlessness.

Precedents

THERE are two broadly typical ways of looking at a precedent. The conservative way is to say: "This institution; or policy, or custom, has endured so many generations; therefore, it must be the final embodiment of human wisdom, and we should be bound by it." The radical way is to say: "This thing has stood here a hundred years; therefore, let's give it a kick in the ribs to find out whether it's still alive, or only a mummy."

Taking it by and large, the radical way, of course, is the more intelligent—especially in politics; for if any political arrangement was good a hundred years ago the rational presumption would be that it is not good now. Step into a museum and notice how little of the stuff that was used a hundred years ago would be useful now. For one illustration: Nobody knows better than constitutional lawyers and Federal judges how the Constitution of the United States has undergone constant modification from the day it was adopted, until its framers would hardly recognize it now.

Recently they have been quoting Washington and Jefferson and Monroe on every problem that has come before them. Quoting Confucius would be almost as much to the point. Washington and Jefferson, at least, were not blockheads. They did not derive their policy from the precepts of Solon, but from the situation of America and Europe as it was in their day.

What somebody else had thought on the subject under the different conditions of a century before would have interested them little. They had recently been engaged in a very extensive smashing of precedents.

Work for a New Solon

IN HIS last sane years Nietzsche projected a great book which he was never able to write. His notes indicate something of what he had in mind. One of them reads:

"Third Book: The problem of the legislator. To bind anew the unregulated forces in such a manner that they are not mutually annihilated by running foul of one another; to make a real augmentation of force."

Doubtless he did not mean a League to Enforce Peace, for he held that a truly useful state must engage in vigorous warfare "to put an end to all lightness of mind." To a great philosopher, whose frivolous contemporaries paid so little attention to him that he had to publish his immortal works at his own expense, and could find only half a dozen people to read them—even when presented with copies—lightness of mind might well seem a serious evil—to be remedied by shooting off the male population's legs, thereby reducing them to a state of sobriety which would relish philosophy.

All the same—especially in view of what has been happening during the last two and a half years—that note suggests an enormous task for the statesman: "to bind anew the unregulated forces in such a manner that they are not mutually annihilated by running foul of one another." Even in the peaceful United States a large part of the country's potential force does cancel itself by mutual jealousies and antagonisms. Better coöperation is the greatest problem before the world.

Statecraft

THE Bryce report on Armenian horrors is possibly subject to a certain discount, because the atmosphere of war is not conducive to judicial poise. Making all reasonable allowance for that, it still seems clear that some hundreds of thousands of Armenians were murdered by the Turks in 1915 and 1916, with all the beastly circumstances of Genghis Khan and Tamburlaine. Children were brained and drowned wholesale, and the highest good fortune for a woman was to find some means of committing suicide before falling into Turkish hands.

The hundreds of thousands of Armenian men, women and children who were killed with appalling cruelty during the last two years were really victims of Europe's international system. They were among its logical fruits. The civilized states were so completely occupied in jealously watching one another, and patching up a wabbly balance of power, that the Turk practically had a free hand. The civilized power of Europe simply canceled itself in mutual distrust and hostility.

We may be absolutely sure that the old system will produce the old results. Under it, a generation hence—if the Christian subjects of Turkey have not been quite exterminated—we shall be reading of more Armenian outrages. The only remedy is a new international relationship.

Advertising the Library

SEATTLE sends us a set of attractive placards that are well suited to making citizens aware of their public library. One of them reads: "Get the good out of your Public Library! Borrow the brains of the best writers in your line of work. For information on any subject, try the Reference Department, Main 2466." Another says: "When you want information, statistics or facts, don't hesitate; come to your Public Library or telephone. This service is yours for the asking." Another reminds the Seattle parent that "Your child's reading may bring happiness, success, character. If you want to know what books are worth while for boys and girls, go to your Public Library; ask the Children's Librarian."

Skilled workmen and those who wish technical information are reminded that the latest and best books are to be found at the library: "Go to the Technology Room and ask for Mr. Thompson, who will be glad to assist you."

This is real public-library service. Broadcast messages of that sort, in striking and attractive type, will multiply a library's usefulness.

Every day's mail shows us how much public libraries need to be advertised. Follow Seattle's example in inculcating a public-library habit.

A Real-Estate Note

THE world is going up!

A hundred and fourteen years ago we bought from France nearly a million square miles of territory, containing great areas of agricultural land as rich as any on the globe, all in a temperate climate and abutting on a great highway to the world's markets. The purchase price was approximately fifteen million dollars, or only a few cents an acre.

Fifty years ago we bought from Russia nearly six hundred thousand square miles of remote and rugged territory, just under the Arctic Circle, having little known productive power. The price was seven million two hundred thousand dollars—a great advance over the Louisiana Purchase, considering the difference in the land.

The other day we bought from Denmark a handful of rocks in the Caribbean and paid twenty-five million dollars for them.

This overmatches any story of city real-estate boom that we know. The world is going up!

No farther back than the eighteenth century great parts of the earth's surface were like land, say, in Nebraska in the early seventies. A farmer with a homestead claim and a timber claim, and illimitable reaches of scantily settled country all round him, might swap a horse for somebody else's timber claim, or pay a hundred dollars for a school lease; but getting more land was a matter of no particular urgency to anybody. Now the earth's whole temperate zones are pretty much like real estate at the corner of Broadway and Wall Street. Every square inch is coveted by competitors who are able to throw almost unlimited resources into the competition.

A Hopeful Sign

CONGRESS, it seems, has some interest in the subject of economy. The Senate proposes asking the President to investigate the executive departments, somewhat on the lines of the Taft Efficiency Commission, and report next winter whether they cannot be reorganized to advantage. Several senators expressed an opinion that thirty or forty million dollars yearly might be saved in that way.

This is a hopeful sign. That at least thirty million dollars a year can be saved, and public business more efficiently handled, by an intelligent overhauling of the executive departments is highly probable.

But the great waste is up at the other end of Pennsylvania Avenue. If Congress once gets interested in this subject of economy there is hope that it will finally overhaul its own end—with a real budget system, a comprehensive and permanent plan for river-and-harbor and building appropriations, and so on. We should like to assure Congress that a great number of people have long been interested in governmental economy, and that every sign of interest on its part will be popular.

Waste

SECRETARY REDFIELD recently confessed to having a "suspicion" that the country's total cartage bill might be five or even ten times the total freight bill. The secretary may be too suspicious; but unquestionably, on a great part of the goods consumed in the United States that are transported both by rail and wagon, the cartage cost is much more than the freight cost.

This is because transportation by rail is highly organized and transportation by wagon is hardly organized at all. In every city, and almost every town, at every hour of the day, wagons are running over substantially the same routes, so that two or three, or half a dozen, are performing a service which one could perform just as well.

That is the way in which the United States is really wasteful—in lack of teamwork and intelligent comprehensive planning. In many other ways it is blamed for waste that is more an appearance than a reality. It wastes many substances because to conserve them would be a waste of human energy.

If a carpenter's time costs forty cents an hour it is cheaper to let him throw away thirty cents' worth of board ends than to spend an hour in carefully matching them together. To make it worth while to save the board ends we should have to pay him only twenty cents an hour. We waste the boards, but save the carpenter.

A farmer who cannot, sometime in nine open months, waste half a day taking his family to a picnic in his own wasteful automobile is himself largely wasted. We do not want life so ordered that nobody can throw anything away.

It is the waste of bad organization that needs curing.

A Revenue Reform

AFTER three years of experience the income tax is open to question. Returns for 1916 emphasize this.

Some seventy million dollars of easily got revenue is derived from it; but every study of the returns strengthens a suspicion that a good deal of taxable income escapes.

The fault is not at all that a small part of the country pays a great part of the tax. In 1916 fifteen districts, inconsiderable in area, but comprising the chief wealth centers of the East and Middle West, paid five-sixths of the total tax. But if they have the income they ought to pay the tax.

The real cause for dissatisfaction arises from a presumption that a great deal of taxable income in the lower ranges of taxable income escapes. After three years' experience the Collector of Internal Revenue says "It is axiomatic that the Government cannot rely entirely upon a taxpayer's declaration as to his own tax liability."

The tax ought to be enforced as equally as possible or ought to be abandoned. The Prussian method of enforcing an income tax is vexatious; but it is better than a general presumption that the man who does declare his income honestly is paying taxes for his neighbor whose conscience is more accommodating. The Prussian method involves keeping an official eye upon every man's expenditure—the sort of house he lives in, whether he has an automobile, and so on—and calling him in for a rigid cross-examination if the income he reports for taxation seems inadequate for his style of living.

As a beginning—and whether or not the exemption is lowered—the Government should require a statement of income from everybody in receipt, say, of fifteen hundred dollars a year or more. That foundation would facilitate checking up evasions.

England and the Upper Class

By WILL IRWIN

ON FIRST acquaintance the American usually tricks himself into thinking that he understands the British—or, rather, that southern part of ıe British who largely govern the empire, and whom we ıll the English. There is the language—except perhaps ıirty or forty words used in different senses on opposite des of the Atlantic—exactly the same. There is the terature—we, as they, learned our letters from Shakpere and Milton. A thousand common institutions, laws, ıstoms and superstitions furnish a basis for mutual nderstanding. Across the waters, Wells, Shaw, Bennett, alsworthy, Masefield, speak to us a set of ideas that we nderstand perfectly; and just so do they read and nderstand Howells, O. Henry, Jack London and Edith harton.

In all these things the waters have not divided us one om the other. So Americans of the old British stock who ttled this continent go among them with perfect conidence that they will understand us, and we them.

The well-willed and good-natured American visits ngland, then, in the mood of a genial setter dog that ıters the house with his tail gently waving, his ears down, s whole soul ready to respond to any advances. And, at st, he usually gets those advances. It is only later that, his explorations of the British Houses of Thought, he ıcounters locked doors—runs, like a man in a fairy tale, to invisible obstacles, which he cannot surmount.

The first and most obvious of these is the institution of onarchy, and the reverence with which the British regard ıth the King and the Royal Family—or, rather, the ıculiar form of that reverence. For the dyed-in-the-wool nglishman will criticize his King, will gossip about him, ll joke about his personal peculiarities, as freely and eerfully as any American. But let the American—let ıyone—criticize the institution of monarchy, and the ıiton becomes coldly or passıonately resentful, according ı his personal nature. An ınor—even the slightest—ins enormously if the name the King is affixed thereto.

Long Live the King!

HAD quoted to me, before I left England, the inconsistent rformance of a titled lady. Se had been gossiping to a ıitor — openly gossiping — out the Royal Family. On te next day the visitor called ain. She had just received a ıle box, value perhaps a und, as a birthday present m the Queen. She was ıist-eyed with the event, exaed; she had been made ppy.

On a journey from Edinburgh t London I found myself in a ıpartment with a wounded itish Tommy, a young man o education, intelligence and en mind. Our conversation f upon the Balkan situation, a the mischief wrought down i that focus of world trouble h dynastic rivalries.

"The institution of royalty is dangerous," I ventured to s. "Hedge it about as you wl by constitutions, it is dgerous!"

His face changed; I could s that he was struggling with irtation.

"Perhaps," he answered; "ut you won't find one in a thusand of us who could think o England without a King!"

Again, in crossing the Atlanti on my way home, I talked wh a Briton who held advanced vws on many things. Being o of England I dared express m extreme republican ideas. H too, froze.

"I am willing to pay my sılling in the pound to keep up th Royal Family," he said. "'s our proudest symbol. Yu lack that symbol. Do you suppose you could have raised such a volunteer army as we have—an army so large in proportion to your population? The prestige of Kitchener had something to do with it; but mostly the King. 'Your King Needs You!' was the phrase that brought the volunteers!"

I mention these instances because they are typical of a thousand others. Here and there I found a man who whispered—gently whispered—that the institution of monarchy had worn itself out. But these were rare. One such was a Socialist leader.

"Nevertheless," he added in qualification, "it isn't nearly so bad as some other things we have to correct in these islands; and I'm afraid Humpty Dumpty will be the last figure to come off the stone wall."

Yet an American understands all this, with his mind, though not with his emotions, if he compares their symbol with ours. We have the flag, merely a combination of primitive, inartistic forms and colors printed on cloth. We may criticize the design; without being unpatriotic, we may say of any given flag that it is blazoned in cheap dyes on rotten fabric. Yet he who publicly insults the flag gets arrested, and he who tramples upon it stands in danger of the mob. It is our symbol. Now, instead of a flag as a symbol, imagine a human being with flesh, blood, animal warmth and personal peculiarities. Imagine, also, that the symbol is surrounded by beautiful, antique appurtenances of pomp; that it is kept in palaces such as appeal to national or local pride; that every great government honor is conferred in its name.

By holding the symbolism of the flag in mind we shall arrive, I think, at some sympathetic understanding of the British attitude toward royalty.

Death in the Desert

So we can make a key to this door; but presently, exploring further the British House of Thought, we come to another, which we cannot unlock, a state of mind for which most of us have no means of sympathetic understanding. It is the class system, and the British attitude thereto. This, the dyed-in-the-wool American can regard only externally, looking upon it as a man looks upon such a phenomenon as the migration of birds or a blood stampede in a herd of cattle—the activity of a totally alien mind, whose expressions and manifestations he may note, but whose true, deep motives he cannot understand.

We encounter it even among the people with whom, on most points, we have the greatest mental kinship. A young American woman of intelligence and ideas was making her first visit to England. She met an English lady, with a minor title, who held advanced social and political views. Together, as kindred spirits, they used to knock about among the radical and revolutionary meetings so common in London, and usually so interesting. At last they attended a dinner given by a group of workingmen to the popular hero of the hour. The toastmaster, in his preliminary remarks, said something like this:

The Prayer Book Taken Literally

"WE ARE glad to honor one who has been honored by so many of the higher classes."

The American girl whispered to her companion:

"Heavens! I thought that here, at least, we should escape from this cant about class."

The English girl turned upon her a blank face.

"My dear," she said, "you must remember that the class system was arranged by a power higher than we!"

The lady was expressing a tenet of her church. There it stands in the catechism of the Church of England:

"*Q.* What is thy duty toward thy neighbor? *A.* To order myself lowly and reverently toward all my betters . . . and to do my duty in the state of life into which it shall please God to call me."

Similar words are in the prayer book of our Protestant Episcopal Church in America; but we do not interpret them literally. The conservative English, I take it, do.

I was talking last autumn with a British economist and Fabian Socialist, a great, quiet force in England. He was forecasting for me that newer England which British liberalism hopes to bring about after the war—its organization for social justice, its abolition of old forms.

"And what you call the class system," I ventured—"will that go too? Will you abolish your government by class?"

A change came over his face. I had run into the invisible wall.

"We believe," he said, "that the best people should rule. In county elections we delight to think that our candidate is a man of education and comes from the finest families. That is the wisest way—don't you think?"

And he said it with such sincerity, with such deep, basic conviction, that I had the heart to register no more than a mouselike difference of opinion.

To give still another typical example: I had written something in praise of the democratic spirit in the French Army. An Englishman took me to task for this article, alleging that the British Army was also perfectly democratic, and should have been mentioned along with the French.

"Why," he said, "the spirit is perfect! The men love their officers."

"But aren't those officers still mostly of the governing class?" I asked.

"Yes," he said; "why shouldn't they be?"

Now the spirit of snobbery, or social superiority, or whatever you may call it, is a human instinct, observable in savages, and, I think, especially strong in the Northern races, from which we ourselves have drawn most of our blood. We Americans have no sooner got a new mining camp into working order than it begins to develop "the best people." What are our fraternities in the Western and small Eastern colleges; our class societies at Yale and Harvard; our clubs at Princeton—but artificial reachings toward an upper class? We have in the older cities of the Atlantic Coast an aristocracy almost as insistent on exclusiveness, almost as convinced of the righteousness in class, as the oldest aristocracies of Europe.

But—and herein we differ from the British—the people below these exalted beings do not recognize their claims. To a very great extent the lower classes of the British do. "I am as good as any man alive!" says the American mechanic. Tell him that he isn't a gentleman and he will knock you down. "I am of the lower class," an English workingman will say, with neither pride nor humbleness, but as one stating a fact. Tell him that he is not a gentleman, and he will reply "Of course not!"

In short, the average conservative Englishman accepts the social position into which he was born, be it upper class, upper middle class, or lower class, as he accepts his stature, the color of his eyes, the shape of his nose. The average American or Frenchman accepts class only if he happens to be of the upper class.

Once, in a town of Central France, I witnessed an interview between an old French peasant farmer and a count, whose family, under the old régime, were lords of the High Justice, the Middle and the Low in all that region. They held adjoining tracts of land; the interview had to do with some emergency war measure. The peasant entered the presence of the aristocrat with an easy dignity that had in it neither deference nor impudence. He was just one Frenchman talking to another, with the same politeness he would have shown to any comparative stranger of his own class—no more; no less. The British small farmer, thrust so into the presence of the lord, would have entered fumbling his cap and ducking. The Frenchman, risen to eminence from humble occupation, absorbs the manners of the class into which he has been graduated. The average Englishman, in like circumstances, carries with him to the last of his days the marks of his origin. He usually shows an uneasy consciousness that he is not quite a gentleman.

The Operation of Class

The operation of class in Great Britain has so many lights and shades, so many subtleties, that an alien must needs live in England for twenty years in order to get all its bearings and ramifications. I, who write of it here, profess to give only a superficial view, like that of the Englishman who polishes off Chicago after a month's observation. Yet, having seen a few of the workings of class in politics, in the army and in commerce, I can perhaps write of it truthfully and soundly along broad lines.

One who cast an observing eye over England in the early days of the war, before all its manhood was cast into the military melting pot, could not fail to observe a difference in the physical build of men and officers. At the time, the old rule of British Army organization held pretty generally true—the officers were gentlemen; the ranks were lower class. And, almost without exception, the officers were long-limbed, slender, willowy—the kind of build we associate with a distance runner. And, almost without exception, the rank and file were stocky and beefy—the John Bull build. As the first volunteer regiments came into khaki one noticed a change in the appearance of the rank and file. The distance-runner build began to appear among them also. This, you found after a little investigation, was because the upper class, true to their traditions, had been first to volunteer. I spoke of this to an English friend, who added his testimony.

"I stood in the lobby of the Houses of Parliament last week," he said, "when the House of Commons and the House of Lords adjourned at the same time and came streaming into the lobby from opposite hallways. I was struck with the same thing you have observed. Most of the lords had the willowy, knife-blade build; most of the commoners looked like John Bull."

Now that peculiar, long-limbed, lithe and yet sturdy build is a Scandinavian characteristic; and the Normans were a Scandinavian people. The stocky build is a Saxon characteristic, apparent to this day in the people of Saxony. In short, one began to suspect that among the South British, whom we call the English, there were still two peoples, dwelling side by side—and I wondered whether Norman and Anglo-Saxon had yet really fused.

Why was it? William conquered England, bringing with him his Norman lords, retainers and settlers, in 1066; within two or three centuries, the history books tell us, the amalgamation of the two peoples was complete. Though Norman blood remained the boast of the oldest nobility, that strain, in the law of breeding, must have flowed through much of the English people, as a drop of actual blood in a pail of water will spread at once and color the whole mixture. Dr. David Starr Jordan has said that almost every person of pure English blood would be found, could we but follow up his ancestry, to be a descendant of William the Conqueror.

However, a special tendency, newly discovered but universally recognized, governs breeding—what science called the Mendelian law. We know now that there is such a thing as a dominant strain. One parent, or one race of parents, is, in the function of breeding, stronger than the other. This tends to put its imprint upon the race that arises from the mixture.

The Dominant Norman Strain

Now I miss my guess if the Normans, those wild, vigorous, long-limbed, hard-hitting rovers who adventured all over Europe in the dawn after the Dark Ages, did not constitute one of these dominant strains. A tribe of them settled on the River Don, in Russia, marrying with Slav and Tartar women, taking Slav and Tartar men into the tribe—a small part, really, of the blood that made the Don Cossack. Yet to-day the Don Cossack bears the mark of the Norman in mind and body. The Normandy of France holds still, in spite of centuries of marriage with Frank and Latin, a population of tall, blue-eyed men and women. If the Norman strain does not show in Sicily, it is because the Norman lords conquered not by their own people, but with armies of alien adventurers.

Now if I am right, and the Norman blood is really a dominant strain, the conditions in England were especially favorable for keeping that strain a little select and apart. For at least two centuries they were the governing class, the nobles and gentlemen, striving to preserve the pure blood. They opened up to let in the able Saxon who forced his way through the mass. But that Saxon usually married a daughter of the Normans; and most certainly his descendants, newly made aristocrats, avoided misalliances and took to themselves women of the Norman breed. Dominance of strain did the rest.

The Wars of the Roses extinguished a great part of the old titles; but the nobles who stepped into their places were mainly of the dominant stock. The day of democracy and industrialism arrived. Brewer and ironmaker and boatbuilder began to force their way into the Peerage, until now a third of the House of Lords hold titles less than a century old. Nevertheless, in these newly arrived families, also, the Norman strain seems to dominate by the third or fourth generation. Hence this long-limbed, clean build, which is the outstanding fact in any gathering of the upper classes; hence the persistence of certain Viking traits, such as a love of out-of-doors and manly sports and a passion for seeking wild and remote corners of the globe.

That the portion of the British race which remains in England is conservative to its bones has become an axiom. Indeed, the Tory portion of Britain glories in that conservatism. Kipling, in his later stories, is never so sentimental as when he records the fact that this thing or that is done exactly as it was under old King John. Now for two or three centuries of frank Norman domination the middle and lower classes of England lived as political and economic serfs to an alien race.

Feudalism was feudalism wherever found. But the French serf and the French lord, the Teutonic serf and the Teutonic lord, were, after all, of the same blood. England is the only country which, through centuries of feudalism, had one race above the salt and one below; one race in command and another in subjection; one race in the hall and another in the hut; one race governing and the other producing. The seeds of that British mental peculiarity whereby the lower class admits its inferiority may have been sown in those days, to grow into the class system of the nineteenth century.

One may carry this theory of a dual race entirely too far. Yet it does explain much about England otherwise inexplicable to the citizen of an alleged democracy. The boundaries of the classes are hazy. It is often hard to say whether any given man belongs to the upper class or to the upper middle class. A family with a title is surely upper class; yet people not even related to titles are so classified. People of possessions and leisure, whose ancestors have held possessions and leisure for generations, might be described by the English as middle class. There, however, we come to subtleties and distinctions with which no American can deal until he has lived a decade in England.

The point of the matter for us is that the upper class is nearly synonymous with the governing class. As my friend, the Fabian Socialist, says, the English, even when it comes to a matter of popular election, usually like to be represented by a gentleman, by a man of good family, by one to whom, on social standards, they can look up. Perhaps that tendency is not strictly British; perhaps it is partly just human and belongs to settled states of society. There are conservative districts in France where noble blood is a political asset; and I find the same tendency here and there among the people of our East. At any rate, during a century in which the hereditary House of Lords declined in power and the elected House of Commons rose, during which the franchise was so extended as to become nearly universal, the upper class still held the reins of government.

Government was its business, as we may learn by inquiring into what sociologists would call the "economic sanctions" of the class. Only a few professions were open to a man of the upper class who wished fully to keep caste. Politics, law, the army or navy, the church—there you have the list. Law, in England as elsewhere, is the little brother of politics; the lawyer interprets, enforces—and gets round—the laws the politician has made. The army and navy are the defenders of government. The priest is a governor in ecclesiastical matters—especially when, as in England, there is an established church, sending its bishops, by right, to the higher legislative body.

Class Occupations

Until the great democratizing movement of the latter part of the nineteenth century it was degrading for the upper class to mix in any business except the supervision of its own landed estates. If the movement of the times carried lords into boards of directors, and managers of great industrial enterprises—like Lord Cowdray and Lord Cunard—into the Peerage, it still remained beneath the dignity of strictly upper-class people to get technical education. Engineering, expert chemistry, scientific research—such education was for the middle class.

If men of the upper class took them up these were but younger sons of large families, whose position in the family line debarred them from hope of inheriting entailed property. For the elder sons, who wanted to do anything at all—for the more brilliant sons—the army, politics, a government appointment to rule a bureau or a colony, the church. In all these positions the family money or estates would help to maintain the position. The practical work of production, even in its most scholarly and scientific aspects, was for the culls of the breed.

Along with this system ran a certain kind of democracy, rather more advanced than ours. That is one of the subtleties in complex old England that will forever puzzle us. A man, to be a laborer or a lord, had certain social and legal rights that society, on the one hand, and the law, on the other, enforced with scrupulous exactness.

Englishmen are always twitting us with the undeniable fact that we do not hang our rich men for murder or imprison them for theft. Somehow, their money and their pull helps them wriggle out, while the British courts will hang a lord as readily as a commoner. The very upper class will combine to convict one of their own members who has broken the law, or to ostracize one who has grossly and cruelly violated custom.

The anomaly of the situation is perhaps this: That a land of advanced democratic ideas permitted and cherished feudalism in its midst. The French, the Swiss and the Americans abolished long ago the idea of a governing class. Not until the later years of the nineteenth century did Britain begin the job of attacking the privileges and questioning the right of the nobles and gentlemen. That movement, accelerated by the advanced Liberal government, which held power for eight years before the war, has been going pretty fast. The House of Lords, stripped of many powers and privileges before the war, was tottering.

The Liberals were beginning to attack the land system, with its bulwark of entailed estates, which had put the soil of England under control of a few great individuals or families. "They are taxing the gentleman class out of existence!" moaned a Tory to me before the war. Indeed, certain Englishmen have told us, with perfect sincerity, that the class system is finished; whereas the class system is almost the first thing about England that strikes an outsider from a democratic country such as France, the United States or the British Colonies.

The Rise of Aristocracy

No; through two or three generations during which the tide of democracy has risen over England, during which she has changed from the *laissez-faire* theory of economics to the coöperative theory, the upper class and the governing class have maintained their grip. Other democracies have broken this grip of a class in the very beginning—we by process of law; the French by the guillotine. The reason for the anomaly lies, I suppose, not so much in the conservative character of the British people as in the merits and excellencies of the British upper class.

Nature, which abhors heights and depths in a breed, which works by leveling the mass and then raising it as a whole, destroys most aristocracies in a few generations by the working of natural or seminatural laws. An aristocracy begins with the rise of able individuals from the mass; they marry with the daughters of other able individuals; able strains are born. This is the logical part of the aristocratic theory and I think it stands the test.

Take, for example, the breed of kings. Even omitting those who have seized thrones by their own powers, like Hugh Capet, Napoleon and Cæsar, you find people of genius or high ability, such as Peter the Great, Augustus Cæsar, Frederick the Great, Elizabeth of England, or Charlemagne, occurring in far greater proportion among kings than among the general run of mankind. Exceptional opportunity is not enough to account for such human phenomena as these. In the British nobility are certain strains, such as those of Cecil and Churchill, which through every generation spawn men approaching or achieving genius. Arthur Balfour, of these times, is a Cecil, and Winston Churchill's name places him.

However, no sooner is an aristocracy founded along these lines than its self-destruction begins, through two special tendencies: In the first place, war is the particular interest of an oligarchy. Until this period of vast enlightenment in the possibility of destruction most wars have been fought by the nobles and gentlemen plus the dregs of the population. Those sturdy yeomen of England who bent the long bow at Crécy and Poitiers are the exception. The officers, in old days, were aristocrats; the rank and file were the failures of peace.

Wars did to the aristocratic blood exactly what the present war is doing to the best blood, eugenically considered, of all the European nations. It stamped out those breeds that had been trying to defy the leveling law of Nature and to divide our human race into man and superman. Follow back the history of almost any title—a title is not the same thing as a noble race—and notice how often the race thereabore it has come to a full stop, leaving the title to some newly arrived breed, because the holder and his heirs have all perished in war.

(Concluded on Page 28)

"I promise the nation, my administration
In vigor and health shall unfold.
This soup of perfection will give you protection,
And *your* constitution uphold!"

A sensible inauguration—

That's what it is when you install a supply of Campbell's wholesome Soups on your pantry shelf. You inaugurate better appetites, greater enjoyment of the home table, less drudgery and care. Above all, you inaugurate improved health and vitality. *As a body-builder and nerve-builder no other food is so consistently effective as good soup eaten every day.*

At times when you especially want a nourishing dish that is easy to digest and ready without trouble or delay, what a comfort to go to your pantry shelf and lay your hand in a minute on such a vitalizing, health-promoting food as

Campbell's Vegetable Soup

It combines sustaining nourishment with the most appetizing zest and savor.
Its basis is a rich and strengthening meat stock which we make from selected beef.

We blend with this an abundance of nutritious vegetables—choice white potatoes—Maine-grown, fine Jersey sweet potatoes, tender carrots, sweet yellow turnips, "baby" lima beans, small green peas, cabbage, succulent okra, celery, parsley, tomatoes and "Country Gentleman" corn.

We also include rice, barley, macaroni "alphabets", fresh herbs, delicate spices, a hint of leek and onion and a smart suggestion of sweet red peppers.

You could not imagine a dish more tempting or more satisfying. And it comes to you cooked and prepared, all ready to serve in three minutes.

Your grocer will supply you with these nourishing Campbell "kinds" by the dozen or the case if you wish. And that is the practical way to buy.

Asparagus	Clam Chowder	Pea
Beef	Consommé	Pepper Pot
Bouillon	Julienne	Printanier
Celery	Mock Turtle	Tomato
Chicken	Mulligatawny	Tomato-Okra
Chicken-Gumbo (Okra)	Mutton	Vegetable
Clam Bouillon	Ox Tail	Vermicelli-Tomato

Campbell's Soups

(Concluded from Page 26)

Again, nobility presumes property and riches. "There never was an aristocracy which was not a financial aristocracy." Born to all the comforts and healthy luxuries of life, possessed of riches without work, and honor without effort, they gravitate toward sharper and sharper pleasures, toward stronger and stronger dissipations, in which excess kills the breed.

So when an aristocracy runs its normal course we have such a group of people as the ancient nobility before the French Revolution. For generations the drain of war had carried off their strongest blood, unreproduced. Dissipation had done the rest.

Now the British upper class has a special history and a special character; and therein resides the reason why it has held the fort so long. Since the Wars of the Roses England has not known any war that much affected its noble blood. If there be an exception it is the Civil War; but that, after all, made small inroads on the breed. While Germany was murdering her nobles wholesale in the Thirty Years' War, while France was grinding up lord and commoner together in the Napoleonic Wars, Britain was holding her domain mostly by naval warfare, which involves comparatively small loss of life.

Again, the British nobility has never, as a class, weakened itself by dissipation. A little priggish, it has also been virtuous. By and large, the English have more character than almost any other people in the world; and this trait is especially prominent in the upper class. They have a sense of responsibility to their nation, their class, their religion. If this sense of responsibility operated to keep the feudal régime in England, it no less operated to keep the upper class wholesome.

Then, too, that excessive love of sport, against which Matthew Arnold railed, has been an important conserver of upper-class virtue. As our Y. M. C. A. long ago discovered, athletic exercise is a great foe of Billy Sunday's Personal Devil. The hunts and polo, the rowing, the school football and cricket, were preservatives of the aristocracy, letting off that excess vitality which in softer oligarchies produced decadence.

Indeed, a zealot for democracy may say, without concession of his principles, I think, that no people in the world excel these for finished human beings. Physically they are a handsome race. I need scarcely describe the tall, lean, long-limbed, scrubbed young man of this class; the type is too familiar. The female of his species, robust, and yet usually graceful through exercise, her satin-complexioned flesh backed by a comely structure of bone, may lack the allure every Frenchwoman has; but most often of any women in the world do these upper-class Englishwomen achieve beauty.

Gentility and Efficiency

I have seen the men of five nations going forward to be ground up in the meat mills of the German Junkers, and have known all the revulsions of sentimental pity; but at no time have I felt such an artistic pity as when I have seen those young English officers marching up to have their fair young bodies rent apart.

Mentally, it seems to me, they are—or were—almost all you might expect of a finished class, sure of its position; usually sure that it has achieved the end of progress. If they lacked anything it was that quality of "soul" or "temperament," so common in the Latin and the Slav. Their schools and universities taught them not usefulness and efficiency—such education was for the bourgeois—but the kind of culture that is the final embroidery to a gentleman's character. The outsider, looking into the life of Oxford, is either appalled or amused by the loafing spirit of the place. Unless the student happens to have a special ambition for certain fairly empty and useless honors in mathematics or the classics, he can slide through to a degree with a paucity of work that makes the "snap hunting" of our American universities seem like industry.

The very teaching of science at the two famous and leading British universities has for its end not practical use, but that rounding out of the mind which we call culture. The practical education of England was for the middle classes, and its schools were elsewhere. To those students of the well-brained Scotch race who dig for twelve hours a day in the libraries and laboratories of Edinburgh has belonged almost an undue share in the technical, scientific and business direction of England.

A well-rounded and tolerant development of mind and character, the aristocratic spirit in its flower—that is the ideal of Oxford and Cambridge, and of the public schools, which follow their lead. The mind of the upper class lacked efficiency in the twentieth-century sense. It possessed information in speculative and historic fields, and—until you reached certain lines along which no British gentleman is supposed to think—breadth and an easy tolerance.

Talking once with a Tory peer I happened to mention that it was Lincoln's Birthday. That brought a discussion of our great liberator. Now I thought myself well informed, as every American should be, on Lincoln; but he bore me down by sheer weight of information. Governing is the business of this class; and their women, without direct participation in politics, have always acted indirectly. They have almost as much interest in the game as their men; and they, too, know affairs and the learning that is back of affairs.

"England," said Morley, "is a heaven for the rich, a hell for the poor, and a purgatory for the able." No life is more charming, better worth leading as an end in itself, than that of the landholding, leisure-class people of England. The English house party is the world's mark for a hospitality cordial without effusion, diverting without dissipation. They know the art of living. Indeed, that life is a weapon in their class struggle. It is so easy, so pleasant, that it acts as a soporific to those who want to waken England and the world.

The Passing of Feudalism

In spite of a "silly set" here and there, in spite of an occasional outburst of dissipation in small groups, this governing class, viewed by itself, has been a fine, admirable body of people, leading a singularly attractive life. There is only one reasonable ground of criticism: It has been too expensive. In terms of humanity, it has cost too much, as aristocracies always do.

Its peculiar ideas, customs and character, with their feudal tinge, suited it far better to govern in the eighteenth century than in the nineteenth or twentieth. In that era England was agricultural; it lived mainly by the soil. The lord, holding then, as now, the greater part of the land, had his upper-class sense of responsibility. He knew his tenants, servants and retainers as individuals. If he was true to the best traditions of his class he administered his position paternalistically, supporting them in adversity, nursing them in sickness.

This was an aristocratic idea; and at its very best it prevented the rise of the mass. It had, however, its virtues of affection between classes, loyalty, generosity. Its flower was that life of Bracebridge Hall, concerning which Washington Irving wrote. The muck about its roots was a kind of intellectual degradation in the peasant class, and the exaltation of property and position, which made the theft of a shilling or the poaching of a hare figure on the statute books as a parallel offense with murder.

Then came the industrial era. The able middle class of England discovered the modern factory system. The more successful of the *entrepreneurs* forced their way into the Peerage and the upper class. The older aristocracy, holding that land which is the basis of wealth, began to invest. And now the economic foundation of the class was rebuilt. The lord held perhaps the governing interest in half a dozen great factories or tenements in London, which housed ten thousand people. He did not know, he could not possibly know, his retainers and tenants. They were far away from the personal interest and benevolence of His Lordship and Her Ladyship.

Sympathetic imagination is the rarest of qualities in Northern blood. The upper-class Briton, wanting this sympathetic imagination, could usually see in industrial relations only the factor of dividends. There followed the *laissez-faire* doctrine of economics, the comfortable theory that if things were let alone they would right themselves. The history of reform in England since the early part of the nineteenth century is written in the assaults on this doctrine.

Yet not all the upper class was mentally crippled by lack of imagination. Indeed, one of those merits operating to keep the governing class in power was the self-sacrifice for conscience' sake which led aristocrat after aristocrat to fight the interests of his class, his family, his very self, for what he believed to be the general good. Notwithstanding that liberalism in its essence is opposed to oligarchy, the direction of British liberalism has come from the upper class.

Other nations have witnessed aristocrats fighting their class, accepting chains and ostracism for democracy—like Count Tolstoy and Prince Krapotkin, in Russia, or the Marquis de Lafayette, in France. But no other has ever possessed a whole group passing on the torch from generation to generation. The English have a genius for political martyrdom; and when a Briton gets it into his rather slow, conservative intelligence that a thing is right, he goes through with that thing, though the gates of hell oppose him.

When this governing class entered Armageddon, its most bitter period of trial, old ideas still prevailed. The gentleman was made to lead; the mere workman to follow. Gentlemen were the officers of the Old Army, which virtually ceased to exist after Mons, the Aisne and Ypres; and lower-class men the rank and file. The aristocracy, true as ever to the responsibility it could see, flocked to the colors; and, at first, the officers of the New Army were universally chosen from this class, with rather more regard to their standing as gentlemen than to their qualifications for the job in hand. They died like men, without flinching; and that, it seemed to one who saw the period just after first Ypres—when the Germans were holding the line by machinery, the British by lives—was about all they did. How could they do better? The direction of warfare now is a matter of exact scientific knowledge. Of what use was the long, ripening, leisurely culture at Oxford and Cambridge; their dialectics and Greek roots; their history and philosophy? They could only do their best—and die.

That they did; and as England straightened things out the other side of the shield began to show. At school, at the universities, all through their education, their fellows, as much as their instructors, had been pounding into them the cardinal principles of life expressed in two old English phrases: "Keep a stiff upper lip!" and "Stand the gaff!" Those principles held them strong during the discouraging days of second Ypres, of Festuberg, of Loos, when the muddling at home had denied them enough equipment and proper ammunition. It gave England breathing space to look about, collect her thoughts, and start on the right track. "Here the battle of Waterloo was won," said Wellington as he viewed a public-school cricket field. There, perhaps, Armageddon was half won for England.

Plain Men in High Places

The system, however, had to go, at least temporarily and partially. Mid-course, England put her military affairs into the hands of a man who began life as a footman; her political affairs into the hands of a man whose uncle cobbled shoes to educate him for the bar. "Our lower-class soldiers want to be led by gentlemen; they will not follow anyone else," said the heads of the army in 1914; and they proceeded on that theory. But, when the British family in Barrie's play was wrecked on a desert island and ran against primitive necessity, it was the butler who, being endowed with practical intelligence, became king of the island. So, in that crisis of the primitive, which was Armageddon, artificial distinctions went down.

The failures of peace often become the successes of war. Men of military capacity began to appear in the ranks—sometimes gentlemen; sometimes not. In the beginning gentlemen were hurled into the officers' training corps who knew no more about a rifle than that it is a thing which shoots. Now the new officer must have done his turn in the ranks. The average social standing of officers went steadily downward. An officers' training corps I looked over last autumn is full of men registered in their papers as "clerks."

Now when such men as the "Kipps," whom H. G. Wells has described for us, achieve in any great numbers the British corps of officers, there is a revolution in British thought. The laboring class is not represented to any great extent in the command of the New Army; but the British have a reasonable explanation for that: To make an officer, you need a basis of education—the cultivated ability to grasp abstractions and to acquire scientific knowledge.

The French Army forms our pattern for military democracy; many of its best regimental and company officers worked with their hands before the war. However, in France, as in the United States, education is more generally diffused than in Great Britain. The barrier to the working class in the British corps of officers is less lingering snobbery or lack of ambition than want of preparatory education. The British upper-class snob may call these new arrivals "T. G.'s"—or "Temporary Gentlemen"; but England, after the war, will know many a temporary permanency.

The England of the Future

"England changes not," says Balfour. "We shall have, after this war, a new England—the newest country that exists," says Lloyd George. The shopkeeper's clerk, who has worn on his sleeve the three stars of a captain or the crown of a major; who has messed on nominally equal terms with the sons of lords and baronets; who has matched flesh and brain and nerve with aristocrats of the same military rank, and found himself their equal—will he live the rest of his life in the spirit of the old-time British shopkeeper? The governing class cannot and will not open up to let him enter. He has not the financial background; and, for all the expressed aristocratic scorn of money, the fact remains that it constitutes the essential, indispensable basis of any aristocracy. He must go back to what he was before the war—Captain Smith, Lieutenant Jones, cutting cloth or directing lady customers to the fifth aisle, rear! Go farther down the military scale to the private in the ranks, who has faced death every day for two or three years; who has dealt such strokes for England as man never dealt before. Will he be again the respectful, contented, subservient domestic, the well-oiled cog in an aristocratic machine?

Barrie, in the last act of his fantasy, which I have mentioned above, shows the shipwrecked English family, and the butler who became king of the desert island, back again in England. The butler, in the old environment, has reverted to type. He is once more the perfect English servant. Does a universal truth about this race lie under Barrie's fantasy? I think not. But, as I have democratic leanings and am an outsider to this game, I put forward my opinion with hesitation: I think that, after a possible setback in the four or five years following the war, the democratic tide in England will roll on more powerfully because it has been diked temporarily.

Two special factors will help to break the hold of the aristocracy: They were the first class of all to volunteer; as officers of the early Kitchener forces they occupied positions of great danger. The mortality among them has been very heavy. Before the war had gone a year, a man of the upper classes told me that the crimp in the noble blood of England was greater than in the Wars of the Roses. The war is now approaching the three-year mark, with the greatest losses for England, and for the upper class, perhaps yet to come.

Also, the economic foundation of the class without which it cannot exist, stands in peril. "They were taxing us out of existence, even before the war," said an aristocrat. The burden of taxation for war debt will fall most heavily on the class that holds the land of England; nothing in the future seems so inevitable as the break-up of the great estates and the restoration of land ownership to the yeomanry.

The system will pass, though not all at once. The British do not arrange progress in that manner—they hate anything sudden; we love it. Then, too, old formulas and ways of existence linger long in new states of civilization.

Though the end will not come until we are all dead and gone, the system will perish—with its honors and ermines, its pageants of power and pretty ceremonies of sport, its hunting parks and preserves, its honors and emoluments.

One who holds democratic convictions but who loves the romance in life, mourns in passing a little, as he mourns the passing of the lotus days in Egypt or the age of chivalry. He may mourn, indeed, on less romantic grounds. For all the faults we find in it, for all our opposition to the system that maintains it, the British aristocracy has been perhaps the most worthy oligarchy since the great ephemeral day of Athens.

"85% MAGNESIA"

Saves the Nation's Heat—

"85% Magnesia" is the matchless insulation. It makes one ton of coal do the work of two tons.

That is why most of the big buildings of the nation, like those illustrated, have their steam-pipes and boilers covered with "85% Magnesia."

That is why in the U. S. Navy "85% Magnesia" is the regulation pipe-covering; why in all modern locomotives it is the boiler-covering; why in power-plants, factories, railroad terminals, hotels, hospitals, sky-scrapers, it is more used than all other insulations combined.

Keeping Heat as important as *Making* Heat

Heat is the greatest runaway in the universe. Bare metal pipes can't keep it from escaping. That's why you have metal radiators—because they give away the heat. Every inch of metal is an open door for heat to rush out into cooler air.

If the *carrying* pipes of the steam, in these buildings, were bare metal, half the heat would run away before it got to the first floor. But those wasteful iron pipes are all jacketed with a thick, white casing of "85% Magnesia."

So, while coal *makes* the heat, "85% Magnesia" *keeps* the heat till it does its full work.

Magnesia is Nature's Insulation

When Nature made heat as a runaway, she made Magnesia as the best wall to hold it in.

Every inch of Magnesia contains millions of tiny air-cells, each holding its bit of motionless air, like a Thermos bottle. Through that mass of walled in "dead air," the restless heat cannot escape.

When to 85 parts of this Magnesia are added 15 parts of asbestos as a binder to give structural strength, you have the most powerful heat-holder in the world.

That is why *you* need it in your residence, in your plant, in whatever building you have a hand in erecting.

A complete Specification for the scientific application of "85% Magnesia" is sent free upon request to all architects and engineers.

THE LAST THROW

(Continued from Page 10)

"Don't you?" inquired Mrs. Pincus.

"No; I don't!" snapped Mr. Pincus; and his voice rising, his face filled with tragic triumph, he added: "Yesterday they told me so! They won't give Pincus a place, because he deals in stocks—yes! Put that in your pipe! Hah, hah!" laughed Mr. Pincus wildly; and Minnie gave him a smile.

"Dress linings, it is, Pincus," she rejoined. "Back you go to them dress linings if with my hands I have to buy a business for you!"

He tossed his arms in contempt.

"You buy a place? Rats! For ten t'ouzand dollars, the least it costs to buy a dress linings place! And where do you get them ten? Is it off the bushes—vat?" Jamming on his hat he gave still another snort of disgust. "You make me sick!" said Mr. Pincus.

"Oh, sick are you?" responded Mrs. Pincus. "Then, why not take something for it at the drug store?"

He did not even reply. Slamming the door behind him, Mr. Pincus scuttled down the stairs.

He still had one string left to his bow. Down at the office—down at Rooker, Burke & Co.'s—he might find somebody who'd help him out, perhaps. He had that tip, hadn't he? It was a hot tip too. If those fellows would do the regular thing—come across, you know—he'd let them in on it. In that way he could still get something from the tip. The dream, however, was as idle as all the others. What! Take a tip from Pincus? Pay Pincus for a tip when for years he'd sneered and sniffed at tipsters? Mr. Pincus, in short, had been hoist with his own petard.

Balked and baffled, his courage gone, he'd sat there all the morning, half crazed in his desperation. Thus, when Ingot, soaring, crossed 50, Mr. Pincus no longer had been able to restrain himself. Rising with a cry, the once calm, once imperturbable dabbler had dashed out and away from the scene of his disaster.

Such a disaster too! Here he was, armed with a tip, a pointer, that meant thousands and thousands in the market; and yet here he must stand by, idle, and watch it die on his hands! It was terrible! Worse than terrible; it was criminal! Minnie, too, had mocked him! That was the worst of all with Mr. Pincus. Had it not been for Minnie's three thousand, that money lying idle in the bank, he might even have forced himself to face it. The loss of the money was not everything. It was the fact that, with that killing almost in his grasp, Minnie had stood by and seen opportunity go to waste!

"*Ach!*" Mr. Pincus exploded violently.

Well, he'd show her! She'd see if he went back to "them linings"! In that, anyway, was some satisfaction. Even though she tried it, she couldn't drive him back to Bleecker Street.

She couldn't, not even if he was willing to go. It would show Minnie the extent of what she'd done.

What had happened, though, was but a part of it. Mr. Pincus had still to face something else. He was rolling on, mumbling and muttering to himself, when at the street corner a tall, shabbily dressed man darted out of a doorway and gripped him by the arm.

"Pink! Pink!" he cried. "What's happened? I've been waiting here two hours now."

Mr. Pincus roughly shook him off.

"Out of my way, loafer!" he snarled, and was striding on when Blake again gripped him by the arm.

"What's happened, Pink?" he demanded wildly. "You were going to stake me to a hundred shares, weren't you? Don't tell me you didn't do it!"

An unintelligible murmur rumbled out of Mr. Pincus, and again he sought to free himself.

"No, no, Pink!" shrilled Blake. "You've won thousands—you know you have! I was up in a place there—a barroom round the corner—and I've seen the tape. You've won thousands and thousands, haven't you?"

"T'ouzands?" inquired Mr. Pincus. A laugh escaped him then. The laugh, though, was harsh—bitter and devoid of merriment. "Oh, sure! I win t'ouzands! It's in my mind I win them. Now ven I lose my mind I lose them t'ouzands too!" Then he told Blake what had happened. "We're bust, Blake—you and me! My old woman she don't let me have that money, and your tip, it blows up in my hand."

Stricken, Blake stared at him.

"She wouldn't let you have it? She wouldn't do it to save me, even though I'd once saved you and her?"

So it was, and shamefully Mr. Pincus admitted it.

"That woman ain't got no heart, Blake. Never before would I suspect it; but now I know. All she thinks of, I guess, is that flat of hers and getting ready three meals a day. . . . Oh, vell," sighed Mr. Pincus, "all them women is like that. A feller c'd be as well dead or a widower." Then he gave a shrug. "Just the same, yes," added Mr. Pincus; "I show her vat!"

Blake, in spite of his distress, stared at him.

"You mean you're going to leave her?"

No; it was nothing like that. He couldn't leave Minnie even if he wished to. Minnie wouldn't let him. What Mr. Pincus planned was something different. He meant to go home; that was all. Then, when he got home he would stay there.

"That fixes her!" explained Mr. Pincus grimly. "After I sit round a week she gets sick of the sight of me. Then she wishes she hadn't!"

It was a fine idea. It was, as Mr. Pincus himself would have expressed it, "swell!" However, though it would indeed have created the result he'd anticipated—that of making Minnie sick of the sight of him—Mr. Pincus had overlooked one salient thing. That thing was Minnie herself.

The hours passed. Noon went by; it was one o'clock, two; then three. At three the market closed. Long ere this the news about Ingot was out and discounted, but still the stock had climbed. At the close it stood firm at 70¾.

Mr. Pincus almost wept.

"*Himmel!*" he cried. "Forty points it up, and that tip busts in a feller's face!"

Blake was still with him. Together they stood in a barroom scanning a news-ticker tape; and curiously it was Blake now who consoled and comforted. In his hopeless ness calm had come to him.

"Well, no use worrying," said Blake and again Mr. Pincus exploded violently.

"Not worry, vat? For why shouldn't feller worry? If in one day you lose twelv t'ouzand dollars, which is forty points three hundred shares, I would worry all like! You are crazy, man! I bet I worr I worry all I wish, I tell you!"

"Come along, Pink," urged Blake "You're coming, aren't you?"

Yes; Mr. Pincus was coming. Blake w going home with him, and when they g there Mr. Pincus was going to give him suit of clothes. These Blake meant to e change for another suit—one that wou fit him; after which Blake meant to hu another job. Mr. Pincus, however, mea to seek no job. His mind was still fix firmly on his original plan of sitting at hor till Minnie got sick of the sight of hi What is more, the minute he got home meant to announce it to her.

Five o'clock had just struck as Mr. Pi cus, accompanied by Blake, climbed t stairs of the West Side flat house where M Pincus dwelt. At five Minnie was alwa at home. Nothing, no matter what it w ever prevented that. Home at five, M nie put the dinner on the stove, and at she put it on the table. A chronometer w not more fixed and accurate in its mo ments than was Minnie in her domes arrangements. To-night, however, th appeared to be a change.

"Vell, here we are!" said Mr. Pinc grimly.

His jaw set, his manner all ready show Minnie what he thought of her, stepped into the hall. To his surprise hall was dark. Furthermore, the kitch also was dark. No dinner was on the sto either—no scent of it in the air.

"Hey, vat?" inquired Mr. Pincus, st tled; and, hurrying down the hall, he w halfway to the kitchen when the parlor d was opened abruptly, letting forth a fl of light.

Mrs. Pincus stood in the doorway. Sh had her hat on, as if she'd just come in. I air bland, she smiled.

"Vell, Benny?" she remarked.

(Concluded on Page 33)

The New Hupmobile

The Beauty-Car a Year Ahead

An Ideal Made Real In Our Four-Million-Dollar Factories

Bright finish, long grain, French seam upholstery.
Luxuriously improved seat cushions and backs.
Moulding finish conceals all upholstery fastenings.
Neverleek fast-color top, black outside, tan inside.
Tonneau quarter curtains, cut integral with the top.
Front and rear edges of top finished with moulding.
Bow spreaders to carry top when folded.
New "Lift-the-Dot" fasteners for side curtains.
Door-curtain carriers fold with curtains, and drop into place instantly.
Tonneau carpet fastened with snap fasteners. Tonneau sills carpeted. Entire tonneau finish improved.
Satin-finish instrument plate. Ammeter supplied to show rate of battery charge and discharge.
Hand grip-pads on doors. Improved door handles.
Larger door pockets, with weighted flaps.
Bodies, Hupmobile blue; hood and fenders black. More paint and varnish, handsomer finish.
New type demountable rims. New type rim carrier.
Adjustable foot pedals. Clutch action very light.
New carburetor air control. One switch for ignition and lighting.
New dimming device graduates brilliance of head lights.
Tail lamp operates independently of other lamps.

lanned for a year, this Year-Ahead
eauty-Car.

ssued from new factories whose added
cilities cost over $750,000 in 1916.

year ahead in beauty. In all that
akes for value, too.

he world's best Four in the setting
brilliant performance merits.

he most beautiful Hupmobile you
ve ever seen.

he most luxurious in its appoint-
nts.

he most appealing in appearance, in
nvenience.

25 Improvements That Captivate

wenty-five worth-while improvements
make Hupmobile captivation com-
ete.

Sixteen that set style for a year from
ow.

Nine to make the world's best Four
ill better.

In the net, the Year-Ahead Beauty-
Car.

No car supplies all individual wants.

None ever *can* meet them all.

But The New Hupmobile comes closest
to doing so.

Many of its features are ahead of the
times.

That is why you, too, will call it the
Year-Ahead Beauty-Car.

The World's Best Four Now The Beauty-Car

The Hupmobile has always been a quality car.

It stands, also, at the pinnacle of performance.

It is, in very fact, the world's best Four. That needs no further proof than the testimony of 17,000 owners.

In our four-million-dollar factories, with nearly $1,000,000 of recent improvements, it now receives the outer dress befitting its famous inner virtues.

Many tell us we build the car too good. That we pay too much for things people never see.

If We Build Too Good: Why—We Build Too Good

We could not be content to give Hupmobile owners less.

Quality and performance—these long have been our ideal.

Surely we have reached our goal in a car fit to stand as the world's best Four.

Five-Pass. Touring Car,	$1185	Roadster	$1185
Year 'Round Touring Car,	$1385	Year 'Round Coupé .	$1370
Seven-Pass. Touring Car,	$1340	Sedan	$1735

f. o. b. Detroit

The Mark of Superior — *Motor Car Service*

So we studied people's style-wants. We prepared for them by building new factories.

In The New Hupmobile, see how we have met them. How we have gone a year ahead.

Note the new upholstery. The gloss, the softness of the leather. The depth of the cushions. The stylish French seam.

Note the finish and fittings of the tonneau—and the front compartment, too.

Be Guided By Your Own Style-Sense

You see the rear quarter curtains on few other cars—unless costlier. A top fashioned in our own factories, on Hupmobile design.

Dim the headlights. See how the light is graduated—down to a dull pin-point glow.

Drop the side curtains into place. See the ease of placing the supports in the doors. They convince instantly that here, at last, is an open car which quickly avails the perfect bad-weather comfort of a closed car.

Let your own style-sense guide you as you go over the car.

Do this, and you can have no doubt that The New Hupmobile is indeed the Year-Ahead Beauty-Car.

Hupp Motor Car Corporation, Detroit, Mich.

There is an *Ingersoll* for Everyone

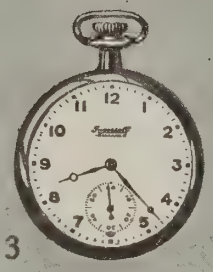
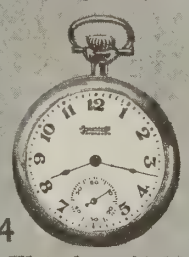
1 *Reliance $3.00* (snap case)

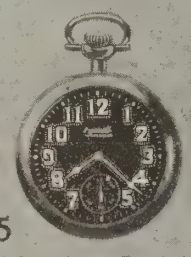
2 *Reliance $3.50* (screw case)



3 *Reliance $6.00* (gold-filled case)



4 *Waterbury $3.00*



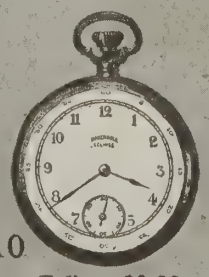
5 *Waterbury Radiolite $4.00*

6 *Radiolite $2.00*

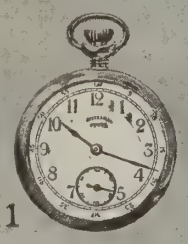
7 *Radiolite Two-in-One $2.25*

8 *Radiolite Strap Watch $4.00* In plain dial, $3.00

9 *Triumph $1.50*



10 *Eclipse $2.00*



11 *Junior $2.50*

12 *Midget $2.50* In glow dial, $3.50

A Quarter-Century of Ingersolls

IN 1892 the House of Ingersoll was marketing but one model; now there is an Ingersoll for everyone—for every use—at prices from $6.00 down. We'd like to make you better acquainted with the newer models.

"Radiolites"

Most interesting of all are the "Radiolites," watches that tell time in daylight and dark. The hands and figures are thickly layered with a new self-luminous substance called "Radiolite." "Radiolite" contains genuine radium (only a little is needed) and glows as brightly as ever for at least eight years—probably much longer.

Jeweled Watches

The Reliance is thin, accurate and handsome. You now have a choice of snap case, dust-proof screw case, and extra high-grade ten-year gold-filled case.

The Waterbury is a man's watch, small and with four jewels. It is accurate, sturdy and good-looking.

Special Watches

Have you seen the "Two-in-Ones"—ideal for desk or bureau? And the strap watches in plain and glow dial, that both men and women are wearing? You can see them at any Ingersoll dealer's store, alongside the familiar Triumph, Eclipse, Junior and Midget, and the Radiolites and jeweled models.

CANADIAN PRICES: Radiolite, $2.25; Radiolite Two-in-One, $2.50; Reliance, snap, $3.50, screw case, $4.00, gold-filled case, $7.50; Waterbury, plain dial, $3.50, glow dial, $4.50. Other models same as in U. S. A.

(Concluded from Page 30)

Mr. Pincus did not wait for more. The look of dark, icy grimness and reserve he had planned would be fitting for their meeting somehow seemed to desert him, and of a sudden he found himself shrill and undignified. Here was the woman, however, who had brought about his ruin; and, his voice rising, Mr. Pincus poured out on Mrs. Pincus all the ire and resentment bred by the vicissitudes of the day.

Minnie merely smiled, though. Her hands folded placidly on her waistline, she waited to wait complacently for Mr. Pincus to finish. There was about her, too, an air of unalloyed triumph and enjoyment that drove Mr. Pincus nearly wild. Catching his breath, he began at her anew.

His voice rising, Mr. Pincus was in the act of telling Mrs. Pincus what he thought of her when Blake, starting violently, gave vent to an agitated cry.

"Rosie!" cried Blake.

"What?" inquired Mr. Pincus; startled, he paused in the midst of his vociferations.

"Rosie! You here?" Blake ejaculated; and pushing Mr. Pincus aside, he stepped into the parlor. Then, for the first time, Mr. Pincus noted that Mrs. Pincus had a child. She was a slender, delicate-featured woman, with soft dark hair and big, appealing brown eyes. The eyes were now moist and glistening, and on the caller's face there was a stain of recent tears. As Blake, however, strode toward her, she looked up tremulously.

"It's all right, Joe!" she cried. "Everything's all right!"

"Sure, everything's all right," nodded Mrs. Pincus; and, reaching out abruptly, with a dexterous hand she jerked Mr. Pincus into the parlor.

"Meet Mrs. Blake, Benny," directed Mrs. Pincus; then, turning to Mrs. Blake, Mrs. Pincus indicated her spouse with a gesture explanatory dig. "Meet Pincus, Mrs. Blake—this here is him."

"Pleased to meet you, Mrs. Blake," said Mr. Pincus.

Briefly baring his teeth in what he estimated to be a formal smile, he turned, beaming, to Mrs. Pincus.

"Say," growled Mr. Pincus, his air all one suspicious, "I don't get you, Minnie. *Was machst du*, anyhow? Is it a game to pull off, vat?"

Minnie smiled more blandly still.

"No game, Pincus. Only my friend Mrs. Blake, she and Mr. Blake, we all go to a restaurant for dinner, first; then Mrs. Blake and him, they take the train for Cincinnati."

"Cincinnati!" ejaculated Blake.

"Yes; that's where you worked once, don't it?" rejoined Mrs. Pincus, beaming ever wider. "You go back to Cincinnati; then you go to work again."

"And go to work!" Blake exclaimed.

Mrs. Blake rose swiftly. Again tears glistened in her eyes, but they were tears of gladness now.

"It's your old job, Joe—don't you understand? You've got it back again!" Then, clinging to her husband, she pointed to Mrs. Pincus. "She got it for you, Joe."

"She?" gasped Blake.

"Why, yes; stupid!" cried Mrs. Blake. "She made me telephone—it was over long distance; and when I promised you'd give up speculating—never gamble again in wheat—they told me to bring you right down. You're going to work the minute we get there!"

"Yes!" nodded Mrs. Pincus, jabbing at Mr. Pincus again with her thumb—"yes; and this loafer here, too, he goes back to his work as well!"

Mr. Pincus stood there gaping. At Mrs. Pincus' words, however, he gave a violent start.

"Vat? I go to work?" Starting again he composed himself, a scowl on his brow. "Vat work, Mrs. Pincus?"

"Dress linings," she replied.

In disgust, in triumph and mockery, Mr. Pincus raised his voice:

"No; I don't! I don't work for any dress-linings feller! Already I tell you they won't give a place to Pincus! . . . Yes; that for you, smarty!" ejaculated Mr. Pincus.

And, her smile as imperturbable as ever, Mrs. Pincus still more widely smiled.

"No; you don't work for no feller, Pincus. Instead, you work for me!"

"For you!" Mr. Pincus gaped open-mouthed. "Vat? I work for you?"

Mrs. Pincus nodded pleasantly.

"Sure; you work for me. It is in the dress-linings trade, like I say. I buy out a business, you know."

Mr. Pincus stared at her for a moment.

"You buy out a business, vat? Don't make a fool of me, Mrs. Pincus! A dress-linings business costs ten t'ouzand dollars!"

"Sure," nodded Mrs. Pincus; "ten t'ouzand I pay for this one, also. Five t'ouzand it is cash, and for the balance I give a note. This afternoon I do it, Pincus." Then, smiling sweetly, Mrs. Pincus gave him a jab. "To-morrow you go to work, Benny! You work for me, you know."

A great light seemed all at once to have dawned on Mr. Pincus; his face moist, he wet his lips together.

"Say," he said, and his voice cracked as he said it; "say, vere is it you get them t'ouzands of dollars—vere, I ask it—vere?"

At once she told him.

"It was in the market, Benny. That tip is a good tip; so I play on it myself. If you play it, you know, and get the money, you stay down a loafer always. So this morning, after you go out, I take the Subway down to Rooker's. Then I slip in by the back way and buy Ingot, like you said. Ingot goes up; so at three o'clock I tell Rooker to close me out. Afterward I hunt up Mrs. Blake, here, where she lives."

"*Ach!*" gasped Mr. Pincus, and he gaped. "You do that? *Gott im Himmel!* How much do you clear?"

"It was twelve t'ouzand nine hundred eighty-two dollars *und* a quowter," replied Mrs. Pincus—"only half of it, fifty-fifty, it belongs to Mrs. Blake, there, like I offer her."

"Yes; but I wouldn't take it!" protested Mrs. Blake.

"Yes; but I make you take a couple o' t'ouzand, anyhow," Mrs. Pincus rejoined; then, with another jab of her thumb, she again adroitly indicated Mr. Pincus. "Even for this loafer—this feller here—two t'ouzand it is cheap to get him back to work again. Hey, vat, Pincus?" she demanded.

Mr. Pincus did not seem to hear her.

"Bleecker Street!" he was breathing. "*Ach, Himmel!* Bleecker Street!"

"Sure; two doors from the corner, Pincus," rejoined Mrs. Pincus; adding grimly: "Eight o'clock, too, every morning, you punch the time clock also. I don't have any loafers hanging about my place!"

Moist, palpitating, Mr. Pincus drew a hand across his brow.

"A time clock? You run the place also?"

It was so, and Mr. Pincus wiped his brow.

"*Himmel!*" he breathed. "If last night I knew this I'd have choked, like you told me, before I give you that tip!"

The Road to Ballymena

By Mary Lanier Magruder

THE ould days; the ould road
To Ballymena going;
The ould hill; the ould thorn
With all its buds a-blowing!
Wild the wind now on the heather;
Wild the heart in me;
For no more we'll walk together
The ould road to the sea.

Leave the day go by in keening
For what's gone before.
Sheila, night has but one meaning
For sad hearts, asthore!
Gray the clouds lie on the could rocks;
Gray the heart in me;
And the gray ship by the ould docks
Soon will wear to sea.

"Down the ould road, in the ould town,
All the bobbins flying
Weave a wedding veil for Sheila—
Oh, my heart is dying!—
His the hold of Ballymoney;
Mine the open sky;
His the white loaf and the honey—
Dawn and dew have I!"

The gray night, the fey night,
And all the wild winds blowing;
A wanderer on the ould road
From Ballymena going;
With only memory to beguile,
And a broken promise his;
But in his heart is Sheila's smile—
And on her lips his kiss!

BLUE STREAKS

$3.00 each

Guaranteed

THAT bicycle you used to ride—is it rusty and dusty in your garret or woodshed? Bring it back again into service with Goodyear Blue Streak tires. Get it out! For Blue Streaks have met that bicycle tire bugaboo. You may now buy really dependable tires—Goodyear Blue Streaks, everywhere. Tires that let you forget that former high cost of bicycle upkeep.

Goodyear has done that for bicycle folk by making only one bicycle tire, and making that one tire really good. Blue Streaks hold fast to a high quality standard. And, they're packed with happy, healthy miles that make your heart glad.

Put that bicycle of yours back on its feet again! Make bicycling better than ever, on Goodyear Blue Streaks.

Even with material prices as high as they are today, Blue Streaks cost only $3.00.

Blue Streaks are standard everywhere.
One quality, one guaranty, one price.

Firestone

Traction

The sure push forward of the Non-Skid tread, with its grip against side slip, attracts added thousands of motorists to Firestone Tires every winter. The quality of Firestone rubber, as well as the design of the Non-Skid tread, accounts for this. The "life," buoyancy and tensile strength of the rubber enable the tires to get a grip and hold it.

This same quality means greater resiliency. An easy, comfortable ride, as well as a safe one, over roads that would otherwise jiggle and jar and jolt one.

All this is yours on Firestone Tires, with the economy of Most Miles per Dollar. Your dealer will supply you.

THE CONTROL OF FOOD SUPPLIES IN BLOCKADED GERMANY

(Continued from Page 20)

amount, one and one-half to two ounces a day, and that the balance could be fed to stock and used industrially; but the public, short of fat, consumed so much sugar that by March it was very scarce, and a house-to-house search was made for concealed sugar. The sugar ration was reduced by April to a little over a pound a fortnight. The inventory in May revealed only six hundred thousand tons, to last until October. Allotments were made to marmalade factories, cake bakers and for household canning of fruit. Finally the state confiscated the early apples and plums, and canned them in order that the sugar and fruit might be thus conserved for general utilization.

The reaction of the public to the scarcity of sugar was unmistakable in tone. The scarcity could not be explained away. Germany, which before the war exported a million tons of sugar a year, was without export reduced to the plane of consumption of one hundred thousand tons a month. The scarcity in meats and fats could be explained in several ways, as directly or indirectly due to the blockade; but the dearth of sugar could not be explained as the result of the stoppage of export. The simple truth was that the peasant fed sugar beets, the distillery used crude sugar and the household consumed refined sugar—all at excessive rates and simultaneously.

The irony of the restriction in sugar must have been most keenly felt by the German when he perused the widely distributed Nutrition of the People in War, a collection of lectures delivered before the Department of the Interior, of Prussia. On page 259 of this publication was an article by Naumann, in which suggestions were given for lectures, to be held in popular language, for the purpose of instruction of the common people in the ways and means of household management. Among the things urged upon the housewife was the doubling of the consumption of sugar!

The sugar crop of 1916 was supposed to represent not much under two million tons, sugar. The food controller apparently has this crop under control. Sugars and sugar products cannot be fed to livestock, and utilization in industries has been restricted. If the sugar crop was as large as estimated it ought to be possible to increase the ration somewhat over the amount allotted for November—a little less than one ounce a day—unless unusual demands are made for industrial utilization of sugar. At the same time it is obvious that the government may add to the present ration and utilize the importation of a certain amount of sugar—which is very scarce and expensive in the surrounding neutral countries—to exact the importation of a corresponding price-amount of fat.

Control of the Potato Crop

When the cold and dry year 1915 turned into the German people fifty-five million tons of sound potatoes, the fact was the basis for widespread rejoicing, since, with the failure of the grain crops, the added millions of potatoes constituted veritable starvation. The crop seemed so large that the necessity of control was not taken seriously by the authorities. The distilleries were making unusual demands; it was obvious that large amounts would be fed to swine and cattle; and potatoes were introduced into the regular ration of horses. The scarcity of labor made the proper storage of this crop of potatoes an impossibility, with the result, not foreseen, that when the stored potatoes were brought out later in the winter loss by decomposition was found to have been excessive.

Nevertheless, since the total crop was over four times the normal consumption as food, it certainly seemed to promise an abundance throughout the year. The amount of potato used in the bread did not form a large figure when compared with the total potato crop. Utilization of potato in the manufacture of soap was prohibited and the amount used for starch was restricted. Maximum prices had been continued from the previous year, both for retailer and grower.

Late in January scarcity in potatoes developed in the cities. This was at first attributed to manipulation. An inventory taken in January, however, showed that only eighteen million tons remained, from which the seed had still to be reserved, leaving only eleven million tons to last for six months. Potatoes had been consumed by man, beast and industry at the rate of over five million tons a month. Thereupon potato cards were introduced and the attempt was made to limit the feeding of potatoes to livestock. The potato card for swine, for example, allotted four pounds a head a day; for man, one pound. It was when the authorities determined to uncover and seize the stocks of stored potatoes that the unexpected losses by decomposition became apparent.

The food controller, on assuming office, promptly forbade any feeding of potatoes to livestock. The potato cards were not guaranteed, and in the large cities the intake for each person during the spring months was often as low as a quarter of a pound a day; to make up for the missing potatoes equivalent rations in bread and flour were issued. The crop of summer potatoes came upon the market with a rush, as the maximum prices were high and scaled downward in order to increase the offerings. The growers brought out the potatoes before they were mature and flooded the market with them. So anxious were the growers to harvest the new potatoes that in some sections the Whitsuntide holiday was not granted to potato workers. The summer crop of potatoes was estimated at some eleven million tons, and was supposed to last three months.

The Imperial Potato Card

Early in August the cities were flooded with potatoes in carload lots. The poor, cognizant by announcement that prices were scaled to fall, bought only from hand to mouth; as a result, thousands of tons decomposed and were lost. Nevertheless, even at this time the potato card and the prohibition of feeding to swine were not suspended. Two weeks later the cities were again empty of potatoes. The growers had ceased to harvest potatoes when the prices fell; they were engaged in the harvesting of grain, and the people in the cities had to wait for regular rations of potatoes until the digging of potatoes could be again resumed.

The potato crop of 1916 was small, supposedly as low as thirty-six million tons, and not of normal grade. The food controller has established an excellent system of regulations: All users of potatoes have to hand in the figures for their year's requirements. An inventory of potatoes has been made in every district. The required amounts are subject to revision by the central authorities; and when the total figures for demand have been checked up against the total supplies available, all of which have been requisitioned and seized, the denominated amounts of potato belonging to each district, community, household and factory were to be set aside or delivered.

The unclaimed potatoes, if such there were, the authorities could dispose of as they chose. Extensive drying of potatoes was being done under official supervision, and every effort directed against waste. Feeding of potatoes to animals is permitted only to swine and geese. The potatoes of the horse's ration of last year were replaced with oats, and every possible measure taken to prevent the peasant from mulcting the crop.

The imperial potato card was issued in October, a guaranteed card, for which each household must select a retailer, who could obtain supplies only by presentation of the collected cards. The potato ration per day for grower and industrial classes was fixed at one and one-tenth pounds for women, children and light workers; two and two-tenth pounds for hard workers, the ration per head not to exceed one and three-quarter pounds, with extra allotments for the army, the sick and wounded, and children whenever necessary. This ration means the use in food of about nineteen million tons, so that apparently, when the industrial demands are satisfied, not over five million or six million tons will be available for animals.

In the spring of 1915 the people were officially urged to plant vegetables, especially

Ivory Garter
REGISTERED U.S. & FOREIGN

Very Fine Elastic

The Ivory Garter is made of the very best elastic. It is most flexible and "stretchy." Pull it out and see how elastic it is—how strong. Furthermore, there are no seams made across the webbing to cut the rubber strands. Consequently, Ivory Garters wear *long* besides wearing well. The Ivory Garter is most comfortable—doesn't bind—is extremely light—and is GUARANTEED. At your haberdashers.

PRICES: Silk 50 cts. Lisle 25 cts.

DEALERS: Order from your jobber or direct. Write for catalog which includes garters for women.

Men's Side Garters
For those who do not like a garter around the leg.
Price 50 cts. and 25 cts.

New Orleans, U. S. A.

This Snow-Sweeper is Driven by Gould Batteries

Equip Your Automobile—

with a Gould Starting-Lighting Battery of the same rugged quality. A generation of experience gained in the hardest fields of battery service is built into Gould Starting-Lighting Batteries.

Go to the bottom of the battery question and you find that battery-quality depends on *plate*-quality. That is why the rugged quality of the Gould Starting-Lighting Battery is fundamental, *in-built*. It rests squarely on Gould Super-Hard Plates—plates that have never been successfully imitated—that are the result of cumulative experience gained in years of plate-building.

The men who make Gould Starting-Lighting Batteries are long-trained in building batteries for requirements vastly more severe than your car demands. *Built inside* of the Gould Battery is the service you want—*service on the car*. When you buy a new car specify a Gould Battery. When you need a new battery remember that over 2,500 dealers can supply a Gould of the correct type and size for your car.

GOULD BATTERIES FOR ELECTRIC VEHICLES have established remarkable records for capacity and long life.

—wherever absolutely dependable battery service is required.

GOULD STORAGE BATTERY

(Continued from Page 35)

to till all the odds and ends of uncultivated ground; the people of the cities were aided by the municipal authorities in the establishment of small gardens, taught how, what and where to plant, how to cultivate, how to harvest and store. Desiccation establishments were installed in order that waste might be prevented. There was also increased cultivation of vegetables on a large scale for the market. The result has been that during the past two years the use of vegetables in the diet has probably been larger than ever before, particularly during the summer of 1916. For many vegetables maximum prices have been established, wholesale and retail.

The commercial manufacture of sauerkraut has been vested in a special company, and it is sold at fixed prices. The conservation of vegetables has been encouraged; in some instances these were confiscated and canned in order to solve disputes between canners and growers. About asparagus was played a little game that illustrates how keen are the Germans to the finer points of trade: The crop of 1915 was large; nevertheless, the retail prices remained rather high, despite the fact that little asparagus was canned on account of scarcity of the cans that are adapted to this product.

To the indignation of the people it became known that special permission had been granted for the exportation of asparagus. The asparagus went to Holland and Denmark, and from there, in part, to England. When the consuming public demanded that this exportation be prohibited and the people be given the advantage of the crop at low prices, the reply was made that asparagus had little nutritive value and was to be classed as a delicacy; but that its high price on export made it a factor of importance in maintaining the foreign value of the mark. Nevertheless, the public clamor was followed by the restoration of the original prohibition of exportation.

It was with the prices of vegetables that the middlemen ran wild during the summer of 1916. On account of the perishable nature of the product, confiscation was impracticable and maximum prices could not be enforced, with the result that the market could never be relied upon, as manipulation swept the produce hither and thither. As an illustration, the city of Cologne was without vegetables for several days.

The Use of Saccharine

Vegetables constituted in peacetime from three to five per cent of the German diet. It is possible that during the past two years double the normal quantum of vegetables has been consumed. Rubner took the wind out of the sails of the popular advocates of green vegetables for the war diet by pointing out that to replace 5.4 ounces of meat or 3.6 ounces of rye bread one would need to consume forty-six ounces of spinach, thirty-one ounces of cabbage, forty ounces of apple or thirty-six ounces of turnips. Nor was anything to be gained by adding to the diet the weeds of the forest or the straws of the field, since experimentation only proved what experience had indicated before—that we are not constituted to digest them.

If there was confusion in the vegetable market during the past year there was double confusion in the fruit market. The retail prices for fresh fruit reached unheard-of elevations during the summer of 1916. The growers' prices were high, in extenuation of which the high cost of fertilizer, cultivation, picking and packing were adduced. The perishable nature of the product and the intense desire of the people for fresh fruit afforded unusual opportunities to the manipulator.

The maximum prices first set were low—then the growers refused to pick; the prices were raised—thereupon green fruit was sent to the market. The people were encouraged to put up fruit by sterilization by heat, and with saccharine; but the housewife was not inclined to experimentation. Thereupon the food controller confiscated the entire crop of early apples and plums, supplied the sugar, and had them converted into jams.

This was an excellent move, as the jams would probably not have been put up on private initiative. The importance of jam and marmalade is greater than can be appreciated at this distance.

Butter is scarce and will continue to be so. Coffee is very poor. It was all important to have marmalade and jam for breakfast, else there would be nothing left of the Continental breakfast. The exclusion by the blockade of the large supplies of dried fruits previously obtained from California has been keenly felt.

When sugar became scarce the law prohibiting the use of saccharine was abrogated, and in March the public was encouraged to use saccharine. Two months later this use became compulsory in certain directions. Since then, eating houses have not been allowed to serve sugar with beverages, and many soft drinks and other addenda of the dietary must contain saccharine instead of sugar. During the summer it was widely used in jams and marmalades, and also made its appearance in beer. It was frankly admitted by the authorities that the use of saccharine was a questionable policy, as it was a constant reminder to the people of the straits in which Germany, a sugar-producing country, found herself.

Saccharine can never be termed a substitute for sugar from the gustatory or any other point of view. Certain articles of food containing saccharine have the normal taste, as though they contained sugar; to other articles of food, however, an abnormal aftertaste is given by saccharine, a condition particularly noticeable in beer. Amazingly enough, though ironically so to the people of Germany, the supply of saccharine was so short that for a time it was almost as difficult to secure saccharine as to obtain sugar—a condition, of course, that was only temporary.

The Scarcity of Eggs

A subject that possessed an interest in the cities, and occupied an amount of space in the newspapers out of all proportion to its importance in the diet, was the egg. The peacetime consumption of eggs was two per capita per week. The domestic production varied from sixty-five to seventy-five eggs per capita per year. These were mostly consumed in the country districts and the cities supplied largely by importation. The eggs secured by importation came principally from Austria-Hungary and Russia—in reality from Russia, since they were largely Russian eggs that came from Austria-Hungary.

A fragile and perishable article like the egg is a poor blockade runner; and when Austria-Hungary, at the beginning of the war, prohibited exportation to Germany, the consumption was reduced to the plane of domestic production, since the surrounding neutral countries produced few eggs. Since the imported eggs supplied the cities, a situation was created that was just made to order for the market manipulator. During the first year of the war, when there was little scarcity of food, eggs could always be obtained in the city markets at high prices. During the second year of the war the country districts were less inclined to send their eggs to the cities, except at very high prices. When the spring of 1916 appeared the usual spring increase of eggs was awaited with great expectation.

But the eggs did not appear and winter prices were maintained.

The use of eggs had been prohibited in ordinary cakes and limited in the making of tart. Local regulations appeared in many cities, fixing maximum price, limiting the number that could be bought, prohibiting the serving of eggs at breakfast—and finally the egg card appeared. The wealthy classes had become very dependent upon eggs in their diet and the egg dealer preyed upon them. Among the students in Germany a popular story was current long ago to illustrate the limitations in the average student's wardrobe, depicting him counting his clean laundry, ending with *und das Hemd*—"and the shirt." Now it had become *und das Ei*—"and the egg."

The wealthy classes resented the restrictions on importations made by the central purchasing bureau, convinced that if the authorities had not centralized imported eggs, but had permitted buyers of eggs in Germany to compete with buyers in foreign lands, eggs would have been available, though the prices would have been very high. As a matter of fact, the supply of domestic eggs was not reduced below the figure for peacetime. In peacetime a few million Germans consumed eighty per cent of the eggs. The total number coming to the cities was reduced and most of these went to the wealthy and to public eating houses.

In June the number allotted in the cities was two per week per head. In July this was reduced to one per week, which was the allotment in September and October; the

This 3 Fuel Wonder Thinks For Itself!

UNIVERSAL STOVES AND FURNACES

Burns Gas, Coal, Wood

EVERY good housewife needs a dependable *coal* and wood range. But there are dozens of times when gas is more convenient than either wood or coal. You can use all three fuels—you can save money, labor, materials and *fuel* by using a

UNIVERSAL Combination RANGE

All you do *then* is *turn the key*. And PRESTO!—your oven is all ready for GAS! No parts to change. Nothing to think of or forget. Simple, durable, easy to operate.

Keeps Your Kitchen Cool in Summer and Warm in Winter

Has the incomparable cooking and baking qualities of the high-grade *coal* range. Has 4 coal lids and 4 burners all on top, a full sized 18" oven, equipped with spring balanced door, oven thermometer, and high closet. Compact, complete, trouble-proof—the crowning achievement of 50 years of leadership.

Burns Natural or Artificial Gas

Finished in baked-on, Sanitary Blue or Black Porcelain Enamel if desired. No blackening. Easily cleaned. Handsomely trimmed in rust-proof silver nickel. Every modern refinement, yet moderate in price.

Sold for cash or on easy payments by leading dealers everywhere.

Write for Free Book Illustrating, describing all. Brings name of your local dealer, who'll gladly give free demonstration. Write now.

This Imprint stamped on 200,000,000 Pens Each Year

EACH year, the great Esterbrook factory turns out 200,000,000 pens that are used in all parts of the world. This is more than the combined output of all other steel pen manufacturers on the American continent.

Every day, the Esterbrook imprint is stamped on 700,000 pens. This imprint has been a guarantee of quality for fifty-eight years. Look for it when you buy pens.

There is no other steel pen made in this country for which the same success as that of Esterbrook can be claimed. There is an Esterbrook Pen for every purpose and for every hand. It would be hard to find a stationery store that doesn't sell them.

Send ten cents for a useful box containing an assortment of the most popular Esterbrook Pens. Stamps will do.

price, seven cents. In October the controller enacted regulations of confiscation in order to protect the needs of children, the army and the sick. The producers were supposed to retain a portion of their production; the remainder was to be turned in to the food controller.

When it becomes a question of dividing the eggs of the peasant's hens between the war nutrition department and the peasant's wife, it will be safe to place the wager on the woman. In the channel of trade the egg is too evanescent an object to be placed under rigid regulation. Enforcement of the egg regulation in hotels was out of the question, and circumvention was always accomplished. When the writer was last in Berlin, in October, he could without difficulty secure an omelet each day in the same eating place, and this not out of any regard for his being an American.

In peacetime the majority of Germans had not over two eggs a month, while a few had thirty a week. Now all have three or four available a month. The cuisine of the well-to-do is hit hard by the lack of eggs, and the well-to-do have loud voices. It is a clamor for luxury. The government will, under these circumstances, find it difficult to effect a confiscation of the peasant's eggs for any other purpose than the needs of the sick and the wounded; and one may be assured that, once an egg reaches the channels of trade, it stands little chance of ever landing upon a poor man's table.

During the first year of the war there was no scarcity of tea, coffee, cocoa or chocolate. Apparently the stocks in Germany were large; considerable amounts were obtained in Belgium; a large amount of Brazilian coffee was confiscated in Hamburg and Bremen; and until July, 1916, importation was not seriously restricted. During the past six months, however, there has been scarcity, which has been met by regulation of use. The first regulations made obligatory the use of substitute with coffee, half and half; and all middlemen were wiped out, retailers securing supplies direct from the authorities. Hotels and restaurants were allotted half the amounts to which they were accustomed, with equal amount of substitute.

Supplies of Chocolate and Milk

In October final regulations were issued. Coffee now comes in three grades—ten, twenty-five and fifty per cent coffee; the rest is substitute. The best coffee has the maximum price of sixty cents a pound. Many substitutes are on the market, composed largely of browned grains, with a certain amount of chicory. The quality of these surrogates finally became so bad that they were placed under the control of the coffee commission.

Tea never possessed the standard of a man's drink in Germany, and the supplies were satisfactory until last May, when the tea was confiscated and the retail sale regulated, the limit being set at half an ounce. The use of substitute was not made obligatory; the prices varied from one to two dollars a pound.

Cocoa was little used as such in Germany and chocolate to a very large extent in foods rather than as a beverage. The writer was never able to understand where the limitless supplies of chocolate in Germany came from. In the smallest hamlet and the largest cities were shops after shops filled with chocolate candies, often of very low grade, but, nevertheless, inexplicable when viewed from the standpoint of quantity. Up to November there was no limitation in the use of chocolate.

No item of the German food supplies has attracted more attention in Germany and in the outside world than the scarcity of milk; and ever since the beginning of the war periodic appeals have been made to the governments of neutral countries to induce them to exert their influence toward such modification of the blockade as would permit the shipment into Germany of milk for little children. Laudable as was the motive of these appeals from the humanitarian standpoint, they were based upon a misconception of the amount of Germany's milk supply that naturally went to the children, since they assumed that any reduction in the milk supply must naturally fall proportionately or disproportionately upon the children.

This was an erroneous assumption. According to the Eltzbacher Commission, from forty to forty-three per cent of the milk produced in Germany in peacetime was

Tire Saver Kit

Perfecting Your Pleasure

Actual tire trouble is not needed to ruin the pleasure of a motor trip—the fear of it works almost as damaging an influence.

And the fear of it springs from what? From the thought that the single spare or the pair behind *may* not fully outrank the chances of accident.

This fear is banished from the car that carries a Goodyear Tire-Saver Kit.

For this Kit prepares the driver against any tire accident short of complete ruin.

It is handy, compact and complete, and the only package on the market containing all essential first-aids-to-tires. It contains tire putty, self-cure tube patches, inside and outside protection patches, cement, talc, friction tape, valve parts, pressure gauge and so on—everything needed in the emergency.

It perfects your pleasure in your car, and its cost is trifling in view of the peace of mind it brings.

Goodyear Tires, Heavy Tourist Tubes and "Tire Saver" Accessories are easy to get from Goodyear Service Station Dealers everywhere.

Wilson & Company's First Annual Sprinkler Saving

Mr. Thos. E. Wilson, President of Wilson & Company, the great packers, wanted the best possible safeguard against having their $150,000,000 a year business interrupted and disrupted by a fire.

He found that Grinnell Automatic Sprinklers would reduce the average insurance rates on his packing plants 85%.

His shrewd business judgment told him that the insurance companies could not afford to make such a sweeping reduction unless the fire danger in those plants was going to be practically wiped out by the Grinnell installation.

Forthwith, he contracted to have Grinnell Automatic Sprinklers installed in all the large plants of Wilson & Company.

As the Grinnell Systems were completed, the new low insurance rates went *immediately* into effect.

In the Kansas City, Oklahoma City and Chicago plants the Grinnell Systems have been installed a year.

The above check for $198,470 shows the first year's saving in insurance premiums to Wilson & Company on these three plants alone, which sum was also their first payment to us.

These savings will come annually.

In less than three years the insurance companies will thus repay to Wilson & Company what it cost them to protect their business against fire.

When the other plants are equipped, Wilson & Company's annual insurance savings will be proportionately increased, and in a few years an annual insurance saving greatly in excess of $200,000 will be entered on Wilson & Company's books as "all profit."

Many concerns can make the same ratio of saving as Wilson & Company even though their insurance premiums are as low as $500 a year and, what is more important, secure the same measure of protection.

If you have the slightest doubt about *your* being able to make a substantial saving, write to us.

In case you cannot spare working-capital, we can give you the names of reputable concerns who make a business of accepting insurance savings as partial payments for a sprinkler system. This plan not only safeguards your working-capital from the calamity of fire, but also, practically with no investment, adds a Grinnell Sprinkler System to your real estate assets.

Your big American business man is in love with his business. He believes in keeping that business going, not chancing it in a fire.

Why not take a leaf from the books of the wisest business concerns in America, and get in touch with us to determine quickly the cost of protecting your *going* business? Address the General Fire Extinguisher Company, 277 West Exchange Street, Providence, R. I.

(Continued from Page 38)

consumed in the household, as such, as beverage and in cooking. The remainder was devoted to the manufacture of butter and cheese. Of the amount consumed as such in the household only two-thirds was required for the children if every child under ten years of age received a quart of full milk a day. From this it is clear that what might be termed the direct childhood need of milk was less than one-third of the normal milk consumption of Germany. Over half of the milk, in terms of units of casein, was fed to livestock. In the final analysis, therefore, the need of the German children for milk was not particular or different from their need for other foodstuffs.

When the government, in the spring of 1915, killed off ten per cent of the milch cows, it was with the idea that the remaining ninety per cent could be so fed as to regain normal production. In other words, the milk production of the empire would be reduced not over ten per cent. In any event it was obvious that reduction in the milk supply, at least down to fifty per cent, need have no effect upon the children if the adult population permitted the reduction to fall upon their butter and cheese. In the light of later events, it is clear that the slaughtering of only ten per cent of the milch cows was a mistake. The production of milk in peacetime was dependent upon imported concentrate to the extent of practically one-half.

The dairies of Germany could almost be compared to dairies in a city cut off by a railroad strike. The slaughter of the lesser number of milch cows was based upon the proposition that, if more swine were slaughtered, fodder that was devoted to them could be diverted to milch cows. The calculations of the commission have been shown by events to have been unfulfilled, since the feeding stuffs that were supposed to be diverted to milch cows were, in fact, not so diverted; whereby the ratio of milk production as against maintenance per head was materially lowered.

The milk supply in the first part of the war was not far from normal. This was aided by the continued importation of oil concentrates from the United States, not checked until well into the second year of the war. The low yield of grasses and hay in 1915, together with the small crop of grain and the scarcity of all concentrates, combined in the fall of 1915 to bring about a scarcity of milk that has since constituted one of the most difficult problems in Germany. The problem has concerned only the industrial population. The agricultural population has throughout the war enjoyed practically the normal supply of milk.

Milk Regulations

The first regulations were enacted in the summer of 1915. Nursing mothers, infants and children to the twelth year, and the sick of all ages, were given first call upon full milk. The use of milk in the kitchen and public eating houses, and as a beverage for adults, was restricted. With the onset of winter, the supply of milk became very much reduced, and in particular the milk supply of the cities was far below the normal. It is probably not far from the truth to state that, from December, 1915, on, not over half of the normal milk supply reached the large cities of Prussia, Saxony and the lower Rhine.

The authorities were at the outset loath to interfere, since milk is such a perishable product. Attempts were made to regulate the prices and to fix the volume of trade in different directions in the geographical sense, and thus secure equitable distribution by middlemen. As a matter of fact, the distribution was exceedingly inequitable until the advent of the new food controller. No milk carrier could supply the normal demands of his route; no milk shop could meet the requirements of its clientèle. Therefore, the milk went to the highest bidder, and customers searched for milk from shop to shop.

The authorities attempted to force production. The producers replied that in the reduced condition of the cows forced production was not profitable at the prices of feeding stuffs and at the price of milk. The scarcity of feeding stuffs tempted the peasant to feed milk to his young stock. Grain offal was supposed to go to the milch cows rather than to beef cattle. It is clear, however, that at the prevailing prices of milk and beef it was more profitable to convert it into meat than into milk; and we may be sure that this was done. The low ration of flour resulted in a larger consumption of milk by the peasant class. The high prices of butter induced the peasant to produce butter rather than sell milk.

Gradually the price of milk at retail was raised from five to eight cents a quart. Nevertheless, increase of price did not bring increase of production. During the winter months the public was urged to be patient until the coming of spring, which would yield the green fodder on which the freshened cows would again produce satisfactory amounts of milk. The spring came, but with it little increase in milk. The cows had calved in such poor physical condition that when the new fodder became available the excess of intake over maintenance went to restitution of lost tissues and not to increase in the flow of milk.

Just at this time the use of crude sugar was prohibited, potatoes were becoming scarce, and grain also; and there was no relief. With the advent of spring the cows of the peasant were placed at work, since the scarcity of horses and work oxen made this necessary. Emaciation of the cows, subsistence on green fodder and subjection to hard work in the fields were not conducive to a large yield of milk; only a low production of milk could be expected and nothing else materialized. These considerations did not apply to the large dairies; but the large dairies lacked concentrated feed.

Chances for Leaks

Milk cards appeared throughout the spring and summer as local regulations. In September, 1916, the supply of milk was very low—scarcely more than enough to cover the needs of mothers, infants, children and the sick. The rule imposed upon the dealer that he should confine himself to his old customers, and not accept new ones, did not prevent him from practicing favoritism with his old customers; and the instruction of the controller to sell not over one-fourth to one-third of the peacetime amounts could not be enforced, as in the last analysis it had no reference to the size of the household.

The point of failure in the entire attempt at regulation, up to the control introduced in October, lay in the fact that the enforcement of specified use was imposed upon the consumer.

The final system inaugurated in October was founded on four considerations: the milk of peasants and of dairies was separated in the regulations; the use of milk in the household, guaranteed on the milk cards, was based on the composition of the family; the amounts of milk devoted to household use and to the manufacture of butter and cheese were regulated at the source; and the feeding of milch cows was effected by rationing by the authorities. Large dairies are supplied with rations, and must return specified amounts of milk. The small producers' milk was not confiscated. They were advised to use the normal amounts and turn the balance over to the authorities.

Here, obviously, was left unguarded an opportunity for a leak, since the peasant might feed milk to swine or calves. The nonagricultural population has been placed upon a strict milk regulation. During the last three months of gestation, during the period of nursing and period of recovery therefrom, a woman receives one liter of full milk daily. The bottle-fed child up to the second year is to receive daily one liter of full milk; between two and four years, three-fourths of a liter; between five and six years one-half of a liter. After the age of six, no milk ration is guaranteed, but of skim milk the child may receive as much as the market affords.

Full milk is allotted to the sick under the care of a physician. After these amounts have been allowed for, the remainder of the full milk goes to the manufacture of butter and cheese, the skim milk being returned to the market for unrestricted sale.

The medical world expressed criticism of the exclusion of milk from the diet of the child over the age of six. A choice had to be made between the milk needs of these children and the butter needs of the entire population; and the controller evidently reasoned that the child would receive the skim milk, and in their ration their share of the butter. There is little doubt that, under the operation of the present system, the people of the cities in industrial sections receive more milk than they secured during the first nine months of 1916.

The manufacture of cheese was regulated and the total cheese production of the empire, outside household cheese, confiscated.

YOUR CAR—MY CAR

How Men Feel Who Own a

HUDSON SUPER-SIX

Some 28,000 men are driving a Hudson Super-Six. Ask any one how it compares with any other car. You will find the feeling about as we find it. And as we express in this ad.

"I have a ——— Six," says one man, "with a motor the same size as yours."

But what about motor efficiency?

Hudsons have long been Sixes. But the Super-Six invention added 80 per cent to the power and efficiency without adding a mite to the size.

A Six with the old limitations is a long, long way from the Super-Six, remember.

"Mine Is a Twin Type"

Other men have Eights and Twelves. And they used to feel that added cylinders gave the car added prestige.

But the present Hudson owner knows this:

The Super-Six, in all sorts of tests, has outperformed other types. It has won in speed, in endurance, in hill-climbing and quick acceleration. It holds all stock car records worth while.

Hudson also built Eights and Twelves before the Super-Six invention. Those types, no doubt, would have displaced Sixes, had the Super-Six not appeared.

We, with others, had turned to the Twin Type because of the unsatisfying limitations of the Six. Then we invented the Super-Six and found it gave all that was sought for by those who had developed the multi-cylinder cars.

How Much Friction?

The question is not between Sixes, Eights and Twelves. It is, What type best minimizes friction? For that is what all aim at.

Friction wastes motor power. It limits motor speed. It causes wear, prohibits endurance.

It was by reducing friction almost to nil that the Super-Six gained its supremacy. It is through the endurance which results that it won its amazing records.

The evidence is clear that the Super-Six best reduces friction. Until some type excels it in that respect, it holds the leading place. Every motorist must concede that, whatever type he owns.

Not Waste Alone

Much of the power was wasted in the old-type Six. We knew that, as did others. And, like others, Hudson engineers sought ways to correct it. We clung to the Six because this invention made the Super-Six excel.

By saving this waste, we get speed, power and flexibility such as like-size motors never showed before. We get more than you need, or will use.

But we get, above all, endurance. The fiercest strains, continued thousands of miles, have failed to show in the Super-Six the slightest evidence of wear.

We now combine this Super-Six motor with the limit in beauty and luxury. We have added to the car a great gasoline saver. No effort has been spared to make the Hudson supreme in every detail.

It is today the world's great car. And it probably always will be. The Super-Six motor comes so close to perfection that it leaves little room for improvement. And our patents control it.

Its owner knows that it can win in any sort of test. And, above all, in the test of long life.

HUDSON MOTOR CAR COMPANY, DETROIT, MICHIGAN

(Continued from Page 41)

The importation of cheese has suffered little during the war. Up to September, 1916, there was no regulation controlling the purchase of cheese; there was no maximum price, though the prices were high, and the cheese shops presented the normal appearance of peacetime. In September all imported cheeses were withdrawn from the market and allotted to the army, hospitals and prison-of-war camps. The domestic cheese is being distributed through control bureaus established in different cities. There was, up to November, no cheese card and no limit to individual purchase.

In Germany prior to the war, butter was the fat of the rich, lard and margarine the fat of the poor. According to the Eltzbacher Commission the per-capita consumption of butter-fat was about 3.5 ounces a day, of which nearly one-half was obtained by importation directly or indirectly. In peacetime Germany imported hundreds of thousands of tons of both vegetal and animal fats for direct consumption, for manufacture of margarine in concentrates, and for industrial purposes, as for manufacture of soap.

In Germany under complete blockade, the dining table, the feeding trough and the factories compete for the fat of domestic production. It is at fats that the blockade of contraband and the blockade of foodstuffs overlap. Battleships need painting; therefore fat is contraband. Leather needs cleaning and dressing; therefore fat is contraband. Glycerine is used in smokeless explosives; therefore fat is contraband. In the polar and tropical zones fat is produced in excess; in the temperate zone fat must be cultivated. This cultivation Germany had neglected and it has proved the weakest as well as the noisiest gear in her transmission.

Of the different varieties of fat, the largest relative importation was in butter, two-thirds of which was indirectly or directly derived from the outside world. The butter consumption of Germany was not evenly distributed, geographically or in classes. The people of North Germany consumed more fat than those of South Germany. The people in the cities consumed more than in the rural districts, the public eating houses being the great dispensers of butter. During the months of scarcity of butter there was, of course, some complaint from the working classes; but, for the largest part, the complaints came from the spoiled rich, whose tables were conducted like those of a hotel.

During the first year of the war there was little scarcity of fat and butter, and there were no regulations concerning their uses. The second year brought scarcity and regulations. Butter, margarine and other fats became so scarce in December, 1915, that regulations were enacted compelling the large dairies to turn over to the Central Buying Bureau portions of their output for distribution to the cities. Cities, towns and communals then introduced butter cards and fat cards. Two fatless days were prescribed—Mondays and Thursdays; on those days the use of fat on the table and in the preparation of food was prohibited.

Fat and Butter Cards

The butter cards' allotments were unequal, allowing from five to ten ounces a week. In the smaller towns there was practically no limit. With each month in the cities the stringency became more pressing. In some places maximum prices were set; in others not. The retail prices in the shops rose gradually until the best grades of butter sold as high as one, or even two dollars, a pound. The authorities attempted to have the card follow the supply, and gradually the figure fell, until in May, in the cities, the weekly allotment was rarely above four ounces, and the ration of children had been reduced to one-half.

During the summer of 1916 there was considerable importation of butter from the surrounding neutral countries. All manner of butter substitutes were placed upon the market for the deception of the poor; while the willingness of the wealthy to pay large prices afforded the basis for widespread manipulation. The standards of manufacture were slowly reduced, and each day the butter and margarine became more watery. There was confusion in the administration of the several departments controlling the dietetic and industrial uses of fats, and in some places there were at one time four different cards for the use of fats. In the cities artificial gradings were established that expressed price distinctions, but not qualities.

The wealthy devised a pretty scheme to circumvent all regulations. A peasant possessing ten milch cows would sell one to each of ten men of means. Then each would employ the peasant to care for his cow, supplying the fodder, and having the milk and butter delivered to him, claiming exemption as an individual producer. The scheme was expensive; but it provided butter and milk in excess of the allotment of the cards.

With the advent of the new controller all fats were confiscated. The outputs of dairies were exacted on the basis of their milk supplies, and their cattle were rationed by the state. The killing of milch cows was made illegal. The butter cards became obligatory for the empire, and the selection of dealers was made compulsory. During June, July, August and September rations in cities varied from three and two-tenths ounces to four and six-tenths a week. The prices averaged from twelve to fifteen cents for three ounces. Communal authorities seized all butter produced by dairies of over fifty-quarts capacity a day, determined how much should be distributed locally and how much should be sent to the Imperial Bureau for Fat for the Use of the Cities. Peasants were not allowed to sell butter except to the communal authorities and the peasant's butter and milk were both liable to requisition.

To illustrate how hard it is to scotch the peasant, one needs but to state that, in Bavaria, it is contrary to law to sell a centrifuge or churn to a peasant, unless he contracts to sell his butter to the communal authorities.

Substitutes for Soap

The margarine and fats are now distributed by the same organization. The results of the new system have been a marked reduction in prices, but no increase in quantity. During October the usual ration in cities was three and two-tenths ounces of table fat a week; butter, two-thirds; margarine, one-third. The prices were from six to eight cents for two and one-tenth ounces of butter; for margarine, three cents for one and one-tenth ounces.

Lard and tallow are classed either as meats for purposes of the diet or as industrial fats. The cultivation of vegetable fats has been greatly stimulated and the crop of 1916 contained very material amounts of fat obtained from chestnuts, beechnuts, rape, marigold, poppy, sunflower and mustard. Slaughterhouse residues are no longer fed to animals until after all the fat has been extracted.

According to Liebig, the great German chemist of two generations ago, the civilization of a people may be measured by the consumption of soap; and if this dictum be accepted the Germans will have to admit that one other people is more civilized—namely, the Americans. The peacetime production of soap in Germany was some seven hundred thousand tons, ten per cent of which was toilet soap; nine thousand tons of glycerine were obtained as by-product. The per-capita use of soap was a little over twenty-two pounds a year. When fats became scarce in Germany, in the winter of 1915–16, the soap makers were among the first to feel the pinch.

In March, 1916, the soap card was issued. The ration at first was three and three-quarter ounces of toilet soap and one and one-fifth pounds of common soap a month, purchased on the bread card on the twenty-fifth of the month. The use of soaps for common cleaning purposes—steps, woodwork, leather—has been prohibited. Since July the monthly soap ration has been one and four-fifths ounces of toilet soap and half a pound of bar soap. There is now an Imperial soap card, guaranteed and uniform throughout the empire. Special provision has been made to cover the needs of children, nurses, physicians and dentists.

A large number of synthetic cleansing agents have been devised. Some of these, which are entirely free of soap and resemble tooth powders or tooth pastes in appearance, are very effective in the cleansing of the skin, operating after the fashion of almond meal. The scarcity of soap illustrates strikingly the scarcity of fats. When one considers the high value of glycerine to a nation at war, one may be certain that all the fat which can be spared from human consumption and technical uses will be spared; and the soap production becomes, therefore, a reliable index of the availability of fat.

better motor car for *less* money.

Overland success means just that to you.

For five years we have out-sold all cars in our class.

Last year our sales were millions of dollars ahead of any make selling over $400.

Economies were greater—values greater than ever.

This year, through an achievement new to the American Automobile Industry, we apply the economies of vast production to a *complete* line of cars.

We have been working toward this end for eight years.

All the general expense heretofore charged to a single class of cars we now *distribute* over several groups including not only low priced cars but cars in the high priced class as well.

Our dealers this year have contracted already for $180,000,000 worth of these cars.

On this volume we will save millions of dollars in manufacturing and sales economies.

We offer you a most attractive line of automobiles in the high priced class—at moderate prices.

We offer you the dominant value in lower priced cars—greater values than ever.

There are Light Fours, Big Fours, Light Sixes and the Willys-Knight group which includes the new Willys-Knight Eight.

Body styles, *all new*, include

—roadsters, two and three passenger,

—Country Club, four passenger sport model,

—touring cars, five and seven passenger,

—coupés, three and four passenger,

—sedan, five and seven passenger,

—and the limousine.

You will find in the Willys-Overland line an automobile of high quality, exactly adapted to your any need or pleasure.

In every class these cars represent such remarkable value that every consideration of pride, economy, safety and enjoyment must urge you to consider the Willys-Overland line first.

Tell the Overland dealer what kind and class of car you want. Let him help you solve your personal automobile problem as thousands of others are solving theirs—permanently.

See the Overland dealer now.

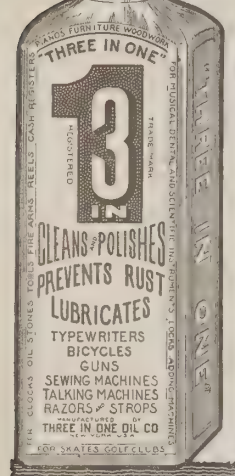
New Furniture for Old

If you only knew how wonderfully it would improve the appearance of your furniture, you would go right out and buy a bottle of

3-in-One

this very minute! Yes—those stains, smuts and finger-marks—even surface scratches—that mar so many handsome pieces of furniture, so many pianos and phonographs, can all be removed—quickly, easily. Try this 3-in-One treatment—



It Will Restore the "New" Look

Pour just a little 3-in-One Oil on a cloth wrung out of cold water. Wipe thoroughly each piece of furniture. Don't cover too much surface at a time, and be careful to rub only with the grain of the wood. Dry and polish with soft woolen or cheese-cloth. Do this today. The transformation will surprise and delight you.

3-in-One is sold at all stores—in 10c, 25c and 50c bottles, and in Handy Oil Cans, 25c.

FREE—Liberal sample of 3-in-One Oil and Dictionary of Uses—both sent free for the asking.

Three-in-One Oil Co. 42 EUF Broadway, New York

(Continued from Page 43)

The peacetime consumption of meat in Germany was about two and a quarter pounds per head per week, practically double the consumption of a generation ago.

The meat production of Germany was to a considerable extent dependent upon imported foodstuffs. We shall not go far wrong if we assume that the fat concentrates were devoted to milk production and the grain concentrates to meat production. If the data of the total fodder consumption and imported feeding stuffs be contrasted, and evaluated according to the rules of scientific stock feeding, we learn that approximately one-quarter of the meat consumption of Germany was derived from imported feeding stuffs. The meat production of Germany had long been upon an efficient plane, as the livestock yielded annually over half their weight in market meat. Germany also imported meat and meat products, and especially fat.

Following the recommendation of the Eltzbacher Commission, one-third of the swine were slaughtered late in the winter of 1914–15; presumably between six and seven million swine were killed. During this winter there was undoubtedly an unusual consumption of meat. Of the conserved meat, which should have been available for reserve for the ration of the following year, a great deal was lost by decomposition; so that, beginning with the autumn of 1915, the meat consumption was reduced to the plane of meat production, and this was low, because the fodder and grain crops of that summer, with the exception of potato, were far below normal.

According to the plans of the scientists, the number of head of domestic animals was to be kept down to the available fodder. When, in the fall of 1915, the available feeding stuffs were recognized to have fallen far below the plane of the number of animals, a second slaughter should have been decreed. If the slaughtering of animals was necessary in 1914–15 it was doubly necessary in 1915–16. Now this did not meet the views of the agricultural population at all. They wished to nurture their stock in order to restore their possessions and stand equipped, ready for the return of peace, which was regarded as certain to come within a year.

When Meat is Not Meat

If the peasant fed up his young stock this could only be done at the expense of proper feeding of the milch cows and by the utilization of potatoes, sugar beets and molasses; to some extent also of grains, the feeding of which to stock was prohibited. All of these the peasant did feed, with the aim of restoring his count of livestock.

During the winter of 1915–16 a great deal of meat was requisitioned for the army. The peasants killed many animals in domestic slaughtering, consuming the meat themselves outside of all control and dispensing large amounts outside the channels of trade, to people living in small towns and in the large cities. Under these circumstances the stock in the best condition was killed. There was not enough feeding stuff to maintain all the animals in reasonably good condition; therefore, the remainder of the stock was carried along on what was little more than a maintenance ration.

When the cities, buying through the channels of trade, went to the country for livestock they could secure only cattle and swine of low grade, thin even to emaciation. Such animals yielded little meat and when placed upon the market did not suffice to meet the demands. Thus, with each month following October, 1915, the scarcity in meats became more and more pronounced. There was little or no meat procurable by importation during the winter of 1915-1916; certainly not over one hundred thousand tons, as meat was scarce both in Holland and in Scandinavia.

Local meat cards appeared in various portions of the empire late in 1915 and became universal in the cities early in 1916. Two meatless days were established—Tuesday and Friday. There was little control in the country districts or in small towns that could secure their supplies through personal dealings with the growers. The country districts made the exportation of animals and meat products to the cities directly and indirectly difficult or impossible. Maximum prices were placed on certain meat—pork—which had the simple effect of driving that meat from the market and inducing others to appear at higher prices.

The situation was, of course, taken advantage of by manipulators, with the result that the rich secured the meat and the poor in the cities had practically none. In the cities there were fine distinctions as to when meat was meat, and when it was not meat. Thus, loin of veal was meat; but tongue and liver and tail were not meat.

In March, 1916, the open market for cattle was practically empty and the provisioning of the cities with livestock was placed under regulations. The cities contracted with livestock associations to furnish so many head a week. Thus, Berlin, in peacetime, consumed one hundred thousand swine a month. In April fourteen thousand swine were ordered to be purchased for the city markets; only twenty-three hundred were secured. The simple truth was that the swine were not fit for slaughter. The cities had no power to confiscate the animals.

Conditions in South Germany

Meantime, in South Germany, the meat cards provided for one and a half to two pounds of meat a week. The cities attempted to meet the situation by buying their stock directly. Failing to obtain stock fit for slaughter, as early as May they began to buy lean stock; and, securing supplies of feeding stuffs, proceeded to prepare the animals for their markets. These meats went largely to the poorer classes.

For example, in May, 1916, four hundred thousand swine were purchased by the city of Berlin, to be used as feeding stock. The cards throughout the cities, from January to May, called for from one-half to one pound a week. The amount of meat available was so small that only a small percentage of the buying public could secure meat, and the average weekly ration in many cities in the spring months was not over three-quarters of an ounce, and this on paper.

In May conditions became so bad that a uniform card regulation was attempted, and this was elaborated when the new food controller took charge. Each householder had to select a meat dealer. The central slaughterhouses and the wholesale buyers were eliminated. The cities sublet contracts for slaughter and delivered the meat directly to retailers, who obtained meat in return for retail cards turned in by them. The amount stated on the cards was reduced to nine ounces a week. At this time the meat ration in the army was reduced to three-quarters of a pound a day, with two meatless days a week for soldiers not on active duty. The card system at this time was necessarily a failure because the amount of meat available was so much smaller than the amounts called for by the cards.

In June a survey of the livestock situation convinced the authorities that it was useless to attempt to increase the ration. The plan was then formulated to keep the ration low and feed up the younger stock, with the intention of increasing the meat ration in the autumn. Practically speaking, conditions in the summer months remained unsatisfactory from every point of view until the Imperial meat card was issued in July. This accomplished more equitable distribution of meat; but the ration remained very low. In August pork was practically withdrawn from sale. A survey of the rations of the different cities of Germany during the summer months indicated that the individual allotment secured each week was not over one-third of a pound.

In September the final system of the war nutrition department was put into effect. The essential feature of this system was the confiscation of the livestock and the control of the feeding of this stock and its delivery to the market, precisely comparable to the system described for the dairies. The livestock remains in the physical possession of the peasant, but the use belongs to the state; the state furnishes the feeding stuffs, allots to the peasant a certain fraction of the meat, and claims the balance for the nonagricultural population.

One concession was made to the peasant which, it was fully realized, carried grave dangers: the peasant was permitted to slaughter stock for his own use, but was supposed to kill such animals as gave a meat ration comparable to the meat card of the nonagricultural population. There is good evidence that this concession was being widely abused in the early months of the autumn of 1916; and, indeed, nothing else was to be expected.

Looking back over the nine months preceding the introduction of the Imperial meat card, in September, 1916, one may concisely describe the situation by saying that the

agrarians took food from the people of Germany and utilized it, with their own feeding stuffs, in order to carry along a number of animals so large that the total available feed for them was not enough to produce comparable amounts of market meat or dairy products, the nutrients being largely utilized by the animals for mere maintenance. This has been made clear by the results of the census of animals.

The number of swine left at the time of the great slaughter in 1915 was supposed to have been some seventeen millions. In October, 1915, the count was over nineteen millions. In December, 1915, it had fallen to seventeen millions. The count in April, 1916, gave a figure a little over thirteen millions. This indicates the number of pigs that were killed during the winter for use by the peasants and for sale outside the open channels of trade. On September 1 the number had risen to over seventeen millions. In November, 1916, another census of swine indicated that the count had risen to practically the figure of June, 1913—some twenty-one millions. In other words, the young pigs born early in 1916 had been fed up during the summer.

The count of cattle in April, 1915, was 24,900,000; in April, 1916, it was 19,900,000; and the milch cows were only eight hundred thousand less than in December, 1914. In November, 1916, the number of milch cows was back to the number before the great slaughter. In other words, the calves had not been killed; the heifers had been raised to milch cows. All in all, the peasants during the year from May, 1915, to October, 1916, had accomplished the restoration in numbers of the livestock in Germany.

If Germany, in December, 1914, did not have the feeding stuffs to maintain the animals, then she certainly did not have them in November, 1916; and all the work of the Eltzbacher Commission to regulate the relative consumption of food units by domesticated animals, and by man, has been in vain. Germany during the winter of 1916-17 is consuming, according to the card, a little over half a pound of meat a week from the same number of animals that in time of peace yielded over two pounds a week, of which one-fourth of a pound came from imported feeding stuffs. The experience of the past year has been an experiment to determine how many head of stock and of human beings could be maintained on a minimum of food and feeding stuffs; but this has not redounded to the credit of the agrarians or to the nutrition of the industrial classes.

Von Hindenburg's Appeal

Now that it has passed, it may be a source of satisfaction to the people of Germany to realize that these animals will be of utility in the near future. It is, however, improbable that the present crop will flesh and fatten the number of animals now in hand. Until the enactment of the comprehensive regulations of the food controller in September the agrarian population was permitted to decide between the maintenance of their domesticated animals and of their fellow citizens; and the fellow citizens had a close shave.

All through the summer of 1916 the industrial workmen of Germany, underfed and overworked, supported their government with the assurance that they would "hold through." When they come to realize that they have had to "hold through" as much against the mismanagement of their agrarian brothers as against the Allies' blockade, the breach between the Social-Democrats and the Agrarians will be wider than ever.

The system of regulation now in operation had it been placed in effect in the fall of 1915 would have spared Germany to a large extent the meat and milk scarcity of the past year. If the accounts in the public press of this country, to the effect that Field Marshal von Hindenburg has appealed to the agrarians for a square deal with the industrial population, and for a strict compliance with the regulations of the food controller, are true, that fact suggests that the regulations of the President of the War Nutrition Office were being evaded.

On the face of the returns one cannot believe that it will be possible during the present winter to maintain in a productive state the swine and cattle of Germany, except by restriction of the foodstuffs now assigned to the industrial classes by the excellent system worked out by Von Batocki.

It is possible that the final struggle between scientific control of the food supplies and the class-interest policy of the agrarians is now at hand. Last year the industrial population went on short rations. This year it must be the livestock alone, or German efficiency has gone to wreck.

The use of poultry in Germany was restricted practically to the well-to-do classes and the accentuated scarcity of poultry, with its higher prices, concerned them alone. On the other hand, the reduction in the supplies of fish affected the common people. From one-half to two-thirds of the supply of sea fish in peacetime was drawn from waters that are now more or less closed to German fishing. Importation of fish from Holland and the Scandinavian countries was extensive until the pressure of the blockade forced these countries, first, to reduce the scope of their fishing operations, and, second, to prohibit indirectly or directly the sending of fish to Germany.

Under these circumstances the sea-fish supply was much reduced during the summer of 1916. The German catches of Baltic and sweet-water fish were increased. The higher grades of fish were consumed by the well-to-do in peacetime, but the cheaper grades of fish formed a staple in the diet of the working people. These cheaper grades of fish, both fresh and smoked, are now expensive. Herring were so cheap in peacetime that they were used as fertilizer; now the prices on the coast range from ten to twenty cents a pound.

A Reduced Beer Supply

A survey of the fish markets and of the reports in the trade papers confirms the opinion, expressed in the daily press, that the total fish consumption during the past summer was probably not much lower than in peacetime; but that the distribution was different, since fish went to replace meat in the households of the well-to-do and middle classes. The supply of fish during this winter must be very much reduced, since the sweet waters now furnish very little; and even in peacetime the salt waters furnished in winter much less than in summer.

In the years directly preceding the war the consumption of alcoholic beverages by each person a day in Germany was seven-tenths of a gallon of beer, two hundredths of a gallon of spirituous liquors and three-hundredths of a gallon of wine. Some thirteen per cent of the beer was made from imported barley; half of the wine was imported. The per-capita consumption of alcohol yielded one hundred and ten calories daily—between four and five per cent of the total intake in calories. The Germans ingested more calories in the form of alcoholic beverages than in vegetables and fruits.

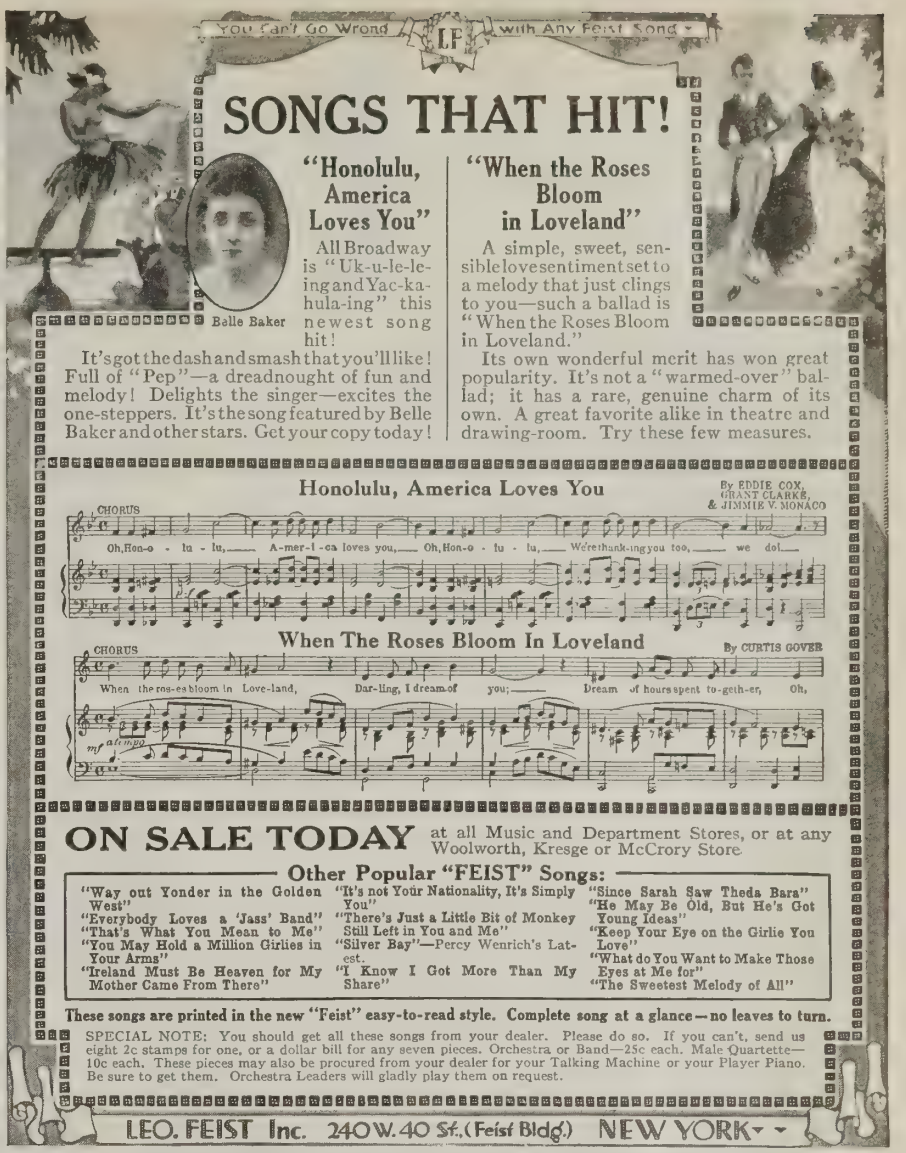
Reduction in consumption of alcoholic beverages was determined upon early in the war, but really carried into effect only after the low harvest of 1915. The alcoholic beverages contain but a small fraction of the protein and calories of the grains from which they are manufactured; the protein is entirely lacking in spirituous liquors. Entirely apart from questions of the effects of alcohol, restriction in manufacture was necessary to minimize loss in grain and to reduce the labor required in the processes of manufacture.

That the prohibition of vodka was necessary in Russia was regarded in Germany as evidence of the lack of civilization in Russia. The amount of barley that could be devoted to the manufacture of malt was reduced to sixty per cent; grain devoted to whiskies was understood to have been reduced one half. More recently the making of grain whiskies has been interdicted. The importation of French wines apparently continues; otherwise there must have been immense amounts stored in Germany, for these wines are everywhere to be had.

The hours of sale and the amounts allotted for daily sale were fixed differently in different parts of the empire. In Berlin limitation was by hours; in Munich limitation was by quantity—so much for each resort for each day. In the summer of 1916 sophistication of the beer by addition of saccharine was first permitted; later it became compulsory. This adulteration has been resented by the people, as saccharine almost ruins a good beer.

Abuse of alcoholic beverages was very rarely observed by the writer during the months he was in Germany, moderation being due largely, he is convinced, to the restraint imposed by the psychology of war and to preoccupation with work, thus indicating again that alcoholism results from idleness rather than from overwork.

Editor's Note—This is the second of three articles by Doctor Taylor. The third will appear in an early issue.



It answers cost
It answers comfort—

Neōlin—our wonder-sole of wear

We sat discouraged, my wife and I, listening to the pounding of the children's feet—thinking of the monthly shoe-bills which seemed to set each little sacrifice of ours at naught.

We sat discouraged, my wife and I—I, foot-weary from the busy office, she from all the foot-miles of her household tasks. And then I spoke:

"Ah! if there were but something BETTER THAN LEATHER—something that would wear better and be more foot-comforting."

How little did we know that even at that moment Science had produced something far, far better than leather—better feeling, better LASTING, and with looks that match its wear!

* * *

Six months after, I made my great discovery.

I had picked up a shoe idly from where it lay on a shoe-store shelf. It was a beautiful shoe, styled and smart.

And about the sole was something—well, *modern* would be the word, I think.

So first I saw a Neōlin Sole. The next moment I had tried it. That moment was a memorable one for me—for flexible and foot-easing Neōlin was, and soothing as a slipper from the first smooth step!

And that was but the beginning of my wonderful Neōlin experience.

For, as day by day and month by month I wore my new Neōlin Soles, an increasing wonder came. They were wearing as no other shoe-soles had ever worn. And then—!

Well, my wife wasted not a moment! Neōlin looks had already won her—and now that Neōlin wear and comfort were proven facts, there was nothing for it but Neōlin Soles for the whole family!

Yes, life is somehow different since Neōlin came—and we thank Neōlin for that. Since then the shoe-bills have hoisted a permanent relief sign, and Willie and Margaret and Dorothy can play and jump and pound, and, bless you, we won't worry. Isn't Neōlin there to wear and save? Yes, and to do far more than that:—

For Neōlin saves the doctor bills as well through snug-foot, waterproof tread—and we just thank it again for that.

Wouldn't *you* thank Neōlin, too?

* *

Neōlin is for new shoes or new soles. It comes in black, white, tan; and your shoe-dealer or repairer probably has it. If not, *insist* and both will get it next time. Remember, it costs no more. And its quality is always the same on any price of shoe. To avoid the imitations—*mark* that mark, stamp it on your memory: Neōlin—

in your plant,

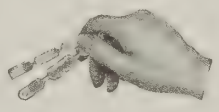
ECONOMY renewable

FUSES

Should always be used to break the electrical circuits when excessive currents cause fire and accident hazards. Safe under all conditions of service, Economy Fuses have the additional advantage over old-style "one-time" fuses of being renewable—just the replacement of an inexpensive "Drop Out" Renewal Link restores an Economy Fuse (after it has operated) to its original efficiency.

Thus Economy Fuse users (large and small) cut annual fuse maintenance expense 80% besides obtaining positive protection.

This is a sectional view of an Economy ferrule type renewable fuse. They are made in all commercial capacities (both ferrule and knife blade types) from 3 to 1000 amperes in both 250 and 600 volts.



"Drop Out" Renewal Links are accurately rated, inexpensive, and their use renews an Economy Fuse over and over again.

Write for samples as offered in The Saturday Evening Post of December 9 and December 30, 1916.

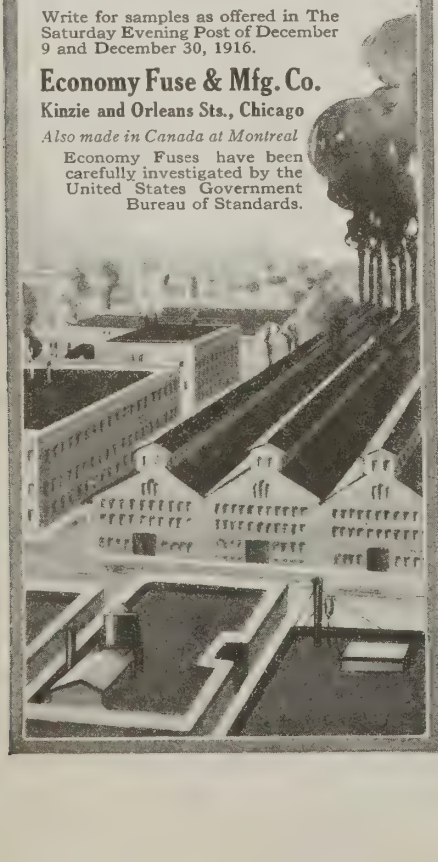
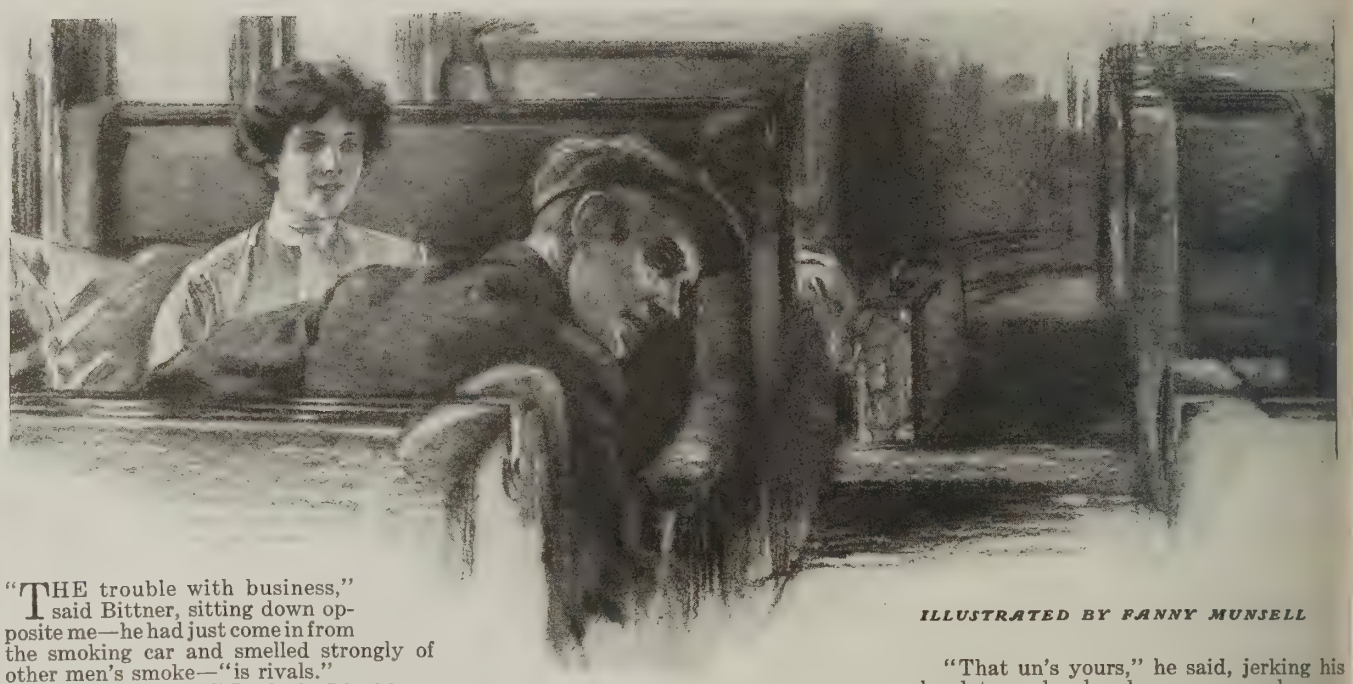
Economy Fuses have been carefully investigated by the United States Government Bureau of Standards.



Making Business Men

By Anne Shannon Monroe



ILLUSTRATED BY FANNY MUNSELL

"THE trouble with business," said Bittner, sitting down opposite me—he had just come in from the smoking car and smelled strongly of other men's smoke—"is rivals."

"Is business bad?" I asked. I had been in the West for a year in business for myself, and I was eager to get at the heart of things with my old employer, with whom I was now returning to Chicago as full partner. He had come West and summarily carried me off on the suggestion that he had a big new scheme on foot, but he had given me no inkling of what it was. His suggestion of rivals now made me wonder whether things were going altogether well with the old Bittner & Binks concern.

"Business ain't what you might call bad from a box-office standpoint," he said, pulling out his knife and looking about for something to whittle, while I grew uneasy for the Pullman furniture.

"And every business must have rivals," I put in cheerfully. "That's inevitable."

"If they can get away with it, it's theirs," he came back, jabbing viciously at his umbrella handle. "I ain't got nothin' against the general run; they get theirs, natural. And when once we get our new scheme rival proof, rock-ribbed and riveted, we'll step over to it so slick and clean there won't be no chance for any of our old rivals to tack and follow. You're not standin' to lose, comin' in with me; but there'll be some hard tuggin' for a while."

I suddenly thought with comfort of my Western ranch, acquired the past year. My own future was secure, whatever happened. New schemes, even with a business genius like Bittner, had diverse possibilities.

"Will this new scheme do away with the old book business?" I asked. We had traveled two days, but owing to Bittner's many excursions to the smoker and the crowded condition of the Pullman car, we had got only this far. Bittner would never talk business in another's hearing.

Plowing With Razors

"It'll swallow it," he answered. "It's bigger." He gouged on for a while; then glancing back to make sure that no one was in earshot he continued: "My idea is that a big proportion of American business men are doin' the other fellow's work and noddin' over it. Their job ain't no alarm clock to their senses. When they started in they didn't know enough about business in general to choose right, and they ain't earned enough or learned enough since to make a change. My new scheme's to put 'em wise to business principles and conditions at the present moment, make 'em know the whole market and their own value in it. Creator's played mighty fair—ain't started none out without his tools, but a lot ain't never found theirs. They're plowin' with razors, and they just rough up the field and ruin the razor."

I sat for some moments thinking over the new scheme. It sounded gigantic; but just how was it to be carried out?

"Is the new scheme pretty well worked out?" I asked. He looked quickly round. Two men had just taken the seat behind us.

"The thing's all blocked out, and that's the biggest part," he said in a low tone. He looked at his watch. "We can't talk here, and there's a man I've gotta see before he gets off. I won't wait for you in the mornin'. Come to the office as early as you can, and we'll go into everything root and branch."

The first whiff of the office air reminded me that as partner I now had a voice, and I instantly determined to raise it in the cause of ventilation. A hundred typists were clicking away for dear life in the large operating room. Miss Krog, the handsome blond forewoman, well tinted and tailored and more of a presence than ever, was showing a new girl how to fill in lines on follow-up letters. The same old bookkeeper was busy in the cage, her swarthy, heavily lined face bent over her books, and her big, intense black eyes peering through ugly, horn-rimmed glasses, fairly daring a figure to get away uncounted. The private office was neglected and ill-kept, though sturdy William, the bullet-headed office boy, had evidently attempted to bring about a semblance of order on the surface of things.

Apparently I was not expected. Miss Krog's expression changed to frowning surprise when she saw me—I caught the antagonism before she could mask it; then she came over to shake hands.

"Glad to see you back," she said in a low, constrained voice.

The bookkeeper left her cage.

"Where you stopping?" she demanded in an inquisitional tone.

"At the Harrington."

"Umph! I looked there once."

William stopped his dusting, rubbed his hand on his trouser leg and thrust it out to be squeezed. He didn't say a word, but there was heart in William's greeting. Each went quickly back to the tasks that had been interrupted. The dull, heavy atmosphere of the great barnlike place contrasted drearily with the remembered brightness of my own snug little office in the West. I had forgot the cold, machinelike inhumanity of a large office. I suddenly wished with all my heart that it would prove a dream, that I would wake up presently and find myself back at my own quiet desk, where business was human. How many times in the next months I was to repeat that wish! Had I imagined then what was ahead of me, I would have taken the first train out of the city.

While I was hanging up my wraps Mr. Bittner came in, spoke to Miss Krog, nodded to me, and went directly to his own much-hacked, flat-topped desk and began to open mail.

"That un's yours," he said, jerking his head toward a handsome new mahogany desk in the lightest corner of the private office.

I went to it, pleased in spite of myself with this compliment to my taste—it was the only good piece of furniture about the place. Further than that, deep down inside I was thrilled by this demonstration of the will and determination of the man. He had bought the desk before leaving for the West, not doubting that I would return with him. I felt once more that peculiar sense of certainty that whatever he ordained would eventually come to pass. And with the feeling the thrill of adventure returned and for a time banished regret. I sat down at the desk, rolled back the top and began to investigate the little pigeon-holes and drawers.

Bittner Goes on Record

Mr. Bittner came over and placed a bulky package before me, then he drew up a chair and sat down. At last I was to hear all the details of the big new scheme.

"First off," he began, squinting up over his carving, "we gotta get rid of our rivals."

"I thought this was wholly new, without rivals!" I exclaimed, dropping back in my chair, disappointed.

He gave me one of his steady sidelong looks, then went on: "Before a new business is dry from the shell the come-ons are ready. We gotta put up bars as fast as we travel—bars that'll be hard to get over. I want you to write a complete history of the beginnin', growth and development of the new scheme. Give the date of its startin'—now; the name of the founder—me; the purpose—to make and place business men and then tell what it's done in the way of wakin' up American men and puttin' 'em right with themselves and business. State it clear that it's the only enterprise of the kind in existence. After the scheme is going good, carry this history over to the State Historical Society, have it filed, and get a receipt for it that will read like this:

"'Received and filed by the State Historical Society a complete history of the founding of the first enterprise in existence for the making and placing of business men

That'll be the first bar for the imitators to get over—that record provin' that we are the first. Then there's one more bar: I gotta get recognized in some public way as an authority on business; but I ain't got that figured out yet; and ——"

"Mr. Bittner," I interrupted, "you are. It's perfectly wonderful how all over the West business men defer to the Bittner & Binks books."

"It's gotta be in shape so's they can see it, like a label or a blue ribbon put on at a fair. But that can wait. You go ahead with the history."

"Please be specific, Mr. Bittner. Just how are you going to make business men?"

"By the aid o' your Uncle Sam and Bittner's Fifty Business Principles," he said.

"Then it's a course of study by mail, that makes plain the entire industry of money-making and shows a man his place in this industry?"

"You've got it. It's one thing to have the makin's and another to roll the cigarette. I'm goin' to do some rollin' that'll make folks take notice. Dope's all there." He tapped the bulky package, got up and ambled over to the bookkeeper's cage.

I untied the package and began to straighten out his notes. Soon I was into the thing and my enthusiasm awoke. I saw men of all stations in life, everywhere, doing uncongenial work, and I saw how this plan of Mr. Bittner's might be tremendously helpful, not alone to the man already marked with the stripes of deadly routine but to young men ready to enter business. By noon I had the plan fairly well in mind.

I found myself hurrying through lunch in the old-time spirit of not wanting to lose a minute. I was eager to finish reading the Fifty Principles and get at the History. At least I told myself that this was the reason why I gulped down tea and sandwiches in the regulation busy way; but I think the power of suggestion was really responsible. I was back in the land of rush and hurry, and already I was moving to the marching time business ever plays in large cities.

That afternoon I finished reading the notes on the Fifty Principles and the following morning began blocking out the History. The work went rapidly, and in a few days I was ready for the task of arranging the course of study. It was to include fifty short problems, a printed talk on each one, and as many personal letters as the subscriber needed.

Each problem involved one distinct and vital principle of sound business. It stated a complication, similar to a problem in arithmetic: "Mr. A, starting in business for himself, receives a call, apparently friendly, from Mr. B, who is already in the same business. How is he to treat that call?"

"They gotta be fooled into exercisin' their brains," Bittner had said, "same's a schoolboy over his arithmetic. He just thinks he's gettin' the answer."

The plan was to correct the subscriber's answer to the problem and return it to him, together with a printed talk on rivals and a personal letter. The meat of the whole course was in these talks. They so analyzed business, specific avenues and the type of mind especially suited to each one, that any man on its completion would have not only a very practical understanding of the entire business world and the principles on which success is founded but a pretty clear idea also of what his own brain could most readily accomplish!

Promising Profits

As formerly, my work consisted mainly of editing. The talks were scientific, based on experience and a keen knowledge of men, and they were tremendously human. I left them largely in Bittner's own peculiar style. I believed they would prove a sharp relish to the most jaded of minds.

The printing for each set of talks and problems would amount to about fifteen cents; the stamps for the entire course would come to about two dollars. Allowing from ten to fifteen minutes of our time for the correction of each problem, two days' work to a subscriber would be the outside limit. As we were to charge fifty dollars for the course, this would make our profit on each subscription in the neighborhood of forty dollars. I saw the practical soundness of the plan. It was not a get-rich-quick scheme, but a very excellent method of meeting a very real need. Business is making greater strides to-day than any other one science. Its tactics change, new departments spring into being, with new discoveries and inventions, and expansion is constantly going on. The very language of business changes year by year. Business literature, like medical works, is of small value a few years after it is printed. Getting down to our personal problem: To sell our books at a price to meet others on the market, we had been compelled to print in large quantities; and before these vast editions could be exhausted the books needed revision. By putting the whole science of modern business and business psychology in the form of fifty principles, each in a pamphlet to itself, the matter was simplified. Year by year new pamphlets could be added and old ones eliminated as they lost their value, without losing on the whole mass. I bowed to the astuteness of my partner.

So often I find that a lack of understanding in the accuser is the fault, rather than a fault in the accused.

I was soon ready to begin dictating the rearranged pages, and I asked Miss Krog, who had held aloof ever since my return, for her best stenographer. She thought a moment.

"I'll give you Gladys Howe," she said. "I find her very satisfactory."

I must confess that I doubted Gladys when I saw her coming. She was a lumpy sort of a girl, with blond hair falling over her eyes, fat arms and neck emerging from a blouse known as "peekaboo," fat hips that wabbled and large feet that overran her shoes. Her face was rather pretty, in a baby way, and she appeared amiable. She sat down by my desk and opened her notebook. Her nails were not nice, and she heaved in a short-of-breath manner as though her clothes were too tight for her.

She seemed to take her dictation readily, however, and I made up my mind to overlook her untidiness; but during the remainder of the day I paid for her readiness. Half a dozen times she came to me to get her notes straightened out, and frequently I had to redictate. She had probably done very well for Miss Krog, whose dictation varied little, day after day, and always concerned the business books. Gladys had achieved Miss Krog's vocabulary. But the work I was doing was of a different order and required a much larger vocabulary. Gladys didn't have it.

Gladys and Her Beau

I went to Miss Krog: "Can't you get me a better stenographer?"

She lifted her handsome eyes in a questioning way that put me all in the wrong. "That's very strange," she said icily. "Gladys does my work very well. I gave you the best girl I had."

I decided to try her a while longer. The next day, in smiling good nature, Gladys took her place. I dictated more slowly this time and had her read each paragraph back to me. I spent the forenoon dictating matter that I could have given to a competent stenographer in a couple of hours. But when she brought me the transcribed pages late in the afternoon they were full of errors. She had written "act yes" for "acquiesce," and said an "author" had expired when I had dictated "offer."

"Gladys, did you really think I dictated 'author'?" I asked. "It doesn't fit in with the context in the least."

She looked blank and ceased chewing gum for a moment.

"I didn't think," she said, blushing.

"Try thinking to-morrow."

I really did my utmost to get along with Gladys, as I could see plainly that Miss Krog did not intend to brook interference in her department, and she had always engaged the employees. She resented any criticism of a girl that she had hired as a criticism of herself. Miss Krog did not seem fully to understand my new position with the firm, or else she preferred to ignore it. Undoubtedly it was hard for her to see another woman in more confidential relationship with Mr. Bittner than herself, when she had been with him for so many years.

She had grown up with the business and she may have hoped some day to be given an interest in it. But Miss Krog had not grown beyond the business—that is, she merely kept up with it. She was an excellent forewoman, but that was all.

I foresaw trouble should I interfere with her in any way, so I determined to be as tactful as possible. The situation was a fire all laid, ready for the stroke of a match. I would not be the one to light the match. Day by day, however, Gladys became more irritating, and in spite of my good resolutions I decided I should have to get rid of her. However, an amicable way of doing so presented itself.

"What is that ring you are always twirling?" I asked one morning as she sank like lead into her seat.

"My engagement ring."

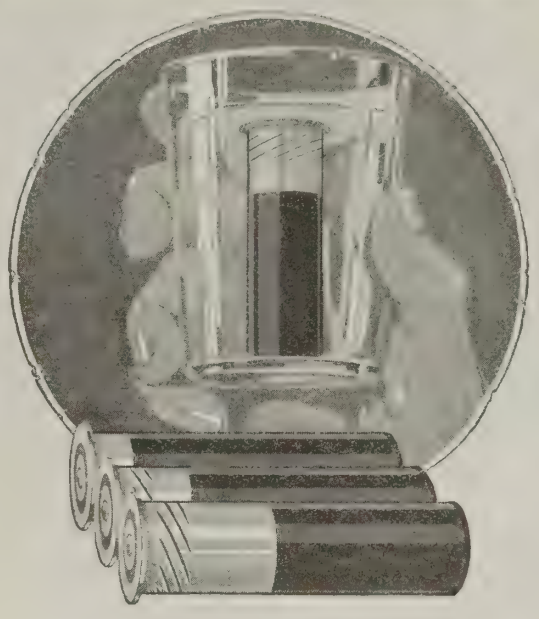
"When are you to be married?"

"I'm not giving notice," she said. "I'm working to get my wedding clothes."

"Is he a good man, Gladys?"

"Oh, yes! He gets eighteen a week and often overtime. He's a printer."

"Then why wait? Isn't he ready?"



Have You Tested the Waterproofing of Your Shot-Shells?

Will the shells you now use soften and swell when they get wet? If they do, what's going to happen some day when you strike a leaky boat or get caught in a down-pour?

Put a Black Shell into a glass of water for half-an-hour. Get it wetter than you'd ever actually get your shells. You'll find it still chambers and ejects as well as if never wet.

It's a good thing to know how much soaking your shells will stand.

US THE BLACK SHELLS
Smokeless and Black Powders

Ask your dealer for The Black Shells. If he hasn't them, mail $1.25 to our nearest selling agent to pay for a box of twenty-five and they will ship prepaid. Be sure to specify gauge and details of load. This is a trial offer and holds good only in towns where The Black Shells are not now sold.

General Selling Agents: National Lead Company, Boston, Buffalo, Cleveland, Chicago, St. Louis, Cincinnati; John T. Lewis & Bros. Co., Philadelphia, Baltimore; National Lead & Oil Co., Pittsburgh; United Lead Co., New York; Selby Smelting & Lead Co., San Francisco.

GLIDDEN AUTO FINISHES

FEDERAL

Double Cable Base TIRES

Federal Tires have all desirable features of the best tires, and something more.

Equal to any in construction, service and non-skid qualities, they contain an improvement found in no other automobile tires.

Double-Cable-Base

As the greatest strain upon a tire occurs at its base next to the rim, there are built into the base of every Federal Tire, four staunch, twisted steel cables of great tensile strength.

These cables hold the tire so securely to the rim as to withstand the most severe service strains. It is an exclusive strength and safety feature which overcomes the causes of most tire troubles.

Federal Tires in Rugged (white) and Traffik (black) non-skid treads are especially built for Extra Service.

Recommended and sold as such by leading dealers everywhere.

The Federal Rubber Company OF ILLINOIS
Factories: Cudahy, Wis.

Mfrs. of Automobile Tires, Tubes and Sundries, Motorcycle, Bicycle and Carriage Tires, Rubber Heels, Fibre Soles, Horse Shoe Pads, Rubber Matting and Mechanical Rubber Goods.

"Oh, yes, but I want lots of pretty clothes."

"That is foolish, Gladys. You get married right away. This office will ruin your looks, and a girl's looks mean more to a man than her clothes."

She slapped a pudgy hand to her plump cheek. "He said I was losing my color. To think you noticed it too!"

"Get married, Gladys; that's the best thing for you to do."

Several mornings later she came to my desk, blushing: "We're going to," she whispered. "I'm leaving Saturday."

I closed my eyes to the sloppy, untidy wife she would make, and encouraged her to go ahead. Maybe the man wouldn't mind. She was lovable in an easy-going, good-natured way, and men prefer lovableness to efficiency in their wives, if they can't have both.

So passed Gladys. My next stenographer, Miss Douglass, was a horse-faced girl with eyes high in her head and fingers of steel. Miss Krog sent her in for me to test before hiring her, and I found she read her notes easily. She demanded—and got, as I upheld her—ten dollars a week. I simply could not spend so much time correcting work and searching my vocabulary for simple words. Miss Douglass showed no matrimonial symptoms in the way of a ring. She was neat and orderly and always on time. That problem seemed settled, provided she did not insist on a raise too soon. It is only the inefficient women who reduce wages. The efficient ones demand and receive pay commensurate with their abilities. The great mass of drifting, unambitious girl workers, who are merely doing time till some man makes it possible for them to "quit workin'," have established a wage that just about measures their worth. Their standard need not frighten a girl who is ambitious and really tries; who brings a brain as well as fingers to the typist's job.

When I was not busy with my stenographer I was usually working with Mr. Bittner. He put himself into the Fifty Principles with a fierce, constant, burrowing force that sometimes startled me, so determined did he seem to wrest from life and experience every particle of business value. Once when I suggested that he let well enough alone, as the course as we now had it was sufficiently unique and thorough to please American business men, he came back with:

"You're forgettin' Borrige & Kemp!"

Hated Rivals

Borrige & Kemp, I had discovered, were the particular rivals that Bittner feared in his new field.

I laughed outright. "Aren't you a bit dippy on that firm?"

"I'd be dippy to forget 'em," he returned with a snap of his jaws, and I said nothing more. This was one subject about which there could be no levity.

At the end of three months I again suggested that we begin to advertise the course without waiting to finish it. I was confident of success, and Borrige & Kemp had pushed the business-book advertising to full pages in all the leading publications, again cutting the price. We had been compelled to do the same, thus increasing our expenses while decreasing our income. The book business remained steady, but it did not grow, neither did we get the high class of buyers that had once been Bittner's pride.

"We'll have our hands full after she's rigged," he said, "commandin' her and keepin' her off the rocks. She's gotta be finished to the last ounce o' paint before she's launched."

"Mr. Bittner," I asked one day, "did you ever fail in anything you set out to do?"

"No man can keep on doin' things rapid, one after another, without succeedin' sometimes and failin' sometimes," he said. "If you think the successful men always succeed, just get a searchlight on their careers way back. It ain't a failure that ruins a man and it ain't a success that makes him; it's never campin' by either."

At last the entire course was in readiness, and I determined to hustle the final copying through and get it to a printer as soon as possible, so that Mr. Bittner would have no chance for further changes. I asked Miss Krog to get me a good copyist, for I had decided that I would put two girls on the work.

"I'm advertising Sunday," she said shortly. "I can't spare another girl now from the operating room."

Monday morning Miss Krog was detained at home by a sore throat, and Mr. Bittner

What Do You Do When Your Pipe Gets a Grouch?

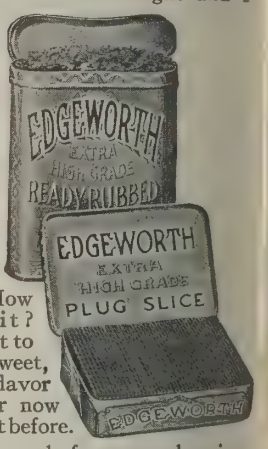
"That pipe and I had been friends for years," remarked a pipe-smoker, pulling out an old scorched briar. "Then of a sudden something went wrong. The pipe got a grouch.

"I tried so many cures, my wife started making fun of me. Finally I gave up and chucked the old briar into the ash pile—covered it up with every shovelful of ashes I could lay my hands on.

"For two months after that it was one thing after another—new pipes, cigars, and even cigarettes. Between them all I managed to forget.

"But one day a couple of weeks ago I was down cellar brushing up when I thought of my old pipe. Do you know, I dug down in that ash pile like a dog after a bone. And I got it—caked in damp ashes and the color of a wet piece of iron.

"Williams came over that night and I brought out the relic.



"'Fill her up with my Edgeworth,' he suggested, handing me his blue tin.

"For a moment I smoked—just deciding what the result was. Then Williams saw the grin that spread over my face. How could I help it? Imagine how it felt to get back to that sweet, satisfying old flavor again, and better now than I had known it before.

"So that's my remedy for a grouchy pipe. Throw it in the ash pile and let it stew for a couple of months."

Now, Williams has another side to this story. He claims it was the Edgeworth that gave that glorious flavor and not the pipe at all.

We won't attempt to decide this for you one way or the other, except to say that Williams has been smoking Edgeworth for years and his word ought to carry some weight. And, we might add, the man who told this story has used it ever since.

Anyway, Edgeworth Smoking Tobacco makes a friend or two wherever it goes—mostly among fellows who take pipe-smoking rather seriously.

You perhaps have never smoked Edgeworth. We very much wish that you would try it and will very gladly send you enough for several smokes, free. Just drop us a card bearing your name and address, and the name of a dealer from whom you buy tobacco.

Edgeworth comes in two forms, Plug Slice and Ready-Rubbed. It's the same tobacco in both forms, but Plug Slice is prepared for the pipe by the smoker, who "rubs it up" in the palms of his hands. Ready-Rubbed is, as the name suggests, all ready for the pipe. You may have a sample of both and decide for yourself which form suits you better.

The retail prices of Edgeworth Ready-Rubbed are 10c for pocket-size tin, 50c for large tin, $1.00 for handsome humidor package. Edgeworth Plug Slice is 15c, 25c, 50c and $1.00. Mailed prepaid where no dealer can supply, but except in a few isolated cases all dealers have it.

Write to Larus & Bro. Co., 1 South 21st Street, Richmond, Va. This firm was established in 1877, and besides Edgeworth makes several other brands of smoking tobacco, including the well-known Qboid—granulated plug—a great favorite with smokers for many years.

To Retail Tobacco Merchants: If your jobber cannot supply Edgeworth, Larus & Brother Co. will gladly send you a one or two dozen carton of any size of the Plug Slice or Ready-Rubbed by prepaid parcel post at same price you would pay jobber.

"Cereal for Breakfast!"

What child is not fond of delicious and nourishing cereal—oatmeal, rice, farina, etc.?

Serve cereals often! They're good for children. Easy to prepare, and the results are perfect, if you use a

"Wear-Ever"

ALUMINUM DOUBLE BOILER

Simply fill the lower saucepan with water, place cereal in upper saucepan, and let boil for about 15 minutes.

You will say, "I had no idea cereals could be made so deliciously soft and creamy."

You can also cook the most delicate sauces and puddings in the **Wear-Ever** Aluminum Double Boiler without fear of burning. And you will find other uses for this valuable utensil from day to day as it remains in your kitchen.

Wear-Ever Aluminum Utensils save fuel because they take the heat quickly and hold it. Remember to turn up the flame high until utensil is thoroughly heated, and then to turn it down low.

Wear-Ever Utensils give such universal satisfaction because they are made up to the highest manufacturing standards.

The enormous pressure of rolling mills and stamping machines makes the metal in **Wear-Ever** dense, hard and smooth, insuring lasting durability.

Because made in one piece, **Wear-Ever** Utensils have no soldered parts, or joints and seams in which particles of food can lodge and form poisonous compounds. They are pure and safe—cannot break, crack or chip.

Replace utensils that wear out with utensils that "Wear-Ever"

If you have never used **"Wear-Ever"** we will send you the sample 1-qt. Stewpan, as pictured, for only 30c. if the coupon is mailed on or before March 20th, 1917.

The Aluminum Cooking Utensil Co.
New Kensington, Pa., Dept. 18, or (if you live in Canada) Northern Aluminum Co., Ltd., Toronto, Ont.

Send, prepaid, 1-qt. **"Wear-Ever"** Stewpan. Enclosed is 30c. in stamps or coin—to be refunded if not satisfied. Offer good until March 20th, 1917, only.

asked me to go to the reception room and choose some girls. It seemed that we needed an assistant for the bookkeeper, Miss Lutkins, and several typists. I was glad of this opportunity to choose for myself, for I wanted an especially quick, accurate copyist to put on the Fifty Principles with Miss Douglass.

I found the usual throng of applicants and everyone went to my heart, but I couldn't help looking among them for the especially appealing case. I found two. Miss Carrel was a small, emaciated person with a pale, anæmic face out of which burned eager eyes. When I sent her to the table to fill out a blank I discovered that she was also lame. That decided me on the spot. I couldn't send such a girl traveling farther until I had proved her inefficiency. I was delighted to find that she was a rapid copyist, that she had done manuscripts for authors, for this made her just my girl. She was thirty, but she had never worked in an office before. The other girl, Blanch Booth, was too pretty to go around to men's offices looking for work. I still think she was one of the prettiest girls I ever saw—slender, with a beautiful supple figure and patrician bearing. Her features were almost Greek and her fairness made everyone else look dingy. Fortunately she had studied bookkeeping at a business college, so I engaged her to help Miss Lutkins. She was only nineteen and this was her first job. It was well for her to begin in an office made up so largely of women. The other applicants were not unusual in any way.

I took Blanch to Miss Lutkins.

"Here is your new assistant, Miss Booth," I said.

"What?" Miss Lutkins' hard, harsh "What" always made me think of a flatiron coming down on a delicate shirt front. It was fairly slammed at the person who addressed her.

"Miss Booth," I repeated.

Bold Advertising

"Well, put up your things and get busy. There's plenty to do." She again riveted her eyes on her figures and I showed the young girl to the cloakroom. Then I installed the new typists, and returned to the private office where Miss Carrel was waiting. She looked up and smiled so happily and humanly that I was won to her all over again. I had William fix her up a desk near the private office, so that she would not have to walk far to consult me, and then I explained her work.

From the first she was on the job every minute. The way the pages flew from the typewriter under her nimble fingers was a delight. It put new vim into the office force. At noon she sprang up from her desk and hurried over to the reading table where we put magazines for the girls' use. She picked up a business publication.

"May I carry one home to-night?" she asked. I sat watching her.

"Yes, indeed. Bring it back, that's all."

Then she hurried out of the office, dragging her poor lame leg pathetically.

She was late that noon, and I was sorry. I wanted her to be the ideal business girl. But I said nothing about it. Probably it wouldn't happen again—she was new to business rules.

With the two girls working steadily and both of them rapid, the Fifty Principles' typing was soon finished and the manuscript sent to a printer. The next work on hand was the writing of the advertisements. They were subjected to the same tests of writing and rewriting as the Principles. We planned a three months' campaign, during which time we were to spend thirty thousand dollars on space. Had the firm of Bittner & Binks been less well known and without persistent rivals, we should have had a less expensive try-out; but in the face of all the advertising the firm had done during the last six years and with the necessity of springing the scheme full-fledged on Borrige & Kemp, it would not do for us to be niggardly. We must show confidence in our own commodity. This did not really mean a heavier advertising appropriation than usual, however, as we intended to substitute the Fifty Principles for the business books. Not even the advertising representatives knew that a new scheme was in the air. No one had been taken into our confidence—even Miss Krog supposed we were working on another book—so great was Mr. Bittner's fear lest the plan get abroad and reach the ears of our rivals.

The catalogue was an achievement in itself. It was of regular book size and form,

Goodyear Tires, Heavy Tourist Tubes and "Tire Saver" Accessories are easy to get from Goodyear Service Station Dealers everywhere.

It Means More Miles To You

Experts contend that 30% of all tires wear out before their time because of inadequate inflation.

And inadequate inflation usually means an inadequate tube—one that holds air feebly, surrenders some, and inflicts insidious damage by failure to perform properly its part of the tire's work.

Whether you figure it in your tire bills, or in the mileage delivered to you upon the road, you cannot escape the fact that the tube's importance far outweighs its cost.

On this ground it is to your every interest that you put Goodyear Tubes inside your tires.

Putting them there means putting adequate and constant pressure there also—these tubes *hold* air. Putting them there means more miles to you.

They are thicker than ordinary tubes, and stronger—made up of many paper-thin sheets of rubber vulcanized together into a perfect air-retaining unit.

Their valve stems are vulcanized in also, not stuck on.

We especially recommend the Goodyear Heavy Tourist type for sustained and severe service. It is exceptionally stout and vigorous, a little higher-priced—and *better*.

A Car's Equipment Tells The Tale

A GLANCE at the dash will tell you the quality of any car. Try it out.

Look at the instrument board of any de luxe car.

Chances are you will find the Warner Auto-Meter.

For really fine cars are fine in every detail.

And the Warner Auto-Meter stands out as the one speed indicator suitable for these de luxe cars.

So it is virtually the unanimous choice of all builders of costly cars.

The Warner is a jewelled instrument—compensated against cold and heat—perfect in design and workmanship. It is unerring in its precision.

It is the most expensive speed indicator made. Its superiority is unquestioned. The market can offer nothing better.

A Warner Auto-Meter on the dash is the best outward indication of a car's costliness.

Look for it.

Warner Auto-Meter

$50 to $200

Stewart-Warner Speedometer Corporation
Chicago U. S. A.

printed on good paper and bound in cloth. The title, Bittner's Fifty Business Principles, was on the back, so that it could easily be read if stuck up on a shelf of books. It was printed in unusually large black type, with extra spacing and wide margins, so that it might be comfortably read on crowded street cars or by a poor light. It was not a thick book—it would slip easily into a man's coat pocket. The matter consisted of a direct talk purporting to be from Mr. Bittner to the reader. It was in his intimate personal style. The plan of study was outlined concisely at the close. From beginning to end there was not a stereotyped phrase, a usual expression or a trite claim. If we resorted to any of the ordinary plans by which business is built up, we so worded it that it sounded fresh and new.

In all this work, monotonous and tiring through much repetition, Miss Carrel was far more useful to me than Miss Douglass, though she could not take dictation. Miss Douglass had her one value—she was an accurate stenographer, and she satisfied herself with that. In fact, she rather resented being asked to do anything but take notes and copy corrected pages. But Miss Carrel would be at my desk the moment her work was finished, asking for more. She was interested in everything I did, and wanted to have a part in it. One day she found me laying out an advertisement.

"Can't I help you?" she asked, looking on with interest.

"Not very well. But you can take down that file marked advertisements and read our advertisements for the last year and learn our style. Then later you might be useful."

She took the file and went back to her desk to pore over advertisements until more copying was ready for her.

We tried out our advertisements before they were run. We had them set up and pasted here and there in the advertising sections of magazines, then we would lay them aside until the following day, when we would open the pages to see which style started up most strikingly to meet the eye. We tried them on Miss Krog, Miss Carrel, Miss Lutkins and William, and in this way they got the threshing out that a new campaign generally gets at a cost of thousands of dollars.

The Spring Campaign

We opened the campaign in the March publications. Mr. Bittner had timed this so that we would have three issues in which to test the plan immediately preceding the dull summer months, when business always fell off. This would give us time for any revisions and changes suggested by the practical try-out. For nothing ever works out in every detail as planned.

Some people, particularly women, regard business as a dull subject. I wish a few of these might have spent the month of March with us. When a woman spends two weeks planning a party she is usually on the *qui vive* till it is over. Mr. Bittner had spent two years, and I some seven months, planning a gigantic party for American business men. We had invested over a thousand dollars in the feast and thirty thousand in the invitations, and now the weighty question was—how many would accept?

The first morning after the March publications were on the news-stands I entered the office trembling with excitement and expectation. Bittner was there ahead of me, and he had the publications, all open at our advertisement, spread out on the long reading table. He was pacing the floor with bent head and hands behind his back, every few minutes stopping to look at the magazines. I paused by the table and examined each advertisement carefully. It was dignified, attractive copy!

"Sour on 'em?" he asked, halting beside me.

"No," I said with decision. "I still like them, and it's a wonder I don't hate them, I've worked on them so long. But they still give me a little shiver of pleasure. I believe they are good."

"If they're the right bait we'll soon know it."

I started to ask if Miss Krog had seen them, and then I closed my lips on the words. She was at her desk just within the operating room, and the expression of her elaborately arranged coiffure was ominous. I knew that she had ignored the advertisements. We had kept her in ignorance of the scheme, and she did not intend to show any interest now that the idea was made public. I was sorry about it, but there was nothing I could do. Mr. Bittner had every confidence in Miss Krog's loyalty, but he did not consider it good policy to tell his plans to anyone.

I went to my own desk and found a surprise. Mr. Bittner had put the entire stack of mail there for me to open. Of course he might have shifted the mail opening to me merely because I now had very little to do, since all the work pertaining to the Fifty Principles was finished; but I believed it was his sensitiveness—which he would not have admitted for the world—about opening letters that would begin to tell the story of our success or failure.

I began to open letters, and instantly Bittner took up his hat and coat and went out. All that day I opened the mail as it came in each delivery, separated checks from business-book orders and handed the one to the bookkeeper and the other to Miss Krog. Mr. Bittner did not return till closing time.

The following day I began to open mail, keenly expectant, for it was possible that a few inquiries might arrive from the city or near-by towns. All day I sorted letters and listed checks and orders. There was just one Fifty Principles inquiry. A man named Clarke wanted to buy the course outright. He wrote in a very kind, courteous manner, saying that though he appreciated the fact that he would miss a great deal in not subscribing in the regular way, he was too busy at present to do so. He inclosed a money order for fifty dollars. Bittner again spent the day at his club or elsewhere, coming in late in the afternoon.

A Competitor's Work

"It's early yet," I said, handing him the one order.

"It's darned queer," he growled, dropping into his chair and fixing his eyes on the letter. Instantly his head shot forward and his eyes burned their way through the request for the Fifty Principles. He got to his feet in a flash and brought the letter and money order over to me.

"Send it back!" he commanded, with a swift indrawing of his breath that had told me before of white-hot anger inside. "Tell 'im we don't sell outright."

"But, Mr. Bittner, it's really all in the 'talks'; and for a very busy man ——"

"Can't you see he's a tool?" he shouted, shaking the paper in my face. "This is Borrige & Kemp's first move. Can't you recognize fake politeness?"

He went back to his desk and I took another look at the inquiry. Yes, it was rather over-felicitous. I sighed heavily. Then it was all true, Bittner's cause for uneasiness over these persistent rivals.

The third day I was at the office at the earliest possible moment, and eagerly started opening the mail. There was not an inquiry. Bittner did not show up till noon, and then he came in as peevish as a teething child. He snarled at the girls for dropping crumbs, ordered William to clean up, and then went to his desk without speaking to me.

The fourth day there was an inquiry from a man named Wagner, who was connected with a small business college near Chicago. It looked promising, but someway just one inquiry seemed worse than none. It was almost an insult. I attended to it personally and said nothing to Mr. Bittner about it. The fifth and sixth days were repetitions of the first three—there were no inquiries. On the seventh day one letter carried the Fifty Principles key number, and I seized upon it eagerly and tore open the envelope. It was from the one inquirer, Wagner. He wished to subscribe, and accompanied his request with a money order for the full price. When Mr. Bittner came in I showed it to him and tried to laugh about it. "If every inquirer means a subscriber," I said gayly, "we're all right."

Again his eyes flamed with sudden anger and his breath came scorchingly; but he only said:

"Well, start him in!"

One subscriber, when we had figured on a thousand at the start! It was enough to enrage him.

The thing continued throughout March; there was not another inquiry for the Fifty Principles. Day after day Bittner became more silent and morose, and he was more and more absent from his desk.

Early in April I stopped by Bittner's desk and asked him what he thought of changing the style of the advertisements for May. It was too late then to do anything about the April copy. He looked up

(Concluded on Page 56)

Only a few days more will this 5-passenger 6-30 Chalmers remain at $1090. On March 1 the price becomes $1250. Prompt action now pays you $160. The roadster price also advances from $1070 to $1250, showing a saving of $180. Either model will prove the most sensible car you ever drove. Sensible because it is neither over nor under weight. Neither a speed car nor a slow poke. Instead: a simple, economical, soundly made car that holds the road, drives straight as an arrow, takes a hill with plenty of reserve, looks the good stuff it is made of, and acts like a thoroughbred. And the saving pays you more than 6 per cent on $2500.

Present Prices

Johns Manville

NON-BURN
ASBESTOS
BRAKE LINING

Your brake lining is no better than its Asbestos

In the factory of the world's largest asbestos producers where Johns-Manville Asbestos is sorted, there is one pile set aside marked, "for brake lining."

It is the prime selection of fibre chosen for its great length and strength, from the thousands of tons of Johns-Manville asbestos—and yet it is not too fine for the best lining made—J-M Non-Burn.

Every strand of this fibre comes from Johns-Manville Mines, every ounce goes into Johns-Manville Looms and every foot of woven product is J-M Non-Burn Brake Lining

—and the point is: Your Brake Lining can't be better than its asbestos. So that these selected fibres that go into J-M Non-Burn guarantee you the best lining—tough, non-slipping, durable—safe. It costs no more than others and is just as easy to get—at your dealer's.

When you think of Asbestos you think of Johns-Manville

(Concluded from Page 54)

and I saw that his face was haggard. His eyes were drawn back into his head, and the flesh had melted away from his chin, leaving it sharp and angular. I was shocked.

"Change it! What for?" he snapped. I was sorry I had spoken.

"Some other style might arouse interest," I suggested lamely.

"Didn't we study out those advertisements and decide that they were the right style for the men we want?" he demanded. "Didn't we agree to spend thirty thousand dollars on a three months' try-out?"

I had to admit that this was so.

"Well, then, what's eatin' you!" He sank back into his chair and I went on to my desk.

Daily the strain grew more tense. I was personally interested, but I felt Mr. Bittner's strain more than I did my own. All the years I had known him—and doubtless many more—he had been using his brain-power at full capacity. He had never taken a real vacation. The climax of his achievement was the Fifty Principles. He had put himself into this work like a fiend, never resting, never laying the subject aside.

How often I have heard men say, speaking of some venture in which they failed: "It was a bad year"; or "I got the wrong men in with me"; or "The thing was misrepresented"; always giving what seemed to them an adequate reason outside of themselves for their failure. But there was none of this in Bittner. When he failed he blamed no one but himself. Hard as he was on others, uncompromising in what he expected of them, he was no less hard, no less uncompromising with himself. The evident failure of the Fifty Principles was, therefore, a failure in himself, and it was gripping him vitally.

A Laconic Message

I went to sleep each night with a terrible stack of letters photographed on my mind. I dreamed of millions of letters that I had to open one by one, in an ever fruitless search for a Fifty Principles inquiry. I arrived at my desk each day, dreading a continuation of the strain. I told myself that when the three months were up and the thing was a proved failure Bittner would rally and put his dynamic brain to the task of reorganizing business. But the waiting was terrific.

Miss Carrel and I had just read proof on the May advertisements. Bittner had not been at the office for three days and Miss Krog had hardly spoken to me in that time. Miss Lutkins was more savage than usual and more absorbed. There seemed nothing human about the place, except Miss Carrel's ever eager face and poor little Blanch Booth's unhappy one—she was having a hard time getting used to Miss Lutkins. I think the child had never been harshly spoken to before in her life. I felt a wild desire to kill the May copy, write my resignation, place it on Bittner's desk and escape. I was tired of the strain and uncertainty and of the unsympathetic office atmosphere. I told myself I had earned the right to enjoy. I thought of my sixty thousand dollars tied up in a Western ranch. It could give me freedom and friends—and it should. I was a fool to remain longer in a place where the women were jealous or suspicious, and the one man always absent, leaving me to bear the brunt of things. I wouldn't wait a day longer. I seized my pen and began to write my resignation, when I saw William leading in a messenger boy.

"That's her," he said, pointing to me. Then he turned back to his parcel-wrapping. The boy came over to my desk and I experienced a sudden sinking sensation. He handed me a note. With trembling fingers I tore it open and read in an almost illegible scrawl:

"Come at once with the boy. Say nothing.
"BITTNER."

I closed my desk, and putting on my hat followed the boy out. Bittner was in some kind of serious trouble, or he would never have sent for me like that. When we reached the street I turned to my companion.

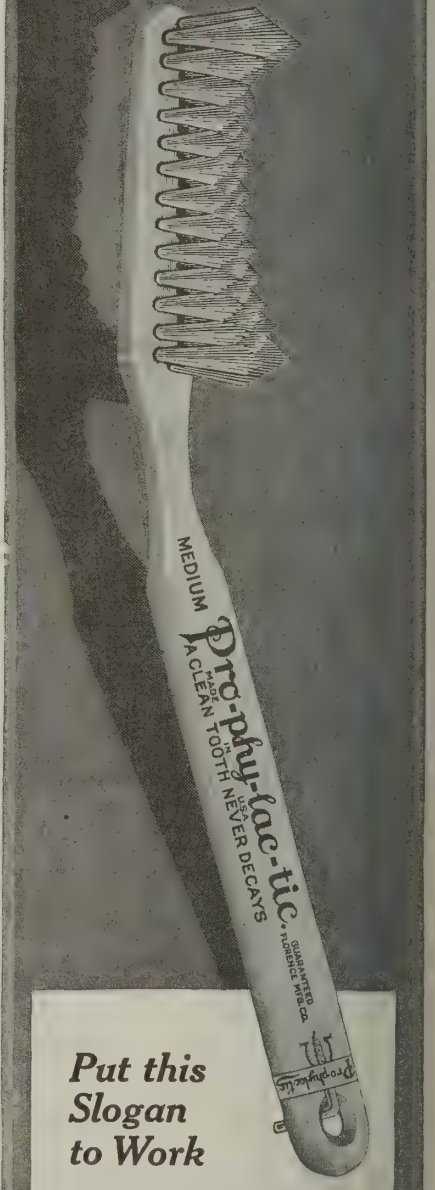
"Where are we going?" I demanded sharply.

"To the St. Mark's Hospital. Guess it's a deat' or somepin."

Editor's Note—This is the first of a series of articles by Anne Shannon Monroe. The second will appear in an early issue.

"A Clean Tooth Never Decays"

Pro-phy-lac-tic Tooth Brush



Put this Slogan to Work

Why not put the slogan, "A Clean Tooth Never Decays," to work in *your* home?

When you buy a Pro-phy-lac-tic you have the double satisfaction of knowing that it is the *world's standard tooth brush* and that no other tooth brush so perfectly cleans the backs of teeth and in-between.

Made in adult's, youth's and child's sizes; rigid, flexible and De Luxe (transparent) handles. Always sold in a Yellow Box.

The Man at the Top

By WILLIAM H. HAMBY

THE station agent at Hicks Mills used to impress me much as I imagined King George did a Colonial who approached him with a petition under his arm.

Hicks Mills had twenty-two houses and the depot. There were two irregular trains a day, besides an occasional freight; so the agent could not have been habitually exhausted by overwork. Yet it was very difficult to transact business with him, even on a cash basis. And as for getting free information on such irrelevant subjects as whether you had any freight stored in the station, or the probable hour of arrival of Number Three—why, that was a hazardous undertaking.

As a youth I have often stood at the ticket window with my money in my hand and my heart in my mouth for long stretches of time, watching the brown birthmark on the left side of that operator's neck, while he sat in the chair on his fourteenth and fifteenth vertebræ, his back indifferently turned to a boresome world. When he finally did, with great reluctance, twist himself from the chair and approach the window, he always stood looking languidly at the ticket stamp on the right of the window, as though under no circumstance would he demean himself by looking at me; and on his lips was that insolent curl which you see on a lawyer's when he asks the witness whether he has ever been in jail.

If I ever got up enough courage to ask him a question he ignored it—as any gentleman should an insult; if I repeated the question he showed symptoms of violence.

One summer my father gave me the peaches on two of the best trees in the orchard. There were about ten bushels and I conceived the idea of shipping them to a small city fifty miles up the road. We had never shipped any fruit; neither had our neighbors; and I did not know how to go about it. The only thing to do was to go to Hicks Mills and inquire of the railroad agent.

For minutes I stood at the window, waiting as usual for Brown Ellis to turn his face to the public. Finally I made a timid noise on the window ledge with my pocketknife and he looked wearily over his left shoulder.

"I want to ship some peaches," I gulped.

"Well, ship 'em!" said Brown.

"How'll I fix them?" I asked anxiously.

He stared at me blightingly a full minute.

"How in hell do I know? Do I look like a hayseed?"

Another Kind of Railroad Man

A few months ago I stopped in front of a fruit store, looking at a box of extra-fine peaches. A keen, busy, forceful man stopped beside me.

"Ozark peaches," he remarked.

"I wonder," I asked, "how many cars the Koshkonong District will ship this month?"

He told me—and told me more. He explained in a few minutes the preparation the railroad was making for the handling of the fruit. He described the new coöperative organization of the growers for gathering, shipping and marketing peaches. As I manifested an interest in the matter he held out his hand and remarked:

"I'm the general manager of that railroad system. The next time you are in Springfield come to my office and I will give you all the data you want."

Two weeks later, while in that city, I remarked to a friend who was showing me the town:

"Stop at the Railroad Building. I want to go up and see the general manager."

"General manager!" He looked as though he thought it was a hoax; but when he saw I meant it he remarked dubiously: "I suppose you know that his time is worth about five hundred dollars an hour."

"Oh, well," I said, "I am not paying for it."

I was sent in to the general manager almost immediately, and we talked for an hour about railroads and peaches and poetry; for he would not let me go until he had read two or three recent poems that had caught his fancy. And even then he got up and went out down the street, bareheaded, to the railroad tracks, a hundred

ACORN RANGES

MUFFINS!

Who likes brown muffins?

Who likes to make brown muffins?

Who likes the girl who likes to make brown muffins?

Back of all the really good things in a life that's worth the telling, must be those who sense the artistry of doing each thing well. It's the *genuine pride of doing*, not the snobbish pride of show, that makes the happy housewife make the muffins brown just so!

Recipe for muffins: A cook with lots of pride; flour, butter, etc., any ordinary cook would use, but each ingredient made by people who like to do things well; put in the fine, hot oven of a *good* range made by people with a genuine pride of doing.

We want the younger ladies of America to know Acorn Ranges as so many of their elders know them. We have made Acorn Ranges for 87 years, and are proud of having made them better and better as the years have gone by.

ACORN RANGES

Gas, Coal, Combinations and Electric

Always Improving

The chief purpose of a kitchen: A Good Place for a Good Range

Baby Grand

Go to your dealer's or the Gas Company display rooms and see the Acorn Baby Grand—two baking ovens, one broiler oven, warming oven, six top burners—very compact.

If gas is available, but you have to use coal part of the time, the Acorn Combination Range for both coal and gas certainly will save you space, time and fuel. In another model a lever does it all. Lever up, gas stove; lever down, coal stove. No heavy oven bottom to remove.

Combination

If gas is not available, let your hardware or furniture dealer show you an Acorn Coal Range designed to cut down coal bills and save many a step with a heavy coal-hod. Special designs for each kind of coal.

The Acorn Electric Range, a joy and pride to the housewife who is so situated that electricity is the fuel she ought to use. So thoroughly attractive it would not be inappropriate in the dining-room itself. The charm of the chafing dish and the utility of a range combined.

RATHBONE, SARD & COMPANY

World's Largest Builders of Truck and Tractor Motors Exclusively

yards below, to show me the operation of a new switching device.

"Hello, George! How does she work?" the general manager said to the fellow in charge.

"Fine!" replied the switchman enthusiastically.

"By the way," I asked as we stood discussing switches and accidents, "how long have you been in the railroad business?"

"Seventeen years—and all that time with this road."

"You must have begun about the same time that Brown Ellis became agent at Hicks Mills."

"Yes; I knew Ellis," he replied. "He was still the operator at Hicks Mills when I became chief dispatcher of that division; but we had to fire him."

"What is he doing now?" I inquired.

"The last I heard of him," answered the general manager, "he was janitor in a livery stable."

If you want to get to the bottom of a thing go to the man at the top. He not only knows it but is willing to tell it.

There are several ways to try to magnify one's job, but only one way to do it. There are thousands of little men like Brown Ellis at Hicks Mills, who, given a small position, puff up with insolence and try to make themselves seem big by making other people feel little.

There are whole shoals of clerks and doorkeepers and flunkies who, when vested with a little authority, imagine they are increasing their importance when they overwork that authority.

But all these fail; practically none of them go forward—and most of them drop out entirely. There is only one way to increase the importance of any job, and that is by increasing its usefulness.

The post of agent at a cinder station—a job that pays sixty dollars a month—does not impress one as important, no matter how boredly superior the operator may appear. But I know a ticket agent at a small station who can, without looking at a time-table, plan your trip over any road to almost any spot in America; tell you the best connection, the most interesting scenery, the most comfortable hotels, at just what hour you will arrive in any given town and at what minute you will get a train out; where you are allowed to stop over and exactly how to do it. He may make mistakes, but I have never discovered one. He stands at the window or the telephone and lays the transportation system of the country at your service.

Now that man's job seems important to me. He is doing a difficult thing, and doing it well; and it is a thing worth doing. He is magnifying his job, and one day he will be given a job that is already magnified. Of course that man is courteous and approachable, and invariably gives information or renders assistance to travelers as though it was a pleasure to him—as it really is.

Surliness is either an effort to make others suffer for one's own bad digestion or blunders, or else it is assumed from a foolish notion that it gives an air of decisiveness and importance.

Two Kinds of Answers

We all dislike effusiveness and have come to look upon it as the tintinnabulations of a thin mind. Palaver—a spatter of inane irrelevant remarks used solely in a selfish effort to cultivate one—is always nauseating. And in their proneness to go to extremes many essentially friendly people go to the opposite extreme and cultivate an unnecessary brusqueness.

Real friendliness consists in rendering efficient service pleasantly. No matter in what capacity a man works, or how busily, it is up to him to do what his job requires—and a little more—and be pleasant about it. That does not mean smiling necessarily—some really happy people cannot smile. It does not mean that one must be chatty and discuss the weather as he makes change; but it does mean that he should render the service with an air and an accent of willingness, so that the receiver shall not feel that he is an interloper and his business an imposition.

If you had asked the agent at Hicks Mills "Is there a westbound train at four o'clock?" he would have answered "Naw!" If, when the present general manager was agent at Sarvis Point, you had asked him the same question, he would have replied: "No; but there is one at five-fifteen."

See the difference? One word more, a rising or falling inflection, a look direct into the face, a gesture of the hand, may make the difference between a grouchy, disagreeable service and a willing, efficient one.

The man at the top is usually the friendliest man on the job.

One morning last winter in New York I spoke to a friend about getting a check cashed.

"Why," he said, astonished, "you don't expect to cash an out-of-town check in New York? And you a stranger!"

"I never have been in a city where I could not cash a check if I needed to badly enough."

"You can't do it in New York," he asseverated. "It is impossible! It simply isn't done."

I laid a wager with him and returned that night with the currency.

"How did you work it?" he demanded curiously.

A Bet Easily Won

"I did not take it to the paying teller," I replied. "The paying teller of a New York bank would not cash a Government check unless the Secretary of the Treasury was present, with the whole Cabinet to identify him. I went to one of the big banks and, having learned the name of the president, walked straight back and asked for him by name—not by position. I introduced myself to him, shook hands, and told him I was from the West. After we had chatted ten minutes, discussing Western crops, commerce and banking interests, I mentioned that I had a check I wished to cash. He O. K.'d it without a moment's hesitance, shook hands at parting, and told me to be sure to drop in whenever I was in town."

The man at the top is the least suspicious man in the institution. Suspicion is the cloud in the mind of a man who does not know. The smaller a man's horizon, the more often will it be clouded with suspicion. The gatekeeper regards every man who speaks to him as a deadhead. He would suspect the owner of half a continent of trying to work him for a pass as quickly as he would a paste-diamond four-flusher. But the man at the top does not need to be suspicious, for he knows the difference.

In dealing with those exalted personages who stand in outer offices with icy swords, to guard the head of the institution from interruption, I learned quite by accident never to ask for "the president," "the manager," or "the secretary."

I was in a strange city and wanted to go through a big sugar refinery. All the way along the line I was told "No," most emphatically. But I persisted until I got to the office and asked whether the manager was in. The clerk looked at me dubiously and shook his head. Now I was sure the manager was in. But when his chief clerk assures you that he is not, there is nothing to be done about it unless you are overly athletic. I went back to town dampened, but not discouraged.

When a fellow has started in he hates to be kept out. In town I inquired whether there was any pressure that might be brought to bear which would squeeze me in. And incidentally someone mentioned the name of the manager—Mr. Harter.

I went back to the plant that afternoon and walked straight through the gate and across the grounds, as though all the orders of the Allies for sugar rested in my inside vest pocket. I approached the clerk in the manager's office authoritatively and asked briskly: "Is Mr. Harter back from lunch?" I went in to the manager at once; and, as he discovered that a friend of mine had befriended his son somewhere in Cuba, he made an exception to the rule and sent me through the plant.

Since then, when I have business with the head of an institution—and I never go unless I have business, preferably mental business, for they love to discuss problems—I invariably ask for Mr. Calder, or Mr. Barton, or whoever happens to be in an official position at that time.

The man at the top is direct and likes directness. He gives extra consideration to the man who, really meaning business, comes straight to him with it.

It was a small city and I was overlooking no chance for information on a subject in which I was interested. Some random individual downtown told me that the

(Concluded on Page 61)

At Last! A Nation's Need is Supplied—

DISCARD your old fashioned overalls, men! Slip on a suit of **Lee Union-Alls!** You'll never wear anything else to work in. Such an improvement! Such convenience! Such service! It's the work garment men in all walks of life have been waiting for. The mechanic, the motorist, the farmer, the laborer, the man who does odd jobs about the home and works in his garden—to every one of these, **Lee Union-Alls** are a revelation of comfort, convenience and serviceability. You'll forget there was ever such a word as "overall." Work clothing will mean **Union-Alls** to you first, last and all the time. Cost no more, either, than old fashioned, inconvenient, binding two-piece garments.

Lee Union-Alls are all in one piece (like your union underwear), which means there is no belt to bind, no double thickness at the waist, no jacket tails to get in the way. The suit slips on easily and quickly and can be worn conveniently and comfortably over clothing or next to your underwear. It is already the fastest selling work garment ever manufactured. You'll know why the minute you put on a suit.

Lee Union-Alls are made to endure the hardest wear—every strain point reinforced—all seams triple stitched; every button hole machine stitched; eight convenient pockets. **Lee Union-Alls** are made of Khaki, blue denim, express stripe, pin check or white drill.

Lee Union-Alls for children are made "just like Dad's," a complete one-piece suit, that pays its cost many times in the saving of clothing, washing bills, stockings, etc.

Lee Union-Alls are at first class dealers' everywhere. If your dealer cannot supply you, send your order direct to any of our factories, enclosing post office money order and stating size and material desired. Sent prepaid to any address in the U. S. Take no substitute. There is none "just as good."

MEN'S: 34 to 50 chest, $3.00
YOUTHS': 12 to 17 years, $2.25
BOYS': 7 to 11 years $1.75
CHILD'S: 2 to 6 years, $1.50

What St. Louis thinks of The NEW EDISON

ST. LOUIS REPUBLIC

PROBLEM OF MUSIC IN HOME SETTLED BY DIAMOND DISC

Edison Machine 'Re-Creates' Voice Beside It at Victoria Theater Concert.

BY HOMER MOORE.

When Mark Silverstone announces an Edison Diamond Disc concert in the Victoria Theater it is a foregone conclusion that the "Standing Room Only" sign will be displayed. From orchestra pit to roof the multitude filled every nook and corner, and the enthusiasm was commensurate with the attendance. It is a wonderful thing—even in this age of scientific wonders—to see and hear an instrument "re-creating"—as Mr. Silverstone calls it—a human voice that is right there beside it, now singing with it and now listening to it, thrilled by the consciousness of a second personality—almost a dual personality. The problem "to hear ourselves as others hear us" has been solved even if we can't as yet "see ourselves as others see us."

The vocal soloist last evening was the beautiful Anna Case of the Metropolitan Opera Company of New York. Her voice was richer than ever before. Her style has broadened and matured and become more musicianly. There is a heart in it that goes to the heart and self-poise and sensitiveness that prophesies a brilliant musical future for this young artist. Miss Case sang the well-known air from Charpentier's "Louise," "A Song of India," by Rimsky-Korsakow, and a number of folk songs, "The Old Folks at Home" being among the number.

Arthur Walsh, the violinist, played the Schubert "Ave Maria" with the Diamond Disc, and also the famous "Meditation" from "Thaïs," by Massenet. Besides these selections, he accompanied Miss Case, voice, violin and the "Recreator" blending into one beautiful tonal picture.

The voice of Thomas Chalmers displayed the merits of that good old tune, "Answers," by Alfred G. Robyn, who used to so completely belong to St. Louis that St. Louis nearly, if not quite, belonged to him.

Mr. Silverstone is, by these concerts, contributing very largely to the advancement of musical taste and interest in this city. Doubtless many went to the performance last night out of curiosity, but that element soon gave place to genuine enjoyment of the program. The problem of music in the home is solved when the singing of the greatest artists is made possible by an instrument that does not betray itself in the very presence of the artist herself.

ST. LOUIS POST-DISPATCH

2500 Endeavor to Distinguish Natural Voice From Phonograph.

A musical event of unique interest was that at the Victoria Theater Saturday evening, when Miss Anna Case, the young prima donna of the Metropolitan Opera Company, appeared before 2500 music lovers in a tone test of Thomas A. Edison's wonderful phonographic invention.

After an opening address by Mr. Mark Silverstone, who arranged the test, Miss Case stood beside the new Edison phonograph and sang several numbers with the instrument, records of which had previously been made from her voice.

So perfectly did the instrument blend with her voice that the audience could not distinguish except by her lips when Miss Case ceased singing. During rendition of the Song of India, the house was darkened and until the lights were turned on no one knew. Miss Case had left the stage.

Besides a rare musical treat, the test convinced many skeptics of the triumph of Mr. Edison's genius in re-creating the human voice in all its naturalness.

THE ST. LOUIS STAR

SILVERSTONE TONE TEST SHOWS EDISON SUCCESS

Again Mark Silverstone's tone test has come and gone and thousands of St. Louis music lovers have voted him their thanks, for indeed he has done much for the uplift of music.

That Thomas A. Edison successfully accomplished the marvelous task of re-creating the natural tone of the human voice in the production of phonographic records was the verdict of a big audience, Saturday night. The vocal soloist Saturday evening was Miss Anna Case of the Metropolitan Opera Company of New York. Her voice was at its best, and as she progressed it became richer and broader. Miss Case sang the well known aria from Charpentier's "Louise." "A Song of India" by Rimsky-Korsakow, and a number of folk songs.

Arthur Walsh, violinist, played Schubert's "Ave Maria" with the diamond disc and also the famous "Meditation" from "Thaïs," by Massenet. He also accompanied Miss Case, voice, violin and the "recreator" blending into one beautiful tone.

Silverstone has given these tone tests for several years and with each performance hundreds of the skeptical listeners go away convinced that the new Edison does re-create and that one can now have the greatest artists in their home. Records played by an instrument that does not betray itself in the presence of the artists.

Daily Globe-Democrat.

2500 HEAR NATURAL VOICE TONES IN PHONOGRAPH

That Thomas A. Edison has successfully accomplished the marvelous task of re-creating the natural tone and timbre of the human voice in the production of phonographic records was the verdict last night of 2500 music lovers who gathered at the Victoria Theater to witness this demonstration of the triumph of inventive genius. Of the numerous persons who attended the demonstration skeptical of the claims made for the records, all came away convinced that it had proved equal to the severe test.

Miss Anna Case, the young prima donna of the Metropolitan Opera Company, was chosen for the test. Edison considers her soprano voice one of the finest of the many great voices he now re-creates. She stood beside the new Edison as it began to play. She sang a few bars, and the instrument blended perfectly with her silvery voice. She ceased, and the instrument continued the air with the same beautiful tonal quality as when the star accompanied it. None in the audience was able to distinguish when Miss Case ceased singing, except by observing that her lips did not move. The unison between the tones of her voice and the reproduction on the instrument was so remarkable that trained ears could not detect the slightest difference.

Anna Case, of the Metropolitan Opera Company, photographed on the stage of the Victoria Theatre in St. Louis on Oct. 21, 1916, while singing in direct comparison with the New Edison's Re-Creation of her voice.

The NEW EDISON makes your home the world's greatest stage

(Concluded from Page 58)

best-posted man in the community was Prof. Harold Buckholder, B. S., A. M., Ph.D., at the Big Bend College.

I found Doctor Buckholder was assistant professor of English; and later I discovered he had won his Ph.D. by a very exhaustive thesis on Shakspere's Use of the Past Participle in King Lear. I had some trouble in gaining admittance to the professor's office and he received me on probation. I did not wear a Phi Beta Kappa key and had forwarded to him no letter of introduction vouching for my honorable discharge from some approved institution for the perpetuation of precise information in regard to past participles. And when, in pursuit of information, I mentioned the subject I was investigating, the professor's aloof, probationary air grew distinctly alien.

"I am not particularly interested," he remarked, "in so-called popular subjects."

Those Who Live in Pockets

Immediately, of course, I gave up any thought of getting valuable information from him. His was the type of mind that gets sidetracked and lives out its life at the end of the spur of some remote intellectual system. He lived in a pocket. While burrowing for the roots of verbs he had become permanently buried.

One evening some months later, in New Orleans, I met at a club a big, frank, interesting-looking man, with a clear eye and warm personality. He had a most comprehensive view of all sorts of movements and things; was interested in crops, in railroads, in labor, ways of living, in politics, in roads and cities. During the conversation he incidentally gave me some concise and interesting information about China and the Chinese problem of government.

Two things impressed me most strongly about this man: the direct way in which his mind worked—his unerring elimination of the unessential; and the clear, simple way in which he expressed his ideas.

"I did not understand your name when I was introduced to you," I confessed at leave-taking.

He smiled and repeated it. And not until then had I known that I had been visiting with the president of one of our leading universities.

Not alone in scholarship is the man who is really at the top—the man of the greatest simplicity. In all professions there are men whose minds get caught by some little byplay of intellectual activity and camp there for the rest of their lives, losing touch with all the bigger and more vital interests.

Such minds, be they legal or medical, literary or scholastic, follow long and tortuous ways of reasoning and perpetually keep their mental storehouses so cluttered with extraneous information that their feet stumble over it, so that they never can get to the door in time to answer the knock of a new idea.

Great scientists, real geniuses, big workers in every field, are almost invariably men of direct mental processes. They think straight because they cut across lots and go direct to the subject. They use, as a rule, the simplest language, the clearest phrasing, the most common and understandable words. They are modest, open-minded, approachable. They do not have any fixed standard of what is valuable and what is worthless, for they know that what was trivial yesterday is often of momentous significance to-day. Ignorant people, common people, all sorts of folks, are of interest to them. Everyday problems are big problems. The germ of a fever is of far more importance than a past participle, and the starving of a people is a greater crime than the splitting of an infinitive.

There is an impression among some men that the only way they can protect themselves from interruption is by exclusiveness. It is not true. A man cannot hide from bores. He cannot burrow deep enough, or shelter behind closed doors thick enough, or have a line of stony-faced sentinels close enough, to escape from that long-winded gentleman who wishes to prove to him that his uncle was the first man who ever ate codfish on Sandy Hook.

The newly elected governor of a Middle West state when he went to the Executive Mansion found his office arranged in the following order: first, an office boy; next, a stenographer; third, an assistant secretary; fourth, the governor's secretary; and last, in the secluded, almost padded remoteness, the office of the executive himself. This governor said to the office boy: "Jim, you have my seat; you go back to the far end." And, calling his secretary to the next post, he reversed the whole order. He was not only the most popular governor the state ever had but transacted more business.

The man with a quick mind and a simple, straightforward approach can discover a caller's business and have it transacted before the ordinary office force could get a card to him. Certainly not every man could follow the governor's example. There are times and affairs which require absolute privacy, and that privacy must be protected; but, other things being equal, the bigger a man the less protection he needs, and the harder a man is to approach the less worth seeing he is.

The peasants of every country have a story of how their favorite king once appeared before some lowly door, disguised as a shepherd or hunter, and, seeing the bread about to burn or a board needing nails, did a simple homely act. All the king's greatness as a warrior and all his glory as a courtier have become their own because the king for that moment became one of them.

Often one hears the same story on a railroad—how the president of the whole system stopped and helped a section man push a hand car. Or the humblest voter will thrill as he recites how a man stepped off at the Junction and chatted with him—"Just as plain as shucks!" And he afterward discovered that he was a cabinet member, or a famous senator, or the President.

Now it is not condescension in a real king, or in a great man of any sort, to do a homely thing or to meet in a simple way his plainest fellow being. A great man never condescends. He does not need to, for he is already on a level with all his fellow men.

The Simplicity of Greatness

Greatness is not in elevation, but in perception. The top of the mountain and the highest rung of the ladder are very good figures of speech; but great men—successful men of every sort—do not live up there. They stay on a common footing with the great mass of mankind. They have a common bond with them—only they see and feel more. They feel and understand as other men do—but more penetratingly, more clearly. They know the value of ordinary things in a way ordinary men do not.

And it is this simplicity, this open-minded interest in everything from the bottom up, which has furnished the inspiration for their success. They have been able to see and use all sorts of material; and, understanding men, have been able to organize and use them too.

Of course there are exceptions—seemingly; very proud, haughty, overbearing men at the heads of great institutions and enterprises. There are a few of that sort—a very few. And most of them have become soured self-worshipers since arriving—not before; else they would not have arrived.

It is noteworthy that the great men we have loved—statesmen, artists, scientists, writers—have had, for the most part, almost a child's simplicity and modesty. They know their worth—some of them were even egotistic in one way or another; but in their spirits they were very modest and very accessible.

Getting to the top is a hard, painful job. Getting anywhere is. A man needs every help he can get. He needs, above all, the active sympathetic interest of those round him. He needs a clear vision to help him miss some of the false steps. He needs an abundance of warm enthusiasm and a lasting appreciation of things that count.

All these make it necessary for him to have a sort of universal understanding and sympathy, which will give him directness and simplicity. He is never fenced in by tortuous manners; nor is his view obscured by circumlocution of phrases. He meets men and ideas and circumstances face to face—smiles if they are friendly and sets his jaw if they are not. But, whether friend or foe, he makes no assumption of arrogant superiority. It is merely a matter of man to man.

His work, his environment, his health, may modify the customs and habits of the man at the top; but eight times out of ten at heart he is the simplest, friendliest, most approachable, most open-minded, most direct man in the whole concern.

For this is the manner of man who gets to the top.

Smart Serge SUIT $15
Made to your measure
Pure Silk Lined

We sell direct by mail. We have no agents.

Style Book and 72 Samples FREE

AS an introductory demonstration of our value-giving, the Bell Tailors of New York, for $15, will make you a smart serge suit of American Woolen Company's #6055 pure, all-wool worsted serge;—guaranteed fast color.

We will line it with Skinner's guaranteed pure dye silk. In fact, we will use the best standard materials in every step of its making. We will guarantee it to be a perfect-fitting, splendidly-tailored, smartly-styled suit that will compare favorably with any you have ever had for even a third more price than we ask.

This is but one of the Seventy-two exceptional values we offer in our catalog of smart, New York made-to-measure clothes.

All Wool Serge Suit, Silk-Lined, $15 Made-to-Measure —By Mail

Colors: Black or Blue.
Lined with Skinner's Pure Dye Silk.
Sewed throughout with silk.
Hand-made button holes.
Coat front re-enforced with real hair cloth and canvas.
Hand-tailored throughout.
Made in any style you want.
Guaranteed to fit perfectly or your money refunded.

Send for New Style Book and 72 Samples—FREE

BELL Tailors of New York are the largest direct mail order tailoring concern in the world—37 years making clothes for smart dressers of America.

Our only salesman is our catalog, which we send with samples and complete outfit with which you can take your own measure. We have no agents or out-of-town representatives of any kind. We deal direct with the consumer by mail, eliminating all in between costs and expenses, and giving you the benefit of the money we save by having you wait on yourself.

Money-Back Guarantee

We guarantee to fit you perfectly from the measurements you send us and to satisfy you in every respect. You are the sole judge, and if you are not entirely satisfied with the clothes we make you, we will cheerfully refund every cent of your money.

Let us send you our new Style Book and 72 cloth samples. It places you under no obligation to buy, but it will show you how to get the smartest New York, made-to-measure clothes at a worth-while saving. Write to-night.

Forty Thousand Miles on a Fifth Avenue Bus

IN the eleven months ending October 31, 1916, the Fifth Avenue Coach Company, New York, had placed in service 259 Goodyear S-V Pressed-On Truck Tires.

On this date Mr. G. A. Green, Chief Engineer of the Company, looked up the records of these tires and sent to Goodyear the most remarkable tabulation of truck tire performance the world has ever seen.

Of the 259 tires, eleven had been retired from duty. In Mr. Green's words these tires had "failed." But before "failing" they had delivered an average mileage of more than 17,000—the lowest nearly 10,000 and the highest more than 28,000.

Two hundred and forty-eight were still running.

Three of them had gone between 35,000 and 40,000 miles. Two months later, on December 31, one of these three had gone 49,324 miles. And still going.

Thirteen had covered between 30,000 and 35,000 miles. And still going.

Fourteen had gone between 25,000 and 30,000 miles. And still going.

But the work of S-V for the coach company, though spectacular because of the number of tires employed, is merely an index to what this wonderful tire is doing in varied service, all over America.

If *your* trucks are not equipped with S-V's probably you are not getting all that you ought to get, in efficient tire service—at a low cost.

strain of chickens, introduced by Mrs. Wilberforce Fogg. They figure on making the two-hundred-egg hen a back number by developing whole flocks of two-hundred-and-fifty-egg hens, thereby adding to the national wealth a figure one and a whole hatful of noughts. We find these things very fascinating, and lots better things to gossip about than others that might be mentioned.

All this showed me the value of the county agent. Our neighborhood was all right as a neighborhood; but it was not large enough for the coöperation and the organization we needed. For instance, when the Federal Farm-Loan Act was passed it was not in the Fairview Settlement that the first National Farm-Loan Association was formed for the purpose of getting the benefit on the farm of the building-and-loan association idea, which has done so much in the cities, but over on Beaver Creek—quite out of our bailiwick.

Freeman Clay found out that several farmers over there needed loans on long time for slow-fruiting improvements; and though he didn't appear in their organization he did figure out for them that by borrowing money for thirty-six years, with the privilege of paying off in whole or in part after five years, they could earn more than twice the interest charge and not be worried about the mortgage ever falling due. They have the right to call their own loans at any time after five years, and nobody else on earth has that power over them. In other words, for the first time in the history of the American farmer the borrower rather than the lender is to have the say about time and terms.

The Beaver Creek people are admitting a Fairview borrower to their association occasionally. The Reverend Frank Wiggins was the first of us to go in, so as to get the money to finance a silo and a lounging barn for his cows—he is abandoning the stanchion system, though I think he is wrong in that.

The money obtained through the government system costs five per cent. One per cent more—making six per cent a year—will amortize, or "kill off," the mortgage in thirty-six years. Frank figures that even on a fifteen-acre farm he can easily make the silo pay him ten per cent on the investment by keeping the silage made in seasons of excessive crops for bad seasons when feed is scarce through drought or something of the sort.

"There is never a time," says he, "three years together, when a silo will not pay for itself in whole or in great part by giving the dairyman feed when otherwise he would have to buy dear or sacrifice a part of his herd. It doesn't pay, perhaps, to fill a silo in September and begin emptying it in October; but give me silage in August every year when the pastures are short, or the silage of wet 1912 kept over for dry 1914, and I'll show you profits on the silo that will make both interest and amortization look small."

Cheap Working Capital

This is pretty sensible talk for a preacher; and I was gratified to see Frank developing sound business sense along with his visionary ideas. I discovered, however, that he probably got it from the county agent, Freeman Clay, who was preaching all over the county the fact that the new Federal Farm-Loan Act is making it necessary for the farmers to figure interest on investments instead of first costs.

"Don't ask me what this will cost," he used to say to the farmers we visited, "when you can get the money on your own time at low rates of interest whenever you want it. Ask yourself what interest it will pay on the investment. If it costs you two hundred and fifty dollars a year, and pays you four hundred dollars, you can add one hundred and fifty dollars a year to your labor income by borrowing.

"Instead of a mortgage being a disgrace under such circumstances, it is a discredit not to have one."

He pointed out to me the fact that the small borrower now has an equal chance with the big one. Now it has been for a long time a fact in the Corn Belt that the farmer who doesn't need a loan of at least four or five thousand dollars isn't of much consequence to the loan companies; though for the big loans we certainly have already had good credit at rather low rates. Personally I never felt that it was good business to encumber my farm for two or three thousand dollars, and I never needed all my farm would stand in the way of a loan; but lots of men who could borrow ten thousand if they had to could use a quarter of that as working capital at a profit.

I began figuring on the thing; and Freeman and I worked the problem out in this way: I might take, say, twenty-five hundred dollars in a Federal farm loan and use it in developing my feeding operations.

I could, for instance, get the money cheaper in that way for buying lambs to put in my cornfields after harvest to clean up the pigeon grass that naturally comes in, and to eat the lower foliage of the corn and the rape I might sow between the rows, and make fifty cents or a dollar a head by the operation. It's good farming to do it too. Or I might take advantage of the market to buy any other stock—when it is cheap—as steers or heifers or sheep, as my feed made it possible. That much money ought to pay for itself, and a little besides, as I'm fixed.

"But," said I, "as I turned these deals the money would come in and would be idle at times, and all the while I'd be paying interest on it. That's an objection."

"You ought to figure to keep it busy," said he; "that's a part of the business of a business farmer. There ought to be a textbook published on the use of money under the Federal Farm-Loan Act. It's going to be the most important part of the farmer's business from now on. As for your periods of idle money, why not invest it when it must be idle in Federal Farm-Loan bonds, and cut down your loss of interest to one per cent or half of one per cent? You ought to be able to stand that for the sake of having a supply of working capital."

A Plea for the Small Farm

I am so much impressed with the idea that I believe I'll join the Beaver Creek National Farm-Loan Association, and indulge in the luxury of keeping two or three thousand extra dollars working for me all the time. That's how the new law will help the farmers with big investments in their farms. If I don't like the scheme I'll pay off after five years. I feel perfectly sure I can make money by the transaction; and I surely can't lose much.

This sort of business farming is coming to be a great part of the county agent's work in the Corn Belt. To be sure, he still looks after the A B C of farming—in cow-testing associations, boys' and girls' clubs, canning clubs, pig clubs, acre-yield contests, seed-corn campaigns, calf fairs, colt fairs, egg circles, beef rings, and county short courses for the young people; but in a community like Fairview, already well socialized by such people as our school force and the Wigginses, he has to rise to a higher plane. He reached this, too, in another movement he inaugurated. That was the contest of Extensive versus Intensive Farming.

Frank Wiggins is an enthusiastic exponent of the small farm.

"I tell you," said he to Freeman Clay and some more of us one day, "Doctor Spillman's investigators in the Department of Agriculture may show that, as farming is now done—here, in Chester County, Pennsylvania, and elsewhere—the big farm pays the better labor income; but what they say isn't the last word. My little fifteen-acre patch of glebeland is nearer the last word."

"You don't make the labor income off it," said Freeman Clay, "that Mr. Dunham and Mr. Bohn or any of the other big farmers make on their operations."

"True," said Frank; "but see who does their work and see who does mine. My work is done by a self-respecting citizen of the community, who has a happy wife doing good things in the community, and a couple of healthy babies. Who does Mr. Bohn's work or Mr. Sharpe's?"

"Hobos," said Jeff.

Abel Bohn nodded. So did I.

"You big farmers," said Frank, "make your labor incomes out of men who drift out in the farming season, and in the winter spend their time in lodging houses for down-and-outers in St. Louis and Chicago; and eke out the time before the spring elections by selling their votes in

(Continued on Page 65)

Should You Be Permitted To Know The Size Of Your Shoes

WE were just saying in this page recently that your average shoe-store doesn't permit you to know the *origin* of your shoes.

It likes private labels — its own name stamped in the shoes.

Further than that, it doesn't think you are to be trusted with the correct *size* of your shoe.

You may think you know the size you have on. Look in the lining where the size-stamp is supposed to be, and unless you wear Regal Shoes, you will probably find something like this: 2X4V7Y2.

Why all these secret signs and symbols? They belong to the Dark Ages of merchandising—before the days of fixed prices, uniform profits, and standard merchandise of known value.

One great source of dissatisfaction and foot trouble is that shoes are *not properly fitted.*

The shoe-dealer objects to plain size-marks that anybody can read. If he is out of your exact size he wants to substitute another size from his stock.

We plainly mark the size in Regal Shoes to prevent this very thing. We want every man or woman to find comfort in Regal Shoes. We particularly do not want a wrong size to go on anyone's foot.

Daylight methods—all the cards on the table, frankness, publicity—are here to stay.

People prefer to buy goods they *know all about.* The movement toward *standard merchandise* in all lines was never so pronounced as it is today. Poor merchandise doesn't seek publicity—it evades it.

To the man who has found a shoe he likes, in a last that fits him—if it is an honest shoe by a reputable maker: if he can always go back and get that shoe, find the style right, the quality uniform, the price fair—we say to that man, stick to what you have! We do not ask you to change!

Much as we would appreciate your trade and well as we might serve you, we do not grudge any good maker the custom he has won.

What we *do* say is that the number of such shoe-wearers is smaller than it has any business to be.

Shoe-quality—shoe-service in general is a variable quantity.

Beginning away back with the "take off" of the hide, there are things you can't *see* that affect the quality of your shoes.

There is too much tendency to keep you in the dark.

In nearly every community there is at least one alert shoe-dealer who is not in sympathy with this backward policy. He follows it because it is the practice in the trade.

There may be at this moment in your town a wide-awake shoe-man who could build up a great business on shoes of *known merit*—authentic styles, plainly-marked sizes, and *values* he does not have to excuse or explain.

Is there any reason why he could not make as great a success of Regal Shoes as is being made elsewhere?

Regal Shoes are a known factor. They are *proving themselves* every day with men and women in the great Metropolitan Fashion Centers, and in the hands of special Regal representatives in a thousand towns and cities throughout the country.

Cities and folks do not differ greatly as to what they like best in a shoe-store.

For one thing, they like to know that there is an *institution* back of their shoes.

With us it is just a question of finding, in each community, the right kind of shoe-man.

Perhaps you know who he is, in your town, right now!

Poverty to $10,000.00 A Year

Miner $1.00 Day

Adv. Mgr. $10,000 Yr.

(A True Story)

Ten years ago a young man with little education was working in a coal mine at a dollar a day. Now he is an advertising manager at $10,000 a year. What did it? The same thorough, practical training that we offer in our new Home-Study course of

Advertising & Salesmanship

This course was organized by ten leading advertising and sales managers in conjunction with Bryant & Stratton College. Each of these ten instructors is a well-known advertising or sales manager with years of experience. Not one is a "professional" teacher. The atmosphere of these men's daily work is in all their lessons.

New Method of Instruction This course is nine-tenths practice and one-tenth theory. You will be trained to write copy for advertisements, booklets, mailing cards and folders; analyze markets; plan advertising and sales campaigns; edit house organs; conduct a mail order business; and to write convincing "human-interest" sales letters. Every lesson carries the "human-touch" that makes you anxious for the next.

Are You Prepared to take this Course?

To help you determine whether or not you are qualified to succeed in Advertising & Salesmanship a well-known Vocational Director will personally analyze you free of charge before enrollment.

Write for complete Personal Analysis chart and Free Book "From Poverty to $10,000 a Year."

Chi for beer and a warm place by the radiator. They are the Huns and Vandals who will tear down our Greater Rome. With my little labor income I live like a king; and I'm a good citizen. Yours is not clean money, my friends—mine is!"

There was a long pause, during which I waited for some one readier-witted than I am to show Frank the foolishness of this visionary stuff. Finally Freeman Clay spoke up.

"I have been thinking," said he, "that it might be instructive if we made a comparison of the results, even in labor income, between the small farm, well tilled, and the large farm. What the Department and the state stations have published, you know, shows only average results. Average results in Mexico or Argentina would damn the farm of a thousand acres as against the ranch of from twenty thousand to a million. The question is: What do both show in profits under the best conditions?"

"In profits?" said Frank. "And in men, women and children?"

"Yes," said Freeman Clay; "and in social values. Of course they come in, but not for the economist."

"So much the worse," said Frank, "for the economist. What is Uncle Abner's bank roll worth if it means a man or two every winter rotting in a Chicago saloon?"

"Suppose," said Freeman, "we run a contest, beginning March first, between a dozen small farms and a dozen large ones."

"I'm in!" said the preacher.

"And you'll be in," said I, "with fifteen acres of the richest land out of doors; because you flimflammed me out of a marsh and wheedled Abel, here, into letting you pump the water across the road on him! Do you call that fair?"

"I do!" exclaimed Frank: "I'm making billions of blades grow, Uncle Abner, where you and Brother Bohn, by your mulishness, made cat-tails and wild parsnips grow, and never would have done any better."

"That," said Abel, "is true, Brother Dunham."

Barto's Labor Income

Well, we had the contest. I went in; and so did Abel and Jeff Sharpe and Wilson Beebe and enough more farmers to make a dozen. Frank's farm was the baby of the small holders, and the others ran from forty acres up to eighty—all small farms for this part of the country. I never took so much pains with my farming since I broke the prairie in the seventies.

Freeman Clay, impartial as a judge, went from farm to farm, big and little alike, and talked things over with us. There was a good deal of excitement at our County Farm Bureau meetings, and a lot of mental money changed heads on the outcome. The state experts got interested. The results are embodied in the first bulletin published by our County Farm Bureau, written by Freeman Clay.

Jeff Sharpe's income was, by all odds, the largest; but I was beaten by Peter Barto, with his little dinky forty-eight-acre farm and his ten-cow dairy. We eliminated truck farms and orchards, because we wanted the race to be run by real farmers mounted on real farms, and there is no doubt that Pete's is such a one. Here's his record for the year, giving him more than two hundred dollars more than I made on my operations:

INCOME	
Milk checks	$1500
Hogs	300
Fruit	100
Poultry and poultry products	100
Calves sold for veal	65
Seed grain sold	150
Stock sold	450
Sundries	40
	$2705
EXPENSES	
Feed	$400
Labor	40
Silo filling and threshing	25
Seed purchased	25
Taxes	26
Insurance	6
Sundries	100
	$622
Interest on investment—$8000 at six per cent	480
Depreciation	300
Total expenses	$1402
Income	$2705
Total expenses	1402
Labor income	$1303

CASSCO
ENGINE DRIVEN
TIRE PUMP

This engine-driven tire pump will save your energy and your time and will save you $30 or $40 a year on your tire bill.

It saves time because it inflates your tires faster than any other pump—*in one-tenth the time of hand-pumping.*

It saves energy because you won't have to do back-breaking work with a hand-pump. Pumping by hand is a dirty, disagreeable job that ruins your clothes and your temper.

It saves money on your tires because it keeps them properly inflated all the time. *Under-inflation causes 80% of all tire trouble.* Keep your tires pumped to standard pressure and you will double your tire mileage.

99.2% factory built—not assembled

The Cassco Pump is *not assembled;* it is actually *built.* 99.2% of the pump is manufactured in the West Side Foundry Co. shops at Troy, N. Y. Only hose, gauge and two small stampings are purchased. We save more than 25% because we do not have to pay profits on various parts to several manufacturers. You get the benefit of these savings.

Designed by expert engineers

The Cassco Pump was designed by expert mechanical engineers. It is simple and scientific in design. It takes up little space. It is easy to install. A motorist can attach it himself. Once in place, it is always ready for service. With one easy motion of your hand you can mesh or unmesh the gears. It requires no attention except occasional oiling. Its few, strongly made parts are never out of order.

Dry air—no oil spray

The air from the Cassco Pump is dry and clean. The Cassco design of piston and cylinder prevents oil spray. Oil ruins tires. The Cassco Pump will inflate a 34 x 4 tire to 80 pounds pressure in 1½ minutes. Smaller tires take proportionately less time. The Cassco Pump has given satisfaction to every user.

Save your time, energy and tires—put a Cassco Pump on *your* car today. Your dealer will supply you.

Flour Facts

Every particle of Pillsbury's Best flour is purified by being sifted through beautiful, white, silk bolting-cloth, costing $5 per yard, so fine and closely woven as to make such a process seem almost impossible.

Grinding and sifting; regrinding and sifting again and again through finer and finer, soft, silk cloths insures the purity and uniformity of this purest flour.

Few people know of this wonderfully delicate process employed to avoid impurities in Pillsbury's Best flour.

This is a fact worth remembering—

Because
Pillsbury's Best

Pillsbury Flour Mills Co., Minneapolis, Minn.

Now this makes Peter Barto easily the real winner of the contest, though other large farms besides the Sharpe place brought in more labor income than did Pete's. Pete had a good income when it is considered that all the produce the family consumed for their living is left out of the account; and when it is further taken into the reckoning that the average labor income of the American farmer is from two hundred to four hundred dollars after allowing him interest on his investment at five per cent instead of six, as was done in our contest.

You see, Pete's folks had $1783 to spend that year when their interest on investment was added to their labor income—and they had this after they had got a good part of their living off the little farm. Note, too, that Pete's folks did practically all their own work; but don't think that the Bartos lived below American standards. They have running water in the house, a fine bathroom, furnace heating and a gasoline lighting system; and Pete's car cost more than mine. They use it, too, in a sensible way; and as liberally as people can who do their own work.

They have a milking machine for their cows, and every up-to-date thing that ought to distinguish well-to-do American farming. Their farming is not fancy, but staple farming. The basis of it is ten cows; not pure-breds, but grades, that bring in from $102.30 a year—the record that year of the poorest—to $208.23 a year, which was earned by his best, a prize-winning milker.

Barto was not, like Frank Wiggins, blessed with a farm of exceptional richness. It was badly run down when he bought it, fifteen years or so ago. He labored under a mortgage, too, for years, and paid it off from his earnings. He made his original start on a small farm and his whole proposition is a small-farm success. On the farm he keeps the ten cows, a team of horses and some young stock, besides the poultry and the automobile. His success has been made with cows, tile drains, clover and barnyard manure.

This demonstration was made by Freeman Clay, I feel sure, for the purpose of showing the Department of Agriculture that there is something yet to be said as between extensive farming and intensive farming.

Frank Wiggins, whose record was pretty good, was exultant. He preached a sermon the next Sunday on the text "I went by the field of the slothful, and, by the vineyard of the man void of understanding," in which he showed, to his own satisfaction at least, that Freeman Clay is tilling his own particular field—to wit, this county—mighty well; and that the fellows who speak for the big farm, just because the big farm pays best as it is farmed on the average, are the men void of understanding.

Farm Missionaries

Not that I think this is just. I believe that one of these days the Department will come out with a study of the small farm which will tell us something about what they call successful departures from the norm toward more intensive farming; in fact, a few years ago they did this very thing, but have since discredited the Bulletins on Small Farms with matter that seems opposed to their lessons.

Not that I have become a believer in intensive farming of the sort preached by the Little Landers—who, it seems to me, are just plain crazy; but there is a middle ground between the pocket-handkerchief farming of Japan and the all-outdoors kind which the experts now seem to favor. The big farm is morally wrong, so long as there are people who want farms and can't get them.

I think I must have made plain by this time the function of Uncle Sam in Fairview. It is to show us that, no matter how well organized a neighborhood may be, the county agent is needed. Uncle Sam, through the county agent, possesses the power to spread the good things of our Fairviews over whole counties, states, and finally over the whole nation, north, south, east and west; and to build up Fairviews where they are not. To put a missionary of good farming in every county in every region in the United States is an epochal thing.

Unless this is done, however, the Smith-Lever Act will fail to do its duty. It is rather sad to see that the poorest regions in every state are the last to get this help—so that it still fails to reach the people who need it most. It might have been better, for instance, to have set Freeman Clay working in one of the twenty-three counties of Southern Illinois which, because they cannot pay their portions of the agents' salaries, have no county agents than to have had him sent to our county, where we were doing pretty well without him. Any educational law that succeeds where education is general and fails where it is needed is not altogether a perfect law.

So this will be about all from your Uncle Abner Dunham on the Fairview Idea. It is the greatest idea in the world. It relates to the improvement of the biggest business of all Big Business—farming. This is a business that has been all hands and no head. The Fairview Idea will give it head. It shows that the country church may be not only as good a church as that of the city, but a better one, we think, than any city can possibly produce. It shows that the rural school may be and ought to be a better school than any city school can possibly be. It shows that country life—poor and sordid as it usually is—may be richer and fuller than city life at its best.

Reforming Standpat Farmers

The Fairview Idea has the power to transmute a standpat farming reactionary into an agricultural progressive, with something of the apostolic in his heart. And why not? For ages society has taken bread from the farmer's hand and given him back a stone; from him it has received fishes and paid for them in serpents.

For many of us older people not much may be done; but think of the unending generations of little girls and boys coming on and on out of the fruitful womb of time to tread the furrows of America, to the end that a world may be fed and clothed! And to receive for these things—what? The sordid things, the false things and the useless things which have been given to them in the past? Or that vital enlightenment of which my New England ancestors must dimly have dreamed when they set up free institutions and free schools?

For the farm boys and girls of the future there must be justice and opportunity, according to the measure of the ages in which they are to live—opportunity to know, to live, and to seek the truth.

Some disquieting truth we have encountered in Fairview; but all truth is good. Even though we hook the Midgard Snake, still must we go on fishing in the ocean of human knowledge.

Whatever of change is necessary for the working out of justice as between Man and the Land is beyond me to say; but I feel sure that such changes as are essential can be made only by that farming people who really live and think, and by their living and thinking are brought to the envisagement of their own tremendous problems—the basic problems of the world; because they are the questions growing out of the relations of Man to the Planet out of which he comes, on which he lives and into which he dissolves.

The Fairview Idea, carried to its logical development, will give such a life to the farmers of the future. Where Truth leads is none of our business. It is ours to follow her unquestioningly, making sure first of one fact only—Is she really Truth?

The Tire that doesn't need its guarantee

When we conceived the idea of The General Tire, we had one great, big thought before us—

that tire users are no longer to be satisfied with adjustments for *under*-mileage; what they want is a tire that won't keep the manufacturer everlastingly in debt to them for more miles than the tire was ever built to deliver.

So we designed a tire to put tire buying and selling on a *sound* commercial basis. We figured your standpoint and resolved to make you buy the second General Tire because you liked the first one and not in order to make good the mileage the first one failed to deliver.

We figured the distributor's and dealer's standpoint and resolved to save them the constant expense, shortened profits and worry that come with adjustments.

We figured from our own standpoint and proved by calculation that adjustments and replacements cost the manufacturer more money than putting the right stuff into the tire in the first place. Our figures showed us that we could better afford to build a tire for 6,500 miles and guarantee it for 5,000 miles than to build, guarantee and sell a tire on a 3,500-mile basis.

That former is just exactly what we've done in The General Tire. Design, fabric, rubber, tread, construction, treatment, cure—every one and all of these things selected and done to make a strong, lively and long-lived tire.

Double Protection by Guarantee and Quality

The service must be 5,000 miles or more—never less. The actual mileage is greater than the guarantee. The General distributors and dealers are anxious to protect your interests, because our liberal guarantee and unstinted quality protect theirs.

Guaranteed for 5,000 miles so you will have the knowledge that you are protected—but a guarantee you'll not be called upon to use. Owners everywhere are piling up 8,000, 10,000 and more miles.

Sold at a moderate—a very moderate price.

We've proved our whole theory by building a sound and solid national success in a year's time. We've proved it by the fact that the new General Tire dealers and distributors who have taken hold of the tire have done it not through wonderful salesmanship on our part, but because of the enthusiastic recommendation of other distributors to whom we have referred them. They all say "it stands up"—they couldn't and wouldn't say this if users hadn't found that it does stand up.

This is the kind of tire you want—viewed from every angle of economy of time, money and trouble.

The General costs less per guaranteed mile. Look up the General Dealer in your city—ask him to tell you honestly what he thinks of the tire. Then ask the price and be surprised.

THE GENERAL TIRE

Built in Akron

A Power Miracle

The Counterbalanced Crankshaft Motor Car

It effects a complete transformation in automobile performance. Among other things, it adds 35% extra power. No such result has been accomplished by a car selling for anywhere near our price. Get our treatise for your own instruction. Motoring now is a different kind of traveling.

A new silky kind of continuous power thrills you in the Counterbalanced Crankshaft Motor Car. In this $795 automobile you now get silent performance without vibration that is scarcely believable in a car at this price; it gives constant-torque smoothness—the ideal of power engineers.

A Silken-Powered Car

You travel 60 miles an hour with no more sensation of speed than at 15 miles an hour. From a standing start you pick up to 40 miles an hour in 20 SECONDS. You lull down to a creeping pace—AT 3 MILES AN HOUR IN HIGH GEAR.

Drivers who take the wheel of this new Crow-Elkhart find that the power has amazing smoothness. The power-flow seems the same from 15 to 30 miles, from 40 to 50 miles, and from 50 to 60 miles an hour. You can always relax in this car. There is no nerve tension.

That tremendous volume of silky energy carries you with the lazy ease of a giant—everywhere.

Climaxes Success of Famous 9-Year Chassis

This famous chassis is today the basis of the silk-like power created by the counterbalanced crankshaft construction in the motor. It is a scientific combination of advancements developed by Martin E. Crow. Engineer Crow had developed what was probably the first "L" head motor—now the accepted standard. Successively he had introduced large bearings—crankshafts and camshafts—valve cover plates—helical cut gears—large size valves—detachable cylinder head—piston oil ports preventing smoking.

Crow-Elkhart cars today are full of new ideas. Crow-Elkhart features: 114-inch wheelbase; light weight, 2040 pounds (touring); chrome nickel steel gears in rear axle; full floating rear axle; underslung three-quarter elliptic rear springs; heavy steel dome fenders.

In addition we offer you choice of ten colors and three upholstery options. Such Custom Service at $795 is unprecedented.

Write for the Complete Announcement

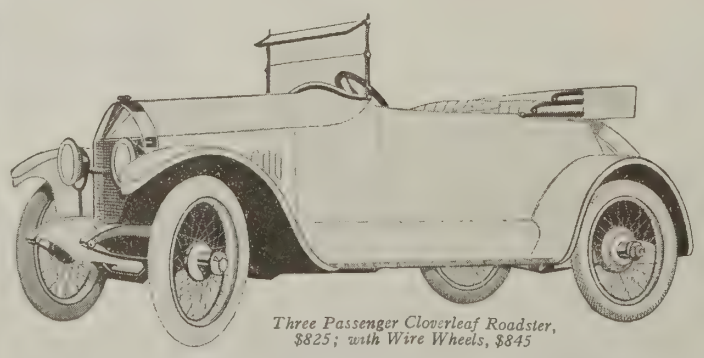
Your judgment of motor cars must now be revised to meet this new standard.

Therefore, write for Treatise on the New Counterbalanced Crankshaft Motor Car. Inform yourself as to how motor power has been so completely transformed—why it is so "silky smooth." Know the secret of this motor miracle. For the Treatise, address

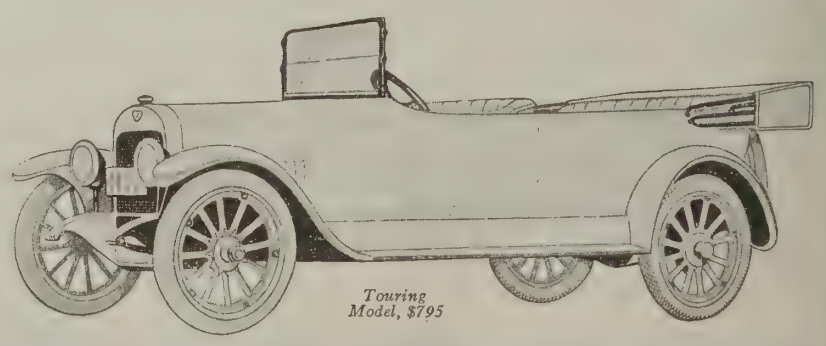
CROW-ELKHART MOTOR COMPANY, Dept. 12, ELKHART, INDIANA

CANADIAN CROW MOTOR COMPANY, LIMITED, Mt. Bridges, Ont.

DEALERS: A special announcement of unusual importance is ready to send you. It describes the biggest territorial opportunity in years!



Three Passenger Cloverleaf Roadster, $825; with Wire Wheels, $845



Touring Model, $795

Crow-Elkhart $795 TOURING CAR

What Do We Mean By "Safety-Sealed"?

No holes in the wall of a Parker, preventing any escape of ink to soil hands, spoil clothes or ruin dainty dresses or purses. Can be carried flat, upside down—any position—it cannot leak—it's SAFETY-SEALED.

In case of accident to self-filling mechanism it automatically changes to a SAFETY-SEALED non-self-filler.

Fills itself in 2 seconds—press the concealed SAFETY-SEALED button.

All sizes at nearest Parker dealer—$2.50, $3, $4 and $5.

PARKER PEN COMPANY
90 Mill St., Janesville, Wis.
N. Y. RETAIL STORE—Woolworth Building

Means—No holes cut in wall of barrel—no openings, levers or rings where ink can get out to ruin clothes or linen.

Cheerful Bran Days

Find out what bran does by its laxative effect.

Learn how it keeps one fit. What it adds to life's enjoyment.

For one week start each day with Pettijohn's. Give the bran flakes a chance.

Then you will know why doctors urge bran food. And why millions of homes have adopted it.

Pettijohn's

Rolled Wheat—25% Bran

A breakfast dainty whose flavory flakes hide 25 per cent unground bran.

Pettijohn's Flour—75 per cent fine patent flour with 25 per cent bran flakes. Use like Graham flour in any recipe.

Both sold in packages only.

THE CUSTOMARY TWO WEEKS

(Continued from Page 5)

all is. With Mr. Harry Burnhart taking so little interest in things it makes it hard for any manager."

It cut Extell to the nerves to hear a word in extenuation of the man who had just discharged him. He went into a state of sulkiness, and to dispense gloom he blurted out:

"You seem to be a good deal interested in Vibert, Muriel!"

She reddened, but forgave him the words and the inference.

"I am interested in you—in us," she replied. "You won't stay in Milledgeville, will you, George?"

"Why not?" he snapped suspiciously.

"Why, because—because there's nothing here to keep you. There's only the paper mill. Surely you're going out into the world now, dear, to win! You ——"

"Listen, Muriel!" he broke in angrily. "I'm going to get even with Vibert some day! If it takes me as long as I live I'm going to get that man! I hate him as I never hated anything or anybody!"

"You will do something; you will make yourself big and strong and successful for your own sake—and for mine?" she replied, leaning toward him and putting her hands on his shoulders. "What do we care for him?"

"I'll advertise for a job in the trade journal next week!" he flashed. The girl looked at him in the eyes.

"As an advertising man?" she asked softly.

"Yes. Why not?" Something in her voice gave him a horrible suspicion. "You don't think as Vibert does?" he cried.

She was silent because she didn't dare to speak, but he rattled on:

"You do think as he does! Why didn't you say so? Afraid to hurt my feelings, I suppose! A lot Vibert knows about advertising! That's another proof that you're under his thumb, Muriel. I suppose you sit there, looking up at him ——"

"George!" she cried, springing up. "Don't—don't—please—we must go home! I—I know you are all wrought up. I know you don't mean what you say. But we must go—at once! We mustn't spoil everything. There are some things—some things that leave a scar that never heals, George! Come!"

They paddled back to the canoe house with hardly another word.

Extell inserted a rather colorless advertisement in a trade paper, as he said he would. He got one reply, and that came to nothing. A few weeks later he tried a New York daily newspaper. This elicited one response also; but after a brief correspondence he was told that, though they would keep him in mind, they had chosen a man with longer experience. The young fellow had the notion of packing up and going West, as Mr. Burnhart had hinted. Somehow he couldn't get started. He had been born in Milledgeville, and he had taken root.

For the first few weeks he felt a delicious sense of freedom. He made himself believe that he was overjoyed to see his old companions plodding to work when he could stay at home. Then he began to get restless. He began to hang round the Mansion House, planning, when he wasn't gossiping, how he should some day get even with Vibert.

Worse, Extell began to buttonhole his old associates on their way to and from work, and to talk loudly against Vibert. Some of the other employees, hating the manager just as cordially, baited him, drew him out, encouraged his venom, because they enjoyed hearing the tirades. He began to tell them how they could bother the manager.

Vibert heard all about this. One day he said to Muriel Clemm, just as they started some dictation:

"Your friend Extell is becoming a common nuisance, Miss Clemm."

The girl nearly fainted. The sneer tore into her heart because she knew it was the truth. She rallied and replied pointedly:

"I am ready to take dictation, Mr. Vibert."

On her birthday Muriel Clemm was amazed to find a leather-bound set of Shakspere on her desk when she came in. There was no inscription, but Vibert's engraved card was in the first volume. She did not

Electricity's Latest Gift

A complete Sewing Machine no larger than a Typewriter

The electric iron, washing machine and vacuum cleaner were great improvements on the old ways of doing things. Now comes this wonderfully compact electric sewing machine that you can carry in one hand—a full-size, high-grade machine without the unhandiness and unsightliness of the ordinary foot-power machine. No more need you tire yourself out pedaling. The

Western Electric Portable Sewing Machine

gives you one or a thousand stitches—for all day long, if you wish. The motor does the work. You simply regulate the speed by a light pressure of your foot on the control pedal. The price is less than you would pay for most any of the well-known makes of foot-power machines. Guaranteed 10 years.

Costs Only $35

($37 West of the Rockies)

If your lighting company, electric dealer or department store cannot show you this wonderful machine, send coupon to nearest office.

Comptometer Section, Nash Motors Co., Kenosha, Wis.

Centralizing the Figure Work of Accounting

How They Cut the Expense of Cost Finding in the Jeffery Car Plant

By bringing all Cost Calculations, figuring of Payroll, Bills of Material, and the Proving of Incoming Invoices together into a central Comptometer Section, the Nash Motors Co. of Kenosha, Wisconsin, struck a body blow at the High Cost of Accounting.

In these days of shifting values, casual Cost Estimates are dangerous. Safety lies in a Cost Finding System comprehensive and flexible enough to get the facts—and keep them up-to-date. That is what they have in this office.

But as Mr. McCandless, Head of the Statistical Department, observed:

"Valuable as our Cost System is, it would be economically impractical if we had to handle the calculations mentally. It would cost too much—more than double what it does now. There's the Payroll, too—instead of having it worked up in the various Shop Departments by higher priced help, it is all turned in to the Comptometers for extending and footing at a marked reduction in cost—to say nothing of how much more accurate the machine figures are."

This fairly illustrates what centralized Comptometer Service is doing for Accounting in a host of offices representing practically all lines of business.

Its benefits are not confined to the large concern—it is just as practical in the one-machine office as where a whole battery is employed.

Figure work of any kind—Proving Postings; Adding Trial Balance; Calculating Costs; Figuring Payroll, Bills, Estimates, Inventory—all can be turned over to the Comptometer with a sure saving of labor and expense and a comforting assurance of accuracy.

Invite a Comptometer man to show you what the centering of all figure work on the Controlled-key Comptometer would mean in your case. That service is at your command without obligation.

Copy of "Better Methods of Accounting" sent free on request.

want to accept the gift, yet she didn't know how to refuse. Finally she thanked the manager, and for the first time since she had worked in the office he showed a real human gleam in his eye as he replied:

"Not at all, Miss Clemm. Your work has been splendid this past year. You don't know how much you help me in my work. I hoped you would accept the little gift in the spirit it was given."

That same day she went home feeling sure that there would be some trifle from George Extell, as in five birthdays past, that she could accept in a far different spirit. But this time Extell had forgotten.

Extell called upon Muriel one night, and almost immediately started on the usual string. He began to tell her, with a great deal of relish, how Arthur Goodwin, one of the clerks in the credit department, had clashed with Vibert and threatened to punch him. The girl stopped him short. Her lips came together with a new firmness, and something altogether new spoke to him from her eyes.

"I don't want to hear it, George!" she exclaimed. "I want to hear nothing more about Mr. Vibert."

He glared at the girl, stupefied.

"You don't know what it means to me to say this, George," she went on with a little shudder of her lower lip. "I must say it. I shall not see you any more, George—while you remain here in Milledgeville. It does you harm and it will drive me mad. I have tried and tried—and you won't let me help you. They are laughing at you—everybody; the people in the office talk shamefully about you behind your back. I thought you were going away from here to fight your way to something fine. I know it is in you; I believe in you; I shall—I shall believe in you. But you must go away. I—forgive me, forgive me if I hurt you; I am hurting myself more. Yes, come once more—the day before you go away—once more."

"You don't want to see me?" he gasped pitiably.

"I want to see you succeed. I want to see you do something well. Anything, George—but well. Good night!"

Extell literally staggered as he went down the steps. The air choked him. He began to walk. There was no moon, and when he got beyond the lighted section of the village he stumbled along; but he did ten miles of fast hiking before he got back to his room. The film fell from his eyes as he walked. Some stoppage of his brain gave way, and he began to see things in their true perspective. And for the first time since Vibert had turned him loose he saw Muriel Clemm, not as a woman to approach for petting but as a woman to fight for, to strive for, to be worthy of.

With a frantic and clumsy-handed joy he lighted the lamp in his room and began to pack.

At seven o'clock, feeling fresh in spite of his sleepless night, Extell was ready. He called a truckman for his trunk, locked his suit case, and swinging it in his hand with a buoyant grip and stride, he went over to the Clemm house and got there just as Muriel was rising from the breakfast table.

Like lightning she caught the welcome news. He didn't tell her; he didn't need to. She bounded toward him with a sunrise of joy radiating from her beautiful face.

"Where?" she whispered.

"Chicago."

"This morning?"

"Yes, I'll catch the eight twenty-nine for Springhaven and get the Southwestern Express."

Muriel Clemm seized her hand bag from the mantel of the sitting room and opened it with thumby fingers.

"Here!" she said. "Take this envelope, George. I wrote it—the week you left the office. I knew the time would come to give it to you. See, it is sealed. I want you to put it away where it will be always safe, and I want you to open it the day you know you have made good. Will you promise me—you will, won't you? 'Not to be opened'—see, I have written on the envelope!—'not to be opened till George Extell knows that he has conquered!' Don't think I mean that you must make a lot of money! It isn't that at all! You know what I mean—the day you feel that you have won."

"Good-by, Muriel," he said gently. "I love you!"

II

THE sales manager of the South Trent Tool Company looked up at the young man who had just been admitted to the office. He held a card between a thumb and forefinger, and scanned the new face for surface indications. But in that swift, businesslike assay there was no sign of suspicion or preconceived judgment. Instead, the sales manager looked at George Extell, as he looked at all the candidates for jobs, with the hopefulness and interest of a man who is constantly saying to himself "This may be the man we want!"

Extell felt it. And when the sales manager, instead of uttering a cold "What can I do for you?"—which is the deadliest gas ever emitted upon enthusiasm—said "How d'ye do, Mr. Extell; pull up a chair!" the stranger felt a powerful desire to leap forward and grip the other man's hand.

"You are with the Eclipse people," went on the sales manager, glancing at the card again.

"I was," corrected Extell. "I'm not now. I am here looking for a job."

"I haven't anything to do with the advertising department——" the sales manager was saying, when Extell interrupted.

"I'm not looking for that kind of a job," he explained. "I want to sell." Mr. Wetterson nodded.

"Good!" he said. "That's more in my line. How did you happen to leave the Eclipse people, Mr. Extell?"

The visitor's face almost matched the dark red varnish on the walls; but he replied with the promptness of a man who wants an ugly task over and done with:

"I was fired."

Extell half expected to hear the words, "Sorry; good day!" as a result of his painful veracity. Indeed, Mr. Wetterson's eyebrows elevated somewhat, but he added simply:

"Do you mind telling me just how it happened, Mr. Extell? I assure you of absolute confidence. It might not be important anyway. Very good men have been fired. Er—I was fired myself once. Good thing too!"

"I was fired for incompetence," replied Extell gravely.

Mr. Wetterson's eyebrows reacted unconsciously. He smiled slightly and suggested:

"That is, Mr. Extell, the man who fired you told you that?"

"No, sir; I was incompetent. I didn't realize it at the time. I see it now. I couldn't have been anything else."

It wasn't the unusual method of approach that held Wetterson's attention. He was justly suspicious of unusual methods of approach. He knew perfectly well that the unusual had become the usual, that too many men were now aware of the effectiveness of surprise, in getting their wares before him. Only a week before an insurance solicitor put his elbow through the frosted glass of his door—and sold him a five thousand dollar policy on the strength of the introduction that his apologies secured. He had had prospective salesmen deliver orations on selling efficiency that held him spellbound—until they got on the pay roll; and he had had them speak of themselves with the humility of Trappists and prove just as productive. But there was something else about Extell—something even besides his clean, healthy exterior and priceless youth—something of just plain, old-fashioned, trite honesty unadorned. Wetterson said:

"Have you ever sold tools?"

"No, sir."

"What makes you think you can?"

It was a challenge, and a fair challenge. Extell hesitated just a moment. Then he replied:

"Mr. Wetterson, I've got to sell goods. I know I can. I'm on my toes. I don't think about anything else. There are some things I can't explain, but those things will make me sell."

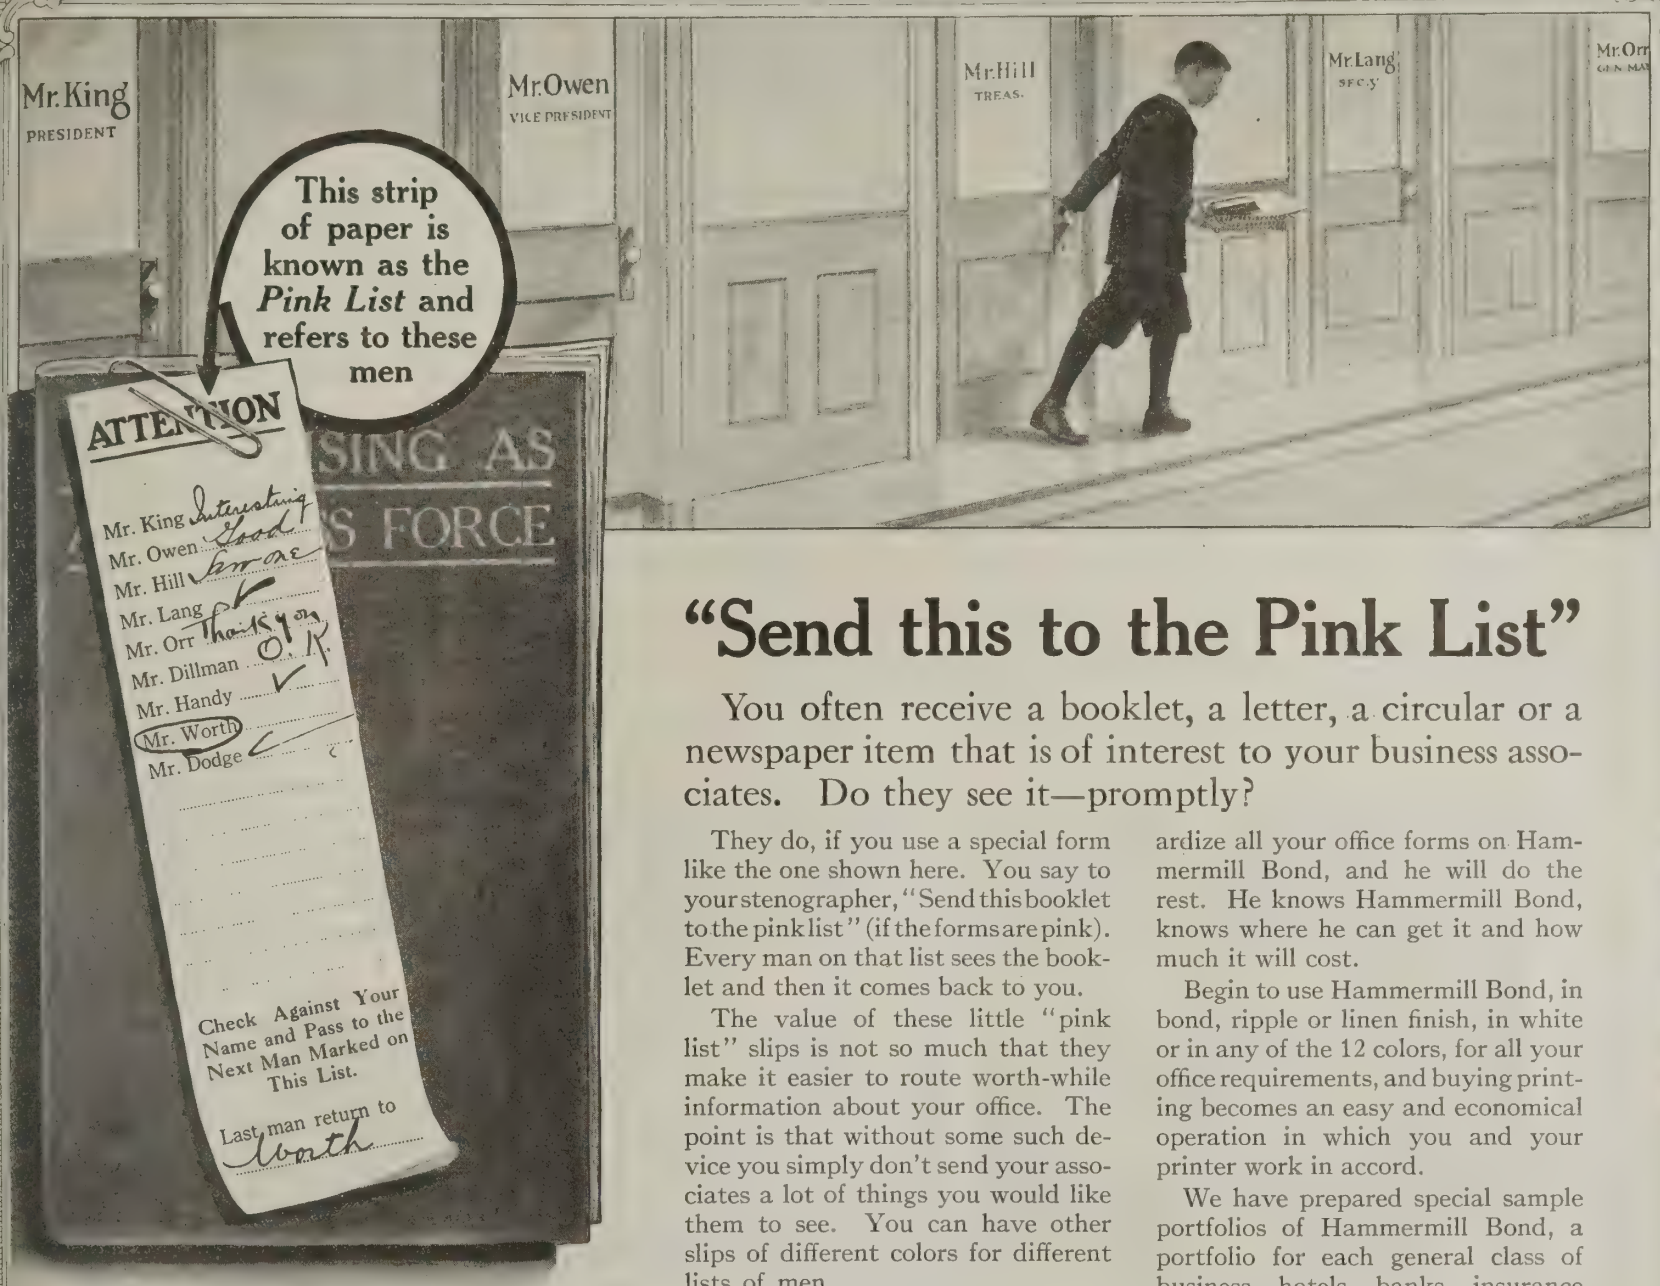
Wetterson smiled, but not deprecatingly. He wasn't impressed by Extell's words; he was impressed by his manner. Such words he had heard before a hundred times. The manner was somehow refreshingly new.

"Naturally you want to stick to tools," he said. "That's right too. You know something about them. By the way, Mr. Extell, tell me something very frankly, will you? What is your opinion of the Eclipse mechanical tools?"

The truth fairly spurted from Extell's lips. With the fervor of a devotee he replied:

"Mr. Wetterson, the Eclipse tools are as fine as anything produced in the world. They are made absolutely on honor. I was with them five years nearly, and I never

(Continued on Page 73)



"Send this to the Pink List"

You often receive a booklet, a letter, a circular or a newspaper item that is of interest to your business associates. Do they see it—promptly?

They do, if you use a special form like the one shown here. You say to your stenographer, "Send this booklet to the pink list" (if the forms are pink). Every man on that list sees the booklet and then it comes back to you.

The value of these little "pink list" slips is not so much that they make it easier to route worth-while information about your office. The point is that without some such device you simply don't send your associates a lot of things you would like them to see. You can have other slips of different colors for different lists of men.

Perhaps you will have to try out this little convenience to find out what a genuine help it is.

That is not difficult. Any printer can supply these slips at a small cost.

Too many firms make a job of buying printing, when it is really an easy matter.

Tell your printer you want to standardize all your office forms on Hammermill Bond, and he will do the rest. He knows Hammermill Bond, knows where he can get it and how much it will cost.

Begin to use Hammermill Bond, in bond, ripple or linen finish, in white or in any of the 12 colors, for all your office requirements, and buying printing becomes an easy and economical operation in which you and your printer work in accord.

We have prepared special sample portfolios of Hammermill Bond, a portfolio for each general class of business—hotels, banks, insurance companies, retail stores, professional men and so on. Let us send you, free, the portfolio that applies to your particular business.

Printers have found complete sets of these portfolios very useful in soliciting business, because they offer suggestions to the customer. Any printer may have the complete set.

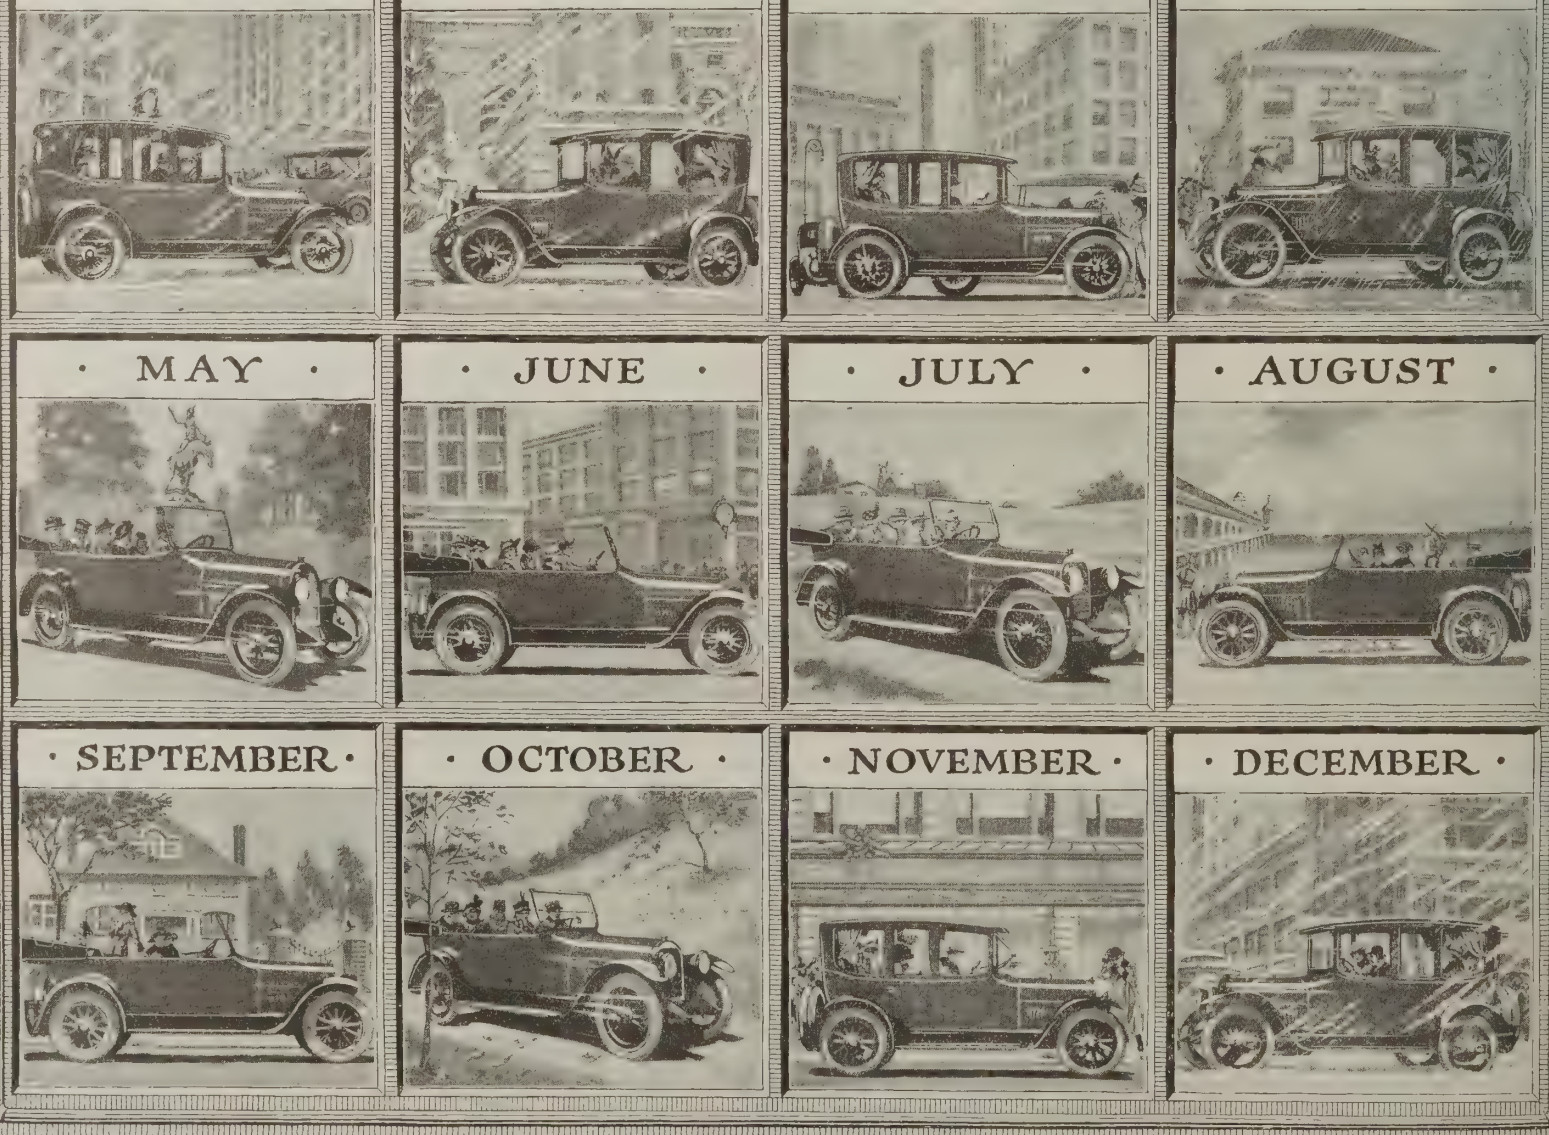
Kissel's Original Idea that Changed the Motoring Habits of a Nation.

The ALL-YEAR Car



(Continued from Page 70)

knew of an inferior article going out of the factory intentionally, and not often by accident. If you could see the rigid inspection and the loving care and the expert work done by a lot of men that have been there for years ——"

Extell stopped, confused. The belief in the Eclipse line, which he had been unwittingly imbibing for several years, had come naturally to the surface. Then he had a sinking sensation. It suddenly dawned on him that he was a candidate for the job of selling a rival line. He started to hedge weakly, by beginning: "Of course, though, I know that South Trent tools ——"

"Wait a minute, Extell! Don't spoil it! Don't spoil it, man! You've come through with straight stuff. Good! A man who can talk like that for the Eclipse line can talk just as well for South Trent. And I'll tell you right now, Extell, I subscribe to every word you've just said. There isn't a man in this office that would deny it, and the fact that the Eclipse people are our biggest rivals makes no difference. Extell, I'm going to take a chance on you. If you make good, I'll be tickled to death. When do you want to start?"

"Right now, Mr. Wetterson."

"You'll go into the factory for three months," said the sales manager with a grin. "You'll get eight dollars a week for those three months. Can you live on that?"

Extell couldn't repress the chagrin that showed on his face. His vision had been that of having mileage issued to him forthwith. But he replied:

"I've got enough money to see me through that time. You needn't pay me anything for those three months ——"

"Sh-h-h!" laughed Wetterson. "Don't talk like that, Extell. The whole office will be borrowing money of you if they hear about it! Come in to-morrow morning and report to me. Miss Willis, take this note to the factory superintendent, please. . . . Good-by, Extell!"

George Extell went back to his room, which he had thriftily taken at a rope-fire-escape hotel, and nervously penned a brief note to Muriel Clemm:

"*Dear little Girl:* This is just to let you know that I am going into the South Trent plant to-morrow morning, for three months' factory experience before they put me on the road. The sales manager is a fine chap named Wetterson. He treated me like a white man. Some difference between him and that reptile in the dark room. Muriel, as sure as I live I am going to get even with V. I am going to win, I can feel it in every nerve. I am going to make them all sit up." . . .

The young fellow folded up the paper, put it in the envelope, sealed it, and then sat over it a long time with his eyes fixed on the corner room in the Eclipse office, a thousand miles away. He could re-create in his mind's eye every detail of the dark room, from the tilted line of old-fashioned box letter files, to the stack of trade journals on the top of the one-section bookcase. He could see those beloved fingers, supple and strong, dancing over the typewriter keys, unpursued by the eyes; the marvelously clean and correct letters issuing from the top of the typewriter; the clear contralto answering questions with scarcely a pause in the writing. He felt homesick.

She was there with him, with Vibert. He was giving her orders; his unworthy eyes were gazing at her; his mind thinking about her. Extell suddenly pounded his fist on the table with such vehemence that he barely saved the ink bottle from going to the carpet. The words, "You can have the customary two weeks," rattled in his ears; he felt the blood rush into his head. "I won't keep an incompetent and I won't keep a drone! You can have the customary two weeks! That's all!"

"Incompetent or not, I'll make him eat those words some day!" cried Extell. "I'll show him!"

Three days after he entered the factory Extell got a reply from Muriel Clemm. Part of it ran:

. . . "Your letter, George, made me so glad, so glad to hear that you had actually made a start on the road to something big. Of course the eight dollars a week is merely a nominal figure; you mustn't feel a bit hurt about that, will you? I have heard several of our travelers say that the office force of the South Trent are very nice, and that they are fine people to work for. . . .

Yes, George, your letter made me so glad—and yet it hurt me a little too. Do you know how? Oh, my dear boy, won't you please, *please* put Mr. Vibert out of your head forever? Can't you consider it as something that never happened? It is only that I am so afraid that this feeling of revenge will hurt you in your work. And that somehow it may grow and grow and finally eat into your very being. What do you care for him?" . . .

"She may be right," said Extell after reading Muriel's letter, "but she doesn't understand how deep that feeling goes. However, I won't mention him to her again. But, by heavens, I'll get him some day sure!"

Extell was one of those men who seem born never to entertain a grudge against anyone alive; and who, having once decidedly found a hatred, follow it with blind, amateur fury. He went into the South Trent factory with his teeth clenched. He clenched them so hard that the keen-eyed Wetterson, meeting him one day, slapped him on the shoulder and said:

"Extell, don't plug too hard. Don't wear yourself out. You'll need energy later. Smile a little, old man, once in a while."

Another time: "Extell, you're a kind of mystery. What's behind that grim deathness of yours anyway? Well, never mind; whatever it is, it looks as if it might put you over. But try to smile, Extell!"

Extell shouldn't have found it hard to smile in those surroundings. The Eclipse environment had—excepting Vibert—been polite, virtuous, but cold. Here there was warmth, a radiation of good fellowship that seemed to come down from the top of the organization, to accumulate hearty interest as it was fanned through all the departments. The newcomer felt it from the first day, when the big Swedish-American factory superintendent, Dahl, took him into his enormous paws. He got a breath of it from Erb, the advertising man, who came to him in the factory one day with a proof in his hand, and said:

"I say, Extell, you were advertising man over there. Look at this, will you, and tell me what you think of it?"

The request brought color to Extell's cheeks. He wondered, with a sort of shame, whether he would have been similarly capable of asking advice when he was in Milledgeville.

So in the latter part of 1912 George Extell was, for the first time in his life, honestly striving, keeping everlastingly at it, spending three evenings out of seven in reading, studying, planning. He had a tremendous driving force behind him. He did not inquire of himself exactly how this driving force was made up. He thought it was due to his solemn oath to get even with Vibert in some way as yet obscure. Whenever he thought of his old manager his muscles tightened and his nerves strained.

In October Wetterson stopped Extell in the hall one morning just as he was punching in. He took the young fellow into his room and sat him down.

"Extell," he said, "you go on the road Monday. The rest of the week you can spend with our Mr. Preston, who is correspondent for your territory, and with our topnotch man in the Southern New England district, who is in the office just now. I'll introduce you to him this morning.

"I want to say just a few words, Extell. I'm giving you a hard territory with a lot of hurdles in it. The man who has had it is getting through. He has done little with it, and I don't hold him altogether responsible. Really I'd like to start you off on something more promising; but there isn't another vacancy. You're going to find the going hard, and at times you're going to get as blue as this typewriter ribbon. I know how it is, and you may as well know. I think you've got sense enough so you won't be hurt by hearing this in advance.

"Extell, you've seen our line. I tell you, South Trent tools can't be beaten in this world for mechanical perfection. You've caught our atmosphere, here in the office, and you can see that we deal square—absolutely on the level. I want every one of my men to go out and talk our tools from an honest belief in them. I want them to feel that, all things considered, they are the best in the wide world. But if I should ever hear that you walked into a place and knocked our rivals, Extell—even by innuendo—well, son, I'd take the first train and wring your neck! Good luck to you!"

(TO BE CONCLUDED)

They Wouldn't Even Buy Shoes for Her!

Marguerite Clark
in "Snow White"

There was an envious stepmother, and a beautiful princess, and seven dwarfs, and the most gallant knight that ever was. And they make a beautiful story—a story with the very spirit of fairyland. Of course, it is a Paramount picture. Marguerite Clark appears exclusively in Paramount Pictures. She is the spirit of everlasting youth, so eagerly welcomed by so many thousands of men and women and children when her lovely face and tiny figure flash out on the screen!

LOOK FOR MARGUERITE CLARK in these Paramount Pictures—"The Fortunes of Fifi," by Mollie Elliot Seawell; and in "Cinders," "Miss George Washington," "Little Lady Eileen," "Mice and Men," "The Prince and the Pauper," "Molly Make-Believe"—and many others. And see these other Paramount Pictures—"Oliver Twist," "Great Expectations," "The Slave Market." These and "Snow White" are some of the

Paramount Pictures

Paramount Pictures are produced by four companies—Famous Players—Lasky—Morosco—Pallas. If you see one of these names you know it is a Paramount Picture.

You know now, that when the bill board in front of the motion picture house shows a *Paramount Picture*, you are going to see a good play and a great star. You know that the Paramount theatre in your neighborhood is the best theatre.

This is no accident. It is the result of many long years of careful effort and much struggle. For the *Paramount Producers* were the first who made motion pictures of quality and always of a clean, wholesome character. They were the first to put Sarah Bernhardt and other great stage stars in the films. They were the first to feature five reel photoplays. They knew from the first that nothing was too good for the motion picture.

Here are some of the many Paramount Stars:

Marguerite Clark, Pauline Frederick, Marie Doro, Fannie Ward, Mme. Petrova, Margaret Illington, Lenore Ulrich, Mae Murray, Louise Huff, Kathlyn Williams, Ann Pennington, Vivian Martin, Myrtle Stedman, Cleo Ridgely, Theodore Roberts, George Beban, Lou-Tellegen, Jack Pickford, Sessue Hayakawa.

Uni-Lectric Light and Power for Every Rural Home

The Uni-Lectric brings to the farm home electric current for both light and power. At a very nominal cost you can have ***all the lights you need***—you can operate the various electrical conveniences and you can have 24 hours continuous service ***every day in the year*** if you wish. The Uni-Lectric operates on exactly the same principle as city lighting plants, delivering its current ***direct*** from the generator. Extremely simple in construction and takes up very little space, being only 24 inches wide, 25 inches long, and 42 inches high.

No Belts—No Batteries

Our patented, high speed, rotary sleeve valve engine drives the generator with such smoothness that there is no flicker of the lights or unsteadiness of the current. Thus all necessity for storage batteries is done away with and the renewal of batteries and battery up-keep cost is permanently eliminated. The engine and generator being direct connected, no belts, gears, chains or sprockets are needed.

Big Capacity The capacity of the Uni-Lectric is sufficient for 50 lights at one time. You can operate electric irons, electric heaters, vacuum sweepers, electric fans, churns, separators, washing machines and electric motors up to 1 H. P. for power purposes about the farm.

110 Volt The Uni-Lectric generates standard 110-volt current the same as city lighting plants. Uses standard lamp fixtures and electrical devices obtainable in *any* electrical supply store. The Uni-Lectric can be placed three or four hundred yards from the house or barn as it will deliver current double the distance possible with low voltage.

Easily Installed—Easy to Operate

Being built in one unit the Uni-Lectric can be placed in any convenient location and after the wiring is completed you simply attach the wires to those leading from the generator. The Uni-Lectric requires only the care and attention that you would give any machine from which you expect *many years* of service. The accurate and carefully adjusted governor gives positive and automatic regulation. Wiring may be so arranged that engine can be stopped by switch located in bed-room or other convenient location.

Because storage batteries are unnecessary with the Uni-Lectric, we guarantee the *entire outfit* for five years. It has proven its efficiency and economy by over two years of actual service in the hands of users.

THE HOUSE OF CRAIGENSIDE

(Continued from Page 23)

"I feel all gone," she whispered. "Something has taken the starch out of me."

She drank, then motioned the girl to take away from the bed the copper warming pan, in which a handful of coals still glowed red.

"Shift the rolls," she said then, shrill as a parrot.

These rolls were rolls of sand bound in red cloth, like huge window bags, one on each side of her. They seemed to be all that kept her tortured body together in the bed. The girl shifted them.

"Hear the wind," said the old lady between her teeth. "It comes against this old rattletrap like a judgment—like a judgment, young man."

The girl left the room with the empty glass, and Mercy turned on me a glittering eye.

"Come straight from the shoulder and no shillyshallying," she said to me. "Prevarication kills me quicker than anything in the world. I won't hear to it. A track was seen in the sand, you said?"

"I saw it with my own eyes this afternoon."

Fear stood in her black eye.

"With your own eye. And no foot that could have made it, I suppose? You saw nothing that you could have put your hand on?"

"There is no reason to start," I said soothingly. "I have good reason to believe that no ghost made it."

"No ghost, I'll be bound," said the old lady faintly. "Better a thousand times if it was a ghost. No, it was no ghost of Amos."

I leaned forward eagerly:

"Then you yourself know who it was?"

"And suppose I do?" shrilled old Mercy. "What does all my knowledge avail me, now that I come to the judgment seat? What was all my nursing him and waiting on him by inches, the great spleeny man? I worked my fingers to the bone, I slaved like a dog, and what was my reward? To embalm him, if you please! That was his will and pleasure—that was what he could find it in his heart to leave me as a legacy. I've heard him say, young man, that women like to be martyred. That was the theory he went on; and so he went and consorted as he chose, and left me to pickle him and bring him home here away from the clutch of foreign hells."

She muttered unintelligible words, then said clearly: "He's well preserved—I had the embalming of him myself. It's a trade like any other, and I learnt it young. 'Bring your tools, Mercy,' he said to me. 'If you must come, bring your devil's chemicals. I shan't be easy unless I'm under those sand dunes. Some day they'll pile over the tomb and hold the secrets of the Craigensides safe.'"

She paused for breath; then went on:

"He was afraid of his little idol, though he wouldn't admit it. Oh, don't tell me they're only wood and stone, these foreign gods! They are wicked contraptions, I don't care if they are carved by hand of man."

Her blue fist was knotted in the sheet.

"I've never known one peaceful hour since the day he brought the thing aboard."

"Where was that then?" I inquired.

"That was in the China seas, young man."

Then she lost the thread of things again. When next she spoke intelligibly, she said:

"Hark! Do you hear the wind over the dunes? So I heard it when I was a child, but it changes its tune. Ah, the air is sweet. Raise the window higher. Let the wind come in on my face. I'm burning up! No, shut it again. Shut it down. Hogs hate wind; but no more than humans, when the soul is blown along too. I felt it snatch at me. Ah, well, I'm going with the ebb . . . with the ebb . . . with the ebb . . ."

Her words became an unmeaning drabble of sound. They ceased. I leaned closer, thinking she had gone already. She still breathed. Through the closed window I glimpsed the ceaseless glitter of the outrushing tide, on which the moon had cast sharp silver spurs. With the ebb?

But the ebb was not yet consummated. The old lady gave vent to that shuddering sigh which, as she said herself, was of such a character that with each repetition it withdrew a drop of blood from the heart.

"Works, that's what it is, plain works," she mumbled. . . . . "For shame! Oh, if there's one thing more than another that just about kills me, it's ingratitude. I can do and do for you and bear and bear with you and slave and work like a dog and wear my fingers to the bone, and not one single, solitary thing will you do for me in return."

She grew wrathful, rose up between her sand rolls and beat the quilt feebly.

"I will not bear with that demon lurking there. . . . Hear the man. . . . Unreasonable. . . . To save myself . . . from the clutches. . . . All my life, fair weather and foul . . . without a murmur of complaint . . . and now . . . unreasonable. . . . Look there at the thing he has set to watch over me in my misery; its eyes follow me in my turnings and tossings. Oh dear, it's awful to face, cast up red hot out of hell. . . . There, there . . . the ship shudders. . . . What's that sharp noise forward? . . . Take the deck, man . . . we shall go down with all our sins if we are not precious careful."

All at once this fit was over; the old lady looked at me with sane eyes, and murmured:

"'Man giveth up the ghost, and where is he?'"

Immediately she relapsed into her harangue:

"I counsel you to drop it where the ocean's deepest. Why should you fear cold stone? Ha, why indeed? You are too bold by half. Bend it toward you, as he says. . . . No, no."

These words came as a wild screech.

An extraordinary light had come into the old lady's black eyes. She rose half up in bed, beating the quilt feebly; and then the most terrible delusion of those who die was all about her.

"My feet take hold on hell!" she shrieked.

I affirm to you that it was possible to see the flames consuming her; she shriveled before my eyes like an ant laid on the coals, and with a shiver I reflected that indeed her feet were gone already. She writhed between the two great sand rolls, and the agony of all historic fiends was comprehensible to me thenceforward. Her cane with the albatross beak appeared from under the quilt, its jaws gaping side by side with hers, as if in a queer, headless sympathy.

I was conscious of the sane appointments of that little chamber—the great four-poster bed, the chintz-covered wood box, the frayed samplers on the walls, the leaky bellows by the chimney place, the low-seated horsehair chair. These things gave the place a look worn and habitual. Yet under my eyes lay a soul suffering the torments of the damned, to whom all this had become remote and chimerical, whose ear had no receptivity unless for the dreaming voice of the tide, which ebbed, ebbed, soliciting her spirit into that dark ocean with its immeasurable voice, that mystery beyond solution.

Mercy Cobb fell back, and the light of reason stood in her eye again. I looked furtively at the lump of clay at the foot of the bed. Could she see it also? Alas, poor lady, thus flies are smeared! Death knows nothing of fastidiousness.

"There you are again," she whispered.

I stooped and adjusted the rolls. The sand itself had absorbed the burning heat of her shriveled body.

"Hark! Is that the gulls beating about the house?"

It was only the tide with its many urgent voices.

"But still they'll wheel and wheel—they're never satisfied. . . . Lost souls. . . . There's the wind again, trampling on the roof. . . . Many the time I've thought it would shoulder this house into the sea. But no, it is founded on a rock. . . . Listen again! Isn't that they, coming against the wind?"

Her eyes blazed; a sort of madness seized her.

"Yes, yes! Here's the one that was hanged. Just God, the hangman's noose is at my neck! Ah, I have done no wrong, but there it is, seven fat turns of the rope round a standing part. It comes nearer. Drive off the bird. . . . Now, hold off. . . . God's mercy, I confess . . . give me time."

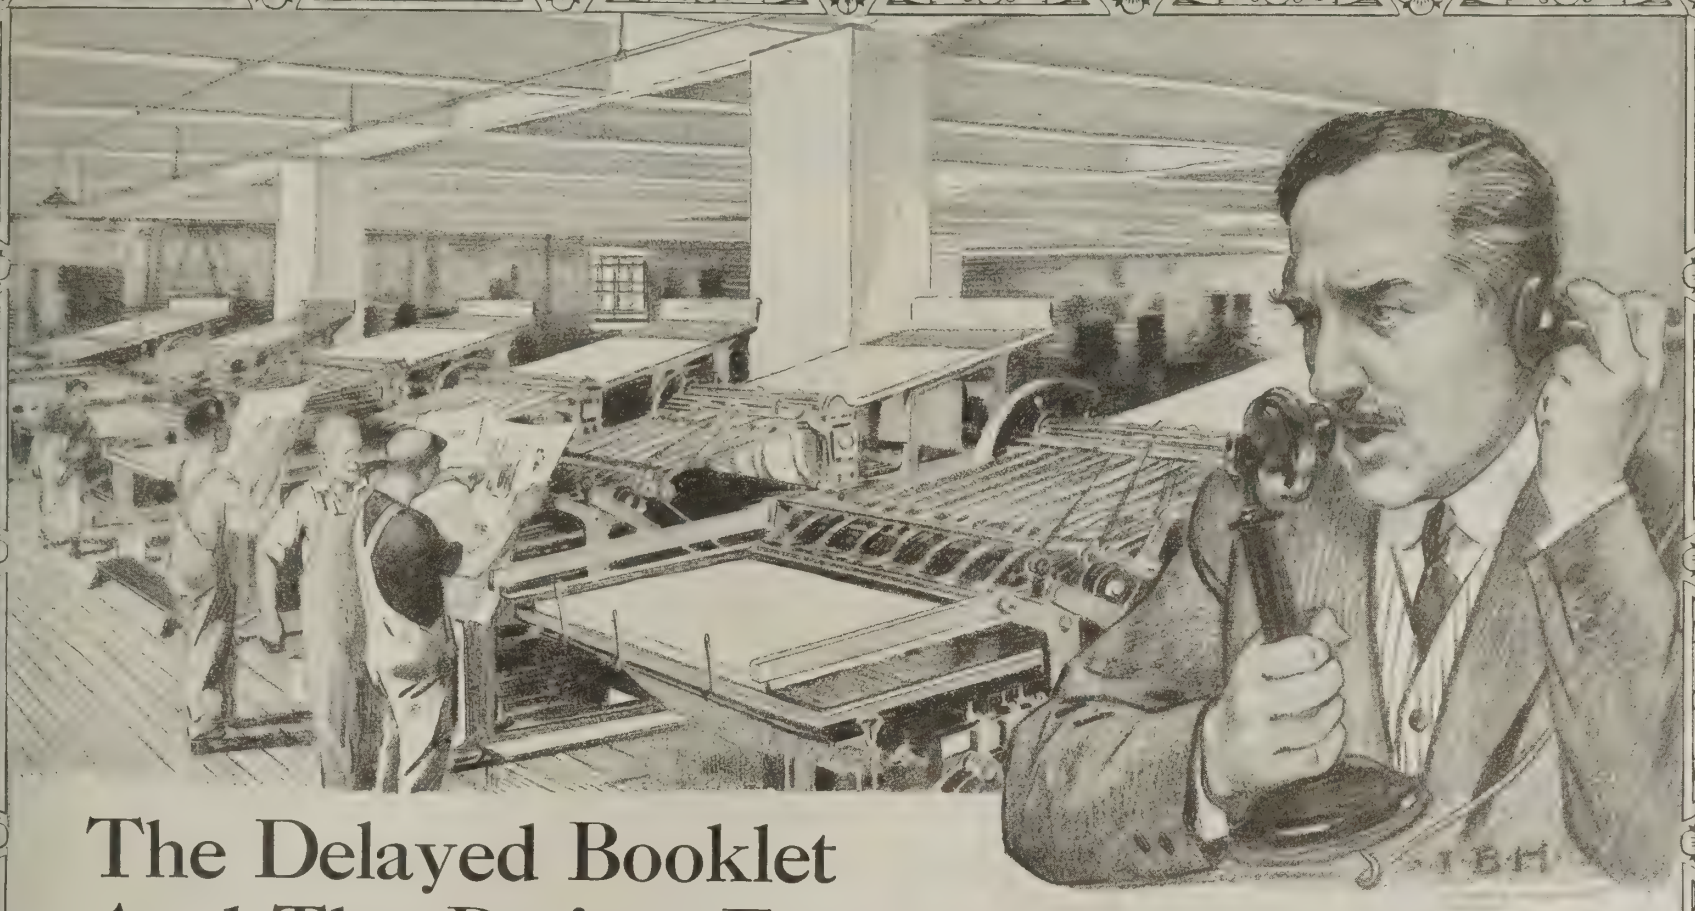
"Confess," I whispered. "And to what?"

But a saner light had come into her eye.

"Young man, I charge you, upon your conscience, bring me the god . . . the little jade . . . here to my bedside. In half an hour it may be too late. Oh, to be plunged at my latest hour into the furnace of adversity, as I am! It is more than I should bear!"

Her fingers were actually at my wrist. Wild terror gave that skeleton hand invincible strength.

(Continued on Page 77)



The Delayed Booklet And The Perfect Excuse

When the telephone rang that morning I was apprehensive of trouble. There was something ominous in the tone of the bell.

It was my printer on the wire.

He had finished his make-ready and started his presses on my new booklet—and the coating of the paper had "picked."

Inquiry (I am afraid I said, "What do you mean 'picked'?") developed that the coating of the paper stuck to the halftone cuts and pulled off.

"Can't you fix it?"—the old, familiar wail went over the wire, unnecessarily loud, for I was in a hurry for that booklet.

No, the paper was not up to standard. The entire order would have to be thrown out and a new run of paper secured.

Next day the printer told me something about printing papers.

It seems that not only the "picking" of cuts, but binding troubles, blotched engravings, some booklets actually weighing more than others, with consequent variations in the way individual pages are printed, folders and circulars that break in the mail, blistered pages, shrunken wrinkled sheets—all these deviltries are due to lack of standardization in the making of paper.

A standardized paper is one that invariably gives uniform results under the same press-room conditions.

Good printing depends upon a perfect co-ordination of three factors: the press, the paper and the cuts.

Just as the speed of a press is standard; just as the number of separations to an inch in a halftone cut is standardized—so must there be a definite weight, thickness, color, surface and body to the paper that is to run on those presses and which is to record impressions from those cuts.

Variations in paper mean variations in printing. Definite standards in paper mean definite standards in printing.

If you want fine printing, you must work with standard papers.

S. D. Warren & Company were the first to realize the importance of standardized printing papers and the first to set about producing them. Their announcement of Warren's Standard Printing Papers gave better printing to America by establishing a basic standard for the kind of paper to be used in the printing you contemplate.

The 1917 Warren Suggestion Book shows you all of Warren's Standard Papers, and suggests when to use them.

It shows you when to use the lustreless, ivory-like CAMEO that gives to halftones the depth and softness of platinum photographs, and the glowing WARREN'S LUSTRO, the highest refinement of surface in glossy, coated papers.

It shows you how WARREN'S SILKOTE brings out the fine detail of illustrations of either commercial or artistic subjects. You see the remarkable effects obtainable on the dignified, clear-printing CUMBERLAND COATED. WARREN'S PRINTONE for large editions, a good-looking, perfect-folding paper, "better than super, cheaper than coated," is also shown and the best uses described.

Write on your business letterhead for the 1917 Warren Suggestion Book, seventy-two pages that are a real, constructive help to any buyer of printing. It and supplementary booklets are free. If you buy printing they will be useful (we almost say indispensable) to you. They are text-books on paper for those who use it.

THE FRANKLIN CAR

WHAT IS SCIENTIFIC LIGHT WEIGHT

PROGRESS is a fight, not so much against ignorance and stupidity, as against the tendency of the *human mind* to run in *grooves.*

The great mass of motorists has never been able to look ahead in automobile construction. It reasons *backward* from what it sees close at hand.

It takes as long to get a wrong idea out of its head as to get a right one into it.

* * *

At first, all fine automobiles were ponderous, heavy cars, complicated and expensive. It took the weight to justify the price.

Besides, that was the way men mostly thought about the automobile—a sort of Pullman-car feeling.

So the heavy car was what the average motorist saw close at hand. And reasoning backward, he built up a fine assortment of *fallacies:* such as, the heavy car was easier to ride in, that it kept the road better, that it made the owner more impressive, that there was virtue in the big wheel base.

Actual motor car *experience* shows up and *disproves* these *fallacies.*

Now the heavy car is going out of fashion.

If you doubt this you can prove it for yourself by going into any fine car salesroom. The automobile salesmen are very eager to tell you that their new models are considerably lighter than last year, if that happens to be the case. But they say nothing about weight if their new car is heavier or the same weight as their former model.

But the average motorist cannot entirely free his mind from the old grooves.

He still looks for an eyeful of cumbersome car and mechanism. He still lingers over the big wheel base.

* * *

For fifteen long years the motor world has fought each advanced principle in Franklin Car construction—and then finally come around to it!

Among fine automobiles the Franklin was the *first scientific* light car, and for fifteen years it has been the consistent exponent of *Scientific Light Weight.*

You may have noticed lately how many cars are making their appeal to the public on light weight.

Now, as an *enlightened motorist*—not one of the unthinking mass—you want to *discriminate* between a car that has had some of its weight chopped off to meet public demand and the one motor car in America that is today as it always has been—a *consistently* Scientific-Light-Weight car.

The Franklin construction calls for the finest materials that can be put into a car. The choice of material is a special Department of Science in itself. The use of these materials is another—saving weight ounce by ounce all over the car.

* * *

The car that has *Scientific Light Weight* to offer you (not merely lightness) can show actual *results* in *facts* and *figures*—in gasoline mileage—in tire mileage.

It can demonstrate to you a new *comfort* and *reliability,* smooth-rolling quality, flexibility, easy control, a resiliency, that saves not alone the expense but the *annoyance* of tire trouble.

In our next announcement we shall take up some actual results of Scientific Light Weight as proven by the Franklin Car.

Touring Car	2280 lbs.	$1950.00	*Cabriolet*	2485 lbs.	$2750.00	*Town Car*	2610 lbs.	$3100.00
Runabout	2160 lbs.	1900.00	*Sedan*	2610 lbs.	2850.00	*Limousine*	2620 lbs.	3100.00
Four-passenger Roadster	2280 lbs.	1950.00	*Brougham*	2575 lbs.	2800.00	*All Prices F. O. B. Syracuse*		

FRANKLIN AUTOMOBILE COMPANY
SYRACUSE, N. Y., U. S. A.

(Continued from Page 74)

"I mistrust it will drag me with it into hell," she cried aloud. "The wrong hell. Yes, yes, 'There's hells and hells,' so Amos said. . . . 'I don't mind roasting in a good Christian hell, as a Christian should. . . . No, that's very good . . . that's like a sailor' . . . so he said. 'But now . . . I tell you, Mercy . . . it'll be rogue's business falling into a hell for strangers. I'm bad; I've been from rum and molasses to champagne and back again in my time . . . but I don't like this Asiatic hell. . . . Put me under the dunes, woman . . . the dunes.'"

Her voice had become hoarse and domineering. It was as if the voice of Amos Craigenside himself issued from those withered lips, and in that moment I could no longer mistake the noise outside. It was a sound of gulls wrangling over the roof of the house. The coincidence was chilling, I confess it.

"Bring the god," breathed Mercy, "holding it very carefully . . . so . . . in both hands."

"Where shall I find it?"

"There . . . there . . . behind you. . . . Do you not see its fearful eye staring at me through the wall? Oh, God forgive me for my many sins! Day and night it stares upon me in my agony. . . . Ah . . . there it turns . . . the eye turns in the head. Save me from it!"

We were suddenly interrupted by a single stealthy sound, which, in fact, seemed to proceed from the wall behind me. I could not then have said in what this sound consisted, and I cannot now begin to describe to you the overwhelming sentiment of horror and white terror which ran all through me in that instant.

I stood frozen in my tracks, and suddenly old Mercy Cobb sat up in bed to stare past me with such a light in her eye as I hope never to see again in this life.

"They come already," she said in a fearful whisper, and fell back, and in that very moment was stone dead.

She had gone with the ebb!

I trust I may never be called upon to turn round again in quite those circumstances. My body seemed to move as if foreign to my will. But turn I did, and immediately the strange noise was explained. One of the framed samplers had been deposited on the floor; a square opening had appeared in the wall, and a human face hung in this opening.

Conceive my amazement when I found myself looking into the eyes of the undoubted living counterpart, eye for eye, feature for feature, down to the last detail of dress, of the scarlet puppet which Mr. James Smith had plunged into the river through the floor of his dressing room.

"Stand where you are!" I called. "You are not dead, it seems. You were not thrown into the river after all."

"Not thrown—no—I jumped," said the fellow grimly. "I threw myself in."

"Aha," said a voice over my shoulder. "In which case there is neither crime nor criminal, and we have wasted our time with you."

Hawley was standing behind me.

"There is the greatest criminal in the world," said the man slowly. "Let me out of this. There may be no time to lose."

He put his hand into the blouse of his uniform and drew forth with cautious fingers the missing jade.

"Be calm, my beauty!" he said in a resonant voice. "You are at last in the hands of the police."

x

WE HAD first to get our man out of his hiding place. But that hole in the wall was not a thing of such monstrous omen as it had seemed to my terror-stricken eye.

"There is a door at my back," he said, withdrawing his head into the recesses of that mystifying aperture. "Under the attic stairs."

We found a low door, concealed by a tapestry and held fast by a wooden button. Hawley pushed it in. At once our velvet-clad manikin stepped out into the yellow light, blinking and holding the god gingerly in both hands.

Hawley thrust past him into his musty prison and lit a match. The place was buttressed with beams big enough for the massive knees of a ship. Rising from the middle of the floor we saw a heavy squared timber, equipped with clustered chains, which terminated in iron wristlets.

"A slave room!" cried Hawley, taking up in his fist a mass of these iron parts.

"She had many," murmured our quarry.

"A slave room—in this Northern state?" I protested.

"My dear sir, this is a Queen Anne house, and its Queen Anne owner would certainly have held slaves, even in this Northern state."

"Wait, did you hear a step outside?" said the man—or mechanism—recoiling with a ghastly face, but still holding the god rigidly erect.

We stood listening with all our ears; but there was no sound. The girl below, we later learned, frightened by the sound of strange voices, had fled the house.

"I hear nothing," said Hawley. "And now, sir, will you be good enough to explain to us how it comes that you haunt an old lady's last hours in this disgraceful fashion? Upon my word, by the look of things it is fair to presume that you have been the death of her."

"Turn and turn about," said the man in scarlet. "She has taken ten years off my life in times past. But it was her own conscience that killed her, and the memory of—this."

He tapped the pug-nosed god affectionately on the end of its most characteristic feature.

"I may say," he continued, "that she had in a measure got into the habit of bowing down to sticks and stones. She is now dead. God rest her! I say it from my heart, though I have reason and to spare to be bitter against her. She had a hard row to hoe at the last. This thing had had its unholy eye on her all along, for all she was a Methodist. The truth is, she is responsible for its having been—transplanted. The East and the West are here weirdly mixed up. No, if you value your life, sir, do not touch this thing until I have verified once and for all the suspicion I have of it."

Again his jaw hung slack, and again he listened, as if to the low breathing of some far-off menace.

"Do you know," he said, "I believe there is no time to lose."

He seized my arm, urging me toward the door.

"As I live, there's deviltry in the air, and of a kind I am familiar enough with by now, in all conscience," he said. "Come with me, if you please, to the other house."

"We expect an explanation in due time," said Hawley.

"In due time you shall have it. I suppose we may leave her alone upstairs. She no longer needs an attendant."

But at the very door we met Doctor Starr, dangling in his fist a small pine box in which he had intended to pack that lump of clay.

"You will have to bring a larger box than that," said Hawley gently in passing out. "Your patient is dead."

"It is the best that God could do for her," said the doctor quietly.

"That is mortal truth, I can swear to it," said our man, "after the time I have put in in that closet of hers."

As we leaped the wall which bounded the Craigenside terraces he told us that he was a sailor, by name Jim Garnett.

"You will not have heard of me," he added. "I went away when a boy, and I've never been back; but I was born on this sand spit for all that, and my feet can still feel it out for me."

He put back a restraining hand as we crept into the shadow of the house.

All was dark and still. In another moment we were between the central pillars of that wide-flagged porch. A cool stir of air came from the river; and then we received into our nostrils that strange suggestion of spice from the huge musty hall which had first drawn my attention to its Oriental flavor. Starshine struck a sparkle from that robust mermaid of brass affixed as a knocker to the center of the panel; and immediately I saw that the door itself stood ajar.

The scarlet figure at my side reached out a hand and brought down the knocker three times. The portentous dwelling of the Craigensides gave out no answer and no stir of life. It seemed absolutely empty, and there was not a sound except a slow dropping of water in some hollow place which gave out a minute echo. From where we stood we could see through darkness a faint spur of light on the silvered knob of the door which opened into the front parlor; but beyond this, nothing.

My friend therefore opened the door wider, and said in a distressed way:

"I believe they have gone already. Is it possible ——"

He twisted his head sharply and made sure that the ship was still lying at her anchorage. The moon had gone behind a cloud,

EVERY year an increasing number of people, who have had experiences like the above, come to the same belated conclusion.

The average building put up today should last for one or two generations. But too often the pipe which goes into it is purchased on price only, and begins to give trouble within a decade, followed by replacement at a heavy cost before the building has reached its middle age. The best way to forestall such trouble is to insist when the plans are being drawn, on

BYERS PIPE

GENUINE WROUGHT IRON
FULL WEIGHT GUARANTEED

For Byers pipe is made from genuine hand-puddled wrought iron—the kind of iron which has for centuries been known for its rust-resistance and ability to withstand vibration, shocks, expansion, and other physical stresses which soon undermine the strength of pipe made from newer and only slightly cheaper metals.

Byers pipe, black or galvanized, has for half a century been the standard for plumbing, heating and power purposes in the best residences, large buildings, factories, mines, power plants, on railroad cars, locomotives, in short wherever the greatest permanency is desired. Its slightly higher first cost is but a small premium to pay for the most permanent pipe insurance.

but the Asphodel's riding light was plainly visible, and something like the ghostly shadow of the ship itself extended on the dark surface of the water.

"The Asphodel," he murmured; "pale flower of Hades and the dead. Well named, choice flower of hell! Do you know it is true that a ship takes the complexion of her company? The very shrouds and shadows may take on that tinge of the murderous and treasonable. I tell you, when I look at that ship, lying there—the very ship that I saw lost in the fires of sunset—gone like morning mist or like a chip on the tide, I feel as if a cold wind had passed through my heart."

"The ship then enters in?"

"You may say that. I suppose as a ship is hung up, rib by rib, bolt by bolt, yard by yard, so she goes. The song of the mallets that drove the oakum into the seams of the Asphodel was a dirge, however. Have you a match? No matter; there comes the moon again."

He opened the lid of the tall clock and replaced the god on its shelf. The eyes, appearing as two venomous sparks of green fire, favored us with a horrid scrutiny.

Jim Garnett loomed close in his bizarre costume. Suddenly his fingers banded themselves like steel about my upper arm, and he hissed:

"Did you hear that noise? Something between a wail and a whistle?"

I had heard it certainly, and for a second had indulged a spasm of fright. But the cause of it had instantly occurred to me.

"They are setting off the fireworks," I said. "That was the stick of a stray rocket falling hereabouts."

I stepped to the door, and in that moment the sky was rent by the splay colors of a triple bomb. Great golden fingers hung for an instant high over that dark house, reaching down as if to whirl it away in the clutch of that mad phantasmagoria which linked it with the vengeance of unknown gods.

Jim Garnett sank his fingers in my shoulder.

"They are coming—from the waterside," he whispered. "Now you shall see a curious thing. Look! I leave the lid of the clock open. The moon will shine into the face of the thing in another second. Come this way, into the double parlors."

We fell back into the musty darkness of those huge rooms; and in another moment Craigenside appeared on the porch, and the girl behind him. "You see, there is nothing," she was saying softly.

"I felt the tug of the thing, I tell you," he insisted in a weary voice, "as much as if some cursed anaconda had got me round the middle. It caught me here. I was as numb as an oyster for a second, then I felt something like a warm wave dart up from my heels, do you understand, and then—— Merciful God, the thing is back!"

We saw him, with his arms hanging limp, stop and stare. He crept toward the coffin, whispering "There is something devilish in this reappearance."

The tall clock was now plainly discernible in its corner, and Craigenside fixed a terror-stricken eye on its infernal occupant.

"Fancy or no fancy, I am a doomed man," he said thickly.

"No, no," said the girl. "If we keep a strict watch, what harm can come to us?"

"Watch?" cried the captain fiercely. "What is there to watch? You know this religion as well as I do. Every act of a man's life follows him, and climbs his back like his shadow—his shadow—his shadow ——"

He went on with his mad muttering. He stole toward the masked horror in the corner, reached out an arm, drew it back.

"The sins of the fathers," he whispered. "Was it my fault? I felt in my bones that no good would come of that hell's opening. But he would have it, and so all of us must pay the shot."

The girl tried to pluck him back, making at the same time a movement to shut the door of the clock.

"Let be," said Ruel. "Time and Eternity! Time and Eternity! So it goes with the house of Craigenside—divided against itself. Hah! Tick, tick, tick, so you go—the sand running in the glass."

Then, in a flash, followed a dreadful series of events. Craigenside, swaying in his tracks, drew one hand across his brow.

"He is coming," he muttered. "He is here already. The summons ——"

He fell to his knees, and his hands clawed at the rug. The ropy shadows of the invisible retribution seemed to be knotted at his throat already.

It was precisely then that we heard a roaring on the roof of the house, and saw the night sky taking a red tinge. That rocket whose whistling we had heard had fallen through the skylight into the attic and set fire to the heap of dusty rubbish there. The house was open from top to bottom, and with the draft thus afforded the flames had a fatal hold in a twinkling.

It may have been this threat of ruin that drew Mr. James Smith out of his hiding place. At all events, he came. We saw his black figure pause on the threshold, that terrible pale eye of his fastened on the god. He had come far and schemed a great deal to possess it; but after all he was doomed to disappointment. He stood with folded arms, the lump on his forehead glowing scarlet. I think we were all affected by glancing rays of his strange mesmeric power. A sleepy veil seemed to hang between our eyes and that impending horror. That extraordinary yellow mortal was terrifying in his economy of movement. It was as if the soul within had stationed itself a thousand miles away. That stillness in the body was like a projection in the flesh of the terrible steadfastness of purpose held within. The man seemed to live by one thought, and to await the revolution of the wheel of things to bring uppermost his opportunity.

Jane Craigenside was first to rouse herself. With a cry between disgust and fear she stepped back, and with a convulsive movement of her arm flung into that ghastly black box a heavy dagger—sheath and all—which she had ripped from the draperies behind her. All her valiant soul went into the throw.

The god fell to the floor. But in that same instant Craigenside thrust his body forward spasmodically in an effort to save the idol from destruction. He overbalanced, and his head brought up with a jarring impact a foot or so below the pendulum. The enormous coffin, which must have been poised very nicely on the warped flooring, suddenly hung out over him, became a descending shadow, then with a horrid crash shut the master of Craigenside from view with his neck broken.

The prophecy of old Jared was so far fulfilled, that the coffin he had built, as if that vindictive spirit had informed it, claimed its own. Jim Garnett stood holding the body of the unconscious girl across his arm; and the head of the little god, snapped off short, spun to the feet of the priest, its eyes still emitting that baleful light with its suggestion of green fire.

Mr. James Smith snatched it up and vanished through the open doorway.

(TO BE CONCLUDED)

Picking the One in a Thousand

You say to Westinghouse "I want a motor for my appliance" or "mill" or "machine."

Westinghouse says to you "You want *the* motor for your appliance" or "mill" or "machine."

What a difference that may make in dollars saved and troubles avoided!

Of the thousands of different kinds of Westinghouse motors there probably are a number that will serve your purpose. There is but one that will do it best.

To Westinghouse, selecting that one is as important as building the highest-grade motor.

Whether you want a motor for a steel mill or a washing-machine, a railroad locomotive or a coffee-grinder, Westinghouse will study your own requirements to determine the right type, size and characteristics.

Often this means weeks of careful investigation on the ground by trained engineers, followed by thorough testing at the Westinghouse plant.

In these investigations and tests, Westinghouse engineers have the great advantage of Westinghouse experience in the application of practically every kind of motor, from 1/100 to 15,000 horsepower. As a result they can not only recommend just the right one for you but may also be able to suggest mechanical changes that will simplify your problem and save you thousands of dollars.

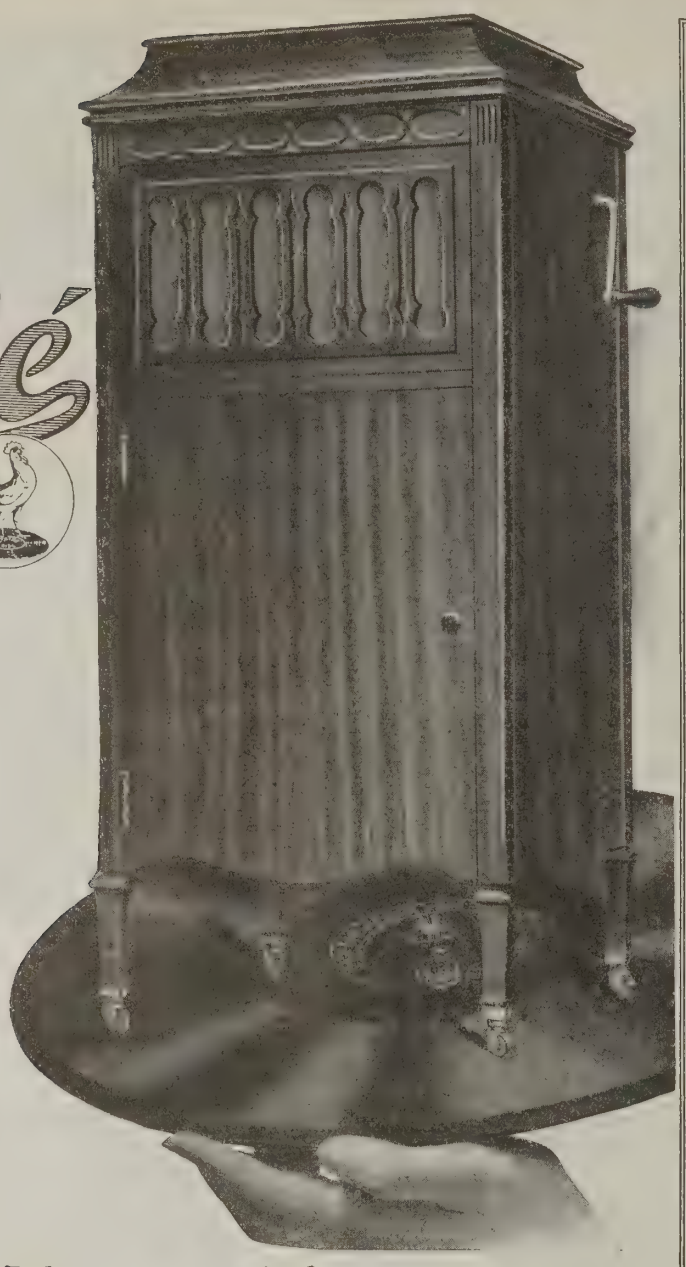
REG U S PAT OFF



The Great Tenor *Muratore's* Favorite Pathéphone

Read the Things That Delighted Him in This New "Professional" Model No. 125

THIS Pathéphone was designed for the personal use of Muratore, leading tenor of the Chicago Opera Company.

Few phonographs at double its price have such *volume*. It has the famous Pathé "*violin*" sound chamber of resonant wood, which amplifies and enriches every shading, every note, every delicate detail of the music as it comes from the large diaphragm of the Pathé "reproducer."

It has a strong, *long-running* motor of a type usually found only in phonographs costing much more.

Pathé Records are played with the famous Pathé Permanent Sapphire Ball, which takes the place of sharp metal needles. You are saved the bother of changing needles every time you play a record. This polished, ball-shaped jewel does not cut, dig or rip the record. There is *practically no wear*. Pathé records are often played a *thousand and more times* without losing any of their fine reproductive qualities.

Hear records by the world's great artists, such as Lucien Muratore, greatest of all lyric tenors; Jacques Thibaud, master violinist; Claudia Muzio, reigning success of the Metropolitan Opera season; Rudolph Ganz, distinguished concert pianist; Adamo Didur, popular Metropolitan Opera basso, and hundreds of other celebrities known to American and European audiences. Records by great European singers you have never heard before. Records of unique Hungarian and Sardinian orchestras, Gypsy violinists, and a whole new world of delightful foreign musical novelties.

And more! The Pathéphone not only plays Pathé records, but plays beautifully *every other kind of disc record made*.

This "Professional" Model Pathéphone at $125 gives *unsurpassed musical value at the price*. Hear it today at the Pathé dealer's near you. If you do not know his address, write us.

Other Pathéphones $25 to $225. Every model equipped to play all makes of disc records.

MACAROONS

(Concluded from Page 17)

"Oh, no," came the unexpected reply. "I'm winding my watch."

Billy laughed.

"When you've finished winding it," he asked, "are you going to let me in?"

"No, Mr. Manners," she replied. "I have finished."

"Why not?" Billy argued. "We were getting on splendidly. Why did you run away?"

"I thought I ought to," she explained in one of her sudden bursts of confidence. "You see, I ought not to have gone—and then I ought never to have thrown that macaroon at you; and it was very bold of me. But I thought it would please you; and I kept it from this afternoon because—because I expect I'm not grown up quite, and I pretended that would please you too. And please don't ask me any more questions. Aren't you going away soon?"

"No; I'm going to stay until you open the door," he said. "You might as well; and I'm catching cold."

He began walking up and down, whistling to himself. Always he watched the door. He did this for a very long time. He was determined to see her, and look into her eyes, and hear her utter simplicities, and tell her—well, he would know what to tell her when the time came. Billy's heart was set on this girl who spoke what was in her mind and knew no guile.

"Oh, Mr. Manners!" said the small voice suddenly.

Billy was at the door in one leap.

"Yes!" he said eagerly. "Are you going to let me in?"

"Oh, no," she said blandly. "I was eating some goodies. Would you like one?"

"Yes, indeed," Billy replied.

A slender little hand came through the crack and he pounced on it.

"Now I've got you!" he announced exultantly. "And I won't let go until you open the door."

"Oh! Ouch! Mr. Manners!" she exclaimed. "Look out! You're scrunching it."

"I'm not, either," he said. "I'm just holding it."

"Oh, not my hand, Mr. Manners," she explained; "it's really quite comfortable. The macaroon, I mean."

Billy loosened her fingers and a little shower of crumbs fell at his feet.

"You've scrunched it, haven't you?" she asked. "That was the last one! I brought two away with me this afternoon. I think I meant to keep them; but I used one, and now you've scrunched the other; so there aren't any macaroons left. Hadn't you better go away? And will you sweep up the crumbs before you go?"

"No, no!" he said. He took her hand in both of his and knelt before the crack. "Listen! I want to tell you something. You said this afternoon that no one took any notice of you because you weren't interesting enough. Well, I think you're the most interesting girl I've ever known; and I think you're the loveliest girl too. And I want you to ——"

"Why, Mr. Manners! What are you doing?"

Steps on the porch and the voice of Pepita interrupted Billy's discourse. He sat back on his heels and looked at Pepita over his shoulder, without letting go of the little hand.

"I—I believe I'm proposing to someone," he announced.

"You! Who? Where?" asked Pepita. Thank goodness, she was alone!

"Behind the door," said Billy. "I—I don't believe I know her name. Say, what are you doing here, Miss Farragut?"

"What am I doing here?" Pepita repeated. "Why, I live here! This is my house. Really, Mr. Manners ——"

"Oh, say!" exclaimed Billy. "Then you're just the person! Do you think you could get this door open?"

The little hand was tugging and straining at his now; but he held on grimly.

"If you'll move away from the door perhaps I can," said Pepita very coldly; she was not in sympathy with proposals that were not addressed to her.

"Oh, but I can't, you see," Billy explained. "If I let go she'll run away again."

"Don't you really know who it is?" Pepita asked.

"No," laughed Billy. "Funny, isn't it? Do you?"

"I believe I do," Pepita replied; and reaching over his shoulder she slipped her hand inside the crack and opened the safety catch.

The door swung open and Billy found himself kneeling on the doorstep, face to face with the runaway girl.

"Yes; I thought so," said Pepita. "Mr. Manners, permit me to present my little sister Suzan."

"Your little sister!" exclaimed Billy. "Your little sister S-Suzan! Why, that's perfectly fine, isn't it?"

Pepita ignored him. She turned to her sister.

"Don't you think you'd better get up off the floor?" she remarked. "And then perhaps you'll tell me what you've been doing."

Suzan did not budge.

"Don't be angry with her," said Billy. "It's all my fault. She couldn't go to the dance, you know, because she tickled her brother's feet at prayers yesterday; and she just went to peep through the windows. And I saw her there, and we've—we've just been talking."

"Mr. Manners, what are you trying to tell me?" asked Pepita. "We have no brother. I thought Suzan was at the dance. By the way, haven't you been cutting a good many this evening?"

"You have no brother!" exclaimed Billy. "Why, she told me ——"

"Goodness knows what she told you!" said Pepita. "She's a perfect little terror! You didn't like me, Mr. Manners, because you thought I posed; but you let her make a monkey of you!"

"Then—then it's not true!" Billy stammered. "You were just stringing me—you didn't really care ——"

"Mr. Manners, do get up," begged Pepita, "and let me close the front door. There'll be some people here for supper at any minute."

Billy stood up, but he did not let go of the little hand. He stared very hard at Suzan; and as he did so he was thinking very rapidly.

"Oh, shut up, sis!" said the little voice. "You don't have to give the whole show away just because you're jealous. I was just having a little fun." Did she falter just the least bit over the word? Billy was not sure, but he held onto the hand all the tighter. "Mr. Manners," she went on, "I expect you won't want to see me again. Please go away now." She looked at him rather mournfully; and then suddenly she began to laugh. "Have a macaroon before you go?" And she produced a large plate of them from behind her back.

Pepita was growing impatient. All this fuss over that child!

"Hadn't you better call it off, both of you?" she said. "Suzan ought to be spanked; and you —— Oh, mercy! Here are the others!"

Sounds of feet on the porch, and laughter, and the door opened to admit a crowd of supper guests from the dance.

They greeted him with loud outcries: "Why, if there isn't Mr. Manners!"—"Do you know you cut my dance?"—"Rehearsing something?" This last from Buck.

Billy arched his eyebrows. Then he looked at Suzan, and in her downcast eyes he seemed to find what he wanted. He was still holding her hand in both of his, while with her free one she extended the plate of macaroons to the entering company.

Billy turned and faced them.

"I'm terribly s-sorry!" he said. "I'll apologize to you all later. You see, the fact is I've been awfully busy. Miss Suzan Farragut has done me the honor to consent to be my wife!" And before them all he drew her to him and kissed her.

Doubled, tripled, quadrupled outcries! How perfectly romantic! But why in the name of sense had he chosen Suzan when he might have had Pepita?

What on earth was he doing? thought Pepita herself; and she forgot to pose at all for perhaps the first time in her life.

"Oh, Mr. Manners!" whispered a small voice in his ear—a voice with a tremble of laughter in it. "What a whopping fib!"

"One good fib deserves another!" he laughed back at her. "Do I have to go now—if I take a macaroon?"

"No; I expect you'll stay now," she replied. "Take a lot!"

They always have a big bowl of macaroons on the sideboard in Billy's home now.

The Bouquet of the Bath

CLEAN, clean, clean—that is the perfume of Cashmere Bouquet Soap. The inviting fragrance breathes of refinement and critical perception of the niceties of life. The luxuriant lather comes freely, softly and quickly—refreshes as it cleans.

This is the characteristic of Cashmere Bouquet which has made it the standard among toilet soaps for three generations. Your dealer has the large size—and the new size at 10¢ a cake.

COLGATE'S

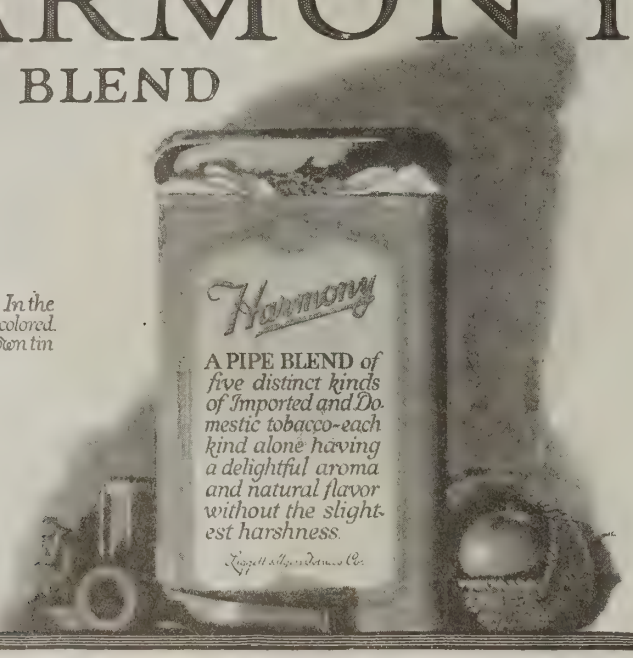
HARMONY
A PIPE BLEND



Of course a Blend tastes better

Each of the several tobaccos in this pipe blend plays its own part in giving Harmony its cool and characterful flavor. One is used for its exquisite aroma—one for its "fruity" richness—one for its delicate pungency—one because of its unusual sweetness—and one for its full, mellow "body".

The result is a new, more delicious flavor—a flavor that pipe-smokers call "rich mildness". No one tobacco by itself could ever give you such flavor. It requires a *blend.*

If you think you have been enjoying a pipe-smoke made of only *one* tobacco, just try Harmony—a *blend* of five tobaccos.

Liggett & Myers Tobacco Co.

If your dealer cannot supply you, inclose 15 cents in stamps, for the full-sized one-eighth pound tin, postage prepaid. Liggett & Myers Tobacco Co., 212 Fifth Avenue, New York

ALLEN'S FOOT-EASE

The Antiseptic Powder to Shake Into Your Shoes

and sprinkle in the Foot-Bath. It instantly relieves the pain you suffer from Chilblains, Frost-Bites, Bunions, Calluses or from Tired, Aching, Swollen Feet, blisters or sore spots. The troops on the Mexican border use it, and over 100,000 packages have been used by the German and Allied troops in Europe because it rests the feet and makes new or tight shoes feel easy. For 28 years the standard comforter. Sold everywhere, 25c. **Don't accept any substitute.**

FOG

(Continued from Page 13)

Mechanically, half in a daze, Billy wheeled Ninespot to the extreme outside of the track, into the position indicated by his number. Tears of helpless rage stood in his eyes; a lump in his throat threatened to choke him. His need was so great, his chance at best so pitifully small; and now he knew that even this slender thing was to be taken from him—Ace of Spades was "trying." Barring a miracle, Ace of Spades would win.

It seemed that some of the other horses were also out to win, or at least to steal an advantage in the break; and Mr. Francis X. Sheehan, Official Starter, took hold of the railing of his perch and used all the language permissible on such occasions, and some which is supposed to be under the ban.

Four times he saw the shifting, plunging line shaping itself for a fair start, and each time some eager jockey attempted to anticipate the rise of the barrier by a wild sudden dash—after which there were many wild dashes furnished by the exasperated Mr. Sheehan. In each case the culprit, perceiving his error, managed to duck under the narrow strip of elastic webbing without breaking it—something to be thankful for, though one would never have guessed this by listening to Sheehan's blistering comments.

From his position on the outer rail Billy Randolph was also keeping his eye on the field. What faint hope remained in him was centered on a good start—a good one for Ninespot; a bad one for Ace of Spades.

A fifth time the field wavered into something resembling a line, and Sheehan bent forward. At least seven of the riders interpreted that crouching attitude as a preliminary to jerking the trigger and releasing the barrier; they hurled their mounts forward—snap! went the strip of webbing, and seven horses dashed down the back stretch and disappeared in the fog.

"No! No!" barked Sheehan with profane emphasis. "No, I said! Bring them beagles back here, till I fine every mother's son o' ye! Bring 'em back!"

And, with these words still on his lips, Mr. Sheehan was given something else to think about. One of the horses still at the post adroitly planted both heels in the midriff of the assistant starter, a gentleman whose name was Connolly.

"Are ye hur-rted, Con?" asked Sheehan anxiously.

"Course not!" gasped Connolly. "I'm layin' here—on th' ground—for fun! Gimme a hand; I'm near—bruk in two!"

Mr. Sheehan clambered down from his perch, grunting, for there was much of him and nearly all of it in one place; and, because Connolly was too sick to do anything but use his whip on the horse that had kicked him, Sheehan had to help with the mending of the barrier. He was still at this ticklish job when the fugitives began to return from their brief dash down the back stretch—and so busy that he forgot to fine the riders; forgot something else, too, as we shall see.

Now when the false break occurred the horse that led the way into the fog bank was Ninespot. When the other horses checked their speed Ninespot drifted by them, no more than a shadow on the upper rail. Billy heard the yell of the starter and sawed at the reins; Ninespot had the bit in his teeth and refused to slacken his stride. The heavy-headed chestnut was out in front alone; it suited him to run in that position and he had no desire for company and competition. He fought viciously for his head, and it was only after a struggle that Billy succeeded in bringing the big brute to a standstill. The half-mile post loomed close ahead, tall and white in the fog; Ninespot seemed to be regarding it with deep interest. He showed not the slightest inclination to retrace his steps.

"You hammer-headed fool!" said Billy. "Come on; we're goin' back!"

Ninespot thought otherwise; he shook his head, grunted, and refused to budge. Billy touched him lightly with the whip; Ninespot laid his ears back and kicked his heels in the air. Billy coaxed; Ninespot sulked. Billy threatened; Ninespot pointed his ears at the half-mile post and shrugged his shoulders. At last mind triumphed over matter, and conqueror and conquered started back through the fog—but very slowly. Ninespot had decided to obey, but he would take his own time about it.

"It's a wonder Sheehan hasn't sent Connolly after me," thought Billy; and then, out of the dripping wall, faint and far away, a hoarse rumbling sound reached his ears:

"No! No! You can't break that way, I tell you! Walk 'em up slow! Slow!"

Billy fairly bounced in the saddle; Ninespot stopped and pricked up his ears.

"Great King!" whispered the boy. "He hasn't missed us; Sheehan hasn't missed us! He's linin' 'em up for another start!"

Plainly, here was a situation requiring thought—an astounding condition of affairs demanding analysis and action of some sort. Billy Randolph was thoroughly familiar with the ironclad racing rule, which—for good or ill—centers all responsibility upon a single individual. As soon as the horses pass the paddock gate and appear upon the track they are declared to be "in the hands of the starter"; and they remain in his hands until the barrier rises. During that period no accident to a horse, no error of judgment on the part of any human being can affect the bets as placed. They must stand for decision at the wire. The starter may leave an odds-on favorite flat-footed at the post or send away a long shot ten lengths ahead of the field; but from his action there is no appeal. While the horses are in his hands the Official Starter is rather more than an autocrat—he is the personification of turf law.

Sheehan had blundered in allowing a horse to slip through his fingers; and the blunder amounted to an advantage of at least a quarter of a mile in a seven-eighths race—a flying start for Arizona. As Billy peered into the fog wall one thought struck him with considerable force—he might steal the race, but no witnesses could rise against him.

Nobody could see him there in the fog; he was alone with his conscience and a very bad horse.

"If you stay with it, Billy, run your hosses on the square."

Yes, his father had said that; but his father had also told him to think of his sister first.

"Huh!" said Billy aloud. "We ain't goin' to stay with it, are we, Ninespot? We're goin' to Arizona ——"

And then he heard the pflung-ng-ng of the barrier and the roar of the Official Starter:

"You're off! Take 'em away!"

Billy whirled Ninespot in his tracks and gave him his head.

"Let's be movin' or we'll get run over," said he.

The big chestnut seemed to sense the humor of the situation. He set a brisk pace, but Billy curbed him to half speed.

"Not quite so fast, ole boy. If we get down there too soon they might ask us where we've been. . . . Steady; that's it—steady!"

Ninespot loafed round the upper turn into the home stretch; and it was then that Billy began to watch the track behind him. As the chestnut passed the paddock gate a black shape appeared on the rail, ten lengths to the rear.

"Now you can run if you want to!" said Billy, drawing his whip. "You got a lot of speed left in you. Let's have it!"

When the grand stand loomed up, a giant shadow in the fog, Billy thoughtfully guided Ninespot well into the middle of the track.

"We'll not take any chances with them judges," said he. "They may not be expectin' us to come first; so we'll get over where they can't overlook us. . . . Oh, no hurry; no hurry—he's pumped out; an' here's one time when a Ninespot takes an Ace!"

Five lengths behind the easy-going chestnut came a laboring black horse, then a long gap, and finally the straggling field.

"That one, eh?" said the presiding judge, fingering his beard. "Well, I'm mighty glad of it. I used to know Tom Randolph. Fine old character! Straight as a die! Boy's just like him."

"Ye-es," said the associate judge; "but this chestnut horse won, pulled up, 'way ahead of Ace of Spades. I wish you'd tell me ——"

"Bad horses, my boy; bad horses," said the presiding judge. "Nobody knows what's going to happen in a dog race like this!"

As Ninespot slowed to a canter the black horse drew alongside.

(Concluded from Page 82)

"Not wishin' to seem inquisitive," said Jockey Sanderson, "where was you when the barrier went up? I got away in front—I'll swear to that—an' I thought I had this race cinched till I was halfway down the stretch. What come off anyhow?"

"If I told you, you'd know," said Jockey Randolph.

"All right—if that's the way you feel about it. All right, Billy." Jockey Sanderson chuckled.

"What's that for?" asked Billy suspiciously.

"I'm thinkin' about the stable money—bet on Ace of Spades," said Sanderson. "It serves that big stiff right!"

V

THE real jubilee took place in the front room of the Randolph cottage; but George the Greek, who was present, mourned in a corner and refused to be comforted.

"What I can't understand," said he, "is the short price we got on Ninespot. I went in there expectin' to get fifty at least, but the best in sight was fifteen."

"Oh, well," said Billy, "we're over five hundred to the good, all told; an' I think I've got a customer for the hoss—account of the fast time he made to-day."

George the Greek rolled an eloquent eye at his friend.

"It takes a stake horse to step seven-eighths any faster," said he. "But that price—now on form, on his record, on everything he oughta been fifty."

"We're satisfied, ain't we, Jen?" asked Billy. "Think we can get away to-morrow?"

"There ain't much here to pack," said the girl.

"Fifty, anyhow!" mooned the Greek, stepping out on the porch and closing the door behind him. "Darned if I can understand it!"

"Well, sis," said Billy, "we finally put one over on 'em, didn't we?"

"You haven't told me about the race," said the girl. "Did you get away in front?"

"You bet I did!" answered Billy. "He stayed in front all the way ——"

The door opened suddenly and George the Greek appeared.

"There's a crazy Chinaman out here, Billy; says he wants to see you."

"A Chinaman? . . . Oh, by golly, it's Lee Sing! I told him I'd pay him a dollar'n a half to-night ——"

"No want 'um dolla hop!" protested the unseen visitor.

"What does he want, then?" asked Billy. "Tell him to come in an' we'll find out. He ain't a bad Chink, at that—well, by the limpin', lingerin' Lazarus! Where'd you get all the clothes, Lee?"

A vision of Oriental splendor teetered and swayed in the doorway, smiling an extremely loose but bland smile. The face was the face of Lee Sing and the hands were undoubtedly the hands of a laundryman; but all else was unrecognizable and gorgeous beyond description. A resplendent coat of plum-colored brocaded silk covered him from neck to ankles; its buttons were of gold and shaped like tiny acorns. His black silk trousers were very little in evidence, but they were there, nevertheless, and taped snugly about the ankles, as fashion prescribes; a flash of flesh-colored silk stockings; and then the shoes—marvelous creations, with inch-thick white soles, and uppers stiff with gold-thread embroidery. On his head Lee Sing wore a dapper bowl-shaped cap, topped with button and tassel, and he bore every evidence of having been barbered and perfumed within an inch of his life; bore other evidence, too, if all the truth must be told, for upon his breath was the faint but unmistakable odor of Chinese gin, reënforced by the more robust aroma of race-track brandy.

"How you likee—huh?" said Lee Sing, turning round slowly. "Plitty good?"

"Fine!" said Billy enthusiastically. "Great! But where did you steal 'em?"

"No steal 'um!" cackled Lee Sing. "Buy 'um! Nisha mawnin' me ketch 'um twen'y cent ni'spot—alla sem ni'spot two times ——"

"He made a killing in the lottery—hit nine of the winnin' numbers," interrupted George the Greek for Jennie's benefit. "A twenty-cent nine! No wonder he bought new clothes; I would, too!"

Lee Sing giggled happily and rocked back and forth on his curved white soles; pidgin English flowed from him in a steady stream:

"Ketch 'um losh money; buy 'um clothes—'nen I 'memba you tell 'um me hoss he win—Ni'spot he win—come out by laish tlack—pay 'um dolla, go insi'—bet 'um; bet 'um evlybody Ni'spot he win ——"

"Holy Moses!" breathed George the Greek. "And so that's why we didn't get a price! This crazy Chink played him down! Why, I'll bet he won a million dollars!"

"Wait a minute," said Billy, interrupting Lee Sing, who was still babbling cheerfully. "What was Ninespot's price—how much to one?"

"No sabby plice," said Lee Sing, shaking his head. "Bet 'um evlybody—no sabby how much—you look see!"

He walked over to the table and began producing bundles of currency and fistfuls of gold. His black silk trousers proved to be a veritable Golconda; the inside of his plum-colored coat yielded rich treasure. The three witnesses could only stare at the loot; they were dumb before such a flood of dollars.

Lee Sing dropped the last bundle of yellow-backed bills and stepped back with a tipsy flourish.

"So now me come you' place," said he to Billy. "You alla sem my podnah; ketch 'um hop!"

"There ain't any hop here!" said Billy sternly. "What does he think this is—an opium joint?"

"Not hop—half!" squealed George the Greek excitedly. "Don't you see? He says you're his partner an' he wants you to have half!"

"Aw, go on!" said Billy. "You're crazy!"

"Ask him!" cried George. "You slipped him a good thing an' he's declared you in with the bet—a Chink'll do it every time. Ask him!"

Billy looked at Lee Sing, who was beaming like a yellow moon.

"You—you want me to have any of that?" said the boy, pointing to the table.

Lee Sing bobbed his head rapidly.

"Me podnah—you podnah, alla sem. Me ketch 'um hop—you ketch 'um hop."

"Well, can you beat that?" gasped Billy Randolph. "He's got every instinct of a Christian!"

Lee Sing laughed as he began to stack the gold-pieces.

"One time me Clistian—go Mission thlee time evly week; jusha now me not Clistian—me Chinaman!"

Billy Randolph and his sister stood in the doorway and watched their amazing visitor disappear in the fog.

They had not been able to detain him long. He had pressing engagements in Fish Alley.

"Pinch me, Jen, and see if I'm awake!" said Billy.

George the Greek needed no such demonstration. He was counting the money into neat piles. Out of the fog wall came a quavering Celestial falsetto, wandering aimlessly from key to key, growing fainter with increasing distance:

"In uh swee-ee-eet . . . by um by . . .
We sha' lest on 'at beau-tee-fu' shaw,
Beau-tee-fu' shaw."

"Well," said Billy, "it'll be comin' to him, at that!"

"Come in out of that confounded fog!" called George the Greek. "What's the matter with you two lunatics anyway?"

"Don't call the fog any hard names," said Billy gently. "It done the Randolph Stable a mighty good turn to-day."

Someone Says, "*Billiards!*"

And Out Comes The Brunswick Table

Folded up in a closet or in any spare space, the "Quick Demountable" Brunswick Home Table is triumphantly brought forth by eager hands and set up in the center of the room. It is only the work of a minute to push back the chairs, rack the balls and fire the shot that starts an evening of royal sport for young and old.

Carom and Pocket Billiards never tire—their charm is endless. Sparkling hours of merry rivalry with those you love—moments of tense uncertainty!

To live a healthy, worry-proof life, to entertain friends and to keep boys home—install a scientific Brunswick Home Billiard Table.

HIGH FINANCE'S RECRUITS

(Concluded from Page 7)

town in New York, where his father kept a country store. He attended public school, and at eighteen went to work as a clerk in a country-town bank. Two years later he went down to the city, where he took a clerkship in a minor bank. At twenty-nine he was made assistant cashier, and six years later was elected to the cashiership of another minor bank. At thirty-nine he was made president. Then there was a bank merger, and he was made president of the consolidated institution.

All his life after public-school days has been passed in banks; so when he won his first important banking position he doubtless knew the technical side of banking thoroughly.

On the other hand, there is Alvin W. Krech, president of the Equitable Trust Company. He was born at Hannibal, Missouri, where his father—who came to this country, like so many other liberal Germans, after the failure of the revolutionary movement there in 1848—was a teacher. He went to public school and began his business career as a clerk in a flour mill at Minneapolis. Round thirty he became a partner in the mill and eventually owner of it. He then turned to railroad construction, and so to railroad enterprise generally. When the Union Pacific Railroad was reorganized, Mr. Krech was appointed secretary of the reorganization committee. That brought him to New York, and in due time he engaged in banking. But he was a successful, influential man of middle age before he engaged in banking.

The Successful Type

Boys are taught a good deal of poppycock about the vital necessity of technical training. For an underling technical ability counts perhaps for ninety in a scale of a hundred; but for an overling it probably does not count for ten out of the hundred. This is particularly true of banking, which is a kind of composite of all businesses.

No doubt every big bank contains men who know the technical mechanism of the business much better than the president does. The late J. P. Morgan was commonly accounted America's foremost banker; but several times, when under cross-examination, he had to confess that he knew precious little about the details of his own business. As to various other businesses, in the transportation, manufacturing and trading lines, where he exerted a very great influence, his technical knowledge of their details would not have won him a junior clerkship in them. A candid bank president has confessed that, in selecting a vice president for his concern, he cares little whether the man knows anything in particular about banking.

Business ability in its higher manifestations is pretty much all out of the same piece of cloth. If a man has business ability in the abstract he will make a good banker. If a young man is ambitious to reach the first table many other things are much more important than technical knowledge. Those at the first table can always find plenty of people lower down who will know how to manage details. It may even be doubted whether careful preoccupation with details is a good augury of one's ever reaching the first table. That perhaps indicates another type of mind—the studious, cautious, particularizing, indwelling type; whereas the most successful type is apt to be expansive, adventurous, confident, generalizing.

Probably a college career is an advantage—not at all on account of its formal training and for the stuff in the textbooks and classrooms. So far as notable success in business goes—as distinguished from professional success—that stuff might just as well be anything else. But probably college tends to promote sociability, to strengthen one's facility in getting acquainted and making friends. That facility usually counts for a great deal in business success. The man who can meet people easily, cordially, agreeably, has an advantage. College may help him to that.

Of the twelve Morgan partners, you remember, eight are college men and four are not. But the heads of the house for two generations have been college men, and perhaps it leans somewhat more in that direction than high finance generally does; or perhaps the preponderance of college men on the Morgan roster is merely an accident.

Of the twelve big-bank presidents only two could be called college men; and only one of them, I believe, is a graduate of an institution of higher learning. In the case of the big-bank presidents there were more people to do the choosing than in the case of the Morgan partners; so this list is rather more representative of the way high finance does its choosing. On the basis of this list college education is evidently of slight importance.

Taking the twenty-four men—Morgan partners and big-bank presidents—only five were born outside that comparatively small territory which lies along the North Atlantic Seaboard. Nineteen were born in New England, New York and Pennsylvania. Of course this does not indicate that those states are more prolific in financial genius; but the ambitious young man in those states is very apt to go to New York, and so to get himself into the orbit of high finance. If these men had happened to be born in the Mississippi Valley, most of them would no doubt now be cutting a figure in business in Kansas City, Minneapolis, and so on, instead of on the larger stage.

Of the twenty-four names on the list only one was of any particular significance in business before its present bearer made it so. The exception, of course, is J. P. Morgan. He inherited a great opportunity. What is even rarer than that, he proved equal to it; for the house doubtless does more business to-day than ever in his father's time, and, on the whole, probably has quite as great influence.

A Morgan came to this new country from Wales early in the seventeenth century and settled on the soil in Connecticut. For several generations his successors were undistinguished New England farmers. Soon after the Revolutionary War a James Morgan broke away from the farm and set up in business as keeper of a tavern on the post road at Hartford. Stagecoaches, of course, were the chief means of transportation in those days, and James Morgan gradually got control of a number of stage lines—dimly foreshadowing his celebrated grandson's operations in a more extensive means of transportation.

Then a big fire happened in New York—big, that is, for a place which we should now consider only a flourishing country town. For some inscrutable reason, Hartford has always been a home of fire insurance. One of the Hartford insurance companies was hard hit by this New York calamity. For a time its solvency seems to have been questioned. Evidently James Morgan thought it was sound, for he bought up, at a heavy discount, many claims against it. When the company finally paid out he had a very comfortable fortune.

Another Able Morgan

His son, Junius Spencer Morgan, inherited not only the fortune but the ability that had won it. He went into the dry-goods trade, with Levi P. Morton as a partner. The dry-goods trade at that time was one of the chief importing businesses; so it involved foreign connections and dealings in foreign exchange. Kuhn, Loeb & Company got into the international banking business by way of the dry-goods trade. Morgan set up a house in London, then in Paris, and long before his death left the dry-goods business to devote himself to banking.

He was—nominally, at least—head of the Morgan house up to his death in 1890; though by that time his son, the first John Pierpont, was very active in its affairs. It is an odd coincidence that J. S. Morgan died abroad—at Monte Carlo—while his son died at Rome. He left a fortune of ten million dollars and a great business. How the first J. P. made it a much greater business is well known. They are saying now that, judging by his performance to date, the present J. P. will keep it at the height his father attained.

But only once in a long while does a family develop four exceptionally able men in succession. Here and there in the roll of high finance you come across a name that was famous in the previous generation; but then, usually the name does not stand for leadership.

Mere money involves little in the way of leadership. There may be a popular impression that a man gets a big job in finance because he has made a lot of money; but mostly it is the other way round. The job comes first and the man makes a lot of money because he has a big job. A House of Morgan, or a big bank, does not take a man into its fold because it wants his capital. It can get all the capital it needs in an easier way. It takes in the man because it wants his personality; because it thinks his personal qualities of ability, energy, attractiveness, and so on, will strengthen its influence.

A great part of business is just dealing with men; essentially it is just salesmanship in some form or other. All business is making something and selling it, and there is a heavy emphasis on the selling end. The job of the president of the City Bank is finally to see that the bank is made right, and then to sell it, pretty much essentially as a grocer sells his soap and flour. By and large, the more people he knows and the more people like him, the better salesman he will be.

The Men Who are Chosen

This is why a good many Government officials—Secretaries of the Treasury and Comptrollers of the Currency—are given high positions in big banks; not because of their knowledge of banking and finance, but because they have been well advertised. Their names are well known; they have formed many acquaintances; and so they will presumably be good salesmen. Mr. Vanderlip came from the Treasury Department. Mr. Hepburn, chairman of the board of the Chase National, was Comptroller of the Currency. Mr. Gage and Mr. Shaw, upon leaving the Treasury, were made presidents of New York banks. The other day Senator Burton, of Ohio, was elected president of a New York bank.

At one time three ex-Comptrollers of the Currency were presidents of important banks at Chicago. The theory was that, being well known, they were in a position to sell the bank efficiently. George B. Cortelyou, private secretary to President McKinley and President Roosevelt, then Secretary of Commerce and Labor and Secretary of the Treasury, was taken from the latter position and made president of the opulent concern that supplies New York City with gas.

If you should look over the men who hold big jobs in high finance you would find them a well-set-up lot physically, running decidedly to the broad-shouldered, deep-chested type, with a round neck that fills out its collar snugly, and a development at the back and base of the skull which indicates large vital motor power.

The candidate for an important job in high finance ought to be physically vigorous. He ought to have a lot of friends and be of the sort that makes friends readily. He had much better be a shade under forty than two shades over. He must have a good deal of confidence in himself and be sufficiently egotistic to assert himself without being offensive about it.

Of course he must have a considerable degree of sheer intellectual ability—that is, he must be able to think fast and straight, and to size up the important elements in a situation. The extent of his bank account and his technical training are immaterial, except that, as a matter of course, he must have had a good deal of practical experience of some sort, and have shown that he can deal successfully with practical affairs—which really means dealing successfully with men.

Then, if the candidate is going to get elected, he must come into contact with a man, or with men, who have the disposal of important financial jobs; and that is probably about nine parts sheer luck. No doubt, for every man who lands a big job in Wall Street there are a hundred men who have all the natural qualifications; but they did not happen to fall into the right orbit.

It seems probable, however, that the orbit is growing wider. Of the two latest Morgan partners, one was brought up in Minnesota, the other in Missouri. When Mr. Cochran left the Liberty Bank a new vice president was taken in; and this new vice president got his business experience mainly in Detroit.

The roster changes continually, both because men die or retire and because the business of the big institutions continually expands. Very rarely does a "son's" name get on it. It is a free field for talent—and luck.

Is Your Battery Holding Its Own?

YOUR car battles its way today through the grip of Winter's worst storm. A few short months and the blazing heat of Summer's sun brings new conditions. Roads, speeds, traffic and many other causes are constantly tearing down or building up the storage battery of your car.

Whether your battery endures the conditions unfailingly, depends not only on the kind of battery, but also on the service behind it.

If your battery is "supervised by Prest-O-Lite Service" you may avoid the greater part of battery trouble—without this supervision your battery may be seriously handicapped. Any battery, no matter how good, may easily be ruined by neglect.

No matter what conditions you encounter—no matter where you may be—you'll find Prest-O-Lite Service waiting to keep your battery in good condition and insure your satisfaction.

There are special Prest-O-Lite Service Stations in cities and towns in all parts of this country—backed up by the great chain of Prest-O-Lite Factory branches in principal cities—insuring prompt, direct *factory* service.

When you need a new battery, remember—there is a Prest-O-Lite battery of correct size for your car, and it will give you superior service and satisfaction.

Look for the Name "Congoleum"

Don't be misled by imitations. Insist upon seeing the name "Congoleum" on the back of every Rug, Rug Border or piece of By-The-Yard goods you buy. It is there for your protection.

CONGOLEUM RUGS

FREE!

Handsome Rug Chart

We will send you free an attractive Rug Chart printed in colors. It will give you some idea of the beauty of Congoleum Rugs. Just send us your name and address. It will help solve that floor covering problem.

Beautiful—Convenient—Sanitary—Economical

MANY floor coverings possess one or two very desirable features. Carpets are soft and warm, but they are expensive, hard to clean, and they never wear evenly. Good fabric rugs are artistic, but they gather dust, are easily kicked up, and their price makes them a luxury.

Congoleum Rugs are rapidly supplanting low-priced carpets and fabric rugs because in addition to great beauty they combine convenience, sanitation and economy. They have a firm, washable surface, with patterns just like the finest of woven rugs.

For Every Room

The great variety of artistic designs and pretty colors will enable you to find a Congoleum Rug that will harmonize with any decorative scheme.

Congoleum Art-Rugs

First we have Congoleum Art-Rugs—a positive sensation in rugs. They are the product of famous rug designers and have unusually beautiful patterns. Distinctive because of their beautifully blended, rich colors.

Sizes and Prices

Congoleum Art-Rugs are seamless. They come in many beautiful patterns and in two sizes, as follows:

9 feet x 10½ feet, $10.00 9 feet x 12 feet, $11.00

Congoleum Utility-Rugs

These rugs are made in a greater variety of sizes and patterns than our Art-Rugs. They are our original Congoleum Rug line and their prices are surprisingly low.

Utility-Rug Sizes and Prices

3 feet x 4½ feet $0.98	6 feet x 6 feet $2.60
3 feet x 6 feet 1.30	6 feet x 9 feet 3.90
4½ feet x 4½ feet 1.50	Two-piece Rug 9 feet x 12 feet $8.00

Washable and Sanitary

All Congoleum Rugs are entirely waterproof—therefore washable and sanitary. A damp mop keeps them clean. No dusty beating or sweeping.

Lie Flat Without Fastening

Congoleum Rugs never curl or "kick up." No need of tacking or pasting down. They "hug the floor." No dust can collect under them.

Congoleum By-The-Yard

If you want to cover a whole floor, you will find Congoleum By-The-Yard a real bargain. Guaranteed to outwear printed linoleum under equal wearing conditions. Sanitary and rot-proof. No fastening needed. Many pretty patterns to select from. Made in 72-inch width. Price 50c. per square yard.

Congoleum Rug Borders

These unique floor coverings are literally hardwood floors in rolls. To be used around a center rug. They give all the artistic effects of real oak floors at a fraction of the expense. Not a cheap, painted imitation. They lie flat without fastening, are waterproof and sanitary.

Made in 36- and 24-inch widths, at 50c. and 40c. a yard respectively. Your dealer will cut any length desired.

Protected By Patents

Congoleum Rugs are manufactured in accordance with United States and foreign patents, with numerous other patents pending both in the United States and foreign countries.

Be sure to send for handsome Color Chart.

For sale by good dealers everywhere; if, however, your dealer cannot supply you, write us and we will

Prices in the far West average 15% higher than those quoted; in Canada prices average 25% higher

Men Who Know

(Manufacturer)

"Our determination has been to make a ***good*** car. The success of the Overland has been due to the fact that we do make good cars.

The Overland is good because every part of it is good. And the Hyatt Roller Bearings which are a part of it measure up to the high standard we have established, in every particular."

THE WILLYS-OVERLAND CO.
John N. Willys,
President

(Sales Manager)

"In marketing Paige Motor Cars our endeavor is to completely satisfy the user.

Naturally, the less trouble he is caused and the less attention required, the greater he is pleased.

For that reason, we have found Hyatt Roller Bearings an asset in making sales, and a continual source of satisfaction afterwards.

Hyatt Bearings are just one of the many reasons why Paige Motor Cars satisfy."

PAIGE-DETROIT MOTOR CAR CO.
H. Krohn,
Sales Manager

(Engineer)

"Our aim has been to make the Mitchell the car of utmost efficiency. Realizing that a car is no better than its weakest part, great attention was given to the designing of this car from the most important part to the minutest detail.

In giving consideration to bearings for certain locations we found that Hyatt Quiet Roller Bearings filled our every requirement. They have been used for years and the service they have given has only confirmed us in our choice."

MITCHELL MOTORS CO., INC.
John W. Bate,
Chief Engineer and
General Factory Manager

(Distributor)

"We find that our Hudson owners recognize and appreciate the quiet operation of our transmission, of which your Bearings are a part.

We are always ready to give service to owners. Yet the carefree, dependable performance of Hyatt Bearings, which require so little attention, is appreciated by both owners and ourselves.

They are a sales asset to us because they are known to require little or no attention and to last almost indefinitely."

THE HUDSON MOTOR CAR CO. OF N. Y., INC.
Harry S. Haupt,
President

(Service Manager)

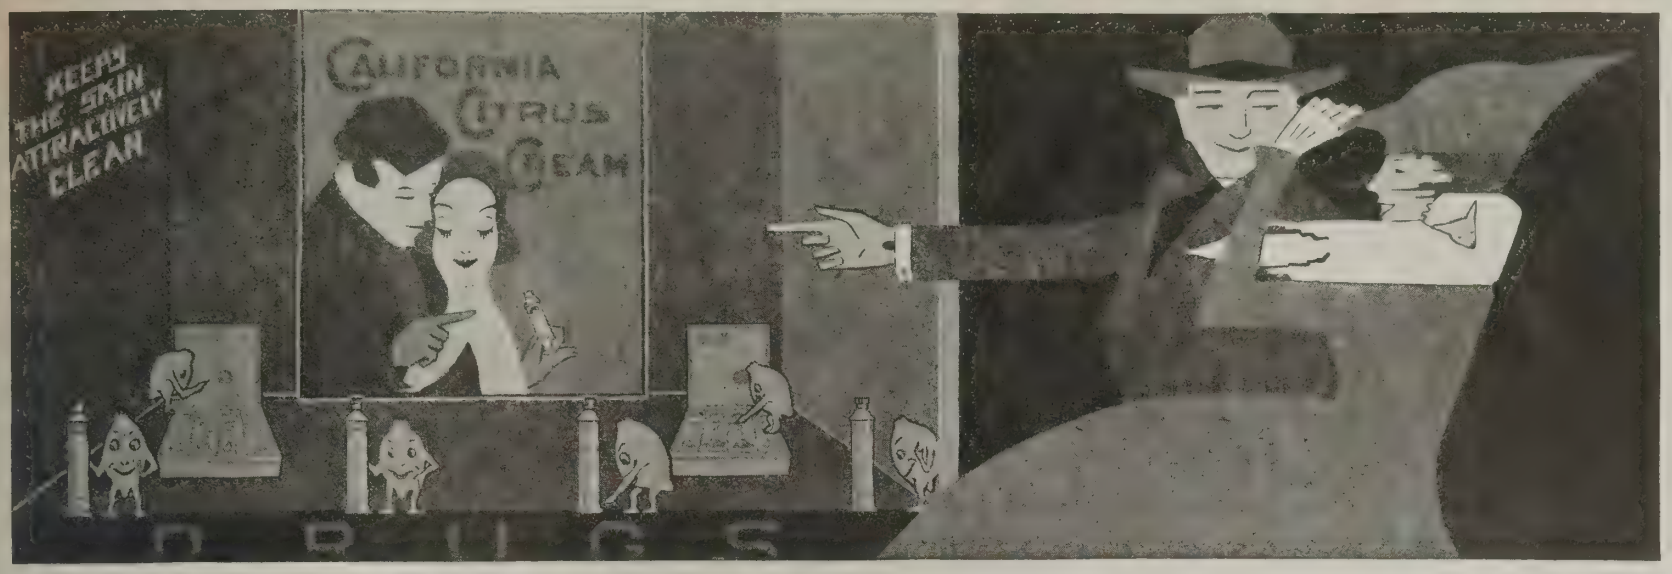
"Through my connection with the various automobile houses in Chicago distributing such cars as the Jackson, Empire, Reo, and others, I have gained a practical, first hand knowledge of motor car bearings, which convinces me of the superiority of the Hyatt Flexible Roller Bearings.

I know from experience that the Hyatt Quiet Bearings are the kind of bearings which prevent annoyance, save time, trouble and money—and satisfy the user."

RALPH TEMPLE AUTOMOBILE COMPANY
A. B. Ferdinand,
Service Manager

HYATT QUIET

The Roller Bearing for Automobiles



Look, Mary! Here is where I go in and buy a tube of California Citrus Cream. This March wind is cracking my lips.

You're right, Jack! But it is up to you to spend another 25c, because you have been using my Cream every time you shave.

I'll do it! But I might just as well make it 85c and get 4 tubes in that pretty box. You know the druggist in our block didn't have it the other day.

Jack! The next time you pass his store, go in and tell him that he can find where to get it in this week's Saturday Evening Post.

BRINGING OUT BARBARA

The Experiences of a New York Débutante

By ETHEL TRAIN

ILLUSTRATED BY CLARENCE F. UNDERWOOD

"MOTHER!" I cried.

"How do you do, dear?" a carefully modulated voice replied.

Two minutes earlier we had puffed noisily into the station and the train had disgorged a carload of our girls, several of whom, like myself, were leaving school for good. I was staggering under the weight of two huge grips, one in each hand, not having been able to find in my pocketbook any change for a tip to the porter.

Mothers and mothers were pressing eager faces against the railing at the top of the flight of steps we were about to ascend, but I did not discover mine. It was terrible, that sight of other people's mothers when I couldn't find my own! She hadn't troubled, I thought, to meet her girl, who was coming home to her forever. I jumped to the conclusion that some social engagement had been allowed to interfere with that reunion to which I had been looking forward for months.

In the anguish of that moment I could not remember what she looked like. I knew I had a mother, but her face was without features, like the faces of the people I used to draw when I was a little girl. I could not imagine the faces adequately, so I just left them out.

Laboring up the steps under my load I saw Jean Royce already at the top, her little slim figure almost obliterated by the clasp of a big man's arms. No father was waiting to sweep me off my feet like that. It was the abomination of desolation, this arrival.

Then suddenly I saw father and mother both, standing quietly beside a pillar. Father looked appallingly tall, had on a silk hat and carried a cane. He's six-feet-one and always wonderfully dressed, dark, with a clear olive skin, smooth black hair, and a mustache that's too small for him. I should sketch it several inches longer and much thicker on an ideal head. He's continually being mistaken for an Englishman, though he was never in England in his life until he had finished college, and, I think, looks more French than English. At any rate, he doesn't seem a bit like an American, even to me. He was born in New York and has never lived anywhere else; yet when I walked uptown with him once, last Christmas vacation, he observed everything as though he were trying to form an impression of manners and customs previously unknown.

I Ripped Open the Nearest Grip and Rapidly Selected What I Wanted

Mother would have served to perfection as a cover design for a fashion magazine. She was faultlessly gowned, creamily spatted, with her hat tilted at an angle of forty-five degrees and, notwithstanding the breathless humidity of the June day, almost obliterated as to contours of cheek and chin by a large, fluffy, white-fox boa. Her whole appearance was calculated to deceive the observer as to her age. It did not seem possible that she could be the mother of a girl of seventeen.

When she made her even rejoinder to my glad cry she protruded her cheek out of the fur just far enough for me to kiss it. As I pressed trembling lips against its coolness I noticed a resemblance between her eyes and those of the dead stuffed animal that dangled over her shoulder.

Shocked that such a thought had entered my mind, I turned to father with some idea of throwing myself into his arms. Luckily I perceived in time the absurdity of this impulse. He was inspecting me with his habitual air of detachment. This affectation embarrassed me. He had known perfectly well for seventeen years what I looked like. The dimple in my cheek, the irregularity of my nose, the cleft in my chin—all had been patent in my babyhood; it was unnecessary to observe them further. The changes that counted were inside changes, due to spiritual growth, but to these I well knew he would devote no scrutiny.

"You've grown, I think?" he hazarded politely; and I answered with regret: .

"Not much, I'm afraid," adding: "Oh! I almost forgot. I must go and report to Miss Wier that I've been met. I won't be a minute."

I found Miss Wier, in whose charge we had made the journey, standing alone, with her hands crossed, a thin, prim presence, spectacled, and as angular as the subject she taught—geometry. Contrasted with hers, my own lot seemed suddenly full of warmth and color. For her there were neither partings nor meetings. In a spot so suggestive of palpitating emotion as a great terminal the isolation of that patient figure wrung my heart.

I wanted to share with her everything I had—my father, my mother and my home. My impulse was to take her by the hand; turn a deaf ear to her trifling protests; carry her off bodily. On fire with my desire I faced about and ran back.

"Mother!" I cried. "May I ask Miss Wier to stay with us while she's in town? She's our geometry teacher, you know, who chaperoned us on the train. There's nobody to meet her and I'm sure she's going to some boarding house."

"Not to-day," said mother. Then, seeing in my face a very abyss of disappointment, she explained: "There are people for dinner." And she added, as though making a great concession: "If you want it very much I might be able to manage it to-morrow."

To-morrow! Bereft of spontaneity, what would the invitation amount to?

"If I can't have her now," I returned hotly, "I won't have her at all."

"You talk like a spoiled child," was the answer. "You don't seem to have outgrown your willfulness."

At these words memory turned up in my mind old scenes—stormy tears and tempers, frequent foot-stampings, innumerable clenchings of fists—of which I had repented bitterly in my exile, vowing that they should never occur again. Could it have been that they had had any justification in fact? That they had been a child's weapons of defense against false standards of conduct, misinterpretation of motives and want of heart? But, even if this were so, I was wrong, now that reason had wakened, in resorting to such means.

"I only meant," I said slowly, "that I didn't think she'd care to move after she was settled. She'd have unpacked her bag, and all that. Is it a formal dinner?"

"No," said mother; "there is no formal entertaining in New York in June."

"Then," I urged, "what would it matter about having one more chair at the table? Couldn't you just slide her in?"

"People are not slid in at dinner," was the reply. "Besides making the number uneven, she would be put in the embarrassing position of having nothing in common with my other guests. It's out of the question. Please go now, and report."

I went, genuinely puzzled as to what constituted informality. Offhand I should have defined an informal dinner as one admitting of any amount of elasticity in regard

to arrangement—everybody moving up at the last moment to make room for one more.

"There you are at last, Barbara!" said Miss Wier when she caught sight of me. "All the others are accounted for. Have you been met?"

"Yes, Miss Wier," I replied glibly in perfunctory school phraseology, and then stood silent before her, in the grip of sudden realization.

Of a multitude of small obediences distributed over years this was the final one. The school had made its ultimate demand of me; imposed its behests upon me for the last time. Henceforth it could dictate to me no more forever. Should I be able to stand alone? Fearful of liberty, fearful of emancipation, I felt unaccountably homesick for the old surroundings, with their hitherto irksome props, demerits for transgression of rules, marks for untidinesses, permissions written and signed. Without these, how was I to know whether I did well or ill?

At the door of my prison I stood hesitant, blinking at the daylight. I was unaware that these thoughts showed in my face, until I saw Miss Wier's eyes soften strangely under her glasses.

"It's hard to give you up. It's harder for us to give you up," she said in a tone I had never heard her use before, "than it is for you to leave us. How we shall miss you, my child!"

Tears started to my eyes. I threw both arms round her neck and squeezed her with all my strength.

"Oh, Miss Wier!" I choked. "After all the bother I've been to you with my rotten work in mathematics!"

She only smiled. At school she got up with her subject, spent the day with it, and took it to bed with her to ponder it in her dreams. Now she vouchsafed it not even passing attention.

"I hope nothing will spoil you," she said fervently, bending over to kiss me on the lips. "Dear Barbara! Good-by!"

I could give no expression to my grief at having to let our association drop then and there, just as it had sloughed off the relation of teacher and pupil, so hampering to the growth of friendship on equal terms. To breathe a word of what had passed between mother and myself would have been arrant disloyalty; so I gave her one more squeeze, released her abruptly and dashed away, not once looking back.

When I came up mother saw me wiping my eyes, but she made no comment. The three of us moved along together, and yet apart, followed at a respectful distance by a porter carrying my grips. The station was rather crowded with people standing in little groups, which broke up inevitably to let father through. What was it, I wondered, that thus cleared a path for him, as though he were a fire engine or an ambulance? I hated to suspect it of my democratic countrymen, but I gathered that it was the "distinguished foreigner" impression he produced.

All this had little to do with the reunion of a family. It was no reunion—this meeting of three people who had nothing to say to one another except obvious things like "Here is the motor," which mother now said as a little automobile rolled up.

Its wheel was in the hand of a chauffeur unmistakably French, with mustaches as sensitive as the whiskers of a cat, and lynx eyes that indicated an order of intelligence too high for such a simple job as driving a toy machine.

At school the same old darkies were familiar presences to generations of girls, but mother changed her servants with the seasons, as she did her gowns. An uneasy fear tormented me that she would have changed her daughter, too, had that been practicable. It would have relieved her of the herculean task of making a silken purse out of a sow's ear, when the sow was likely to protest at the amputation. I fancied her discarding me with scant compunction—a last year's daughter; a daughter out of style; one not worth the trouble and expense of remodeling.

"Show me your latest thing in daughters," I could imagine her saying in her somewhat languid voice. "No; not to take with me. I shall have her made to order. My last daughter I got ready made, and she was such a complete failure that I had to throw her away."

Whimsical as was this idea, it made me seem to myself even more of an alien than I should otherwise have done in that delicately upholstered car, my well-worn clothes brushing the luxurious ones on each side as I sat down uncomfortably between my parents upon a seat obviously designed only for two.

I felt as though I were being taken somewhere to be adopted instead of to my own home, and that the first thing they would do when they got me there would be to order me a bath and provide fresh raiment.

The groom adjusted the robe and asked:

"Where to, madam?" touching his cap.

"Home," was the answer.

"Yes, madam," he replied, touching his cap again. "Very good, madam," touching it a third time.

"And—James!"

"Yes, madam," with another touch.

"Tell Réné not to drive quite so fast as he did on the way down."

"Very good, madam," with still another sign of deference.

I had begun to regard this frequent gesture with fascinated eyes.

"Don't you get tired of being treated like royalty?" I questioned flippantly when the door had snapped. "I should be bored to death by having a man like that about."

"His manners are excellent," returned father with an emphasis which was clearly meant to reflect on mine; and, indeed, the groom's were the better of the two.

"It's a tiresome trip from school in hot weather," mother remarked presently.

"Yes, mother," was my prompt answer. "Quite, mother."

"Through uninteresting country," she went on.

"Yes, mother," I repeated. "Very, mother."

"Did you make an early start?" father inquired.

"No, father," I replied in monotone. "Not very early, father."

Conversation languished.

At length mother tried again.

"Did you receive a letter from me yesterday," she questioned, "with money in it?"

"Yes, mother," I said. "Thank you, mother."

At this, with one accord, they drew back.

"Have you lost your mind?" father demanded. "Or are you making fun of us?"

I laughed.

"I was only trying an experiment," I explained. "You see, I have such difficulty with my manners, and his kind seemed so simple I hoped an adaptation of them would work. It won't, though. It seems more difficult for a girl to give satisfaction than for a groom."

While Two Women Were Pinning and Snipping at Me, Mother Ordered More Dresses

"You put things in the strangest way," mother objected. "Why do you talk about giving satisfaction, as though you were a servant? You, the daughter of the house!"

I made no reply. It would have required some thought to formulate my reasons for the remark; and, even had I done so, my success in conveying them would have been problematical. Theoretically I was the daughter of the house, certainly; but practically I was worse off than the groom, who, if his efforts to please did not meet with success, would be dismissed, and thus provided with an opportunity to try his luck elsewhere. There was no such loophole for me. Satisfactory or not, now that I was here, here I should have to remain.

How was I to fit into the existence of which the expensive trifles I had already noted were the emblems and the signs? I had no notion of either the duties or the perquisites of my position. Instead of familiarizing me with them gradually during my adolescence—the period of greatest adaptability—mother had abruptly cut me off at its start from my natural surroundings and thrust me into others where entirely different ideals prevailed.

Having kept me for four years out of sight, put away like a lunatic, she had suddenly brought me back in the expectation that I would feel like a daughter.

I didn't feel like a daughter. I didn't know what I felt like, I'd been away from home so long—ever since I was a kid of thirteen. Now I was almost a woman; too old to go to school any more. Every summer I'd been packed off to camp, and the winter and spring vacations were too temporary to make much impression.

Just then we passed the cathedral and my eyes fell upon a long line of orphans going in to some service.

That was it! That was what I felt like! A blue-garbed Orphan, with a capital O—a Public Charge—an Institution Child! By a quick transition my thoughts passed from myself to mother. If I had had no mother she had had no child. During my long exile she had remained in undisturbed possession of a childless house. She had had no willfulness to encounter; no opposition; no interruptions; no demands; no whispered confessions; no penitence; no confidences in the dark, cheek on cheek.

The motherhood that was the kernel of my soul revolted, and there arose within me a fierce longing for a little child of my own, that I might make up to it all that we had lost—she and I. I felt that I should never be able to give it up to anyone, even at night. When I woke I should want to feel its warm, live, marvelous little body in my arms; press it, limp and unresponsive as it was, against my breast. It would grow up then without my knowing it; and I should grow along with it, because I should have to find answers to the questions it asked. That would be much less disconcerting than receiving it back from somewhere, full grown, like a Venus rising out of the waves.

Poor mother! I understood a little now why she had not seemed more glad to see me. My absence had become a habit. It wasn't going to be easy, this taking up of motherhood at the eleventh hour. She had omitted all the steps—the settling of childish difficulties; the comforting of small troubles easily comforted. As she sat there beside me, so calm, so dainty, so aloof, she seemed to me to resemble in every respect a woman who had never either desired or possessed a child.

"Where's he going?" I asked suddenly, when the chauffeur failed to slow down at the accustomed corner. "Stop him, mother! He's passed the street."

"What are you thinking of, Barbara?" she returned. "I wrote you we'd moved into the new house."

"Oh-h!" I gasped. "The new house! Of course! I'd forgotten all about it. It went completely out of my head."

"We've been in it two weeks," said father as we slowed down before an imposing edifice, which upon my previous views of it had been obstructed by scaffolding. "That is the only reason we're not at Westbury. Rotten bore! It's practically all furnished."

"All furnished!" I repeated, incredulous. "That immense house—in two weeks? But you had a lot of things, of course."

"Very little that was suitable," he replied.

"My furniture?" I insisted, suspicious and on the defensive. "You haven't got rid of that?"

"You'll see," said mother evasively as we got out.

The front door swung inward, revealing three men, one in afternoon attire and

two in livery. All had British countenances, entirely devoid of expression, and all were six feet high. These strange, imposing servants in possession of a strange, imposing house oppressed my spirit.

"What's become of Jules?" I whispered to mother, referring to our erstwhile French butler, whose wrinkled, smiling face had welcomed me home at least twice—at Christmas and at Easter—and who, therefore, in our ménage might almost have been regarded as a family servant.

"I couldn't have a Frenchman in this house," she replied.

"But you have one on your car!" I demurred, doubting whether I should ever master these distinctions. It was apparently correct to employ a French chauffeur. A butler, however, must be English. Moreover, an impressive presence was a requirement. Not being very tall myself, I had a fellow feeling for those who did not measure up to standard, and determined that when I had a house I would employ only short men.

The entrance hall was spacious, with Caen-stone walls and a floor of black and white marble laid in squares.

We went up in the elevator to the third landing to inspect my room before lunch.

The walls of this room were paneled in ivory; the furniture was ivory and cane; the hangings pale-rose taffeta; the rug of the same hue. The desk was supplied with a desk set of pale-rose leather in dull tooled gold, and the crowning touch was a pale-rose quill pen, thrust into a pale-rose receptacle filled with white shot.

I had never seen white shot used for ammunition and I wondered where these had been obtained.

I did not like this two-tone room; it cried to heaven for some jarring note—something crashingly purple, orange or blue; yet my heart overflowed in appreciation of the pains mother had bestowed upon it; the time she had spent in carrying out the minutiæ of the scheme—just now, when she was so busy and had so much on her mind. Nothing that day had made me so happy as this, and I threw my arms round her neck, crying: "Oh, mother darling! How sweet of you!"

Her next words chilled me to the bone.

"I felt sure you'd be pleased with it," she said. "This whole room was on exhibition, just as it is, in every detail, even to the pictures, at the interior decorator's. All they had to do was to move it. Luckily even the curtains were an exact fit."

She left, telling me to meet her in her sitting room when I had taken off my things.

While I was standing disconsolate there was a muffled knock at the door. I opened it and found that my grips had arrived in the hands of one of the huge footmen. No sooner had he left than I ripped open the nearest one, scattered its contents over the floor, and rapidly selected what I wanted. My old felt slippers went under the bed, my memory book on the table, the photographs of our cheer leaders and basket-ball teams I piled on the desk—all but a few of the choicest, which I stuck in the mirror of the dressing table. Then, a little comforted, I ran downstairs. In the dining room the table was laid for two, father having disappeared.

It was a very large dining room indeed, decorated in green and white marble, with a stone mantel and tapestried chairs.

"The breakfast room isn't finished yet," mother explained. "We'll always lunch there when it is."

The butler stood behind mother's chair, a footman behind mine. Acting in concert they pulled the two chairs out simultaneously. I sat down, my feet missing the floor by half an inch.

The first course was cold eggs in aspic jelly, with an herbaceous border encircling the dish. I partook nervously, not only of the solids but of the party-colored garnishings.

"Have you got a new cook?" I asked, detecting an unfamiliar bite at the tip of my tongue.

"A chef," she replied, "who was twelve years at Voisin's. He's an expert at seasoning."

The second course roused little interest in me, as the eggs had more than satisfied my appetite. It consisted of small round fillets, each with a mushroom on top and, underneath, a layer of artichoke resting upon a foundation of toast. I took one perfunctorily, and also a spoonful of very black thick sauce. Salad followed; and we had for dessert ice cream, together with strawberries almost as big as plums. At least that was the way they felt when I swallowed them.

It Was No Reunion—This Meeting of Three People Who Had Nothing to Say to One Another

Coffee was served in mother's sitting room by the butler, the first footman immediately following him with liqueurs on a tray. We declined both and they marched out again.

"I've ordered the car at three," mother announced.

"Must we go out?" I asked, lolling in an easy-chair. "I feel as though I didn't want to move after that lunch."

Her eye rested upon me in disapproval.

"You must learn not to eat everything," she said. "I don't. If you noticed all I took to-day was an egg, some green peas and a strawberry or two."

"What do you have it all cooked for, then?" I questioned. "Isn't it a waste?"

"Oh, no," returned mother vaguely. "François doesn't waste anything. He makes use of it in some way, of course."

"Where are we going at three?" I resumed.

"To get you some clothes," she replied with decision.

I had not been mistaken, then, in my conjecture as to raiment.

"What's the matter with those I've got on?" I demanded, in sudden reluctance to part with the rough garments that had adapted themselves to my casual lines, and the discarding of which would mark the end of an epoch.

"They're unsuitable," she decreed. "They were all very well for a schoolgirl, but you're not a schoolgirl now. Go and put on your hat."

As we crawled down Fifth Avenue, in a line three deep with motors bent on similar errands, I remarked that we should never get to Rosenberg & Hymen's at this rate.

"We're not going there," mother enlightened me. "I shall not dress you at the department stores any longer. We'll see whether Yvette has anything."

Yvette had a great many things. Her dressmaking establishment, which specialized in girls' frocks, was carried on in a large corner house built not five years before as a private residence, and hastily vacated, as such houses often are in New York—why, nobody knew.

Yvette herself failed to appear, but in her absence the gowns were displayed by a Miss Hawkins, who seemed to be a person of authority, and a smiling assistant to whom money was no object.

"This is only a hundred and fifty dollars," she would say, holding up an exquisite, flowerlike dress, thrown together out of nothing more durable than net and tulle. "That blue chiffon with the silver embroidery is two-twenty-five; but look at the lines of it!"

These figures made my brain reel. Up to this time, while a girl at school, eighteen-fifty had been the highest price paid at Rosenberg's for my "best" dresses. My shirt waists I had been allowed to choose myself at Tracy's, for sums ranging from $1.49 to $4.75, articles of striped and zigzagged patterns in which my soul had rejoiced. At home I had always had my supper apart on a tray, and at school my wardrobe had stood up well beside those of the other girls.

"How do you like the blue, Barbara?" mother asked indifferently. "Don't you think it's rather pretty? I think I shall have my daughter try the blue one on, Miss Hawkins."

I went over to her and whispered tensely in her ear.

"Two hundred and twenty-five dollars for that dress is robbery, mother!" I said. "Don't buy it! Please don't! Suppose I should get a spot on it! Let's go back to Rosenberg's. They've got lovely things! Really they have, when you get extra lace to fill them in! I'm not out; I don't need such a beautiful dress as that."

"Yes, you do," she returned placidly. "You forget that you're coming down to all my informal dinners after this. Could we have this dress for to-night, Miss Hawkins?"

At Rosenberg's alterations inevitably took ten days; so I was astonished when Miss Hawkins acquiesced suavely:

"If there's not too much to do, madam; certainly I'll hurry it through for you! The alterations, of course, will be extra—I can't tell how much until I see just what there is to be done."

While two efficient young women were pinning and snipping at me together, mother ordered more dresses and arranged for appointments late in the week. As we were leaving the establishment I reminded her that she had forgotten to ask anything more about the cost of the alterations.

"Twenty-five dollars," said Miss Hawkins offhand. "The young lady seems to be very economical; so different from most of the young ladies nowadays. How nice that is!"

Her tone was bland, but her glance at me was inimical as she bowed us out.

On our way home I maintained silence for at least two blocks. Then I burst out:

"It's wicked to charge twenty-five dollars for those alterations! Why, mother, there was hardly anything to do! Just a little redraping in the back and putting in some tulle—about a dollar's worth, I should think. It could have been done just as well in the house."

"Not in time for to-night," rejoined mother easily. "Why do you worry so, Barbara? You're not paying for it."

We had tea, served by most of the men; and when I went up to my room there was the gayly striped box that held my dress.

I had no desire to open it. The extravagance I had seen displayed that day sickened me. More food than you could eat; better clothes than you needed to wear; a servant at every door and behind every chair—I was weary of it already, weary and depressed. What was the object of this continual outpouring of money for that which was not bread?

One little pincushion of mother's choosing would have meant more to me than the whole room she had bought at a price, and a single kiss of real welcome I should have prized above all the finery in the world.

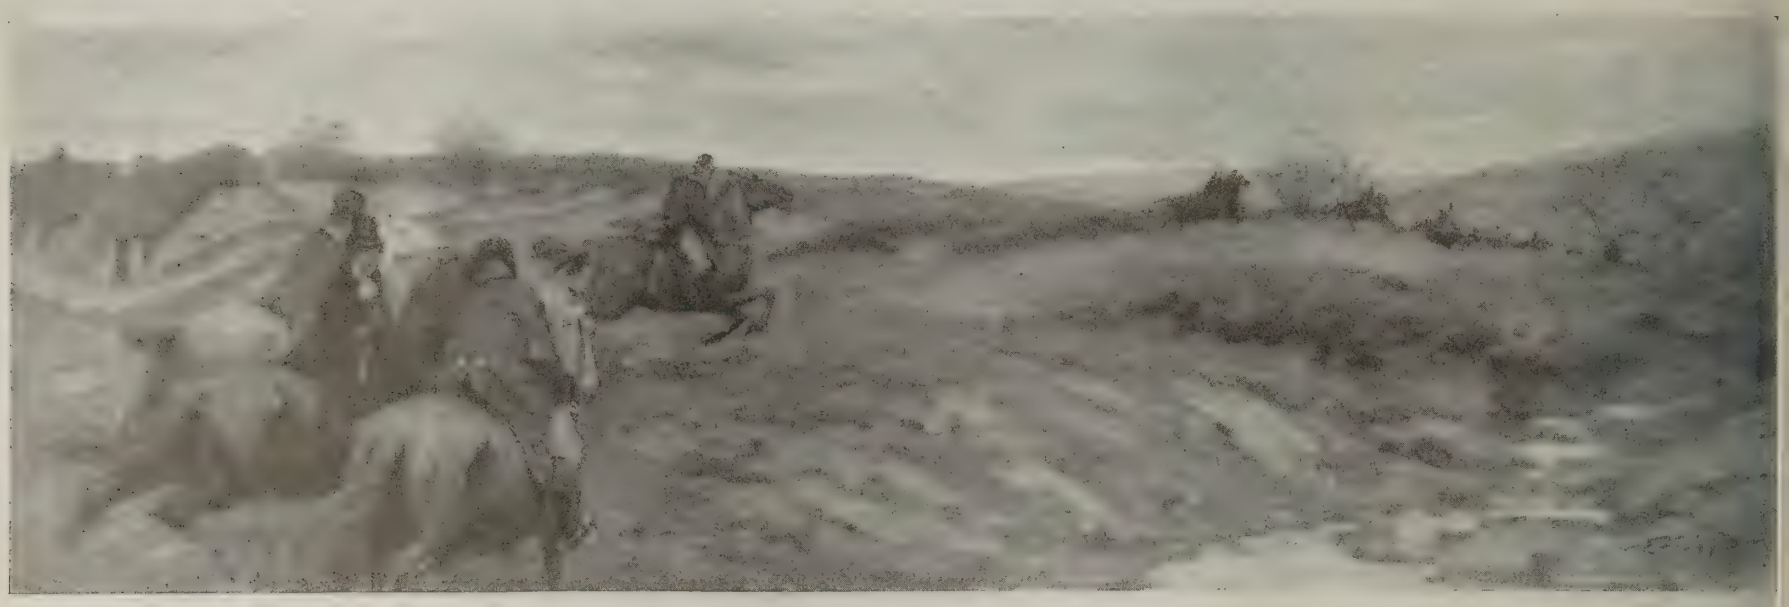
"You must learn how to wear your clothes, Barbara," she admonished me as we went downstairs together at five minutes to eight. "You can't move about in an evening gown as though you were swinging clubs."

I restrained my movements obediently.

As we passed the heavily wainscoted room known as father's "study," through the open door I glimpsed the butler deigning to occupy his leisure moments in altering by the fraction of an inch the positions of the magazines on the Italian table.

(Continued on Page 39)

A WOMAN IN THE HOUSE



By DONN BYRNE

ILLUSTRATED BY E. F. WARD

HE REINED in the big gray gelding for an instant while he watched his son and the girl take the fence together. There was a hard thunder of hoofs, like a hammering of bass drums, as they raced neck and neck; and then suddenly the great chestnut hunter that the boy rode and the girl's fine black mare were over lightly, like swallows whipping over water.

He brought the gray across easily, with a quick lift of his knees, and leisurely took in the scene before him. Three hundred yards away, up the hill, between the bright yellow of the gorse and the grayish brown of the winter grass, he could see the red streak of the old dog fox as he headed warily for the copse above; then came the flying squadron of the dappled pack, heads forward and tails stiff, silently intent; and after that Tim, the old huntsman, in faded red broadcloth and brown corduroy, on his mare Pegeen. Then again came the girl and his son, tall, lithe figures on their mounts. Behind him straggled the rest of the hunt, motley in red broadcloth and gray tweed.

He brought the gelding down to a walk, and for the first time in many years he let his eye wander from the quarry and the pack. His glance was on the girl ahead, in her trim habit and bowler hat. And he wondered to himself how it was that, of the thousand times he had seen her, it was only on the last three or four occasions she had engrossed his attention. He had always known her for a little beauty, and he had laughed at every dare-devil feat of hers that had evoked the applause of the countryside. But somehow he had never thought of her as a woman until a few days ago; and yet she was twenty-five.

"The little Heart of Corn!" he said to himself tenderly, repeating the name that the peasantry had given her.

And then suddenly, as though he had been storing up memory subconsciously these ten years or more, there rushed into his brain a flood of remembrances of her. It seemed to him that he had always been looking into that imperfect oval face, with its tinge of olive color, its full gray eyes, and straight black hair. He could always remember her swift boyish stride and hunched shoulders; the mannish hunting dress; the little spurred feet in the top boots—and, above all, that pert, inquiring, challenging look of hers, that made one uncertain, a fox-hunting parson had said, whether to thrash her or kiss her.

And how often had he laughed at Tim the huntsman's description of her!

"She's a rare young devil—Miss Hester!" Tim would say. "Ah, but she's the little Heart of Corn!"

That morning at the meet she had greeted him pertly, sitting there beside that son of his, who seemed less of a son than a younger brother.

"I doubt, Sir Patrick," she had said in that touch of brogue that was hers, "you're getting old. I heard your bones creak, and you climbing into the saddle."

"Huh!" her father, old Colonel O'Donnell, had snorted. "Boyd's younger than his overgrown son, and he rides harder; and harder than you, too, miss."

And he could, too, at forty-six, outride his son Harry, who was only twenty-three; and her, too, though she was the best horsewoman of the county.

A host of new and disturbing ideas had come into his head since he had begun noticing her, now that there was the fleeting expression in her eyes that betokened she was woman as well as tomboy, capable of loving as much as of riding to hounds. He remarked the trim tidiness of her, and it occurred to him, with a sense of shock, how much in need of attention his house and gardens were, which had had no woman to care about them now for two-and-twenty years, except for a doddering housekeeper and a couple of maids who would be more at home milking cattle than polishing furniture.

That old house of his, now, for example, resting at the foot of Slievegullion—how much she could have done with that! There in the great dining-room, where the portraits of the Boyds looked down mellowly from the wall—the Boyd who had fought with Cromwell, and "Boyd of the Boyne," and the Boyd who had stood by Grattan against Castlereagh—those and a dozen of others, soldiers and statesmen—would there never again be a gathering of beautiful women and stalwart men? In the drawing room, with its noble depth and height, with its virginal, which a queen had given his father, with damascened weapons on the walls, would there never be a woman to brighten it, to place flowers here and there, to warm it into the intimacy of life? Every corner of the house was cluttered with fishing rods, with guns and saddles. A pair of spurs lay on the antique sideboard in the dining room. An otter dog dozed in the depths of a brocaded couch.

And that garden, too, with its walks that should be graveled and its flower beds that should be trimmed; the little lake, where swans should be, with their throats raised exultantly—would there be never again a beautiful woman in clinging white to pass down its alleys in the full of the moon?

The red fox had taken cover in the copse, and about it the pack was circling busily, with shrill impatient yelps. The whipper-in was herding them together, making his lash crack like a rifle. Boyd watched the girl as she sat back easily, waiting for the leader to give tongue.

"A woman in the house!" Boyd thought to himself. "We need a woman in the house."

And for his son, too, something was needed. In spite of the boy's years at Harrow and Dublin, there was lacking a polish to him—due undoubtedly to the lack of mother care, the lack of mixing with women. In a while, Boyd felt, the lad might become a boorish type of county gentleman, like old Squire Boyley, who spoke of nothing but the points of cattle and the vintages of port. No; there must be a refining somewhere.

The fox had broken cover and was careering uphill gayly. The hounds broke into a passion of crying and tore along in a wavering piebald stream. The girl was after them like an arrow.

"The little Heart of Corn!" Boyd repeated as he watched her; he nodded his head in conviction. "That's what we need—a woman in the house."

II

IF YOU had been present—say, three years ago—at one of the formal levees at Dublin Castle, your eye would have wandered past the gorgeous Viceroy; past the Ulster King at Arms, with his four heralds; past the bemedaled generals and Knights of Saint Patrick, in their long cloaks, with their swords and stars—and it would have fixed on a tall, young-looking man in modest court dress, knee breeches and sword, standing apart, with his back against the wall and his arms folded. You would have been certain to ask his name.

"That is Sir Patrick Boyd," the answer would have come, with a note of deference at the name.

A tall, lean figure of a man, I remember him, six feet or thereabouts, and spare as a lance. He impressed you as a sheaf of sinew, something like a panther. Surmounting that came the lean, aquiline face, with its overbig nose and its overlong jaw; the chestnut hair, with just the faintest gray at the temples; the cool, calm, fearless brown eyes. If it had not been for the eyes one might have thought him to be some official, aged thirty-two; but the look in them showed that he was a man who had lived long enough to gain poise and authority. Still and all, one would hardly have thought him to be forty-six years old, and to have a son of twenty-three.

It means very little in England—that name, Boyd of Beltana. It means nothing in Europe. In America it has hardly ever been heard. But in Ireland it means a great and gallant sportsman, a credit to his country; one of those last figures of Irish gentlemen who resemble, in a way, the old noblesse of France—like the White Knight the Knight of Glyn, O'Conor Don, and McGillicuddy of the Ricks. It means all that; and it does more—it recalls a tragedy.

They will tell you, old county gentlemen in rough tweeds and blue poplin stocks, disappointed diplomats in third-rate capitals, officers of the Rifles and the Fusiliers sunburnt from India—all who had been to Trinity with him—that they cannot understand how Boyd married her.

"You could see she was that sort," they say. "You could see it with half an eye."

They alluded to little Ada Breguel, that turbulent French dancer who whirled across the stage of the Empire, shook Dublin out of its lethargy, and captured the hearts of a field marshal and a chancery judge in ten minutes. A woman who looked like a child, is the description I get of her, with her pert flashing face, her mass of black curls and her slight figure.

Boyd met her after the theater and in one week they were married. It was his perfect courtesy, his respect for her, for whom few others had respect, and a clean whole some manner of wooing that gained her. He was twenty-two then, and a student at Trinity.

His father, blunt old sportsman, took it philosophically. "Well, it's done now. Let's make the best of it," he said. "Thank God his mother isn't alive to see it! She was such a stickler for family!"

Nor did he last to see the worst of it. A week later they brought him home on a door from the hunting field and the men's heads were bared.

She had thought she would enjoy being Lady Boyd of Beltana; of having a recognized position in society; of having a husband who treated her with deference. She had all the *gamin's* love for a title and lands. She would escape, she thought, the muck of dressing rooms, the tyranny of hours, the need for giving every ounce of herself every moment to keep her hold on the public.

But she found the North sad. The hunting and the fishing did not interest her. She discovered, to her amazement, that a duchess was only a charming elderly lady such as a butcher's wife might be. The two peeresses she met never wore their coronets, and one of them swore like a trooper. At the Punchestown races none paid attention to dress, as they did at the Grand Prix. They watched the horses. She was bored.

"There are no smart people here, Patrick," she would complain to him. "Let's go to Paris and live."

"But I can't, dear," he would explain patiently. "I've got my responsibilities here; my tenants—everything."

"I'm so sick of it," she would tell him.

This frame of mind occupied her for a year, at the end of which their son Henry was born. As soon as she could get round she packed her trunks.

"I'm sick of you," she told Boyd. "I'm sick of your place. I'm sick of your people. I'm going back to something with life in it."

Nothing could hold her; arguments, affection—not even threats. The dregs of Paris were in her, and they suppurated now into an ulcer of discontent. She had never wanted horses and dogs, flowing water and blossoming heather, a house surrounded by purple mountains. She had wanted an *hôtel* on the Avenue Kléber, the adulation of bankers, the intrigue of music halls. A fierce nostalgia for them seized and paralyzed her.

"I don't want your child," was her final word.

She died in Paris a few years later. How, nobody but Boyd knew; and he never spoke of it. Even he could find nothing good to say of the dead. So he said nothing at all.

The boy grew up. Out of the indiscriminate features of childhood emerged the hooked Boyd nose, the heavy Boyd jaw. Out of the cooing clamor of infancy emerged the wonderful Boyd dignity and the Boyd calm. There was nothing in him of his mother—not one speck.

"A miracle of God!" the friends of the family judged it. But of that they mentioned no word to Sir Patrick. He was not the sort of man who allowed criticism of his wife, no matter what she had been.

Tall and lithe and straight he grew, while his father watched him with a care a mother could not have equaled. He taught him to ride and shoot straight; the ethics of sport; the duties of a landlord to his tenants; the duties of a gentleman to his dependents and his peers. And little by little they came to resemble each other, until the boy seemed but a pocket edition of his father.

"I'd know him out of his father anywhere," Tim the huntsman would say. "The same high head and the same eyes. Aye, and the same way of looking at you. The dead spit of the Boyds—God bless him!"

To Harrow the father sent him, going over to England to be near him, and forsaking, for the time, the furze-clad hills and ditches of his hunting country for the sodden plowed fields and elaborate social meets of the Saxon. Carefully he guided him through Trinity, in Dublin; and then Harry came home.

"What is it to be, Hal," the father asked him—"army, navy, diplomacy, church?"

"I'd rather stay at home, sir," he said, "and help you with the estate. If we look after our own people the Empire can look after itself."

"I'm glad," his father said simply; but his heart leaped at the thought that, for another generation at least, the Boyd tradition would be carried on; that another link of the chain would remain to care for the people and govern the estate well and justly.

Together they rode to the hunt and back from it. They visited cottages; planned improvements; heard complaints and investigated them. There was always the kind word for the children, and an occasional phrase of the vanishing Gaelic for the white-haired women sunning themselves at the doors. There was a joke for the fox-hunting parson and a chat over politics for the parish priest.

"Listen to me, my friend," old Father Kelly told a member of Parliament who had journeyed North during the agrarian discussion with an eye to the disaffection of the neighborhood; the member had spoken violently about "landlords' spawn," as he put it. "Listen to me: You may shoot landlords in Kerry and ambush them in Roscommon. But if you advise that here you'll go home on a stretcher. And it won't be the landlords will send you. It'll be the tenants. I'm just telling you!"

And it wasn't alone their sense of justice and honor that made this man and boy popular in the Barony of Oriel. It was the deep bond between them that called forth the sympathy in everyone. Even old men's eyes grew dim as they saw the admiration and the near-worship of the son for the father; his happiness when they were together; his pride in the elder man's strength and endurance, handsome face and proud carriage.

And women with children smiled tenderly in understanding as they watched the baronet's concealed solicitude for the boy's welfare, the careful training, the inculcation of ideals. They understood even more his patient waiting for the boy's return when away on a visit, or on a trip to Dublin, or a round of the fairs, looking after stock. Patiently the baronet sat and waited on the terrace for his return, like David, sitting between two gates, waiting for tidings of Absalom, his son.

III

A GREAT line of Boyds there had been since De Courcy clanked into Ulster at the head of his Norman band; and of all that line there had not been one who was a famous lover. They were not uxorious men—women in the main had no attraction for them; but it seemed their custom to pick out one woman and to lavish their lives on her. It was their boast that they picked out wives of high ideals and tried to live up to them.

"A grand eye for a horse, they've got," the country people would say; "aye, and a grand eye for a woman. 'Tis better for a girl to be married to one of them than to be a queen, with crown and jewels. A better thing, surely."

There had been few of them who had married outside their own Province of Ulster. They mated with the O'Donnells and O'Neills, overlords of the North; with the O'Hanlon women, those red-haired, strapping amazons; with the De Lacys and D'Arcys, tall, commanding women who still retained the Norman manner. A Boyd had stolen a King of Spain's daughter, and another Boyd had brought home an Austrian; but that had been all—that and the defection of Sir Patrick, who had married the dancer from Paris.

"A queer thing for him to do!" the tenantry puzzled. "'Tis many the hearts were sore and broken on that same day."

That was dead and gone, now; buried in the oblivion of twenty-three years, until it seemed no more to the squire than a tragic story that had happened to someone else. For twenty years the stream of affection that was in him had been dammed by the caring for his son; and now that the boy was no longer a stripling, but a man, the stream flowed over the bulwarks and was prepared to take its natural course.

If there was one woman who would have suited him in the whole world it was Hester O'Donnell. He liked everything about her—that quick and boyish stride that was always carrying her swiftly somewhere; those raised eyebrows that gave the impression she was eternally puzzling over something. More still, he even liked her way of walking along the road, her left hand in the pocket of her tweed coat.

And then came the daily, ever-dramatic change from the hoyden of the mannish stride to the gracious, well-gowned woman who presided over her father's table—a slim, soft beauty, to the manner born. That was the thing which fascinated him.

"A sportswoman and a great lady," Boyd told himself. "There's only one in a million!"

He had noticed her watch himself quizzically, and with a little tenderness in her eyes. She could not feel anything particular for him, he thought; but she might be receptive toward his courtship. Her father, old Colonel O'Donnell, would be only too pleased at the alliance. Indeed, he had once hinted at it himself.

"I wish I had someone to look after that child," the colonel had said—"someone like yourself, Boyd."

"She'll find a young man some of these days," the baronet had answered; "my kind are too old."

"You're good for twenty-five years in the saddle yet," O'Donnell chaffed; "and she's not exactly an infant. She's twenty-five years old."

Whom else could she marry? Boyd tried to think. Two or three seasons she had been to London and Dublin; but from both of them she had come back heart-whole apparently. For the officers of the near-by garrison she seemed to have no liking. There were few of the old stock left from whom she could choose. She was too much of "a fine woman," as the phrase went, to be taken by the younger whippersnappers she might meet. She would want a whole man—mind, body and soul.

"I can't think of anyone she could care for." The baronet shook his head.

Well, then, if that were so, why shouldn't he have his chance as well as the next? An old name and a fine estate, a constitution ten years younger than his age, there might be a possibility of the match appealing to her. And then there was the boy. She seemed to like him, from their companionship together. How happy they could be, all three of them! And how the old house would brighten up, as it used to be under every one of the Boyds until his tragedy had occurred! Again there would be the laughing parties there, the balls, the hunt breakfasts—everything as the old tradition had it, the tradition of his hospitable, open-handed ancestry.

It was getting toward evening now. The sun had dropped behind the crest of Slievegullion, and a great golden light, like a

"On Your Word of Honor as an Irish Gentleman, Is That True?"

liquid, bathed the mountainsides. Beneath it the lake lay, a placid winding pool bordered on each side by pine trees. As he stood by the open French window and watched it across the garden with the stripped rhododendron trees, the baronet wondered to himself how the boy would take it. A great flight of wild geese went clamoring by, and Showk, the red setter, raised his head as though he heard something. He trotted down the avenue of chestnut trees. A moment later Boyd could hear his son's strong barytone ringing out:

"I cautiously saluted her, and I viewed her o'er and o'er;
And I says: 'Are you Aurora bright, descending here below?'
'Oh, no, kind sir,' this maiden fair, she modestly replied;
'I daily labor for my bread down by the tanyard side.'"

The boy swung round the side path to the back of the house. He had been duck shooting, the baronet remembered, and he was probably going round to leave his gun and bag before coming up. He could hear the old housekeeper greet him:

"Yerra, Master Henry, and 'tis you is the elegant shot. Eight of them, and you not gone upward of an hour!"

"Not so bad for a young one—eh, Margaret?"

And then his voice rang out again:

"Her golden hair in ringlets rare hung down her shapely neck,
And the killing glances of her eye would save a ship from wreck.
Her cheeks like fair Hypatia's, and her teeth so waxy white,
Would have made Napoleon her slave down by the tanyard side."

He swung into the room easily, with his shotgun beneath his arm. His hair was tousled under the tweed hat, and the pockets of his golf coat were bulging with cartridges. His hands were in the pockets of his riding breeches. There was so much wholesomeness to the devil-may-care look of him that Boyd's heart jumped with pride.

"Dreaming, father?" he asked laughingly. He put his hat upon the muzzle of the gun and propped the barrel carefully against the wall. "A penny for your thoughts, sir."

"I was thinking, Hal —— What would you say if some fine day I were to get married?"

"Success to you, sir, a thousand times! And I'll dance at the wedding until the dawn of day." He paused for an instant and his voice grew anxious: "Why, sir, you've not been worrying about me, have you? Sure, I'd only be too glad of anything that would make you happy. Who is it, sir? Lady Alice Sellingham?"

"No."

"Mrs. Brown-Abott?"

"No."

"Surely it's not Miss Reddy? It couldn't be she!"

"It isn't," his father laughed back.

"Who is it, sir? Don't tease me about it."

"Hal," his father said softly—he kept his head averted with some sense of embarrassment—"it's Hester O'Donnell I want to ask to marry me."

"Hester O'Donnell!" The name seemed to be more gasped than spoken.

The elder man was noticing nothing. His mind was full of relief and tenderness at the son's quick delight at his happiness. He didn't notice the long spaces that came now between his remarks or how white he had suddenly become.

"Have you asked her yet, father?"

"Not yet, Hal."

Another long pause. The son moved toward him at last.

"I wish you every success, sir. If you get her you'll be getting the best girl in the world; and I've often said that the woman you'd marry would lack for nothing. Success again, sir."

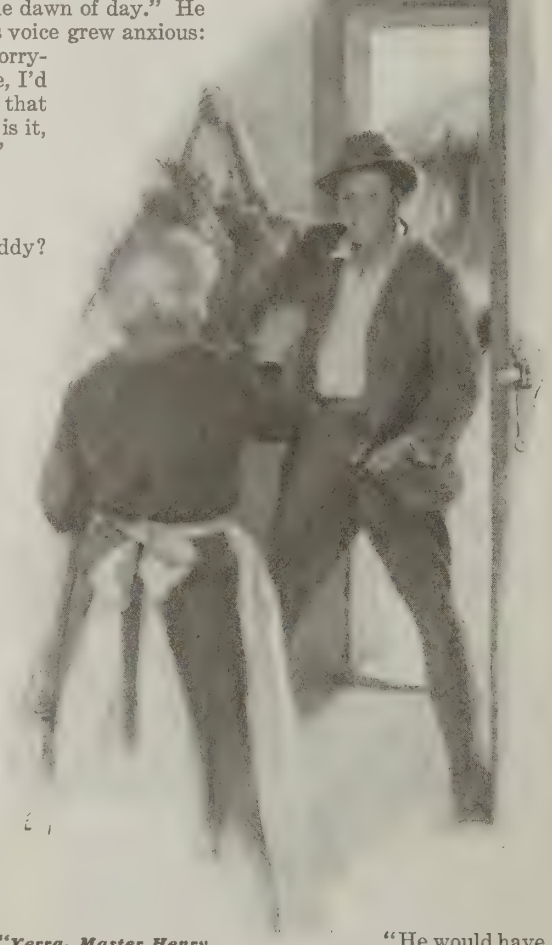
"Thanks, Hal."

The boy straightened up and moved toward the door.

"I'll be taking the gray down the road for a gallop," he said. "He's not been out to-day."

Hal swung off quickly. His father stood there motionless. He couldn't trust himself to speak, so moved did he feel. How happy they three would be together, he thought! He listened for his son's voice to break into the countryside ballad again. The boy did so much like the last verse. The baronet repeated it to himself with an amused smile:

"Farewell, my aged parents; to you I bid adieu;
I am crossing the main ocean, my love, for love of you.
And if ever I return again I will make that girl my bride,
And I'll roll her in my arms down by the tanyard side."



"Yerra, Master Henry, and 'tis You is the Elegant Shot!"

But no swinging barytone arose, lilting the grace notes of the Come-all-you. The only sound the baronet heard was the shuffle of the gray hunter at the stable door; and then, an instant later, the thunder of his hoofs along the road.

IV

IT SEEMED to Boyd, in those three days, that there had always been a gray cloud over Slievegullion Mountain, and that the lake had always been misty and desolate, with no sound from it but the hollow and lonely booming of the bitterns. About the house the servants came and went with the furtive, exaggeratedly careful step that seems to go with the presence of Death—as though that were a light sleep, instead of being the heaviest of all. Riordan, the butler, for instance—his ruddy cheeks seemed to have suddenly gone gray. Margaret, the housekeeper, was ever wiping a tear from her eye. The stableboys' loudness was hushed, and the maids whispered together in a stealthy susurrus that was more irritating than if they had shrieked aloud. Even the dogs whined, as though they knew something was wrong.

Where had his son gone? the baronet demanded of himself fiercely. And why? There had been no news of him beyond that which came with the man who brought the horse back from Goraghwood Station, and who said the boy had got into the Derry train. To every station on the line Boyd had wired; but no news came from any.

"He can't be dead!" the baronet told himself over and over again, fighting against the fear that was rising in him; and as he began pacing about he noticed himself in the glass, and he saw suddenly how aged he had become in the few days. His face was haggard, and great rings showed about the eyes from sleeplessness. He had become old overnight, like Ossian of the Fianna, who had touched earth after living in the Enchanted Isle.

Why had the lad done it? he asked himself, going over the thing again like a foxhound searching a covert. Why? He had seemed glad that the father was about to marry. There seemed no objection to that ——

Riordan, the butler, came into the room.

"Miss Hester O'Donnell to see you, Sir Patrick," he announced.

"Show her in, Riordan," Boyd told him.

There was no need for Riordan to show her in. She was behind him like a flash.

Her face blazed into the baronet's.

"Where is my boy, Sir Patrick?" she cried to him. "What have you done to my boy?"

He looked at her in amazement. A great color had mounted to her cheeks and her gray eyes were flashing in little sparks of vindictive light. Her ride over had blown a strand of black hair across her brow, and in her right hand she held her riding crop fiercely, as though at any moment she might strike him with it.

"Your boy?" he asked faintly.

"Yes; my boy," she told him. "My boy! Nobody's but mine."

"I see!" He felt a little faint for an instant; but he pulled himself together quickly. "Hester, did you care for Hal?"

"I did," she told him boldly. "And he for me."

"Why didn't he tell me?" Boyd asked. "Why didn't he tell me?"

"He would have," she answered—"in a few days."

He must have gone very white then, for the eager fire went out of her face and a look of anxiety came into it as she watched him. He went over to the fireplace and leaned heavily on the mantel.

"Sir Patrick," she whispered—"he's not dead?"

"No; he's not dead."

There was a pause in which it seemed to each of them that they could hear the other's heart beat, and that they each could feel the other's mind and soul struggle with a gray, shapeless fear.

"Why? Why did he go?" Hester O'Donnell asked breathlessly.

He did not answer for a minute; it seemed such a hard thing to say, such a terribly violent, blasphemous thing in the face of what he had just heard. But it had to be done.

"I'll tell you, little Hester," he explained: "I told him I was going to propose marriage to somebody. I thought it would be good for him to have the house as it ought to be—to have a woman in it, as it were, who would loo after him. I was afraid of his going wild. Do you see Do you understand?"

"Yes; but why should he go away?" she demanded "What is there in that to make him go away?"

He kept silent and watched her as she bit her lips an knit her brows, trying to puzzle it out. She raised her hea to ask him again, to demand an answer; and they looke at each other without saying anything. The color fade from her cheeks and she recoiled slightly.

"You wanted to marry me?" she cried out.

"And to put it absolutely brutally"—he lied with a wr smile—"the only reason I had for wanting to marry yo was my son's good. I never thought of him as being any thing but a child; never thought of his marrying."

"At his age you had a son a year old," she told him. Sh took a quick turn about the room, head down, thinkin "I know where he is," she said suddenly: "he's in Americ He's taken the Derry boat for New York. He was alway saying, if anything went wrong —— Oh, I know it in m bones—he's there!"

"I'll go look," Boyd told her. "I'll find him for you.

"Listen!" she asked him fiercely: "What you said t me—that the only reason you had for marrying me was fo his sake—is that true?"

"Absolutely true."

"I don't know," she said. "On your word of honor as a Irish gentleman, is that true?"

"On my word of honor as an Irish gentleman," he an swered smilingly, "it's true."

"Oh, then it is true!" she said in relief; and, letting he self break down, she cried in his arms.

V

THE police had failed and the private detectives ha failed to find any trace of his son in the week that th baronet had been in New York. There was nothing els to be done, they told him, shrugging their shoulders. Peopl disappeared every day, and no trace was ever found them. Perhaps the son was at home now. Perhaps it wa only some boyish escapade, some hiding of himself out pique. But Sir Patrick knew better; he knew the boy.

Disconsolately, night after night and day after day, h roamed the streets. He watched the quays, with the lon shoremen loading cargo by sun and incandescent light. H watched the Subway workers crawl out of their cave, shi by shift; but no Harry was among them. He searche among the structural workers who clambered like pygmi up and down the great iron columns. And yet there wa no sign.

"Give it over," the police told him. "There's not chance in the world. If he's to be found we'd have got him.

"He's here," the baronet replied doggedly. "I know in my heart. He's here!"

The porters at the Grand Central came to know hin sitting there forlornly in the great main hall, waiting f the boy to pass through. The men at the Pennsylvan offered sympathy as the police told the story. He woul thank them politely and, after hours of waiting, go awa

"I know he's here!" he would tell himself. "I know he here! We both feel it—Hester and I."

It was eight o'clock now. Somewhere the strokes ra out from a near-by church as he crossed Herald Squa from Sixth Avenue. The theater crowd of motors whirr into Broadway, their horns snarling like dogs. The El vated Road lumbered by overhead with a thunder like ba drums. Here and there horses picked their way throug the maze of cars and pillars with the adroitness of tri skaters upon ice.

All about him advertising devices twinkled and flashed a red star; a pelican opening and closing its beak; a chari snorting along, the horses' nostrils distended, the driv flogging viciously at their flanks; a pair of boxers leadi and countering, with absurd mechanical gestures. It seemed a vast pandemonium of sound and light.

Sir Patrick saw none of it, heard none of it, as he blu dered his way across as calmly as though he were walki across his own moor. A shrill whistle cut into the air li a knife. From a street near by came the loud, insiste clang of a bell. The automobiles stopped short as if turn to stone. A huge furniture wagon, with two figures on t driver's seat, drew up within a foot of him. The clamor bell was nearer. It was fifty yards away.

"Hi, you!" a policeman shouted from a distanc "Where do you think you're going? Get back!" T baronet did not hear him.

A slight figure in overalls and a flannel shirt sprang fro the furniture van. It caught the baronet by the should and swung him into safety. The fire engine whipped by a streak of red.

"A narrow shave, sir!" he heard said behind him. "D I hurt you?"

He turned round unbelievingly, and caught the figu by the arm.

"Harry! Is it you, Harry?"

The boy went white. He tottered and nearly fell.

"It's I, father," he said.

THE PHANTOM CIRCUIT

Out of the Corner of My Eye I Saw the Military-Appearing Spy Dawdling a Hundred Feet Away

By John Fleming Wilson

ILLUSTRATED BY T. D. SKIDMORE

"DID you find her?" I asked George Turner when we met two years after the close of a brief association in Bermuda.

It was the first night out from Honolulu, and the turbiner Hesperia thrust her lofty bows into the rich glow of the rising moon as if hurrying out of the unreal, phantasmic sea toward a daylit world.

"Did you find your real woman?" I continued. "Or did some other motion-picture director seize your prize?"

"I found her and directed her," he announced with sudden bitterness. "I'll probably destroy the film."

"What picture did you feature this—this paragon in?" I asked.

"War stuff," he mumbled.

"Then you, too, did your battles on a California field?"

Turner laid one finger on his neck and indicated a deep, triangular scar. I begged his pardon in proper terms.

"I was in China—and all that," he explained. "My people sent me over at the beginning of the war."

"And you really got a picture?" I inquired respectfully. "You had your wish—grim reality before your camera? Kiao-chau?"

"Not there. I got my picture in Bismarckshafen."

"I confess I never heard of it," I told him.

Turner acknowledged that most people had not.

"A German coaling station just outside the Samoan Group," he told me. "Used to be rather under the United States protectorate; but we let the Germans have it a good many years ago, and they made it a real naval station, defended by a third-class cruiser, a hundred and fifty soldiers and a little fortress. Besieged and captured by a modest expedition from the Colonies."

"Good picture stuff?" I demanded.

"I don't know!" he burst out. "Just six weeks ago I finished it—three thousand feet. The reels are in the purser's safe. And I'm not sure I'll ever turn the film in. I—I may burn it!"

"Nonsense!" I said roughly. "You're morbid. You get some genuine fighting stuff—not to speak of being wounded yourself—and then go daffy because of—er—a woman," I concluded lamely.

He considered my remonstrance, for he presently ejaculated: "Ha! Not so simple as that. To tell the truth, I staged the affair as a fake—a replica of a real fight, of course, but redone with an eye to the dramatic possibilities, and with a girl in it. The thing fizzles out finally—but I got this!" He pointed again to the uncomely scar on his neck. "I risked my life for her," he muttered.

"You thought you were filming a battle that had taken place before, and found yourself taking the real article?" I suggested. "And the girl? How did she come out?"

Turner peered about him at the shadowy figures recumbent here and there under the deck lights. Then he laid a shaking hand on my arm.

"I don't know!" he whispered.

"You don't know?" I cried. "Surely you must know! What does your film say? The camera can't lie!"

"Can't it?" he whispered again. "I daren't look!"

A thought occurred to me. I had, before this, heard motion-picture men mutter of strange apparitions seen against the projecting-room screen, as if ghastly actors had seized the set stage for themselves and played an unearthly scene above the commonplace of the cinema. Had this shaken and desolate man caught a glimpse on his costly reels of some such phantasmal drama? Out of the unknown had some dark power called forth a dimly seen, unforgetable horror? I fished for my answer.

"The girl played the lead as you planned?"

He shook his head as much as to say once more "I don't know!" Then he began at the beginning.

II

WHEN I reached China they told me I had better go back to America. Officialdom disapproved of pictures, and particularly motion pictures of actual events. Not a soul was even decent to me till a representative of a Dutch concern took pity on me and said:

"You're wasting time in Hong-Kong. Go to Melbourne and see Major Forsythe."

I went to Australia and didn't find him, though everybody seemed to know of him. He was a very high personage, I understood—a kind of free lance, with the entrée everywhere. In Sydney I got trace of him, though nobody would admit for a minute that the major held any place under the government. Yet it was as clear as day that the man was vastly important. I was justified in assuming that the very indefiniteness of his position meant he was something extraordinarily lofty and influential—exactly the man who could help me. Incidentally I learned that he had a daughter.

"The major is a queer card," said an acquaintance; "but the girl is magnificent. I suspect her father is a lord and she a lady. She has the grand manner. Lofty? Handsome? And cold? My word!"

Following a hint, I sailed for Auckland. There I discovered my man. He was living very quietly and unobtrusively with his daughter. Inquiry for him in official quarters elicited nothing but inarticulate murmurs.

I went to his house—a cottage back from the road—and caught him right in his own doorway. I told him I had been referred to him, and set forth my business, which was to get permission to make moving pictures of as much of the active operations as I could.

The old boy shied terribly, waved his well-kept hands, and gave indications of great mental disturbance. I gathered that he was about business so fine, so delicate, so weighty, that a breath might do irreparable injury. Nothing out-and-out, you understand—evasive civilities uttered in a mysterious tone. At the end he leaned outward from the doorway and said impressively:

"Mr. Turner, you would do well to consider my position here. And your own."

"A warning?" I asked. "Or a threat?"

He lifted his lids a little, so that I saw his somber eyes.

"The air is filled with it," he said. "One breathes it. It is the terror by day and the menace by night. 'Who? Who? Who?' one man asks of another."

"Who?" I repeated. "Who what?"

"Who is a spy?" he whispered.

At the time I hadn't learned my lesson. I was astonished that this elderly soldier and man of affairs should be affected by a phantom, and stated that I, at least, was no spy. I insisted that I represented a reputable and neutral film company, and stood a little on my dignity. The major seemed abashed, stumbled over a sentence or two, and then astonished me still more by curtly asking me inside.

I was extremely surprised to walk into a large, bare apartment and come to a stand before a small, light table on which a young woman knelt and held a tin saucepan over the single gas jet that depended from the dusty ceiling.

"My daughter Aileen," the major mumbled.

I realized that this was no maidservant.

"I am heating this milk for the kitten," she told him calmly, and surveyed me for an instant with eyes as emotionless as crystal.

We stood there like owls until the contents of the little pan steamed. For a very good reason the major didn't ask me to sit down—there was no chair. It didn't matter. I stared at the girl and understood perfectly that I should never see another woman with so splendid a throat—her head tilted back a little as she looked at the gas flame. I wondered how she was going to get off that spindle-legged table.

Her task finished, she simply slipped to her feet and set the pan down. Then she looked at me as if to defy me to inquire what kind of a kitten drank scalding hot milk, with rum in it. Her father ignored the saucepan and introduced me as his friend—"The General Director of the Planetary Film Company." He repeated that I was his friend.

Presently the major excused himself and departed.

"How much do you know of my father's plans?" the girl asked me suddenly when he was gone.

I was startled—I couldn't get it out of my head that she bore a title and was socially equal to the magnificence of her beauty—and answered that I knew nothing, except I had heard he was very influential. I explained to her, in full, my own plans and hopes. I wound up by pleading with her to help me with her father.

"I want to have a chance to accompany some of the expeditions they are sending out," I said. "I want to film some genuine war stuff. You see, Major Forsythe can assure them I am harmless. Personal influence means everything to me."

She was haughtily interested. She went into particulars about the business; asked a score of questions as to my ability to depict battles, sieges and assaults; was anxious to learn how we motion-picture people reproduced scenes of the past; and inquired what was the minimum material I needed to start work.

"Give me the story of a battle, put me on the spot with soldiers enough, artillery and paraphernalia, and I'll make the fight live again," I told her.

"And a real battle? Could you make a film of that?" she demanded.

I explained that this would be possible; but that when I had taken all my pictures it would be necessary to arrange the scenes in some logical order, so that the spectator in the theater would get a clear notion of the continuity of the action and see the outcome in a single flash.

"Give me three hundred feet of actual fighting and I'll make two reels of battle," I told her.

Then we discussed the government's half-hearted entertainment of proposals that motion pictures be made of actual warfare, to be exhibited for patriotic purposes. Here she seemed to have special information, and suggested that

many hard-worked officials had been reluctant to take the matter up only because there was doubt in their minds whether the censorship would be adequate.

"If there is one thing more than another that they fear, it's giving information to the enemy," she said.

The girl's complete and splendid beauty was bewitching me. I could think of one thing only.

"I must have your father's help—your help," I said.

"Impossible!" she told me.

All that week I could not get Aileen Forsythe out of my thoughts for a moment. You see, she was precisely the woman I had been seeking all my life; the kind of woman everyone looks at when great things are afoot; and a woman, I fancied, whose extraordinary loveliness was like a crystal wall about her passionate soul. And from the hour she dismissed me from the cottage I never managed to lay eyes on her. The major avoided me as if I were poisonous.

My plans seemed vain. Nobody would listen to me. Once or twice I met with rebuffs that partook of a semi-official warning to be gone from the country. Why did I stay on?

The only explanation I can offer is that I had been completely subjugated by that girl. Nothing mattered except my seeing her again. With my belongings packed, and various police agents constantly hinting at my departure, I stayed in Auckland, walking the streets, and biting my nails because I could not see Aileen again. I was mad. I dreamed of running off with her; of making her the lead in a company that would film miracles. I told myself that nothing mattered but her; I fought the fear that she, with her social position and title, would have forgotten me. Oh, well!

I was at last ordered out of the Dominion. I was given so many hours in which to clear out. I was at the end of my resources. I sat in my wretched room, cursing wars and all their consequences. My landlady bustled and fidgeted in the hallway, eager to be rid of her dangerous guest. A muffled policeman stamped the pavement outside. Then my door opened and Aileen Forsythe walked in.

I stared at her. She was dressed, I saw, for a journey. I gaped at her.

"I must have your help," she said in a clear voice, as though we had parted only an hour before.

"I'll do anything in God's world for you," I replied fervently. "Anything!"

She lifted her veil and I saw the despairing expression on her face.

"I'll be grateful," she murmured.

"What is the matter?" I demanded.

Her whisper barely reached me:

"I must save my father."

In amazement I repeated the word after her:

"Father?"

"Yes," she said. "I've thought and thought! And there is no one to go to but you."

I thought I saw her plight.

"You don't want him to go back into active service?"

"I don't want him shot as a spy," she told me.

I tell you that, when Aileen looked at me with her level, sad, beautiful glance and formed the word "spy" on her strained lips, my heart missed a beat. God help me! I had lived under the pall of suspicion too long, I'd had too much experience with the dreadful obsession that holds whole nations in its power and makes them cringe at the word "treason." I was instantly convinced that Major Forsythe was a traitor. I believe I uttered no sound except an "Ah!"—a brutal ejaculation that must have pierced the girl's bosom like a bullet. But she faced me gallantly.

"He mustn't be shot as a spy!" she repeated.

"Is he a spy?"

You see, I had to know. I might be in danger myself, for having been at his house.

"They won't believe that he is not," she said simply.

"Why not?"

"And they won't believe you either," she murmured.

I fairly jumped.

"Me?" I shouted.

"They know that you came to our house," she said. "And—haven't you felt what the police think of you?"

"But this must be some—some definite affair," I stammered. "Your father has—they have discovered ——"

I looked into her eyes. The two of us stood there in that wretched room with the shadow of the gallows dark above us. I admit that the whole affair sounds unreal, exaggerated, false. Who was this girl? Who was her father?

I Sat in My Wretched Room, Cursing Wars and All Their Consequences

Yet I trusted her. She had warned me. She hadn't come to me empty-handed either. She had a scheme to save her father's life—and to save my own, too.

"What am I to do?" I asked her.

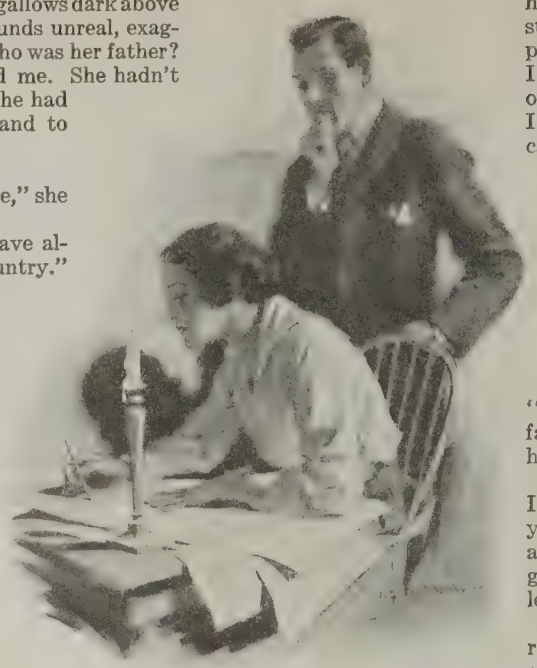
"You must take pictures—a picture," she told me.

"Impossible!" I exclaimed. "I have already been given notice to quit the country."

"I can arrange it," she said, growing calmer. "My—er—friends have risked giving me a chance." She assumed a proud expression. "I have friends—still."

"I can understand it," I returned.

"And though they have no definite knowledge, they are aware that father has been indiscreet. Nothing, you see, is certain. So there is time. I have seen several people who are really powerful. They have stretched a point." She flushed. "They have thought it might be arranged for you to go to Bismarck Island and take a picture of the expedition there. A government boat is going down with supplies. You could take myself and my father along as members of your company."



"He Would Have Fought if There Had Been a Chance"

"Still, I don't understand," I protested. "I'm ordered out of New Zealand and you tell me your father is suspected of being a spy. Do you mean to tell me that the government will actually let us go together and take pictures of some maneuvers?"

"Not of maneuvers," ran her swift correction. "They look at it this way: they will have us all under surveillance. They will be sure that you aren't taking observations or pictures without their knowledge. Father will be—we shall be—it amounts to our being really prisoners. But no one will know. I have arranged it."

I suppose I stared at her, for she flushed hotly.

"Is it too much to do for my father?" she cried.

"You arranged it!" I repeated. "And what—er—friend in the government did you deceive? A young man? In love with you?" She choked, and I went on: "And now you come to me and try to make me put my neck in the noose. Are you wagering on my being in love with you too?"

"Yes," she whispered.

"But I—I'm not!" I stormed.

Then I was silent. I saw the mystery of her inscrutable eyes and knew my falsehood for what it was. I loved her. Nothing she might do or say could ever change that truth. She was very still, like a lovely enchantress in the presence of a miracle she had wrought.

Presently I found my voice. But at the first syllable she laid a finger to her lip. The stair outside the door creaked. Someone was listening. It was a tight place. Any moment the man outside might rush in and denounce us. I played trumps.

"We have only a little while," I said in a loud voice. "If we have government permission we must make our arrangements right away. Are you ready?"

She knew better than I what depended on eluding and deluding the invisible auditor on the other side of the door. She did not hesitate, but replied in a calm voice:

"I suppose we had better go."

The stair creaked again and we waited. The spy was gone. Undoubtedly he would watch for us on the street. We went down and walked slowly to the corner. A glance behind me assured me that we were followed.

"He is going to see you home," I muttered.

She whispered back:

"We must have everything settled and our passes in our hands, and our luggage ready, this afternoon."

"Then it is so dangerous?" I asked. "Have they got anything—any proof against your father?"

"You don't know him as I do," she replied in a restrained tone. "They will work on him. We must have everything decided and done to-night. We must sail to-morrow. There is a steamer going to Bismarckshafen in the forenoon. Oh, we must hurry!"

Out of the corner of my eye I saw the military-appearing spy dawdling a hundred feet away. It struck me that he was expecting others to join him. I seemed to catch a vision of myself huddled in a cell. I looked up the street and caught sight of a flag floating from a staff three blocks away. I touched Aileen on the arm.

"If it's a matter of such haste, come on!" I said.

At the door of the American Consulate she looked up and grew pale.

"Why—they will turn us out!" she whispered. "And it won't help my father. I don't care what happens to me."

"Or to me either, I fancy," I told her bitterly. "But you've dragged me into this and I propose to have some guaranty that you will not leave me in the lurch."

"We must hurry," she responded with an evident effort to be calm. "We must arrange matters and tell my father—warn him."

"When we have done a little business in here," I replied, and led her inside, under the Eagle of the United States.

Twenty minutes later we came out, man and wife! On the lower step she halted and let me see into her splendid, bitter eyes.

"You have had your way," she said. "You will be sorry. I did this only to save my father."

I held her by the arm.

"Shall I be sorry, I wonder?"

She flinched at my touch; then smiled faintly.

"I must not resent it, I suppose. You have the right to lay your hand on me. I have warned you."

I relaxed my clutch and she withdrew a step. Then, in some impulse of feeling, she stretched out both hands to me.

"I—I'm sorry!" she cried.

"I have a good deal to do," I responded. "I know enough of the plan to work it out. When I've got my own arrangements made I'll let you know. Then you can take it up with the people you know in the government. I'll see you this evening."

After she was gone I still felt the quick pressure of her fingers about mine as a steady stress on some obscure nerve that went to my heart and made me a little breathless and weak. I turned on my heel and strode back toward the spy, who still dawdled on the curb. He seemed puzzled.

"Look here," I said vigorously; "I don't like your manner. Keep away from me and my wife."

The man opened his mouth.

"Your wife!" he repeated in a daze.

"My wife," I told him. "I warn you!"

The spy gulped, stammered, and tried to give me to understand that he was on entirely other business than I suspected. He almost made me laugh, so hurt he was at being thought ungentlemanly. I left him to his bewilderment and hastened to make ready for this preposterous and thrilling adventure. And I was married to the most absolutely perfect woman in the world!

III

MY GOODS packed up, my landlady thoroughly satisfied by my explanation that, at last, I had been sent by the government on an expedition, a hasty call made on a couple of unattached camera men, I swallowed a bite of lunch—my wedding supper!—and went to Major Forsythe's cottage. I rang the bell loudly. The old fellow himself opened the door and I pushed by him.

"I must see my wife," I told him.

He grabbed my hand.

"She told me," he said, clinging to me. "My boy!"

"You will be hanged for this business," I said brutally, jerking away from his insufferable clasp.

"Hush!" said a voice from the obscurity behind him. I looked beyond the candle flickering on the table. I saw Aileen, her earnest, intent face vividly emerging from the dusk.

"I think I had better take a walk," her father said in a stifled tone, and was gone.

"Well?" I remarked to my wife.

Just as I spoke there was the long roll of a drum from the distance, a gloomy and ominous reminder of the search of a city for traitors. Aileen answered me quietly:

"I saw my friends. They think it best that we go to Bismarckshafen to-morrow, as you said. Father will go too." She bit her lip. "They will see that you don't miss the boat. That is what you get for marrying me."

"Be frank," I adjured her. "I've trusted you. Trust me."

"I shall have to uncover a—an imposture," she said with difficulty. "My father's."

I tried to help her out.

"I know he is a spy," I remarked gently.

"He isn't, at all!" she protested. "That is part of his imposture."

"Then he isn't really a retired British army officer?" I demanded. "Is that a pretense too?"

She bowed her head.

"Better tell me the truth," I urged her. "I am wholly in the dark. I came here expecting to find an honorable officer, busy on his country's affairs. They told me you were a lady born. I find—so far—that Major Forsythe isn't at all highly regarded by his supposedly fellow British officers; and—I doubt whether you are a lady born."

Her defenses were beaten down.

"I know! I know!" she cried. "That is only part of the great pretense. We are both impostors—but spies, never!"

"Was our marriage this afternoon a pretense too?" I demanded. "How many husbands have you?"

"I had one," she said simply.

"When?" I shouted, seized with a wild rage.

"This afternoon, when you put this ring on my finger," she answered. "I—I lost him at the door of the American Consulate."

I was touched. But I didn't wish to make a new, useless surrender.

"You aren't in mourning for him?" I asked brutally.

"No," she said. "I had my moment of reality—in a whole lifetime of playing a part."

I was suddenly swept by a feeling of prodigious triumph.

"Then you love me!"

What was it I saw in that girl's mysterious eyes at the instant? I can't tell. Something exhilarating and soothing, rousing and satisfying.

"Come!" I urged her. "Stop playing a part and live realities. Let's get back to the Consulate. I've made you an American. Let's get away from here and back to the States."

She gave me a glance of inexpressible regret.

"I'm bound," she whispered. "I'm the only person in the world who understands my father. I must save him. I've always promised myself I would save him."

"Who will save me, Aileen?" I pleaded.

"I will!" She glowed, transfigured. "It will be my reward for all the years I have suffered—to save you." Her voice fell into a compassionate murmur. "I will save you from myself."

The street without became clamorous with the noise of men following a single, steadily tramping man whose footsteps seemed to come straight for us. We held our breath till the night patrol was past the door. "You speak constantly in riddles," I said. "Tell me what it all means."

IV

"HE TOLD my mother he was a major in the Confederate Army," she said. "He married my mother, who loved him. He wasn't ever in the Confederate Army, you see—or in any army at all. But mother left her people and died in two years."

"He killed her," I said.

"No!" she protested. "She was a Southern girl, and lovely and proud. She wouldn't have fallen in love with anybody but a brave soldier. Father knew it and lied to her. But when she found him out she understood why he had deceived her."

"Womanlike, she forgave him," I remarked. "She excused his lie because it was to win her. But there were other deceptions—that have landed your father here in Auckland to be seized as a spy."

"Oh, yes!" she confessed. "He tried to conceal himself from me too. He wanted to be worth my loving as well."

"By falsehoods," I said.

"Wasn't I worth it?" she inquired in a low voice. "Maybe not! He came to me in school when I was fourteen. I'd written him that I was homesick. 'My dear,' he told me, 'I'm back from fighting for the Stars and Stripes against the Spanish. I've been badly wounded, my child. I can't live any longer without a woman in my house.' I knew—and yet I went gladly with him."

"He hadn't been fighting against Spain?" I demanded.

Aileen shook her head.

"He only dreamed it. He never let on; but so many people got to looking sidewise at him. They laughed at him. We had to quit America."

"Japan?" I said, smiling.

"He had been there, he said, years before. I don't know. You see, everything with him was a grand pretense. He is a splendid child, making believe. But when the Russian War broke out we had to leave Japan. I don't know why. So we went to London."

"And what did he pretend to be, there?" I asked.

She did not wince.

"An American naval officer, retired. And then someone turned up to say horrid things. Then it was Hong-Kong—Auckland."

"A spy!" I muttered.

"Only another pretense," she pleaded. "It's father's way to accept any suggestion of his own importance. Nothing is so talked of now as spies. He never actually did anything wrong—he couldn't. People first suggested that father had been a most important man in England. He couldn't disabuse them. Then they suspected him. Now they think he may be a spy."

Their Shouts Rang Out; But Above Them I Heard Aileen's Clear Cry: "Father! Father!"

"Your explanation is plausible," I admitted. "Your father is mildly insane. But it strikes me that his performance was pretty consistent. He won a fine woman to wife, and you for a daughter. He has never ceased to be an impostor. I fancy you live on the money he makes by it?"

"Mother had no money at all. Freeing of our slaves made us bitterly poor. Father knew that. He had then and has now his royalties on a patented tin can."

"Tin can!" I echoed.

She nodded.

"It sounds awful, doesn't it? Mother never knew that! Father is a rich man." She looked at me appealingly.

"I can forgive his lying to win your mother," I said, "if she was as beautiful as you are. The rest is beyond me. I can't understand the motive for a life so perfectly futile, disgraceful and perilous."

"It didn't take me long to sympathize with him," she told me. "He had begun his deception to be worth mother's while. He kept it up to be worth my while. Now he does it to be worth his own while!" She lowered her eyes. "It is terrible never to have done anything worth while—to have invented only a tin can!"

Dimly, of course, I did get a light on the old fellow's mental twistiness. He should have been an actor. The same queer spiritual hunger—I insist on the genuine nobility of the desire—that impels certain men and women to be always playing some part on a stage, however obscure and tawdry, had made him enact rôle after rôle in real life, where Destiny directs the stage. He had picked the world for his theater—and financed the venture on the proceeds from the invention of a peculiar and useful tin can. I demanded better illumination.

"He lacks opportunity," she answered.

"To be real?" I suggested.

"You see," she explained, "he was deeply touched by the brave struggle the South made in '64 and '65. He would have loved to have fought under the Stars and Bars."

"Why didn't he?"

"He was a boy in the North," she answered. "I suppose he heard only Yankee talk. When he heard the South's story it was too late. But he did his best! Don't you see? He joined the Lost Cause when the end had come. He said he had been in the Confederate Army!"

"And lately he's been a British officer."

She wrung her hands.

"It was because of Belgium. He was so helpless. 'They call Americans damned neutrals,' he told me. 'Other people are dying gloriously on the field of battle, and we sit and smoke at home as mum as mice!'"

"Well?"

She bent over the candle, which lit her starry eyes.

"He would have fought if there had been a chance."

I understood. I pondered the loyalty of fine women, who take our pretenses and our dreams and our tinsel, and try to make real the phantom of impotent ambition; and always toss us the cloak of their glowing love when the mire soils our useless finery. Lucky the man who plays his part in the spotlight of a woman's love!

"But what is to be the end?" I demanded.

"Your film," she said. "A picture of a battle—the storming of a redoubt—and my father dying gloriously at the head of his troops!"

V

WITH the gas burning yellow over our heads, we studied the map she flung open on the table. Within half an hour I was in possession of the story of the sending of a small naval force to Bismarck Island by the New Zealand Government, the attack on the enemy squadron there, the assault and capture of the fortifications of Bismarckshafen.

Aileen made it plain that certain officials would like nothing better than to have the whole affair fittingly celebrated in motion pictures; and in the course of her narrative I perceived that she had managed very shrewdly to give a much-embarrassed lot of men a chance to extricate themselves from a bad business by shipping the false major, his daughter and myself to a place where we could do no possible harm. Everything had been arranged except the professional details, which would fall to me on our arrival.

"I have no choice except to agree," I said. "But where does your father come in? How is he to appear on the film?"

"You see?" she said breathlessly. "People will see it in the theater—they will see Major Forsythe—and they will say to themselves 'What a gallant soldier!' In the States—in Hong-Kong—in London—men who have known him and laughed will see the picture and confess they were wrong. Major Forsythe will have given his life in the assault on Bismarckshafen!"

"You seem to think those fellows down there will gladly step aside and give him the glory in the picture," I warned her. "My experience tells me that he won't be allowed so much as a place on the side lines."

"I'll arrange that," she told me.

"And everybody will know that the picture is only a fake," I went on.

She looked deeply into my eyes.

"It will be real," she murmured. Then she tossed her head. "I have known all my life that sooner or later someone would denounce him. We will anticipate them. No one can say anything when we can point to the film, and to him, and say 'He died at Bismarckshafen.'"

Jeeves and the Hard-Boiled Egg

He Furthermore Endeared Himself to Me by a Most Extraordinarily Gifted Imitation of a Bull Terrier Chasing a Cat Up a Tree

By Pelham Grenville Wodehouse

ILLUSTRATED BY HENRY RALEIGH

SOMETIMES of a morning, as I've sat in bed sucking down the early cup of tea and watched my man Jeeves flitting about the room and putting out the raiment for the day, I've wondered what the deuce I should do if the fellow ever took it into his head to leave me. It's not so bad now I'm in New York, but in London the anxiety was frightful. There used to be all sorts of attempts on the part of low blighters to sneak him away from me. Young Reggie Foljambe to my certain knowledge offered him double what I was giving him, and Alistair Bingham-Reeves, who's got a valet who had been known to press his trousers sideways, used to look at him, when he came to see me, with a kind of glittering, hungry eye which disturbed me deucedly. Bally pirates!

The thing, you see, is that Jeeves is so dashed competent. You can spot it even in the way he shoves studs into a shirt.

I rely on him absolutely in every crisis, and he never lets me down. And, what's more, he can always be counted on to extend himself on behalf of any pal of mine who happens to be to all appearances knee-deep in the bouillon. Take the rather rummy case, for instance, of dear old Bicky and his uncle, the hard-boiled egg.

It happened after I had been in America for a few months. I got back to the apartment latish one night, and when Jeeves brought me the final high ball he said:

"Mr. Bickersteth called to see you this evening, sir, while you were out."

"Oh?" I said.

"Twice, sir. He appeared a trifle agitated."

"What, pipped?"

"He gave that impression, sir."

I sipped the high ball. I was sorry if Bicky was in trouble, but, as a matter of fact, I was rather glad to have something I could discuss freely with Jeeves just then, because things had been a bit strained between us for some time and it had been rather difficult to hit on anything to talk about that wasn't apt to take a personal turn. You see, I had decided—rightly or wrongly—to grow a mustache, and this had cut Jeeves to the quick. He couldn't stick the thing at any price, and I had been living ever since in an atmosphere of bally disapproval till I was getting jolly well fed up with it. What I mean is, while there's no doubt that in certain matters of dress Jeeves' judgment is absolutely sound and should be followed, it seemed to me that it was getting a bit too thick if he was going to edit my face as well as my costume. No one can call me an unreasonable chappie, and many's the time I've given in like a lamb when Jeeves has voted against one of my pet suits or ties; but when it comes to a valet's staking out a claim on your upper lip you've simply got to have a bit of the good old bulldog pluck and defy the blighter.

"He said that he would call again later, sir."

"Something must be up, Jeeves."

"Yes, sir."

I gave the mustache a thoughtful twirl. It seemed to hurt Jeeves a good deal, so I chucked it.

"I see by the paper, sir, that Mr. Bickersteth's uncle is arriving on the Carmantic."

"Yes?"

"His Grace the Duke of Chiswick, sir."

This was news to me, that Bicky's uncle was a duke. Rum, how little one knows about one's pals! I had met Bicky for the first time at a species of beano or jamboree down in Washington Square, not long after my arrival in New York. I suppose I was a bit homesick at the time, and I rather took to Bicky when I found that he was an Englishman and had, in fact, been up at Oxford with me. Besides, he was a frightful chump, so we naturally drifted together; and while we were taking a quiet snort in a corner that wasn't all cluttered up with artists and sculptors and what not, he furthermore endeared himself to me by a most extraordinarily gifted imitation of a bull terrier chasing a cat up a tree. But, though we had subsequently become extremely pally, all I really knew about him was that he was generally hard up and had an uncle who relieved the strain a bit from time to time by sending him monthly remittances.

"If the Duke of Chiswick is his uncle," I said, "why hasn't he a title? Why isn't he Lord What-Not?"

"Mr. Bickersteth is the son of his grace's late sister, sir, who married Captain Rollo Bickersteth of the Coldstream Guards."

Jeeves knows everything.

"Is Mr. Bickersteth's father dead too?"

"Yes, sir."

"Leave any money?"

"No, sir."

I began to understand why poor old Bicky was always more or less on the rocks. To the casual and irreflective observer, if you know what I mean, it may sound a pretty good wheeze having a duke for an uncle, but the trouble about old Chiswick was that, though an extremely wealthy old buster, owning half London and about five counties up north, he was notoriously the most prudent spender in England. He was what American chappies would call a hard-boiled egg. If Bicky's people hadn't left him anything and he depended on what he could prize out of the old duke he was in a pretty bad way. Not that that explained why he was hunting me like this, because he was a chap who never borrowed money. He said he wanted to keep his pals, so never bit anyone's ear on principle.

At this juncture the doorbell rang. Jeeves floated out to answer it.

"Yes, sir. Mr. Wooster has just returned," I heard him say. And Bicky came trickling in, looking pretty sorry for himself.

"Hullo, Bicky!" I said. "Jeeves told me you had been trying to get me. Jeeves, bring another glass, and let the revels commence. What's the trouble, Bicky?"

"I'm in a hole, Bertie. I want your advice."

"Say on, old lad!"

"My uncle's turning up to-morrow, Bertie."

"So Jeeves told me."

"The Duke of Chiswick, you know."

"So Jeeves told me."

Bicky seemed a bit surprised.

"Jeeves seems to know everything."

"Rather rummily, that's exactly what I was thinking just now myself."

"Well, I wish," said Bicky gloomily, "that he knew a way to get me out of the hole I'm in."

Jeeves shimmered in with the glass, and stuck it competently on the table.

"Mr. Bickersteth is in a bit of a hole, Jeeves," I said, "and wants you to rally round."

"Very good, sir."

Bicky looked a bit doubtful.

"Well, of course, you know, Bertie, this thing is by way of being a bit private and all that!"

"I shouldn't worry about that, old top. I bet Jeeves knows all about it already. Don't you, Jeeves?"

"Yes, sir."

"Eh?" said Bicky, rattled.

"I am open to correction, sir, but is not your dilemma due to the fact that you are at a loss to explain to his grace why you are in New York instead of in Colorado?"

Bicky rocked like a jelly in a high wind.

"How the deuce do you know anything about it?"

"I chanced to meet his grace's butler before we left England. He informed me that he happened to overhear his grace speaking to you on the matter, sir, as he passed the library door."

Bicky gave a hollow sort of laugh.

"Well, as everybody seems to know all about it, there's no need to try to keep it dark. The old boy turfed me out, Bertie, because he said I was a brainless nincompoop. The idea was that he would give me a remittance on condition that I dashed out to some blighted locality of the name of Colorado and learned farming or ranching, or whatever they call it, at some bally ranch or farm or whatever it's called. I didn't fancy the idea a bit. I should have had to ride horses and pursue cows, and so forth. I hate horses. They bite at you. I was all against the scheme. At the same time, don't you know, I had to have that remittance."

"I get you absolutely, dear boy."

"Well, when I got to New York it looked a decent sort of place to me, so I thought it would be a pretty sound notion to stop here. So I cabled to my uncle telling him that I had dropped into a good business wheeze in the city and wanted to chuck the ranch idea. He wrote back that it was all right, and here I've been ever since. He thinks

I'm doing well at something or other down town. I never dreamed, don't you know, that he would ever come out here. What on earth am I to do?"

"Jeeves," I said, "what on earth is Mr. Bickersteth to do?"

"You see," said Bicky, "I had a wireless from him to say that he was coming to stay with me—to save hotel bills, I suppose. I've always given him the impression that I was living in pretty good style. I can't have him to stay at my boarding house."

"Thought of anything, Jeeves?" I said.

"To what extent, sir, if the question is not a delicate one, are you prepared to assist Mr. Bickersteth?"

"I'll do anything I can for you, of course, Bicky, old man."

"Then, if I might make the suggestion, sir, you might lend Mr. Bickersteth ——"

"No, by Jove!" said Bicky firmly. "I never have touched you, Bertie, and I'm not going to start now. I may be a chump, but it's my boast that I don't owe a penny to a single soul—not counting tradesmen, of course."

"I was about to suggest, sir, that you might lend Mr. Bickersteth this apartment. Mr. Bickersteth could give his grace the impression that he was the owner of it. With your permission I could convey the notion that I was in Mr. Bickersteth's employment and not in yours. You would be residing here temporarily as Mr. Bickersteth's guest. His grace would occupy the second spare bedroom. I fancy that you would find this answer satisfactorily, sir."

Bicky had stopped rocking himself and was staring at Jeeves in an awed sort of way.

"I would advocate the dispatching of a wireless message to his grace on board the vessel, notifying him of the change of address. Mr. Bickersteth could meet his grace at the dock and proceed directly here. Will that meet the situation, sir?"

"Absolutely."

"Thank you, sir."

Bicky followed him with his eye till the door closed.

"How does he do it, Bertie?" he said. "I'll tell you what I think it is. I believe it's something to do with the shape of his head. Have you ever noticed his head, Bertie, old man? It sort of sticks out at the back!"

I hopped out of bed pretty early next morning, so as to be among those present when the old boy should arrive. I knew from experience that these ocean liners fetch up at the dock at a deucedly ungodly hour. It wasn't much after nine by the time I'd dressed and had my morning tea and was leaning out of the window, watching the street for Bicky and his uncle. It was one of those jolly, peaceful mornings that make a chappie wish he'd got a soul or something, and I was just brooding on life in general when I became aware of the dickens of a spat in progress down below. A taxi had driven up, and an old boy in a top hat had got out and was kicking up a frightful row about the fare. As far as I could make out he was trying to get the cab chappie to switch from New York to London prices, and the cab chappie had apparently never heard of London before and didn't seem to think a lot of it now. The old boy said that in London the trip would have set him back eight pence; and the cabby said he should worry. I called to Jeeves.

"The duke has arrived, Jeeves."

"Yes, sir?"

"That'll be him at the door now."

Jeeves made a long arm and opened the front door, and the old boy crawled in, looking licked to a splinter.

"How do you do, sir?" I said, bustling up and being the ray of sunshine. "Your nephew went down to the dock to meet you, but you must have missed him. My name's Wooster, don't you know. Great pal of Bicky's, and all that sort of thing. I'm staying with him, you know. Would you like a cup of tea? Jeeves, bring a cup of tea."

Old Chiswick had sunk into an armchair and was looking about the room.

"Does this luxurious flat belong to my nephew Francis?"

"Absolutely."

"It must be terribly expensive."

"Pretty well, of course. Everything costs a lot over here, you know."

He moaned. Jeeves filtered in with the tea. Old Chiswick took a stab at it to restore his tissues, and nodded.

"A terrible country, Mr. Wooster! A terrible country! Nearly eight shillings for a short cab drive! Iniquitous!" He took another look round the room. It seemed to fascinate him. "Have you any idea how much my nephew pays for this flat, Mr. Wooster?"

"About two hundred dollars a month, I believe."

"What! Forty pounds a month!"

I began to see that, unless I made the thing a bit more plausible, the scheme might turn out a frost. I could guess what the old boy was thinking. He was trying to square all this prosperity with what he knew of poor old Bicky. And one had to admit that it took a lot of squaring, for dear old Bicky, though a stout fellow and absolutely unrivaled as an imitator of bull terriers and cats, was in many ways one of the most pronounced fatheads that ever pulled on a suit of gents' underwear.

"I suppose it seems rummy to you," I said, "but the fact is New York often bucks chappies up and makes them show a flash of speed that you wouldn't have imagined them capable of. It sort of develops them. Something in the air, don't you know. I imagine that Bicky in the past, when you knew him, may have been something of a chump, but it's quite different now. Devilish efficient sort of chappie, and looked on in commercial circles as quite the nib!"

"I am amazed! What is the nature of my nephew's business, Mr. Wooster?"

"Oh, just business, don't you know. The same sort of thing Carnegie and Rockefeller and all these coves do, you know." I slid for the door. "Awfully sorry to leave you, but I've got to meet some of the lads elsewhere."

Coming out of the elevator I met Bicky bustling in from the street.

"Hullo, Bertie! I missed him. Has he turned up?"

"He's upstairs now, having some tea."

"What does he think of it all?"

"He's absolutely rattled."

"Ripping! I'll be toddling up then. Toodle-oo, Bertie, old man. See you later."

"Pip-pip, Bicky, dear boy."

He trotted off, full of merriment and good cheer, and I went off to the club to sit in the window and watch the traffic coming up one way and going down the other.

It was latish in the evening when I looked in at the apartment to dress for dinner.

"Where's everybody, Jeeves?" I said, finding no little feet pattering about the place. "Gone out?"

"His grace desired to see some of the sights of the city, sir. Mr. Bickersteth is acting as his escort. I fancy their immediate objective was Grant's Tomb."

"I suppose Mr. Bickersteth is a bit braced at the way things are going—what?"

"Sir?"

"I say, I take it that Mr. Bickersteth is tolerably full of beans."

"Not altogether, sir."

"What's his trouble now?"

"The scheme which I took the liberty of suggesting to Mr. Bickersteth and yourself has unfortunately not answered entirely satisfactorily, sir."

"Surely the duke believes that Mr. Bickersteth is doing well in business, and all that sort of thing?"

"Exactly, sir. With the result that he has decided to cancel Mr. Bickersteth's monthly allowance, on the ground that, as Mr. Bickersteth is doing so well on his own account, he no longer requires pecuniary assistance."

"Great Scott, Jeeves! This is awful!"

"Somewhat disturbing, sir."

"I never expected anything like this!"

"I confess I scarcely anticipated the contingency myself, sir."

"I suppose it bowled the poor blighter over absolutely?"

"Mr. Bickersteth appeared somewhat taken aback, sir."

My heart bled for Bicky.

"We must do something, Jeeves."

"Yes, sir."

"Can you think of anything?"

"Not at the moment, sir."

"There must be something we can do."

"It was a maxim of one of my former employers, sir—as I believe I mentioned to you once before—the present Lord Bridgnorth, that there is always a way. I remember

"If You're the Duke of Chiswick, Why Isn't He Lord Percy Something? I've Read English Novels, and I Know All About It"

NICK CARTER, REALIST

By Melville Davisson Post

NOT long ago some young gentlemen who write fiction, some gentlemen not young, and a princess occupied a page of a New York daily in issue with the author of this article on the value of plot structure in a story. They imagined that the surprises of plot structure were something artificial; that mystery and coincidence were forced effects. They thought the editors of magazines that reach the whole people were not adhering, in their fiction, to the actualities of life.

I wonder what they would think of a narrative which I have just been reading. It is a blood-and-thunder story! It has the characters, the tricks, the devices, the thrills, the mysteries, and the melodramatic, tragic climaxes of the most daring penny dreadful.

Desperadoes with alliterative names swagger through it. There are disguises and automatic pistols in it, a thundering express, baffled detectives, mysterious clews, persons miraculously saved from death, the stock heroes, and a great smashing curtain. And the names in it are of the luridest.

I shall take no advantage of these literary persons.

This narrative was not written by Nicholas Carter. It was written in the District Court of the United States, for the District of Nebraska. And every item in it is precisely the truth; winnowed out by the fiction-removing machinery of the law. It is called Transcript of Record, Number 3423. Not much of a title for a dime novel, I cheerfully grant you. But let us not deceive ourselves. It has the yellow stuff between its covers.

Listen to it open:

It was forty-five minutes until midnight. The Overland Limited of the Union Pacific was thundering into Omaha. It had just passed the east switch of Seymour when suddenly two shadowy figures began to crawl forward over the engine tender. They were sinister and terrifying figures. They were cloaked to their feet, with slouch hats pulled down over their foreheads and blue polka-dot handkerchiefs tied round their faces. Each was armed with a big automatic revolver that glittered in the flaring light of the engine cab.

The Great Holdup at Mud Cut

THERE were three men in the cab of the Overland Limited that night—the engineer, the fireman and Dick Wright, who was deadheading into Omaha from Columbus. The movement of the masked figures was so silent that the men in the cab were unaware of the approaching menace until one of the robbers jumped over the coal gate and thrust his weapon into the fireman's face. The second robber covered the engineer. That official turned with an oath.

"What the hell do you want here?" he said.

"Never mind," replied the robber; "this is a holdup. Stop at the mouth of Mud Cut."

The engineer was angry and profane.

"Where the hell's Mud Cut?" he said.

"Just east of the double board," replied the robber.

Then he silenced the engineer with a bit of explanation. It was an explanation that the man accepted for the truth:

"We don't want to kill anybody . . . so long as you do the right thing."

Suddenly the robber who held up the fireman saw the person who was deadheading into Omaha sitting in the corner of the cab and turned savagely on him.

"Come out of there—damn you!" he cried, "or I'll blow your head off."

And so, as this dime novel puts it, "he come out and stood in front of the fire door with his hands up."

The train thundered onward, carrying these tragic actors.

Presently in the darkness ahead there appeared a tiny flare of light. It burned steadily until the train was almost upon it; then it vanished, and the robber covering the engineer ordered him to stop. The air went on, the wheels ground on the rails, and the great Overland Limited pulled up panting in the Cut.

The determined outlaws ordered the men to get down on the north side of the train. Here they were joined by another masked robber, and the three took their prisoners along the track toward the mail car.

There were eight railway postal clerks on this run from Cheyenne, on the Union Pacific, into Omaha. They were all in a single mail car—second back from the engine. It was a sixty-foot car, lighted by electricity, with two doors on each side opening on a sliding carriage, and three or four windows covered with iron bars. There was no stop on the line between Fremont and Omaha. When the air went on it threw the doors of the mail car open. There was a tremendous jar, and the men thought the express had collided with a freight train.

"I guess we have got into 'em," somebody said.

One of the men went back, closed the doors and locked them. A companion said:

"What's the matter?"

The man could not see anything from the south door, so he went over to the north door. For a moment he stared out into the darkness; then he spoke:

"It's a holdup, boys!"

Immediately there came an ominous rapping on the north door of the car, and a voice:

"Come out of there!"

And immediately a pistol shot crashed into a window.

And here the dime novel has its item of miraculous coincidence. William Sears was standing directly before this window. The dust and glass spattered his face. There was an iron bar across this window at precisely the height of his chest. The bullet struck the bar and was deflected. The bar was broken, but the bullet was providentially turned aside from the bosom of the mail clerk.

We are warned against these incidents. The literary gentlemen and the princess are scornful of them. One can hardly use them in creative fiction. They are possible only in the realities of life.

The mail clerks saw that resistance was useless. They called out not to shoot. They were ordered to hurry. And in obedience to that command they opened the door and filed out of the car. There was order and expedition in the way the bandits went about their work. They drove back the conductor and the flagman, and kept the passengers in the coaches by the simple device of firing shots along the sides of the train. They lined up the prisoners from the cab and the eight postal clerks, facing the train, and then turned them about. Two of the robbers now began to search the line, not for any personal effects, but to discover whether the clerks carried any weapons.

The commanding outlaw made such a brief explanation that the engineer remembered precisely the words that he used:

"All we want is a little of Uncle Sam's money. We are damn' good men in a damn' bad business!"

He knew what he was after and set about to do it in the quickest way.

"I want a mail clerk," he said.

The line of prisoners explained that there were eight mail clerks. The bandit selected one of the men out of the line and addressed him with directness:

"I want the bank pouch."

"We haven't any bank pouch," replied the man.

"You have a bank shipment, a special shipment," said the bandit. "I want that."

"Well," said the mail clerk, "I don't know what we have got."

The robber now took charge of the mail clerk and went with him into the car. He wore a black hat with a low crown, a long overcoat buttoned closely, and a mask made from a piece of black cloth. The mail clerk kept looking at him, and he took occasion to advise the clerk, with a good deal of vivid language and the menace of his big weapon, that he had better concern himself with something else.

"Where's the registered mail?" he said.

"In the back end of the car," replied the clerk.

"Go back there," said the bandit, "and call them off."

This was a moment particularly tense and dramatic. Outside in the darkness, ten men were lined up under the menace of weapons. And now and then, to keep the passengers reminded of the danger, a pistol shot broke the silence of the night.

The reader would like to know what went on in the damaged mail car; what acts, what matters of conversation were accomplished between the bandit and his prisoner. The story leaves him in no doubt.

A Grim Touch of Color

THE mail clerk reached over the pile of bags and commenced calling out the destinations of the pouches. The bandit stood on the left side of the clerk, and the story goes along here in the language of that official:

"When I uncovered the Reno Inners, which are small sacks made up by the post offices that do not have enough registered to justify larger pouches, but have the same style of lock as the others, he looked them over carefully and laid them on the pile he wanted to take out of the car. After I had pulled off several more he looked them over himself, and pulled out one or two small pouches and threw them over on the pile, and said:

"'Take them to the other door.'

"I said:

"'Good God, man! I don't want to do all the work.'

"He said:

"'Hurry up; and I will help you.'

"We made two trips and got the pouches to the door and he said:

"'Throw them off!'

"I started to look at the destinations from force of habit, and he said:

"'Never mind looking; we will do that. Throw them off!'

"So I dropped seven sacks out of the car door; and then he went up to the upper end of the car and made some inquiries about sacks there, and then went to the other end of the car and looked round the tables and made some inquiries about things there; and then he said:

"'I have got all I want, I think. We will get off.'

"All the time we were in the car he had in his left hand a gun which had the appearance and style of an automatic pistol of the army pattern, large size, with blue-steel finish."

While these things were going forward in the mail car it was a time of anxiety for the line of prisoners outside. A big outlaw swaggered along this line, a polka-dot handkerchief concealing his sinister face and his nicked ear. No; I have not loosed the checkrein of my fancy. It is on page 73 of the record. And, with his automatic pistol in his hand, he assured his helpless prisoners that if anything happened to the bandit in the car he would shoot every "damned" one of them. It was no idle threat. The man behind it was a cold, cruel, cunning, inconsiderate desperado. I bring forward a climax of the story when I name him:

It was Derf the Dane!

I kiss the Book against your elevated eyebrows. He was a Dane and they called him Derf. Read the sixty-fifth page; read the seventy-seventh page.

When the mail pouches had all been thrown out the robbers ordered their line of prisoners to carry them down the track ahead of the engine. There is a grim touch of color in this scene: a line of mail clerks carrying pouches from the rifled car, with an armed outlaw on each side of the line. One of the clerks was a little lame and could not move as rapidly as his guard wished, and Dan Downer—thus is the

doughty desperado denominated in the record—encouraged him by jamming the muzzle of his big automatic into the man's back.

As the line passed the head of the engine a notorious bandit came into the scene. He was a short heavy man. He fell in behind the line and shot at the headlight. But he was a bad shot; the headlight was uninjured. This was one of the famous characters in the midnight drama, mysterious Matthews, known as Bully Red, a woman-hater—*vide* the scene in the Sapphire Restaurant, in Kansas City, page 77—an old stage driver from Idaho, gone to the bad, like a rogue elephant.

He talked through his clenched teeth, as desperate bandits do in the yellow novels. It is an accurate, determined fact—this dramatic peculiarity. A waitress in the Uneeda Restaurant, in Omaha, afterward swore to the identity of the man.

"He speaks with his teeth closed," she said in her testimony before the court. "Kind of through his teeth."

And so will the critics observe that desperate bandits do, in life, have the habit of talking through their clenched teeth!

The procession went ahead in the darkness, with now and then a fragment of conversation such as Nicholas Carter would throw in.

A prisoner complained of being forced to carry the heavy mail sack.

"I doubled the road to-day," he said, "and don't want to carry it."

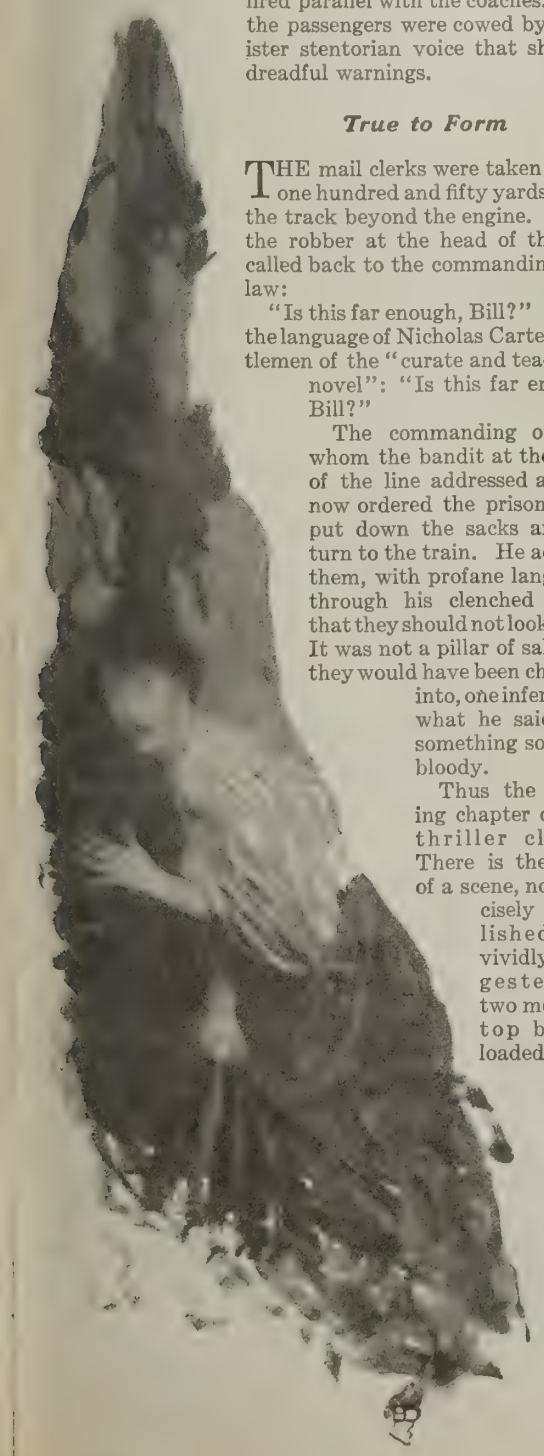
"Carry it," replied the masked robber on his right. "You made more money to-day than I did."

And again:

"Brother," said the engineer, "what do I get out of this if we ever meet?"

"I'll get you a drink," replied the desperado.

While these events went forward the flagman on the rear of the train and the conductor were driven in by shots fired parallel with the coaches. And the passengers were cowed by a sinister stentorian voice that shouted dreadful warnings.



True to Form

THE mail clerks were taken about one hundred and fifty yards down the track beyond the engine. Then the robber at the head of the line called back to the commanding outlaw:

"Is this far enough, Bill?" Mark the language of Nicholas Carter, gentlemen of the "curate and tea-party novel": "Is this far enough, Bill?"

The commanding outlaw, whom the bandit at the head of the line addressed as Bill, now ordered the prisoners to put down the sacks and return to the train. He advised them, with profane language, through his clenched teeth, that they should not look back. It was not a pillar of salt that they would have been changed into, one infers from what he said, but something soft and bloody.

Thus the opening chapter of this thriller closes. There is the flash of a scene, not precisely established but vividly suggested, of two men in a top buggy loaded with mail sacks, driving desperately along the midnight road, while the long Overland Limited crawled through Mud Cut into Omaha.

Now this is but the opening chapter of the shilling shocker. There must be many other artificialities to make a tale—stock tricks, stock devices, all the impossible machinery that my gentle critics tell me cannot happen, and are but the evidences of a perverted and sensational taste. Prithee, sirs, observe: the District Court of the United States, writing its narrative in the Federal courtroom for the District of Nebraska, included them all. It was not writing this dime novel for general circulation. It was writing it to be read by the United States Circuit Court of Appeals—a number of rather grave gentlemen, with a marked disinclination for figments of the fancy, and a rather effective way about them of insisting on the truth.

Let us see how close the tale adheres to the formulas.

There ought to be a detective in it who finds a clew. The obviousness of this clew will depend upon the skill of the writer of the detective story. Conan Doyle would leave a fragment of a word written in blood on a wall. The word would be in a foreign language and have to be translated two or three times before one discovered that it meant Revenge! Gaboriau would have a Delphic sentence: "The Prussians are coming!" Poe, a cryptograph. Nick Carter would have his bandits leave behind them a fragment of an address. Not a complete address, for that would be too obvious; but a fragment of one that his detective could work out. It is Nicholas Carter that this story follows!

On Sunday morning the chief special agent for the Union Pacific went out to the scene of the robbery. He found where a fire had been built; and, after the manner of the formula for this sort of story, he picked up two pieces of an envelope. It was postmarked at Waco, Texas, and bore the following fragment of an address:

"Mr. . . . nk. . . . re. . . . City. . . . issouri, Gen. De . . . "

Thus the detective was given his clew according to the rules, and the story can go on.

Now there must be other things besides the baffled detective and his enigmatic clew in the typical story of this sort. There ought to be boy heroes and a schoolmarm in it; finger-worn lay figures, the critical gentlemen and the princess tell us. Well, they are all here; even the boy heroes and the schoolmarm!

The Brown Park School is a two-story brick building with an attic and twelve rooms. The attic is reached by a ladder and also by a rope and pulleys. When not in use the ladder is drawn up to the ceiling by a rope fastened to a hook. The school is in the outskirts of Omaha.

On Monday morning the janitor found that one of the west windows in the north basement was unlocked. He knew that somebody had entered through this window—note the trick of the detective writer—because there were cinders on the floor where somebody had stepped down! This trail of cinders led out into the hall and up a flight of stairs to the first floor; there it ended. Nothing had been disturbed and the clew vanished in a cul-de-sac.

But let the reader be encouraged; the boy heroes are on the way: Johnny Krolik, Stanley Perina, Anton Kubat, Joe Tesnohlidek, Antone Potach—sturdy youthful Americans all!

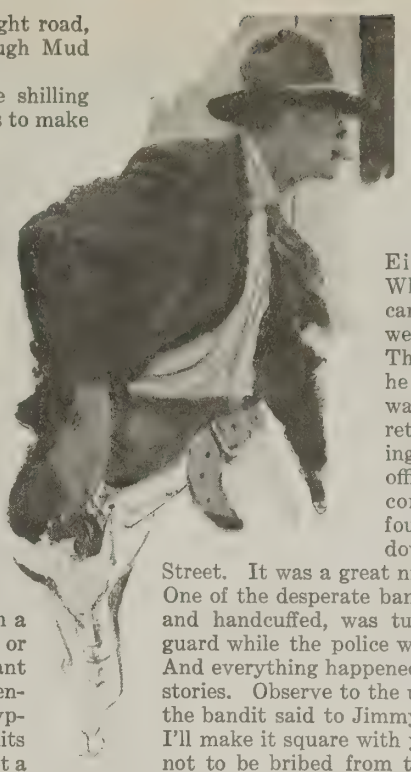
There is a deep gulley across the street from the Brown Park Schoolhouse and a fallen telegraph pole lying along the clay side of the slope. Johnny Krolik and little Stanley Perina were playing in the gulley on the Thursday after the robbery, when they saw a leather strap sticking out of the ground. Stanley Perina thought it would be a good strap for his dog. But the other end of the strap was buried and he was afraid to pull it out.

Not afraid was the American Johnny Krolik.

He pulled it out; and there came out with it a big automatic pistol in a leather pouch, a blue polka-dot handkerchief and a black soft hat. The boys searched the bank that afternoon. They found an electric flashlight and two additional revolvers, one a blue-steel automatic and the other of a well-known make. Lying with each revolver was a blue polka-dot handkerchief and a number of loaded cartridges. These articles had been concealed in the gulley close to the telegraph pole. They were taken to the schoolteacher and by her, through the truant officer, turned over to the police officials of Omaha.

But this is not the only work of the boy heroes.

That night, as the story runs, by an arrangement with the police officers, six boys stationed themselves at a point which commanded a view of that part of the gulley where the articles had been hidden and kept watch to see whether anybody would return for them. About eleven o'clock they saw four men coming down Nineteenth Street toward the schoolhouse, and at once notified the police by telephone. When the men reached the telegraph pole one of them went down into the gulley where the first revolver had been discovered. After a few moments he went over to the bank where the other revolvers had been found and continued his search.



Meantime the others passed back and forth along the street a couple of times, and went on to Eighteenth and U Streets. While they were gone the man came up out of the gulley and went over to the schoolhouse. The police had now arrived and he was arrested. Shortly afterward two of the other men returned, and as they were passing the schoolhouse the police officers seized them. The boys continued to watch for the fourth man and saw him jump down the bank at Nineteenth Street. It was a great night for the youthful heroes. One of the desperate bandits, Dan Downer, abashed and handcuffed, was turned over to the boys to guard while the police went after the other outlaws. And everything happened as it happens in the yellow stories. Observe to the utmost detail: Item—What the bandit said to Jimmy Belik: "Let me loose, and I'll make it square with you." But Jimmy Belik was not to be bribed from the bright path of duty by the enticements of any trussed-up desperado! It was a time spread over with gold leaf for the sleuths with Johnny Krolik. They had captured three train robbers, two of them celebrated bandits, as their sinister names eloquently testify—Dan Downer and Derf the Dane!

And now there comes into the story some of the effective deductions of the hatchet-faced detective of Baker Street; some deductions like those that used to make Doctor Watson stand aghast at his chief's amazing perspicacity.

Whither did the cinder trail from the unlocked basement window lead? To the first floor of the schoolhouse, for one had seen the scattered fragments on the steps. But whither after that? Why, obviously, onward and upward! It is a motto of the copy books: "Onward and upward!" Onward and upward lay the attic of the schoolhouse. And in it, when he looked, the janitor saw the mail sacks lying in a row between two joists; six large sacks and two small ones. There were also three raincoats, a pair of overalls and a rope. The mail sacks had been cut open.

Dan Downer and Bully Red in the Toils

THE school-teacher came now with New England efficiency. She wrote down an inventory of everything she found and an accurate description of it. She was a person of discernment and expedition. And when one reads her chapter in this story, one sees that it is for good and sufficient reasons that the schoolmarm is a stock character in the Western tale.

It is the custom of Nicholas Carter to furnish the Government with some conclusive evidence against his outlaws. It is all very well to fit the pieces of the puzzle together, but there must be something that is distinguishing and conclusive—something to come in crashing at the end. It belongs in the formula, and the District Court of the United States does not omit it from its tale. Moreover, it must come in coupled with some name agreeable to this type of fiction—some name that we are accustomed to associate with it and that colors it yellow on the utterance.

Deadwood is the best name that Nicholas Carter ever put in black letters on the cover of his novels.

Query: Does the District Court of the United States dare to plagiarize it from him?

Answer: It does!

On the twenty-first of May the assistant cashier of the First National Bank of Kemmerer, in Wyoming, mailed a registered letter to the National Park Bank, in New York. This letter contained a ten-dollar bill issued by the First National Bank of Deadwood, in South Dakota. Read it over again carefully; it is the magic name—Deadwood! Deadwood, in alliteration with Dakota. My hand is up in solemn affirmation!

The bill was mutilated and the bank wished to have it redeemed. Therefore, its number had been made a matter of record. It was Number T-560897-T.

Imagine that, gentlemen of "the curate and tea-party novel"!

In order conclusively to bring to grief Dan Downer, Bully Red and Derf the Dane, the Providence of Heaven causes the assistant cashier of Kemmerer, in Wyoming, to select a mutilated bill of the First National Bank of Deadwood, make a record of its number, inclose it in a letter to the National Park Bank, in New York, register the

(Concluded on Page 59)

The Emancipation of Galatea

By KATE KELLY

ILLUSTRATED BY MAY WILSON PRESTON

"You Know Perf'ly Well What I Mean—Perf'ly!"

THIS story is going to tell what happened after Galatea had been down off the pedestal a while. The assumption has always been that she and Pygmalion lived happily ever after, but any thoughtful person must have his doubts of so unqualifiedly jolly a conclusion; inevitably the day had to come when Galatea would be told that she was, but for Pygmalion, merely a statue, and had better get back on the pedestal. The advanced position Galatea took in the matter is the subject of this narrative.

Of course she couldn't have married James R. Skinner, because he went home every night to a pair of sympathetic brown eyes; and I don't mean that she was really called Galatea, either.

"Eloise Eisel," she had replied to the head of R. E. Babcock's advertising department as she sat down for a trial trip on the typewriting machine; and Charlie MacEwan, overhearing, had remarked that it was a name like a squeaky cart wheel in two feet of mud.

Charlie MacEwan sat all day long in the north light and drew slim, slippered débutantes wearing R. E. Babcock's specially priced dance dresses, or R. E. Babcock's richly lace-trimmed combinations, or R. E. Babcock's copies of imported hats. The advertising, auditing and buying departments, which together occupied the eleventh floor, liked Charlie MacEwan; but Miss Eisel, when she heard of the slur upon her euphonious name, put him down—and publicly too—as "A pinhead simp!"

That, however, was after her emancipation. Before the dawn of that surprising day the little world of Babcock's eleventh floor roused none of her emotions and received a minimum of her attention; it merely flowed round her as she stood, self-contained, like an island in the stream.

It is a loss to learning that Miss Eisel and her type are not so well known to the psychologists who write about the subconscious, as they are to business offices. It might be said that theirs is a dual personality, were it not for the fact that they haven't any personality at all—let alone two. A dual self perhaps—one, a mere automaton, residing in the fingers and communicating only with the spinal cord; the other, a self reserved for interests far above the vulgar business of common-sense English and spelling.

The amazing psychological fact is that these two selves carry on their separate existences simultaneously. The Miss Eisel sort patters the keys and plans her winter clothes; she answers the telephone and puzzles out how the girl at the next typewriter does up her back hair. You dictate an important telegram and her pencil flies, but there is a far-away look in her eyes, for she is wondering whether her gentleman friend will suggest that they go down to Coney on Sunday. She is your employee only from the knuckles down. Demand, in some irritated moment, cerebration of her and she is highly indignant. Perhaps she is right—what more than finger service can you expect for twelve dollars a week?

At any rate, Miss Eisel fulfilled all the requirements of the subliminal-action stenographer and added a few that were quite her own. Of course, if James R. Skinner had not lost his temper she would never have existed for Babcock's advertising department. It must be admitted, in his excuse, that the long talk on the subject of cutting down expenses, to which young Babcock had submitted him, was nettling. Old Robert Babcock had been gradually withdrawing, of late, from the burden of active business, and Harvard, 1912, with a minimum of tact, was working his hand in.

"Even if profits were better, Mr. Skinner, I should hold that any unnecessary leakage must be plugged up," he had explained. "Naturally I don't propose to economize on the brains of the concern; cheap men are always expensive!" Here there was an appreciable pause; but his listener let this bit of brilliance go by, apparently unnoted. "But we can and must cut down on the more or less mechanical details—the stenographic force, for instance. Now I don't doubt for a minute that an intelligent girl like Miss Elmer is worth twenty dollars, Mr. Skinner. But the point is, she isn't worth it to Babcock's; in fact, it's been my personal experience ——"

James Skinner didn't care any one of a lot of things what this young man's personal experience had been, because he knew that it had been next to nothing at all. But he did care enormously that the little home in the suburbs should be paid for within the next two years; and when his superior began to express vague dissatisfaction with the day's advertising copy, which lay before him on the desk, Skinner felt the stab of the ugly realization—which some time comes to every man—that no place in this world's business is secure.

Consequently he went back to his desk that morning divided between two strong emotions—anger and fear. He gave expression to the former by telling Miss Elmer that her only fault was unintelligence, and—would a week be long enough notice? Then he called up an agency and told them to send him the stupidest girl they could furnish for twelve dollars a week, at which the other end of the wire was highly indignant, as well she might have been. He shouted so into the transmitter that the entire three departments of the eleventh floor heard him and commented variously.

Miss Tillotson, who was not openly recognized as a member of Babcock's publicity department, being in charge of the welfare work, said she was surprised Mr. Skinner should talk like that—even to be smart; and Mr. Schermerhorn, the silk buyer, who had an eleven-room apartment and was very much above the house of Babcock, save when talking with members of the firm, remarked that Skinner wasn't a very smart man, in his opinion, if he had to go off the floor to find stupidity.

Whereat Miss Mandelbaum, who got together the material for ladies' wear, and little Miss May, who typed form letters, were considerably perturbed; for, though it wasn't pleasant to be thought stupid—and Miss Mandelbaum, for one, didn't intend to be—still, on the other hand, Mr. Skinner might get them all fired for being too intelligent. It was a difficult situation.

Monday morning, with Miss Elmer actually gone and her would-be successor standing before his desk, James Skinner himself realized how very difficult was the situation. The Independent Agency had taken him at his word. One look into Miss Eisel's blue eyes, shadowing as they did about as much depth as a clean clamshell, would have satisfied even the most particular seeker of unintelligence that he had here found a prize. So, at all events, the minor toilers on the eleventh floor concluded, as Miss Eisel languished in the rail-inclosed preserves of the advertising head.

Miss May and Miss Mandelbaum strained their ears—Mr. Skinner mumbled so.

"—— congratulated; you're a paragon!"

"Wha'd he say?" whispered Miss May anxiously.

"He said she was to stay," replied Miss Mandelbaum cautiously, and cast toward Miss Tillotson, who also was watching, a look of scorn and indignation. The removal of Miss Eisel's tilting hat, Miss Eisel's fox furs and Miss Eisel's ripple-skirted coat confirmed Miss Mandelbaum's translation of Mr. Skinner's apostrophe.

Mr. Skinner, it seemed, had wakened to the fact that he had made a fool of himself; but it was now too late to retreat. The morning after his conversation with the Independent Agency he had felt a bit ashamed; but the incident was soon snowed under by the requirements of a busy day. Now, however, with Miss Eisel before him, and an audible titter apprising him that his little farce had an attentive audience, he realized that he had done two very childish things—tied his own hands, and made himself ridiculous. And the only way of making himself less ridiculous was to tie his hands some more and install this obviously useless creature at Miss Elmer's desk, and keep her there until the public eye had turned elsewhere.

Hence it was with sarcasm welling up out of a profound disgust with himself that he told Miss Eisel she was a paragon, and would do.

"She makes me think of a banana!" he reflected, as he watched the inevitable rearrangement of the desk drawers.

The analogy was good. Miss Eisel was willowy and fair—curiously fair. Her straw-colored hair was pasted flat to her temples and cheeks with innumerable little gilt hairpins, "blond invisibles"; and every one glitteringly prominent. Miss Eisel's hair was not luxuriant; consequently her ears showed through. No one can have her ears show through and look captivating—not even E. B. Browning, whom Miss Eisel did not in the least resemble otherwise. But Miss Eisel's ears were much the same lifeless color as her hair; her complexion was as puttylike and neutral as herself, a fact to which she called attention by powdering her nose and dabbing on a little rouge from the box she kept in her stocking. Her nose was too much and her chin not nearly enough; her teeth, though restrained at intervals with gold, gave the appearance of a concerted attempt to struggle to a given point in the front of her face.

"I guess I got what I asked for," concluded James Skinner; and he pulled himself together and dictated a letter with awful distinctness.

Miss Eisel's face took on the transported look which indicates that all the subconscious processes are now at your disposal, and James Skinner shortened his words accordingly. But he did not shorten them enough; the sentence he dictated as "Such a course would never conform to our personal convictions," emerged from Miss Eisel's fluent shorthand as "Such, of course, would sever our telephone connections."

The Entire Three Departments Heard Him and Commented Variously

He locked his desk and went out to luncheon at eleven. Miss Eisel rearranged her supply of envelopes, clips and carbon paper, sharpened several pencils that didn't need sharpening, and at twelve took out her patent-leather bag, submerged her typewriter, and went to the coat room.

Little Miss May was there, tying on a veil that ended just below her nose.

"Y' goin' t' work for Mr. Skinner?"

"Yeh," said Miss Eisel. "I guess he's nice, ain't he?"

"Oh, yeh; he's awful nice."

"But he's kinda queer, ain't he?"

"Yeh; kinda. But he's nice."

"Yeh; I thought he was nice."

"He cert'n'y is."

"He don't never make you stay overtime?"

"Sure, he don't—never."

"I guess there ain't much work to do, yeh?"

"Yeh; it ain't so much."

"It don't seem like much."

"Yeh; 'tain't."

"Aft'noons you could get off by ha' past four, yeh?"

Miss May hesitated.

"Well, I don' know. Miss Elmer never did."

"Well, if there ain't work to do? Oh, it's awful the way they keep us girls sittin' round whether there's anythin' pertic'ler to do or not—just so they can have us sittin' round!"

"Yeh."

"'Snawful cute little veil you got."

"Y' like it?"

"Yeh; 'sawful cute."

"Well, goin' t' lunch?"

"Yeh. Where d' you eat?"

"Drake's is a nawful nice place."

"Awright!"

And they went off to have "slice' tomatuhs an' a glassa milk, an' a piece raisin pie."

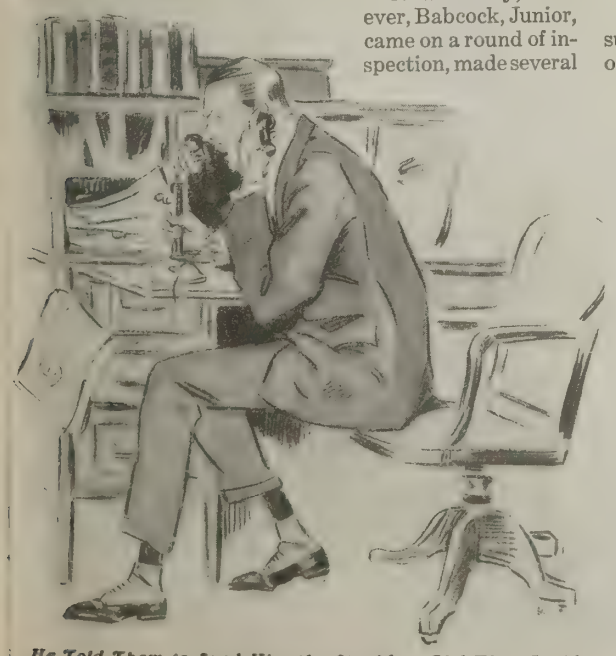
I detail this conversation only by way of pointing out to you that the head of Babcock's advertising department did get what he asked for, and that Mr. Schermerhorn was right when he said that stupidity need not be sought at any great distance from the eleventh floor.

During the next few days James Skinner tried to make the best of Miss Eisel; but it was uphill work. The shock-haired elevator boy found her a great improvement on Miss Elmer, and in consequence her taking-dictation look became more rapt than ever, the transcription of her stenographic notes more extraordinary.

As for Miss Eisel's feeling in the matter, she was enchanted with her new place, and on Wednesday reaffirmed to Miss May her belief that Mr. Skinner was "a nawful nice man"; and she got all her shopping done at lunch-time and he never said a word. Mr. Skinner meantime wrote out his advertising copy painfully by hand, tormented by the realization of how greatly he had depended on Miss Elmer.

At two-thirty on Thursday he had to sidle over to Miss Mandelbaum and ask, as a special favor, that she whack this copy off on her machine for him, if she could spare a moment, as Miss Eisel was still at luncheon. Friday morning he began the day by telling himself it wouldn't do for a man in his position; and if things had to be retyped a dozen times they would have to be—that was all; and it served him right for making an almighty fool of himself before a lot of giggling stenographers. But when he looked round, to carry out his resolution, Miss Eisel had vanished, to return at least twenty minutes later with a freshly whitened nose and the blond invisibles all rearranged.

On Saturday, however, Babcock, Junior, came on a round of inspection, made several remarks about system; and on Monday a time clock was installed on the eleventh floor, an innovation that called forth much indignant discussion. Indeed, young Mr. Babcock's activities were food for thought to more than the lower strata of the eleventh floor. Mr. Weinstock, who had been auditor for nine years, looked worried; Mr. Schermerhorn seemed preoccupied. For a young man with new power in his hand, and in his head a vague idea that change is progress, is a very uncertain quantity.



He Told Them to Send Him the Stupidest Girl They Could Furnish for Twelve Dollars a Week

The consciousness of that uncertainty had been sitting heavy on James Skinner's chest ever since his talk with his employer. With a picture of that attractive suburban cottage tripping up his resentment, he had listened attentively to the younger man's remarks on the function of advertising, and had patiently but unsuccessfully endeavored to wring from him some concrete suggestions for the improvement of Babcock's present method of addressing the public.

"We must have more verve," the junior member had declared, and James Skinner had come away feeling unhappy.

It was a problem. How to put in more verve and yet maintain Babcock's long-standing reputation for reliability? James Skinner was an honest chap, with a real sense of obligation to old Robert Babcock and to the business he had built up.

One Look Into Miss Eisel's Blue Eyes Would Have Satisfied Even the Most Particular Seeker of Unintelligence

"How can you appeal to a mind like hers, for instance?" he asked himself gloomily as he watched Miss Eisel pushing about the hairpins in her flat coiffure with one hand, and, with a little rag in the other, polishing the nickel of her typewriter; there are no ways of appearing sufficiently occupied to ward off work with which Miss Eisel and her tribe are not acquainted.

"It's the Miss Eisels who read Babcock's advertisements," said James Skinner. "What can you do but appeal to them with 'values'? We can't get down to the cheap level with scare-head sales; and, on the other hand, we can't stimulate their imagination with well-placed hints, as the exclusive shops can, because there isn't any imagination to stimulate. The great in-between class, the Eisel class, don't want any romance in their shopping information; they want to know what you've got to sell, what it looks like and how much it costs. Where do you do your shopping?"

This last was said aloud and with such abruptness that Miss Eisel looked up startled, her hand on the typewriter carriage and one flat shoulder blade lifted. Indignation was gathering in her blank eyes.

"Pardon?" she said, implying: "If you are going to make improper advances to a perfectly respectable girl——"

But her strange employer repeated the question with such an intent and abstracted look that she reformed her surmise and replied:

"Here, or at Constable & Lennon's, or Whitney's."

"Do you ever read the advertisements?"

"Oh, yeh."

"Which? All of them?"

"Not all of them." Miss Eisel was flattered by this sudden interest in her reading matter. "Not reg'larly all of them. I always read Paul's, though."

James Skinner stared.

"Paul's!"

"Yeh; they must have a swell advertising man there, ain't they?"

He ignored this tribute.

"But you don't buy anything at Paul's, do you?" he pursued.

"Oh, no; I ain't never been in there. But I got a friend once bought a sport hat there, an' she paid fifteen for it; an' it was marked down at that. An' I tol' her it was redic'lous, her payin' that price; an' w'y didn't she get some nice little novelty style that showed its price outside insteada on a label in the lining? An' she said it wasn't so different inside from Babcock's gray saloons—on'y better-lookin' girls. But I said to her, I said:

"'Believe me! if I——'"

James Skinner plugged up the dike with another question.

"Why do you read Paul's advertisements if you don't buy anything there?" he insisted.

"Oh," replied Miss Eisel vaguely, "I like it the way they are—French words an' all."

He pondered this a moment. Somehow he felt his estimate of the Eisel public's psyche undergoing revision.

"By George!" he said finally. "Do you mean to insinuate that you've got some imagination?"

"Pardon?" asked Miss Eisel.

"Look here; would you rather buy a *robe d'après-midi* than an afternoon dress?"

"It all depends," dodged Miss Eisel.

This time he spoke French as it meets the English reading eye.

"I mean, for instance, would you rather buy a *chapeau trotteur* than a street hat?"

"If it didn't cost no more," she replied, and wondered what would come next; but her puzzling employer abruptly concluded the pleasing conversation.

"All right!" he snapped. "Make two carbons of that letter to Michelson." And he eased back in his chair to ponder a possibility.

It had seemed to him a mistake when Constable & Lennon had begun inserting an occasional French heading; perhaps, however, they were right.

"But I often use French words," he burst out again inconsequently.

Miss Eisel decided that Mr. Skinner was awful queer; but she was pleased with this conversational tendency he had developed. She marshaled her explanation, with an effort, and put it forth importantly:

"Yeh, Mr. Skinner. But now look; you say like this: 'A *chick* hat!' An' Paul would say just: 'Our imported models evidence a maximum o' *chick!*' An' they ain't the same effect—absolutely!"

"Good enough!" said Mr. Skinner. "Take this."

And he dictated with such velocity that Miss Eisel very nearly swallowed her chewing gum in the effort to attend her galloping pencil. Even so, she had to be rescued twice, and the typed result was as follows:

The most difficult task in the world is the selection of a "party frock" for the June fille. Her ——ity [?] must not be destroyed by the furblows that are the acne of poor taste; and her charm must be cheapened and ——ated [?] by just the right prevention of simplicity and artfulness.

A rosebud here, a ribbon there, a 'not of toul at the shoulder—these little touches which the world has had to learn from the Paris attila, make the June fille a thing of bueaty and a boy forever.

In the gray sallons of R. E. Babcock's a small but select assortment of party dresses is awaiting the particular purchaser.

"What's your opinion on that sort of thing, Miss Eisel?" asked James Skinner.

"Class!" replied his paragon succinctly. "On'y"—and here Eloise Eisel made a real contribution—"On'y you gotta say a bottom price, or people'll be afraid to go in; you gotta say now like eighteen-fifty an' up."

And a faint pink, which did not owe its origin to the box in her stocking, found its way to Miss Eisel's cheeks as she watched the head of the advertising department add "eighteen-fifty and up" to his copy. The pink deepened as he said gravely:

"Miss Eisel, your acumen is immense! I can see plainly that you will be a most valuable asset to the advertising business."

The Customary Two Weeks

By FREEMAN TILDEN

ILLUSTRATED BY F. R. GRUGER

"Is That the Way Goods are Sold—by Telling Falsehoods About Your Competitors?"

III

GEORGE EXTELL went on the road full of determination and confidence. The three months in the South Trent plant had done him a world of good. They showed him, among other things, how little of real understanding of mechanical tools he had absorbed during his five years at Milledgeville. He had a good working knowledge of his line now, and he had acquired an enthusiasm for the South Trent trade-mark quite as genuine as his old enthusiasm for Eclipse. The retiring salesman on his territory went part of the way with him, and then started back.

Wetterson had not claimed much for the territory, and he was just in not doing so. It was the southeastern part of the country, from Tennessee to the Gulf, and east and north on the seaboard to North Carolina. The demand seemed limited, and capable of a slow growth at best. And the fact that the customers were less subject to fickle impulses than those in the North, less likely to shift from a man or a brand they had learned to like, made it obviously easy to fall into a padded life of order-taking.

This was just what Urmy, the last man on the territory, had done.

Extell meant to dodge that fate. He told himself grimly that he was going to take his hack saws and squares and gauges and protractors and verniers and micrometers into every shop that was big enough to be seen with the naked eye, and that he was going to earn his sleep.

Right from the jump the dealers liked him. They couldn't very well help it. To what youth was doing for him, Extell added such an irrepressible enthusiasm and such manifest sincerity that he seemed to radiate the welcome atmosphere of business, even when business didn't exist. They liked him; they listened to him, sometimes when they didn't want to; but he was facing the cruelly well-known fact that you can't get something out of nothing, and that, similarly, when tools aren't selling off the shelves it isn't necessary to buy any to replace them.

There was one other obstacle that used to give the young fellow a lot of troubled thoughts after he turned out the light in his room. He felt that there was still something lacking in his approach. He couldn't lay hands on this thing; it was subtle and elusive; yet somehow, when he analyzed the situation after making a visit, he had the consciousness that something had been unsaid or undone—that last touch that makes or mars. And one day he learned what that one lack was.

It was in a city in Central Georgia. Extell was making his first call on a little ruddy Austrian, a comedy of a man when one first looked at him, carelessly dressed, with ragged, short whiskers and hair that seemed to stand up straight, not through any intent of the owner, but because it simply refused to lie down. But something in the soft, expressive eyes told Extell from the first moment that this was no ordinary man.

Introductions over, Extell had to stand being depressed a few minutes by sober stories of hard times—and times were certainly not good in Georgia just then. It flashed out of little Mr. Weinberger's conversation, too, that he was pretty much attached to the Eclipse line of tools. The Austrian was in a loquacious mood. He talked fast and needed no assistance in the way of replies or suggestions. But suddenly, as he was talking, the dealer's eye sparkled. His glance had fallen upon a pair of micrometer calipers in a simple case from Extell's bag. In a moment the whole manner of the man changed. He took up the instrument, holding it before him almost as though it had been eggshell china, and his nostrils twitched with emotion as he said, with a strong German accent:

"Ah, Mr. Axdell, it is a beautiful instrument! I was a mechanic; I know the Eglibse is alzo. There is noding between them. See, the berfection! A hair out of your head would make the difference! So fine; so beautifully aggurate! Ah, Mr. Axdell, some dings are gross. Some have a soul. Dis has a soul. The man that makes it—he is an artist almost. And the vernier alzo has a soul. Nod like some dings. Meganigal dools are different altogedder. You must understand them to love them—as I do."

Extell looked at the man in amazement. Then, to show interest, he said, looking at the right hand with three fingers missing:

"You used to be a mechanic, Mr. Weinberger?"

"But I did nod lose the fingers in machinery," was the smiling response. He had followed Extell's glance. "I was in the army. Shot off."

And then Mr. Weinberger went back to his discourse about the tools. He did not buy any tools. He was undoubtedly overstocked, as it was. With his affection for them he was bound to be. But Extell walked down the street with the sensation that something new and big was leaking in upon him. Weinberger's words began to take coherent form in his mind. He felt as though a new and keener light had been turned on in the brain corners where he kept his sales ideas. He had been five years in Milledgeville without once perceiving this personality in the tools. He had been three months in South Trent without thinking of it. And it had remained for a queer little man in Central Georgia to show it to him. It was not a thing that could be phrased in words. It was a feeling. But it was a feeling that took root in George Extell's mind, and grew. That day he found himself.

It was a discouraging year, but Extell stuck like glue. He had the consciousness that he was wringing every last drop out of the territory. And at the end of the year, when he came to the plant, he was rewarded with a hearty greeting from Wetterson and a ten-minute conversation with the president. They had been talking him over. They had been going over his orders.

Extell wasn't nearly so well satisfied as his employers were.

The young fellow was writing regularly and goodspiritedly to Muriel Clemm. He was telling her the truth even when it hurt; but what he couldn't tell her, because he didn't know, was that Wetterson had already said to the president of the South Trent:

"Mr. Gaylord, I'm beginning to think I picked a good man in Extell. There isn't a man that's doing the amount of missionary work he is. I hear it from all sides. And it's making a fine impression on the dealers."

The president nodded, puffed on his cigar and asked:

"Why keep him South, Wetterson?"

"I'm not going to. I think we ought to put him on Thrasher's territory when he gets through the first of the month—Pennsylvania and Western New York, you know."

When Extell got the news he indulged himself in a flip-flap in the middle of his hotel room. Then he dived into his suit case and fumbled through his papers till he came to a sealed envelope. On the outside was written in Muriel Clemm's strongly feminine script: "Not to be opened till George Extell knows that he has conquered." But after gazing upon it a moment he shook his head and put it back.

"I've got a long way to go yet, I guess," he murmured.

On the new job Extell ignited no swiftly flowing rivers. He had balance enough nowadays not to expect to. But he sold the goods, and did a tremendous deal of that hard work that does not immediately show—missionary work, so called—which had the primary result of increasing his own confidence. He sent in a few suggestions with his letters, but the few were sound and useful. He had reached the point where he needed the unusual opportunity to develop the unusual results. And the opportunity came sooner than he expected.

In August, 1914, Europe shut up its stores, drew the shutters, and sent the help to the front. Over-night peace became bedlam, good will became hate, and killing became laudable. The traveling salesmen left their cases, put on different clothes, and went out to convince their rivals with a different kind of argument. The pulleys and belts and machines creaked and stopped, and then started to manufacture something to make people miserable instead of comfortable. And as they couldn't manufacture this new line fast enough—as some of them couldn't—something began to happen in the American factories too.

There was the first panicky feeling, when everybody in the United States was thinking the same thing, which was that destruction had come; followed quickly by enormous war orders.

It came so suddenly that many a salesman in the much desired lines began to wonder if he hadn't supernaturally solved the problem of selling. Everything that bore the slightest relation to machinery began to disappear from the shelves and warerooms. George Extell found himself selling more mechanical tools in a week than he had been selling in a month. He took orders that, on the book, looked mad and dreamlike.

And then the Northern Machinery Company deal went through. It was no secret. This group of financiers went into the market and bought factories as hucksters buy apples. An uncomplicated change in the automatics—and they were ready to make shells. A slight readjustment here and there, and they were making

"Ah, Mr. Axdell, You Must Understand Dools to Love Them—as I Do"

bayonets. And it all meant more and more mechanical tools. The Northern Machinery Company was operating in seven towns in Extell's territory already, was building additions as fast as the concrete could be poured in, and was reaching out for more factories.

Extell got a telegram to come in to the home office at once. When he got there the president, the sales manager and several other heads were in session and ready to look him over. It was the first time Extell had faced them all together, and his knees felt giddy.

"Mr. Extell, our understanding is that the Northern people are ready to place contracts for nearly a hundred thousand dollars' worth of tools," began Mr. Wetterson. "Yes, I know; your letters on the subject were accurate. There isn't any doubt of it now, however. It's a whale of a contract, Extell, and there's more behind it. And we want it—we want it all if we can get it. The question resolves itself frankly: Can we or should we put it up to you? What do you think? Don't be afraid to say exactly what you think."

Extell's voice trembled with emotion.

"If you would let me ——" he began.

The president interrupted:

"It means a good deal to us, Mr. Extell. You see, the simple advertising value of it is tremendous."

"Yes, sir, I know it." Then he stood, not knowing how to say what he wanted to say.

The president fixed his eyes on Extell. He looked at him a moment, straight in the face, then rose deliberately and said to the sales manager:

"I think you can find the best thing to do, Mr. Wetterson." Then he went out.

Immediately Wetterson walked over to Extell, put his hands on the young fellow's shoulders, and said:

"Extell, I'm banking on you. They think you lack experience. I don't. I didn't convince Mr. Gaylord, you see—you noticed the way he put it up to me. On the other hand, he didn't say no. Extell, go out and get that contract!"

It was a settled fact that the competition lay between the Eclipse and the South Trent companies. In the first place they were the only ones equipped to fill orders of such magnitude; and, besides, the smaller fry had all the business they could attend to.

It was with a peculiar feeling that Extell started for Simonsburg, the temporary main office of the Northern Machinery Company. He felt powerfully confident—and somehow a little regretful. He supposed that he would be pitted against Adams Walker, the Eclipse man on his territory, and he knew Adams to be one of the squarest and best-willed fellows in the world. They had often lunched and dined together in the old days, whenever Adams came to the home office. And now they were going to fight it out.

When Extell reached Simonsburg he learned from the Northern offices that the president had been hurriedly called to New York, and that when he should return there would be a conference to receive the salesmen. A date was set four days distant. Extell filled in the time to splendid advantage farther along, getting back to Simonsburg early on the appointed Monday morning. He went to a hotel, wiped the cinders out of his eyes, shook out the train dust, had breakfast, and then got out on the street. It was a quarter to eight, and there were few persons on the main thoroughfare. He strode along for several blocks, unconscious of anything round him until, with a shock that went through every nerve of his body, he heard a well-known voice impulsively cry: "George!" The next moment he was looking into the face of Muriel Clemm.

"Muriel!" responded Extell. "What—what on earth are you doing here?"

"Wait, please, George!" exclaimed the girl with a little nervous laugh. "Please—you'll attract a crowd!" And then Extell was suddenly aware that in his excitement he had almost taken the girl into his arms. He backed off a little, still retaining her hand. With a catch in her voice Muriel half-whispered:

"You're not here about the Northern?"

Extell nodded.

"But tell me, what are you doing here? How in the world ——"

She looked at Extell dazed. He saw her breast rising and falling quickly, and her lips trembled.

"He—he said you wouldn't be here. He —— Oh, George! I'm—I'm ——"

"What is it, Muriel?" cried Extell. "I can't understand. Who said I wouldn't be here?"

"Mr. Vibert!"

"I am Wondering, Dear, if You Have Ever Even Peeped Into That Envelope"

Extell went back as though he had been struck in the face. He stared at the girl incredulously for a time before he asked:

"You don't mean he is here, Muriel. You—you're not here with him?"

She seized the young man's hand and held it tightly.

"Isn't there some place we can go to talk?" she said. "We mustn't stand here. Take me somewhere, George, anywhere."

He did not move a muscle. He simply stared at her and repeated in a voice that was as cold as the tinkle of ice in a thin glass:

"You are here with him, Muriel. With Vibert!" Then he got a hold on himself and added: "I am at the Randolph. Shall I take you there?"

"Anywhere," she replied faintly.

As soon as they were seated in the parlor Muriel Clemm began to speak.

"He said you wouldn't be here," she told him. "He was sure the sales manager of the South Trent would come himself. He offered mother the trip, so that I could come along, because there were so many letters to take care of while he was here—and mother wanted so much to make the journey. You know she has hardly ever traveled. And now you are here—and ——"

"He had no right—no right to bring you," came from the man. "He lied to you. He knew I should be here for South Trent. He knew it would get my nerve. He knew just what it would do to me."

"No, no!" she cried. "Don't look at me like that, George! Perhaps he really thought as he said. What shall I do? What shall I do?"

"As if it wasn't bad enough for me, all these months, to think of you in the same office with him!" exclaimed Extell. "And now you help him—you—when I was just at the threshold ——" He stopped abruptly. "You will go back to Milledgeville, you and your mother, immediately!" he added with set teeth.

"But I am working for him, George! He is my employer. The Eclipse Company ——"

"It makes no difference, Muriel. You didn't contract to follow that man round the country. You will go back."

"George," said the girl falteringly, "you—you are bigger than that. You have grown; I have seen it in your letters. You can forget that I am here; you can forget who we are—you know we are each working for our own companies, George, you for yours and I for mine. We must both be loyal. You won't ask me to desert now."

"You want to stay!" he said bitterly.

"No—I ought to stay. But it is only my head; my heart will be with you, George, you know it."

Extell rose. "Very well, Muriel," he said shortly. "You will stay then."

She reached out her hands toward him.

"Tell me it will be the right thing. Don't say it like that, George!"

"It will be the right thing, I suppose," he replied mechanically. "I must go over to the Northern office now. You are stopping at the Fiske? I will take you over on my way."

"No, I'll stay here a while," she said.

The sun was shining brightly when Extell gained the street again, but somehow he was walking in a shadow. All his hatred of Vibert came back, redoubled, and the future turned black before his eyes. He was told at the Northern plant that the representative of the Eclipse Tool Company was to have his inning that afternoon, and that probably Extell might have to wait till the following morning. And that information, which would have pleased him the day before, as a chance for getting in the last word, now seemed a fatal omen. He went back to his room in the Randolph and, utterly exhausted, threw himself upon the bed. All the suppressed jealousy and antipathy for Vibert seethed and boiled anew. He was twice on the point of telegraphing to Wetterson to come immediately, but he could not summon strength enough to make the decision.

In the afternoon Extell tried a walk, but gave it up and went back to the room again. At three o'clock he called up the Northern plant to make sure about his appointment. It was for the first thing in the morning. At half past four his telephone rang. There was a lady to see him in the parlor. But scarcely had he pulled on his coat when there came a knock on the door. He opened it, and Muriel Clemm, with a cautious look behind her, pushed into the room.

"I know this isn't the right thing to do—but there were people in the parlor and I had to see you alone!" she cried, half sobbing. "You—you were right, George. I was wrong. Mother and I are going home immediately. I have been punished for coming!"

"Punished!" he cried, seizing her hands and finding them cold. "What do you mean, Muriel?"

"For putting the office before my—my heart! For wanting success for myself. You don't know—I've never told you—I've dreamed of being successful for myself. I've been selfish—and, well, it's over now! I never want any more to do with business. I've resigned. I never want to see the Eclipse office again."

"I don't understand," was all Extell could say.

She went on, speaking fast:

"Mr. Vibert asked me to come down to the Northern offices, in case he should be held up. There were important

letters to be mailed. After I typed them I went down. They showed me into a room that adjoined the room where Mr. Vibert was having his interview. The transom was half open, and I couldn't help hearing what was being said. He was talking. I heard every word. And I would not work another day in the Eclipse office, no matter what happened, George. My poor illusions are gone—all gone!" Extell waited diplomatically.

"How could they sit and listen to him? Why didn't they stop him?" she cried passionately. "Is that the way goods are sold—by telling falsehoods about your competitors? By telling things you know are not true? Oh, I could have died of shame to be with such a firm! And they sat and listened to him. They let him go on."

"Did he knock South Trent?" asked Extell with a queer smile coming into his face.

"He lied foolishly and shamefully. He didn't seem to have a word to say as to why they should buy his goods. It all seemed to be why they shouldn't buy the others. But I mustn't tell you any more—it wouldn't be right, I suppose. The only thing I can do is to quit them—and I have. But why did they listen to him? George, is that the way business is done?"

Something like happiness had come back to George Extell. His eyes shone as he held her hands and looked into her eyes.

"No, it isn't, Muriel!" he cried. "You'll see! That was Vibert's idea of good salesmanship. I could have sworn he would do that. He was raised on that kind of argument. The only salesman he has that has never copied him is Adams Walker. And that's why he came out here himself. He thought Adams wasn't strong enough. He'll find out! Oh, my dear, you don't know what you've done to me! You're going home! You're not going to stay in that office! Now I feel as though I could sell anything! I can hardly wait till to-morrow."

She looked at him and her face brightened.

"You don't have to tell falsehoods about your competitors, do you?" she asked.

"You bet I don't!" replied the man. "I'm with the real people, Muriel. You wouldn't ask that if you knew Wetterson. Muriel, if I put this order over I'll get something good. You remember what you wrote on the envelope? Would that be it?"

She smiled with eyes that never missed the little humors.

"I shan't need to tell you when the time comes," she answered. "You will know."

He saw the girl and her mother off at the station, and brought a big box of roses to go home with them.

"Really you ought not to do that," Muriel objected, her prudence trying hard to overcome her delight.

"By to-morrow night I'm going to ship you a carload!" was the boyish reply just as the train was pulling out.

That night Extell in his room opened his case and took out a micrometer: the very micrometer that the little Austrian in Central Georgia had apostrophized. He looked at it a long time. He studied the infinitely accurate gradations, and noted how marvelously adapted it was for the work it had to do. He saw how intricate it was, and yet how simple; noted the ratchet stop, so adroitly contrived to keep the measuring spindle from turning when it should be at rest—and the words of the little old man came back to him: "Axdell, you must understand them to love them—as I do."

IV

AT A QUARTER to ten next morning, when he had made his talk before a group of sharp-eyed men, Extell felt that he had expressed this understanding of his tools. He felt that he had never talked better. He had been direct, not wordy. He had not once mentioned the competing lines. He had told the exact truth about shipments—that freight was congested in their district as elsewhere. But above all he had tried to convey this idea of perfection, of efficiency, in the South Trent tools.

Extell paused and wiped his dry lips with his handkerchief. The feeling of strong confidence had never once left him. But there was one thing which had just a little disconcerted him. It was the steady, riveted, impersonal eyes of an elderly man with iron-gray hair and mustache, who had sat just at his left across the table. He tried vainly, as he was speaking, to read that look. It worried him. Round the mouth of this man—the president of the newly formed corporation—was something that never quite ripened into a smile. It was as though the man was hazing him, in a subtle way, trying to make him say something incautious or ill-advised. And after a short silence this sphinxlike man spoke. His voice was just as impersonal as his eyes, touched, it seemed, by no emotions whatever. He asked quietly:

"Mr. Extell, what do you think of the Eclipse tools?"

Extell had a queer sensation. He felt his lips tighten and the nerves of his face twitch. He was thinking of Vibert. He was thinking of the dark room, of Muriel Clemm, and of the words: "You can have the customary two weeks." But he replied:

"Mr. Nickerson, I worked for the Eclipse people for nearly five years. They make beautiful tools, sir. They have always made beautiful tools; and I have no doubt they always will. I believed in them then and I have never lost my faith in them."

"You would admit they are just as good as the South Trent tools, then?" said that impassive mouth.

"No, sir."

"Why not, Mr. Extell?"

"Because, Mr. Nickerson, I am selling South Trent tools. And, aside from that, I can show you that our line is fuller and I have shown you that we have several invaluable patents."

"It is generally thought, however, in the trade, that there is little to choose between them," went on the president. "You would be satisfied, I suppose, if we split the order, Mr. Extell?"

"No, sir. I am asking you for the entire order."

"But on what grounds do you ask it, Mr. Extell? You have admitted that the Eclipse are fine tools. The patents—well, I don't think those are so very important really. A hack saw is a hack saw, when they are both of high quality. I should like to have you tell me what other thing, what final argument, you rely upon to convince us that you should have the whole contract."

It was the crucial moment.

Extell felt it. Somehow he knew that there had been a tacit decision made in that conference to split the order. He felt it going from him. And then like a flash he whipped out:

"Yes, sir; there is one other thing."

"I should like to hear it," was the challenge.

"It is something I say with hesitation," said Extell, feeling himself redden. "I wouldn't have mentioned it, Mr. Nickerson, if you had not put it squarely up to me. There in one other thing, and I am depending on it as the last resort. I ask you not to believe that I say it with any unworthy motive or spirit; but it is something that comes into nearly every order that wa ever sold. It is a real, living thing. It is the personality of the salesman."

The moment he uttered the words Extell felt his knee shake. If his words were construed wrongly he was lost He saw the utterly amazed glance of the president in the direction of the factory superintendent.

He saw the factory superintendent return a grin to tha astonished look.

The New York manager of the Northern looked surprise a moment, and then began to laugh outright.

Mr. Nickerson rose slowly.

"I think that will do, Mr. Extell," he said.

"Thank you, sir."

But just as Extell gathered up his effects and started fo the door, the president came after him and seized him by the arm.

"Mr. Extell," he said, "you have the nerve of the devil!"

The young man looked frankly and soberly into the eye of the older man. In a voice that trembled in spite o himself, he asked:

"Do you really think that was merely nerve?"

The older man did not answer for a moment. Then h reached out and gave the young fellow's hand a little shake

"No!" he replied. "You told the gospel truth. It' funny nobody ever sprang that before. You'll go far, youn man. Good day."

There are days that are not merely red-letter days, they are rainbow-letter days. There are few of them in a life and the memory of them never dies. The next day was on of those days for George Extell. When he went to the tele graph office, the following afternoon, the two telegrams tha he wrote there swam before his eyes. The telegraphe looked like an Adonis. The dirty telegraph office looke like the Stock Exchange. The barely swept floor was lik a carpet of priceless Oriental pile. One telegram went t Wetterson, the other to Muriel Clemm. The one to Wetter son read:

"I put it over. EXTELL."

The other one:

"You gave me the courage to win. GEORGE."

Queerly enough, in Extell's first flush of triumph h entirely forgot Vibert. He had dreamed, without darin to hope, that the day would come when he could meet hi old manager on even terms and show him who was th better man. His common sense had told him that thi could scarcely happen—yet it had happened—and nov his first reaction was not the one he had expected. It wa not that he had ceased to hate Vibert. It wa simply that he was now thinking of bigger things

In the first place, Wetterson's night letter, i response to his brief telegram announcing hi success, thrilled him with honest joy. It wa just like Wetterson, enthusiastic without slop ping over, and sincere as few men could phras sincerity. It ended with a sentence that stencile itself on Extell's mind and steadied him abso lutely. The sentence was: "I know you ca stand prosperity."

Muriel Clemm's letter filled his cup of hap piness. She wrote herself into it unreservedly She had the art of translating her inmost feelin into written words, of projecting herself to hin with every dotted i, so that as the young fello read she seemed to be at his side. She did no mention Vibert. Sh said never a word abou the Eclipse office.

Extell's first desir was to go to Milledge ville at once. H burned to tell Muri the whole story; to se her eyes respond t every point. He kne that his request for couple of days would b granted at South Tren without demur—an yet he could not ask i He was coming in on th high tide. Everythin was going his way now He was writing orde such as he had neve turned in before, an even the conditions c the trade did not seer wholly to account for i Then one night, jus as he was coming out o the dining room of hi hotel, he came face t face with Harry Burr hart. That the presider

"That Northern Machinery Business Gave Us an Awful Jolt. You Got Us There, and Got Us Good"

THE HOUSE OF CRAIGENSIDE

By RICHARD MATTHEWS HALLET

ILLUSTRATED BY HENRY RALEIGH

"'You are Going the Right Way About to Make a Dead Man of Yourself, Mister Mate'"

XI

THE ornithologist, in good truth, had gone this time, beyond all recapturing. He headed straight across the dunes, Hawley following at top stretch. When they came to the beach the chase did not once hesitate or falter. James Smith plunged in and with a strong motion of the arms made for the open sea. Hawley set guards along the coast, but the ornithologist did not return.

Nothing could save the house itself. It made a vast showing, cast as it was into that lonely situation. The black bark, anchored in mid-channel, stood revealed high and clear; and the dunes behind the house shone with a smooth red light, as the flames shot higher and yet higher.

And, strangest of all, this tumult had roused the gulls from sleep. I saw the flickering of crimson breasts hurled in mid-air, and wondered if in truth new voices had joined already in that unlikely chorus.

It was morning before we could come together on the water front at Silver Glade. Garnett had seen to it that a room was made ready in the Glade Hotel for Jane Craigenside; and presently he came toward us with a grave step.

"The shock of these two deaths has been too much for her," he said to us. "And yet, if she but knew it, the old lady had done her—and me—a fearful wrong."

Garnett had washed the enamel from his face and got into other clothes. The lines in his face appeared deeper, but still he was seen to be a young and rugged man, with a keen eye that rested briefly on our faces, one after the other.

"There is no need for her to know it," he added gently, "and God knows the old lady paid the shot. After my experience in that slave room, I can assure you, gentlemen, that I shall never look a sea gull in the face again. If there is the least jot of superstition in you, you will believe that tale you know. I remember coming upon a raft in mid-Pacific, empty as the palm of my hand, and the greatest flock of gulls keeping it company that ever you saw. These things naturally come back to a man in circumstances like the present. You will want to know the truth about all this. It can be told briefly, I imagine.

"This man—James Smith, he called himself—was actually the son of old Craigenside by a Chinese wife. Amos had her stationed for years past count aboard a junk in a certain backwater of the Yang-tse. I have seen that junk. It was and is a fine piece of work—sandalwood paneling, reed lanterns aft, and two blazing blood-red eyes at the prow. Watchful eyes, gentlemen; but I can assure you not more watchful than the eyes of that old Tartar lying in state across the river.

"She was a Tartar. That's the colossal joke involved in this business—one of these merciless jokes that a devil might dispatch red-hot out of hell. Craigenside had held her off a great many years, and yet he had granted her privileges, don't you see, until the man was fairly under her thumb. There were times when he didn't dare to say his soul was his own. You may have heard the Tartar apply those words to herself; they applied with triple force to him. If you had ever seen that smooth yellow woman in the Yang-tse, you would understand the peace that stole into the bosom of that old pirate every time he headed for his mysterious yellow river. She was the impersonation of silent worship. If he so much as held up his hand she was watching it that moment like a cat, like a dumb slave. I verily believe he went there to recover the self-respect which he lost periodically in the presence of old Mercy. Why, then, didn't he stay in the East? Why should he return to Dockport to confront her with his uneasy conscience squirming somewhere inside that great barrel of a body? How came it that at length she began to go as stewardess and visited those perilous waters in her own person? I don't know, except to say that hers was the presiding personality.

"All the years that Mercy went as steward," he continued, "there was this establishment going on, the boy growing up, Craigenside absenting himself from time to time and coming back to his mentor with a sheepish eye. You have seen that old lady's face—lined, and acid, and featured with hirsute moles? He used to look into it as a naughty boy looks into the eye of a stern parent, trying to fathom what shape the administration of wild justice will assume. It was 'killing,' to use a phrase of Mercy's own.

"When the child was twelve years old Craigenside assigned to some broken-down but omniscient missionary the task of providing him with an education of the Western sort. But note: The silent mother, to counteract this alien influence, induced a certain Chinese gentleman to attach himself to her household in the situation of a tutor, and so the learning of two hemispheres came to be poured into his head. By the powers, his range was enormous. He knew more than the devil himself. But I don't know which of those gentlemen brought out his mesmeric faculty. He had it, to a degree. He could put me into a trance by turning a marlinespike in his hand and letting the sun flash from its tip.

"But wait. Old Craigenside never fully understood what flame it was he had plunged his hand in. He knew nothing of the necessities, nothing of the resources of one of these Eastern religions, patched together through the industry of certain shady and traitorous disciples of the great god Buddh.

"The fact is, during those years the boy's mind was being prepared to take up the vengeance which expiring generations had been forced to drop. To put the matter briefly, the Chinese gentleman above-mentioned had ascertained that the woman was descended from a dynasty of pirates who had their headquarters on a certain island in the Yellow Sea. They were not, perhaps, practicing piracy at this date; indeed, the woman gave Craigenside to understand that they had gone out of the business, after making certain terms humiliating to the Chinese Government. Nevertheless, they were bound to that island by the common bond of a piratical tradition; and through the instrumentality of that Chinese tutor a call was issued to the son of Craigenside's foreign wife as the last male representative of a perishing dynasty.

"So it happened that on that last voyage Craigenside stole up the Yang-tse, only to be met with a cool statement from the lips of that hitherto tractable woman that his son had been drafted into the priesthood.

"Craigenside was frantic. Was it conceivable that son of his should turn into the sort of stony-eyed idiot who would bow down to sticks and stones? In the blood of the old seaman there resided very little of the strict tincture of religion, I suppose. If he owned in his heart to a fundamental belief at all, it must have been only in some vast power screened by clouds or moving silently underfoot; an inscrutable power, contemptuous of man-made fantasies, a power that spoke only in the whirlwind, and that never stooped to examine individual destinies. Into the invisible bosom of that power he was hurled, and that sufficed him.

"For the rest, he had slept through many sermons, had paid pew rent, and in winter put his ponderous feet on the zinc-lined foot warmer which had descended to him through many generations of cold-footed co-religionists. He called himself in a booming voice a 'fair-weather Christian,' with a vague belief in a kind heaven and a serviceable hell; and as such he had no sympathy with foreign gods. That son of his should fall so low as to feed the fires in the very incense pans laid before foreign altars was what he could not stomach.

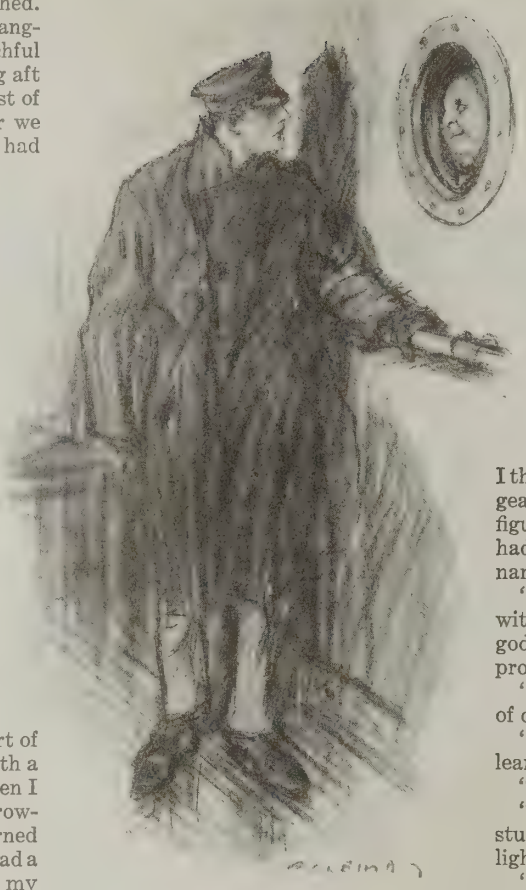
"That was how he came to follow him, seize him up out of the crater of that broken-down volcanic island where he had established himself, and bring him to book in the cabin of the Asphodel along with his green jade god.

"There were ructions on that ship, I can tell you, when Mercy saw who the man was," continued Garnett. "And she wasn't in doubt long, because by chance she spied the six toes on his right foot—his curious Western inheritance, almost the only part of him that he had in common with his father. Can you wonder if the old lady carried on a little after all those years—her life, no less—which at one stroke she saw to have been spent in the shadow of a mocking delusion? I think she was not accountable for her actions.

"All the time I was going about that ship making love to Jane Craigenside, getting deeper and deeper in love every blessed minute. I felt those sharp black eyes of Mercy's trailing me with that hungry power of observing another's felicity which seems to be the especial attribute of spinsters. They can never grow too old for it; and after all, she was not so old, not over sixty, and sentimental as the devil behind that black mustache, I imagine. A poisoned soul escapes by distilling itself through the very pores of the

skin; an atmosphere is engendered which if not seen, is yet breathed. The eyes of that junk in the Yangtse were not one-half so watchful as those of that old lady lying aft in a canvas chair, with a nest of tatting in her lap. I wonder we didn't all of us see how she had come to hate the old man.

"We didn't—not one of us. I had eyes for no one but that girl. I had first spied her bringing the sextant out to Craigenside, the very day I joined the ship in Sydney harbor. Her fingers were adjusting the screws, and I swear there were small brains in the pink tips of them. We got to have a very good understanding in a short while, and she told me frankly just the nature of the old lady's tantrums; but she had not the slightest notion of what might be expected to come from them. I thought the old Tartar had entirely recovered her calm. That's how far deluded I was! She made no noise on the deck. Her feet were encased in a sort of moccasin of black leather with a limp sole. Every now and then I caught a flash from the arrowheads of obsidian which adorned her constricted old bosom. I had a feeling that the very course of my thought was traced with limpid thoroughness by the intent watchful eye of that ancient shade. In the hours of my later reflection a sort of ominous cloud gathered about her mysterious and fragmentary utterances.



"I Would Catch That Enormous Yellow Face Hanging in the Port Like an Unfathomable Mask"

"Then one morning as I was going to take the deck I found the cabin thronged. Breakfast was just over. Mercy Cobb sat back, grasping her shark's spine, and sucking her lips grimly together. The girl stood tall and pale beside her. Ruel sat pulling sullenly at a fringe of the tablecloth. Behind him rose the portly figure of the priest, his arms crossed, his heavy-lidded eyes half shut. For the first time a sort of excitement seemed to breathe out of him, and the ugly knob on his forehead had turned red. The cause of this commotion was to be found in the sudden determination of Craigenside to break his son publicly of his superstitious folly.

"'You have about as much chance of making converts to that thing as a song sparrow of finding Venus in the blizzard of '58,' he roared. 'It galls me to think that son of mine should descend so low.'

"The priest said in cold tones:

"'It is enough. You do not believe.'

"'Not in foreign hells, no,' said Craigenside. 'I have enough to do to swallow a Christian one.'

"I caught a glimpse of Mercy's eye at this point. Sunk as it was in its shadowy socket, it seemed to emit a terrible fire.

"'Come now,' said Craigenside, striking his hands behind him, 'tell me, sir, what are the properties of this god? Suppose I slap him in the face: Do you think he will rise up against me? Can he strike me dead?'

"'When he falls forward on his face,' said the priest, 'then, and not till then, will he wreak vengeance.'

"'In that case,' said Craigenside, putting out his huge hand, 'I calculate to know the nature of this vengeance.'

"Ruel, turning in his seat, struck his father's hand away from the god's head.

"'You will have us all hopping in the wrong hell next,' he muttered sheepishly.

"'I want to know! I want to know!' the old gentleman said then. 'So now my other son is bowing down to sticks and stones.'

"'Do the safe thing,' retorted Ruel.

"The old man was staggered a little in spite of himself. He saw about him a ring of tense white faces. Little by little some dread omen seemed to creep into the atmosphere. It was a burning hot morning. I felt as though I had been trapped in my own tomb. The sun came through the starboard porthole in a thick golden fog. It glittered on a strip of red linoleum, on Craigenside's fist raised to smite the god, and on the plump six-toed foot of that priest, who never seemed to move one jot. And now I thought I saw a kind of certainty of vengeance stream from the eyes of the jade figure. I could have sworn that a smirk had overspread the diabolical countenance of that pug-nosed little god.

"'The wrong hell,' repeated Amos without turning round. He stared at the god long and hard, as if revolving that proposition in his secret soul.

"His meditation was broken by a sort of cackle from the Tartar.

"'He's afraid,' she sneered aloud, leaning forward in her chair.

"'Afraid?' roared Craigenside.

"I called out suddenly 'Beware!' stung to suspicion by the continuing light in the old fury's eye.

"I was too late. Craigenside had hooked his finger about the neck of the little god and drawn it forward on its face.

"I felt in the ensuing seconds that a change had come over the old man with the completion of that movement. He drew one hand across his forehead in a daze.

"I heard Ruel whisper 'What's the matter?'

"'Matter—nothing the matter,' said old Craigenside. 'I'm a little cold. It's a foggy morning.'

"Something was wrong, however. He reached up one hairy arm to the gimbals, in which a lamp was swinging, and hung there—twirled slowly, facing each of them in turn. They saw his mouth open and the whites of his eyes glitter.

"'Bring me . . . coffee . . . woman,' he said in a ghastly voice. 'There's ice in my veins.'

"It was frightful! All in the course of a few seconds! And still he hung to that bracket. I began to believe that he would hang there in death, with a kind of unforgiving tenacity in his finger-ends. He hung about our very necks.

"Then Ruel sprang toward him and eased him down. That yellow priest had not stirred an atom of his fat body. But the old lady fell down stiffly on her knees and began a kind of low wailing, stroking the head of her master.

"Can you imagine the terror of that moment? The jade god was upright on its shelf again. Was the priest responsible for its new position? Nobody had seen him stir out of his tracks. But there was a gleam of satisfied vengeance in those eyes of jade.

"They carried the old skipper into his cabin. There he was alone in his last moments with Mercy Cobb, by his own request, and not until he was dead did she come out again. Then with a rigid face she set about unpacking her embalming tools."

"I knew as well as I wanted to what had happened," continued Garnett somberly, "and yet I forbore to breathe such a charge without first having a look at that perverted god. But I am not a believer in foreign hells myself. I said as much to Ruel, but he took the short way with me and shut me up. You were all privileged to see how he felt about the matter.

"I had decided to get round that old lady, but how I didn't know. She never slept, to the best of my knowledge. She had taken the jade into her own cabin and locked the priest fairly into his. I would catch that enormous yellow face hanging in the port like an unfathomable mask; and every time he could get me to stand still he would send out flashes of reflected light from some bright object. It had the effect of rooting me to the spot once or twice.

"I said nothing of my suspicion of that god to anyone—not to Jane even; but I set out to have a look at it. Now how did that old lady get wind of me in the extraordinary fashion she did? I have given up explaining her. I suppose, as a matter of fact, she overheard me talking with the starboard bos'n. She might have been anywhere; she hovered about the ship like a murk.

"He came aft one night to heave the log, and stopped to whisper in my ear:

"'She's been training on again, hasn't she?'

"His words were almost lost in a heavy wind. I nodded absently. The sails, powder white half an hour before, were beginning to get black with rain. The bos'n's earnest, privileged face was close to mine, and a pale phosphoric light played about his person.

"'I tell you what,' he whispered, 'I don't like this a little bit. I wish he was overside, that's what I wish. I want to shake those sharks. She is pickling him in brine, isn't she? Time we get into port he will be sweet enough for a chowder. The old witch!'

"Before letting fall the compromising word 'witch' he favored the chart house with a prolonged stare, full of discretion, as if he had detected her presence there by some remote sound or some secret motion of the heart.

"'Give them an inch and they want an acre,' I said a trifle prosily.

"'You can't talk to me about women,' returned the bos'n. 'I know 'em right down to the ground. I was brought up on 'em, I tell you, and I know enough to know that you can't indulge 'em only about so far without running your neck into a noose.'

"'Did she offer any objection to this job in the Yellow Sea?'

"'Not a word. She sat there as stiff as a new sail, and over the side he went without so much as looking at her. Up we went over that cliff hand over hand, and into the temple, and snakes out this fellow in less than no time, the old man puffing after us with the idol under his arm. What he wants of it is more than I can tell.'

"I said morosely: 'If I had my way, I'd maroon her!'

"The bos'n shook his head gloomily at that.

"'You might as well try to hurdle up smoke in a gill net,' he said in somber tones. 'That old witch would leak out of a sealed pot!'

"That very night as I lay in my bunk the thought came to me to have it out with the old lady, once and for all. There was no wind; a flat calm had fallen. The slightly resonant personality of the ship oppressed me with vague creakings and slattings. It was a depth of calm which poisons the sources of thought and defeats the simplest movements of the brain.

"Impelled by this restlessness, I rose and went out of my room in stockinged feet. You understand that my berth was on the port side, separated from the main cabin by an alleyway. The cabin was empty, lighted by a dim lamp in a bracket affixed to the round of the jiggermast.

"I was full of panic fears in making my expedition against that old lady. The whining of wheel tackle outside caused me to stand in my tracks, bolt upright like a rabbit. One pane of the skylight was raised; and I heard Craigenside murmur something to the wheelman. Silence again. My eyes coasted over the sticky maple panels of that cabin and finally fixed themselves on the door of Mercy Cobb's room.

"It was held open a foot or so by a long hook, which served to introduce a draft of air through it on hot nights.

"I came closer, step by step, withdrawing the hook from its eye, and pushed in the door an inch or two. At once I had a view of the thing I was looking for. The god was affixed to a white panel in some way. The eyes were horrid, I can tell you, opalescent in a ray of bright moonlight which fell through the porthole.

"I was fascinated, so much so that I didn't so much as notice the Tartar's strong, harsh breathing. She was prone in her bunk. I had got as far as to stretch out my arm for that jade when I heard a rustle from the gloom of the bunk; then a click, such as the barrel of an old horse pistol might make in turning over. She was awake.

"She said to me without a trace of excitement:

"'You are going the right way about to make a dead man of yourself, Mister Mate.'"

Garnett lay back in his chair and stared hard at the Asphodel and at the stark ruin of the house of Craigenside.

"By George," he said, "that old woman believed in a policy of Thorough! She meant to make a clean sweep, I haven't a doubt of it. She meant what she said, neither more nor less. I drew back out of that cabin like a ghost of other years, but I could be as still as I liked after that—I had sealed my own doom. I had revealed my curiosity as to the nature of that god, who could strike a man dead in his tracks without winking an eye. She had caught me flat-footed cruising about in her cabin, and she knew what she had to expect. Thorough. That was Strafford's policy, you remember; well, it was that old lady's policy no less. All the time I was on that ship she wouldn't allow a smudge of dirt anywhere. The men were always busy with the holystones; always expecting to see her come along with the corner of her apron lifted looking for dirt. Rasp, rasp, rasp! They quaked when they saw her shadow."

Garnett drew on his pipe reflectively.

"Well, she was shipshape to the end," he continued, his eyes glowing with the first amusement I had seen in them. "Thorough, and no mistake. She marooned me. She put me off in company with Mr. James Smith, on an island, an atoll in the Marshall group. Ruel was her instrument. They came in on me in the dead of night with all my imperfections on my head, snaked me out of my bunk, bound and gagged me, and had me overside in the ship's cutter before you could say kismet.

"The priest was there before me. I imagine it was a sort of bargain. The old lady conceded Ruel the casting away of that mongrel son of his father in exchange for his allowing of similar treatment being meted out to me. He was as meek as Moses with her.

"At any rate we were put off there together. The old lady even insisted on being swung down into the stern sheets in a bos'n's chair. I caught a glimpse of her, like a descending harpy, with that black dress wavering all about her and her eyes fixed lovingly on mine. Her last words to me were: 'A taste of your own medicine, Mister Man'; and I swallowed them. There wasn't the least outcry aboard the ship. That bos'n who had called her a witch was the selfsame man who rigged the bos'n's chair for her; and the girl was sleeping below.

"Yes—marooned.

"A taste of my own medicine! There we were, James Smith and I together. We sat on the sands of that cursed atoll through burning eons of time, hung our heads and let time pass as we imagined it might over the heads of stone images. We let it pass like men doing penance in a yellow hell obscured at intervals by blue-black flames filled with flaring sparks.

"And all the while we had a distaste for one another—physical, mental, moral. There was no way in which we could mix. This distaste became profound antipathy, and the antipathy mortal hate. I could have sprung on him time and again, taken him by his fat throat, and forced him to yield up the secret of that amazing resignation, which caused him to surrender his body to those hot sands with the serenity of a god whom nothing and nobody can challenge. He was as uncomplaining as if he had created his own situation. But this did not detract from the smoldering venom of that poison he was hoarding up for me.

"I tried to keep away from him. I found some timber, and began to build a boat with nothing more than a pocket knife. I stripped the fiber from coconuts and wove it into rope. I found a piece of old ship's metal, cast there, heaven knew how, and I set to work to cut it square and hammer it down smooth with stones. One side I polished bright, and marked out a compass on it. I marked the point east to the sun when it rose, and then leaving it on the ground until night I marked out the bearings of the different constellations. I had a mad notion that with nothing more than this instrument, as soon as my boat was done I should start before the wind for China, three thousand miles away.

"All this while the Oriental sat idly by. He seemed neither to hope nor to fear, but only to anticipate the miracle which was going to restore him to his volcano.

"'A Bell!' He Cried. 'Here in My Shadow. It Rang Four Times'"

"Then came a strange turn in this common life. One night, as we sat together listening to the wash of the reef, James Smith stood upright with a ghostlike face.

"'Hark!' he whispered.

"You are aware what power there is in a whisper, coming unsolicited like that, to smite the heart dumb. It is like the cold hand of death laid on the brow of the sleeper. The body of the priest went as still as stone. He stood with one arm half raised and an indescribable light in his eye.

"I sprang up and actually grappled with him. I was in a rage to think of the chill he had been able to sink into my very marrow by a single word. I began to believe that already I was taking his tone, so to speak—being drawn into the maw of that voracious intelligence and made helplessly subject to its apprehensions.

"'What do you hear?' cried I.

"He ran his tongue over his lips.

"'A bell!' he cried. 'Here in my shadow. It rang four times.'"

XII

AS GARNETT spoke these words I could not hold back a cry of astonishment. Bells! This was what that grizzled watchman of the Asphodel had described as Craigenside's affliction. He heard bells.

"That amazes you," continued Garnett. "Well, it was the truth. They were distinctly audible to us as we sat together on that atoll.

"God pity us! What will you think when I tell you that they actually measured the time for us! At first I thought it was the sort of thing that accompanies the sound of water. You know the drone of inland rapids provides the imagination with a spur. You hear chimes and sweet voices oftentimes.

"But this was a thing of darker omen. It came once an hour, as nearly as we could estimate it. The number of the strokes increased from one to twelve, and began with one again.

"It was a terrifying thing, to the priest as well as to the sailor. It had the significance of a dread summons. We had no knowledge of the injunction Craigenside had laid on the old lady in his dying moments, as later appeared, to set up that figure in the shadow of Time and Eternity.

"'Bring it under a good Christian curse,' were Amos Craigenside's last muttered words, as I later learned them from the lips of the old Tartar herself.

"It might seem as if this sound was only the curious imagining of mad castaways. Perhaps. But to them it came as the voice of that god, summoning out of a dark void.

"And this eerie sound came between them like the shadow of a fiend. Each read the soul of the other. Meantime, those bells showered on them out of a clear sky. They slept only between the striking of those fateful hours.

"Isn't it a fact that by tradition, or by a memory like an echo of the conflicts of other days, we are familiar with the Christian hell?

"Yes, we have those curious descriptions—a precise imagining of the sort of reception that awaits us, as sailormen—even a history of the unlucky man, Satan. We are in a measure prepared.

"But what was this other? Nothing. A bell. A summoning. To what? Could I tell that?

"It couldn't have gone on long of course. I should have been a madman. That plague of bells was lifted the moment we were taken from the atoll by a United States gunboat, the Essex. I heard them no more.

"But I was in the grip of something worse than solitude by that time. Do you think I could pry myself loose from the company of that man, Mr. James Smith? Not by a jugful! He knew my goal. He knew that I could never rest until I had seen Jane Craigenside again. And where she was, there his jade god would be.

The Submarine

GERMANY advertises an expectation of starving England into submission by midsummer through unrestricted submarine warfare. If she should realize that expectation England's command of the sea would be paralyzed for the time being, and the political map of the world would be altered in so radical a fashion that the exploits of Napoleon would afford the only comparison in modern times.

England derives about two-thirds of her food from overseas, all of her cotton, much of her wool, copper and other basic raw materials. Cut off at sea, she could neither feed nor clothe herself—to say nothing of carrying on that vast industrial activity which makes her the world's premier exporter, and on which her whole economic life is largely founded. To cripple her fatally it would not be necessary absolutely to cut off imports, but only to reduce them by a certain percentage. For basic materials that are absolutely necessary in carrying on a war—especially food—Germany was much less dependent than England upon sea traffic; yet the Allies' blockade undoubtedly pinches her sharply.

To the first of February—that is, in thirty months of war—the Allies had lost a little over three million tons of merchant shipping through mine, submarine and cruiser attack, and neutrals nearly a million. Until about five months ago shipping losses had been pretty nearly offset by new construction, and the submarine had affected ocean carrying so little that insurance against it in North Atlantic trade could be had at about one per cent.

Last fall, however, submarine activity began to increase; and in January—the last month under the rules imposed by the United States—destruction of shipping was greater than in any previous month of the war, amounting to over three hundred thousand tons. The February record no doubt exceeded this.

This is a serious burden upon shipping, as the great advance in war-insurance rates shows; but unrestricted submarine warfare will undoubtedly involve a much more vigorous warfare upon submarines. Presumably all merchant ships will speedily be armed, and a comparatively small gun is effective against submarines. Patrols and convoys can be increased. The unrestricted submarine is a pirate, with no standing before international law—to be sunk at sight.

In adopting unrestricted submarine warfare Germany has engaged in the greatest sea gamble ever known. The stakes are the highest ever played for on water. Winning it would imply that, until there is another advance in naval art, any nation rich enough to maintain a fleet of submarines can paralyze the world's commerce at will. Few except Germany's own partisans will share her expectations of winning.

No Time for Politics

UP TO the end of January the old game went on at Washington in an especially dull and unpleasant manner. Having played the most narrow and purblind sort of party politics in the late presidential campaign and got nothing from it but defeat, the opposition developed here and there a quite febrile eagerness to win a trick. Even the President's address to the Senate on world peace, bringing forward the greatest question that American statesmanship has had to consider in many years, could not elevate some congressional minds above the dust of partisan squabbling.

At the shock of the rupture with Germany partisanship was laid aside, as sober men leave checkers when the fire bell rings—a good sign of capacity for sober and responsible action. But shock, in the nature of the case, is a temporary state. There will be temptations to go back to the game.

The people have means of letting it be known that all such temptations must be resisted just so long as the international relations of the country are out of joint. They should overlook no opportunity of expressing a conviction that the man who attempts to shape any phase of this international situation to a partisan pattern will be disgraced and marked unfit for public trust as long as he lives.

The mere partisan game of jockeying for position and fencing for points is burdensome, but tolerable, in fair weather. It is intolerable when the barometer falls.

The Difference

THE Allies have trespassed upon our neutral rights at sea. They have disregarded international law or made it over to suit themselves. They say what shall be contraband. They ransack our mails. They take our ships to port and search them, condemning them if the cargo is contraband. We continue friendly relations with them; so why not with Germany?

The two cases are fundamentally different. The difference between them is as great as that between dumping ashes in a neighbor's yard and turning him out of his house, with homicide.

We do not decisively object to Germany's doing anything the Allies do. Without decisive objection, we permit her to do more. England takes a ship to port and searches it at leisure. Germany, as in the recent case of the Housatonic, sinks the ship outright, only giving the crew time to take to open boats, far from land. But as she did give them opportunity to save their lives we did not object.

Her note implied that American ships, passenger and freight, would be sunk without warning, and with hardly a chance of saving the lives aboard. Two or three passenger boats might ply over a rigidly prescribed track in a rigidly prescribed manner, provided this Government guaranteed that they carried no contraband—the definition of contraband being fixed by Germany.

Under the circumstances this involved nothing less than assent by the United States to Germany's laying an embargo on our export trade. It involved assent by the United States to the proposition that Germany could mark off any regions of the high seas she chose and forbid us to enter them—not merely putting annoyances upon our trade there but forbidding us to trade altogether, except at the risk of our lives.

For less oppressive impositions the American colonists revolted against their lawful sovereign.

In Safe Hands

WOODROW WILSON deserves the implicit confidence of that great majority of the people of the United States who earnestly desire peace. For two years, in the most trying circumstances, under great and repeated provocation, he showed an unwavering determination to keep the United States out of war if that could possibly be done without surrendering rights of such a fundamental nature that none but a contemptible nation would surrender them.

Last April—a year after the sinking of the Lusitania—he stated the terms upon which this country would continue friendly relations with Germany. The country unquestionably approved that statement. The only notable objections came from those who resented its moderation. After careful consideration, Germany chose to reject those terms. The choice lay with her. When she chose to reject our terms the United States had no choice but to terminate friendly relations.

The situation was thrust upon the President after he had done the utmost to avoid it that national self-respect would permit. On his record all those who sincerely wish peace, but would not purchase it by surrender of vital rights, must give him their complete confidence. His course throughout demonstrated that he was a trustworthy guardian of their interests. Whatever could reasonably be done to avoid war, he would do.

All attempts to discredit and harass him in the crisis were unworthy and should have no countenance. The fatuous and transparent agitation for a referendum previous to a declaration of war was only, in effect, an attempt to get a vote of lack of confidence in the President and to tie his hands; so that, no matter what indignities or outrages might come, the Government of the United States must stand idle for weeks with its hands in its pockets—a spectacle for the laughter and scorn of the nations—while an electioneering diversion was carried out.

Give no countenance to any attempt to discredit and harass the President. He has deserved your confidence. Let him know he has it.

Short Selling

THE question of short selling is simply and exactly the question of speculation. If speculation is useful or permissible, its usefulness or permissibleness extends to the bear operation precisely as much as to the bull. There is, say, a surplus of wheat—more than the consumptive demand will take up. If the only purchasers are those who have an actual use for wheat—namely, millers, who must buy it and carry it until consumptive demand requires it in the shape of flour—prices will probably decline heavily. Purchases by speculators who will carry the grain in hope of a rise broaden the market and tend to stabilize prices.

Such is the stock argument for speculation on the bull side. It applies equally to speculation on the bear side. If there is a shortage of wheat at the time being, selling by speculators who hope to buy back cheaper later on broadens the market on that side and tends to stabilize prices. Later, when a new source of supply is available, the decline in prices is steadied by the purchases of speculators who have sold short.

Whether speculation does, in fact, tend to stabilize prices is an open and difficult question. But if it has any usefulness on one side it has an equal usefulness on the other side; nor is there the slightest difference in the ethics of the two operations.

It is absurd to say that a man can back his judgment by buying for a rise something he has no use for and no intention of owning, but cannot back his judgment by selling for a fall something he does not own.

East and West

CONSIDERABLE geographical illiteracy is to be expected in a country as big as the United States. Many excellent and noisy people along the North Atlantic Seaboard are in a state of chronic astonishment over the West—astonishment and, from time to time, exasperation. For example, they could not, for the life of them, imagine what the West was thinking of when it took up with Populism a good dozen years before the essential features of that creed became fashionable in New York. Oklahoma's constitution seemed utterly irrational until Ohio adopted one cut after the same general pattern.

In Western indorsement of President Wilson's course regarding the European war these good people read an appalling affirmation that patriotism stopped pretty close to the Mississippi River—with some shocking lapses east of there—and at least beyond the Missouri there was not spirit enough left to fight a jack rabbit.

As for California, "Chinese" was one of the endearing terms applied to it considerably west of Broadway. There was the historic fact that the Middle West had done some fighting in 1861–1865—as well as those degenerate states below the Ohio River which also voted for Wilson—but the old stock was presumed to be dead.

What the recent presidential vote meant, of course, was that the West, with cooler head, had then seen no cause to fight. If the relentless Fates should ever require the President to call for a great army of volunteers, watch that same supine region. It will give its Eastern critics another big surprise.

Cost of Government

OHIO furnishes a bit of preparedness that we should like to see generally emulated. It has published a pamphlet showing in convenient and easily understood form not only where every dollar of public revenue raised within the state comes from and where it goes, but giving comparative statistics, reduced to a per-capita basis, of the revenue and expenditure of all counties and cities.

One city of about ten thousand inhabitants has a revenue of little over six dollars a head; another, nearly the same size, has a revenue of more than twelve and a half dollars. One county spends two dollars and forty-three cents a head on the public schools; another, with almost the same population, spends six dollars and sixty-three cents. Of two cities, each having about thirty-five thousand inhabitants, one spends fifty-seven cents a head for police; the other, one dollar and seven cents. Fire protection in two cities of about the same size costs fifty-two cents a head in one, and a dollar and thirty-eight cents in the other.

There are, no doubt, differences in local conditions; but not enough difference, in many cases, to explain the difference in cost.

Thanks to this compilation, any citizen of Ohio can easily find out how his town's expenditures compare, in all the principal details, with the expenditures of other towns of similar size and conditions.

This is the beginning of economy and efficiency in local government.

The Control of Food Supplies in Blockaded Germany

Importation of Foodstuffs—By Alonzo Englebert Taylor

IT IS difficult to discuss the question of food importation into Germany comprehensively, since the available data are difficult of evaluation. The Central Buying Bureau, referred to in a previous article, had complete charge of importation of food supplies. It was daily charged in newspapers of all political and industrial complexions that this bureau did not accomplish as much as private buyers could have done; that it specified the rates of exchange and influenced the type of payments so that trade was diverted to the Allies from Germany, since the surrounding neutral countries could sell to either. Few figures for importations were given out in Germany.

The writer, when in Holland, looked into the trade figures for exportation and importation; and in England, also, for the Scandinavian countries. The data are convincing that during the first year of the war the importation of foodstuffs, and even of feeding stuffs, continued with but slight restrictions. It was only when organizations like the Oversea Trading Trust, in Holland, were put into operation, through the conduct of the blockade, that the results upon German importations were seriously felt.

Since the first of July, 1916, the surrounding neutral countries have been practically rationed by the Allies—that is, they may import of foodstuffs only as much as they can show are needed by their own peoples, and must make agreements not to reëxport into Germany. From that time the importations became weekly less and less.

The complexities of the actual situation in which the citizen of the neutral country is placed were well illustrated to the writer by a Dutch dairyman. He had been so restricted by the Allies in his importation of concentrates, to prevent his exportation of dairy products to Germany, that the business had become unprofitable. He thereupon sold his cows to the Germans at close to five hundred dollars a head. With the money in hand, he was deliberating over the figures of the bond exchange, to determine whether to buy British, French or German war bonds!

The Feeding of the Poor

IT IS not possible to express in figures the importations of foodstuffs. It is probable, however, that the food supplies captured in Belgium and Northern France, added to the amounts imported during the first eighteen months of the war, more than equaled the amounts of the normal direct importations in food units in two years. But the indirect losses, through loss of concentrates for feeds, could not be overcome, and these deprivations have been of far-reaching influence.

From October, 1916, the food blockade has been, by common consent of the blockaded and the blockaders, tighter than ever before. This tightness is also being felt keenly in the surrounding countries. The cost of living in Holland and Switzerland is higher than in Germany; in Holland higher than in England. The chief efforts of the

Adolph von Batocki, Food Director of Germany

Germans for importations extend to cocoa and chocolate, fats, cheese and meats. The price of sugar in the surrounding neutral countries is very high. It is commonly supposed in Germany that a certain amount of sugar is being allowed to pass out to these countries, thus compelling the return of value-equivalent amounts of fats and meats.

Such an arrangement, though technically in violation of the stated prohibition of exportation, if skillfully carried out would yield a net gain in calories. And, since the exchange would be both directly and indirectly profitable, it is likely that it is taking place. The writer is certain that he ate beet sugar in Holland in October.

In peacetime the cities and the social-service organizations of Germany maintained supply stations, from which foodstuffs were dealt out to the needy, and public eating places where they served prepared food. These have been greatly expanded in wartime. Thus, the city of Berlin buys large amounts of flour, potato and pork for direct distribution to its poor. It also pays part of the cost of foodstuffs the price of which has risen past the buying power of the poor. In July it contributed daily seventy-six thousand marks, paying one pfennig on each pound of potatoes that went to the working classes.

Since the beginning of the war Berlin has dispensed for its poorer citizens, in foodstuffs, over forty million dollars. Early in the spring of 1916, when the scarcity in food supplies first became acute, field kitchens were sent into the streets to offer cooked supplies to the poor. The *goulasch-kannonen* provoked miniature riots, and it was soon seen that this method of reaching the needy was impracticable. Then began the expansion of the civic kitchens and eating rooms.

The value of the civic kitchens lies in three considerations: They can buy and prepare food much cheaper, and often much better, than can be done in the houses of the poor; they operate without determent by fluctuations in wages or food supplies; they save labor, and thus permit the women in the poorer classes to engage in remunerative work. In all the large cities needy school children of the poor are given the noonday meal at a cost of from twenty to thirty pfennigs, as against eighteen in peacetime. Three classes of kitchens are now maintained in practically all cities: For the very poor; for the lower middle classes; and for the class of petty officials.

Meals at Civic Kitchens

THE petty officials—post office, police, railroad, telegraph, and so on—have had a hard time, because the salaries in those positions, unlike daily wages, have not been advanced at all comparably to the increase in the cost of living. The food may be taken to the home or eaten at the public eating house. The costs vary from 7–10 to 17–22 cents for the noonday meal—the former for the poorest classes; the latter for the middle class.

The food is clean, well selected, prepared in accordance with the tastes of the class to which it is to be served, and also, of course, in accordance with the state of the markets. Very few of these places serve more than the midday meal, it being considered better policy to have the breakfast and supper prepared in the home. The taking of the noon-meal food to the home is encouraged, as tending to maintain family life. The efficiency in management may be illustrated by the figures for one large kitchen, where, of the total cost of a meal—thirty-three pfennigs—twenty-eight went for the raw foods.

The unit value of these meals varies from nine to thirteen hundred calories.

The patrons of civic kitchens must hand in portions of the meat and potato cards; in some cities cards for pulses and cereals also. It is usually planned to leave the food of the bread, butter and sugar cards for home consumption.

The attendance on these civic kitchens and eating houses has fluctuated with the stringency in food supplies. The different cities in the empire have now capacities for

School Children Contributing Their Share to the Food Supply

feeding some six millions daily; to what extent of their capacities they are in operation cannot be stated, as the statistics of these places are not published. They have accomplished results of enormous nutritional importance during the past summer. The feature of pauperization is being carefully avoided. That these places fill a niche between the problems of production and consumption cannot be doubted, as they remove the difficulties of distribution from a class that has little stability in the market.

The machinery through which the regulation of production, distribution and consumption of food and feeding stuffs was accomplished was elaborated for the exigencies of the situation of war. The workings occur largely through operating companies. These companies were organized for particular tasks. They were incorporated, and were limited—*Gesellschaft mit beschränkter Haftung*. Once the articles they were to handle had been obtained by confiscation, they were turned over to the particular company. The company had a capital stock, derived from the state. It had the right of contract, could buy, sell; and, in fact, enjoyed all the rights of trade, plus monopoly. The transactions were supposed to return a nominal profit.

The press of the opposition frequently made complaints against the management of these companies. It was alleged that the overhead charges were excessive; that the officials were oversalaried; that too many aids were employed; that sinecures existed; and that influence and not efficiency sometimes determined appointments. So far as it was possible for the writer to obtain an idea of the internal workings of these companies, these allegations seemed to have little basis; on the whole, these companies seemed to carry out their allotted tasks with dispatch and effectiveness. There was sometimes overlapping, with resulting confusion and failure. The companies did not always succeed in accomplishing what they were organized to do; but that lay in the difficulties of the situation, rather than in the working operations.

The following is an incomplete list of these companies, but it will suffice to indicate the scope and character of the organizations—thirty-three in all:

Imperial Grain Department; Central Bureau for Maintenance of Military Supplies; Barley Utilization Bureau; Imperial Society for Milk Concentrates; Imperial Bureau for Food Fats; Commission for Fodder Surrogates; Distribution Bureau for Crude Sugar; Association of German Landlords; Central Buying Department; Dried Potato Utilization Company; War Company for Sauerkraut; War Company for Fruit Canning and Marmalades; Pig-fattening Corporation; War Commission for Vegetal Oils and Animal Fats. These operate now under the food controller by authorization of the Chancellor.

Middlemen Cut Out

PASSING through the average small American town, one is impressed by the number of retail stores and churches; there is not business enough for the stores, and there are not communicants enough for the churches. One of the first problems in the food control of Germany was the multiplicity of middlemen, and the desire of each to continue in wartime to handle foodstuffs as he had done in peacetime. The wishes of these tradesmen were not compatible with the desire of the authorities to keep the prices of foodstuffs down. Until the incoming of Von Batocki the dealers eluded all efforts to constrict them successfully. Wholesale prices would be fixed for a certain article. Then the article would be passed through a chain trading, passed from one to another for the mere purpose of adding to the price. Thus the retail price was forced up.

If maximum retail prices were applied in one place and not in another the wares were shipped to the locality of highest price. If a substitute was on the market this would be used in manipulation of the price of the real article. The middlemen would store large amounts, create a shortage, and when the demand forced the elevation of the maximum price the hidden wares would be returned to the markets, and the producer had no advantage from the increase in maximum prices.

When one contrasts the producers' prices and retail prices during the first six months of 1916, one is forced to the conclusion that the toll imposed on the consumer by the middlemen was, for many articles, not less than half the sales price. In particular, the middlemen plied a profitable trade in inferior or worthless surrogates that were foisted on the market and tempted people because stringency was so acute.

Measuring Supplies in a Berlin Butcher Shop

The authorities in cities and communals early took their business into their own hands as the only method of cutting out the chain trading, dealing with the producer directly, and themselves making their distributions. This had, in itself, a tendency to corner the market, as the cities were such large buyers. And instances were not unknown in which a municipality plied this trade to the large financial advantage of its own coffers, as when Schöneberg purchased noodles from the Imperial Grain Department, allowed the retail seller five pfennigs' profit per pound, and retained seven for itself.

Definite regulations were enacted by Von Batocki in August, 1916. All dealers in foodstuffs had to secure licenses to engage in business. This did not apply to producers, holders of wa concessions, municipalities or communals. The Centra Bureau grants, limits or refuses in accordance with it interpretation of the needs of the market and the interest of the consumer. Commission agents are abolished; fron the wholesaler to retailer there must b no middleman. The number of whole salers is limited by the volume of the busi ness. The number of retailers is limite by the interests of the consumers; and for most foodstuffs, the consumers ar placed on retailers' lists, and the busines of the retailer is thus directly known an controlled.

Censored Advertising

ALL increase of price by indirection o chain trading was made a pena offense. Advertisements seeking purchas of foodstuffs must pass inspection of au thorities before being permitted, also suc dealing with offers for sale or with an subject bearing on the question of the sup ply or prices of foods. The press was mad responsible for the periodic inspection o the advertisement columns.

Acting under the authority of thes regulations, the authorities now practicall dictate the way that business in foodstuff is done; and the result has been to plac the consumer closer to the producer, an to eliminate a considerable number o large and small middlemen and buyin and sales agents. The theory is not tha such intermediary dealing between pro ducer and consumer is indispensable o wrong—though, of course, in normal times abused b manipulations and extortions; it is that the state will d for nothing what private interests previously did at a larg profit to themselves.

During the month of August the following were convicte in the city of Berlin for violations of the regulations dealin with sale and prices of foodstuffs: Butchers, twenty-nin produce dealers, one hundred and twenty; grocers, seventy three; milk dealers, fifty-eight; bakers, twenty-four; pe dlers, twenty-nine; barkeepers, six; fishmongers, fiv pastry dealers, two; butter dealer, one; and soap deale one. If this number were caught, how many were guilty The regulations were later well enforced and observed.

When the authorities limited the number of middl men—wholesalers, commission men and retailers—in an line of trade, the result was, of course, to deprive those me of their occupations. Such limitations were carried throug rather rigorously in some lines, because of the lessened vo ume of business and the necessity of control of the circun stances of sale. The deposed dealers were left to their ow devices; if individual sacrifice was made necessary, tha was nothing unusual in a war that teemed with sacrifice

The labor market of Germany has faced scarcity in me from the beginning of the war, and wages have been hig The central bureaus controlling the distribution of foo stuffs have required the services of many aids, drawn i part from the ranks of those familiar with a particula trade. Removed from trade, dealers have lost the profi that war has, in history, yielded to tradesmen; but in a likelihood want has not been induced thereby, as oppo tunity for occupation in one line or another has alway been easily available.

(Continued on Page 49)

Setting a Pace for Production

One idle machine is costlier than a hundred that keep on working.

The factory superintendent knows this. To him uninterrupted production is vital.

So he demands equipment that will obviate shut-downs due to faulty performance.

He specifies Robbins & Myers Motors for their dependability year in and year out. To him every Robbins & Myers installation is a veritable production guarantee.

He knows that whatever the size, whether 1/40 or 25 horsepower, or whatever the circuit—direct or alternating current, there is the very Robbins & Myers Motor for the purpose.

He knows that makers of the best motor driven equipment, from vacuum cleaners for the home to drill-presses for the machine shop, equip their product with Robbins & Myers Motors because of the high operating efficiency they insure.

If you are a user of electrical power, a manufacturer of motor driven equipment, or a dealer, write for prices and facts regarding Robbins & Myers service.

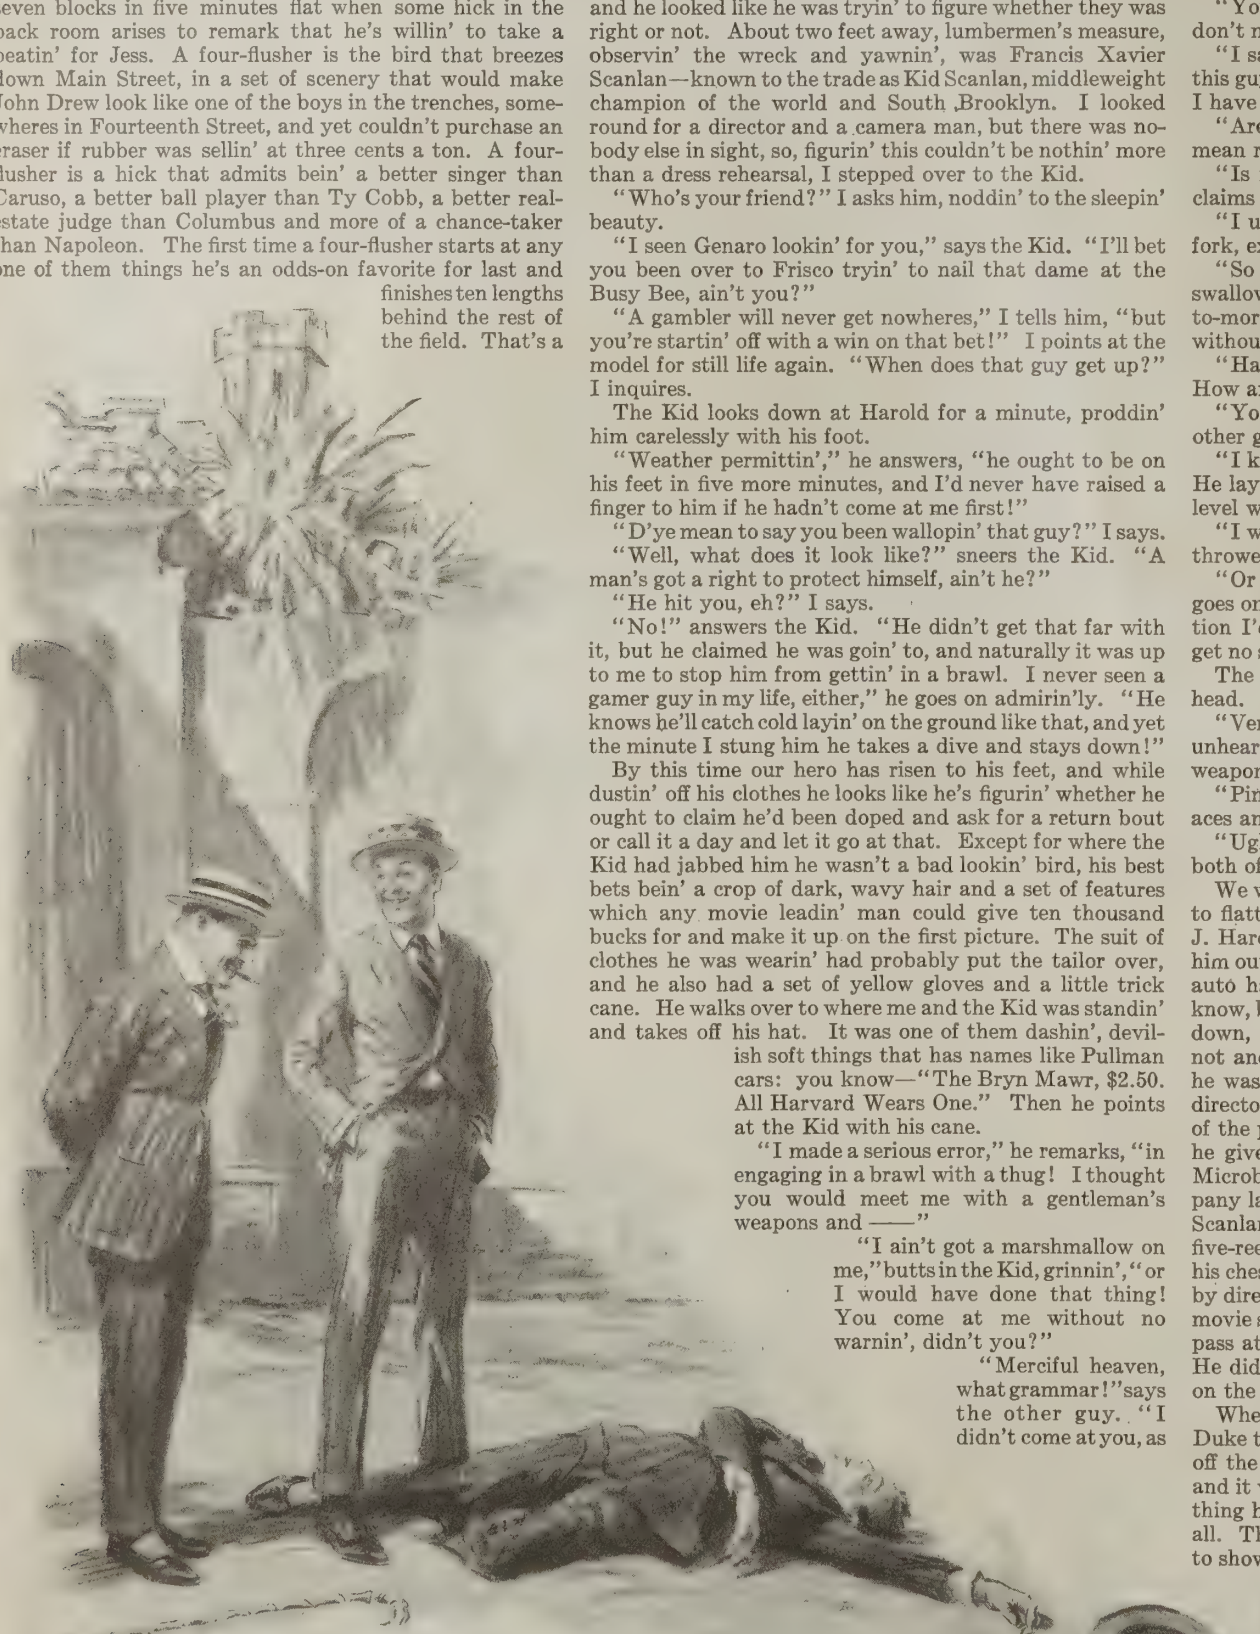
LEND ME YOUR EARS

By H. C. WITWER

ILLUSTRATED BY ARTHUR WILLIAM BROWN

I DON'T mind a four-flusher if his stuff is good—know what I mean? A guy that makes the world think he's there forty ways when, as a matter of fact, he's shy about sixty, deserves credit. Usually them birds get it too! They know more about credit than the guy that wrote it; and any butcher, grocer, tailor or bartender who figures on 'em settlin' the old account has no right to be in business. The only time a four-flusher pays off is when he hits a new town. Then, if the attendance is good, he'll buy four or five evenin' papers right out loud in front of everybody, carelessly displayin' a couple of yellow bills that might be fifties—if they wasn't tens. After that outburst all he spends is the week-end.

For the benefit of those who live in towns where the total vote for president sounds like the score of a world-series game, I'll explain what a four-flusher is—although they probably got one in their midst at that. You'll generally find one wherever there's two people—men or women. A four-flusher is a guy that claims he can lick Jess Willard, in a loud and annoyin' voice, and then runs seven blocks in five minutes flat when some hick in the back room arises to remark that he's willin' to take a beatin' for Jess. A four-flusher is the bird that breezes down Main Street, in a set of scenery that would make John Drew look like one of the boys in the trenches, somewheres in Fourteenth Street, and yet couldn't purchase an eraser if rubber was sellin' at three cents a ton. A four-flusher is a hick that admits bein' a better singer than Caruso, a better ball player than Ty Cobb, a better real-estate judge than Columbus and more of a chance-taker than Napoleon. The first time a four-flusher starts at any one of them things he's an odds-on favorite for last and finishes ten lengths behind the rest of the field. That's a four-flusher! A guy can be taught paintin', pinochle, politics and prohibition, but a first-class four-flusher is born that way!



"D'ye Mean to Say You Been Wallopin' That Guy?" I Says

Takin' 'em as a league, I'm about as fond of them guys as a worm is of a fisherman. The only one I ever fell for was J. Harold Cuthbert, and that bird had somethin' that the others didn't—he was different! I thought I had seen 'em all, but this guy crossed me—his stuff was new!

The way I met Harold was almost romantic. He was reclinin' on the ground in a careless manner about ten feet away from the main entrance to Film City, Cal.; and he looked like the loser in a battle royal, where the weapons used had been picked out by a guy who hoped there'd be no survivors. He was gazin' up at what the natives insist is a better grade of sky than anything we got in the East, and he looked like he was tryin' to figure whether they was right or not. About two feet away, lumbermen's measure, observin' the wreck and yawnin', was Francis Xavier Scanlan—known to the trade as Kid Scanlan, middleweight champion of the world and South Brooklyn. I looked round for a director and a camera man, but there was nobody else in sight, so, figurin' this couldn't be nothin' more than a dress rehearsal, I stepped over to the Kid.

"Who's your friend?" I asks him, noddin' to the sleepin' beauty.

"I seen Genaro lookin' for you," says the Kid. "I'll bet you been over to Frisco tryin' to nail that dame at the Busy Bee, ain't you?"

"A gambler will never get nowheres," I tells him, "but you're startin' off with a win on that bet!" I points at the model for still life again. "When does that guy get up?" I inquires.

The Kid looks down at Harold for a minute, proddin' him carelessly with his foot.

"Weather permittin'," he answers, "he ought to be on his feet in five more minutes, and I'd never have raised a finger to him if he hadn't come at me first!"

"D'ye mean to say you been wallopin' that guy?" I says.

"Well, what does it look like?" sneers the Kid. "A man's got a right to protect himself, ain't he?"

"He hit you, eh?" I says.

"No!" answers the Kid. "He didn't get that far with it, but he claimed he was goin' to, and naturally it was up to me to stop him from gettin' in a brawl. I never seen a gamer guy in my life, either," he goes on admirin'ly. "He knows he'll catch cold layin' on the ground like that, and yet the minute I stung him he takes a dive and stays down!"

By this time our hero has risen to his feet, and while dustin' off his clothes he looks like he's figurin' whether he ought to claim he'd been doped and ask for a return bout or call it a day and let it go at that. Except for where the Kid had jabbed him he wasn't a bad lookin' bird, his best bets bein' a crop of dark, wavy hair and a set of features which any movie leadin' man could give ten thousand bucks for and make it up on the first picture. The suit of clothes he was wearin' had probably put the tailor over, and he also had a set of yellow gloves and a little trick cane. He walks over to where me and the Kid was standin' and takes off his hat. It was one of them dashin', devilish soft things that has names like Pullman cars: you know—"The Bryn Mawr, $2.50. All Harvard Wears One." Then he points at the Kid with his cane.

"I made a serious error," he remarks, "in engaging in a brawl with a thug! I thought you would meet me with a gentleman's weapons and ——"

"I ain't got a marshmallow on me," butts in the Kid, grinnin', "or I would have done that thing! You come at me without no warnin', didn't you?"

"Merciful heaven, what grammar!" says the other guy. "I didn't come at you, as you say in that quaint English of yours; I thought you could take a joke or ——"

"Yeh?" interrupts the Kid. "That's what the Kaiser has been tellin' Belgium, but I don't think they went into no hysterics over his comedy!"

"Well," says the other guy, buttonin' up his coat and glarin' at us both, "this is not the end of the incident you can rest assured of that! The next time we meet I think the result will be different!"

"Say!" pipes the Kid. "What d'ye think I'm gonna do—fight a world series with you? If you wanna scrap I know where you can get all the action you can handle."

"And where is that, pray?" asks the other guy.

"Europe!" says the Kid. "You must have seen it in the papers." He pats the young man on the shoulder. "And now good-by and good luck," he goes on. "I'm sorry I had to bounce you, but ——"

"Enough of this nonsense!" cuts in the other guy, pullin' out a card and passin' it over to the Kid. "My second will wait upon you to-morrow. I choose rapiers!"

"You which?" says the Kid, examinin' the card. "I don't make you."

"I said that my choice of weapons is rapiers!" explains this guy. "And as a matter of fairness I must tell you that I have never met my equal with a sword!"

"Are you tryin' to kid me?" asks Scanlan. "What d'ye mean rapiers?"

"Is it possible you have never handled a blade?" exclaims the other guy, like he couldn't have heard it right.

"I used to at that," admits the Kid, "but now I use a fork, except to pat down the potatoes."

"So much the worse for you, then!" frowns the sword swallower. "But you brought it upon yourself. Remember to-morrow! And"—he stoops over and hisses—"rapiers without buttons!"

"Ha, ha!" yells the Kid. "Raypeers without buttons! How are you gonna hold 'em up?"

"Your ignorance is pathetic—not funny!" answers the other guy.

"I know," says the Kid. "I barely got through Yale!" He lays his arm on this guy's shoulder. "Are you on the level with this fight thing?" he asks him.

"I was never more in earnest in my life!" says the knife thrower.

"Or nearer heaven!" grins the Kid. "All right!" he goes on. "I'm game if you are, only there's just one question I'd like to ask before the slaughter begins—don't I get no say about the tools we're gonna use?"

The other guy thinks for a minute and then nods his head.

"Very well!" he says. "I'll make the concession—an unheard-of thing in the code. What is your choice of weapons?"

"Pinochle!" yells the Kid. "I'll stake you to a hundred aces and beat you from here to Denver!"

"Ugh!" snorts the other guy, and castin' a sneer at both of us he passes in the gate.

We went in after him, and the Kid tells me how he come to flatten this guy, which from the card he give us was J. Harold Cuthbert. The Kid says Harold had stopped him outside the portals of Film City and asked him why no auto had met him at the train. Scanlan says he didn't know, but he had seen the mayor and two brass bands goin' down, and hadn't Harold met 'em? Harold says he had not and he was gonna file a complaint about it, because he was the greatest movie actor that ever bawled out a director. With that, says the Kid, he reeled off the names of the pictures he had been featured in; and from the list he give out the only thing he didn't play the lead in was Microbes at Play, an educational film tore off by the company last year. The Kid asks him if he ever heard of Kid Scanlan, the shopgirls' delight, who was bein' starred in a five-reeler called Lay Off, MacDuff. Harold throws out his chest and says he wrote it and practically made Scanlan by directin' it. At that the Kid tells him that he may be a movie star, but he looks like a liar to him. Harold makes a pass at him and Scanlan hit him to see would he bounce. He didn't, and he was just comin' round when I blowed on the scene.

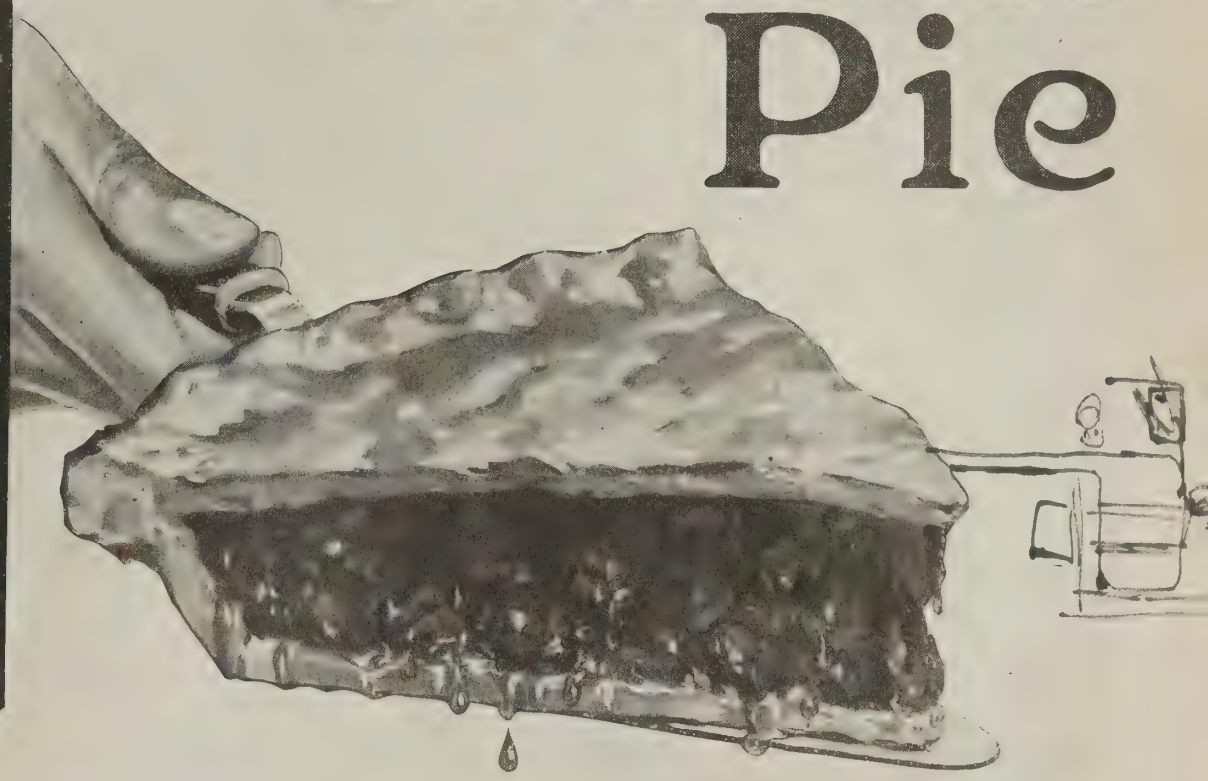
When we got to Genaro's office, Harold was tellin' Eddie Duke the reason he was bunged up was because he had fell off the train comin' out. And Eddie says that was tough, and it was time Congress got after them railroads, but the thing he'd like to know was why Harold had come out at all. They had looked up the files and there was nothin' to show who had ordered this guy shipped on.

Harold looks over the bunch in the office for a minute, registers "I am thinking deeply," and then snaps his fingers.

"Oh!" he says. "I had a letter of introduction from Mr. Potts, but I suppose it's in my gra

(Continued on Page 30)

California Raisin Pie



The Famous Recipe
—made with Sun-Maid Raisins

"CALIFORNIA RAISIN PIE" leads in deliciousness, ease of making and economy. Countless thousands now ask for it at the mid-day meal downtown. It's the *energizing* fruit pie—for *brain* and *brawn*. Both good and good *for you*, and for the children. Just serve a California Raisin Pie with a meal at home. You can buy it from your baker or bake it in your kitchen. Use the recipe below.

This luscious pie is made with Sun-Maid Seeded Raisins, which every grocer sells—full-juiced, meaty, thin-skinned *California* raisins—Muscat grapes cured by the glorious California sunshine. And raisins are 75% carbohydrates—grape sugar—pre-digested and ready for action in providing energy.

Mother, give your family, especially the children, the benefit of pie like this. Order a package of Sun-Maid Raisins now—then try our recipe.

Business men and women, ask for *this* pie at your restaurant or lunch room. It is a delicious adjunct to the light-lunch method of preventing "heavy" afternoons. Taste this energy dessert. Learn how it sustains you.

SUN-MAID RAISINS are packed for home use in one-pound sealed containers—each package freshly seeded and pasteurized by a highly scientific mechanical process. Quality always uniform.

California *Raisin* Pie

One cup Sun-Maid Seeded Raisins, 1 cup cold water, 1 tablespoon sugar, 1 tablespoon cornstarch, 1 level teaspoon salt. Put raisins in saucepan with cold water, bring slowly to boil. Add sugar, salt and cornstarch, which has been mixed with a little cold water. Boil three minutes. Pour into pie tin lined with crust, while hot. Cover and brush with cold milk. Bake in oven with quick bottom heat. Lemon flavor may be added if desired.

A beautiful little booklet containing tested recipes for scores of dainty raisin dishes will be sent free to any address upon request. Send a post card for your copy today.

California *Raisin* Bread

Made with Sun-Maid Raisins

Your baker can now supply you with a delicious loaf of

CALIFORNIA
RAISIN BREAD

Made with Sun-Maid Raisins after a prize recipe which we furnish to all bakers free. This recipe calls for a loaf containing *plenty* of Sun-Maid Raisins—a loaf that will please you in every respect.

(Continued from Page 28)

morning suit, which will arrive with my trunks in a day or so. Mr. Potts and myself are old friends." He winks at Genaro confidentially. "I really think my father owns a slew of the company's stock, but then dad is connected with so many vast enterprises that ——"

"Joosta wan minoote!" interrupts Genaro, turnin' a cold eye on Harold. "Joosta wan minoote! We're very busy joosta now; sometime nex' week everybody she's a listen about your father. What we wanna know is what Meester Potts he's a send you out here to do."

"Yeh!" says Duke. "That's the idea—what's your act?"

"Why I intend to play romantic leads," pipes Harold; "and I have an idea that ——"

"Ha, ha!" laughs the Kid. "That's fair enough. All Edison had was an idea, and look at him now!"

Harold frowns at him and walks over to Miss Vincent.

"How do you do, Miss Vincent?" he says, takin' off his hat and makin' a costume-play bow. "I knew you at once from your photographs. I have a remarkable memory, inherited from my father. The late J. P. Morgan once said of him, during the course of a gigantic stock deal, that —— But enough of personalities. I saw you in the Escapes of Eva."

"Did you like me?" smiles Miss Vincent.

"Very much!" Harold tells her. "Although the mediocre support and execrable direction spoiled most of your opportunities. Now, if I had directed that picture you would have been a great deal ——"

"Joosta wan minoote!" butts in Genaro, gettin' red in the face. "I, Genaro, directed that picture!"

Harold looks over at him and lights a cigarette.

"Well," he says, flickin' the ash in Genaro's drinkin' glass, "I dare say you did your best! But had I been there when the picture was being produced I would have suggested a great many things that would have greatly improved it. I remember calling Belasco's attention to a detail one time, and Dave said to me ——"

"Enough!" snaps Genaro, glarin' at him. "You will report to Meester Duke. He's a tella you what to do. Or maybe," he snorts, "maybe you tella heem!"

And he stamps out of the office.

"What a quaint little man!" says Harold, sittin' down in Genaro's chair and glancin' with interest over some letters that was on his desk. "How do those chaps ever get into the movies?"

"Ow!" whispers Duke. "If the quaint little man had only heard that!" He turns to Harold. "I don't know where I can place you right away," he says. "How are you on Shakspere? We're putting on a seven-reeler of As You Like It, with Betty Vincent as Rosalind. Do you think you could do Orlando?"

Harold throws out his chest and sneers. "What a question!" he remarks. "I could eat it up!"

"I don't want you to eat it," says Duke, gettin' sore. "If you can play it I'll be satisfied! You had better go over and register at the hotel now, and when you come back we'll go over the thing."

Harold gets up, yawns and looks at Miss Vincent.

"I'll show you an entirely new interpretation of Rosalind, Miss Vincent," he tells her. "Of course Shakspere was clever after a fashion, but I—however ——" He breaks off and holds out his arm. "Would you care to walk about the grounds here a bit, so that I may illustrate some of the salient points in my version?"

"No!" cuts in the Kid before she can answer. "On your way!" he says. "Miss Vincent's got a date with me to find out is it true you can make ninety miles an hour in a 1916 Automatic!"

"But—but, my dear sir," splutters Harold, "I—you ——"

"Listen, stupid!" says the Kid. "I can't be bouncin' you all day, but if you don't canter along I'll make you hard to catch!"

Miss Vincent smiles and grabs the Kid by the arm.

"Let us have no violence!" she says. "You can tell me all about Rosalind when I return, Mr. Cuthbert."

"Yeh," adds the Kid, "I'll be willin' to stand for an earful of it myself then!" And they breeze out.

"Heavens, what an uncouth ruffian!" pipes Harold, lookin' after 'em. "I wonder Miss Vincent trusts herself in his company!"

"She's a whole lot safer with him than you'd be, old top!" I says. "And if I was you I'd lay off that uncouth-ruffian stuff round the Kid. Don't keep temptin' him, because he's liable to get sore, and when Scanlan gets mad you want to be in the next county!"

"Huh!" sneers Harold. "What does he do, pray?"

"Well," I says, "I'll tell you. I don't get that 'do-pray' thing of yours, but the last time the Kid got peeved he won the middleweight title! Is that good enough?"

"He had better look to his laurels," remarks Harold, "for if he insults me again he'll lose them! I'm rather a master of boxing, and at home I won several medals as an amateur heavy ——"

"I suppose," I butts in—"I suppose you left them medals in one of them gray mornin' suits of yours, eh? You didn't have 'em on when the Kid flattened you, did you?"

"I am not fond of vulgar display," he says, "or ——"

"What are you wearin' that black eye for, then?" I asks him.

He didn't have none ready for that and I blew.

II

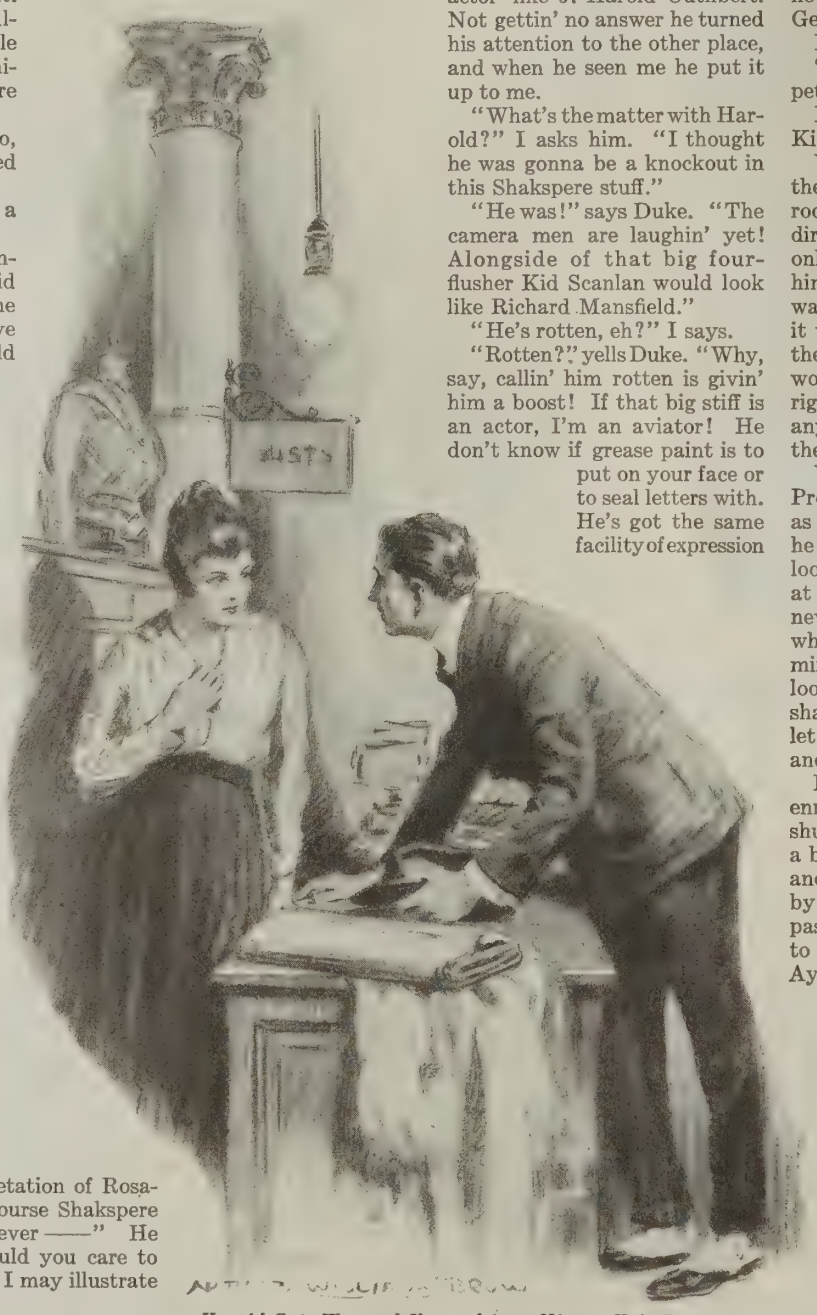
WELL, Harold run true to form. The next afternoon I seen Duke standin' near the African Desert. He was callin' upon heaven, in a voice that could be heard plainly in Cape May, N. J., to ask it if it had ever seen an actor like J. Harold Cuthbert. Not gettin' no answer he turned his attention to the other place, and when he seen me he put it up to me.

"What's the matter with Harold?" I asks him. "I thought he was gonna be a knockout in this Shakspere stuff."

"He was!" says Duke. "The camera men are laughin' yet! Alongside of that big four-flusher Kid Scanlan would look like Richard Mansfield."

"He's rotten, eh?" I says.

"Rotten?" yells Duke. "Why, say, callin' him rotten is givin' him a boost! If that big stiff is an actor, I'm an aviator! He don't know if grease paint is to put on your face or to seal letters with. He's got the same facility of expression on that soft-putty map of his as an ox has. He makes love like a wax dummy, and he come out to play As You Like It in a dress suit! It took eight supers to keep him away from in front of the camera, and he played one scene with his face glued up against the lens!"



Harold Gets Warmed Up, and in a Minute He's Press Agentin' Himself at the Rate of Fifty-Five Words a Minute

Just then Harold himself eases into view with the Kid taggin' along at his side. Scanlan is excited about somethin' and wavin' his arms, but Harold still has that old sneer on his face, and as they come up I hear him sayin' this:

"My dear fellow, I know more about auction pinochle than Hoyle. At home I am recognized as the champion card player of ——" He breaks off when he sees us and turns to Duke. "Hello!" he calls over. "Are you ready to admit now that my idea of making feature productions is the right one?"

"No," snarls Duke, "but I'll concede that as an actc you're a crackajack bartender! D'ye mean to tell me tha you got away with that kind of stuff in the studios bac East?"

"I introduced it!" says Harold proudly. "As a directc for some of the largest film companies in the world I hav put on hundreds of ——"

"The only thing you ever put on was your hat!" inte rupts Duke. "And I bet that give you trouble on accoun of the size of your head! I suppose you're gonna tell m that you're also a scenario writer, a camera man and th guy that got Nero's permission to film the burnin' of Rom eh?"

"The last is something of an exaggeration," pipe Harold, "but as far as the other things you mention ar concerned I must confess that there are few people in th business who have approached me!"

"Ain't that rich?" whispers the Kid to me. "You gc to hand it to this bird!"

"You'd be a wonder as a press agent," I says to Harol

"Now that's odd you should remark that," he smile "for as a matter of fact I excel in that field! I did all th press work for ——"

"Columbus!" yells Duke, wavin' him off. "Good-by! he goes on. "I got enough! You got a liar lookin' lik George Washington!"

Harold looks after Duke as he went into the office.

"Heavens!" he says. "I can't stand that man with h petty little jealousies! Now when I ——"

I don't know what the rest of it was, because me and th Kid left him to tell it to the African Desert.

Well, Genaro, bein' afraid to get in Dutch with Potts the owner of Film City and, accordin' to Harold, an e roommate of his—give this guy a crack at everything fro directin' to supin', and Harold hit .000 at 'em all. Th only thing he seemed to be any good at was talkin' abou himself, and he was champion of the world at that! H was willin' to concede that Wellington beat Napoleon an it was Fulton who doped out the steamboat, but he wa the guy that had put over everything else. His favori word only had one letter in it and that's the one that come right after *H*. No matter what subject would come u anywheres where Harold could get an earful of it, he wa the bird that invented it!

We went down to Montana Bill's one afternoon to de Prohibition a blow, and the Kid gets talkin' about drinki as an art, carelessly lettin' fall the information that, befo he had put the Demon Rum down for the count, he had bee looked on as champion at goin' through the rye. He wink at Bill and orders a tumbler of private stock. Harol never bats an eye, but says he's got a roomful of lovin' cu which was give him for emptyin' bottles. Bill sets down mixin' glass full of the stuff before the Kid, and Scanla looks at Harold and asks Bill what was the matter with th shaker. Harold coughs and raps on the bar. "You ma let me have a seidel of gin!" he says, sneerin' at the Kid and we all fainted.

He got run out the south gate one afternoon by a enraged scene painter, for tellin' the latter that he coul shut both eyes, bind one arm, lay flat on his side and pai a better exterior than the two-hundred-a-week decorato and he started a riot in the developin' room another tim by remarkin' that the bunch in there didn't know how t paste up film—addin', of course, that he did. He trie to show Van Aylstyne how to write scenarios, and Va Aylstyne threatened to quit cold if Harold wasn't calle off; and when he found fault with Genaro's lighti of a night scene Genaro chased him all over the pla with a practical shotgun.

It wouldn't have been so bad if Harold had con through on somethin'. If he had discovered an thing he could actually do even halfway decent I would have got away with murder; but no—that bi was the original No Good Nathan, from Useles Miss. The fact that he didn't cause no sensation our midst worried Harold about as much as the pri of electric fans keeps 'em awake in Iceland. The was only one thing Harold was afraid of—and th was lockjaw!

Then Potts, the big boss, blows in unexpected o afternoon and we all stood round to see him a Harold fall on each other's necks. In fact, pret near everybody in Film City watched the reunion, whi took place on the edge of the street scene in Tokio.

Potts comes walkin' along with three supers and Edd Duke carryin' his suit cases, when Harold bumps into t parade at the corner. Genaro had sent him over to Fris for a lot of props that would be needed in a picture he w puttin' on, and naturally, now that Potts was on hand, was anxious to have everything O. K. He had give Harol list in the mornin' that read like an inventory of a machi shop, and here's friend Harold comin' back with nothin' his hands but his fingers.

"The props—where are they?" shrieks Genaro. "Sev hour you have been gone and you come back with nothin Everything she's a ready and we musta wait till you con with the props. Where are they—queek?"

(Continued on Page 33)

"Won't Daddy be surprised that I've made my own birthday cake, mother?"
"Yes, dear, and I'm proud you did, with only the McDougall to help you."

All the Latest Improvements are in the McDougall

The McDougall has the new, snow-white porceliron extension tabletop — that never requires scrubbing or scouring—that is as sanitary as glass, but will not chip or break—that nothing can stain or mar.

—has the new leg base—that you can sweep under without moving the cabinet—a sanitary feature of the greatest importance.

—has the new, easy filling, removable, open-faced flour bin, with attached magic sifter — that supplies the exact amount of flour needed.

—has durable, pure white enamelled cupboards and compartments — to hold a full supply of package goods and necessary china.

—has large, swinging, crystal-glass, metal-top sugar bin, with new quick-action shutter, from which the sugar flows freely as required.

—has crystal-glass, metal-top jars, plainly marked for coffee, tea, spices—with sifter-tops for salt and pepper.

—has racks for cook-books, extracts, tickets, small change—bill spindles—reference tables—order reminder—meat board and chopper stand.

—has roomy drawers or knives, forks, spoons and all small articles — for linens and towels — all neatly and conveniently divided.

—has large cupboard with sliding bottom and sliding shelf, containing ample room for all kettles, pots, pans and other large utensils.

—has big, all-metal bread and cake drawer, with automatic cover and sliding shelf — that keeps bread and pastry fresh and sweet.

—has lacquered artcraft trimmings, ball-bearing casters, art-panel doors — and all the latest improvements in kitchen efficiency.

—has graceful lines — superfine cabinet work, and is daintily finished with steam-proof varnish that retains its lustre indefinitely.

In addition to all these advantages, the McDougall is the only kitchen cabinet made that has the patented Auto-Front feature—which adds immensely to its beauty and convenience.

The McDougall Auto-Front is therefore the one perfect Kitchen Cabinet — the undisputed "Steinway of the kitchen."

ARE you fitting your daughter by example and experience to be a successful home-maker?

Are you encouraging her to take keen delight in cooking and baking? Are you educating her for the practical work of life? Are you teaching her true economy and efficiency?

Economy comes from knowing how to get the best results for the least expenditure—efficiency comes from accomplishment with the least effort. Each is an essential factor.

In kitchen work, both economy and efficiency find their real development in the McDougall with the Auto-Front feature—securing the best results from the least expenditure—in time, labor, money—all with the least possible effort.

The Auto-Front

device (patented and trade-mark registered) consists of a flexible wooden curtain that drops and raises at the finger's touch—leaves no slot or groove to catch dirt and foods—adds over one-third more working surface — does away forever with doors which obstruct the table top.

The McDougall Auto-Front makes kitchen work easier, simpler, quicker—and more interesting.

The McDougall Auto-Front cuts the time spent in the kitchen practically in half—gives you leisure for other things—thus adds to the joy of living—all for only $1.00 a week, for a short time.

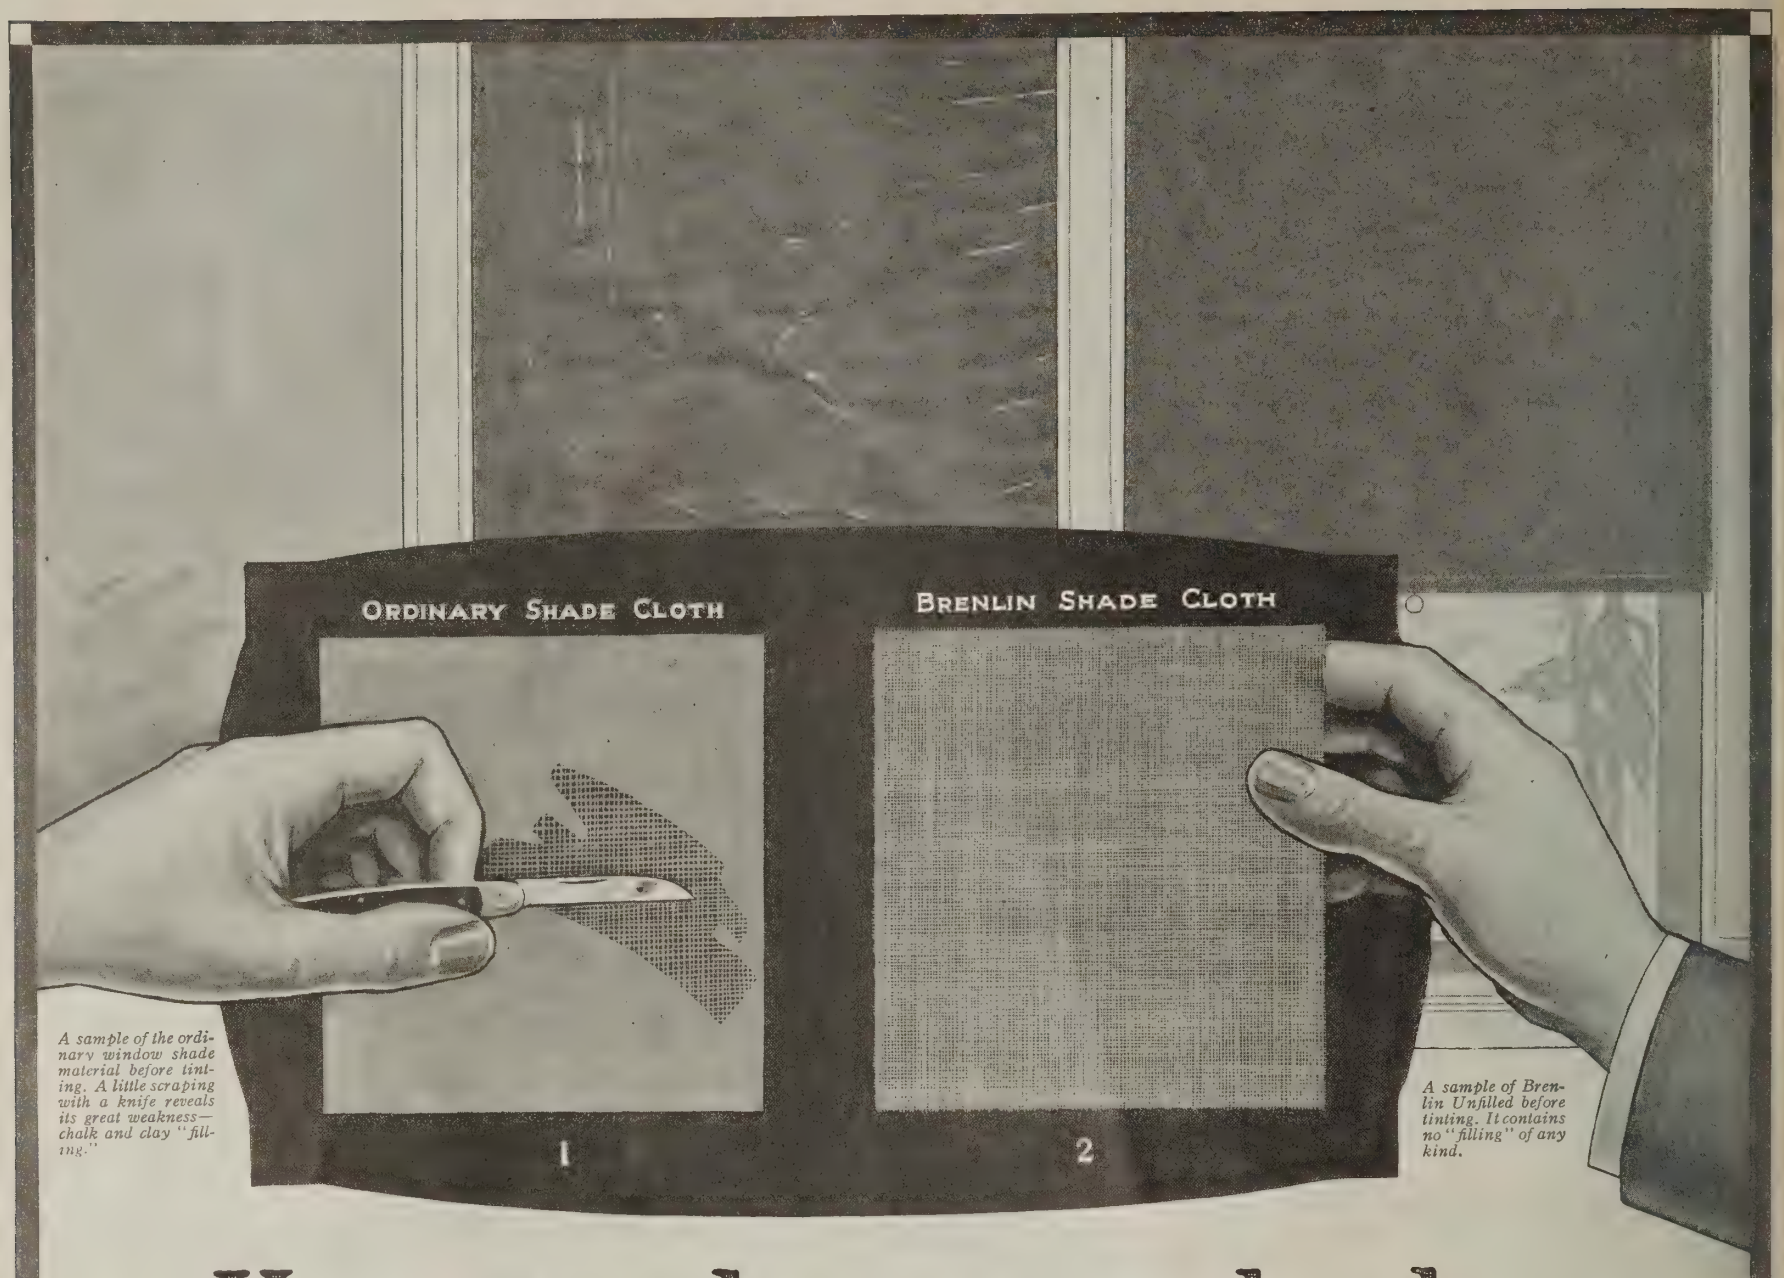
You cannot spend this small amount in any way that will be of greater daily benefit to your daughter, your family and yourself.

Visit your McDougall dealer today—let him demonstrate the advantages of the McDougall Auto-Front. Then, have him send you one on approval—so you can test it in practical use.

Also, write—now—for description, prices and dealer's name to McDougall Company, Frankfort, Ind.

McDougall

The Auto-Front feature can be had only on cabinets bearing this name



A sample of the ordinary window shade material before tinting. A little scraping with a knife reveals its great weakness—chalk and clay "filling."

A sample of Brenlin Unfilled before tinting. It contains no "filling" of any kind.

Here is why your shades show cracks and pinholes

Here is the vital fact you must know—if you would get window shades that *really wear*.

It is a *hidden* weakness—this cause of cracks and pinholes—a certain great fault of the ordinary type of window shade.

What it is—and how you can avoid it—is clearly revealed above.

The story the pictures tell

Note, first, photograph No. 1. This is a sample of the ordinary window shade material in unfinished state, before the tint is applied. Its surface has been lightly scraped with a knife. Here, exposed before your eyes, is the great hidden weakness of the ordinary shade.

See what has happened: The scratching has loosened a quantity of chalk and clay filling, revealing the coarse muslin cloth beneath. At your windows, under the strains and stress of daily usage, this "filling" loosens and falls out, leaving a "mess" of cracks and pinholes, as shown above in the picture to the left.

Now note photograph No. 2. This is a sample of BRENLIN UNFILLED shade material in the same unfinished state. Observe that it consists purely of a fine, closely woven cloth—that it contains not a particle of chalk, clay or any other filling!

What is the result?

In Brenlin Unfilled, as a result, has been perfected a shade material of remarkable durability. A material that really resists the constant strains of daily usage—a material that is fortified to withstand those sudden attacks of sucking, snapping wind—a material that the hottest sun cannot fade, nor the inbeat of water spot—a material that is supple, not stiff, yet cannot sag, bag, or wrinkle. A material, to sum up, that wears twice as long as the average—because from it has been eliminated that filling which is the greatest weakness of the ordinary shade.

Go to the Brenlin dealer in your town today, ask for this UNFILLED grade of Brenlin Shades—*and get it.* It is perforated with this mark—BRENLIN—along the edge of every yard. Look closely for it when you buy and when your shades are hung. Made in many rich, lustreless tones, and in Brenlin DUPLEX—light on one side, dark on the other.

For windows of little importance Brenlin Filled offers the utmost shade value at its price.

Write for the Brenlin Book today

It shows actual samples of Brenlin UNFILLED shades in all colors and gives many helpful suggestions for artistic window treatment. With it we will send you the name of the Brenlin dealer nearest you, or tell you how to order direct. CHAS. W. BRENEMAN & CO., 2010 Reading Road, Cincinnati, Ohio.

(Continued from Page 30)

"My dear fellow," says Harold, bowin' to Miss Vincent, "there is no excuse for addressing me before these ladies and gentlemen in that ruffianly manner. I was unable to carry out your—er—orders this morning, having overlooked a trifling detail in the scurry and bustle of catching that ungodly early train."

"What!" screams Genaro, doin' a few cabaret steps. "You got nothing? *Sapristi!* What you do—make fun of me? Why you no get those props?"

"Calm yourself!" pipes Harold. "I'll tell all. I forgot the list of articles you gave me and ——"

"Aha—he's a maka me crazee!" yelps Genaro, pullin' a swell clog step. "Take heem away before I keel heem!"

Just then Potts comes by and we all yell:

"Welcome to Film City, Mr. Potts!"

Harold hears this and turns pale. He seen we was all watchin' closely for the grand reunion between him and his old college chum Potts. He coughs a couple of times and takes a step forward. That boy was game!

"How do you do, Mr. Potts?" he says. "Did you—er—have a pleasant trip?"

"Yes," answers Potts, lookin' at him kinda puzzled. "What is your name again? I don't seem to recall it!"

And this was supposed to be Harold's dear old college chum!

"Why—eh—why—ha, ha!" pipes Harold, dyin' game. "That's odd! Surely you recall—eh—Cuthbert, my name is, you must remember—eh—why in New York we—eh ——"

He's about eighty feet up in the air and still soarin', with the whole bunch watchin' him and enjoyin' the thing out loud. Potts is lookin' him over like he's a strange fish or somethin'.

"I think you're mistaken!" pipes the boss, cuttin' in on Harold. "I never saw you before in my life!"

With that he passes on, leavin' Harold flat and with no more friends than an umpire.

After that little incident it was about as pleasant for Harold in Film City as it would be for a German in Liverpool. Genaro, Duke and everybody else went out of their way to make him sick of the movies; but Harold stuck round and took whatever odd jobs that come his way, with the remark that he could do it better than anybody else and that was why they give it to him.

I made a mistake when I said everybody rode him. He had three little pals. They was Miss Vincent, the Kid, and yours in the faith. Miss Vincent claimed that after all he was only a boy which would grow out of lyin', if given enough time, and it was an outrage the way everybody picked on him. The Kid said we couldn't all be perfect, and Miss Vincent would give him back his presents if he laid off Harold. My excuse for not shootin' Harold was that I liked one thing about him, and that was the way he hung on no matter how they was breakin' for him. He was no good all over, but he wouldn't quit, and any guy that could stand up under the punishment like he did is worth a cheer any time—and sometimes a bet!

I thought I'd brighten his life by tellin' him how he stood with the three of us. I pictured him goin' down on his knees and thankin' me, with tears in his eyes, when I said that we was with him to the bitter end. He must have had rheumatism or a pair of charley horses, because he failed to do any kneelin' where I could see it, and his eyes was as dry as the middle of Maine. Instead of that he took me for ten bucks and said the news was no surprise to him. He didn't see how Miss Vincent could miss likin' him, because he had been an assassin with the women from birth. As for the Kid—well, it was common talk that Scanlan was afraid of him, and I was nothin' but a sure-thing player which knowed he was a winner and stuck, hopin' I'd cash. Could you tie Harold?

Van Aylstyne, the guy that committed the scenarios, went out one night to get some atmosphere for a thriller at Montana Bill's. He got the atmosphere O. K., bringin' most of it back on his breath, and the Kid asked him to stick out his tongue so he could see was there any revenue stamps on it. For the rest of the night the self-confessed author give imitations of the chairman of the belchin' relief committee; and in the mornin' he grabbed a container of ice water and a pen and dashed off an atrocity in five reels, based on what atmosphere of Montana Bill's was still with him. He called the thing The End of the World.

Potts says the title sounded good enough to him to remove the bumpers from his bank roll without lookin' further, addin' in a loud aside that if the plot wasn't a knockout Van Aylstyne could change the title to The End of My Job. De Vronde, the popular heartbreaker, is given the lead, opposite Miss Vincent; and of course Kid Scanlan is to be dragged in as a special feature. Harold has hypnotized Genaro into lettin' him take off a enter-with-others in the first reel. Everything was ready to have the cameras pointed at it, when somethin' come up that balled it all up.

Her name was Gladys O'Hara. Gladys was no ravin' beauty and I heard her say "ain't it" twice, but she was one of them dames that the first flash you get at 'em you wonder are they still enforcin' the law against mashers. She had a wonderful complexion, and although, if you looked close, you could see she had give Nature a helpin' hand she did the retouchin' so well that you was glad she had. She had one of the latest-model, twin-six figures, and she dressed with the idea of givin' the natives a treat, even if she was takin' chances on pneumonia. Gladys was the kind of dame that starts the arguments in the newspapers on what is our offices comin' to—look how them stenographers dress!

When J. Harold Cuthbert met Gladys she had got as far as bein' a saleslady in the Busy Bee, Frisco. She could have beat that with her eyes closed, but Gladys kept hers open, and bein' a female wise guy she knew who to eat lunch with and who to say "I don't get you!" to—which is an art. As a result, she had never got no further than sellin' shirtwaists, and had her first home to break up. She never advanced beyond that counter—up or down! Many a necktie salesman had flashed Gladys and gone right out to buy the tickets before he even asked her would she look over a show, windin' up by throwin' 'em away and tellin' her what a sweet old woman his mother was. That was Gladys. She looked like what she wasn't and she fooled 'em all. All but Harold.

I found Gladys very easy to look at myself, and I helped the Sante Fé over a tough year by runnin' over to Frisco to the Busy Bee whenever I could get away. It took me a short month to find out that I had the same chance of winnin' out that a temperance candidate would have at a brewers' picnic, because Harold had been there first and got in his deadly work.

I was standin' in the next aisle to where Gladys held forth one afternoon, waitin' for a couple of fatheads to call it a day and move away from the counter, when along comes Harold. As usual he was all dressed up like a horse, with the even fare back to Film City in them one-way pockets of his. He butts right into the conversation, and I nearly fainted when he passes a box of candy over to Gladys. Then I seen the label on the package and I revived, because it was one of a dozen that some simp had sent Miss Vincent, and in order to please the Kid she had give 'em all away. Harold had brought his all the way over to Frisco—on a ticket furnished by the Maudlin Movin'-Picture Company, which sent him over for props.

Well, Harold gets warmed up, and in a minute he's press agentin' himself at the rate of fifty-five words a minute—I clocked him! He tells Gladys he's bein' starred in The End of the World and the amount of money they're payin' him would startle Europe, if it ever got out. He claims he made 'em all faint at the rehearsals, and offers from other companies is comin' in so fast that he's got a charley horse on his thumb from openin' telegrams. From that he works into the fact that after the picture is made he's gonna run round Europe—that's just the way he said it: "Run round Europe!" Oh, boy!—that bein' the way he usually spent his vacations. When Gladys staggers over to wait on a customer, Harold charges himself up again, and when she comes back he's off to a runnin' start. He remarks that his father has just made a killin' in Wall Street that has caused Rockefeller to weep and gnash his teeth, and that the last affair his mother give at Newport got four columns on the front page, although the mayor of the town had been shot the same afternoon.

Gladys takes this all in with her mouth as open as Kelly pool, and her eyes half closed and dreamy, like she was dyin' happy. When Harold put on the brakes and eased up, she throwed him a look that I would have walloped Willard for. Harold says he must go because the picture would be ruined if he wasn't there to direct it, and Gladys holds out a tremblin' hand. Then Harold plays his ace—he takes off his hat, bows, kisses that hand and blows.

When I seen Gladys deliberately walk back of the wrappin' booth, put that hand to her lips and kiss it herself, I pulled my hat down over my ears and went round to the joint on the corner, to do my little bit in aid of the Scotch. When I figured I had done enough for the Allies, I shot back to Film City.

The next mornin' they begin work on the first reel of The End of the World, and Harold had a field day at bein' rotten. He got in everybody's way, ruined twenty feet of film by firin' off a cannon at the wrong time, and made Genaro hysterical by gettin' caught in a papier-mâché tower and pullin' it down. Not content with that,

"How Do You Do, Miss Vincent?" He Says, Makin a Costume-Play Bow. "I Knew You at Once From Your Photographs"

he goes back of an interior to try out one of the Kid's cigarettes, and by simply flickin' the thing into a can of kerosene he set the Maudlin Movin'-Picture Company back about five hundred bucks.

They run him out of the picture and he went, yellin' that it would be a farce without him in it.

About four o'clock me and the Kid is trottin' along the road outside of Film City, like we did every day so's Scanlan could keep in condition, when we all but fell over Harold. He's sittin' on a rock and gazin' off very sad in the general direction of New York. His dashin', smashin', soft hat was yanked down over his home-breakin' face, and his dimpled chin was buried in his lily-white hands. He looked like a guy that has worked twenty-seven years building a trick boat and then seen it sink the first time he tried it out.

The Kid runs over and slaps him on the back just hard enough to make his hat fall off.

"Cheer up, cutey!" pipes Scanlan. "They can't hang a guy for tryin'!"

Harold retrieves his hat, smooths it out carefully and lets loose the gloomiest sigh I ever heard in my life.

"Have you a cigarette?" he asks sadly.

The Kid pulls out a deck and Harold takes two, droppin' one in his pocket.

"Alas!" he remarks, strikin' a match on my shoe. "Alas!"

"When can the body be seen?" asks Scanlan. "And is it a church funeral, or will they pull it off at the house?"

"This is no time for levity," mutters Harold. "I'm ruined!"

"I only got ten bucks on me," the Kid tells him, "but I'll part with ——"

"Poof!" sneers Harold, wavin' his hands like a head waiter. "Money! I am not in need of that. Why, my father ——" He breaks off to take the bill from the Kid's hand and shove it into his pocket. "Rather than offend you!" he explains. "No," he goes on, "this is a more serious matter than money. I"—he flicks away the cigarette, jumps up off the rock and gives us both the up and down—"I am going to take you two into my confidence," he says, "and perhaps you will help me."

"Go on!" encourages the Kid. "I'm all worked up—shoot it!"

"Well, then," says Harold with the air of a guy pleadin' guilty to save his old father, "in the first place, my name is not J. Harold Cuthbert!"

There was no answer from us, and Harold seemed peeved because we had not collapsed at his confession.

"What is it?" I asks, when the silence begin to hurt the ears.

"Trout!" pipes Harold bitterly. "Joe Trout!"

"Yeh?" says the Kid. "Well, what's the matter with that? What did you can it for?"

"Ha, ha!" hisses Harold with a curse-you giggle. "Where could a man get with a name like that?"

"In the aquarium!" yells the Kid. "I knew you'd fall!"

Harold shakes his head and blows himself to another sigh.

"Imagine a moving-picture leading man named Trout!" he goes on. "I changed my name as a sacrifice to the movies, for ——"

"Just a minute!" I butts in. "On the level now, where did you get your movin'-picture experience?"

"As assistant bookkeeper in a grocery store!" he answers. "Now you have it!"

"But you said your father was a big man in Wall Street!" I busts out.

"He is!" answers Harold, lookin' over at the Sante Fé. "They don't come any bigger. He's a traffic policeman at the corner of Broadway and Wall!"

"Oh, boy!" shouts the Kid, and falls off the rock.

When we recover from that, Harold has smoked the other cigarette and he nods for my box. Then he asks us do we want to hear the rest.

"If you don't tell it," says the Kid, "you'll never leave here alive! Hurry up, I'm dyin' to hear it!"

"Well," says the ex-J. Harold Cuthbert, "I am about to be married, and at the eleventh hour Nemesis has gripped me. I told my fiancée that I was being featured in The End of the World, and that it would be exceedingly easy for me to get her a part in the picture—she having expressed a desire to that effect at various times. She will be here, within the hour, to watch me being filmed and to hold me to my promise to place her as leading woman opposite me."

He stops and moans. "Gentlemen," he goes on, "picture for yourself the *contretemps* when she finds I am nothing but a super and that Genaro wouldn't give Sarah Bernhardt a job on a recommendation from me! My romance will be shattered and the—the humiliation will kill me!"

There was a heavy silence for a minute and then the Kid whistles.

"Well, pal," he says, "you have certainly balled things up a few, haven't you?"

Joe Trout just let loose another moan.

"Gimme one of them good cigarettes!" pipes the Kid to me. He lights it and looks over at friend Joe. "The first thing," he says, puffin' away—"the first thing is this: Just how much do you think of this dame, all jokes aside?"

Joe turns round and straightens up, for once in his life lookin' like the real thing.

"I love her!" he says. That was all—but the way he pulled it was a plenty!

The Kid grunts and tosses away the pill. Then he walks over to Joe and slaps him on the back.

"Listen!" he says. "You ain't a bad guy at that! I'm gonna give you somethin' I never took in my life—advice! Why don't you lay off lyin' about yourself, kid? Why don't you can that four-flush thing?"

The effect of them simple words on Joe was remarkable. He swung round on us so quick that we both ducked, thinkin' he was comin' back with a wallop, but his hands was sunk so deep in his coat pockets they liked to pushed through the linin', and his face was as hard and white as an iceberg.

"Because," he shoots out through his teeth—"because I can't!"

Y'know the change was so sudden I remember lettin' out a little nervous laugh and then side-steppin' a vicious left the Kid sent at me. Scanlan had turned as serious as the other guy.

"What d'ye mean, you can't?" he says, grabbin' Joe by the arm and holdin' him fast. Joe's face showed how hard he was fightin' to keep from fallin' apart.

"You won't understand," he answers in a hard voice, "but I'll tell you. The thing has grown upon me until I cannot shake it off! I guess I was born a liar and probably four-flushed to my nurse when I was three days old. When I was a boy my incessant lying, although it harmed no one but myself, kept me in countless scrapes. As I grew older the habit grew stronger, and I lost girls, jobs, friends and opportunities with breath-taking rapidity. Time after time I have sworn to rid myself of the thing and speak nothing but the undiluted truth, and the first time I open my mouth I find myself unconsciously telling the most astounding falsehoods about myself with an ease that nauseates me!"

He tore himself loose from the Kid and kicked an innocent tomato can down a cañon. "I know I'm nothing but a big four-flusher," he winds up, "and I can't help it!"

Right then and there I warmed up to Joe Trout like I never had before. After all, Miss Vincent had the right dope. He was nothin' but a big kid at that, and any guy that will come right out in public and admit he's a false alarm deserves credit!

"Well," he says after a minute, "I suppose you're both through with me now, eh?"

"Do I look like a quitter?" demands the Kid.

"I'm still here, ain't I?" I chimes in.

Joe coughs and took hold of our hands.

"Thanks!" he mutters. "And now ——"

"Listen!" interrupts the Kid. "I got the whole thing doped out. When is this dame of yours due to hit Film City?"

"She'll be here on that one-o'clock train," moans Joe.

"Fine!" says the Kid. "Now get this! De Vronde is supposed to do a fall from a horse in The End of the World, and the big yellow bum won't do it. They're lookin' for some guy that will take his place just for that one flash—see? Now suppose I fix it so you get that chance, and, when the dame comes on, there you are playin' the lead as far as she can see in the best part of the frolic. How's that?"

I thought Joe was gonna kiss him!

"I'll never forget it!" he hollers. "You have saved my life! What can I do to repay you?"

"Stop four-flushing," comes back the Kid, "and be on the level!"

"I'll do it if it kills me!" promises Joe—and I don't know whether he meant the fall or the other.

"Can you ride a horse?" the Kid asks him as we start back.

"Can I ride a horse?" repeats Joe, stoppin' short. "What a question! Why, at home I was the champion ——"

"Now, now!" butts in the Kid. "There you go again!"

"Pardon me!" says Joe, gettin' red—and he quits!

Well, the Kid fixed it all right so's Joe could double for De Vronde in that one place where he did the fall. I don't know how he did it any more than I know how Edison come to think of the phonograph, but he did. All my suspicions as to who the dame was come true when Gladys hops off the one-o'clock train that afternoon. I seen her talkin' to Eddie Duke near the African Desert, and I immediately went scoutin' round for Joe, because Eddie liked him the same way the brewers are infatuated with Billy Sunday; and I knowed if Eddie got a chance to harpoon Joe with Gladys he'd do that thing.

About half an hour later Genaro asks me to go over and find Potts, because they're ready to start shootin' the picture, and when I got near the hotel I seen a couple of people blockin' the little narrow passage in back of it. They was Gladys O'Hara and Joe Trout, and when I got close up I heard Joseph talkin'. He was goin' like a house on fire, and his little old lyin' apparatus was hittin' on all cylinders and runnin' smooth without a break. He explains to Gladys that he went on only in the important part of the picture, which she would see in a minute, and that De Vronde was only one of the cheap help who played the part while Joe was restin' for the big scene. As soon as that come up—and he said the whole picture was built round it—they give De Vronde the gate, and in went the darin' Joe.

He was all dressed up in a soft hat, a cute little yellow-silk handkerchief twisted round his manly neck, and more chaps than any cow puncher ever wore on his legs—outside of a picture. He looked like what he'd like to have been.

"And not only that," he winds up, "but they are going to feature my name on all the advertising for the picture!"

"Is that all?" asks Gladys in a queer little voice.

Joe looked surprised. I guess it was the first time anybody had asked for more!

"Well—no!" he starts off again briskly. "Of course I am ——"

"Wait!" says Gladys, grabbin' his arm. "Don't tell me any more lies! They are not featuring you in this or any other picture! You are not the leading man, you are only a super! Your father is not a millionaire, and you cannot get me a job with the Maudlin Moving-Picture Company! You're simply a big four-flusher and that lets you out!"

Say, on the level, I thought Joe was gonna pass away on his feet! If I was given to faintin' I'd have been stretched out cold myself. He got white and then he got red, then he got white again and red again for fully a minute. He tried eighteen times by actual count to say somethin', but that well-known tongue of his had laid down at last and quit! He couldn't even raise a whisper.

"I knew you were four-flushin' the first time you started to hand me that stuff!" goes on Gladys sweetly. "I happen to know the folks here, includin' the leadin' man, De Vronde. He was hangin' round that shirtwaist counter before you knew whether they made pictures here or sponge cake. Also some of your friends come over from time to time and tipped me off about you, so that I was all set when you started!"

Joe whirls round on her at that, and although this bird had beat me to the wire with Gladys I felt sorry for him right then. The poor kid was hangin' on the ropes, waitin' for the sponge.

"If you knew all that," he says, kinda choked, "why—why did you let me come over and continue to—to mislead you?"

Gladys coughs and places three or four stray hairs exactly back of her little white ear, gazin' at her wrist watch like it's the first time she ever seen one and she's wonderin' can it really go. The big boob stands there lookin' at her, and the chance of a couple of lifetimes is slippin' away. What? Say, listen! I don't know much about women—fighters is my line—but there was a look on Gladys' face that I'd seen Genaro work two hours one time to put on Miss Vincent's when they was takin' a big picture. So you can figure she wasn't registerin' hate!

"Well, why?" demands Joe again.

"This stuff is all new to me," says Gladys with a sigh, "but I guess I've got to do it!" She gazes at the ground and gets kinda red. "It was not your conversation that made the hit with me!" she winds up softly.

"I'm afraid I don't understand," pipes senseless Joe.

"Heavens!" remarks Gladys. "There's enough concrete between your neck and your hat to build a bridge over the bay! I can safely say you're the first man I ever proposed to, but somebody's gotta do it and I guess I'm the goat!"

"What!" screams Joe, comin' to life at last. "You—you—forgive—you ——" The poor simp gets all excited and once again he can't talk and—I don't blame him. You never seen Gladys and you don't know how she looked right then!

"Say," says Gladys, "am I bein' kidded or ——"

Joe might have been a tramp as a movie lover, but take if from me as the real thing he was no slouch! I hadda stand there and watch it, because I couldn't get past till they got away, and if they'd ever seen me I guess Joe would have bought a gun. Finally they break, Gladys pushin' Joe away and holdin' him off.

"You've got to promise me you'll stop lyin' and four-flushin'!" she tells him. "Tell the truth and don't kid yourself that you'd have been president if you hadn't been jobbed! That stuff is poor and will get you nowheres! Make good and you won't have to tell anybody about it—it'll be in the papers!"

"We'll get married to-night!" yelps Joe. "There's a minister in Film City and ——"

"Don't crowd me!" interrupts Gladys, lettin' herself be kissed. "Do you promise?"

"Anything!" grins Joe.

"Just what are you supposed to do in this picture?" she asks him. "The truth now!"

"Fall off a horse!" says Joe.

"Is that all?" asks Gladys.

Joe nods.

"Well," Gladys tells him, "you won't do it! I don't want no crippled bridegroom at my weddin'. Now listen to me! If you could write that stuff you've been wastin' on the air round here, you ought to make a pretty good press agent. Mr. Potts, the man who owns the company and the fellow you or your father never palled around with, has a man on his pay roll named Struther. He's head of what they call the publicity department; it says so on ten of his cards I have. He once claimed he'd do anything for me, in such a loud voice that the floor-walker had to speak to him. I'm goin' over to the office now and ask him to give you a job back in New York. To be perfectly truthful with you, that's what I came over here for to-day in the first place!"

"But—but——" stammers Joe, "I can't have you asking favors for me, Gladys and—and why New York?"

"Because," she says, "that's where I come from and I want to look at it again. I'm simply crazy to yell down a dumb-waiter and throw a quarter in my own gas meter!"

Well—that's about all. They had a big weddin' right in the middle of Film City and everybody sent in and bought 'em a present. Potts got a flash at Gladys, moans regretfully, and has the ceremony filmed givin' the result to Joe as a special gift. Of course Gladys got Joe that job.

"It'll be terrible here when you're gone," I says, "because you know more about makin' movies than Rockefeller does about oil."

Joe shakes his head and grins.

"No!" he says. "I guess I don't know much about anything!"

I pronounced him cured to myself and shook his hand. The Kid went to the train with him and his bride. I didn't feel up to seein' that guy goin' away with Gladys.

I met the Kid as he was comin' up from the railroad station and, seein' he was laughin', I asked him if the happy pair got off all right.

"Yeh!" he says. "Everything went fine. Me and Miss Vincent waited till the train was pullin' out. Gladys was inside and Joe was standin' on the steps of the Pullman talkin'. Just before the thing pulled out I shook Joe's hand and said I hoped he go past in New York, because it was a big burg and a tough one for losers." The Kid stops and laughs some more.

"Well," I says, "what's the joke?"

"Oh, boy!" says the Kid, wipin' his eyes. "Joe's face lights all up and that old glitter comes back in his eyes!

"'Make good?' he yells to me. 'Well, I ought to make good—my father owns half the town, and I was the biggest thing in it when I left!'"

Is Your Storekeeper A *Business* Man

IT'S important to you in these days of rising prices, of quality manipulation, of widening delivery radius—it's *mighty important* to know that your storekeeper is a good business man. One quick way to tell is to look out of your window and see how he delivers your packages.

Investigation of a thousand stores shows delivery costs from 2½c. to 48c. per package.

The average dealer knows the cost of everything in his store except his delivery service. In fact, when it comes to delivery cost the whole business world *thinks with its feet.*

As far as we can learn, only one concern in America has actual figures and data on the cost of package-delivery in all lines of trade—and that is the VIM Company of Philadelphia.

From the big Department Store, with a hundred wagons, to the little grocer with one, dealers are delivering packages on *theory.*

Now about your dealer—

If he clatters around with a horse and wagon, his delivery is costly and his service bad.

With telephones everywhere and the spread of population, a live dealer's delivery covers ten to twenty-five miles to the trip, and handles packages in loads anywhere up to 1000 pounds.

Horses and wagons cannot cover the ground.

The answer is some form of *motor* transportation—

Now we say again—look out of your window and see how your storekeeper delivers your packages.

Is he using a *converted pleasure car*—an automobile made into a delivery truck—a chassis built to carry only live weight (which by its very nature absorbs the shock and consequently is easy on the car) when the facts and the figures show that the economical thing is a car *built especially for package-delivery purposes?*

Some dealers make the costly mistake of using a truck too heavy for the work. They think it looks impressive to drag around a ton of dead weight—burning up gas, grinding down tires.

When you look out of the window and see a VIM Delivery Car you know that your storekeeper has the last word in a delivery car—the first answer to efficient package-delivery—founded on facts, proved by the results.

A car that is light in weight, quick on its feet, easy on tires, built for strength and simplicity; that will carry packages and loads up to one-half ton, stand the shock and strain of shifting dead weight over any kind of pavement and roads, economical in gas consumption; that will run day after day in the care of ordinary drivers with practically no adjustment and keep out of the repair shop.

This is the most efficient chassis for its work in the world—price is $645. Fitted with any one of twelve types of body—handsomely designed and strongly built—suitable for a hundred lines of business. Price complete: Open Express, $695; Closed Panel Body, $725.

All prices F. O. B. Philadelphia.

"THE ACID TEST"

Endurance and Economy

The Elgin Six, now in its second triumphant year, has stood "The Acid Test" by winning perfect scores and highest economy honors in some of the most gruelling endurance and economy runs of the past year.

The most recent championship performance of the Elgin Six was the establishing of a new record of 67½ hours between Chicago and Miami, Fla., over some of the roughest, steepest mountain roads and through the heaviest sand and mud in the country. Another Elgin Six, used as the official pathfinder by the President of the Chicago Motor Club, completed a strenuous trip of 1626 car-racking, stamina-testing miles, conquering alike the steep, rocky mountain grades of Kentucky and Tennessee, the deep sands and heavy muds of Georgia, and the slippery, treacherous swamp roads of Florida. Both cars finished the long, hard grind without mishap and in perfect mechanical condition.

Three Elgin Sixes, on a hard two days' run under the auspices of the Chicago Motor Club, made perfect scores and averaged 25.6 miles to the gallon of gasoline.

An Elgin Six Touring Car won a race against a fast express train through the wilds of Minnesota and Dakota, over roads that in some places were little better than a mere rocky trail, covering 552 miles without mechanical adjustment and without a single stop of the motor.

Comfort and Ease of Operation

Elgin Engineers have perfected an improved rear spring suspension, found only in the New Elgin Six, which sets a new standard of motoring ease and comfort at high speeds, reducing shock and vibration to a point not surpassed in any car at any price.

The interior is noticeably roomy and loungy. The seats are curved and tilted at just the right angle to permit leaning back in comfort, as you would at home in your favorite armchair.

The special construction of the Elgin velvet-acting clutch enables the Elgin Six to be started on high gear, under ordinary conditions, eliminating to a large degree the necessity of gear shifting, thus removing the last barrier to the safe and easy handling of a motor car by women.

Artistic Body Effects

A famous artist has created body effects of such exquisite taste and harmonious proportions that the New Elgin Six radiates an atmosphere of refinement and distinction, so that it stands aloof from the monotonous design of the average car.

The long line body, swung between 116 inches of wheel base, follows the European fashion of center cowl, yet embodying the full yacht-line effect.

Right From Every Standpoint

The Elgin Six delights the hearts the most artistic on account of its style a beauty; it has won the cold, measured approv of engineers and designers, who think in m chanical terms and calculate materials and p portions down to the thousandth of an inc it has won the gruff praise of the grimy-fac greasy-handed repairmen, who think only "the insides" of a car and who seldom have "doctor" an Elgin; it brings greater ease a comfort and more pleasure to delicate wom and children on longer trips and over roug roads; it fits the pocketbook of the avera American family, and effects substantial s ings for them in the cost of motoring.

Can you afford to buy a small, "che six," when for a slight additional cost you c drive this Capable Six—this big, roomy, impr sive quality car, of superior beauty and co fort?

Can you afford to pay more than t Elgin Six price when this "Beauty of the Roa embodies in such full measure the quali style and comfort desired by the discriminat motorist?

Write us today for catalog "B" a the story of "Elgin Winnings." And be sure o see the New Elgin Six before you buy.

ELGIN MOTOR CAR CORPORATION, CHICAGO

JERRY OUT-O'-MY-WAY

By William Dudley Pelley

ILLUSTRATED BY H. J. SOULEN

FRANK BAUM, the gambler, was killed in the lobby of the Hotel Prince Alexander on the evening of June tenth—the year being somewhat previous to the open season for hunting public crooks enjoyed by certain muckraking magazines. Baum had been at dinner with his wife, when word was sent him that a friend outside urgently desired to see him. As he emerged from the dining room three young bucks turned in from the sidewalk. Instantaneously the great lobby roared with the thunderous reports of belching revolvers, followed by panic-stricken cries and the scuffle of feet. Baum staggered a moment, then went down on his hands. A long, low gray car, which had been brought to the curb with motors rummeling, caught up the three gunmen and they were subsequently lost in the traffic.

Baum lived five minutes; but not long enough to tell of the relation of one Mike Bleaseley with the state government, or of the connection between the state government and several raw deals that had lately been put over in a financial way at the capital to the south. The public sensed that it had been Baum's threat to do this which had resulted in his death. Baum said so anyhow, just before he died.

The gunmen were never captured; and the newspapers mysteriously dropped the case, as nothing could be pounded out of Bleaseley or his associates which could in the slightest manner involve them with those who plotted the murder. A disappointed reform element was obliged to abandon the investigation and accept the verdict of the obedient newspapers—to wit, that Baum's death had been only the revenge of a gambler's gang. Again it must bide its time to destroy Bleaseley's power.

This much is public history.

Bleaseley and his crowd are no longer in control of the state machinery. It was no sensational disclosure, legislative investigation or official shakedown that shattered their influence. Quietly they resigned their positions, wound up their affairs and left the state. And they were never seen therein again, either in official or in unofficial capacity. That the men responsible for the existence of the Bleaseley organization did fold up their tents and silently steal away is also history, but not history that has ever been made public. Three chaps besides myself, Sanderson Anderson Platt, who records this narrative, know why the Bleaseley crowd pulled down their shingles and went out of state business. These men are Bill Gridley and old Joe Dermott—Wild-West showmen—and a half-bald, grim-faced bum who had all the earmarks of a college professor down on his luck, and was known to the show folks by the name of Jerry Out-o'-My-Way.

Jerry Out-o'-My-Way is a hero who never had a halo, a public benefactor who never had a reward. It's time someone told how Jerry—the worm that turned!—with no power but his own backbone, kept the pages of his state's history clean. And the yarn really starts with Bill Gridley and old Joe Dermott.

Bill Gridley and old Joe Dermott were Western old-timers, who had lumped their coin, accumulated an outfit and started through the Middle States with a Wild-West show. Their venture has gone down in show history under the title of Gridley & Dermott's Montana Stampede. Bill had driven stagecoach on the old Laramie Trail; Joe had gone through the campaign with Crook on the border. When it came to an exhibition that made this powder-puff generation thank Providence they'd been born in an age of civic improvement societies, wireless telegraphy and fly paper, those two old bunch-grass angels were sure some artists.

"First, Understand That I Don't Give a Tinker's Dam for Any of You"

The first year Joe acted as advance man for the outfit. The Wild-West shows had only recently graduated from Fourth of July cowmen's contests and hadn't learned to figure very far ahead. We'd play almost to the border of one state before asking permission to go on into another. One day Joe invaded the statehouse of a prospective commonwealth and made formal application for a license for his show. I'm told that the chap he interviewed looked more like a barkeep than official bookkeeper for a great and glorious slice of this land of the free. He hemmed and hawed and sucked a clove. Finally he said:

"Am I talkin' to a business man or am I not?"

Joe was a whole-hearted, innocent old cuss; he didn't tumble. The clove-chewer explained:

"There's a man over on Bacon Street we sort o' let pass on such situations. He's better acquainted with the inside o' this license-grantin' than we boys under the dome. If you should see him now, and he should phone us it's all right, I would of course supply you with the wanted permission."

Poor old Joe hunted up the Bacon Street address, thinking he was being sent to some ex-official whose advice still came in useful to those in authority. The house resembled the place from which little Cinderella fled when she kicked off one of her oxfords. A chap who supported the Confucius administration let him in the plate-glass door and demanded what he wanted. Joe was told to wait in the downstairs hall until sent for. The gentleman he desired was busy.

If the gentleman hadn't been so busy as to keep Joe waiting the better part of two hours, maybe there'd have been a different kind of wreck of the Bleaseley machine. But he got tired sitting there in the hall, and started ambling round that establishment looking at the pictures and investigating the house furnishings. The house being pretty much deserted, Joe went from one room to another until behind a closed door he heard voices raised in a scrap. If they had not been scrapping Joe would never have eavesdropped; but if there was anything Joe loved it was battle. He used the door full ten minutes to listen behind. Not only did he hear who the gunmen were that killed Baum and where they were hiding, but he heard enough evidence of "the man higher up" to send Bleaseley to the chair. It seems Old Joe had rammed into a conference of Bleaseley's henchmen just when there was a little unpleasantness in the matter of coming across with hush money. Joe got away from the door in time to avoid discovery. The conference was closed, the roughnecks went out a back way, and the Chinaman came to tell Joe he could have his audience. When Joe went in he found his man reading a sporting extra and trying to get more out of life than there is in it by saturating himself with whisky-and-soda. He had a jaw like a chimpanzee and there were queer-shaped horizons to his bald head. "Very good," says Mike Bleaseley—for it was none other than that famous old crook—"I can get you a license at a profitable figure if you'll let me have your gambling concessions for my men."

Joe wasn't so wild and woolly but that he understood then that he stood in the presence of the power behind the throne. And he didn't like the lack of face round the other's eyes.

"Me and Bill don't allow gamblin' with our outfit no more," says he. "A couple o' smooth guys taggin' after us skinned a rube o' his roll down in Ohio last month and his friends nearly cut our trick to pieces. We concluded hereafter it was more profitable to go straight."

"All right," said Bleaseley; "then the state's afraid of an epidemic of foot-and-mouth disease. I doubt if the authorities will permit you to bring in stock that's collected all the four-footed germs of the Middle States," said he.

He rolled his cigar round in his face and returned to the extra.

"In other words," said Joe, "by askin' me if I was a business man you-all meant would I stand for graft?"

"That's not a popular term," said Bleaseley, "to apply to a gentleman."

"I ain't applyin' it to no gentleman," said Joe.

One word led to another, and within ninety seconds both men had lost their tempers. Joe said that he guessed he'd get that license without paying graft. Bleaseley smirked and asked how.

"Oh," said Joe, "I've heard enough in the last ten minutes listening behind your door here to get me that license!"

Bleaseley jumped like he'd been shot from beneath. He yanked a gentleman's gun out of the table drawer and made the mistake of his life by shoving its business end into

the hurry-up department of Joe's nervous central office. It was all a bad business, especially for Bleaseley. Joe wasn't heeled and took the gun away. Bleaseley was seized suddenly with lack of breath.

Eighteen hours later a little bare cubby-hole of an office down in a back street held a half-dozen coarse-featured men who spoke in cautious whispers. Right then and there a course was determined on by the machine men that introduced the complications into this history. If Joe Dermott ever came up for trial, it meant that the fact of Mike Bleaseley's control over the state government would become public property. That wouldn't be healthy for the machine men. Bleaseley was dead, but the evil which he had done lived after him. At all costs his official rottenness must be kept from the common people.

They decided that for the sake of every skin in the crowd the machine had to put its power to a supreme test. Joe had been arrested and the story of Bleaseley's murder was in the newspapers. It was, therefore, impossible to keep Joe's mouth shut by croaking him in prison. There was but one thing to do—the man had to be railroaded! In other words, there must be no public trial, at which Joe for his own defense would tell what he knew. Instead, a confession of guilt must somehow be pried out of him. The hearing must be held before safely bought machine men and a judge that could be relied upon, the man sentenced and executed at once.

He Used the Door Full Ten Minutes to Listen Behind

There must be no slip. If Joe couldn't be croaked privately, the machinery of state must be utilized and speeded up for the purpose. Every last ounce of rotten strength in the grafter's grip must be applied toward keeping Joe from making an affidavit of the things he knew. It was a ticklish situation. There were terrific chances of a slip-up; but the gang was desperate, and desperate men take desperate chances.

Well, they sent Joe a lawyer—nothing but a machine crook. To the latter's surprise honest old Joe declared without any palavering that he had shot Bleaseley. He added that he was mighty glad of it; there was one dirty, rotten grafter less in the world. To allay Joe's suspicions the lawyer encouraged him to make an affidavit. But it was burnt to ashes within fifteen minutes after the attorney had left the jail.

Joe's confession was produced at the formal hearing. No mention was made of the affidavit. Joe told his story to a judge, who heard him without blinking. The judge blandly informed him that the fact that Bleaseley had produced a gun did not warrant Joe's getting it and using it on the political boss. Joe was flabbergasted and started to refer to laws and customs in the sagebrush country. He was informed that his crime had been committed in the East and must be judged by Eastern codes. He was reminded that he had pleaded guilty, and nothing remained but the sentence and its execution. Joe got mad at that, and declared if that was the way they did business in the East he wanted no mercy—and they clapped the sentence onto him while he was in that mood, and made it as quick as they dared without exciting too much public suspicion.

Although I'm relating facts here that the bunch of us weren't wise to until afterward, we felt that all wasn't as it should be in Joe's case, and old Bill got busy. But it didn't get him anywhere. In the first place, no one was allowed to see Joe. This was tough, besides being illegal—but for that matter so was the whole thing. And old Joe's grouch really helped the crooks out. You can bet that his lawyers were seeing to it that none of his friends had the opportunity to beat it for the mountain top with a strangle hold on the skeleton in the statehouse closet. As for our chances with the governor—he was a wishy-washy, no-good man, a polished but spineless figurehead, who would have left his bed at midnight and gone to Bleaseley's home to pull off the latter's boots if Mike had told him to. When we saw that a jury trial for Joe meant only a packed box and worse verdict, we went to him; but the son of a gun had sneaked. The machine had seen to that also. The governor had been ordered to take a fishing trip for his shattered nerves until after Joe was croaked. He had obeyed. One old showman's life was nothing to him anyway.

So things looked like a November horizon at twilight for old Joe Dermott. The newspapers got sudden orders to shut up on the Bleaseley murder, and they obeyed. The men who were responsible went round the scaredest bunch of mortals that ever blew the suds off booze. But they were getting away with it, and that, in the last analysis, is what really counts in this world. That is, they thought they were getting away with it.

Joe had about twenty more days to enjoy a normal method of respiration when I came under the "come-and-get-it" top one night to see something happen that was funny. One of our lady riders—Helen o' Troy—came down the other side the grub bench and spotted Jerry. He wasn't doing anything more offensive than poking nourishment in the hole under his nose. But Helen, like the rest of us, was pretty glum over the rough deal that was being handed Joe; and she had a sudden hunch that on this particular evening she wanted that particular corner.

"Out o' my way, Jerry!" said she, crowding him from his place and giving him and his grub a flying shove.

I felt sorry for the cuss. A portion of a look told you that Jerry was one of those taggers-on after a circus that had seen better days. Now he was dressed in anybody's old cast-off baggage. There was a growth of beard that his own mother wouldn't recognize, and he was prematurely old by being kicked round like an old hat. From the first day that Jerry had come onto the lot and begged a job on the canvas until the day I saw the last of him he reminded me of a college professor down on his luck. Just enough quiet studiousness to him, just enough gray at the temples, just enough quiet living in himself, and silent and melancholy timidity.

He picked himself up from where Helen had spun him, dusting off the battered black-felt hat and wiping his grim-lipped face with his sleeve. Not a syllable did he say, but he just stumbled over and stood by some water barrels in the shadow until everybody who might be hostile had fed. Then he chose a corner off down at one end in the gathering darkness. I found him there munching scraps when I came back after a rope I'd left beneath the table.

By way of showing him I was his friend, I said:

"You poor sepulcher-faced has-been, what's the matter with you anyhow? You're a fine candidate for tobacco-juice and suspenders to let a mere female toss you round like that!"

He shut his lips hard beneath the dirty whiskers, and his forehead wrinkled as he gazed off across the lot to the lights of the distant town.

"Waal," said I. "Say somethin'!"

"I haven't anything to say," said he after a moment. Then, in that precise college-professor voice of his, he concluded: "There's a popular fallacy that all men are created equal. It isn't so. Some men are born to lead and some are born to be led. Nature endows certain men with aggressiveness and self-confidence. Others are created totally devoid of them. It's my misfortune that I've been one of those last."

"Rot!" said I. "You make me sick! Didn't Nature give you as many hands and feet and senses as these other male humans that use you to wipe up the earth with? Doesn't air whistle into your lungs and food stick up your in'ards same as all the rest o' them. Why then bow down and offer your neck for the boot of a social class that warn't created with any more hands and feet than you?"

"I told you," he said. "I've been a man that's had brains, education and social position; but I lacked aggressiveness and will-power. A horror of physical force and the shedding of blood was born in me," said he. "I've never been able to live it down. If I had I shouldn't be following this show now." He sat with those fine artist's hands of his, all bruised and battered where he'd done rough work for his grub, lying idle in his lap. His forehead was furrowed into so many wrinkles that it resembled an accident in a corrugated boxboard factory. "Take to-night, for instance. Suppose that woman had done to you what she did to me. What course would you have taken? Fought her back, I suppose. But I couldn't do it."

"Fought her back?" said I. "No, I wouldn't never have been you in the first place. You've heard what the boys call me here in this outfit? Well, it's Gatlin'-Gun Platt. Gun for short. It's about as safe to monkey with my screws and cranks as with a machine gun. And the boys and girls know it. No one handles me like Arizona and Pu and Helen has handled you. Danger signals stick out all over me like burs," said I.

"Now," I went on, "you're just the opposite. You made your first mistake debutin' with this show in such an inoffensive, hang-down manner. A certain amount of offensiveness is mutually admired by the human species. You should o' interviewed the boss like a fire-eatin' personification o' the old saw 'I'm little—but oh my!' Then havin' got the job, you should o' gone among the boys—not like some dear dead memory o' the past or a broke resolution—but with the cool, calm demeanor of a case of cholera or a rattlesnake; conductin' yourself so that it subconsciously inferred that you're about as safe to take hold of as the drivin' rods on a locomotive. Instead o' being perpetually bawled out with 'Out o' my way, Jerry!' you ought to sport them words as a monicker the other way round. You ought to glory in the title o' Jerry Out-o'-My-Way!"

"I'd like to be that manner of man," said he. "I'd give a good deal if I could cultivate the propensities for a little fighting. But I'm beginning to wonder if at my time in life it isn't too late."

"Let me tell you somethin'," said I, "and don't you never forget it, regardless o' who tells you contrary: It ain't the folks with twenty-ounce brains, youth or college diplomas that gets the good things o' the earth," I said. "It's the folks with engine-pilot fronts, who bang through this vale o' tears usin' their voice to roar 'Out o' my way!' Success, man, is like a play on a football field. The grandstand don't applaud or give much credit to some brainy little chap that gets the ball and maneuvers round on the edge o' circumstances till he makes a goal. But let some great mountain o' humanity with a prow like

(Continued on Page 105)

The Hand of Destiny Screwed in My Neck and the Wrath of Judgment Took a Strangle Hold on My Trousers

Nut Tootsie Rolls

A GREAT SAGE said: "Do something a little better than anyone else and the world will make a path to your door."

That Nut Tootsie Rolls are a "better" candy is not due to magic, but simply to the combining of good, pure, wholesome ingredients.

We have only mixed fresh, roasted Virginia Peanuts and delicious chocolate candy in a way that everybody likes.

Nut Tootsie Rolls are made clean—kept clean—wrapped dustproof.

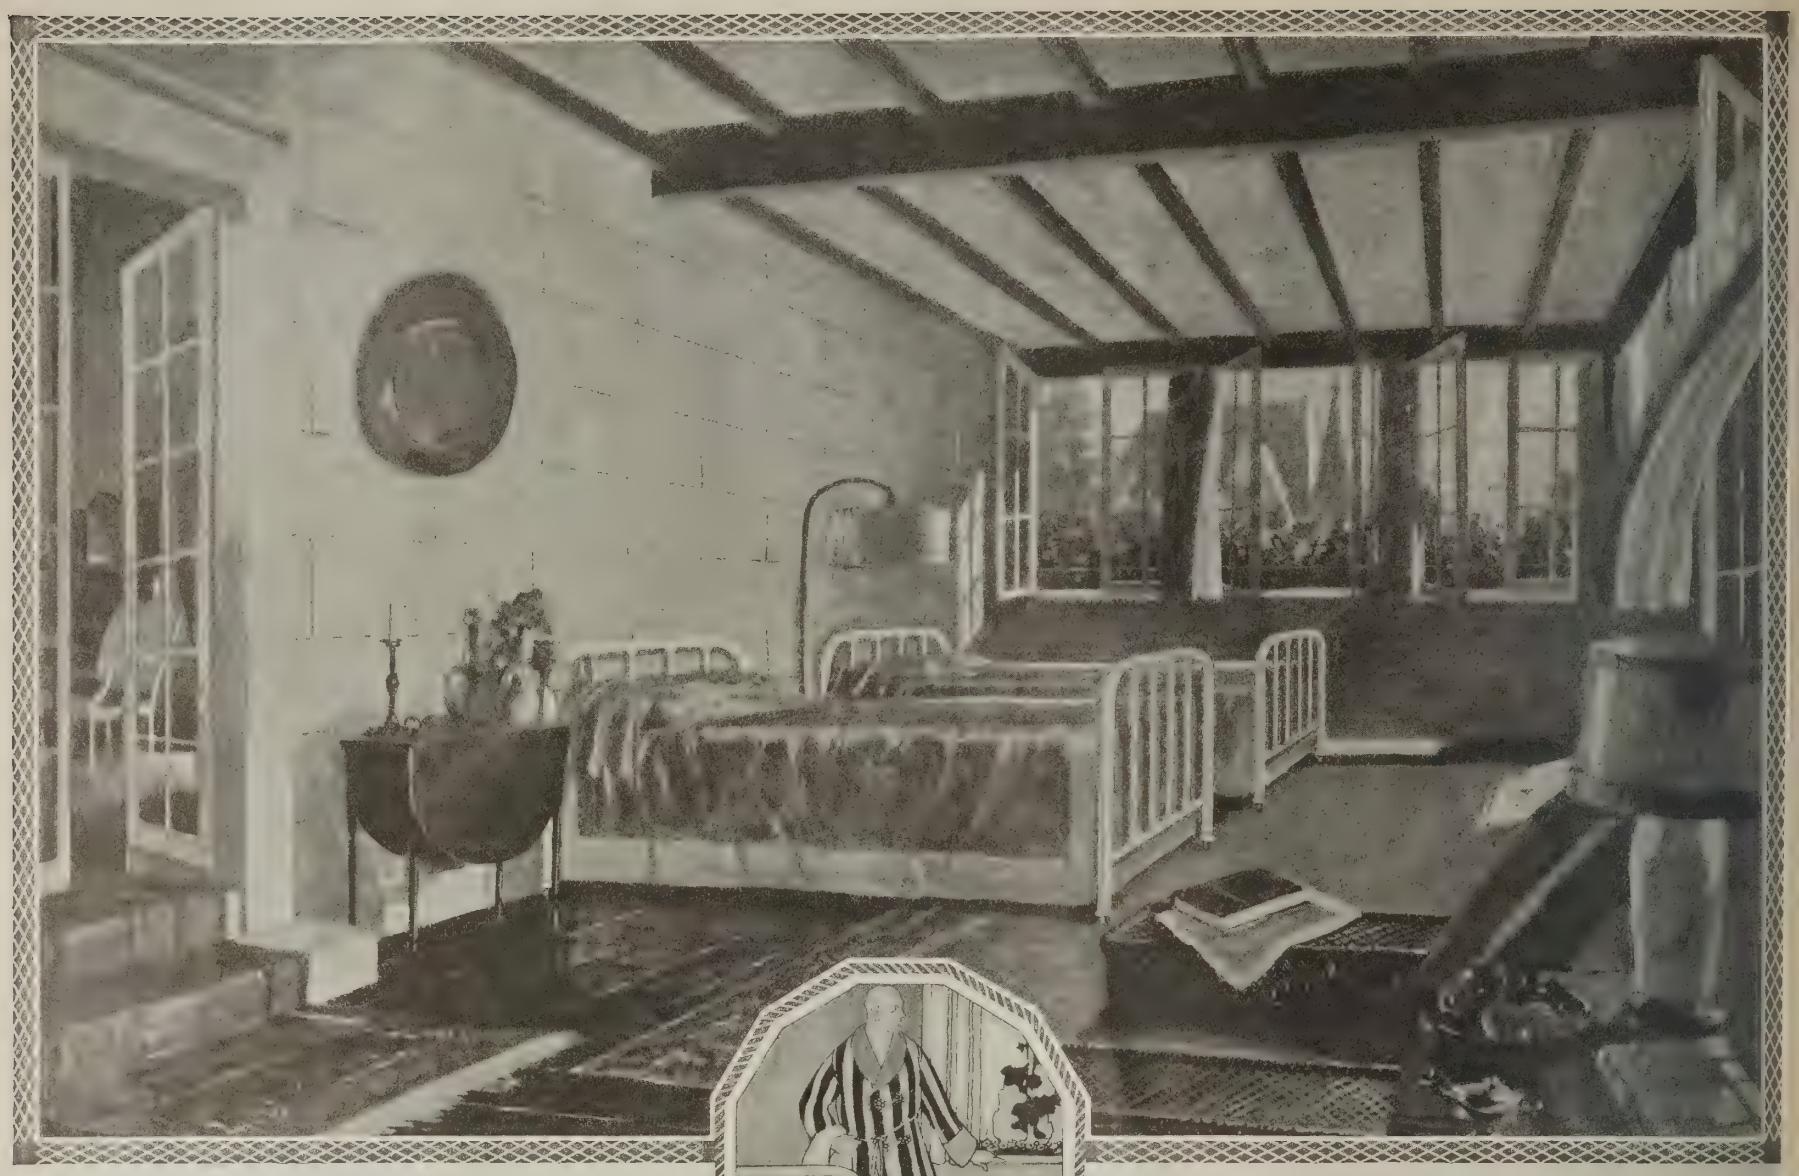
MILLIONS have eaten Nut Tootsie Rolls, and what was intended as a modest idea has developed into a national enterprise.

The demand for this honestly good product has gone beyond the originator's wildest hope.

We thank you and promise to allow your liking for Nut Tootsie Rolls never to grow less.

Each roll is divided into six parts for your convenience—sold wherever candy is sold.

The Stern & Saalberg Co., New York City.



See your dealer's exhibit *of Simmons Beds*

ON THE SLEEPING PORCH

Out in the crisp air, close to the stars, within hearing of the crickets, the whispering trees, the far-off, drowsy murmurings. Sounder sleep, brighter mornings.

But the bed must defy storm and dew and outdoor sun, and never get dull or rusty or creaky.

There are Simmons beds just right for sleeping porch, or camp, or summer cottage.

It is because every last detail of Simmons beds is carried to perfection in the same great shops, that the finish is so lasting, the construction so solid.

Our own enamel factory—

Our own rolling mill—

Our own patented machinery for welding electrically a new kind of metal tubing—

Our own artisans, trained for years—

It is upon these that we depend for this high quality.

And this high quality strikes the keynote of the whole Simmons policy, as reflected in its merchandise, its men and its methods.

THE EMANCIPATION OF GALATEA

(Continued from Page 17)

Eloise Eisel struggled to keep her remarks up to this amazingly high level on which she had unexpectedly arrived.

"The whole trutha the matter is," she observed confidentially, "you gotta give the public w'at it wants, Mr. Skinner—ab-so-lutely!"

"Miss Eisel," rejoined her employer solemnly, "I almost believe you are right." And he went upstairs to suggest a new slant for Babcock's daily half page.

Babcock, Junior, listened, frowned, made quite the objections that his advertising manager expected him to make, and, in the end, said it should be tried, care being taken not to shoot over their heads.

"Their heads, Mr. Babcock," James Skinner earnestly assured him, "are in places we should never suspect them to be—in clouds of romance, to which we are quite blind. As you have said, only close psychological study can make us understand their darned empty heads and where they are; and that's the advertiser's business, isn't it?"

"I didn't say quite that," replied his employer, annoyed at the mutilation of an epigrammatic statement, but pleased that it should have left an impression. "However, the plan is, as you present it, reasonable."

"It wasn't my idea"—and this with outward modesty and sudden inward deviltry. "That new twelve-dollar girl you advised me to get suggested it."

"So! Bright girl?"

"A very valuable asset," was the grave reply; and James Skinner went downstairs feeling buoyant.

The hideous feeling of insecurity had lifted considerably and he felt positively jovial as he made his way across the room to where Charlie MacEwan was copying, with pathetic fidelity, the different models in ladies' nightdresses, which the January sale was to offer Babcock's patrons. Half a dozen headless forms, arrayed in half a dozen degrees of unsubstantiality, were ranged before him, looking very bleak in the north light.

"Look at that!" said James Skinner over Charlie's shoulder, addressing no one in particular. "I ask you to look at that!"

"Look at what?" said Charlie, screwing round.

"Look at that collection with which he's planning to use up eight hundred dollars' worth of space. Just look at it! I ask you, could anything be more unappetizing?"

"Unappetizing? Wha'd'ya mean—unappetizing?" came from Charlie huffily. "These aren't forty-nine-cent chocolates we're advertising. These are nightgowns!"

"My friend," laying an affectionate hand on Charlie's shoulder, "they are nightgowns; no one could ever doubt it. But the public doesn't want to know what they are; it wants to know what they're not, Mr. Charles MacEwan. And, as I have just learned, we 'gotta give the public what it wants—ab-so-lutely!'"

"Well, Mr. Skinner," broke in Miss Tillotson; "if I didn't know that was just your way of speaking I'd say you were deliberately advocating principles of misrepresentation—deliberately!"

"Miss Tillotson," replied James Skinner, "we tell the public that it can buy itself a nightie, 'Value, $2, special for to-day, $1.49,' and it doesn't mean anything; and when I say 'Exquisite *robes de nuit*,' in bold-face italics, it doesn't mean anything, either; but the girl who buys a *robe de nuit* instead of a nightgown gets with it a feeling that's worth twice the price to her, and no misrepresentation about it. Misrepresentation and romance—they are two different things, Miss Tillotson—ah, romance!" And Mr. Skinner opened his arms dramatically.

"I see!" cut in Charlie plaintively. "Just *rub de nuey* sells the goods, and I look round for a job. Is that the idea, Mr. Skinner? Are you letting me down easy by E. H. Sothering about romance? Because, if you are ——"

"Charles, you are getting sensitive. Look here, my boy; I'm going to make a little change in our advertising methods—not in our staff. Put those *genre* masterpieces in the basket." Charlie was already unscrewing his board. "Now make me a nice little three-column silhouette of a four-poster bed, a fiddle-backed chair, and a lady just about to blow out the candle before jumping in. Get me?"

Charlie MacEwan stared a moment.

"No more of these damn things?" he asked, unbelievingly pointing to the models before him.

"Not for a while, anyway, Charlie."

"You mean I can think up something—have some ideas?"

"I shall be glad to consider a few ideas from you, Mr. MacEwan."

"You mean there's going to be some drawing in the advertising?"

"Oh, we may not get hung in the Academy this year; but ——"

Charlie suddenly took James Skinner's hand and began unexpectedly pumping it up and down.

"I'm your man, Mr. Skinner—God bless you! I'm your man!"

"Why, Charlie!" exclaimed his superior as he began to realize the unsuspected. "Why, Charlie, you've really got some art in you, haven't you?"

Charlie reddened apologetically.

"S'ell to spend your time drawing lifelike holes in Val trimming," he mumbled. "God bless you, Mr. Skinner!"

"Well, you needn't thank me," the other replied. "Thank Miss Eisel. She's the one who is responsible for this change."

It is this last sentence that is of importance in my story, for on it was reared the framework of Miss Eisel's personality. Miss May heard Mr. Skinner's remarkable statement and confided it to Miss Plotz, in the auditing department; and thus circuitously it came back to Miss Eisel, to strengthen the suspicion Mr. Skinner himself had already implanted in her mind—namely, that she was something of an individual.

Now, if this were a moral tale instead of merely a true one, I should tell how, with this realization, Miss Eisel's stupidity gradually gave way before an awakening interest in a larger life; how her indifference was replaced by attentiveness; how she came to ask searching questions about the business, and eventually made herself so indispensable to R. E. Babcock's that the junior member had, in the end, to marry her.

But, though this makes interesting reading, I am bound to set down that it did not happen. Nothing in the way of stupidity was subtracted from Miss Eisel's general make up. Quite the contrary; if anything her dictation was somewhat worse, for her mind was full to bursting with a hazy, gratifying sense of importance. Heretofore she had merely known that she, Eloise Eisel—her real self—was outside the world of Babcock's advertising department. She had never located her exact position; she had not considered it above or below; it was merely outside.

Now, though she felt no new share in Babcock's welfare, she knew—positively knew—where she stood in relation to it—not only outside, but distinctly above; and this consciousness made itself objectively felt with peculiar force. Not that Miss Eisel convinced the eleventh floor that this newly discovered personality really existed; they perfectly agreed with the Independent Agency's estimate of her, and, had she gone on in the even tenor of her way, they would have come to treat her with superior indifference. Now, however, such was the self-assurance she radiated that, though one could smile behind a hand or lift the lip in scorn, still this fact was established: Miss Eisel could not and would not be ignored!

Even Mr. Weinstock looked up as she entered; whenever she passed, the eyes of Miss Plotz and Miss Myers and Miss Tiernan turned as one eye, and Miss Eisel became responsible for many an erasure on formerly clean copy. On the strength of nothing at all Eloise Eisel had passed from Cipherdom into Being, and such was her nature that she preferred simply to enjoy this new state rather than investigate the causes of the transition.

"I must say," commented Miss Tillotson, after a week of being patronized by Miss Eisel, "I must say I don't think it's a very dignified proceeding in a business office; and, even if Mr. Skinner does like to show off, he has no right to let that girl make such a fool of herself."

"It's terrible!" sympathized Miss Mandelbaum. "Why, he asks her everything! 'Miss Eisel, here is the copy for to-morrow; will you see whether it is all right?' And, 'Miss Eisel, is the wording of that perfectly

BLUE STREAKS

$3.00 each

Guaranteed

You can afford that bicycle now. You have long wanted it. You need it for get-about business service and it's great for pleasure jaunts.

But you've feared the expense of tire-buying. For that is the only considerable expense in bicycle riding today.

Goodyear Blue Streak Bicycle Tires have met your problem. You needn't hesitate any longer. For Blue Streaks cut tire costs by giving you better value at a price you can afford to pay.

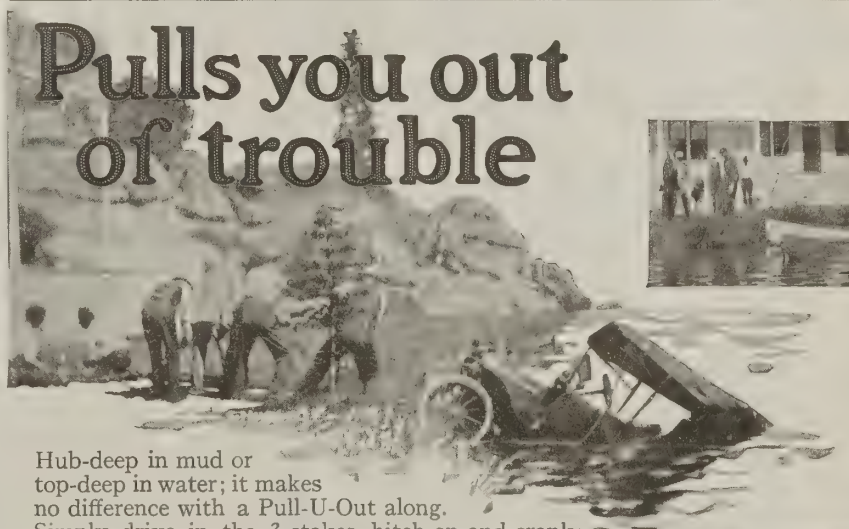
To do this, Goodyear specialized on one tire, built into it the honest quality you have long wanted and kept that one tire standardly good. More than that, Goodyear cut out unnecessary selling costs, and put the saving into tire quality.

Talk to your dealer now about that bicycle you want. Any Goodyear Dealer can supply you with Blue Streak Tires. Even with material prices as high as they are today, Blue Streaks cost only $3.00.

Blue Streaks are standard everywhere. One quality, one guaranty, one price. At any Goodyear Dealer's.

GOODYEAR AKRON

Pulls you out of trouble



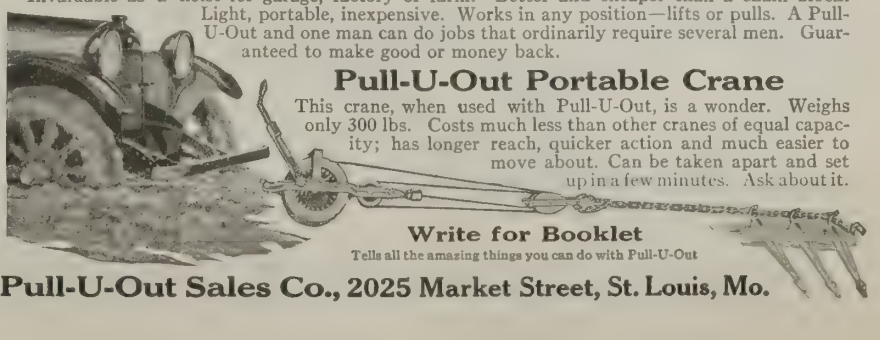
Hub-deep in mud or top-deep in water; it makes no difference with a Pull-U-Out along. Simply drive in the 3 stakes, hitch on and crank; you're out in no time and with no effort, for Pull-U-Out puts four mule-power into your arm.

Pull-U-Out
The little thing with the big pull

takes the sting out of bad luck and makes you care-free of road conditions. Consists of a winding drum, lever crank, 40 ft. of steel cable, two 7 ft. chains, 3 stakes. Weighs only 28 lbs. and goes in space 4 x 6 x 14 inches—yet is strong enough to pull the biggest auto out of trouble. A Pull-U-Out and towline combined—the two indispensables of autoing.

Does jobs no other machine can do

Invaluable as a hoist for garage, factory or farm. Better and cheaper than a chain block. Light, portable, inexpensive. Works in any position—lifts or pulls. A Pull-U-Out and one man can do jobs that ordinarily require several men. Guaranteed to make good or money back.



Pull-U-Out Portable Crane

This crane, when used with Pull-U-Out, is a wonder. Weighs only 300 lbs. Costs much less than other cranes of equal capacity; has longer reach, quicker action and much easier to move about. Can be taken apart and set up in a few minutes. Ask about it.

TAILOR SHOPS AT ROCHESTER, N. Y.

All Roads Are Smooth Roads
when your Ford car is equipped with
AITCHANDEE
"TRADE-MARK REGISTERED"
Shock Absorbers

THEY "IRON" the roads for Fords. Over 100,000 are now in use. They give your car Comfort, Safety and Economy.

COMFORT because the "Cantilever" construction gives different tension on the upward and downward thrusts, eliminating the annoying rebound and sidesway.

SAFETY because the elimination of sidesway and "rolling" makes steering easy on all sorts of roads and does away with the danger of breakage of some vital part.

ECONOMY because by reducing vibration, strain on engine and transmission is done away with and lack of rebound prolongs the life of the tires. Wheels do not bounce—but stick to the road all the time. Your dealer can fit a set of AITCHANDEES. They do not mar the appearance of the car.

Let us send you our illustrated booklet. It tells you what AITCHANDEES will do for your Ford.

clear to you?' And Miss Eisel this and Miss Eisel that. And she thinks he's really asking her for advice! Up in the coat room she'll say to the girls: 'Oh, excuse me; I must go. There're some important matters Mr. Skinner wants to consult me about.' Now isn't that terrible—especially if she knew what Mr. Skinner said over the telephone!"

For when James Skinner realized what, innocently enough, he had done, he was for extending the experiment as far as it would go.

"I tell you," he would declare to the brown eyes that squinted almost shut when she laughed, "I've created a personality—with my bare hands! And out of nothing! I've made Galatea get down off her perch and walk round with real life in her! I've taken zero and I've made it plus infinity! Why, Dora, the Lord had a good live rib to work from; I had much less than that!"

"Jimsy!" exclaimed the brown eyes, horrified.

"I had less, I tell you! I had a complete blank—putty—a vacuum! If you could have seen her the day she came! She had about as much chin as a rabbit!"

"Well, dearie, you know you didn't give her a new chin by making her feel important."

"I did! I have! She has a brand-new chin, as stern as Juno's; she has a new eye, as militant as a suffragette; she has a positively regal nose—like—like Carrie Nation's."

"You never saw Carrie Nation's nose."

"Why, she has even a completely new voice—not renovated, mind you; but new! She used to drawl over the telephone like this"—falsetto imitation of Miss Eisel, which makes the brown eyes squint up: "'Yeh—yeh! No, he ain't! Yeh—aw-right!' Now she says in a deep voice, an exact counterpart of a bank president on his busy day: 'I see! I see—surely—yes, indeed—I see! I shall do so!'"

The brown eyes had to be dried with a wisp of a handkerchief.

"But, Jimsy, she doesn't know any more than she did before."

"Any more! She knows less! Why, my dear, she's precisely like the fellow in the Arabian Nights—you know, the beggar, or whatever he was, they played the trick on—put him asleep into the king's bed; and when he woke up, with 'em all bowing and scraping before him, it took him just five minutes to readjust his ideas and convince himself that he was the king. Miss Eisel rose to the top of the advertising department, Dora, in less than twenty-four hours. I expect, any day, to hear her say that she doesn't think so much of the advertising manager; off with his head!"

"But, you know, I think you should let her go now and get a better stenographer. It doesn't look right—the head of the department ——"

"Oh, I shall, of course, dear; though I shall have to cook up some explanation to offer young Babcock. I've solemnly assured him every time we mention advertising that he was right about twelve-dollar girls being much more intelligent than Miss Elmer's sort; and he's come to think Miss Eisel a mine of progressive ideas."

"But, Jimsy, I'm afraid he'll think ——"

"He doesn't think, Tootsicums; he just perches up on somebody else's ideas and chirps away from there. But he likes this new slant to the advertising, and he's going to add five dollars to Charlie MacEwan's princely salary. I think it may be a Happy New Year for us, too, Dolly."

The brown eyes widened.

"Not really a raise, Jimsy?"

"But don't hope too much. Maybe not."

"Oh, Jimsy, you're really a very wonderfully remarkable sort of man!"

"My darling!"

"Precious!"

It seldom happens that people six years married continue to conclude their conversations in this charmingly illogical fashion, but it's very pleasant when they do; and may God bless 'em!

But this takes me afield into the Skinner romance, which is too commonplace to have even a minor part in the story of Miss Eloise Eisel and her personality. That story came, on the fifth week of Miss Eisel's career in the advertising department, to a swift and unexpected summation. I say unexpected—an acute observer would have had premonitions; for there had been gathering an undercurrent of resentment against Miss Eisel; it extended even to the outlying districts of the auditing department.

The storm was brewing. Miss Tillotson was expressing her opinion of both Mr. Skinner and his talented secretary with ever-increasing audibility; and even meek little Miss May had told the coat room that she wasn't going to be lorded over "by nobody who wasn't anybody what-so-ever!" James Skinner himself was thus far committed to the idea of imminent change in that he was speculating as to what his nine days' wonder would say when he fired her.

He speculated a little too long; the event swept down and found him unprepared. Miss Eisel had just learned, in some round-about fashion, what Charlie MacEwan had said about the cart wheel in the mud, and she had called him "A pinhead simp!"—as I set down at the beginning of this narrative. But you will realize how far on the way to a great personality she was when I tell you that she uttered this verdict—and to Charlie himself—not in anger but in sympathy.

What she conveyed by tone and manner was pity for one whose judgment was so circumscribed, whose mind was so trivially occupied. Charlie, somewhat embarrassed, had gone on lining in, and she had stood there, looking over his shoulder with the air of one who takes a charitable interest. The personal affront she had decided to let pass with just that brief phrase.

"Your work's improved, Mr. McCune," she went on helpfully; "but you ain't yet got the idear. You ain't yet got th' s'ggestiona *chick*. You ain't got yet t' know that the public deman's *chick;* an' you gotta give it to 'em if it wants it."

Charlie squirmed.

"But you mustn't get discouraged, because you really do real good," added Miss Eisel, "only you should oughta ——"

It was too much.

"Well, I must say," broke in Miss Tillotson, the pent indignation of five weeks finding relief. "I must say I think Mr. MacEwan can do his work without any suggestions from what the Independent Agency considers its stupidest girl!"

There was the silence that precedes the storm.

"Oh, it does, does it? He can, can he?"

"He certainly can, and it did!"

The storm burst.

"Let me tell you, Miss Tillotson, as woman to woman—let me tell you ——"

Probably Miss Tillotson could not have set down in black and white just what it was Miss Eisel begged so earnestly to be allowed to tell her, but that made little difference; the emotional content was clear enough, and its color scheme was not black and white, either. It was sufficient, at all events, to make it imperative for Miss Tillotson to enlighten Eloise Eisel as to the circumstances under which she had been engaged and under which she continued to be Mr. Skinner's stenographer.

There was comparative silence throughout the eleventh floor; every typewriter ceased clacking; Mr. Goosen paused; and the auditing department, hampered by distance, nearly burst a bloodvessel in the effort to hear what Miss Tillotson was saying to Miss Eisel. They gathered enough to know that the awful truth was being told her. "And it serves her darn right!" declared Miss Plow vehemently. The great are circled round about with petty jealousies.

Eloise Eisel went back to her desk, and the typewriters took up their pattering and rattling, a furtive buzz of comment accompanying them.

"Take this, Miss Eisel, please," said James Skinner impersonally, quite unaware of the terrible tension a more sensitive nature would have felt on Miss Eisel's approach: "To Mr. Bernard—B-e-r-n-a-r-d ——"

Automatically Miss Eisel opened her note book and took down five letters. But when her employer said "That's all; thanks," and turned to the card index, she stood up.

"Mr. Skinner!" she said.

"Yes?" he replied, looking for the card drawer.

"Mr. Skinner, will you kin'ly tell me pos'*tive*ly what it was you telephoned the Independent Agency about me?"

It was a bolt from the blue. James Skinner swung round in his chair and faced Eloise Eisel's personality.

"Good Lord!" he registered mentally. "I put the machine together and made it work, and now it's going to steam-roller me! Off with the king's head!"

For, indeed, the work of his own hand seemed about to turn and rend him. The righteous indignation blazed at him on

(Concluded on Page 45)

REMY STARTING LIGHTING IGNITION SYSTEMS REMY

Why Remy Is First

Ignition Experience is Vital, and Remy's Is the Oldest—Automobile Engineers Recognize Remy as an Authority in Starting, Lighting and Ignition

REMY is winning more and more motor car manufacturers. The reasonableness of the Remy argument is irresistible. Engineers realize, now, that correctly designed ignition is vital to the success and reliability of a starting system.

Remy history, therefore, appeals to them. They know that Remy experience dates back to the days of the gas engine and that Remy supplied the spark then—long before automobiles were born.

Remy and Ignition Mean the Same

Remy and ignition became synonymous. Progressive, intensive research upon the solid ground of experience is the reason why Remy sets the ignition standards for the world.

Because ignition is so vital to starting systems, Remy enjoys an immense advantage.

No Other Experience Like Remy's

Remy speaks with certainty. No one else has had such experience. No one else can look back on such exhaustive research. No one else has put uncertain experiment so far behind.

Automobile engineers feel safe with Remy, as they recognize the certainty of its experience. They know that the best-will-in-the-world cannot make up for the lack of that experience.

What Remy Has Done in the Generator Field

They realize that the generator is the all-in-all of starting and lighting efficiency.

No one else has Remy's mastery of generator design and construction. No one else has evidenced such a thorough study of generator needs. Remy has always advocated large-capacity generators as a positive necessity; and no one has made still larger capacity possible by inventing an automatic Thermostat Control.

Moreover, the public has found out that Remy is safe and sure. Motor car manufacturers recognize public approval of Remy as an asset. Automobile engineers keep track of users' experience. They have had thousands of reports of Remy reliability.

Additional Lustre On An Old Name

So one of the oldest names in the industry shines with additional lustre. Remy pioneered in Ignition. But better still, it has strengthened its hold by bringing Remy Starting and Lighting to the fore by the sheer force of successful performance.

Remy experience, coupled with honest purpose, assures you that a Remy-equipped car is sound and right in Starting, Lighting, and Ignition.

REMY'S Patented Thermostat Control, with its large capacity generators, assures ample current for Starting, Lighting and Ignition in Winter, when the demand for electricity is greatest.

In the Summer, when the demand for electricity is the smallest, the thermostat automatically reduces the generator rate to a safe value.

Thus it protects the battery from damage caused by overheating, which would result from the use of a generator of like capacity, but without this patented Thermostat Control.

CONSTANT REMY SERVICE

Remy Electric Company

Sales and Engineering Offices

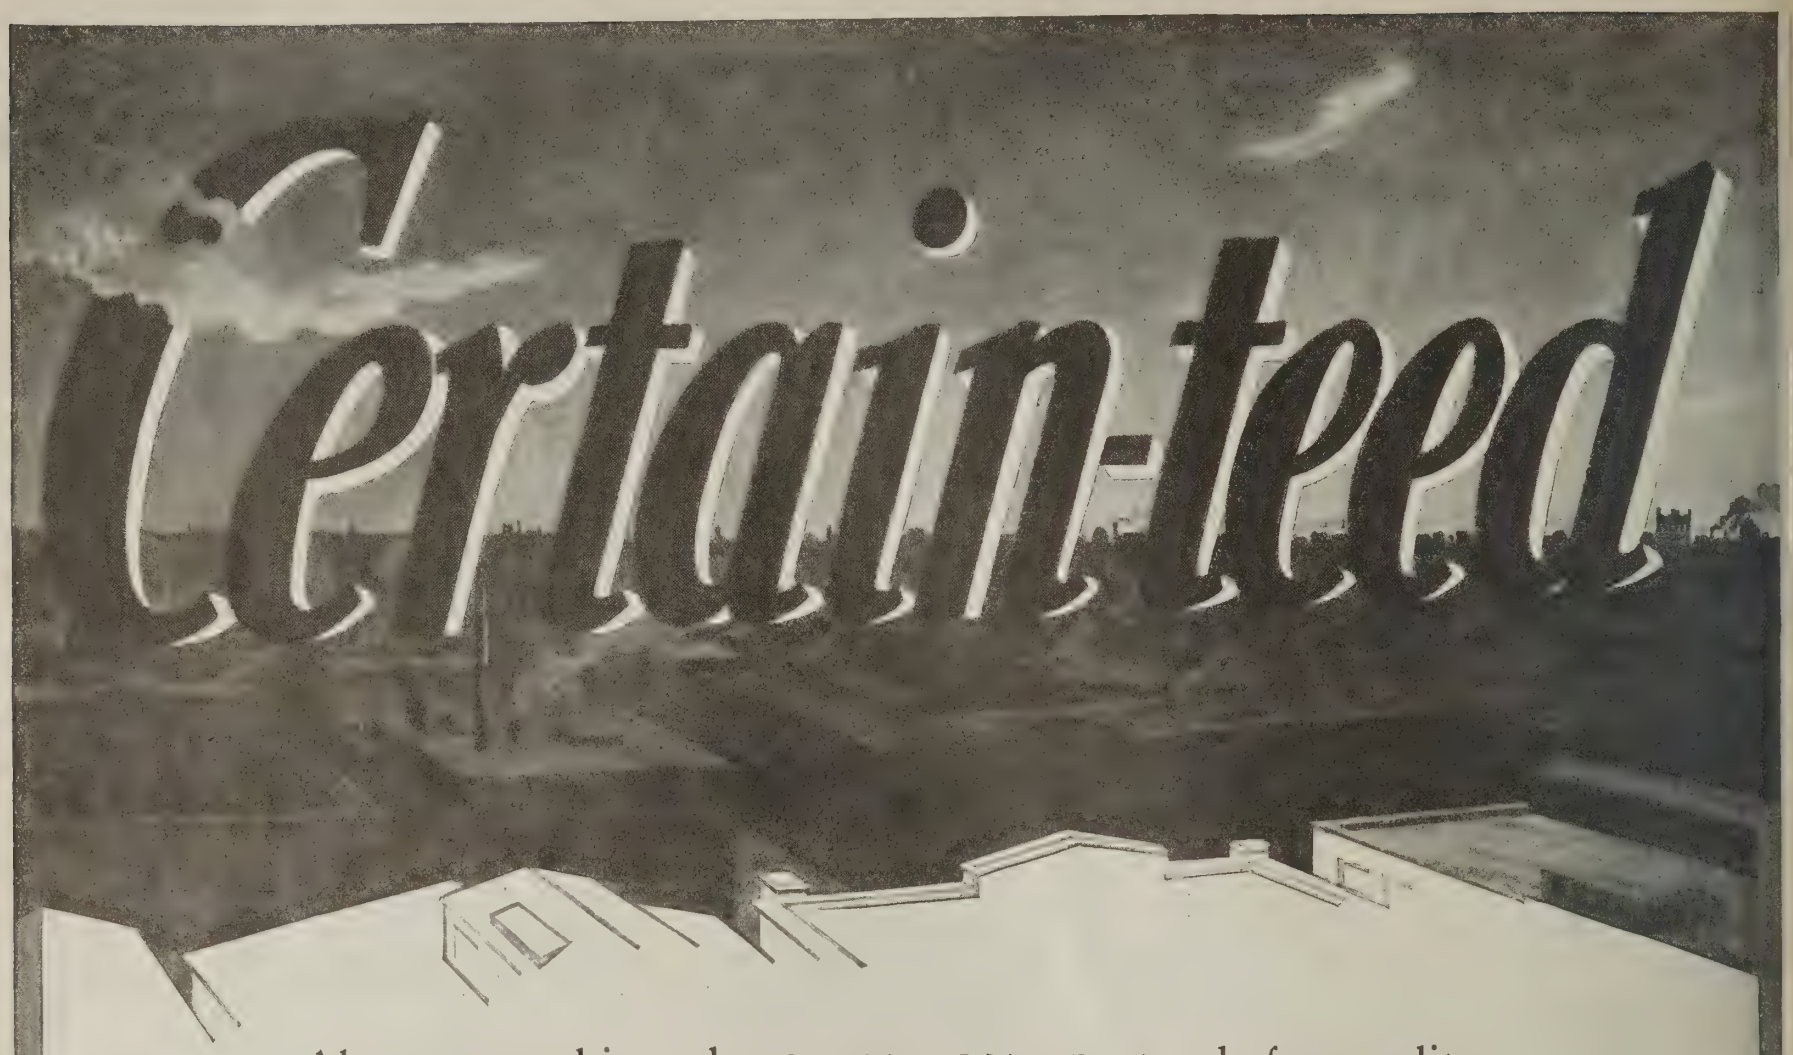
Factories and General Offices
Anderson, Indiana



Above everything else CERTAIN-TEED stands for quality, efficiency and economy. Any product bearing the name CERTAIN-TEED delivers all three in heaping measure.

Certain-teed
Roofing

is the most efficient roof for all kinds of buildings. For factories, CERTAIN-TEED makes the best roof because of its light weight and low cost,—and it is fire-retardent, clean and sanitary. For sky-scrapers, a built-up roof of CERTAIN-TEED is recognized as ideal.

For garages, outhouses, farm buildings, its economy and ease of laying make CERTAIN-TEED the superior roof. For residences, CERTAIN-TEED Slate Surfaced Shingles are artistic and economical.

CERTAIN-TEED costs less to buy, less to lay, less per year of life. Made in rolls, plain and slate-surfaced; also slate-surfaced shingles. Three thicknesses, but one quality: the best. Guaranteed 5, 10 or 15 years, according to thickness (1, 2 or 3 ply); and will outlive the period of guarantee.

The long life of CERTAIN-TEED is due to its quality and the saturation of a special blend of soft asphalts, which is kept from drying out by a coating of harder blended asphalts.

Before you decide on any type of roof, investigate CERTAIN-TEED. For sale by dealers everywhere.

Certain-teed
Paints and Varnishes

Made by experts and mixed by modern machinery. Every can exactly conforms to the chemists' formula, both as to ingredients and color.

With tremendous facilities to make paints and varnishes; with unlimited resources and an extensive sales organization, costs are greatly reduced so that CERTAIN-TEED Paints can be sold for less than good paints usually cost.

Both the professional painter and the man who pays for the job gain when CERTAIN-TEED is used—all uncertainty is eliminated, waste and left-overs avoided and quality assured.

Besides, CERTAIN-TEED is guaranteed to give satisfaction,—by a business that has become the largest of its kind in the world because it makes and sells good quality goods at lowest possible price; and backs them with all its enormous resources.

Whether you paint or employ a painter, it will pay you to get CERTAIN-TEED Paints.

of those eyes; a terrible hauteur raised the left shoulder of Miss Eisel's flimsy silk blouse; and a fearful scorn curled the edges of Miss Eisel's cutting words. James Skinner was completely swept off his feet; it was, indeed, an unlooked-for turn of the experiment.

"Why, Miss Eisel—what I telephoned—what ——"

"You know perf'ly well what I mean—perf'ly!"

There was a pause. For the life of him James Skinner could not wholly repress the desire to tip back in his chair and shout; it flickered to the corners of his mouth in a smile, and came from his lips in a choking sort of sigh.

"Oh, Galatea!" said James Skinner.

There was an ominous silence; and then it was made clear to this presumptuous Pygmalion that not only had his Galatea no intention of going back on her pedestal but she had never been on one at all.

"I'll thank you—I'll thank you, Mr. James R. Skinner, not to begin callin' me s'ggestive names. An' I mus' say I thought you was a gen'l'man, and not one to be so mean an' underhanded as to take credit away from a girl w'en she has idears, just because she's on'y a girl an' can't pertect herself; but I see what you're gettin' at—be-lieve me! I c'n see you want to get all the credit for yourself an' keep people from knowin' they was my idears all along by sayin' I'm stupid, in your smart-Aleck way. An' I mus' say you gotta nerve to talk like that w'en you know all along you're stealin' my idears an' not givin' me my credit for 'em; an' that's little enough for anybody to ask. An' I want to say right here, Mr. Skinner, you ain't no gen'l'man; an' I'll thank you to remember it!"

Miss Eisel paused in deference to the demands of respiration.

"No—oh, no!" hastily reflected James R. Skinner, bewildered by this new psychological complex. "No; I'm not Pygmalion. I'm Frankenstein!"

"Where are you going?" he asked aloud, for his paragon was opening and shutting desk drawers with great conclusiveness.

"You don't think I'm goin' t' work for a man that's mean enough t' steal my idears an' then defame my character? Well, maybe you got another guess, if you please! I'm goin' to leave; an' right now!"

"Oh, come now!" And her employer put his heels on the floor and asserted his authority. "We've had enough of this nonsense, Miss Eisel. Go at the end of the week, if you like; but wait until you've looked round for another place. Don't be silly!" And he waved the matter aside.

He should have known that Eloise Eisel was past waving aside. She straightened up, snapped her patent-leather bag shut, and regarded him, her look a curious mixture of ice and fire.

"Thank you, Mr. Skinner!" she replied. "Thank you for your kin' thought; but I guess there's plentya places waitin' 'most any time for girls of my ability."

And Eloise Eisel marched out to the elevator.

"Well, I'll be darned! I'll be holy goshdarned!" said James Skinner as he watched her go.

And there were still further qualifications of his state of darnedness when he learned that she had walked straight up to the office of Babcock, Junior, and magnetized him, by sheer force of her powerful individuality, into believing that she could be a most useful secretary to a man of ideas like himself.

It's the same old story; you can't keep Personality down.

"But wait!" said James Skinner. "Wait until he sees what she does to the dictation!"

THE CUSTOMARY TWO WEEKS

(Continued from Page 20)

of the Eclipse Company had sought him he knew at a glance; and his first sensation, on looking into the clean-cut features of his old employer, was that of surprise at seeing there a determined expression that was wholly new.

"Mr. Extell," said Harry Burnhart, "I wanted to have a little talk with you on an important matter. Frankly, I've made the trip for the purpose of seeing you. Shall we go in to the lounge?"

Burnhart came to the issue with astonishing abruptness. He could hardly have chosen a more flattering introduction than the intimacy of his first statement:

"Mr. Extell," he began with a smile, "I've come to life. You won't have any difficulty in knowing what I mean by that. I've—er—quit playing and gone to work."

"You have taken active charge of the plant?" asked Extell.

"Exactly. I am now to be found at the office week days from eight-thirty to five. And I want you back in Milledgeville. That's what I'm here for. I don't want the suspicion of underhandedness about it. If you are not in a position to discuss the offer I want to make you, if you have contracted in any way to your present employers, say so at once. I know it's a delicate matter, a thing of this kind."

Extell thought quickly. Then he replied: "I see no reason why I shouldn't hear the proposition."

"Good! Extell, you're a Milledgeville boy and you know our people. You left us under circumstances—well, I don't think we need to discuss that matter. It was certainly a great thing for you, as it turned out. The time has come when you can come back, and come back big. You may be surprised—and maybe you're not—to hear that I am the office manager and sales manager. I want to resign both jobs just as soon as I get the man for them. I ——"

"But—Vibert?" broke in Extell breathlessly.

"He is still with us. He is my assistant. Whether he remains depends upon the man who comes in. Whether I remain in the office depends on the same man. In other words, I stand ready to be fired if I don't make good. Mr. Vibert runs the same risk. Now, Extell, I could go out into the open market and get a man who already holds that kind of a job. It isn't a question of money. But I've got an idea into my head that what we want is young blood, somebody just arriving, and arriving with the punch. If I'm wrong, well, my money pays for my mistakes. I've also got a vain idea that I can size up men. That Northern Machinery business gave us an awful jolt. You got us there, and got us good. It wasn't a question of life or death, but it hurt. And I know a little more about it than you think I do. Er—hang it, Extell, I'm going to tell you! I'm about to be married to Miss Nickerson, the daughter of that elderly man who charged you with having the nerve of the devil. What do you think of that?"

"You—don't mean it!" gasped Extell.

"I do mean it. That's the kind of a man he is. When you get an order from him you've got to show why. And he's given me the laugh ever since. Er—he suggested you to me. You made all kinds of a hit with Mr. Nickerson. Well, enough of that. I want you to come back to Milledgeville. Will you do it? And on what terms?"

Extell was looking at Harry Burnhart, but somehow he didn't see Harry Burnhart. His brain was a swirl of images and notions, and yet surprisingly clear too. But at that moment he was looking at Carl Vibert.

"Five thousand dollars, and the unrestricted right to run the selling end along lines that seem best to me," was the cool reply.

The expression on Burnhart's face indicated that the price sounded stiff to him, coming from a salesman who was not even holding down a star territory. But the young heir to the Eclipse was game. He knew what he wanted, and he had set his mind upon it.

"Agreed!" he said. "Shake hands on it, Extell!"

When Wetterson heard of the offer from Extell he threw up his hands in a sort of half-humorous, half-serious despair.

"Just my luck!" he said. "I pick winners for other people." But seeing the hurt look on Extell's face, he added quickly: "As your immediate boss, Extell, I ought to try to persuade you not to go. But I haven't anything like that to offer you. As man to man, all I can say to you is that I wish you the best of luck. And once you take hold over there in Milledgeville, mind you, I'm going to show you no quarter. So look out for me!"

"The Lord give me enemies like you!" replied Extell simply.

A month later came Extell's last day with South Trent. He had faithfully done his level best up to the last day. He had turned in his samples, his books and his papers, and severed the last tie. He had a little lump in his throat as he thought of the decent Wetterson, and impulsively sat down at a writing table in his hotel room to send a last personal note. In hunting for some stationery in his bag his eye fell upon a little package of letters, all in light-blue envelopes. They were a few of Muriel Clemm's letters—priceless stimulants to his courage they had been—and on the top was the sealed envelope she had given him when he had left Milledgeville. He took it from its place and poised it on his hand, deliciously tormenting himself with it for a while.

"Surely," he told himself, "I can open it now. Sales manager of the Eclipse—even Muriel probably did not dream of that!" He took out his penknife and inserted it under the envelope flap. Then he hesitated. Always when he had reached this point he had hesitated. That envelope had come to have a potent influence upon him. It had come to be a silent champion, always traveling at his side, always attending his thoughts of home; and it was a silence he somehow was reluctant now to break.

"I have succeeded," he repeated in a low voice. "And yet ——"

Suddenly he snapped the envelope back into its place under the rubber band.

"No!" he muttered. "She meant not till the day when I have done all I had in mind to do. The time hasn't come. Vibert is still over there." He began to laugh queerly. "Vibert! I wonder if he'll wait for me to come. If he'll only wait! 'The customary two weeks, Vibert!' 'You haven't quite got the punch in your work, Vibert!' Ah, if he'll only wait! If he'll hang on! I'll hand it to him just the way he handed it to me and to Pop Grinnell and the rest of the boys. 'The customary two weeks, Vibert!'"

V

INSTEAD of handing in his resignation the day Harry Burnhart demoted him from the position of office and sales manager, Carl Vibert weakly stuck. He hoped, perhaps, that it was merely a whim on the part of the young owner, and that when Burnhart had become tired of toying with authority things would easily slip back to the old status. But it was evident to everyone but Vibert himself that the manager's steam had been leaking away for some time past. His discomfiture at the hands of George Extell, and the subsequent awakening of Harry Burnhart, were but finishing touches. Somehow, though unconsciously, he sensed the end of his reign of terror. He faced it with nervous indecision and put off action till it was too late, till Extell was actually in the office and in a position to exact pound for pound.

On Extell's side the spirit of revenge had been so long in his mind that he never questioned what he would do. He was going to fire Vibert, if it was his first, last or only official act. Whenever he thought of his old enemy the lines round his mouth hardened. Toward no other human being in the world did he feel the slightest ill will; but as he looked back upon his humiliation at the hands of this man he saw red. And he promised himself now that he not only would fire Vibert but would make the act as mortifying as possible.

Yet there was no sign in Extell's manner, as he greeted his old manager the first day in the office, of what was in his mind. He was disconcertingly polite. Vibert twisted at his mustache, shifted from one foot to the other, and finally stammered:

"I—I wish you success, Mr. Extell. I hope the changed conditions will—will not ——"

"I don't think so," interrupted Extell. He felt like adding, not out of pity but out of a sort of horror that a man should be willing to put himself in Vibert's hopeless position: "For heaven's sake, Vibert, why don't you quit before the ax falls?"

It was just what Vibert couldn't make up his mind to do. He had begun to have that middle-aged terror of looking for another job. He had begun to ask himself: "What if I couldn't land anything?"

The result was that day after day Vibert came furtively into the room of the man who was now his superior, swallowed the

United States 'balanced' Tires

Before You Buy Tires, Ask Yourself These Questions

Shall I take long country trips?
Shall I use my car every day?
At what average speed?
Over hard-smooth, hard-rough, soft-smooth, or soft-rough roads?
Shall I drive much through mud?
Over level or extremely hilly country?
Shall I use my car exclusively for town driving?
How many miles per month do I expect to drive?
What has my tire mileage been?
How much does my car weigh?
What size of tires has it?
How many miles to a gallon of gasoline do I get?

These questions are a brief analysis of the conditions of use which govern your tire cost per mile.

No one type of tire can possibly suit all needs—any more than one key can possibly fit all locks.

Because there are so many conditions that influence tire mileage, the United States Tire Company makes, *not one or two* types of tires, *but five*—one for every need of price and use.

Ask the nearest United States Tire Dealer which one is best suited to your *needs*.

'Nobby' 'Chain' 'Royal Cord' 'Usco' 'Plain'

United States Tire Company

(Concluded from Page 45)

contemptuous looks that were cast on him, and worked harder than ever. In an almost juvenile way he tried to let Extell know about the extra hours he was putting in, tried to show him how sincerely he was taking orders and executing them. He didn't need to make this effort; Extell saw it all well enough; and it began to give him concern. For it flashed upon him one day that in Vibert he had an assistant who could scarcely be matched. He understood for the first time that Vibert as manager had wabbled round in shoes that were too big for him; but that Vibert, as an assistant, as a detail man, could be invaluable.

It was this knowledge, first, that held back Extell's intention. And then, as he delayed carrying out his design, he saw something else. He saw that Vibert, in constant suspense, was suffering mentally as much as his most relentless enemy could wish, whereas with one word that trepidation would be over and the zest would be gone. And so Extell fell into the habit of alternating his outward display toward Vibert, of treating him with threatening coolness one day and praising his efforts the next. He kept the ax poised, but never let it fall.

Harry Burnhart did not suspect what was in Extell's mind. He was too busy trying to get on familiar terms with his own business. Vibert himself could never quite make up his mind as to where he stood, and he worried constantly. His thin face got thinner, and the dark spots under his dark eyes grew down upon his sallow cheeks.

But there was one who knew, and who trembled because she knew. She had been afraid of it. She had seen what was coming from the day she heard that Extell was returning to Milledgeville. And now, in the midst of her happiness at having George at her side, the thing cast a shadow. It was not that she was afraid for Vibert; she had a woman's pity for the man, that was all. But a certain hardness that was creeping round Extell's mouth and a reserve that was coming into his conversation when the talk went toward office matters, made her afraid.

Yet Muriel Clemm could not make up her mind to speak of that thing. It seemed to her too much like rousing a sleeping beast. She made the most of her happiness, and if she sometimes fixed her tender, searching eyes on Extell she never let him know what was in her mind.

One night, unasked, the question came up between them. She had said timidly, because Extell had consistently refused to mention it:

"Do you know what I am wondering, dear? I am wondering if you have ever even peeped into that envelope?"

Extell shook his head. Something hard came into his eyes and made the girl wish that she hadn't spoken. But Extell, who had been waiting for this chance, went on:

"No, Muriel, I haven't. Should I? Do you think I have conquered?"

"I think you have done wonderfully," she replied without looking at him.

"Do you think I have conquered?"

"Y-yes," she said finally.

"No," cried Extell, "you know I haven't. You only said that because you didn't want to hurt me. I have just found out what you meant by those words. It came to me the other day as I was thinking about Vibert! I never meant to mention him to you again, but I've simply got to. That man—something about him makes a barrier between you and me. I feel it."

"No, no," said the girl quickly. "He doesn't stand between you and me. Nothing can come between us, George. But that thing is a barrier between you—and yourself. That's what makes me afraid. I have been afraid of it from the beginning. It was the reason I asked you—remember?—please not to think about Mr. Vibert. I can see what it is doing, George. I can see it taking away something of that sweetness I loved so much. Oh, my dear, you are so much bigger than he! You are so much stronger; you don't need to be afraid of him. Don't you see that it only spoils a little of you ——"

"I know it's all true what you say—I've thought it all out. But I can't help it. Something stronger than I am urges me on. It's as though I'd signed a contract with some greater power than I am, Muriel, and I can't escape the terms of it now. I try not to think of it; and then every time I see that man it comes rushing back at me. Then I see nothing except the way he looked at me that day, and I hear nothing except those words with which he humiliated me. No, it's no use. I can't stand it any longer. I've got to do it. I wish there were some way out. From the office point of view I need him. He's really valuable. But it's no use. Either he or I would have to go."

She looked at him fixedly.

"Then you should lose no time," she said, with a little sigh of resignation.

"You're right!" returned Extell. "I'll do it to-morrow." Then he turned to her, still only half convinced, and asked: "Do you blame me?"

"Blame you? No, George, not the way you feel about it. No, I don't blame you."

As it turned out, Vibert himself forced the issue. The little of his nerve remaining to him was gone. He had made no decision, but he was on the verge of an explosion that would decide well enough.

Extell had made it a practice to spend the first half-hour of the day going over the most important sales matters with Vibert. This morning the assistant sales manager came into Extell's room as usual, but instead of seating himself he walked up and down.

"I'm ready, Mr. Vibert," began Extell coldly.

He got no further. Vibert, his face livid, his eyes uncanny with the dull glare of nervous exhaustion, suddenly stopped short and leaped toward his side of the desk. He smashed his hand down upon the glass top, producing no sound except the creaking of his own knuckles from the impact, and he cried hysterically:

"Why don't you do it? Why don't you do it? I can't stand this any longer! Do it now, if you're going to!"

Extell made no reply. He merely followed the other man with his eyes, having a healthy inspiration to get to the heavy inkwell first if Vibert should make a grasp for it. Vibert began to laugh. It was not a pleasant laugh. It came out from between two rows of teeth almost shut together.

"I can't stand it any longer!" he rushed on. "I've given the best years of my life here. I've failed to make good. I've been anything you please—a fool, or a brute, or anything; but I can't stand this, Extell. It's your turn. I know you've got the deal. I ought to have seen it coming! I ought to have had the sand to quit! I ought ——"

Vibert paused from sheer lack of energy.

"What do you want me to do, Mr. Vibert?" asked Extell in a shaky voice.

"Do as you damn please!" shouted Vibert. "But don't keep this farce going any longer! Extell, I didn't treat you right. I know apologies are no good—but I apologize to you. I gave some of the others a rotten deal. Don't get the idea I'm begging for mercy. I don't care what you do now! But I've got to tell you I'm sorry!"

"Mr. Vibert," said Extell slowly, "'you can have the customary two weeks.'"

For reply Vibert sank into the chair. Exhausted, his head fell over upon his breast, and he gripped the arms of the chair convulsively. "Thank God, it's over with!" Extell heard him mutter.

Then Extell jumped up. He strode round the corner of the desk and, laying a hand on the other man's shoulder, said quickly:

"Vibert, I've wiped the slate clean! I say 'Thank God' too. It's all over with, and I shall never have to give it another moment's thought. I've lived in hopes of this moment; but I never thought I'd view it the way I do! We're both changed. We can both start new. Vibert, I want to offer you a job. It's a job that you can handle better than any other man I know. It's the job you were holding down ten minutes ago. Will you take it?"

"What do you mean?" shrilled Vibert suspiciously.

"I mean what I say. I mean we can start new, clean and square. I mean that I never saw you before and you never saw me before—see?"

Vibert's eyes were staring incredulously. As he did not hazard an answer, Extell went on, still more at ease now the problem was solved:

"I'll tell you something else, Mr. Vibert, before we let the subject drop for good and all. I haven't always been just in estimating you. I never did give you credit for what you had. I was a bumptious kid when I left here, and—well, I've grown up. I want you to stay. I want to work with you. There's room enough in the office for both of us. When either one of us gets something bigger we can jump; but for the present let's pull together. What do you say?"

Vibert rose.

"You're on the level," he said. "I'll do it, Extell. I—I hand it to you—you're the bigger man. I'll start in to-morrow."

As he was going out, he halted in the doorway and added: "You deserve her, Extell. Tell her I said so."

The moment Extell had made sure that Vibert was out of sight he seized his hat and went through the factory almost on the run to the back entrance. From there to the Clemm home he made record time.

"I know this is terribly bad—to quit the office like this on personal business," he panted, reaching out for the girl's hands, "but it'll never happen again—at least not like this. Muriel, it's done! It's over with! I've fired Vibert! He's gone home!"

She looked at him aghast. It was not that the crash had come. She had expected that. But on Extell's face there was a light of ecstasy. His eyes had gone back to what they were three years before, and the old boyish gallop had come back into his voice. She couldn't understand it.

"Yes, he's gone home," rattled Extell. "I gave him the customary two weeks. And then I hired him right back! And he's game, Vibert is! He's coming in to-morrow morning—and we start clean! I burned the road getting up here to let you know!"

"You hired him back?" she murmured. "You ——" Then abruptly she saw the reason for the change that had come over him. She looked into Extell's face with the old tenderness in her eyes, but now there was something else besides. It was her recognition of something for which she had waited wistfully through long months, and she surrendered joyously to it.

"My man!" she whispered up to him. "You have conquered—yourself—me—everything!"

A few minutes later Extell went fumbling for the envelope.

"See, I have it with me!" he said.

"Please don't open it here—just now," she begged. "I—I don't want you to. You must wait till you get back to the office."

But her words came too late. The envelope was already torn, and Extell was reading:

"My George: I know that you will succeed; I know you are strong and fine and something will develop every bit of it. I shall wait for you always. Wherever you are I shall always be with you. It is only yourself you must conquer, George. That will be everything. I don't think you will open this before you are very sure. But I want you to know, dear, that no matter what happens, whether you do well or badly, whether you succeed or fail, no matter what happens, you need only to come back and take me—because I am all yours.

"MURIEL."

"Well, I'll be hanged!" exclaimed Extell with a grin. "All this hard work for nothing. Why, if I'd opened this envelope the day after I left here I'd have taken the first train back."

She put her arms about his neck and smiled up at him all her love and pride.

"If I hadn't known you wouldn't open it I shouldn't have written it, should I?" she asked.

United Light & Power Co.
Largest Power House in
the World uses ECCO.

from
POWER HOUSE
to RESIDENCE

From the point of generation to the point of use—through the meter to the lamp—electric wires must be insulated.

The Electric Cable Company has furnished the conductors for many of the largest generator plants as well as the insulated wire for a great many of the largest buildings and best residences in the world.

ECCO
Dependable
Insulated
WIRE

is accepted as dependable wire by people who know. ECCO is a scientific product, designed by able engineers and made by skillful workmen.

Every coil is tested and a certificate of tests furnished upon request. "ECCO" is stamped every three feet on the outer surface of the braid—your guarantee of quality and proof of our pride in the product.

Remind your architect to specify ECCO and insist that it be used by your contractor. The best and safest costs but little more than the others—it lasts.

Every property owner should be interested in the subject of correct insulation. We will furnish booklet giving information on this subject upon request.

The vital part of your Kitchen Cabinet

Exclusive Hoosier Ideas

Woman to Woman

7 Out of 10 New Hoosiers Are Sold This Way

Women who own the Hoosier Kitchen Cabinet make no attempt to conceal their enthusiasm. Seven out of ten who buy it say that some friend urged them to choose this cabinet in preference to all others. Now more than a million are in daily use on our money-back guarantee.

The Vital Section Is Exclusive

The part that makes a cabinet a real helper—that saves you time, energy and miles of steps—is pictured in the oval above. This is exclusively the Hoosier idea. Six of its chief attractions—found in no other—are these:

1. **The All-Metal Glass Front Flour Bin.**
2. **The Gear-Driven Shaker Flour Sifter—makes flour light and fluffy.**
3. **Scientific Arrangements—articles needed most frequently easiest reached. No partitions to chop up table space.**
4. **Revolving Caster Spice Jar Rack.**
5. **Ingenious, Big-Capacity Sugar Bin—holds more than twice as much as most bins.**
6. **Doors with Handy Trays that hold small utensils, or the new Roll Doors without extra cost.**

Hoosier has places for 400 articles, *all within arm's reach!* Forty labor-saving inventions are ready at hand for your instant use.

Low Prices—Easy Terms

Each Hoosier is sold under the broadest guarantee ever given on a kitchen cabinet—*your money all back if you are not delighted!*

Prices $14.25 to $53.00, according to design, equipment and your location. Pay a little at a time, without extra cost or interest.

Write for Hoosier Book FREE!

Read from the pen of clever women many ways that Hoosier cuts down kitchen work. See the five handsome new models illustrated and described. Get our low prices and freight-paid offer. No obligation whatever. Write for Hoosier catalog at once.

The HOOSIER KITCHEN CABINET

THE CONTROL OF FOOD SUPPLIES IN BLOCKADED GERMANY

(Continued from Page 26)

During the past months the authorities have been working on the concrete details of a mobilization of civilians. The authorities, intimately cognizant of the exact status of the industries, are in position to know where increased production must be achieved. The purpose of mobilization of labor is merely to put the man where his services are most needed; what needs to be done, and not what the individual wants to do, is the criterion of employment. This holds for brain service as well as for hand service.

The excess of tradesmen was merely transferred to other lines of activity, since in wartime they were nothing else than parasitic. The social philosopher has long contended that the middleman is a parasite; expert and legislative committees in this country are engaged in investigations to determine to what extent the practices of the middlemen are parasitic. Measured up on the scale of wartime efficiency, the trade practices of peacetime have been shown to be cumbersome, circuitous, expensive and inequitable.

Hotels, restaurants and cafés provided points of especial difficulty in the enforcement of the food regulations. The public eating house may be placed under compulsion to serve no food except upon presentation of food cards; but it cannot buy its supplies in that manner, since it must be provisioned in advance of the arrival of its guests. The most feasible method of regulation was to permit the public eating house to buy supplies in accordance with its established needs of peacetime, or a fraction thereof, but not to permit a revictualizing except after the turning in of the food cards of the guests who have been served from the preceding allotments. But manipulations were easy of execution. Thus, a café of good grade would buy from one of poor grade a portion of its coffee, so that the good café would be able to serve pure coffee, in violation of the regulation making use of coffee and substitute, half-and-half, compulsory.

The Disposition of Waste

So long as all forms of meat were not on the card, the public eating house could accomplish many violations of the regulations by indirection. The correction of the abuses, so far as they were corrected, was accomplished by limitation of purchase of raw supplies to the lowest possible figure. The result was that, at times, these places would run out of food entirely, as the writer several times learned by experience. The eating places in the largest cities were often run with a laxness that suggested the occurrence of grafting—or, at least, of favoritism.

Special regulations governing the disposition of waste materials were imposed on public eating houses, and in many ways attempts were made to check the notorious waste of these establishments. To limit consumption, to prevent abuse and to check waste, the simplified bill of fare was finally introduced as an Imperial regulation. A soup, choice of fish, choice of two meats, choice of several vegetables, and dessert was the established bill of fare. To this the eating places objected, on the ground that such a system did not permit of the advantageous utilization of the different cuts and portions of meats—if a restaurant served fowl and pork it was not permitted to serve a dish of livers of fowl, which had to be kept over for another day, and so forth.

Secreted Food Supplies

Nevertheless the system was forced into operation, and though not fully successful the simplified bill of fare did accomplish large savings, tending to reduce the food consumption of the eating houses to somewhat nearer the level of the home. In the matter of serving bread and butter, most eating houses respected the card system closely. Naturally the large hotels had exceptional difficulties; the patrons were willing to put up with simplified menus, but desired also simplified prices, which the hotel could not grant, because the costs of operations and overhead charges continued on a high plane.

The writer used to amuse himself in calculating the caloric contents of the dinners in the large hotels and contrasting the units with the prices. It was not uncommon to eat a simplified meal from an elaborately worded bill of fare, and realize at the close that some six hundred calories had been ingested at a cost of two dollars, recalling the experience of Lusk and Gephart that in New York twenty-five hundred calories cost, in sliced tomatoes, in a cheap restaurant, nine dollars, and in champagne fourteen dollars. The hotel cuisine suffered especially from the paucity in fats, since hotel cooking is based on the use of fats.

During the winter of 1915–16 there was much buying of household supplies in excess of need at the time, the supplies being cached for future use. Such storage was practiced by the peasant and in the small towns, as well as by the rich in the cities. The practice was vicious, because it enabled manipulators to force up retail prices and made distribution even more unequal. Such concealed storage was particularly applied to conserved meats, especially smoked sausage; and the extent of the abuse of the practice led finally to prohibition of the manufacture of all nonperishable varieties of sausage.

The total amounts of food thus secretly impounded in private homes was greatly exaggerated. Under Von Batocki a house-to-house search was carried out with more or less seriousness of purpose; but notable amounts of concealed foodstuffs were not uncovered.

The cost of living is a composite. The high cost of living in Germany is not the

More Success for Your Garden

Garden success is largely a matter of seeds.

Unknown seeds may or may not succeed. They are a gamble.

Seeds known to descend from families with traits of quality and abundance will almost certainly produce quality in abundance.

FERRY'S SEEDS

are seeds with *known* pedigree. We *know* the histories of their forebears for many plant-generations back. Each crop each year is tested in the great Ferry trial gardens to see if the family traits are there, the strain pure, the type up to standard.

The Ferry label means: "The seeds represented inside this packet have been tested and found worthy of the name 'Ferry.'"

The Ferry Seed Annual is free for the asking. It contains a selection of fine receipts for cooking vegetables.

Ferry's Seeds are sold by dealers everywhere

—the final seal of protection

If your car is worth insuring, it's worth the additional protection of a J-M Fire Extinguisher —positive protection, secured at slight outlay because of the 15% reduction in insurance premium thus gained.

And when the car is two or three years old—when only a limited percentage either of its cost or its real value to you can be covered by insurance—then, more than ever, you want protection. Equip your car with the

Johns-Manville Fire Extinguisher

Efficient on all incipient fires—even from gasoline or electrical arcs—and the *only* one-quart extinguisher with a two-way method of operation. Can be discharged by pumping or by air pressure previously pumped up—an invaluable feature in tight corners.

The J-M Fire Extinguisher is approved and labeled by the Underwriters' Laboratories, Inc.

To the Trade: Ask the nearest J-M Branch for details —generous discounts, uniform and rigidly maintained regardless of size of order, coupled with a sales policy designed for your protection.

cost of living high. The price of bread was, for the common rye bread, held to seventy-eight pfennigs—nineteen cents—a week from the middle of the winter of 1914–15 until October, 1916, when it was reduced to sixty-four—sixteen cents. These bread prices are lower than in this country. The cost of butter has fluctuated from fifty cents to a dollar a pound at different times and places, being now under control, though variable. The costs of meats have fluctuated from twenty-five cents to two dollars a pound for different kinds at different places. The maximum price of meats varied in October from twenty-five to eighty cents a pound for different kinds and cuts. Eggs have sold from six to nine cents apiece. Potatoes have sold at retail from one to four cents a pound; the set price for this winter is one and one-third cents a pound in hundred-pound lots; in small lots, one and a half cents a pound. The price of refined sugar has varied from seven to nine cents a pound; the set price for this winter is, wholesale, six cents a pound; the retail price will run about two cents higher.

Limitation in price has gone fairly hand in hand with limitation in ration. It is difficult to make a set calculation; but the writer, in Berlin in October, calculated that, for the amounts one could purchase, the cost was not over sixty per cent in excess of the cost of the normal ration just before the war. In England the prices were high, but one could secure any amount; in Germany the prices were relatively moderate, but the purchase was limited; in Holland, the prices were high, and the purchases were limited in fact if not by regulation.

Thanks to the efficiency of the Commission for Relief in Belgium, and its remarkable chairman, Herbert C. Hoover, the people of that unhappy country are being fed, relatively and absolutely, at a far lower cost than is possible in England, Holland or Germany.

The consumption of food stands in inverse proportion to the cost of food. One must not from this infer rigidly that if the prices of foodstuffs are doubled the consumption falls to one-half, if incomes remain unchanged. But the general relationship stated holds, though modified by the fact that the scale of wages tends to rise when the cost of living rises. Wages are high in Germany. The increase in the average wage in October was not far below the increase in cost of foodstuffs. In the spring of 1916 the cost of foodstuffs was much higher than later under the elaborated regulations of control. At that time the average intake was reduced not only by scarcity but also by the exaction of prices absolutely beyond the reach of the working classes. The reduction in price of bread was a great gain; less of a gain than if the bread ration had been increased to the same extent, but still a great gain, because it set income free, to be devoted to the purchase of other articles of diet.

Estimate and Production

When one compares what has been achieved in production with what the commission of German scientists believed could be attained, the results are not creditable to the agricultural classes, even when the influences of unfavorable weather are fully allowed for. The Eltzbacher Commission estimated the peacetime use as:

Protein, 2,261,000 tons.
Calories, 88,694,000,000,000.
Of domestic origin:
Protein, 1,650,000 tons.
Calories, 71,282,000,000,000.
Physiological need:
Protein, 1,605,000 tons.
Calories, 56,750,000,000,000.
Attainable production under blockade:
Protein, 2,022,000 tons.
Calories, 81,250,000,000,000.
Actual production in 1914–15 was, in foodstuffs:
Protein, 1,510,000 tons.
Calories, 63,410,000,000,000.
Actual production in 1915–16 was, in foodstuffs:
Protein, 1,100,000 tons.
Calories, 57,000,000,000,000.

The production for 1916–17 cannot be stated, but is in all probability not larger than for 1915–16. It is clear that the production during the past two seasons was not over one-half the protein and two-thirds the calories that were estimated as possible by the scientists. All that has been accomplished has been in the direction of distribution and economy, not in production.

The care of the soil, the rotation of the crops and the use of fertilizer have been kept from sagging to the lowest wartime plane; in particular, the use of fertilizer has been restored.

The storage of the crops is under partial control and losses are less.

The use made of the crops is determined to a greater extent by the needs of the people as a whole and less by the wishes or financial interests of the growers.

The waste of grains in manufacture of alcoholic beverages has been curtailed. The Socialists had requested the abolition of manufacture of spirits, the reduction in manufacture of beer to one-half of the normal output, and the introduction of the beer card; but this has not been adopted.

The use of grains in feeding swine and milch cows has been regulated so as to lessen the inevitable loss that occurs when grain is converted into an animal product.

The number of domestic animals was at first reduced, and the competition between the people and the animals for the produce of the soil was thus diminished. But this state of affairs has not been maintained.

The feeding of livestock has been taken, in part, from the growers and placed under the control of authorities, who will use this function for the benefit of the whole people rather than of the producer class alone.

The bread card has effected a fairly equitable distribution of the grains, but the bread ration has been low.

The control of the channels of trade has been taken, in part, from the trading class. This has brought producer and consumer closer together.

The disproportionate elevation of sales price over production price has been reduced; in some instances almost eliminated.

The distribution of the different foodstuffs to the different classes has been made less unequal. The principle that the individual must be fed in accordance with his needs and the available supplies, and not in accordance with his power of paying, is the guiding rule of the organization.

The Food Blockade

The nutrition of the entire people was in October placed upon a lower level of cost and a somewhat higher plane of intake for the industrial workers.

Waste has been reduced in all classes of society.

The particular needs of the hard-working men and women of the industrial classes have found at least a partial relief.

The health of the people has been maintained to a surprising degree. In particular the death rate in the early years of life has been reduced to a plane never before attained in Germany.

"More for all the people and less inequality between classes." During the second year of the war the agricultural classes consumed half again as much food as was available to the industrial classes; the well-to-do probably twice as much. It is the belief of the authorities that the inequality is now not over twenty-five per cent in the necessities of life; probably less. This the social democrats deny.

It is the belief—or possibly only the hope—of the authorities that the feeding of bread grains to animals has been checked.

That a state socialism is possible, Germany has demonstrated. She has also illustrated how difficult it would be to maintain in time of peace! The history of the past two years has confirmed the age-old dictum of the Socialist that the producer class and the traders have no thought for the consumer—just as it was at the time of the French Revolution.

That the food blockade of the Allies could have positive advantages for Germany may sound like a novel statement. Nevertheless, advantages exist, and they have been of far-reaching influence and importance. Space is not available to discuss the subject at length, but the two sets of influences may be summarized. It is assumed as the basis of the argument, that the blockade could have been applied to unconditional and conditional contraband to all industrial productions even, but not to foodstuffs; in other words, the usual type of blockade for which England has in previous wars always contended in principle.

The disadvantages of the food blockade may be grouped under four headings:

1. Lack of food, *per se*. This could only occur in an isolated country like England except under mismanagement. No one can study the food production and food need

(Continued on Page 53)

A "Peace-Program" for all the World

The Peace That Comes With Universal Brotherhood!

GET in tune with that Fraternal spirit of our day which is the world's best promise of peace and prosperity. This spirit as exemplified in Fraternal insurance is a big factor in the Nation's Welfare *because it conserves the home.* And this type of mutual protection, adequate and economical, reaches its highest expression in the order of THE MACCABEES. A membership in The Maccabees insures peace of mind, and that feeling of security for you and yours which is beyond price. It does more. It brings nearer the great Brotherhood of Man, the one big hope of permanent, universal peace.

If fears of old age sorrows haunt you, secure now the protection of The Maccabees. If, above all, you want the wife and children to be saved from poverty or worse, join this Brotherhood—**300,000 strong**—and protect them against the day when, bereft of your care, they face the world—alone. And all this at a monthly expense so small that no husband or father can afford to be without it.

From the social standpoint you will always feel good to know that in the local Lodge or "Tent" you will find the hand of welcome, the joys of fellowship and the word of sympathy.

When The Maccabees makes a promise to protect your home if you die, to take care of you when you are old, it provides the funds which make sure that those promises shall be kept.

A Maccabees Certificate is as good as gold. Over $90,000,000 has already been paid in their redemption.

Present Assets Over $21,000,000

Write us for the list of securities if interested. We are glad to send further details of how and why it will be to your advantage to join this Brotherhood which has weathered every storm and now stands on a solid, sure financial foundation.

Certificates on popular, easy payment plans, *$500 to $3,000.* Dues or premiums may be paid monthly, semi-annually, or annually. White persons from *18* to *50* years of age are eligible if in sound health. Certificates on the Whole-Life Special, Whole-Life 20 Annual Payment Plans—provide for paid up and extended insurance protection after three full years of membership.

If there is no local Lodge (Tent) near your home, and you would like one there, or if you desire further information as to plans and benefits, fill out the coupon below and mail to our general offices at Detroit, Mich.

LYNITE PISTONS

Why They are Used

This book—the first authoritative history of the development of the modern light-weight, high-speed piston—explains simply how Lynite Pistons—

Increase flexibility and acceleration,

Cut down vibration,

Reduce gasoline consumption,

Lessen bearing wear,

Decrease carbon deposits,

—in short, how they transform the engine.

Just a few minutes with this little book will make clear to you that Lynite Pistons add the final touch of quality to the high-quality cars on which they are used. Sent free, postpaid, at your request.

THE ALUMINUM CASTINGS COMPANY
Cleveland, Ohio

(Continued from Page 50)

of Germany without realizing that lack of food, *per se*—barring extreme crop failure—could not have arisen except as the result of crass inefficiency. There has been no question of this in the minds of scientifically trained Germans; the difference of opinion has been as to the responsibility for the mismanagement that has occurred.

2. The rationing of a people. This disturbs the physiology of a people, because it abolishes the tastes, desires and habits of classes and of individuals. It wears upon the spirit of the daily life. Rationing, to the mass of ignorant people, implies doubt of sufficiency and inculcates an attitude of fear. A state of fear in a people is a basic factor in their morale. To eat every day what one does not select, prepared according to rote and not according to taste, is enough to ruin the disposition of every man and of most women.

3. The technical labor involved in regulating the production, distribution and rationing of the food supplies of a people is enormous, both in mass and in efficiency. And there is only just so much efficiency in a country.

4. Limitation of the freedom of action in distribution of human energy. The need of producing nearly all her foodstuffs compels Germany to maintain, or even augment, the agricultural class, to the detriment of the exaggerated industrial development made necessary by the war. The withdrawal of ten million men places upon every adult civilian an extra work impost of from fifteen to twenty per cent. If the labor in agriculture could be reduced the pressure in the industries would be less severe. The work on the land is done largely by women, and mostly with primitive equipment.

Better Farm Tools Needed

The writer had not traveled through Germany for eight years, and each week he marveled more that the agriculture of so progressive a nation was so poor in modern farm implements. With modern agricultural equipment the cultivation of the soil would have been accomplished with half the manual labor. England is able to place the highest pressure on industrial production, because she is not compelled to grow all her food supplies. A food blockade places the blockaded nation in a strait-jacket. In the opinion of the writer this injury by the food blockade has, up to the present, outweighed all the others, and made necessary the mobilization of the industrial army.

A blockaded country is compelled to devote special attention to replacements and substitutions. Cotton is excluded; the manufacture of wood cellulose must be perfected. Copper and nickel are excluded; these metals must be recovered from existing supplies, directly and indirectly, and new alloys devised and manufactured to take their places. Crude rubber is excluded; processes for the synthesis and regeneration of rubber must be developed. Saltpeter is excluded; nitric acid and ammonia must be manufactured by synthesis. Sulphur and phosphorus are excluded; the methods for the manufacture of sulphuric acids and phosphates must be modified to utilize available crude materials.

Industries are internationally interdependent. A blockade necessitates a more or less elaborate reconstruction of industries, involving time, talent and labor. The needs of the industries compete with the needs of the isolated agriculture, with the result of decreased efficiency in each. Because of the need for agricultural labor, Germany has not been able to make use of women in munitions and other manufacturing plants to the extent that has been possible in England. A blockade of materials adds to the labor needs of the blockaded country; a blockade of food supplies adds still further to the labor needs, even though the ultimate food supply be not in the least reduced. The partial crop failures of 1915 and 1916 were due in part to inefficient cultivation of the soil, using that term in its widest sense.

The great advantage to Germany of the food blockade has been the result of protection of the value of the mark conferred by blockade. The mark is secluded; it does not encounter the buffeting of the winds of trade. Let us suppose the blockade did not apply to foodstuffs. The average importation of foodstuffs, direct and indirect, in recent years was six hundred million dollars annually. This would have had to be paid for in cash, as exports would have been prohibited. How would this have affected the German mark? The result would have been, in all human certainty, that Germany would have restricted her imports. In other words, the necessity of protecting the mark would have compelled Germany to do what the blockade has done—shut herself in.

To have allowed the normal importation of foods and fodders would have drained the circulation of Germany empty of its blood of gold. The Germans would not have made the prohibition of imports absolute; certain things she would have felt it wise to import, despite loss of gold; but, by and large, the final result would have been much the same. For a few months she could have imported by exchange of foreign securities held in Germany; but these were not enough to have maintained long her normal rate of importation of foods and fodders. One may interpose that she could have issued bonds. But she could not have gotten the bonds out under conditions of blockade; one cannot sell bonds abroad without securities, except at depreciation of currency in terms of gold.

So, in the end, to import food she would have had to export gold; and that she could not have continued to do. When one contrasts the value of the mark as against that of the ruble, one realizes the degree of protection that has been afforded by the food blockade.

A second result has been that the food blockade has enforced food economy and reduced the cost and the plane of living.

Lastly, the food blockade has given Germany a rallying cry, and provided for the government a reason for everything that it feels compelled to do. Whatever restriction is urged, whatever regulation enforced, whatever exertion or sacrifice demanded, the ground is the same—Germany is under food blockade. *Der Englische Aushungerungsplan* explains everything, extenuates everything, and is justification for everything. When the English Parliament enacts regulation of sale and use of food supplies it must prove the need and advantage to every Englishman; the German authorities need not prove the need for anything, they simply point to the food blockade, and the people not only submit but coöperate.

It is very difficult for anyone—even a trained observer—to formulate a precise opinion on the health and nutrition of the German people, as observation alone cannot afford the requisite data. One may judge the nutrition of a people by the body weight, by the statistics of the health departments and by their accomplishments. Beginning with the last, the writer was not able to learn that any class or group was failing in its work; indeed, the people were carrying an abnormal load of work. The statistics of the health departments, so far as published, do not afford any indications of subnutrition in adults or of any increase in diseases whose incidence might possibly arise in the presence of subnutrition.

The Health of Infants

The birth rate of Germany has been far below the normal; in some sections down to nearly one-half the normal. This is contrary to what the American public had been led to expect.

In a nation at war a low birth rate is normal. Low nutrition and excessive work may be invoked to explain, in part, the low birth rate. But the larger motive springs from the instinct in women that the horrors of war do not constitute the life environment a mother desires for her child. Hand in hand with the low birth rate, as everywhere, goes the low death rate in infants. The death rate in infants during the present war has reached a low plane never equaled in peacetime. It is now clear that, with the present low birth rate and death rate, there will be as many six-year-old children in Germany in 1921 as there would have been with continuation of peace at the old birth rate and death rate.

This has been accomplished by social service; the babes and their mothers are given special care.

In the family of a friend of the writer were two lusty boys. One day, on returning home from school, the boys began the daily supplication for food.

"Mother, we must have something to eat."

"My sons," replied the mother, vainly trying to still the mother's instinct with scientific reflections, "you have had eighteen hundred calories already to-day, and will receive for supper eight hundred more."

(Concluded on Page 55)

ATWATER KENT

SCIENTIFIC IGNITION

A quarter of a million Atwater Kent systems will be used by representative car manufacturers during 1917.

This system is made by the largest concern in the world devoted exclusively to the problem of scientific motor ignition. Its presence on your car is an evidence of that car manufacturer's desire to give you the best and most modern equipment—regardless of cost.

Thousands of dealers sell Atwater Kent Ignition for magneto replacement—there is an outfit for every type and make of motor.

Why the Liberty is Your Car

INSTEAD of making broad, general claims of Liberty excellence, we detail below definite and specific features in which the Liberty stands alone among cars.

To prove the truth of these statements rests absolutely with you.

You will buy a Liberty on facts—not phrases. You will buy—for your own protection—on the basis of your own judgment. Here are the facts:

You Drive With Ease

WE claim for the Liberty unprecedented driving ease.

Get into a Liberty and see if the car backs our claim. Make your own investigation—for your own protection. We want you to sell this car to yourself—on plain facts—in direct comparison with every other car made.

Push the clutch pedal down with one finger. You never could do that before. How much fatigue will that save you in a day's motoring—that clutch that almost yields to the weight of your foot as you sit?

Shift the Liberty gears—even from third to second at full speed—and get the new note of mechanical perfection. Pull the emergency—with one finger—and see what happens. Get the vital fact that in al the motions of driving a Liberty there are only eas and pleasure—without effort.

You Ride In Comfort

WE claim for the Liberty—unprecedented ridin comfort.

You have rattled in cars—you have been shake up by car tracks and cobbles, ruts and pits. Yo have had to pick the smooth places—for comfort

Drive straight ahead in the Liberty, no matte what the road. There are no rattles. In the wide deep, restful front or back seat you ride in perfec comfort. You swing along smoothly, absolutel at ease, supremely comfortable, at all speeds—ove all roads.

THOSE are two tremendous claims for the Libert —but they are very easy for you to prove.

Take this statement along as you ride and driv a Liberty. See if it's true. Make the car prove it

And buy the Liberty—as have thousands of sat isfied owners—only on the sure testimony of actua experience.

(Concluded from Page 53)

"But, mother," replied the lads, "boys cannot live on calories alone!"

The body weights of the Germans have been materially reduced. The long familiar Teutonic obesity has disappeared.

Subnutrition is a relative term. When a man whose normal weight is seventy kilos reduces weight—let us say to sixty kilos—he has no longer the food needs of a seventy kilo man; instead, he may have less than the needs of a normal sixty-kilo man. The American people might, for illustration, reduce in weight to the level of the Italian people, and the food needs would fall in proportion; the Italian people might reduce to the level of the Japanese, and the food needs would fall in proportion. When an individual loses weight he has less need for food, because his food needs express both his mass of tissue and his body surface; and both are reduced when body weight is lost.

This will show both in needs for protein and for calories. A time will come when such a reduction in body weight becomes subnutrition. The point of distinction—the place that separates loss of weight to the physiological minimum from pathological subnutrition—is hard to fix. The histories of famines and of men separated from supplies of food indicate to what an amazing extent men can continue to work on low rations. The defenders of Ladysmith were for several months on fifteen hundred calories a day. In all countries at all times, but especially in winter, there are classes that are no better nourished than were the industrial classes of Germany during the past summer. In a panic year, or a season of low industrial activity, probably not less than several million persons in this country suffer subnutrition in the same sense and to the same or a greater degree.

The writer was not able, during the summer of 1916 in Germany, either by observation or through inquiry with trained observers, to find evidence that the Germans were suffering from subnutrition in the rigid sense of the word. There were no signs of loss of strength or lowering of resistance. There had been universal wasting of fat, and the intake, per capita, was low; but there was no evidence available that the intake had fallen below the plane of physiological need. There are a number of published experimental studies in low rations in which the intakes were considerably below the German intakes, especially in protein, with the preservation of health and strength.

The protein intake was felt by the Germans to be low, but not to an apprehensive extent. The low ration in fat was keenly felt, however. This reaction to the scarcity of fat is difficult of evaluation. Fat plays a prominent rôle in the externalities of a diet; it is essential in the normal and customary cooking of foods, and foods prepared without fats are flat, unnatural and unsatisfying. Nowhere in the literature of human physiology is there an adequate discussion of fat need, *per se*. It has been tacitly assumed that the body could always form fat from sugar; therefore, sugar in intake was equivalent to fat.

Hunger for Fats

In experiments with animals it is known that a normal diet must contain a certain amount of native fat, supposed to carry fat-soluble vitamines. The medical profession has long believed that diets low in fat tend to result in loss of health, especially in children. The fat intake in Germany to-day is not over twenty grams of fat, animal and vegetable, per capita per day. This is certainly more than enough to cover the needs in fat-soluble vitamines. It is twice the Japanese intake of fat. But the fact remains that the people are fat-hungry. This fat-hunger has impressed the trained workers of the Commission for Relief in Belgium.

The writer has heard the same story of fat-hunger from workers in the Balkans and in the Russian prisoner-of-war camps. It is not definable—it may possibly be only the intense desire for return to the normal preparation of food; but it is a positive hunger. Over and over again Germans have told the writer that the low rations in protein were nothing, but the low ration in fat was a deprivation that was only more and more keenly felt with time. Several Germans have described it as like the sensation of a tobacco user or a tea drinker when off tobacco or tea.

The writer realizes how very hazardous it is to formulate an opinion in such a matter, without experiment and without controls, since so many factors are involved. But one cannot exclude the possibility that fat-hunger may express a fat-need which we do not understand.

One German, a trained observer, who discussed the situation, spoke as follows:

"My body does not need tobacco, coffee, alcohol or fat, I am convinced. But when the coffee is not fit to drink, the cigars not fit to smoke, the saccharinated beer not fit to drink, my food not cooked with fat and my bread dry, the sum total of deprivation is too much; and, even though each of them be unessential, the losses combine to form a fact of crucial importance."

In talking with Germans one almost gets the idea that subnutrition on a normal qualitative diet would be preferable to adequate nutrition on a fat-free diet.

The diet of the well-to-do classes has not been reduced to the plane of minimal requirements; though restricted, when regarded psychologically, it has been fully adequate physiologically, even in the lay sense of the term.

The diet of the agricultural classes has not been materially reduced below the plane of peacetime consumption.

Up to the Agrarians

The dietary of the industrial classes was, from March to September, 1916, reduced to the physiological minimum. This diet was low in animal protein, very low in fat, and low in calories, when contrasted with the work imposed upon the laborers. The diet was repugnant to the taste and did not satisfy the desire for food. A survey of the chief manufacturing cities of the empire carried out during the late months of the past summer indicated that the average intake for adults varied from 1.6 to 2 ounces of protein and from 1800 to 2500 calories per day. Since this was not sufficient to maintain the physical labor that was being done, this was accomplished by utilization of the body fat of the workers.

The psychology of the war atmosphere and of the rationing provokes a mental reflex that is abnormal. The consciousness of class distinction was a factor in deepening depression. Though loyal in the highest degree to the responsibilities imposed by the exigencies of the situation, the industrial classes have realized that, while the food blockade was a burden imposed by war and the crop failure a second burden imposed by Nature, the burden of mismanagement came from within. The industrial classes are fully aware that the agricultural classes fed to live stock during the first two years of the war not less than four million tons of bread grains, one million tons of sugar and fifteen million tons of potatoes that should have gone to the industrial workers. These amounts of foodstuffs would have contributed to each of the 58,000,000 civilians of the empire daily during the two years four-tenths of an ounce of protein and five ounces of carbohydrate, equaling six hundred calories, in terms of man ration eight hundred calories.

In October materially larger rations were allotted, and the elaborated system of control presaged better conditions still later in the winter. Recent official utterances from high German positions, however, have made it clear that it has not been possible to maintain the improved conditions in the dietary of the working classes of the industrial districts.

In the final analysis it is up to the agrarians. There is enough food in Germany to maintain the nutrition and the nervous system of the industrial classes if equitable division be attained, assuming that the harvest yields of the past summer were as large as unofficially and officially stated, and that the selfishness and rapacity of the agrarians are held in check.

When the situation in the food supplies of Germany is considered in association with the state of the manufacturing industries, and the efficiencies in the two domains evaluated, as an experiment in state socialism, it becomes clear: *a*—That mobilization of capital and industry has been successfully accomplished; *b*—that control of the channels of trade has been shown to be practicable, though difficult; *c*—that control and mobilization of agricultural production have turned out to be difficult, past all expectation; and, indeed, practically impossible so long as land continues in private ownership.

Whether experience in wartime indicates more or less than would be expected to occur in peacetime cannot be conjectured.

Editor's Note—This is the third and last of a series of articles by Doctor Taylor.

Can't you afford an Enamolin Room?

Madam—if you intend to refinish your home or even one room—you cannot afford *not to use* Enamolin.

Here are the reasons:

Enamolin itself costs no more than any other high-grade enamel and very little more than good paint.

Enamolin has tremendous "spreading" capacity—one gallon of it spreads *over 600 square feet* of surface—therefore less of it is needed.

And it costs no more for labor, whether the painter uses Enamolin or the poorest paint.

As for looks and wear—the Enamolin finished room is ***permanently beautiful.*** It is finished for a lifetime with a surface that is lovely to look at, one that can be kept in perfect condition by an occasional scrubbing with Sapolio and water.

When you have protected and beautified your woodwork with Enamolin, take care of your floors with Namlac Floor Finish. Give them a high lustrous surface, so elastic as to withstand the tramp of feet, the dragging of furniture and even spilling of hot liquids.

Enamolin and Namlac are on sale at the better paint and hardware stores. If you cannot secure them, write to us.

AUTOMATIC IGNITION
CONNECTICUT

Dependability

Automatic protection is essential wherever carelessness or neglect can result in danger or loss. Boilers have safety valves. Factories, sprinkler systems. Railroads, block signals.

And on the more modern automobile the Automatic Switch protects the battery against drainage by cutting off the flow of current—automatically—when the motor stops, should the driver forget or neglect to do so. No automatic protective mechanism is any more dependable.

The device shown above marks this switch and identifies Connecticut Automatic Ignition. This is "The Device of Efficiency."

The Automatic Telephone

is not merely a commodity, not simply a machine; it is a service of vital meaning to your business

Vital to your business, because through it lies the easy way to better work, the economical method of handling routine duties, the speeding up of production.

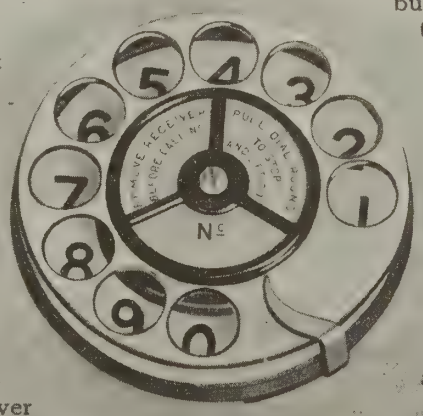
"A man and an AUTOMATIC telephone at every desk" is the slogan today in thousands of firms in America and abroad.

In these organizations telephoning between individuals and departments is easy, inviting, convenient. Employees find it to their own interest to talk rather than to walk. They turn instinctively to the AUTOMATIC telephone whenever their activities extend beyond their own desks.

Without exception, the use of the telephone for interior communication doubles and trebles with the installation of the AUTOMATIC system. In many large commercial institutions 45 calls per telephone per day is the average traffic carried by the AUTOMATIC system. Before the AUTOMATIC was installed in the office of a great railroad system, for example, scores of office boys were kept busy carrying notes between individuals and departments; the manual telephone was available, but did not invite use because its service was so slow and inconvenient. Today every AUTOMATIC telephone in that organization averages 40 calls per day, for interior communication only.

This result is not remarkable to those who know and use the AUTOMATIC. It is revolutionary in its effects, but the revolution is natural. Conditions formerly wasteful of time and money disappear because their source has been removed.

The AUTOMATIC system operates without an operator. Her work is performed by a machine, which must of necessity be more accurate than a human hand. Operated by electricity, the AUTOMATIC telephone shares its speed. Controlled absolutely by a simple dial on the base of the telephone, the mechanism has no other duty than to obey the commands sent to it.



Contrast the way you make calls about your office or factory today with the AUTOMATIC way, which is merely the lifting of the receiver and the turning of the dial two or three times. Four seconds after you start to call, five at the most, the bell at the station you want is ringing, or a signal tone tells you instantly that the line is engaged.

On the AUTOMATIC system nobody can listen to your conversation. Your conferences over it are as secret as though held behind locked doors.

The AUTOMATIC system always gives you the number you call. It cannot misunderstand or make a mistake.

The AUTOMATIC telephone is on duty day and night, holidays and Sundays. You never have to find a substitute while it takes a vacation.

The AUTOMATIC telephone is handling with equal efficiency the enormous traffic of great city systems, like those in Los Angeles, Minneapolis, St. Paul, Columbus, Dallas, and the requirements of business firms which need but a dozen or so stations.

Today such organizations as the Standard Oil Co., The Remington Arms Union Metallic Cartridge Co., The Goodyear Tire & Rubber Co., The New York Central Railroad, The Republic Iron & Steel Co., The Hill Publishing Co., The United Fruit Co., and hundreds of others, have adopted the AUTOMATIC telephone system and are enjoying all its advantages.

The standards of efficiency and service of such concerns as these dominate the business world today; they set a pace which all, large and small alike, will have to follow. Their resources run into hundreds of millions, but they cannot afford the costliness of manual telephone service. They can command the time of the highest priced men in America, but they are not willing to waste the time of even their lowest-waged office boys through inefficient and insufficient interior telephone service. With them an enormous volume of business cannot justify wasteful handling of routine details.

Nor can *your* business, whether it needs six telephones or 600, afford the waste, inefficiency and costliness of manual telephone service. Your men, whether they draw salaries of $60 a month or $60 a day, should not be hampered by the delays, inaccuracies and inconveniences of that system.

We have solved the problem of interior telephone service for companies engaged in every conceivable line of business. A request from you will place all our resources at your disposal.

NICK CARTER, REALIST

(Concluded from Page 15)

letter, and, after having scaffolded up all these improbabilities, to so time the traveling of the letter eastward that it was in one of the bags of mail which the bandits took off the Overland Limited at 11.20 of the clock on the night of May the twenty-second!

Nor did the Great Gods of Coincidence stop with that.

They caused Derf the Dane to cut open the pouch in the attic of the schoolhouse and put the bill into his pocket, and to leave behind him, in the pouch, United States Post-Office Department registered package Number 1768, with the envelope postmarked Kemmerer, Wyoming, and addressed to the National Park Bank, in New York.

And so, my critical gentlemen, in this dreadful dime novel that I am reading, Deadwood, of Dakota, wrought the ruin of Derf the Dane!

Andrew Lang, the English critic and historian, used to speak flippantly of the Professor of Poetry at Oxford as "Mat" Arnold. But when he mentioned the founder of our largest school of fiction he always respectfully named him as "Nicholas" Carter.

Doubtless a reason was this writer's charming notion of verisimilitude.

He labors in his stories, obviously and patently, to preserve the characters of his leading actors. There is usually some correspondence that exhibits these peculiarities; the slang of the underworld, and its serene unconcern for the structure of our written speech and its rules of punctuation. The presence of such correspondence is not a major requirement of the formula. It is rather a detail of it. That the District Court of the United States has not overlooked this detail must conspicuously impress us—force upon us—how accurately its story follows the rules.

Fact and Fiction Hand in Hand

Examine the letter called Exhibit 76, on page 99 of this amazing narrative. It was written by Bully Red to one of the associate bandits and is equal to anything on the ten-cent counter of the bookstalls:

"Friend J. C.

"I received your letter just now I was cupied at pasho I got a hundred and fifty com F Brother I have not got a dam cent ow But will sure do all that I can before hey come up for trial tell me all about it nd Let me know how bad it is the Bulls now it was them they said it was you they ad that picture of the bunch in the Review nd everybody would know it B must of ft if you see him tell him to write I wrote letter to D. W. Woods at K. C. if you ont think they got it write and have it orwarded to J. C. 608 Well J I hope it aint ad write soon

"Oley is getting along O K

"B"

Accurately, as with the nicest care, Transcript of Record, Number 3423, has followed every rule for the structure of the Nicholas Carter story.

We have found the characteristics we have grown accustomed to expect: the holdup; the profane, rough talk; the overdone dramatic disguises; the miraculous escape from death; the clews; the boy heroes; the schoolmarm; the long, carefully built-up, painstaking plan of Providence to trap the desperadoes at their own game—all the tricks in the bag.

And now can the court close its story according to the rules?

Every urchin knows how it ought to end. There the formula never varies. There must be a dramatic arrest, and a great final scene in which all the desperadoes are rounded up, defeated and abased, with a closing sentence, ominous and fearful, to remain in the memory like the pronouncement of Fate.

I hasten to assure the reader that the District Court of the United States, for the District of Nebraska, does not disappoint us in this behalf. Its story is what the editors call "sustained"; and it closes according to the rules.

There is an ancient belief, threaded into numerous tales, that in the end, after various wanderings, the criminal will return to his ancient haunts.

One of the central figures in this drama is mysterious Matthews, known to the underworld as Bully Red. He had been a stage driver in Idaho. Now on the eighteenth day of June, a month after the holdup, and after having vanished clean away out of human knowledge, we find him seated in Room Number 19, at the Buhl Hotel, in the state of his old associations.

He was doing precisely what Nicholas Carter would have wished.

Bully Red's Fatal Error

He was sitting in the middle of the room, with a suitcase open before him, and a .45 pistol lying on top of his clothing in it, ready to his hand. He was writing a letter, two or three sheets of which he had finished. He was a farsighted and careful desperado. But on this day, in the old country where as a stage driver he used to lord it like a king's governor, he felt the security of his ancient dominion; and he made his one incalculable blunder. He neglected to lock the door!

It was a fatal error.

Like shadows, noiselessly two sleuths slipped into the room. He looked up from his letter to find himself under the muzzles of their guns. He was outwitted and he knew it. He rose and put up his hands. They handcuffed him and ordered him to sit down. Then suddenly he realized the significance of the letter he had been writing. He fell forward over the suitcase, seized the letter, and put it into his mouth. In an instant the sleuths were on him. They jerked his hands down, forced his mouth open, and got out the damaged sheets. It is all precisely as one finds it on the last page of the yellow story.

Then the dime novel closes.

It closes with a scene of incomparable drama. The five bandits are standing before the bar of the United States District Court. The courtroom is crowded with people. There is a breathless silence. The judge sits forward in his black robe, a marble face above a figure in basalt—the simile is contributed.

And in words that seem to have dimensions and weight, words sinister and ominous, words heavy with the tragic fatalities of life, he pronounces the sentence of the court upon each of the captured desperadoes: Dan Downer, Derf the Dane, Bully Red, and their two unfortunate companions. He named each man, with his alias; and as he named him he added the awful words in the formal language of the law: "Imprisonment at hard labor . . . for the term of his natural life!"

How pregnant with dreary, unimaginable horror are the last words of that sentence: "For the term of his natural life!"

And now, my critical gentlemen of the "curate and tea-party novel," I suggest a dreadful doubt: Suppose—and I whisper it lest the idea escape into the world—Suppose it should ultimately happen that Nicholas Carter is a truer realist than you are?

GOODYEAR

AKRON

THE MASTERPIECE

"It is in vain that we look for genius to reiterate its miracles in the old arts; it is its instinct to find beauty and holiness in new and necessary facts, in the field and roadside, in the shop and mill."
—Emerson, Essay on "Art."

THE Manufacturing Subordinate fingers the sheaf of shop records—cost sheets, materials estimates and so on—yet another time. Presently he speaks:

"Sir, there is no other way—we must cut the quality."

"You will keep the quality," sternly returns his Chief—"where it is. You will, if it is within the power you direct, improve it!"

"But—competition—"

"We are not here to meet competition."

* * *

The artist before his canvas, the writer above his phrase, the sculptor guiding his chisel—withdrawn, absorbed, sincere—marshaling brain and hand to the line, the thought, the form, that, for the moment alighted upon, has become the deputy of the world—toiling perhaps in ignorance of the existence of other pictures, other passages, other sculpture—intent upon that wondrous thing called the masterpiece—

They are not there to meet competition.

Pigment and canvas, pen and foolscap, mallet and block, rubber and cord—where is the difference?

Where—so long as the conceiving mind, the fashioning hand, the resulting accomplishment find common harmony in perfection.

—so long as the Masterpiece is born!

* * *

The composite character, skill and cumulative knowledge of the Goodyear institution have illustrious reproduction in the Goodyear Cord Tire.

In the lithe strength of its multiplied cords is wrought our conception of integrity.

In the quality of its substance is revealed our idea of sincerity.

It is the very capstone of our effort—the centerpoint of our aim.

There came a time when rising production costs, coupled with the action of competitors, forced a situation precisely like that indicated in the first paragraph of this advertisement.

That situation was met precisely as shown—without the slightest sacrifice to expediency.

The tire that had been born of lofty purpose and aspiring toil was continued in the same spirit.

Never intended to meet competition, but to transcend it—to stand out, conspicuous and compelling, in the eminence of its own superiority—it was held religiously to its original dimension.

It is the *best* tire we know how to build—irrespective of cost, method, makeup or any other condition.

It is the climactic expression of all that has been learned, evolved, dreamed of, in the productive history of the tire company foremost in the world in point of inventive achievement.

It is the tire carrying the pride and prestige of us all—designers, workmen, supervisors and executives.

Unmatched, imperial, unique in simple goodness—it is itself the summit of tire accomplishment.

It is the Masterpiece.

LAVATORY

KITCHEN

LAUNDRY

BATHROOM

You'll know what Hot Water Service really is when you get a RUUD

With a Ruud connecting the gas and water pipes in your basement, you can shave and bathe in hot water to your heart's content, no matter what the hour of the day or night.

There is no waiting, no trouble of any kind. Just turn on the faucet—a tingling hot stream comes gushing forth like magic.

And every hot water faucet in the house responds just as quickly—just as hotly—when you own a Ruud. Hot water is waiting at the kitchen tap—for dishes, for cooking, for scrubbing. Down in the laundry, the faucets are ready to begin the day's work without a moment's delay.

RUUD AUTOMATIC GAS WATER HEATER

"Hot Water All Over the House"

With all its wonderful convenience, Ruud Hot Water Service is economical too. The Ruud Heater burns gas, except for a tiny amount in the pilot light, only when you are drawing hot water and then only enough to heat the exact quantity of water you use. It gives you continuous hot water service without the expense or trouble of keeping a fire going all the time.

The principle of the Ruud is simple. The flow of water when you open a faucet automatically turns on the gas in the heater. The gas ignites from a tiny pilot light and instantly heats the water as it passes through a copper heating coil.

A temperature regulator in the heater keeps the gas supply down to just what is needed, and so prevents any waste of fuel. Turning off the water shuts off the gas—until you want hot water again.

The initial expense of the Ruud Water Heater is moderate—extremely so when you consider that the one investment means instant hot water service added permanently to your household. The Ruud is of such durable construction that long life is assured. Many Ruud Heaters have been in service for 20 years.

The Ruud is made in sizes according to the number of faucets to be supplied. Any gas company, plumber, or gas appliance store can tell you what Ruud model will fit your house. Ask them for information. If you are near one of our branch offices, listed opposite, come in and see the Ruud for yourself.

Interesting Ruud Booklet Mailed Free

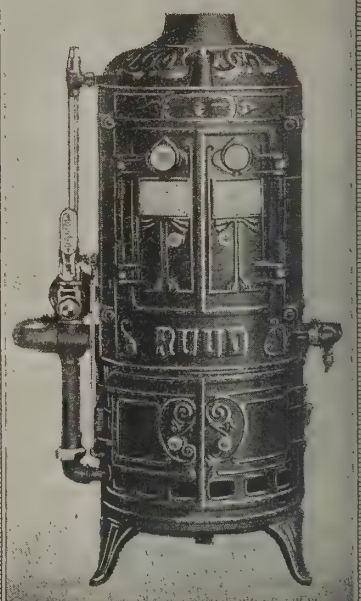
The Ruud booklet and descriptive matter, telling all about the Ruud Heater and Instant Hot Water Service, mailed free on request. Address either home office or branch nearest you.

Ruud Manufacturing Company

Department A Pittsburgh, Pennsylvania

Makers of Standardized Gas Water Heaters

Ruud Manufacturing Co. of Canada: 371 Adelaide St., W., Toronto



The Ruud Goes In the Basement; Answers the Turn of Every Hot Water Faucet In the House.

The Ruud Heater is a thoroughly tested and proved device. Over 100,000 are in use. Once you install a Ruud Heater, your hot water question is settled permanently. Consider this when you buy.

Get a RUUD

Not an Imitation

There are other water heating devices on the market which operate by the "turn the faucet" method. You may be offered one for a little less than the Ruud costs. But the sturdy construction of the Ruud and its exclusive gas-saving features make it far more economical and satisfactory. The Ruud in greater economy of gas alone soon makes up for the small difference in price. It is distinctly worth while to be sure that the water heater you get bears the name "Ruud."

THE QUEEN'S MISTAKE

By BOZEMAN BULGER

ILLUSTRATED BY T. RICHARDSON

J. WILBERT KNOPPS brushed into the office of the managing editor with what his æsthetic mind regarded as a just kick.

"Boss," he announced, "if I knew where I could get another job—mind you, I don't hold this against you—I'd walk right out of this office before I would do another one of those sycophantic praise notices for Old Man Siegfreund and his Hippolite. And that goes!"

The young dramatic critic plumped himself into a seat, lighted a cigarette, and threw the extinguished match across the room with a motion of thorough disgust.

"What's the idea, Knopps?" asked the directing head of the paper. "It doesn't hurt a dramatic critic to write an occasional boost, does it?"

"I don't know that it does," admitted Mr. Knopps; "but it's humiliating for a reviewer of standing to feel compelled to toady to a rube show like that. Occasionally, yes; but ——"

"The Hippolite does the biggest business in town," the M. E. reminded him. "A lot of people like that sort of thing."

"That has nothing to do with it," retorted the critic, though he might have thought differently had he caught the expression in the editor's eye as that dignitary toyed with a crested envelope, fresh from the morning mail.

"You know as well as I do, boss," Mr. Knopps went on with increasing indignation, "that the Hippolite production, with all its elaborate scenery and those nauseating vaudeville acts, interpolated for novelty, is patronized by out-of-towners almost exclusively. . . . Oh, I know, it's considered a magnificent spectacle, and all that; but it's a rube show just the same, and I'm sick of having to boost it. Now what is the idea?"

"You don't always get such definite orders from me."

"I know I don't; but, even if I do miss you, the hint comes from the office downstairs every time I start to a Hippolite opening."

"It might be advertising," suggested the editor, assuming an air of puzzled innocence.

The real answer he had in his hand, and knew it. He was well aware that Mr. Siegfreund and his Hippolite would never be boasted in the Morning Star.

"I guess that's right," agreed the critic, thinking of the advertising. "Old Siegfreund does give the paper a lot of business—more than it deserves, I suppose; but I was under the impression that you were running this end of the paper, independent of the office downstairs. You never stop me from blistering these other shows."

"No; and I won't. It is my policy to give you a free hand—except, possibly, the Hippolite; so you go right ahead and cut them to ribbons if you like. It's giving the town quite a laugh."

"Exactly," affirmed J. Wilbert. "That's what makes it humiliating for a man who has built up a following by satirical cynicism to have to write these commonplace, stupid boosts of an inartistic production built exclusively for rubes. If it's simply got to be done, send one of the ordinary reporters next time. It doesn't do me any good with my following, I tell you."

"All right; I'll think it over, Knopps," said the M. E. "You won't have to be bothered for a while anyway. The Hippodrome show, you know, always runs six months, good or bad. . . . Now will you wait outside for a few minutes? I must answer a couple of letters."

As the critic withdrew, nursing his wrath, the editor turned his attention to the letter that still lay in his hand, now somewhat crumpled, but with the well-known crest showing plainly on the envelope.

As the editor had suspected, it was a note filled with minute directions from the owner; also, a suggestion that ways and means be devised by which the Star could spread out and attract a new clientele.

This paper occupied a unique and very limited field in metropolitan journalism. It was born in the theatrical district and had learned to walk among stage people. Its appeal naturally was almost exclusively to people of a dramatic turn of mind. The Star had a reputation for being unduly smart and clever, but its circulation had never moved in leaps and bounds. Dividends were unknown in its business policy and financial backing was a constant problem.

Thus it had become the plaything of wealthy men with fads. No less than five millionaires had amused themselves by using the Star as a medium for ramming what they liked to call spiciness down the throats of a commonplace public.

The bit of spice that attracted attention under the present régime was the caustic, unbridled pen of J. Wilbert Knopps. To those who like to see the flesh of conscientious effort laid bare, and salt rubbed into the raw wound, young Mr. Knopps was par excellence.

As the editor thought of this in connection with his circulation problems it occurred to him that it really was a little unfair to make the critic boost those Hippolite shows; in fact, he knew no reason for it except that intimations of that nature had been made to him when he took the desk.

The editor himself was of the class that revels in iconoclastic writing. He dearly loved to carry clippings and repeat caustic lines with which his young star had singed the feathers of some stage favorite.

"I say, boss, are you through with those letters?" Mr. Knopps called out.

"It's all right; come on in," the editor answered.

"I've got the real notion this time," declared the critic with unusual enthusiasm. "I can not only get this sheet some more business but we can have a lot of fun."

"Now you are talking!" agreed the M. E. "What is it?"

"What's the matter with our spreading out and taking a pot shot at some of those little fellows occasionally?"

"I don't exactly understand."

"Take on vaudeville for one night a week," explained Knopps. "There's a world of material there for making funny cracks in my column. The Paladin, you know, is doing a big business over there with a bill of headliners. Their Monday-night opening is quite an event."

The Final Duel Almost Broke Up the Show

"I thought you didn't like vaudeville."

"I don't; and that is exactly the point. I've always had to boost those acts that get drafted to the Hippolite; but here is a chance to speak right out and say what I think of them. It would give us a new lot of readers. There are lots of people who go to vaudeville in this town—I confess I don't know why; but they do."

"And you propose to write a review of the Paladin bill every Monday night?"

"Sure! It would be a scream panning those little acts."

"But all of them might not be bad," suggested the editor.

"Certainly not; but we don't have to bother with the good ones. Leave that to the commonplace sheets. Our sport will come in potting the small fry. There's many a laugh there."

"Are you sure it would appeal to our class of readers? Is the Paladin patronized by the higher class of theatergoers?"

"Is it? Why, the press agent tells me that the daughters of Old Man Whipple, the millionaire, have not missed an opening in three months!"

"What do you know about Old Man Whipple?" asked the editor sharply, giving the critic a searching glance.

It had occurred to the boss that the young man might know more than he was pretending; but the critic's answer reassured him.

"Why, that old fellow is the biggest theatrical bug in New York!" he explained. "Thinks himself and his daughters kind of benevolent guardians of the whole show business. I've never seen them, but fellows round town tell me they are real stage angels. There is talk that Old Whipple has been putting up for a lot of that big scenery at the Hippolite."

"All right," the M. E. quickly decided. "Go to it, old fellow! Give us some real live stuff on vaudeville. We'll have this town talking."

J. Wilbert Knopps accepted his self-imposed assignment with genuine enthusiasm. He would be avenged on vaudeville—his pet aversion. He went out of the office mentally sharpening his already ruthless pen to a needle point.

He was a peculiar sort of genius—this Knopps. To him the dramatic stage was something at which to laugh; its people beings at which to sneer for the amusement of a certain class of restaurant companions—a coarser form of *dilettanti*—superficial critics of everything pertaining to art.

From early boyhood young Knopps had been familiar with the stage. Nothing was new to him. He had been a cynic from childhood. This knowledge came to him through the work of his father, who had been a playwright and a stage director of burlesque shows. The ideas out of which the elder Knopps had accumulated enough money to educate the son served merely as a playground for J. Wilbert's heartless wit. There could be no doubt of his ability to write; and but for a certain lack of poise, probably due to youth, he would have been a master. As Knopps left the office of the Morning Star that morning he had but one thought, and that was made very clear in his opening remark to a party of friends he found at luncheon.

"Fellows," Knopps announced gleefully, "if you've got any good lines slip them to me. I've got a chance to knock Broadway back on its haunches. I'm going to write a weekly review of those inane vaudeville acts at the Paladin!"

II

EARLY on a morning in October—which is to say, in theatrical circles, about eleven o'clock—D'Arcy & Devere, vaudeville song-and-dance team, proceeded, with great caution, to prepare breakfast at the expense of the landlady's gas. The register downstairs gave their names as Mr. and Mrs. Cornelius O'Hare—their real names—and they had so registered with the understanding that no cooking was to be done in the rooms; this in view of the fact that Mrs. Trildea Buckingham, proprietress, served a morning meal for thirty-five cents.

It would be two weeks before their act opened at the Paladin, and D'Arcy & Devere deemed it wise to conserve their small change for more pressing needs, such as new props and Miss Devere's gowns. Besides, they had not used the gas the night before, which made everything even.

D'Arcy poked into a big traveling trunk and from the hatbox drew forth a miniature gas stove and a coffee pot. Ground coffee he kept in a rubber tobacco pouch, a very successful idea of his own invention, to keep it fresh. Dexterously he attached the stove to the gas jet by means of a rubber tube and set the pot on to boil. From her hand bag Miss Devere lifted a small paper bag containing two eggs and a couple of rolls. Going to the washstand she washed the eggs very carefully and then dropped them into the coffee pot. One of the rolls she stuck between the spout and the side of the pot and the other was wedged in alongside the handle.

This method of preparing a quick breakfast might shock the ordinary housekeeper, but there could be no question as to its efficiency. When the coffee came to the boiling point D'Arcy poured a small quantity of cold water into the pot to settle the grounds at the bottom and turned off the gas. Everything was ready. The eggs were medium-boiled and the rolls were hot.

In another corner of the trunk tray Miss Devere found two cups, two spoons, several lumps of sugar, and a five-cent can of evaporated milk. A grease-paint crock contained a small quantity of butter.

They had seated themselves at the little center table when the quick ears of Miss Devere detected a suspicious sound. In a jiffy D'Arcy had the stove disconnected and was about to dump the whole breakfast into the trunk tray when a warning finger from his wife stopped him. She had her ear to the door.

"Can't be Mrs. Buckingham," she half whispered. "It's somebody next door."

"Who's rooming in there?" asked D'Arcy, as both listened intently.

"Conners & Yvette, I think," she said. "They opened at the Paladin yesterday."

Don't You Want Them?

These Extra Features—In the Car You'll Own?

The Mitchell differs from other cars in some hundreds of extra values. This year they include

31 extra features—
24 per cent added luxury—
100 per cent over-strength.

They are in the Mitchell because of John W. Bate. His ideals of a car require them. And his factory savings—due to efficiency—make them possible at Mitchell prices.

Let us briefly review them. Then judge for yourself if you want them in the car you buy to keep.

The Extra Strength

Above all stands the margin of safety in every vital part. That has been doubled in the past three years.

Mr. Bate demands 100 per cent over-strength. It is essential, he says, to a life-time car. It is ridiculed by some makers, just as they ridiculed his former standard of 50 per cent over-strength.

But the world's best automobile engineers are working toward this standard. It was so in Europe—in 1913—when Mr. Bate spent a full year among them. It is coming in America—very fast—among makers who don't stint cost.

In these days of high steel prices it means much added cost. It means some added weight. But to owners it means safety. It means low upkeep, small repairs. It means a car that keeps its newness, and that probably lasts a lifetime.

We give it in Mitchells for the future's sake. For a year or two a car might serve about as well without it. But in years to come men by tens of thousands will be advertising Mitchell endurance.

31 Distinct Extras

The Mitchell has 31 distinct features rarely found in cars, even at high prices. Go let the Mitchell dealer point them out to you.

A power tire pump, for instance. You know that you need it. Reversible headlights, which shower the engine, when needed, with a flood of light.

An easy control, a ball-bearing steering gear, a light in the tonneau, an engine primer at the driver's hand. An extra-cost carburetor, a locked compartment, never-broken springs.

Consider all of these 31 extras. They will cost us this year about $4,000,000. There isn't one you don't want on a car you buy to keep.

New Added Luxuries

Handsomer cars than the Mitchells of last year can hardly be hoped for, we think. But this year we have added 24 per cent to the cost of luxury. We have added what we save in our new body plant, where all Mitchell bodies are built.

Now our finish coats are fixed by heat in enormous ovens. This gives a deep, lasting luster. We have added 50 per cent to the cost of the upholstery. This means extra-grade leather and a new type of springs.

There are scores of new touches.

Every woman will delight in today's exquisite models. And every man will want them. Go and see.

MITCHELL MOTORS COMPANY, Inc.
Racine, Wis., U. S. A.

TWO SIZES

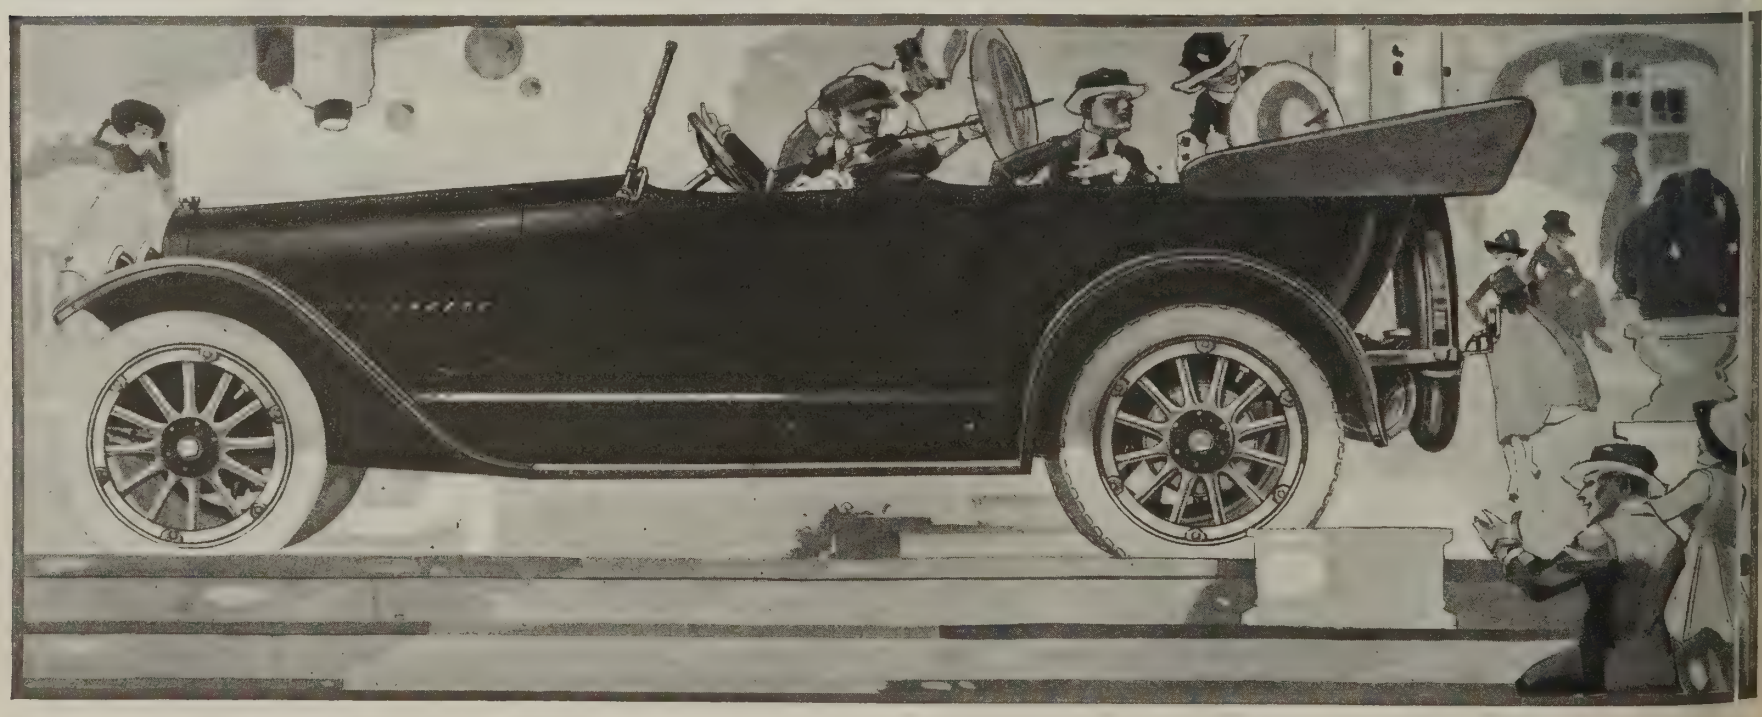
Mitchell —a roomy, 7-passenger Six, with 127-inch wheelbase. A high-speed, economical, 48-horsepower motor. Disappearing extra seats and 31 extra features included.

Price $1460, f. o. b. Racine

Mitchell Junior —a 5-passenger Six on similar lines, with 120-inch wheelbase. A 40-horsepower motor—¼-inch smaller bore than larger Mitchell.

Price $1150, f. o. b. Racine

Also all styles of enclosed and convertible bodies. Also demountable tops.



31 Extra Features
24% Added Luxury
100% Over-Strength

Mitchell SIXES

Two Sizes
$1150-$1460
F. o. b. Racine

Now at $1150, Too

For Those Who Prefer a 5-Passenger Car

We have made heretofore but one size in the Mitchell—our impressive 7-passenger model.

But some prefer a 5-passenger car. A 120-inch wheelbase makes such a car roomy. A 40-horsepower motor gives it power enough.

So this year we build Mitchell Junior. This is a Six without extra tonneau seats. It has more room and power than most cars of like type. But less than the larger Mitchell.

This is not a new model. Last year we put out 2500 to feel out the demand. It is simply our standard car now built in two sizes, to meet every buyer's idea.

New Body Styles

The Mitchell line, of course, includes all types of bodies. But the designs are exclusive—made for Mitchells only. And the bodies are built in our new body plant.

One attractive new design is the Mitchell Club Roadster—a roadster that seats five.

Another is our new-type Convertible Sedan. Cars of this type, for winter and summer, have attained a remarkable vogue. In summer they mean clean touring, and protection from sudden storms. In winter a luxurious closed car. See the Mitchell design—it's unique.

Mitchell Advantages Due to John W. Bate

The ways in which Mitchell excels every rival are all due to John W. Bate. For 14 years this great efficiency engineer has devoted all his time to the Mitchell.

This model factory, covering 45 acres, was built under his direction. Its thousands of machines are all adapted to build this one car economically. Our factory cost has been cut in two under these Bate methods.

No car like the Mitchell, equipped like the Mitchell, has ever been built elsewhere. Such a car at this price would be utterly impossible under ordinary factory conditions.

Mitchell Models

The Mitchell is built with eight styles of bodies—

Touring Car	4-Pass. Cabriolet
Roadster	Convertible Sedan
Coupé	Demountable Top
Limousine	Club Roadster

***Mitchell Junior* is built with Touring Car and Roadster bodies only.**

Quoted prices, of course, apply only to open models.

Unique Standards

This saving makes possible the extreme Mitchell standards, on which Mr. Bate insists. Over 440 parts are built of toughened steel. Important parts are all built oversize. Parts which get a major strain are built of Chrome-Vanadium. Steel in Mitchells costs as high as 15 cents per pound.

Two Bate-built Mitchells that we know of have already exceeded 200,000 miles apiece—over 40 years of ordinary service.

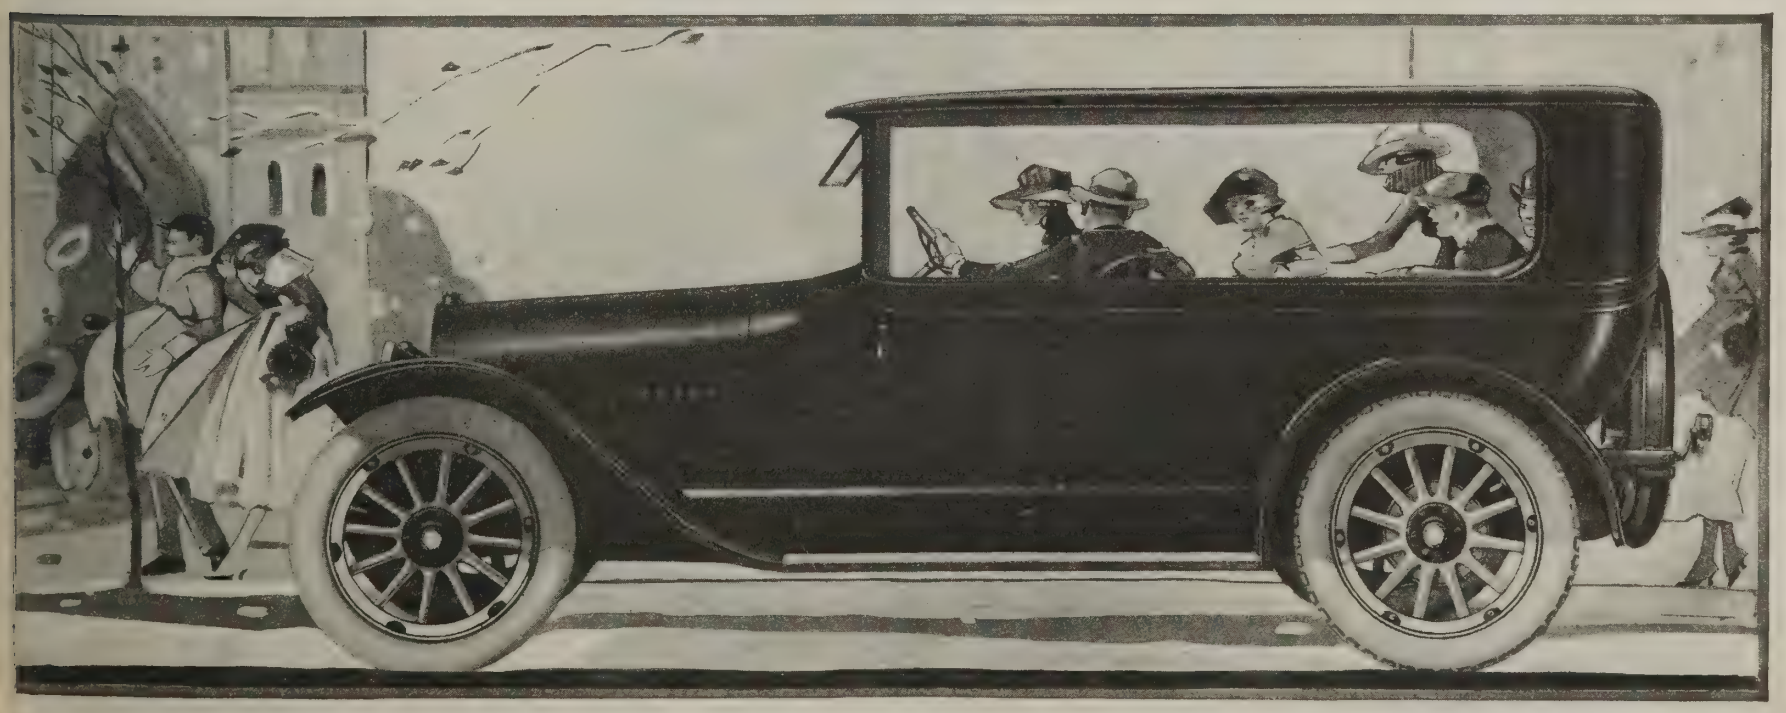
Let us cite one example—the Bate cantilever springs. You know how often springs break under shocks. But not one Bate cantilever spring ever yet has broken. They have been used for two years, on tens of thousands of cars, under every road condition. Never one leaf has broken.

In every hidden part of Mitchell's those same Bate standards exist.

These factors should outweigh all others in choosing a motor car. Other cars may seem equally attractive. Some makers, perhaps, attain equal endurance. But no other fine car gives so much for the money. And no other car embodies so many of the Mitchell extras.

This is to urge that you prove those facts. You can't afford to overlook them when you buy a car to keep.

MITCHELL MOTORS COMPANY, Inc.
Racine, Wis., U. S. A.



(Continued from Page 63)

"Oh, I guess it's all right," declared D'Arcy, returning to his coffee.

"I'm not so sure," Miss Devere was about to say, when there came a startling rap on the door.

"Oh, let her catch us," D'Arcy decided. "I'm not going to stop now."

Meantime the wife had resumed her listening at the door before turning the key.

"Why, it's somebody crying!" she said, and turned the knob.

As the visitor looked into the face of her friend she burst into a violent fit of weeping.

"Why, Bonnie Yvette, whatever is the matter?" cried the sympathetic little Mrs. O'Hare, putting her arm round the girl and drawing her inside.

Behind Yvette stood Buck Conners, her husband.

"I've been telling her not to worry about that crook of a critic, Trixie," the husband half whispered to Miss Devere. "But somehow I can't stop her from crying. . . . See if you can calm her down."

"This Knopps, Knocks, or whatever is his name," wailed the distressed Yvette, "has ruined our act. And—and," she almost screamed, "we had twenty weeks ahead of us at good money!"

"Just take a look at this paper," added Conners, handing a copy of the Morning Star to D'Arcy. "Ain't it awful?"

"Never mind, dearie; never mind," consoled Miss Devere, forcing the young woman to sit beside her on the bed. "The Booking Office don't pay no attention to that stuff. . . . Where's the kid?" she was suddenly reminded.

"The boy's out in the country," Conners informed her. "We've got him in school out at the place where we're aiming to live next summer."

"But we won't live there now," wept Yvette. "Hadn't you heard about our house?" she asked. . . . "Oh, I wish I was a man! I'd kill that Knopps. . . . Yes, I would; and don't you say I wouldn't," she said in response to her husband's deprecating look. "I'd kill him, I tell you! Our act was going good—everybody liked it. But him—that hyena! . . . I wonder if a man like that ever had a mother, a sister or a wife! I'll bet he never saw a baby in his life."

"Look at it! Look at it, and see for yourself," added Conners, indicating the review in the Morning Star. And he handed D'Arcy the paper.

"Yes, read it, Mr. D'Arcy. Read it aloud. You can't hurt my feelings any more. I want to show Trixie just what all of us show folks are up against."

D'Arcy rapidly glanced down the column, but did not read aloud until he came to this:

"A good movie house that runs four or five shows a day could take this act and make a lot of money. They could put Conners & Yvette on every hour and clean out the house in ten minutes, making it easy to start another performance with a brand-new audience. There are great possibilities here."

D'Arcy stopped. The four sat looking at one another, silent. It was too embarrassing for discussion.

"It's too bad!" finally remarked D'Arcy, unable to think of anything consoling. "That Knopps is a no-good guy—that's all!"

"But tell us about the house," Miss Devere inquired, in an endeavor to divert her friend's mind. "It must be lovely!"

"We've got it half paid for now," Yvette told her; "and this twenty weeks would have given us a home. It's a shame! And you know, Trixie, how hard we've tried."

"Well, we hadn't got so far as a house," said Miss Devere; "but Connie and I had our minds on a car—a flivver, you know. No regular car. Wouldn't it be great if we could drive out and visit you?"

"There's a lot of other vaudeville people going to have a hard summer," observed Buck Conners irrelevantly. "And, mind you, them agents have been stalling us with talk about getting by at the Paladin, so that future booking would be a cinch. Can you beat it?"

"This Knopps, I reckon, never boosts anything," remarked D'Arcy.

"The only thing that's got by for him in six months," Conners informed him, "was one of them little dramatic acts. He ain't got sense enough to know that a theater's got to have acts in one. Like the rest of them fool critics, he thinks there ain't nothing but the drammer." This launched a discussion of current attractions, and by degrees Yvette's eyes dried.

"Oh, say, Bonnie," Miss Devere was suddenly reminded, "I want to show you my new gowns for the opening."

That, for the moment, eliminated J. Wilbert Knopps. It also eliminated the two husbands. Conners and D'Arcy thought it a good idea to walk round to the Booking Offices.

III

DION D'ARCY, alias Cornelius O'Hare, returned to the boarding house of Mrs. Trildea Buckingham aglow with new ambition. A great big thought had hit him squarely between his Irish eyes.

"Trix," he announced, "you might as well roll up them short fancy dresses and put 'em in storage."

"What d'you mean, Connie?" she asked in alarm. "We ain't canceled?"

For several hours she had brooded over the fact that she and D'Arcy had the same kind of act as Conners & Yvette.

"No; 'tain't that," D'Arcy explained. "But to go ahead with our old knockabout act would amount to the same thing. We've got to pull something new, and I've got the big idea."

"But we are booked to do the old one," she reminded him. "We can't change it without notice, can we?"

"Sure we can! I just saw the agent, and he says we are booked as D'Arcy & Devere, and that's all. We can put on any kind of act we want to. If it don't go good they can cancel us then; but not before. Anyway, we can't lose anything by a shift. Look at what's happened to Conners & Yvette! They haven't got a thing after next week."

"I can see that my old boy's been doing some thinking. What is it, Connie?"

Devere was profoundly proud of her big giant of a husband and gloried in any opportunity to praise him.

"Trix," he asked importantly, "do you remember the time you recited Gunga Din at the benefit?" She nodded. "Well," he proceeded, "you know I told you right then and there that you had the old dramatic instinct and that you ought to have been a Maude Adams, didn't I?"

"Yes," she admitted with modesty; "but I thought you might be kidding, dear."

"Well, I wasn't. Now you know that I've got the build and the looks for a heavy, don't you?"

Again she nodded, looking at her husband with growing admiration.

"You could be anything, Connie!"

"There ain't a reason in the world," he went on, "why I couldn't do a heavy-hero stunt just as well as Bill Farnum. I've had fellows tell me I looked like him, at that." He squared off his shoulders so as to give his figure an appraisal in the mirror.

"But, honey, where are we going to get the material?" inquired Devere, at all times practical.

"I'm going to write it!" he declared, and paused for dramatic effect. "Just wait a minute," he added, in answer to her look of astonished wonderment. "You remember Modjeska, don't you?"

"You know I'm not old enough for that, Connie."

"Well, I do. Anyway, you've read about how she played Mary Queen of Scots?"

"Mary was the Queen that had so many lovers, wasn't she? The one that finally got her head cut off?"

"You got it, Trix; and you're just the gal who can play her. I got it all doped out. I was a kid sceneshifter in them old Modjeska days at the Lyceum, and I'm wise to every trick she ever had."

"Me play a Queen!" Mrs. Cornelius O'Hare blushed at the implied compliment.

"Well, you are a Queen, ain't you? You are to me, anyhow. I know you can get away with it. All of 'em was timid at the start. Julia Marlowe done it; and in looks you got her beat four ways from the ace."

"It's wonderful, Connie!" gurgled Miss Devere. "The bigness of it makes me tremble. I knew you had it in you to do something great. Hurry up and tell me the rest, dear!"

"To begin with, Trix," D'Arcy elucidated as he reached for pencil and paper, "mistaken identity is the backbone of all good farces, and the same thing goes for drammer. You know that, don't you?" She nodded. "Now listen," he went on: "This Mary Queen of Scots had all kinds of lovers—the biggest string in history, so far as I have read. I think she was also nearsighted."

"Are you sure about that, Connie?" the wife asked timorously.

"Not exactly; but I've got to have her nearsighted so as to plant the kick in this plot. Anyway, there ain't a boob in that Paladin audience who will know the difference."

"This J. Wilbert Knopps might know," she suggested.

"That's where I'll get him," he said with enthusiasm. "He'll think that maybe he's skipped a few facts in his reading and will give us credit for pulling something new.

"Anyway, the Queen has got to be nearsighted, and that's settled. Now follow this closely: I'm going to be one of the lovers. I'll come on when you, playing Mary, are busy with some embroidery or something. I'll pass out some salve about how good you are looking in your new crown, which is just the kind of stuff that Queen Mary always fell for. Now, Trixie, you know that I kn women, don't you?" he asked impressive and Devere nodded. "Well, I'll st about ten feet away from your throne; you, being nearsighted, will mistake me one of the other lovers with whom M has been getting a little too confiden about government matters. Get it?"

"Yes; but ——"

"No buts about it. You'll open up talk freely to me about what you said to other lover guy the night before. In t way Mary will expose the secrets of st . . . Don't it work out nifty? . . . Wh I've got the suspense established just ri I'll work closer, and she'll discover her rible mistake—a cinch for a big dram scene! Then she'll beg me not to tell. S get down on her knees and do the big e tional stuff—a fat part for you. Can imagine what a knockout scene it will with a Queen, wearing a crown on her h on her knees begging me to be mercifu let up?"

"Why, it's marvelous!" exclaimed trusting little woman. "And then?"

"I'll finally tell her that, deceived have been, I'm no blackmailer. . . . see, I've got to keep the sympathy of audience. . . . All I will ask is that keep a little love in her queenly heart me, and that my only reward shall be privilege of being put in charge of an which will go out and lick her enemies. also promise to catch that Queen Elizab or whatever her name is, and bring he alive. She was Mary's rival, you kn

"To save my life, honey, I can't see you remember all that history!"

"Oh, I know a lot of stuff," he explai with a weak attempt at modesty, "th never spout round these ham actors."

"That should be a beautiful act—a classic, Connie," agreed Trixie. "An can do it without the use of a single stage prop."

"I don't know yet," D'Arcy told "I may put in a duel at the finish. It m be good stuff for me to have one of t court spies come in and catch me ma love to the Queen. I could challenge to a duel and fight him right there o stage, with the Queen rooting for me to w

"Oh, glorious! . . . But what ki costumes do we wear?"

"That's a matter of detail. I want to go up to the library to-morrow and book on it. It's a cinch, though, that y have to wear some kind of a long p gown, and a neat little gold crown on head. I know where you can get those for me, I think I'll have to wear one of layouts with the tights and the big boots that get all wrinkled and fall d Also, a big wide hat and one of them jackets that button tight round chest and then flare out at the w But you look it up. You can be at ing to that while I'm doing the writ

Mrs. Cornelius O'Hare walked over and gave her husband a hug kiss. He had grown much in her es tion.

"If they like this act, Trix," D' reminded her, "we'll have that fl bought in six weeks. . . . They ways hollering for something new that Booking Office, and we are goi give it to them right hot off the grid

"Don't forget, dear," cautioned T "to see that your name gets on the gram as author. By the way, h what are we going to call it?"

"That's easy," he replied, s wisely. "The Queen's Mistake. K a cinch, eh?"

She thought it was.

Conners & Yvette dropped in over their troubles again, but D'A Devere said not a word about thei pendous project. Nobody should of this, D'Arcy had decreed, until Broadway out of a clear sky.

In the mind of the author there be no doubt of success. The n alone would carry it. No actor doubted his own ability to act D'Arcy & Devere were actors.

By noon the next day Author D'Arcy was well along with his hist one-act play. Miss Devere, lest she disturb the great mental concentr moved about the room on tiptoes.

"Say, Trix," said the author, lo up after an hour of steady writing, got a bird of a laugh that I could here."

"But don't forget, Connie, that drama—not comedy," she suggest

"There Ain't a Reason in the World Why I Couldn't Do a Heavy-Hero Stunt Just as Well as Bill Farnum"

MAXWELL ONE-TON CHASSIS

$795

F. O. B. FACTORY

BRIEF DESCRIPTION Four-cylinder engine, cast in block, powerful and economical; three-speed transmission; gears made of heat-treated alloy steel. Worm drive, using Timken-David Brown worm and gear embodied in rear axle. Axles of heavy construction with Timken roller bearings throughout. Frame of pressed steel with heavy cross members. Extra long springs made of special spring steel. Sturdy wood wheels with steel rims. Two sets of brakes acting on rear wheels. Heat-treated alloy steels used in all vital parts, providing a margin of strength and durability adequate to insure good service and long life. Remarkable economy in fuel consumption, tire expense and maintenance cost is assured.

The regular chassis equipment (as illustrated above) includes seat; front fenders; solid tires, 32 x 3 inches front and 32 x 4 inches rear; electric headlights and tail light; electric horn; generator and storage battery of 80-ampere-hour capacity; full set of tools. 33 x 4½-inch pneumatic tires with demountable rims on all four wheels, $30.00 extra.

THE new Maxwell One-Ton Truck, here announced, is the first truck to be built in the great volume necessary to make a low price possible.

This truck has been in the processes of development for two years. During that time we experimented, tested, made changes and finally drove the finished product over 30,000 miles of city and country roads.

We know, therefore, that the Maxwell Truck is mature, efficient, exceedingly sturdy—and in every other way fit to bear the Maxwell name.

Timken-David Brown Worm and Gear is used for final drive. Worm drive has the advantages of smoothness and silence in operation. Moreover, this drive, through greatly reduced friction, transmits the motor power with maximum economy.

Through our nation-wide dealer organization covering 3,000 cities and towns, we are able to render a service to truck owners that is absolutely without parallel in the motor truck industry.

Alert dealers in towns where we are not represented should consider the tremendous market for this low-priced Maxwell Truck. Business concerns, large and small, and of every description, can operate these trucks with better results and at less expense than any other form of equipment.

For these reasons, and others too numerous to cite within this space, the Maxwell One-Ton Truck will fill a long existing and immense field.

Consequently, it presents a literally golden opportunity in open territory for dealers of the right sort. To these we will be glad to send our proposition and printed matter on request.

The Slip-Shod Driver

Help Us Focus the Condemning Light of Public Opinion o
THE SLIP-SHOD DRIVER—*The Greatest Enemy of Motorin*

The *slip*-shod driver is one who leaves tire chains in the locker when careful drivers put them on their wheels. Driving with chainless tires over wet-slippery-skiddy streets he gambles with the lives and property of everyone in his path.

Only two things can reach the *slip*-shod driver —fear of the law and the mightier power of public opinion. So, we ask you to help us arouse and concentrate a public opinion that will compel the *slip*-shod driver to use intelligence and judgment that will safeguard all of us against all preventable accidents.

Concentrate your light of condemnation on every driver who cuts corners; who does not signal when stopping or turning; who does not give a warning signal of his approach; who exceeds a safe speed limit; who does not inspect his brakes and steering gear; and who does not stop to put on tire chains at the first indication of wet-slippery-skiddy streets.

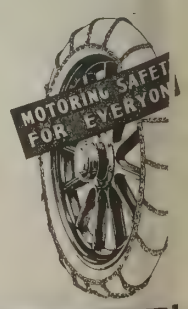
Help Us Insure Motoring Safety for Everyone.

AMERICAN CHAIN COMPANY, Incorporated

SOLE MANUFACTURERS OF WEED CHAINS

Bridgeport, A·C·C Connecticut

In Canada: Dominion Chain Company, Ltd., Niagara Falls, Ontario.



The above advertisement was suggested by a car owner who has the best interests of motoring at heart. Please show it to all slip-shod drivers you meet and ask them to spread its doctrines to others in their class. Help forge an endless chain campaign to insure motoring safety for everyone.

(Continued from Page 66)

"You're probably right, at that," he agreed, biting on his pencil and looking at the ceiling thoughtfully. "But wouldn't this be a scream? Listen: I've got the lover strolling in and saying: 'Well, how's the girl? What've you got to say for yourself? How's everything, anyway?' You know—that pleasant stuff. Well, after doing a little business with the embroidery the Queen'll look up and come back with: 'Oh, so-so!' Get it? 'Sew-sew!'"

This brought on a prolonged argument, Miss Devere insisting that the remark, even if it did bring a big laugh, was too undignified for a Queen. And her argument bore weight, because she was to be the Queen.

With great reluctance, Dion D'Arcy consented to leave it out—for the first performance, anyway. If things broke right he might slip it in later. The author was inordinately fond of that line.

IV

THE head property man at the Paladin scanned the prop list and scene plot with an ugly frown. He thought himself the victim of a practical joke.

"Say, Lawler," he called to the stage manager, "did you see this—this scene plot for D'Arcy & Devere?"

"It's in one, isn't it? Same old stuff?"

"That just shows you ought to take a look at your own business before slipping it to me. Get this!"

The prop man handed the two slips to the stage manager, who had passed them over without even slitting the envelope.

"They must be kidding," he decided, after a glance down the typewritten sheet.

Dion D'Arcy had called for "Full stage, old English setting; large royal chairs, heavy hangings, and colonnade back drop." Among the other props he called for "Metal suit of mail and armor, to stand in corner of room," noting in pencil that he had often seen one, backstage, at the Paladin. His idea for this was to give a better atmosphere.

"Send out front and get the billing," the stage manager suggested, "and see what these hicks are trying to pull. Must be some kind of a josh!"

But both prop man and stage manager were wrong. The copy for the outside billing read:

D'ARCY & DEVERE

SURPASSING ARTISTS IN NEW OFFERING

FIRST TIME ON BROADWAY

For the program the copy was a little more enlightening. It announced:

"Dion D'Arcy and Delhi Devere, dramatic artists, in The Queen's Mistake, a one-act play of historical interest, by Dion D'Arcy. Staged and directed by the Author."

The prop man and the stage manager looked at each other and—and laughed. Having the interest of the house at heart, and possessing a keen sense of humor, the S. M. betook himself to the office of the press agent for fear that dignitary had overlooked a bet. But he hadn't. Not only that, but he was on the point that very moment of mailing two seats to J. Wilbert Knopps, of the Morning Star.

"Give 'em the best setting you've got in the shop," the press agent urged the stage manager, "and let's see 'em work. This ought to be good."

Thus it happened that when the stage was all set for the matinée performance of The Queen's Mistake Miss Devere peeped through the drop curtain while a song-and-dance team was working "in one" and saw the hard, stony face of J. Wilbert Knopps for the first time. He was seated in the second row.

Performers coming backstage after their turns had reported no change in J. Wilbert's face since the curtain went up on a juggler's act, which opened the show. Not a semblance of interest or a smile had moved those hard, cynical features.

"Ole Sober Sue out there wouldn't smile," declared a star monologuist, over his shoulder, as he took two legitimate bows—and then "stole" another—"if the Statue of Liberty should hit William Penn over the head with a bladder."

Just the same, Mr. Knopps was awaiting The Queen's Mistake with unusual interest. The wording of D'Arcy & Devere's act on the program had roused his curiosity. In it there was a suggestion of something thoughtful, artistic.

Finally the boy hung out the card. The curtain rose slowly to the music of Hearts and Flowers, and even J. Wilbert Knopps could not repress an amused twinkle. Mary, Queen of Scots, was disclosed seated in a huge armchair, industriously plying an embroidery needle on what appeared to be the cover of a sofa pillow. On her head was perched a gilded crown, made of cardboard. Through the carelessness of haste, Miss Devere had permitted the black thread that held this coronet in the back to hang down across her white neck and shoulder. Knopps very carefully noted that fact in his memorandum book.

The ridiculousness of this picture, seriously intended as it was, had just started a smile on the critic's lips when the soulful music died down for the entrance of Dion D'Arcy, attired in the swashbuckling costume of a Scottish knight. At his side

"Say, Trix, I've Got a Bird of a Laugh That I Could Slip in Here"

clanked a sword that frequently got caught in the wrinkles of his big boots.

"Good morning, Mary!" was his first line. "How's the girl?"

"Oh, Gerald!" she replied, startled. "Why don't you come nearer? My poor myopic eyes!" D'Arcy had found in a dictionary that myopic was the highbrow word for "nearsighted," and insisted that it should go in. "My poor myopic eyes," she repeated for emphasis, "deny me the pleasure of seeing your handsome features."

"You should wear spectacles, milady," advised the knight.

"What? And ruin my looks for those who have learned to love me!"

Even though this had thoroughly "planted" the plot, it was too much for the stony features of Knopps, the critic. Knopps, at last, had found something at which to laugh. As the scene proceeded he actually guffawed.

Line by line D'Arcy's serious drama unfolded; and, as it did, the whole Paladin audience rocked with laughter. One young woman, in particular, got the giggles, the most disastrous calamity that can befall any act. As the performance continued, the rest of the audience, led by the giggling patroness, actually screamed. Men and women held their sides, while tears streaked down their cheeks.

The Queen's emotional plea and the final duel, which D'Arcy had insisted on putting in at the last moment, almost broke up the show. Spectators stood up and yelled. The giggling young woman was taken out, in hysterics.

There was no doubt that D'Arcy & Devere had knocked Broadway theatergoers out of their seats. But they did not appreciate their enormous hit. With sinking hearts, the ambitious couple had struggled through the historical drama, until at the finish the humiliated Miss Devere was on the point of swooning.

Without asking or awaiting a word of information as to the verdict of the house authorities on the success of their opening, the mortified Mr. and Mrs. Cornelius O'Hare sneaked out of the stage entrance half an hour later and went wearily to their rooms at the boarding house of Mrs. Trildea Buckingham. The triumphal homecoming had not materialized.

They reached their room and, after locking the door, Miss Devere threw herself on the bed in a violent fit of weeping.

"Connie," she whimpered, as he tried to comfort her, "they were laughing at us—laughing at us, I tell you!"

The distressed husband sat there for several minutes looking at his wife, his brows knitted. His conceit, enormous as it was, had been dealt a heavy blow. But, he mused, it was not knocked out. He would yet find a way.

"Never mind, little girl," he soothed. "I've got 'em where I want 'em now. Your old Connie knows what he's doing."

The more sophisticated audience at the night performance found The Queen's Mistake even funnier than did the matinéegoers. At this performance D'Arcy put in his beloved "Sew-sew" line, and it was with difficulty that the patrons held their seats.

The house manager came round at the end of the performance and informed the two artists that they had knocked Broadway flat on its back.

"That's the funniest cheese drama I ever saw in my life," he admitted; and an admission like that from a house manager would be a fortune to some performers. "I tell you it's a knock-out!" He added: "I knew you had it in you to do something big, D'Arcy. The only thing I fear now is that they will be grabbing off this act for the Hippolite."

"Well," said D'Arcy noncommittally, "I done the best I could."

The next morning Mrs. Trildea Buckingham served breakfast to D'Arcy & Devere in their room. This was unusual, but circumstances appeared to warrant it.

"I want to give you a chance to read the papers without being disturbed," she explained to Miss Devere, who was red-eyed from weeping. "The whole house is talking about the way you put over that act, and I know you would be sick of being stared at."

After leaving a copy of the Morning Star, Trildea retired.

J. Wilbert Knopps had devoted exactly one column to The Queen's Mistake. No other act on the bill was mentioned. He wrote in that superb sarcastic style which conveyed to the unsophisticated that he had never suspected D'Arcy & Devere of being serious. The performance he declared, with a rapierlike thrust, to be the most artistic bit of tomfoolery and the funniest thing that had ever hit Broadway. It was a subtle, cruel cut at heartstrings. He described in detail the performance, the stage setting and the costumes, even to Miss Devere's cardboard coronet with the black thread hanging down her neck.

Again Miss Devere burst into tears.

"Now listen, Trixie," said D'Arcy, his courage and conceit returning: "This guy thinks he's getting away with something, but he ain't kidding me. You know I had a comedy notion in this thing all the time. I could sense them laughs. Don't you think I knew something when I put in that 'Sew-sew'? Why, I ——"

"Sh-h-h!" warned the wife. "You are talking too loud."

As his voice suddenly died down they heard a distinct titter and a coarse mocking guffaw in the adjoining room.

"There's troupers in there," said Devere; and, with all her mortification returned, she lay on the bed and wept pitifully.

"We ain't licked yet, honey," declared the author; but in his voice there was something that failed to carry the weight of conviction. "Just give us another day or two to break this thing in good, and ——"

He was interrupted by a rap on the door.

"Mr. D'Arcy," called Mrs. Buckingham's maid-of-all-work. "A Mr. Siegfreund wants you on the phone."

V

TO THOSE with highly cultivated appetites for subtle humor the Morning Star's review of The Queen's Mistake made a strong appeal. Even the managing editor enjoyed it, all the time congratulating himself on having spread the dramatic columns so as to take in vaudeville.

But there came an awakening. The editor gradually discovered that there still remained a class of people who appeared to

The New Oliver Nine

How We Will Save American Business Millions of Dollars

The New Plans of The Oliver Typewriter Company

This is a proposal to sell new Oliver Typewriters for half what they used to cost. New machines of our latest model—Oliver Nine. That without altering the value one penny. All by ending a monstrous selling cost. If that interests you, we claim a few minutes' attention.

WE now propose to revolutionize the typewriter business.

This is the time when American industries must prepare for the end of the war. New economic adjustments are inevitable.

So we announce here what the Oliver Typewriter Company proposes to do.

Henceforth there will be no expensive sales force of 15,000 salesmen and agents. No high office rents in 50 cities. No idle stocks.

PRICES CUT IN TWO

By eliminating these terrific and mounting expenses, we will reduce the price of the Oliver Nine from the standard level of $100 to $49.

This means that you will save $51 per machine. This plan, were it to become universal, would save all who buy typewriters over $100,000,000 a year.

This is not philanthropy on our part. While our plan saves *you* much, it also saves for *us*.

There is nothing more wasteful in the whole realm of business than our old ways of selling typewriters. Who wants to continue them? Wouldn't you rather pocket 50 per cent for yourself?

THE SITUATION

On each Oliver typewriter for which the user paid $100, more than half has been spent for salaries, traveling expenses, and commissions to an army of salesmen and agents.

Thousands of dollars have been spent in maintaining expensive branch houses and show rooms in many cities.

Our new plan now saves all this useless waste and brings the typewriter business down to a rock bottom basis.

NEW CONDITIONS

Up to now it has cost manufacturers a great deal to educate people to universal typewriting. But that period is past. Large, expensive sales forces are no longer needed.

The time has come when everybody may use a typewriter—not merely experts.

The growth of the Oliver business and the greater use of typewriters give us the opportunity to revolt from old methods.

BUSINESS MUST HEED

You have read of after-war industrial conditions. You have probably read the warnings of such men as Judge Gary of the U. S. Steel Corporation and President Vanderlip of the National City Bank, that American business must reach new planes of efficiency.

The Oliver Typewriter Company is more prosperous today than ever before—the present Oliver Nine is the most popular model ever made. So we propose to make this change at the height of our success.

Our new plan, we know, will win. People are prepared for new economic adjustments. Thousands will welcome this announcement. It heralds a standard typewriter at a price never before possible.

WHO CAN RESIST?

Now note this fact carefully. We offer the very same Oliver Nine—the latest model—brand new—full standard equipment—for $49, the exact one which was $100 until this advertisement. Every Oliver Typewriter is fully guaranteed.

This is the first time in history that a new, standard $100 typewriter has been offered for $49. We do not offer a substitute machine—cheaper, different, or rebuilt. Only new Oliver Nines, direct from the factory to you.

You may have one of these Oliver Nines for inspection without paying a cent. You decide in the privacy of your office or your home. There will be no forceful salesman—working for a commission—to influence you.

Then you may take advantage of our monthly payment plan amounting to 10 cents a day.

WHAT DO YOU SAY?

Now we ask you, is the old sales plan necessary? Must we turn over to salesmen more than half of what you pay? Must we continue, at your cost, all of the unnecessary expenses? Or would you rather have us save $51 and give the whole saving to you?

Read all of the details on the opposite page. Then order an Oliver Nine for free trial or send for our startling book, entitled "The High Cost of Typewriters—The Reason and The Remedy." Mail the coupon.

Oliver Features—Many Exclusive

One-third lighter touch because type bars drop downward. Speed 50 per cent faster than human hands; every machine is tested at 800 strokes per minute. Permanent alignment insured by arch-shaped type bars. Built for hardest usage. Famed for dependability. Printype—if you prefer—the clear, readable type that writes like print. Interchangeable carriages—make several machines in one. The clearness, readability and number of Oliver carbons is beyond comparison. Double color ribbon. In-built tabulator. Ruler—horizontal and vertical. Simplified construction—2000 fewer parts. Bronze bearings. No hair springs nor flimsy wires. Built of fine tool steel.

Famous the World Over

Was $100—Now $49

A $2,000,000 Guarantee That This $49 Typewriter Was $100

The Sales Policy Alone Is Changed—Not the Machine

The Oliver Nine—the latest and best model—will be sent direct from the factory to you upon approval. Five days free trial. No money down—no C. O. D. No salesmen to influence you. Be your own salesman and save $51. Over a year to pay. Mail the coupon now.

THE Oliver Typewriter Company gives this guarantee; the Oliver Nine we now sell direct is the exact machine—our latest and best model—which until this advertisement was $100.

This announcement deals only with a change in sales policy.

The Oliver Typewriter Company is at the height of its success. With its huge financial resources it has determined to place the typewriter industry on a different basis. This, you admit, is in harmony with the economic trend of the times.

For $49, whether you buy *one* Oliver Nine or one *hundred*, you receive the exact machine which was $100, fully guaranteed.

THE LATEST MODEL

This Oliver Nine is a twenty-year development. It is the finest, the costliest, the most successful model that we have ever built.

More than that, it is the best typewriter, in fifty ways, that anybody ever turned out. If any typewriter in the world is worth $100, it is this Oliver Nine.

It is the same commercial machine purchased by the United States Steel Corporation, the Standard Oil Company, the National City Bank of New York, Montgomery Ward & Co., the National Biscuit Company, the Pennsylvania Railroad and other leading businesses. Over 600,000 are in daily use.

SIMPLIFIED SELLING

Our new plan is extremely simple. It is in accord with the tendency of the times.

It makes it possible for the consumer to deal direct with the producer.

You may order from this advertisement by using the coupon below.

We don't ask a penny down on deposit—no C. O. D.

When the typewriter arrives, put it to every test—use it as you would your own. If you decide to keep it, you have more than a year to pay for it. Our terms are $3.00 per month.

Or if you wish additional information, write us or send your address on this coupon for our proposition in detail. We immediately mail you our de luxe catalog and all information which you would otherwise obtain from a typewriter salesman.

10 CENTS A DAY

In making our terms of $3.00 a month—the equivalent of 10 cents a day—we make it possible for everyone to own a typewriter. To own it for 50 per cent less than it has cost heretofore.

Regardless of price, do not spend one cent upon any typewriter—whether new, second hand or rebuilt—do not even rent a machine until you have investigated thoroughly our proposition.

Remember, we offer here one of the most durable, one of the greatest, one of the most successful typewriters ever built. If anyone ever builds a better, it will be Oliver.

WHY PAY $100?

Why not pay only $49 and obtain a brand new Oliver Nine—a world favorite?

Why not accept—at least—our five days' free trial offer? Then decide.

You may do one of two things. Order direct from this advertisement.

Or send for our remarkable book entitled, "The High cost of Typewriters—The Reason and The Remedy." You will not be placed under the slightest obligation.

Send today for your Oliver Nine or for further facts—many of which can't be printed here. Check the coupon below and mail today.

The Oliver Typewriter Company
1013 Oliver Typewriter Bldg., Chicago, Ill.

NOTE CAREFULLY—This coupon will bring you either the Oliver Nine for free trial *or* further information. Check carefully which you wish.

To the Big User

This announcement is of particular value to you. Big users will save hundreds and thousands of dollars. An absolutely new Model 9 Oliver Typewriter, fully guaranteed, at a list price of $49, presents a typewriter opportunity unparalleled in the history of the industry. To save 50 per cent is certainly interesting to any business man, especially when the value remains unaltered. You know the Oliver. This present Model 9 is operated by any stenographer or typist, including touch operators.

We suggest to purchasing agents or buyers whose concerns use typewriters in quantity to get in touch with us immediately. Write today for further particulars relating to large users.

This Coupon Is Worth $51

THE OLIVER TYPEWRITER CO.,

enjoy their humor as they found it, and not as an overtrained wit might judge it for them.

The first ray of light came in a letter from a Paladin patron who resented what he termed the Star's reflection on his intelligence. He had enjoyed the performance immensely, under the impression that its comedy was so intended.

"Why," he asked, "should a sarcastic critic spoil this illusion, with apparently no other purpose than to wound the performers?"

Others of a similar nature kept coming in until a stack of letters a foot high rested on the editorial desk. And among these one brought immediate action. Its orders were explicit.

The directing head of the Star sent for J. Wilbert Knopps.

"Knopps," he inquired kindly, "have you any idea where you could get another job?"

"What do you mean?" asked the surprised critic. "Any trouble?"

"Yes; to speak candidly, we are both in trouble. How are you fixed financially?"

"Financially? I suppose you've forgotten advancing me fifty dollars last week. What's the matter? Are you sore at that Paladin story?"

"No; I'm not sore. I think it a masterpiece; but"—he tapped the stack of letters suggestively—"what I think, it seems, does not count—not altogether."

"You are the boss of this office, aren't you?"

"I am; but let me tell you something, Knopps: It has just dawned on me that there are hundreds of theatergoers who like reviews of shows written as they might appeal to the audience, and not as they happen to strike the funny bone of a cynic."

"Well," declared Knopps testily, "if I've got to gauge my writings according to the brains of a lot of vaudeville lowbrows, then I am through."

"You are quite right, Knopps. That is what I was getting at. You are through."

"Down and out, and broke, eh?" Knopps remarked bitterly. "For having written a clever story! You'll admit it was clever?"

"I do; but there are even some who appear to have missed the subtle humor and thought your story one of sincere praise. Everybody, it seems, hasn't such a vivid imagination."

"I'd like to know the name of the numskull who thought that stuff was on the level."

"You haven't forgotten your old friend Siegfreund, of the Hippolite, have you?" The critic nodded, his expression indicating that the editor should proceed. "Well, you don't want to. He may be a real friend, because he's the only one you've boosted. He has just telephoned down, asking if we would use a short notice announcing that he had booked The Queen's Mistake for a season's run. He tells me that you are the best judge of vaudeville acts he has ever known. And, mind you, that old German meant it as a sincere compliment! To prove it, he wants you to come round and see him."

"The big dub!" exclaimed the critic, trying to hide his distress. "But, boss, that isn't the question. I think it is due me that you let me know how and why I was fired."

The editor reached for a square envelope, on which Knopps could see a crest.

"Do you recall," he asked Knopps, "a young woman who had to be removed from the Paladin Theater that afternoon on account of giggling—the one whose hysterical laughing almost broke up the show?"

"Yes; I mentioned it in the story, I believe."

"Well, that young woman has made an open apology to D'Arcy & Devere. She thought it the cleverest performance she ever witnessed. She so informed her friends in society, and they are packing the theater, in spite of the cutting story that appeared in the Morning Star. Furthermore, she has asked her father, a very rich man, to see that the author of what she regards a column of cruelty is discharged. And he has done that very thing.

"That young lady," he went on mercilessly, "is the daughter of Everett Whipple. And Everett Whipple is the owner of this paper! He is also the man who suggested that I engage you as critic when I was first placed in charge."

J. Wilbert Knopps took one glance at the envelope and tossed it back on the desk without looking at the contents. He had heard enough.

The dejected critic took a quick mental inventory of acquaintances that he might call friends. He discovered but one possibility: The only man he had ever befriended was Herr Siegfreund, of the Hippolite; and even that was against his will. He had friends among the *dilettanti*, it was true; but they could be of no help to him now. He betook himself to the Hippolite, crushed.

Herr Siegfreund greeted him warmly.

"Just the man I wanted most to see!" he said, grasping Knopps' hand and shaking it warmly; in his voice there was a slight Teutonic tinge, but when careful of his words he spoke perfect English. "My boy," he continued, "you have found my new attraction for me. It will be worth money to me and, maybe"—he looked at Knopps curiously—"maybe to you."

"Listen here, Mr. Siegfreund," said Knopps; "don't joke with me now. I'm in a fine mess—I'm fired!"

"Ah, I am delighted!" exclaimed the old German. "You are no longer in the employ of the Star? Excellent! And I believe you were paid seventy-five dollars the week?"

"Yes; but ——" Knopps caught himself as he saw a new meaning in the kindly face of the theatrical man; this reference to money reminded him that he was broke.

"No hesitation, please," said Herr Siegfreund. "You will come with me for one hundred? Don't shake your head. That brain of yours may be worth more, maybe, and I will be the winner. . . . Sign this!" He shoved toward the critic a contract blank.

"For doing what?" asked Knopps bluntly.

"I want a man who can write—one who knows; one who can find my attractions. And you, my boy, are that man. You agree? Is the sum not enough?"

J. Wilbert Knopps took off his overcoat and hung it on the hall rack. He then affixed his name to the contract.

"All right," he said resignedly. "Where'll I start?"

"Will you wait until I telephone? . . . I say, Miss Gordon," Siegfreund called to his stenographer, "did you get Mr. D'Arcy yet?"

"Yes, sir; he was on the phone a moment ago and I told him that Mr. Knopps was here."

"You should have let me speak to him," the old man mildly reprimanded. "But did he say he was coming? And when?"

"Yes, sir; he's coming round right away—in his new car, he said."

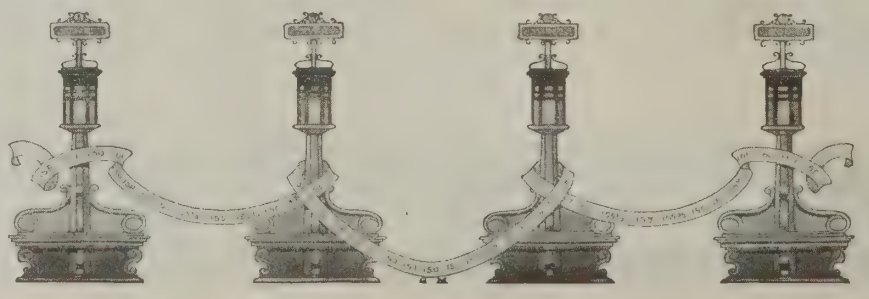
"Wait a minute. What's this?" Knopps demanded to know.

"Ah, it is a great opportunity, my boy, for you to make a name. Mr. D'Arcy, as you know, is not only a great actor but he has proved himself a playwright. I've engaged him to write me a burlesque on the big scene in Romeo and Juliet. And you"—he patted Knopps on the shoulder—"are to collaborate. Fine, eh!"

"But—er—er ——"

"Now don't be too modest, my boy. I know you can do it. It is your big chance to get recognition in the show business. Your name, linked with that of D'Arcy, will mean something. Now have I not partially paid you for the many kindnesses you have shown me?"

Mr. Knopps wilted inwardly. Something seemed to stifle him. But, among his few good traits, he was game. The lesson had hit home.



A New Idea—Shoe Service Is It Practical?

[Copy of Letter Sent to Retail Shoe Dealers]

Gentlemen:—

Shoe retailing is a more difficult proposition than formerly. Many of the shoes now sold are so delicate in color and material they very soon become too stained or marred for a well-dressed person to appear in. The result is much dissatisfaction with the dealer, many customers changing to other stores and a good many shoes being returned, a total loss. The shoe dealer is now beginning to understand that GOODS ARE NOT SOLD UNTIL THEY ARE CONSUMED; that a dealer's work is not completed at the end of a sale; not completed until he has provided a means through which the shoes will be consumed to the entire satisfaction of his customer.

The dealer is frequently asked "How can I clean the shoes? How can I keep them looking well?" He cannot dodge the responsibility of recommending a polish or dressing. Should he recommend the one which stains the shoe or which does not keep the shoe looking as well as the polish recommended by some other dealer he will lose the profit that has come from giving satisfaction to his trade. He will lose customers and money. It is, therefore, time that a shoe retailer should realize that HE MUST KNOW POLISHES. He must know what is the best in order that his customers will not prove him incompetent.

The time has gone by when dealers should keep and sell a polish because it had "the call," and the time has come when a dealer should keep a polish because it is the best. The shoe dealer should be an expert like a doctor. A doctor who gives his patients medicine because that particular medicine had "the call" would not stand well in his profession. It may be argued that a doctor knows his business better than his patient and that a shoe dealer does not know his business as well as his customers, but if this is true a change must come. In all lines of business the company which gives "service" is the one which is growing. The shoe dealer who gives intelligent service will be the one who will grow.

If you accept our argument you will accept our goods. We do not claim to lead the trade in one, two or three articles which we manufacture. We can truthfully boast that no matter what kind of a shoe it is we make a better polish for it than any competitor. If you will consider the articles on which we have led the trade, BAGOF, REPRUS, WHITERIGHT OFF and WHITEHEELEDGE, you will see grounds for our contending that we lead on some articles, but if you will test our entire line you will find that there is not a single shoe polish made on which we are not the leaders.

If you grant the argument that you must in the future give shoe service as well as sell shoes the PRICE at which you buy the polish is a SECONDARY CONSIDERATION compared to the condition in which you keep your customers' shoes. Positively you cannot afford to have your customers using an inferior polish or dressing when it is in your power to provide them a better.

We will be glad of an opportunity to demonstrate the truth of our "very broad claim."

If this letter interests you and you want more letters containing suggestions write and tell us so.

Very truly yours,

GHK/P GEO. J. KELLY CO.

To Consumers of Good Shoes

Does the high price for shoes mean that you will buy cheap shoes and put up with your feet not looking so well as formerly? It does not. You look better dressed every year and will continue to progress in the same direction, high prices or low prices. Will you forego colored shoes because they spoil so easily, and instead wear "solemn black"? You will not. You will be cheerful and look cheerful as long as you have the price.

And will the girls wear light colored shoes? Of course. Do you have the faintest notion that girls do not know how attractive their feet look in light colored shoes? The most beautiful thing in the world is life. The action of a pretty foot in walking is extremely attractive, and requires light colors on the foot to bring out the outlines with distinctness. The girls know it of course.

But, ladies and gentlemen, you do wear these fine, light colored shoes a while after they look rather shabby. You naturally hate to throw away things that represent so much good money. *Then why not make it your business to learn who makes the shoe preparations that keep the shoes in good condition the longest?* Buy one of Kelly's shoe preparations and find inside the paper box the pamphlet, "How to care for shoes." Or if you do not readily find a store selling Kelly's polishes, write us direct and we will send you a copy of the pamphlet, no charge. We will be glad to hear from you, anyway, and will answer any question you wish to ask.

We are shoemakers as well as polish makers and when the subject is shoes we know whereof we speak.

Which Way Do You Clean?

ARE you still using the wearying, old-fashioned, unclean method?

Your men folks use, in their business, the appliances which do better work in less time.

Why don't you?

Torrington CLEANERS

make it easy to keep the home clean, sanitary, healthful, in an orderly and thorough way.

They don't stir up dust and dirt, they remove it. There's no odor of dust or dusting in a Torrington-cleaned room.

The Electric Torrington
shows in U. S. Government test 25% greater suction power than is actually required.

Used 15 minutes once a week upstairs, and 15 minutes twice a week downstairs, it keeps your house clean and sanitary and the cost of current will not be over 2 cents.

Price, $30.00
West, $35.00

Lady Torrington
not electric, is tested to clean 12,200 room-size rugs and still remain in excellent condition. Strong suction is developed by pushing easily back and forth over the rug, and the brush which picks up the surface litter is operated by the same motion.

Price, $8.50
West, $9.00

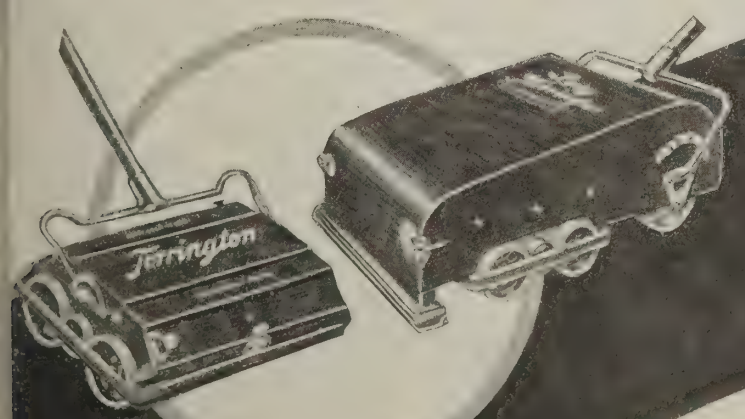
Torrington Sweeper
has no suction, but for brushing up crumbs around the dining table and litter in living or sewing room, it's a great time saver and housewife's comfort.

Prices
$3.50 to $5.50

National Sweeper Company 29 Laurel Street Torrington, Conn.

New York Office: Woolworth Building

Canadian Branch: 52 Bruce Avenue, Westmount, Montreal



To the Dealer You know that the Torrington Company is the world's leader in several lines of merchandise—that its size and progressive methods insure both the production of the newest and best models in household cleaners for every purpose, and an advertising procedure which makes your customers acquainted with the goods you may sell them.

MAKING BUSINESS MEN

II

By Anne Shannon Monroe

ILLUSTRATED BY FANNY MUNSELL

AT THE hospital the head nurse met me with that cool deliberation of manner so maddening when one is in desperate haste. I told her I had come to see Mr. Bittner.

"What is the trouble with him?" I asked breathlessly.

She consulted a schedule. "Typhoid."

"May I see him at once?"

She would see; and in a few moments I was taken to his room.

"You beat it!" It was Bittner from his blankets addressing his very pretty, very demure little nurse.

"Don't stay long," she whispered to me as she passed out. "He'll be raving in ten minutes."

"That isn't raving," I whispered back, "that's just—Bittner." Then I went to his bedside and sat down, ready to take his instructions. Oh, how I did wish I had a healthy bunch of inquiries to report! I knew that would do more to quiet the fever in his veins than anything else. Of course he was terribly run down, but it was the last six weeks of strain that had worn out his powers of endurance.

"You gotta remember just one thing," he said, "and that is that I ain't sick. I'm out of the office and you can't get me for a while, but I ain't sick—not to no one!"

"I understand, Mr. Bittner."

"Stop the advertisin' with May. Tell the ad men we're not ready to talk further plans, that we're slowin' down, as usual, for summer. Then make the Fifty Principles into a book. We'll sell it by subscription most likely. You'll have to change the form some."

"Yes, Mr. Bittner."

For a long time he stared at his hands as they rested on the white coverlet. They looked so thin and wasted I wondered how I could have been blind to the man's condition, how I could have thought only of nerves.

"I'll be out o' here in a few days," he said at last; "but maybe I ought to 'a' gone into matters more with you. Our advertisin' and cut prices has mowed down my capital. We've just dropped over thirty thousand dollars. I ain't got much of a balance—not more'n enough for summer expenses. We gotta retrench. You and Miss Krog go over the force and weed out close as you can to keep open. Tell Miss Lutkins to hold off on the bills till I get back—not to pay anything but salaries."

"Yes, Mr. Bittner."

"And if I don't get back you'd better close out. What with rivals and one thing and another it'd be a hard business for a woman to handle alone. I ain't got any folks; it'd be all yours."

"Please, Mr. Bittner, don't talk that way," I implored.

"Why not?" he asked in a surprised tone. "Didn't you always know that you'd be quittin' sometime. That's one o' the rules o' the game. But, ding it all, I'd like to 'a' made the Fifty Principles go first. I gotta ——"

The Doctor in Doubt

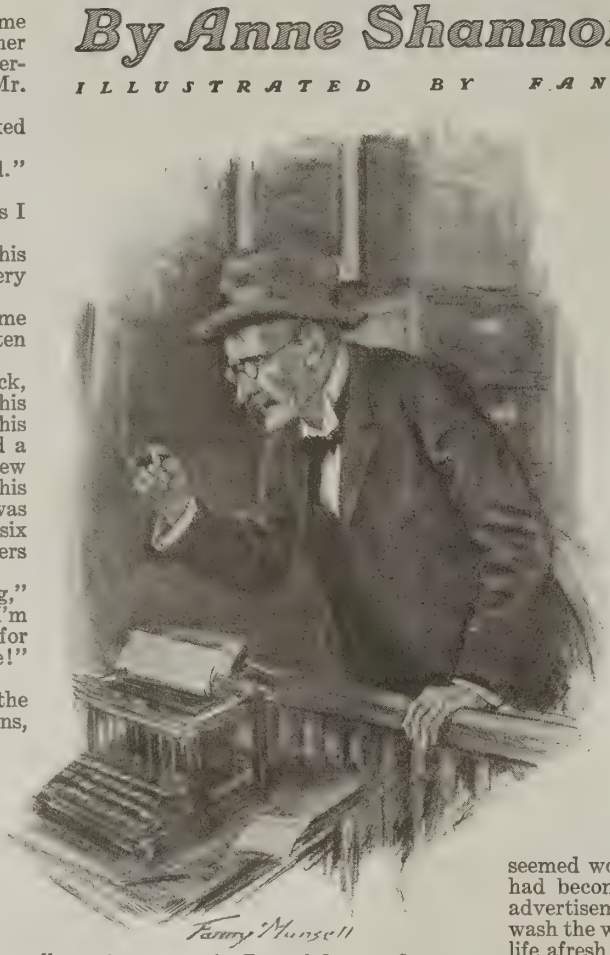
The color had been mounting in his face as he talked, and suddenly he tried to get up. His nurse came to the bed and told me to go.

I found a house physician and asked what he thought of Mr. Bittner's case. "I'm not a relative," I said, "I am his business partner; and I must know for business reasons." I spoke in a coldly brutal tone, for I didn't want any sentimental deception.

"We can't say just yet," he told me. "We must wait for further developments. He's run down—he's had what is known as walking typhoid for weeks—and the fever has got him. His nurse will telephone you each day if you will leave your address."

"I'll leave the address," I said; "but please don't telephone me. If there is a serious change write." Then I explained the necessity for secrecy as to Mr. Bittner's illness.

I went back to the office. Another mail had come in and the letters were on my desk. The stack was smaller than any we had had so far, though it had been decreasing for a month. We were approaching summer, when business always fell off appreciably,



"I Don't Want to be Turned Over to Some Cheap Woman Clerk"

but the slump was caused by our having eliminated the business-books advertising in favor of the Fifty Principles. Borrige & Kemp had used the same amount of advertising space that we had, and of course they were getting the business. But though I could account for it in a very natural way, still that small stack of letters was ominous. It signified to me the beginning of the end.

Miss Krog's Jealousy

I glanced into the operating room at Miss Krog. She would, I knew, resent not being told where Mr. Bittner was; she would resent news of him coming from me. Why couldn't he have left his orders directly with her? she would ask. Had she worked with him nearly a decade just to take orders from a newcomer in the firm? If only she could know that he was ill she would sympathize and be kind. Men don't know what allies they have in women when their sympathies are aroused. I half decided to tell Miss Krog; but the more I thought about it the more I felt that it was up to me to carry out Mr. Bittner's wishes. He had trusted me and I could not fail him.

I went over to her desk with a handful of orders for the business books.

"Just look," I said, giving them to her, "how business is falling off. It's beginning early, don't you think?"

Rather frostily she agreed that it was.

"Mr. Bittner has gone on a long trip," I went on, as casually as I could in spite of the lump that had risen in my throat. "When he gets back he will have new plans. In the meantime he left instructions to cut the force as much as possible. Let me do all the dictating while he is away. I'll have plenty of time."

"Where did he go?"

"He didn't seem sure," I answered, all at once very weary. "Doesn't he generally stop at all the branches? I think he is making a number of changes. How many do you think you can cut?"

We had some further talk and I went back to my desk, but I could not work. It was impossible to start on anything, least of all the Fifty Principles.

The next day I called at the hospital. Mr. Bittner did not know me. The nurse said that he had been very ill all night. He must have felt himself close to serious illness when he sent for me. Some way I could not imagine even illness attacking him without his having sensed it and got ready.

That afternoon I let Miss Douglass go. She was a good stenographer and would readily get another position. I did not really need Miss Carrel, but I told myself she could help on the revision of the Fifty Principles for book form, and on this excuse I kept her. Miss Krog reduced the operating force to thirty girls. Miss Lutkins sniffed the air more militantly than ever while this cutting was going on—and kept her assistant. I think Miss Krog was as much afraid of offending Miss Lutkins as I was of offending Miss Krog. Miss Lutkins never saw anything large but her own work.

To reduce my personal expenses I moved from my hotel suite into a small boarding house, where I had but one room. As the days passed Mr. Bittner's condition remained unchanged. The uncertainty of everything made me restless and unable to apply myself to any definite task. Nothing seemed worth while. The Fifty Principles had become abhorrent to me. The very advertisements were an insult. I wanted to wash the whole thing off the slate and begin life afresh somewhere else.

Saturday I determined to make a tremendous effort to get above the thing, out of and away from it. I needed to get myself assembled and in hand again. I had quite lost my sense of proportion; the Fifty Principles loomed mountainous. I got up abruptly from my desk, unable to stand the office any longer, jerked my hat off its hook and picked up my handbag, intending to try a matinée. Maybe that would take my mind off the unending problem. I felt that if I could get out of the business atmosphere altogether I might be able to make the Fifty Principles shrink back to their normal place in the scheme of living. On my way out I told Miss Krog where I was going. I don't know why I did it, except that I was keeping so much bottled up inside that something just had to escape. Her mouth narrowed to a thin line and her cold blue eyes glittered.

"Miss Krog," I said, "I've just got to get away from things for a while. Please don't think I mean to be unfair in leaving so much to you."

She smiled in a coldly amused manner and bent again to her letter signing.

I went to a vaudeville house and bought a ticket. Maybe something on the program would distract my attention from business problems. If only I could get the office out of my mind for a while I could get the reins of life in my own hands and do the driving once more.

How Vaudeville Helped

A silly dancer with a cracked voice turned the trick for me. I found myself laughing at her antics and applauding furiously. She came back and danced for us again and again, till the house was in an uproar and she was exhausted. For ten full minutes I forgot that there was such a thing in the world as the Fifty Principles. A great weight lifted, my mind rose from its depression, and I breathed rarefied air. When the applause at last died away and the curtain fell, the awful sick sense of failure began to creep back like some horrible pain that has been temporarily deadened by a drug. I exerted all the will power I had and succeeded in thrusting it from me.

All on springs I went out of the theater into the bright day. The Fifty Principles had shrunk. Never again could the thing loom large. Once more I was in command of myself. I went back to the office with quickened step. As I entered the typists were covering their machines and Miss Krog was signing her last letter, while William patiently waited, his arms full of mail to be posted. I came in eager, energetic, alive. Everyone else was weary and drooping. Again I caught that look of lofty disapproval on Miss Krog's face. I did wish I could tell her what the dancer had done for me, but I knew she would not understand. Miss Krog was a plodding, regular, even day-by-day worker. She was not of a temperament to recognize the relation of a vaudeville show to a large business enterprise. I was tempted to begin new plans for advertising the business books. This was impossible, however, as the janitor would soon be there. So I closed my desk and followed the others out.

I called at the hospital and was told that Mr. Bittner's condition had not changed. I suddenly wished I might get him out and take him to a show. I believed if I could get his sick mind off the Fifty Principles his sick body would have a chance to fight its germs.

Thanks to the dancer with the cracked voice, I had achieved a transient feeling toward our business—it was out of my veins. I decided that I would find some one else to work the Fifty Principles into a book should this task prove too much for Miss Carrel, and I would merely hold the business together. It would be a good thing for Miss Carrel to get the book in shape, as this would win favor with Mr. Bittner—she might in time succeed me. I believed she could do almost anything that required brains rather than physique and I decided to broach the matter to her Monday morning.

She came in particularly radiant—she always did on Monday—and I wondered if she was a very religious girl. Sunday seemed to do so much for her!

Miss Carrel's Secret

"Do you go to church, Miss Carrel?" I asked, when she came to me for instruction.

"No," she answered. "I'd love to go, but I have too good a time Sunday mornings. Then she explained that she took all the big Sunday papers and read them in bed. She clipped the store advertisements, studied their special appeal to women, and each noon of the succeeding week she visited one of these stores and observed the class of people and the size of the crowds, and then found out which advertisement made the strongest appeal. At last I had the explanation of her lateness and I was willing that she should be late in such a cause. What our business needed was thinking women.

"I have a great plan for you, Miss Carrel," I said. "I am going to fix things so that you will have a permanent as well as a responsible position in this house. I want you to start work on the Fifty Principles to-day and see how you get along making it into a book."

The blood rushed to her face and she looked hastily away. In a moment she faced me resolutely.

"Miss Gale," she said, "it isn't fair, and I've got to tell you the truth. I am just working here to learn all I can about the mail-order business. I hope to leave next month. My uncle has given me five hundred dollars to start a business of my own, and I can't afford to waste one cent of it or a single day. I must succeed quickly. I have a mother to support, and typing has about ruined my health."

"Have you your commodity?"

"Yes." Her face shone. "I've invented a home workslip for women. It's like a middy blouse, only long, covering the dress completely. I make them in duck in pretty colors, and mother embroiders the tabs where they turn open at the neck, and laces them up the front with cords and tassels. They make a woman look young, and so neat and trim! They're so much more attractive than the ugly wrappers and flapping kimonos that most women wear to do their work in, and they are lovely for students and artists. They will appeal especially to women who like dainty, handmade things."

"It sounds practical."

"You think I'll succeed?"

(Continued on Page 76)

Oakland Sensible Six

"Sturdy as the Oak"

Satisfaction

There's a lot of *solid* satisfaction waiting for you in the purchase of an *Oakland "Sensible Six."*

From the first time you ride in it, you'll find the *Oakland* really "sensible" in power, comfort, ease of handling, and operating cost.

Its valve-in-head motor delivers full 41 h. p. at 2500 r. p. m.—one h. p. for every 53 pounds of car weight.

Its big oversize tires, 32 x 4; long supple springs, 51 inches in rear; wide seats and ample leg room,—mean *comfort* over any roads.

Its *sensible* weight, 2150 pounds, assures fuel and tire economy.

Its excellent finish, real leather upholstery, beauty and high class equipment stamp it a quality car at a *sensible* price—$875.

Oakland Eight—$1585—is a big luxurious 73 h. p., 7-passenger touring car for those who demand the utmost in power, speed and luxury.

OAKLAND MOTOR COMPANY, Pontiac, Michigan

(52)

(Continued from Page 74)

"Yes; at almost anything you attempt."

"Oh, thank you, Miss Gale. I know so little about business."

"Your alertness and your study of the stores are worth more than any other acquired knowledge of business. They make you a business woman, rather than a working girl. Many business colleges turn out merely working girls."

I said no more about the book. If she were not to be a permanent employee I could not take her into my confidence. I must find someone else. As I sat studying over the matter my eyes wandered to her, busy at her desk; and looking on her white face, her thin little body and her feverishly eager eyes, I once more realized how little our physical selves have to do with our success.

My talk with Miss Carrel had further buoyed me up. I could not believe but what Mr. Bittner would get well and start another business. Hope was in the young spring air; it was in my veins. The fresh new green of the parks and Michigan Avenue was inspiring. I called to William to open all the windows. The ventilators, which had been installed at my suggestion, were a success and the air generally fairly pure; but I couldn't get enough of the fresh young growth of things. The breeze from Lake Michigan played with my papers and delighted me. I spoke gayly to Miss Krog when she came in, but she did not respond to my mood or the mood of the day. Miss Krog had no enthusiasms. She was never up or down, just even—and it seemed to me sometimes as though she were going evenly down. On a reckless impulse I went over to her desk.

"Wouldn't you like to take a nice long vacation?" I asked. I felt that I must break the office tension somehow. "I can manage the girls if you will give me a schedule."

She looked up at me in scornful surprise. "We never take vacations till July and August," she recited in an informative tone.

"I know, but you seem so tired, Miss Krog. I think the time for a vacation is when one needs it, not according to the calendar."

She frowned down at her papers for a few moments.

"Go away for a month and get some good country air into your lungs with which to meet the summer," I insisted.

"On pay?" she asked.

"Certainly on pay."

"All right; I'll do it."

Her face lighted up at the prospect of release, and she began to make a schedule for me. I went back to my desk with a light heart. I realized that Bittner would not have approved, but in my judgment it was a wise course. If we were to go into bankruptcy, what difference could a month's salary make? And if Mr. Bittner should get well and manage to hold on to the business, or start a new one, he would need Miss Krog above all people, especially as I was not planning to continue with him and Miss Carrel was clear out of it. Aside from this selfish viewpoint, Miss Krog deserved especial consideration. I believed that it would make for her loyalty to recognize her needs and meet them. Mr. Bittner, like most business men, was inclined to take a woman's loyalty for granted. It had never occurred to him to reward it by pleasant small concessions. But this is usual in business. Men get off to go to a ball game, or take a pleasure trip occasionally, while women have only sick leave. They seldom have a holiday other than the official ones.

Enter Mr. Dumble

I could easily do Miss Krog's work, for the book business had dwindled with the cessation of the advertising; and in the present state of affairs I welcomed her absence. It would be play to give out letters, take them up and do the signing. I would be going back close to where I had begun with the firm. I would find someone else to work on the Fifty Principles—my resolution there didn't waver. The question was, whom should I get? I wondered whether in all the world there was another Miss Carrel, for Miss Carrel was leaving before long and I must have someone to do her work. Then I had a sudden inspiration. Women were really successful when they attained a man's outlook on business and his permanent interest in it. Why not just hire a man and be done with it? I inserted a blind advertisement and heard from thirty men the first day. What had all these men been doing, I wondered, to be out of jobs and seeking them in this fashion? A good man generally had a job. Then I remembered the misfits that the Fifty Principles course was designed to put right, and answered several of the most promising letters, asking the men to call.

Mr. Dumble, the one I selected, had written a book on English that had had but a small sale, and had taught English to foreigners in a night school. Before that he had taught in the country. He was a tall, heavily built man, fair and over thirty. My only fear was that the typists might make him a matinée idol. He was good looking in a big, soft, jellyfish style. I would have said that he lived on pastry. But he was the only eligible applicant who would start on twelve dollars a week.

"I'm Not a Relative," I Said, "I am His Business Partner; and I Must Know for Business Reasons"

A titter of excitement ran through the office as the big man followed me in. I knew the preening and perking would begin, the many small mirrors do double duty, and the luncheon hour become highly enlivened, all on account of the man. And some way I felt sure that the man himself was conscious and proud of his six feet, as he followed me, with straightened spine, down the aisle of furtive eyes. Perhaps that was why, past thirty, he was taking a twelve-dollar-a-week job. I gave him a desk near Miss Carrel's and close to the private office, and put the Fifty Principles course into his hands to read.

The May magazines came in the day Miss Krog left, and they made me glad once more that she had gone. It is easier to face a catastrophe when no one is looking on. I called William and gave him a whole stack of new uncut magazines. "File them," I said. I didn't want them round me to remind me of the Fifty Principles. Usually we kept the current magazines on the reading table.

Each morning I first opened the mail, which dwindled daily, then attended to Miss Krog's work. At twelve I hurried to the hospital, but the word I received there was always the same—"No change." Then I would snatch a sandwich and a cup of tea and be back at the office by one.

Publication representatives called almost daily, but I told them that we were not ready to talk summer plans. One afternoon a man tried to influence me to sign a contract for summer advertising. "Borrige & Kemp now," he informed me in a low tone, with his hand to his mouth and with a cautious glance round, "are considering full pages right through the summer. I'm just tipping it off to you, for Bittner's always mighty square with me."

I felt sure that the same representative would hurry over to Borrige & Kemp's in New York, and in a low tone, hand to mouth and a cautious glance round, whisper: "Bittner's considering full pages right through the summer," with the additional plea: "I'm just tipping it off to you fellows, for you've always been mighty square with me."

I had never known such tactics to produce any appreciable change in Bittner's plans. He watched his rivals, but he did not credit all he heard. So I paid little attention to these arguments for summer advertising. But repeated hammering does make an impression, and I began to wonder after a while whether there really had been a change of tactics; whether Mr. Bittner would do differently were he on the spot and able to raise the money. Often he had talked of the advisability of heavy summer advertising, and I had heard him say repeatedly that he believed trade could be worked up just as lively in July and August as any other time, if the business houses would only keep up steam. In view of the fact that we had let the old cat die, so far as the business books were concerned, I wondered whether it would not be Mr. Bittner's policy now to push the advertising heavily and regain our lost book trade. From his having asked me to make the Fifty Principles into a book, I gathered that his next move would be to raise capital from some source or other and center everything on the old business.

This problem now occupied my mind almost constantly. True, we had no money with which to advertise, and I did not know how to approach a bank on the subject of a loan; but just the same I went about the routine tasks, trying to figure the thing out. I realized that to drop the Fifty Principles from all the prints and reënter the business books would be a tacit admission of the failure of the former; yet, on the other hand, such a course might save the book business. Borrige & Kemp had swung way ahead since we no longer advertised our books in large spaces. But then again it was just possible that there was a limit to their capital too. The game was not yet up.

Bittner's absence became daily harder to explain. Hart, our New York representative, wrote repeatedly, complaining of the falling off of his commissions through the decreased advertising. He wanted to know where he came in on the Fifty Principles scheme. We had used only the home office address, so he was wholly in the dark as to its fate. Several of the publication people insisted on having Bittner's address. One man said he wanted to wire him of conditions concerning which he felt in honor bound to put him wise. I told him I was a partner in the concern, and anything he wished to say to Mr. Bittner he could say to me. I insisted that I was not sure at that moment just where Mr. Bittner was. I assumed an air of offense because he preferred to do business with Bittner.

The representative apologized, drew a contract from his pocket and put it before me. It left no room for further doubt. Borrige & Kemp had contracted to run full pages through the summer. I handed back the contract without a word. The representative said he would see me in the morning, as his paper's forms for June closed within a few days. He would get us in if he had to telegraph the copy. Then he left me alone with the problem.

I sat for a long time, thinking. Borrige & Kemp had worked unremittingly, unflaggingly, to get into our territory, and now they were working just as hard to cover it and crowd us out altogether. We must meet their summer advertising or close down. As business was now going we should not make office rent.

I got up at last and went to the hospital. Perhaps Mr. Bittner was better and might have a suggestion. I slipped past the nurses and into his room. There he lay, mumbling incoherently in delirium. I felt suddenly enraged. How wickedly unfair it all was! While the present Borrige & Kemp people were out in the sunshine, playing ball, Bittner had been shut up in a dingy hole of an office, figuring out his plan. While their business had been handed to them ready-made, with plenty of capital to keep it going, Bittner had created his through the hardest sort of work—it had been a blood-sweating task. And now while he lay there broken and helpless, they were cruelly and willfully pushing him to ruin. He had paid the price of his youth for his business, but the price had not been sufficient.

Gnats After Mosquitoes

Every drop of my fighting blood came to the fore. My uncles had died on Southern battlefields for a lost cause; could I do less than fight to the end of my resources for one? I went swiftly out of the hospital and hunted up a telegraph office. I sent a message to MacGregor, my Western real-estate agent, ordering him to sell my ranch immediately for the highest possible cash price. It should bring at least sixty thousand dollars, and this would carry us through a big summer campaign.

The next day I began signing contracts.

It is expensive to be popular, but it is pleasant. After signing the contracts even Miss Lutkins treated me with respect. I didn't tell her where I got the money, but the ability to raise a large sum in an emergency will command the respect of any bookkeeper. I had no more tiresome questions from solicitors concerning Mr. Bittner, and I was able to write a satisfactory letter to Hart. Very likely the solicitors feared Bittner's return—he might cancel my contracts! They congratulated me on my good judgment and spoke honeyed words supposed to please. Generally they do, no doubt, but in my case I had, on a momentary impulse of sympathy on the one hand and defiance on the other, staked everything I possessed in the world on this last throw, and I was not exactly in a mood to be affected by flattery. I went to work immediately to get up good strong copy for the business books. I cut prices, made bargain offers and otherwise struck deep into our possible profits; but anything was better than having all that dead stock on our hands, and we must get back our lost trade at any price.

I have noticed always that just as one begins to feel in a self-congratulatory mood over the disappearance of mosquitoes, small gnats arrive in swarms. The morning after I had signed the last of the contracts and had written to Hart, our one subscriber, Wagner, entered the office. He was a small, thin, dried-to-the-bone man of uncertain age, with wispy reddish hair and a stubby mustache. He wore large eyeglasses, and as he came in he turned his head this way and that. He gave me his name and asked for Mr. Bittner.

"He is out," I said.

"Then I'll wait." He looked about for a chair.

"He won't be in to-day," I told him. "Can I do anything for you?"

"I wanted a personal interview." He looked aggrieved.

"That is the trouble," I said, smiling and trying to speak lightly; "so many do. But you know this is a mail-order course of study."

He waited a few moments, still turning and twisting his head, his nostrils working.

14-in. Graton & Knight Quarter-turn Drive in the Donovan Lumber Co., Aberdeen, Wash.

GRATON & KNIGHT
Standardized Series
LEATHER BELTING

Tanned by us for belting use

Graton & Knight bigness insures Graton & Knight uniformity

Graton & Knight Leather Beltings are uniform—

Because Graton & Knight are the largest belt makers, because we purchase and tan 285,000 hides a year, because our brands are selected and graded to the highest degree of uniformity from this enormous supply of raw material.

Uniformity is the most important factor in belting quality. A belt, like a chain, is no better than its poorest piece

* * *

Only a big firm like Graton & Knight could establish and maintain an equal degree of uniformity in its belting.

And Graton & Knight are the largest leather belt makers in America.

This minute control of uniformity is possible only because of our large supply of leather tanned by us for belting use. A smaller supply would prove a constant temptation to put dissimilar pieces of leather into the same belt.

Graton & Knight hides are tanned in the Graton & Knight tannery, especially for belting purposes, by processes perfected in 53 years of belting tannage. It would be impossible for us to maintain equal uniformity if we used several different tannages.

Finally, Graton & Knight use bellies, shoulders and other parts of hides not suited for belting in their by-products—there is no temptation to include these in Graton & Knight Belting.

* * *

This is why Graton & Knight can make a complete and standardized series of leather belting; and maintain so high and so fixed a degree of uniformity in each brand.

It is why Graton & Knight First Quality *means* first quality—absolutely free from any mixture of seconds, shoulders, or worse.

This is no time to experiment

with untried belting. High-speed production and continuous operation demand the *known* quality, the *proved* strength and ruggedness which have been built into Graton & Knight Leather Beltings for three generations.

The Graton & Knight Book on Belting is authority on modern belting practice. Write for a copy today.

GRATON & KNIGHT

(Concluded from Page 76)

"What I want to know," he said at last, "is this: Does he handle my work personally? I don't want to be turned over to some cheap woman clerk."

I hadn't been rigidly schooled in business tactics for five years just to lose my temper now. I made my face smile.

"Tell me, have you some definite kick to register," I asked, "or is it just a case of wanting to examine the mechanism? For I'll save your time by telling you frankly that Mr. Bittner does not do business in that way. None of his time is given to face-to-face tutoring. It is all by letter."

"I was told there was a woman in here that stood between him and the public," he returned with an ugly look. "I guess that is right all right."

I wanted to seize his small red neck between fingers that felt suddenly like steel, and squeeze hard; but outwardly I remained calm.

"Every really big man has a number of people between him and the public," I returned carelessly. "Don't you find that so? It is more difficult to meet some men than others. And now won't you please sit down and write your question? I am really very busy."

The man was a little confused. He hesitated a moment, then he sat down. I went back to my desk and pretended to read a daily paper that William had laid there during the conversation. I blessed William for doing it. That boy seemed at times to have the intuition of ten women. He always did a helpful thing just when it was most needed.

Presently the man rose with his question and I went over to take it from him.

"I hope to meet Mr. Bittner soon," he said, and picked up his hat.

"I hope you will," I answered cheerfully, and smiled as pleasantly as I could. He passed out and I went back to my desk.

"Miss Gale," said Mr. Dumble—he had brought his first revised chapter to my desk—"don't you want me to kick that man out the next time he comes bothering round?"

"Thank you, no," I said.

"Little shrimp! Let him face my six-feet-two and he'll have a different idea all of a sudden."

Wagner's Complaint

"It may be bulk that he respects," I answered lightly, "but we don't use it."

Mr. Dumble looked at me queerly, then went on to his own desk.

When I was quite sure Wagner had left the building I opened his note. This is what he had written:

"*Mr. Bittner:* I am paying fifty dollars for your personal criticism, but I have had my suspicions aroused. I have compared corrected problems with those of another of your subscribers, and they are not in the same handwriting. What I want to know is, which one of us is receiving your personal attention and which one that of cheap women clerks. I am afraid I am the victim.

"WAGNER."

I sat twirling the paper in my hand and smiling in real earnest now. The man had proved himself a liar—we had no other subscriber. But that was hardly a proof we could use. I thought quite a while about Wagner. He was evidently one of those chronic kickers who, if nothing presents itself to kick about, start something. How should I answer him? I decided to be conservative. I dictated a letter in Bittner's terse, half-slangy style, telling him that the hand that signed that letter had made every correction issued to every subscriber for the Fifty Principles. I tried to turn the matter off lightly and put the man in a good humor again, when he would be ashamed of his question and his lie. I signed Bittner's name, as was my custom.

The following day a letter came addressed to Mr. Bittner, with the word "Personal" heavily underscored in the corner of the envelope. I carried it to the hospital, but Mr. Bittner was in a high fever. I returned to my desk and opened the letter. It was from the chairman of the program committee of the International Convention of Commercial Colleges then in session in the city. He said that through a misunderstanding the speaker for Friday morning could not be present, and he had been asked to invite Mr. Bittner to fill his place and give a talk on the Fifty Principles. The writer reminded Mr. Bittner that the convention was composed of business college men from all over the United States, Canada and England, and that this would be a fine opportunity to advertise his new course of study. He was confident of the interest the convention would feel in so unique a subject. He requested a prompt acceptance, as the time was short—this was Wednesday.

A Bold Plan

I sat for some time thinking over the matter. If I should decline it would seem queer; if I should accept, and then send a note of regret at the last moment, it would disappoint the program committee and make Bittner unpopular. I had never talked in public in my life—could I do it? The idea grew, and finally I determined to attempt it. I could read from those talks in the Fifty Principles Course which I had found particularly inspiring, and I believed I could inspire these men. I wrote a note accepting the offer and boldly signed Bittner's name.

It was a little late when I arrived at the convention hall, frightfully scared and with hardly enough breath to speak Mr. Bittner's apologies. I explained to the chairman, who met me at the foot of the platform, that it had been impossible for Mr. Bittner to be present, but that he had sent his paper by me, and that either I or some one else would read it. Though the chairman showed keen disappointment, he very courteously insisted that I read the paper. He had evidently counted on Bittner as a unique feature of the program. I went to the platform, sat down and looked out upon several hundred faces. There was not a woman in the entire audience. My heart was beating so fast that it seemed to me every one must hear it. I hoped earnestly that my voice would not tremble. Far over in the right-hand corner I made out our one subscriber, Wagner. His presence did not reassure me. I wondered, too, what he would think when he should get the later talks and find that I had cribbed my material from them. Well, I had done the best I could.

The meeting had already come to order and the audience was waiting for Bittner. At the chairman's signal I rose and stepped to the front of the platform. I looked all about the hall, then over at Wagner, and I caught a "smarty" expression on his face. No other word describes it. It is an expression worn by boys when they have got the upper hand of some one in authority over them. That look on his face fired me to do my best. I began to read.

All the talks were at my tongue's end, for I had worked them over many times, and I read with very few glances at the paper. At first the men were bored—I think men usually are bored at the prospect of listening to a woman—but gradually they forgot me, woke up and began to take an interest. It was good stuff, stimulating and inspiring. It was Bittner at his very best, and I never knew him to fail to arouse interest. Only one face in the audience remained unresponsive—Wagner's. He sat with his hands thrust in his pockets, and his expression didn't change throughout the reading. When I finished there was an instantaneous roar of applause. The chairman stopped me as I started to leave.

"I want to say," he shouted above the din, "that I don't know what we may have missed in not hearing Mr. Bittner read his own paper, but Miss Gale has given us the greatest kind of a treat. I thank her in the name of the convention."

Instantly a dozen men were on their feet. They wanted to ask questions. The chairman asked me if I would answer them.

"I'll do my best," I said, turning back.

And then the questions began. The queries came so rapidly, one after another, that I had no time to think. It was well that my mind was so fully stored with the Fifty Principles and all the imaginary queries that we had propounded and answered in the months of preparation. As fast as a question was hurled, I hurled back an answer. "What were the Fifty Principles?" "What was Bittner's idea of making and placing business men?" "How did he propose to do it?" "Was the plan suited to business colleges?" "Would he consider putting it in the colleges as a regular course of study?" "Would it help students to find their correct vocations?" For an hour this kept up. I felt perfectly at ease and could have stood there the rest of the day, had they demanded it. It was a positive joy to see how interested these men were. I had always believed in the Fifty Principles. The convention was in the best of spirits. One man wanted to know how a business-college teacher could prepare to teach the Fifty Principles.

"Subscribe," I answered, and every one laughed.

I used Mr. Bittner's name with every answer. "Mr. Bittner's idea," I would say; or "Mr. Bittner's plan"; or "Mr. Bittner thinks thus and so." Nothing came from me; I was his mouthpiece.

The big wall clock registered twelve and the city whistles began to blow. A man got the floor and declared that they had no right to tire me further.

"Before we adjourn," he began with jolly good nature, "I move we confer on Mr. Bittner a new degree made to order for him—'Master of Business Principles.' Bittner, M. B. P.! And on Miss Gale ——"

Men sprang to their feet on the spur of the suggestion, and "Bittner, Bittner, M. B. P.!" they called. "Three cheers for Bittner, M. B. P.!"

Some Free Advertising

I left the platform, laughing and enjoying it, having had a very good time. The chairman secured order and adjourned the meeting properly. He hurried after me to shake my hand. Dozens of men crowded about me to speak, but I saw a reporter I happened to know—an Englishman lately come to Chicago—gathering up his papers from the small table near the platform, and I slipped quickly away and followed him.

"That was great, Miss Gale," he began, as I overtook him on the outside stairs. "I'll see that you get all that's coming to you."

"Wait a moment," I begged, for an idea had just come to me. This could be made Bittner's recognition, his label put on by some one in authority. It could be done, if the reporter would only handle it right. "Don't mention me in the paper," I said—"that is, not prominently. Give Bittner all the credit; play him up big."

"Come now, Miss Gale, that is going too far," he protested. "Take fame when you earn it. It was you that did it—firing back such quick, clever answers."

"Please, Mr. Bates," I insisted, "listen. Those answers were all Bittner's. And, besides, I don't care a rap for fame, as you call it, but I do care for success. Every cent I have is tied up in this company—it's my bread and butter for you to boost Bittner. His personality is what makes us. Now I've just given your office a big summer contract, and as a little favor I ask you to play up Bittner strong."

"But how can I when you did it?"

"You can make the headlines: 'Bittner, Master of Business Principles; Fifty Principles make big hit at the International Convention.' Take it seriously, please do. It was conferred humorously, that degree; but it was a tribute too. Americans are always most humorous when they are most serious. Please play up to those headlines."

He looked a little dubious, but he agreed; and as soon as I reached my office, to make doubly sure, I telephoned to his paper's advertisement man and explained the thing. The contract was yet fresh, and he agreed to "see" the headliner.

The next morning I hurried out before breakfast and bought the paper. The report was as satisfactory as if I had read proof on it. I telephoned to the newspaper office for one hundred copies to be delivered at our office, then ate breakfast and went downtown. Of course the thing had small value now, except as general advertising; but Bittner had once wanted something of the kind for his second bar.

William Grows Up

William was interested, and together we read the story and gloried in it. I took a good look at William. Something was happening to the boy. His hands were clean and he wore a white collar and a necktie. Also, more amazing still, his hair was brushed all round, instead of just above his forehead, as usual.

"William," I said sternly, "I do believe you are growing up."

He blushed—William!

"What will Mr. Bittner think when he gets back?" I asked banteringly.

"Is he better?" William gazed up into my face with quick, eager little eyes.

"William," I said severely, "Mr. Bittner is away; don't you know that?"

"Course I do," he answered stanchly.

"There—There isn't any change," I whispered. I had to say it. It was such a relief to find that William knew; that he had always known.

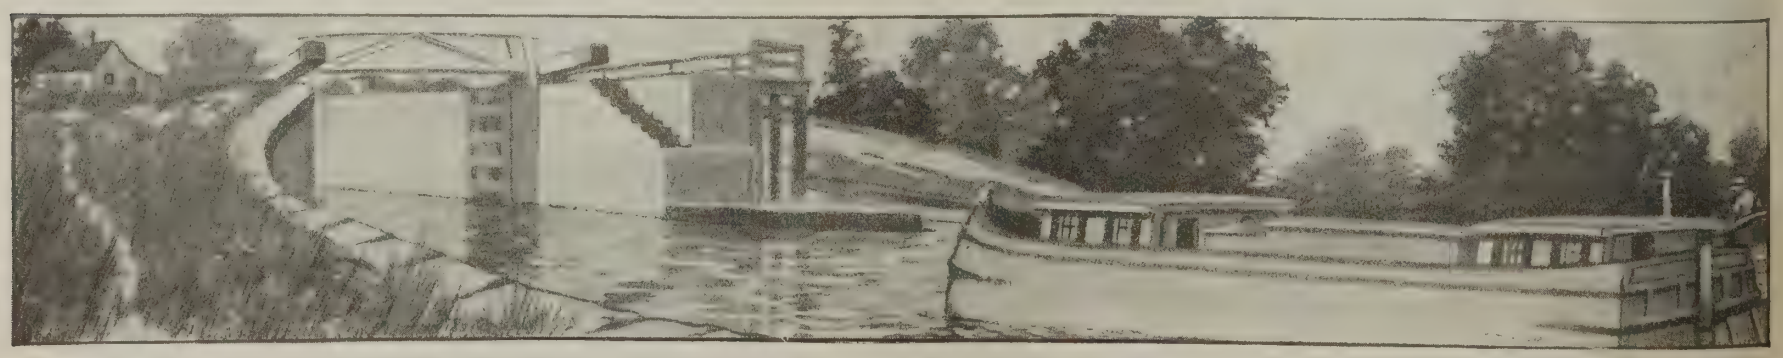
His face became very serious; but he didn't say another word.

I turned to my desk and wondered what I had best do next. Everything seemed so futile. The two bars were now up, but no one wanted to get over. After all the whole convention procedure had been rather a foolish waste of energy. I wondered why I had bothered. Just the spirit of adventure, I concluded; and that painful sense of possibilities ahead, which brought the lump to my throat and made me want to carry out Mr. Bittner's wishes, even though he was never to know about it. I decided that women were after all sentimentalists—even business women. Winning honors for a man at death's door, putting a fortune into a bankrupt business—yes, I was a sentimentalist. I was not emancipated, for all my five years in business.

It was Saturday and I was glad. I went home that night with my mind made up to rest all day Sunday, to get down early on Monday, and to keep before me the fact that business was business. I must plan advertising for our books. Whatever happened, I was in for that.

But Monday morning when I arrived at my office I found that a great change had taken place. I sank down dumbly into the chair before my desk and wished for Miss Krog.

Editor's Note—This is the second of a series of articles by Anne Shannon Monroe. The third will appear in an early issue.



Why the Allies' "Great Drive" Was Delayed

Last Summer the whole World was asking: "When will the Great Drive of the Allies get started?" Field Officers and public were equally impatient—equally uncertain. The troops were ready. Transportation systems, food and clothing, hospitals and ambulances—everything was there, *except* Guns and Shells.

Shells were needed by the million; orders were being placed everywhere, but production had hardly begun. Why? Because nothing can be made rapidly and accurately in large quantity without *Gages*. Inspection was too rigid, tolerances too small for old methods. Before manufacturers could start their lathes they must have Gages, which require time and skill to make.

The Men Who Made the Gages Knew Why the Drive Was Delayed

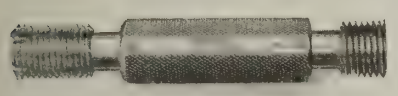


Fig. 1

The War has made momentous changes in manufacturing processes. The nations learned during the awful sacrifice of men that to make shells, Gages were an absolute necessity. Let American manufacturers apply that lesson.

For sixty years American manufacturers led the world in economical, big-volume production of machinery. But the way they fell down on the first war orders, showed that their standards of accuracy were too low. Soon they realized that

Limit Gages

were absolutely necessary for rapid and accurate work. Gages will measure profits in the severe competition certain to follow the war.

Limit Gages are made for a wide variety of work—internal and external screw threads, holes, round bars, and a multitude of special purposes.

For example, the illustrations above show a thread limit gage in use—gaging a bolt. If the bolt is too small, it will pass *both* sets of points, as shown at the left. A bolt too large will fail to pass *either* set of points (center). If just right, it will pass the *upper* set and hang on the *lower*, the "touch" being governed entirely by the weight of the bolt.

The two sets of points are set by skilled mechanics to a certain tolerance, or variation above and below the required diameter, and sealed. This variation depends on the type of machine being made; the parts of a road scraper are not nearly so close to standard as are those of an automobile (nor is there any reason why they should be), yet even the scraper must have some limits as to the size of its parts, in order that they may go together at all.

Whatever the product, whether it be a single piece, such as an "S" wrench, or a mechanism as complicated as an adding machine, Limit Gages are a prerequisite to accurate, economical production in quantity. *Absolute* accuracy is unattainable and unnecessary; a Limit Gage is made to check dimensions within the variation decided upon as permissible, and with it an inexperienced workman can gage thousands of parts in a day.

The parts that pass this inspection will be interchangeable, and will positively fit into the complete machine. Assembly is made easy and rapid. Moreover, since parts can be gaged so easily and cheaply, more frequent inspection is practicable, errors are quickly discovered and corrected, rejections are minimized. The result is a higher quality product at a lower cost.

Fig. 3

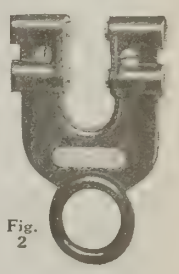

Fig. 2

The plug limit thread gage (Fig. 1) is used for gaging tapped holes. The thread is cut the right size if the "Go" end fits and the "Not Go" end is too big. In Fig. 2 is shown a cylindrical snap gage for outside measurements of smooth surfaces. Fig. 3 shows a rapid inspection limit gage, which does the same work as the gage in Fig. 2, but the solid extension jaw guides the work rapidly to the measuring points.

These are only four of a line of Gages made for all kinds of work, sold under the G. T. D. trademark. Then there is a full assortment of taps and dies, with a number of new and improved types, such as the Gun Tap (the tap that does not break until worn out), the Acorn Die and the Wells Self Opening Die.

For further information on any or all of these products, write for General Catalog 37, or the Bulletins on How to Measure Screw Threads and on Gun Taps.

Quality slips the "unlimited" sign on P. A. smokes!

You know *that's right* on the hop-skip-jump! For, you can open up on Prince Albert tobacco like you hold five aces; and, smoke lick-a-tee-split without intermission! And, you close the session with your tongue *right side up;* with your taste-apparatus turned to new high-spot-delights, and, your Department of Satisfaction bubbling over with smokesunshine!

Prince Albert sure is the joyjenerator *because it has the quality* that can pass out such tobacco happiness! P. A. is made to do that; made to give men *more tobacco enjoyment* than they ever dreamed could be theirs; made to let *all* men smoke *all* they want without bite or parch or any kind of a comeback *because* bite and parch are cut out by our exclusive patented process!

PRINCE ALBERT

the national joy smoke

puts such a spanking-keen-edge on your smokeappetite that you are glad when the next fire up time comes, and, you have a lot of fun all-around-the-clock; and, you pal-it-up-with-P. A. like you were born and raised in the same little old house! For, your tobacco troubles take-to-the-tall-timbers when *you* adopt Prince Albert, which meets the favor of smokers of every civilized nation; men of all tastes and all walks of life! It is the universal tobacco—the quality-taste-satisfaction *standard!* Slip a new cog in your wheel-of-content! Let Prince Albert's friendly flavor and fragrance and coolness blow into your smoke-spirit; for, you'll find it so good, so true, so chummy, that each cheery puff will taste better than the last! And, you'll get a new notion of what *quality* means in jamming *joy in a jimmy pipe!*

Prince Albert is to be had everywhere tobacco is sold. Toppy red bags, 5c; tidy red tins, 10c; handsome pound and half-pound tin humidors—and—that clever, practical crystal-glass humidor with sponge-moistener top that keeps the tobacco in such perfect condition.

THE HOUSE OF CRAIGENSIDE

(Continued from Page 23)

"For my part, I swore that he should never get it. Why, since I was not myself a believer? I wanted to convict that old lady of an atrocious crime. Or so I suppose. I meant to subject that jade to an examination of my own. I wasn't as lenient with spinsters as I am now that she has turned her experience inside out to me. I meant to hound her and harry her with the full head of vengeance which had risen in me while I was sitting on that atoll.

"The first thing was to be rid of Mr. James Smith. But do you think for one moment that I could? No; he clung like the shadow of destiny itself. He made himself into a kind of ironical servitor. Let me go where I would, he was at my elbow, silent, solicitous, a valet with the heavy-lidded intelligence of a demon. We had to live, of course; and it was by his suggestion that we came to work out the Man or Mechanism Act. This was a bad day for me. Smith had mesmeric powers of the highest; and in the interests of the act I allowed myself times without number to come under that influence.

"Day by day it took stricter hold on my faculties, until a time came when he struck through my will like a knife through cheese, and a ray or two of light reflected from the hunting case of his watch was enough to throw me into a trance.

"Finally I thought I had shaken clear of him altogether. I left him in the middle of the night, took what money I could lay my hands on and came to Dockport. Years since I had been here. It was home in every intimate line; unchanged, immortal, in that sort of quaint decay which surrounds it.

"I stole through the little town and came in sight of that house among the dunes. Then when my hand was already closing over the mermaid's head which you have seen doing duty as a knocker on that door, some haunting presence, an elastic and invisible power, if you like, plucked me back. I trembled my whole length. I stood silent on the stone flags, and heard voices within, her voice among the others.

"Then I turned and staggered away like a drunken man, with a premonition at heart which in a little time became terrible conviction. The house loomed behind me white and ghostly; its tall and narrow windows glinted, and expressed a ghostlike and fixed melancholy.

"I fled, stumbling and falling back across the dunes, treading the tips of that subterranean forest like an abandoned sand demon which only a wind from Tartarus could summon.

"As you surmise, at the station in Dockport I found Mr. James Smith sitting on a baggage truck. A wave of helpless anger shook me through and through.

"'So now you know,' I cried fiercely. 'I have betrayed her into your hands!'

"'You have betrayed nothing,' he replied stolidly.

"Then, as I stared at him with fingers twitching, he said in his oiliest tones:

"'Come, come away. Our time is not yet ripe. You shall have the girl when you have helped me to the god.'

"'You mean destruction to us all, you fiend!' I whispered. 'You overtook me with the damnable hold you have over me—don't deny it. I read you like a book. You will be the death of me, I know it.'

"He had moved farther into shadow.

"'You are foolish,' he said. 'If I had wanted to be rid of you I might have done so long ago. You have seen how I got you drunk by suggesting that the water you held in your hand was whisky. You coughed, you choked, your face grew purple, your senses reeled—and all the while it was clear water you were drinking. Wait! This is a simple thing, but it may be extended. I might suggest to you that you climb to the top of an electric-light pole, seize the wires in your hands and fall dead. I might suggest that you fling yourself from some cliff into the sea. Would my hand be visible in this? You have gone to her house. Suppose I had decreed that you should go at midnight, enter her room, and cut the head from her shoulders. You would have a fine awakening, my friend!'

"'No, no!' I cried. I felt myself quivering as if the thing were done already. 'I am yours, heart and soul. I will obey you like a dog if you will give me some assurance. God pity me, pass it over this once, and I will do nothing more to thwart you.'

"'That is better,' said Mr. James Smith suavely. 'I knew, of course, where you had come—but the time is not ripe. In the meanwhile you are valuable to me. You have become my livelihood. Do you realize that we are making a handsome thing? We are booked for the summer season at two hundred dollars a week. We are what the people call a headliner. Our silly act will make us famous, if we go on as we have begun.'

"'How long must this mummery go on?' I moaned.

"'Until my plans are made,' said James Smith. 'I think slowly in this air. Here in this hemisphere my mind is as barren as those heaps of sand. I must take my time.'

"He took his time. He booked the act for six months. We went on circuit through the Eastern states and into Cuba. During this time Smith's hypnotic hold grew stronger with each performance. One night in Havana I received two inches of a stiletto blade in my leg, sunk home by one of that inquisitive Spanish tribe as I was going up the aisle. Yet I did not so much as blink; nor did I have even an inkling of the wound until Smith, back in the dressing room, waved his hand.

"We returned to New York. There, one early summer morning, the power of Smith over his wretched human puppet was manifested to the full. He made his customary pass—one movement of the hand was now enough—and I fell into my professional trance.

"When sight came into my eyes again I was alone with Smith as before, but now oddly dazed, as if I had lived a century in that black sleep. A strange weakness had invaded me. I tried to get out of my chair and sank to my knees. Smith smiled his bland smile.

"'You yellow devil!' I cried despairingly. 'You have put me to the rightabout at last!'

"Without a word then he turned to the wall and tore several sheets from the day calendar that hung there. He flung them lightly into the wastebasket.

"I crawled to the basket and, reaching in, counted the discarded sheets. Eight days had passed.

"'What have you done?' I whispered weakly.

"'I have arranged to show at Silver Glade,' he answered.

"It was, of course, during this period that he had practiced his avocation of ornithologist. I was thus informed that vengeance had not fallen yet; but how long would he delay it. With tears of rage in my eyes, I knew myself impotent to prevent it, let it take what form it would.

"It was a hot night, that night of Smith's return. The very bed under my fevered body was hot. I hooked my fingers about the brass rod at my head and prayed for sleep to dispatch me from my misery.

"I must have slept at last, to open my eyes again on a sight that was for the second the strangest of my life. James Smith had carried for some time, with the rest of his effects, an iron-bound trunk which, I had supposed, contained his chemicals. The lid to this was now thrown back, and, with a dim yellow light at his elbow, Smith was fiddling with the face and figure of a man, whom, as I stared, I saw to be in my own likeness to a hair.

"You are aware how all sane notions are gone in that moment between sleeping and waking, when you seem to grasp in vain at the shreds and shadowings of another world. My curious thought was that this vengeful priest had made away with me at last. The stealth, the silence, the great trunk yawning to receive the body; the intent, fat, moonlike face of the perpetrator of this crime, all alike bespoke it. I had the spiritualized illusion of floating in a disembodied sort of way, while Smith lowered my corpse secretly into the iron trunk. My astonishment was considerable; but at the same time I felt almost exhilarated, as if the bridge over that black gulf had been crossed without bringing to me the least alarming consequences.

"I was prepared to laugh in my sleeve; and still I stared while Smith arranged the body in a new position. The conclusion was irresistible, of course. The head of the thing rolled on its shoulders; it was as dead as dead, and the face was my own face. What possible alternative lay open?

"All this flashed in my brain in the course of half a second, when suddenly I saw that

Putting the Navy on a Better Footing

Uncle Sam buys thousands and thousands of pairs of Durable-DURHAM Hosiery for his sailors, marines and soldiers. A splendid O. K. for Durable-DURHAM quality, because every pair of socks your Uncle buys has got to stand the rigid Government inspection. Durable-DURHAM does this with practically no rejections. For instance, out of 400,000 pairs only 21 pairs were rejected and this was on account of damage in shipping. This is the greatest percentage of rejections we have had in any lot and your Uncle buys Durable-DURHAM by the hundreds of thousands of pairs.

This is only a demonstration of the thorough and careful way in which the entire line of Durable-DURHAM Hosiery for men, women and children is manufactured.

Durable DURHAM Hosiery

FOR MEN, WOMEN AND CHILDREN

"Made Strongest Where the Wear is Hardest"

The sock illustrated here, 1700 G S (Government Specification), has the same comfort, the same reinforced heel, sole and toe, the same yarn made in the same way as you will get at your dealer's, except we have made it a little more dressy with sheer, light uppers. 25c a pair.

sells for 15, 19, 25 and 35 cents and has a lot of special features. The heels, soles and toes are heavily reinforced to stand the toughest wear. The deep, stretchy-garter-pull-proof tops with the anti-run stitch are knit on to *stay*. The quality is uniform throughout—the sizes are correctly marked. Toes are smooth and even. The famous Durham dyes assure permanent colors. Durable-DURHAM Hosiery always holds its shape.

Durable-DURHAM Hosiery is made by the largest hosiery mills in the world and it is a wonderful hosiery value.

Durable-DURHAM Hosiery is sold everywhere. Fastened to every pair is an unlimited guarantee ticket that insures absolute satisfaction.

Ask your dealer to show you our 35 cent Silk-Mercerized Hosiery with the patented Anti-run Stitch.

DURHAM HOSIERY MILLS
Durham, N. C.

Mr. Punch
You Push
He Twists
Price $1.60

Let Mr. Punch Do It!

Wherever you're going to use a screw, drill a hole first.

Instead of fussing and stewing with a nail or gimlet, ruining your disposition and getting no results, let Mr. Punch drill that hole. Use a real tool, the proper tool, instead of a makeshift.

Mr. Punch is an automatic drill devised expressly for that purpose. The numbered holes in the handle show the sizes of the drill points kept in the handle. You can pick the right drill, insert it in the tool, place the point where the hole is needed, and push. The tool does the work. A spiral twist whirls the drill with great speed —it will cut an inch into solid oak in a few seconds.

This tool costs $1.60 and it's worth the money. Many small repairs will be made, many fixtures will be put up that otherwise would drag along undone for months. The house that has Mr. Punch staying in it will be a better house to live in on account of the tremendous number of little things, each one small in itself, perhaps, but great in the total, that he will attend to.

Another useful tool around the house is the glass cutter, which makes it easy to replace your own broken windows. This turret-head glass cutter, No 1, has six cutter wheels, so you're sure of a sharp cutter for a lifetime. It costs only 35 cents.

Write for the story of "The House That Jack Fixed," an entertaining tale of a man and a house and his tools.

GOODELL PRATT
1500 GOOD TOOLS

Smith was not putting the body in the trunk at all, he was pulling it out.

"I saw my partner rest the body on his knee, stare critically at it, and then, to my immense surprise, give the nose ever so slight a touch with his little finger. Was he trying to resuscitate me?

"Precisely then I dropped my own eyes, and became aware of a scarlet leg, my own, stretched out below me on the bed.

"You may believe my mind was in a whirl. I experienced an intolerable disappointment to find myself still at my mooring of the flesh. Recalled—and to what? That accursed Eastern genius had modeled the counterpart of my person in wax, and equipped it with the identical gaudy trappings in which I myself had a habit of appearing.

"I closed my eyes without a betraying movement, and at once the significance of what I had seen was plain to me. That ghastly puppet was meant to be substituted in my place.

"You smile; but wait, my friend. You do not know the intense isolation from his kind to which circumstances may condemn a man. What qualities, let me ask, did I display to the world at large which were lacking to this straw puppet? Absolutely none. For the sake of protecting the verisimilitude of the deception, I had long ago consented to being thrown into a trance and carried into the dressing rooms in the box itself. As for myself, with all that history of horror behind me, I was unknown to exist. I was forgotten, a shadow in men's eyes that had passed, unless in one heart an image ——

"Yes, it was plain enough that Smith's one problem would be the disposition of the body. I myself was no more than a stage property, but in that capacityI must be continued. Man or Mechanism? I actually wondered myself which of these things I had a better right to call myself. I lived the life of an automaton. I was an automaton.

"With this conviction came the thought that I was chained, body and soul, to this hideous night worker, the secret modeler in wax. I could not so much as run away again, for Smith had flooded me with neutralizing impulses. The action of my will was stayed, and I swayed like gossamer to the least suggestion of my captor.

"Yet I was still in intellect myself, quite able to reason out the whole of this design upon me, and brood upon the consequences.

"Plainly, at a certain time, perhaps while I slept or was entranced, Smith meant to hurl my soul over that mysterious borderland of red and yellow flame, recollections of which now came back to me, so hot and vivid from my throng of Eastern memories. Then the thought occurred to me that Smith imagined himself undetected. It was perhaps even now not too late. I might dispatch him out of hand.

"I waited until the puppet was replaced in its box and Smith with a vast sigh had blown the light and settled down beside me. Lying wide awake and alert, I knew the very moment when Smith went to sleep. The strong and regular breathing, entered upon all at once, suggesting somehow that the involuntary man within had seized upon the body, intimidated me for the moment. The organism seemed abandoned to its own devices; there was a touch of the grave, of the dark, of the supernatural in that hoarse, strong breathing. The incomprehensible voice of the foreign god seemed manifested in it.

"I was stayed; but then the possibilities of my own predicament were presented to me in the darkness. I rose to my elbow, and leaned over the man beside me with a penknife in my hand. My eyes were now accustomed to the dark, and I sought the fat throat. One of the thick hands stirred on the coverlet, the fleshy web between thumb and finger folding together. He was more hideous than ever when he slept.

"I raised my knife. It was impossible to kill.

"You must have heard of treasonable slaves stealing into the bedchamber of an emperor, only to be struck dumb and to flee from the menace of the will written on that sleeping brow. So it was with me in the presence of that yellow demon. It had become so automatic with me to obey Smith when he was awake that even when the man slept I was helpless still.

"I drew back, that is certain. An iron curtain round the bed of that yellow priest would not have served him better than his sleeping will. He very likely had suggested limits to the sort of action I might take while he was sleeping.

"Then followed the affair at Silver Glade. Why did consciousness suddenly return to me as I was going up that aisle? I would like to suppose that it was the intuitive bond between me and that girl, which tugged at the moment that her heart leaped on recognizing me. For it did leap! Of course the knife blade of Sturgis here may be thought by less prejudiced heads to have had a larger share in that return to consciousness. And yet—and yet—is it so sure? Remember the stiletto which the Spaniard had stuck into my leg in Cuba. I had not felt that.

"Argue it as you will, my trance failed, as you know, most inopportunely for my proprietor. I was aware of a sea of returning faces. Sight, my own sight, not that falsely substituted, came into my eye; and yet the habit of control was strong enough in me to keep my features rigid.

"It was she at last. She saw me there, a figure of fun, rigged out like a scarlet macaw, with the staring eyes of an imbecile or of a thing of wax. I reeled in my tracks. I should have sunk down at her feet, in another second I should have betrayed the act by some sort of demonstrably human action, when I heard Smith's hasty steps and felt those huge pulsating arms wrap round me.

"I was his property, the mechanism which, as he had a custom of telling audiences, he had put together in his idle moments. You remember where he stops to inquire in awe-inspiring tones: 'Has it a soul? Gentlemen, I do not know.' He did not know; and I had been willing to believe him. But that fateful second in the aisle had struck a last spark from the ashes, I believe. I revived as a man in the very moment when I failed ignominiously as a mechanism. The magic circle of my solitariness had been pierced by the eyes of that girl, whose mere presence, whose least movement of appreciation, gave a dramatic quality to my life.

"It was impossible now, don't you see, that I should disappear, and that without a ripple of suspicion. I had been recognized. One person existed who would be resolute to inquire and to scent out foul play.

"The method of procedure which Smith had determined on would seem to be plain enough. He meant to take me, still in a hypnotic state, and plunge me through the trap in the dressing-room floor with a weight tied to me.

"That this was what he had in mind I argued from the presence in his trunk of a heavy iron flywheel. He meant, of course, to choose a moment of hubbub in the other dressing rooms. One faint splash, and the unknown Garnett would be represented to the world by a staring waxwork, a thing which Smith would explain had failed in an important particular and must be returned at once to his laboratory.

"I believed that if I could wrest myself clear of Smith, even for a short time, the evil power of the man over me would be gone. New energy flowed through my veins with this hope. On being returned to the dressing room, even before the lid was removed from my box, I remembered the trap in the flooring. It must have been some question of the feasibility of this trap to effectuate his plan which had called Smith to that midnight prowling in which you had detected him. I at all events remembered it, and composed my features into a stony stare which caused the mesmerist to suppose that the trance had after all only intermitted, and had now reasserted itself.

"He turned to lock the door of the dressing room; and in that moment I read his mind like a flash. It was the slave's, the coward's instinct of divining and forestalling. This is the secret of the Egyptian diviners; the power of mind-reading had its rise in the oppressions of Rameses. The product of necessity, do you see? The dumb heart of the slave, with its cringing power to intercept invisible currents, to be beforehand in satisfying the wish of a tyrannous master, and so staying the hand of punishment.

"It was not otherwise with me. I had applied myself to the study of that man's moods, dark or bright, until I could intuitively take the content of his mind by a sort of aura about him.

"Yes, it is quite likely that I knew by looking at the man's back that what he had in mind was murder. What time more likely? My curious behavior in the theater actually played into the hand of my enemy as making more plausible his assertion that

$100-Down Plan

with order

BUYS YOUR TRUCK *for* YOU

—This Wonderful Worm Drive Truck

JUST $100 down with order brings you a time-proved Indiana Worm Drive Truck. Then pay a moderate sum, at the time of delivery, and spread the balance out over a year's period in twelve equal monthly payments. Get this fine Indiana Truck in any capacity—one to five tons. Prices below. All *buy themselves* on our Installment Plan.

This is a great immediate business opportunity for you! *Motorize now and make the delivery savings pay the installments and leave you a big margin.* Merchants and manufacturers reduce horse haulage costs one-third to one-half with motor trucks, beside serving territory ten to twenty-five times larger. Our plan enables you to *build your business* without the usual tying up of considerable capital.

Indiana Worm Drive Trucks *save on first cost* and *save continuously*. Mr. I. L. Rose, a wholesale meat dealer of Chicago, recently reported that his Indiana Truck (now running) had given 66,000 miles of daily service for 5 years with no repairs and only $70 spent for precautionary overhauling. His garage receipts show more than 20 miles to the gallon of gasoline. Another user, Mr. A. E. Saum, Michigan contractor, gives us this statement: "My two Indiana Trucks *paid for themselves in 65 days.*" Here is proof of both trucks and terms. We'll send more such proof.

$2,000,000.00 Worth of

INDIANA TRUCKS

We build hundreds of different bodies

Earn Themselves on This Plan

They average 20,000 miles of service while "paying their way". Indiana Trucks are serving a thousand lines of business—America's leading industries.

Our convertible dump body with Woods' Hydraulic Hoist

The Money-Making Merchandising Plan for Thousands of Businesses

You can benefit in the *same* way as others with this Installment Plan. It finances the delivery systems of Dry Goods Companies and General Merchants—Hardware, Supply, Bakery, Grocery (Wholesale and Retail) Stores, Furniture Houses, Storage Concerns, Manufacturers, Warehouses, Elevators, Packers, Oil Refiners, Coal Dealers, Farms, Commission Houses, Independent Hauling Companies, Contractors, Municipalities, Bus Lines, Hotels, etc.—solves the transportation problem of every size and kind of business.

The *strength* and *economy* of Indiana Trucks make possible this Year-to-Pay Plan—backed by our big plants, and the great *success* made by the plan itself. Indiana trucks all have well-known standardized parts—100% safety factors—special-built heavy-duty type motor—25% stronger crankshaft, connecting rods and wrist pins—80,000-mile axle service, by actual test in users' hands—special analysis steel frame—50% more brake surface—velvety clutch, preventing racking—nickel-steel transmission gears—extraordinary gas economy.

Save $150 to $1000 on Prices

Comparison shows Indiana Worm Drive Trucks to be the greatest values in America: 1-Ton, $1385; 2-Ton, $2100; 3½-Ton, $2750; 5-Ton, $3600. These prices are the same, cash or terms.

Specifications Show the Quality

MOTOR—Special-built high-powered, heavy-duty type; large crankshaft bearings and connecting rod bearings of special Fahrig metal. SHELDON AXLES—Worm (David Brown type) mounted on over-size bearings with separate bearings for end-thrust, large spindles; wheel bearing tapered roller type. FRAMES—High-grade alloy steel, special heat-treated. STEERING GEARS—Special truck design; all wearing parts alloy steel heat-treated and case hardened. CLUTCHES—Multiple dry disc, Raybestos against steel. IGNITION—Bosch magneto TRANSMISSION—Special Truck design, nickel steel gears. CARBURETORS—Special Stromberg. SPRINGS—Special alloy spring steel.

(Continued from Page 82)

the act had broken down by reason of a serious mishap to the entrails of his mechanism. It would only be necessary that they should catch a glimpse of those waxen features. There would be nothing strange in his refusal to let them pry into it. A mere eyeshot on the part of some person in authority would allay all suspicion, if indeed it were possible suspicion should arise.

"The only persons who could by any chance recognize the features of the puppet were the three across the river. Mr. James Smith had very likely thought it improbable that any one of these three would be in a playgoing mood. To make assurance doubly certain, he had waited by the gate until the last possible moment. The girl had come only a moment or two after his departure for the stage.

"But for once Smith had miscalculated. He had forgotten the power of a woman to kindle fires anew on the cold altars of the human spirit, if you will. He did not see the girl in the theater pit, and so he did not know that I had looked for that vanishing instant into the compelling face of love, which breaks all molds and melts all chains in forging others of its own.

"For one second, during which Smith was turning back from the door to exhibit that deathlike face with the crimson knoll on the forehead aglow, I displayed a blazing force of retaliation. Smith was leisurely in all his movements. I heard him sigh with satisfaction and turn toward the iron trunk, with a view, it is reasonable to think, of lifting out the flywheel which was to serve as a weight.

"My brain moved with marvelous quickness. I seemed to see all possibilities in a flash—or all but one. If I could once fasten upon that fellow the suspicion of murder I would be free at last, the prison bars solidly between me and my hideous proprietor. The hue and cry would be raised. I had only to remain in hiding to keep Smith in jail, with a charge of murder to his name. And the girl's recognition of me, which Smith had not seen, assured me that the hue and cry would certainly be raised.

"Therefore, uttering a strangled wail, which easily penetrated those slimsy wooden partitions, I precipitated myself, box and all, through the trap, swam out from under the stage, and ran into the almost impenetrable waterside thickets which began just outside the confines of the park.

"What I did not foresee was the lightning flash which illuminated the situation to Smith and resulted in his flinging after the rebellious Man the Mechanism itself. This was a move vastly weaker, it is true, than the one he had contemplated; but still there was a chance that it would work; and, as the sequel proved, it did.

"His great danger was that the manikin should be opened by prying hands, and its impracticability as an operating mechanism made manifest. But he counted, and rightly, as it appears, on the surprise of the police to counterbalance this. It is no discredit to you gentlemen. Who could have foreseen such a concatenation of events? Then, when he found himself still followed, he made for the open sea and sank the evidence of his intended crime, as he hoped, beyond all chance of resurrection. But time pressed; he was hurried; in some way the head got parted from the shoulders, and by great good luck you stumbled upon it.

"His next move must have been to seek sanctuary in the tomb of his own father. You may have passed within a dozen feet of him at that time. As for me, after everything was again quiet I determined to swim the river. In the old days this would have been an easy matter; but I have spent so much of my time lately immured in that black box that my muscles have grown soft. A ship loomed in my path; it was not until I had fairly set foot on her deserted deck that I recognized her for the Asphodel.

"There was no time for hesitation. I drew a belaying pin out of the rail, and went below thinking to find clothes with which to replace my scarlet costume. There were none. Craigenside had taken his ashore, and Goddard, I suppose, boasts only those which cover his body at the moment. They are the separable accidents of the logicians.

"Seized by panic, owing to the conspicuousness of my position on that deserted ship, Flower of Hell, I stripped off my costume, slung it over my shoulders, and again reëntered the water, this time pushing the belaying pin ahead of me when I swam. In ten minutes I was crawling among the dunes, shivering in my wet garments, and still clutching the belaying pin. I didn't know which way to turn. Even supposing my proprietor safe behind steel bars, was I safe from some intangible and monstrous summons? You have heard Craigenside describe it as something which seemed to shoot up from his heels in a warm wave, a sort of indescribable and fatal abandon, as if the atoms which make up the body had lost their faculty of pulling together. The sort of thing which would root you to the spot, as much as if you were nothing but a cast-iron dog in front of a house.

"Then again a sort of restlessness came over me when I reflected that that girl was hardly a biscuit's toss away from me, and that I couldn't very well see her.

"And so I went forward like a headless man, creeping in the shadows, out of the moon, following the tangle of weed and vine into the ravines. The night wore on; your chase had long since died away, and my own resolution had melted, when there came a climax to this night of horrors. I stopped and knelt at the edge of a pool to drink. The moon was rising and a great sweep of purple shadow coming down to my very heels. I myself was in full moonlight, when, raising my head from the water, I saw the fat face of my proprietor mooning at me over the black ridge behind me.

"This fearful image I saw not directly but reflected in the water at my feet. I felt as if a mold of ice had all at once been clamped hard about my body. He was not, then, behind the bars! My ruse had failed, and he was at my very heels again, free, perhaps able at an instant's notice to reassert his old power.

"Without once turning round, I dashed through that calm pool and out upon the other side. I had a nightmarish sense of the futility of speed, and the conviction that I was lost was like a ton weight on me. Still I ran like a madman, thinking with each stride that my legs were going to fail under me, or that I should feel those iron fingers of Mr. James Smith hooked into my shoulder.

"But when at length I turned, my tormentor was not even in sight. He had then other fish to fry. I threw myself down in the sand, and shook like a hysterical woman. What madness!

"Had that ominous face, inflicted with such horrible vividness on the surface of the water, after all been only a hypnagogic vision? I couldn't have told if my life had hung on the answer.

"Then I saw that the white pediment of the house was visible from where I lay. I had been running in circles, dashing through one of those extinguished forests of scrub oak. Now a sweet scent was blown to me. I saw that this proceeded from the wild flowers which had sprung up in the neighborhood of the broken-down stone wall, and the raw breath of the river front was in my nostrils.

"I got up and walked unsteadily toward that wall. I laid my hand on one of the rough stones of the wall, still warm with the day's heat. I fixed my eyes on the shadowy exterior of the house. Its windows were open, but no light appeared.

"I was halted. In what guise, by what right, did I come here, a poor and hunted man, dressed in the livery of a fantastic vaudeville act? I had no longer even a will of my own.

"And yet—I leaped the wall, and began to creep along in the shadow of the second terrace. Midway between the wall and the path to the river a figure appeared in my path. You may guess who it was. I fell on my knees before her, and implored her to hide me.

"She thought me mad at first. Of course. Perhaps a vision too. But I drew her down into the shadows, and explained. Then, gentlemen, her face regained its old expression.

"'Wait here,' she said. 'I must first get you other clothes, and then I will take you to a hiding place.'

"She disappeared. I don't know how long she had been gone. I crouched there, torn by a dozen emotions, when suddenly I heard a crushing step on the gravel walk, followed by the tap of thick soles on the stone steps.

"In another second I saw Craigenside coming toward me, but with a strange motion, I assure you. His face was emptied of all expression. His eyes stared straight in front of him, and his legs swung out with the automatic movements of a puppet. For all the world, it was the Man or Mechanism thing over again, with this exception, that Craigenside breathed strongly and evenly with that hoarse, involuntary sound

When you overhaul install the genuine

McQUAY-NORRIS LEAK-PROOF PISTON RINGS

To enjoy perfect motor service get McQuay-Norris LEAK-PROOF Piston Rings because they conform exactly to the cylinder bore and exert absolutely equal pressure all around. Yet this pressure is so delicate as not to cause undue friction or cylinder wear.

The perfect fit of every ring is insured by the micrometer manufacturing methods, which insure dimensions to within one-thousandth of an inch. The only piston rings obtainable in such a wide range of stock sizes that the garage or repair man can fit your motor immediately, whatever the make or the model. Over-sizes in all widths and diameters in stock.

Don't take chances with poorly designed and cheaply manufactured piston rings. Use only Genuine LEAK-PROOF Rings. Made only by the McQuay-Norris Manufacturing Co.—the inventors. Known by no other name. Packed only in this special carton under this copyrighted label; each ring separately contained in this sealed parchment container.

As an assurance of getting the Genuine, have your garage or repair man send you the empty containers—one container for each ring—with his bill.

McQUAY-NORRIS LEAK-PROOF PISTON RINGS
They reduce vibration, noise, riding discomfort, repairs.
They mean speed, silence, smoothness, comfort, long life, economy.

TRADE MARK

For Your Convenience In Over 4,000 Stores

THE wrench board here illustrated is for the convenience of the purchaser as well as the dealer.

The buyer no longer has to wait, the dealer no longer to search endless drawers and boxes. The wrench needed is there before you, quickly and easily located. And the triangle trademark found on each wrench is your assurance of a perfect article.

THE dropforged tools and parts manufactured by the Billings and Spencer Company have this highest warranty; they are made by the pioneers in the dropforging industry—a concern that for more than half a century has devoted its energies to raising the standard of its production.

EVERY wrench stamped with the Billings & Spencer Triangle B trademark is unconditionally guaranteed.

THE BILLINGS & SPENCER CO. B
HARTFORD, CONN. U.S.A.

which, I admit, affects me powerfully—very likely because I see reflected there my own involuntary history. My professional trances had, of course, eliminated this useless noise, eliminated everything indeed but an imperceptible action of the lungs.

"Then, gentlemen, I saw that he held against his midriff in both hands ——"

"The jade!" cried Hawley and I.

"Exactly," said Garnett.

"Wait," said Hawley at this point, "here is the explanation of that mysterious lens flashing. Here is the solution of the ornithologist, in short. You remember the words of Ruel Craigenside, when you first met him on the bridge of his house? 'The bird catcher—he smears his lime.' He must have been conscious even then of the infernal preparations going forward."

"Yes, precisely," said Garnett, bringing his face close to Hawley's. "You speak of flashes. How was that?"

"He sat in a bag at the edge of the dunes, pretending to photograph birds, and casually turned the lens of his camera in the sun."

Garnett brought down the palm of his hand smartly on his knee.

"The very means!" he said.

"Having accustomed him to falling into a trance easily," continued Hawley, "catching him on the bridge or at the edge of the estate, wherever he could, in short, he must have gone into the house, made his way to those attic stairs which lead out upon the bridge, and there commanded him to bring the god to some designated spot—perhaps that part of the stone wall which was broken down. He must have felt that danger lurked in every second of his visit to that house. How he got by under Goddard's nose is more than I can tell as it is."

"Wait," interposed Garnett, "it is easier than that. As you suggest, it is unlikely that he should himself come to the house without being found out. Somebody was always prowling round the environs of the place. But we know that Craigenside had a habit of walking among the dunes. Isn't it easier to assume that this yellow demon suddenly rose up in his path, put him in a trance, after perhaps some sort of conversation which threw him off his guard, and then suggested to him that at a later time, a precise time, he should bring the god to a certain spot? Remember his threat to make me enter the chamber of that girl by night and cut the head from her shoulders. That was not an idle boast. The instigation to involuntary action does not have to be contemporaneous with the trance at all.

"That's the solution. Smith had found the house impregnable—at least against the attack of a single man without weapon of any sort. This was his one chance—and I thwarted him. I, his puppet, put a spoke in his infernal wheel at last. And when the thing was all but in his clutches too.

"Craigenside, then, came forward at that dangling, angular pace; and if I knew one thing better than another in this world, it was that somewhere out among those pallid dunes my proprietor awaited him. I became unreasonably angry, and filled with a strange confidence, which must have been born of my renewed evidence of that girl's loyalty. All at once I decided to snatch the fruits of victory from that fat demon, through sheer wantonness, as like as not. Wrath entirely dominated my fear of him. I saw him through all the successive stages of this burdensome phantasmagoria: sitting on the sands of that remote atoll, watching me at work while he considered how and when to make an end of me, and make certain the security of his god on the top of that volcano of his; hovering by my side through all the days of our vain pilgrimaging through the States; putting my rigid body time after time into that diabolical casket with its rose-colored lining, limp burial shoes on my feet; snatching the sheets from the day calendar which showed me that he could absent himself from me for an indefinite time and still leave me powerless to think or act against him; threatening to make me the active agent in compassing the destruction of what I held most dear; and finally turning from me in that stuffy dressing room with the look of murder written indelibly on his remorseless face. He had no animus against me. He was actuated solely by a determination to let nothing stand in the way of the restoration of that jade to its ancestral temple.

"All this was in my mind, and perhaps a sneaking notion that I might ingratiate myself with the house of Craigenside. Yes, ingratiate myself with a man by knocking him on the head with a wooden belaying pin. For I had clung to that through thick and thin.

"I laid those two men low, Goddard and his master. I snatched the god, stuffed it in my blouse, and appeared on the porch in time to intercept the girl, who came out with an armful of clothes.

"After that my story is that of the slave-room only," said Garnett. "The old lady in some infernal way got it into her head that I was there staring at her—pure delirium, and yet it was literally so. She made a hard end, in my opinion. Better for her if she had dropped the thing overboard herself, instead of obeying Amos' last injunction. But—she did obey. It must have been remorse that dictated her solicitousness for the well-being of that god. She felt herself not guiltless of complicity in that old fellow's death. I don't know whether she knew all that might be known about that venomous jade, but this much is certain—something had been whispered in her ear by that yellow devil. Perhaps he had deceived her as to the far-reaching effects of tampering with its uprightness."

"But, God bless me," said Hawley, "do you mean to say that you indorse the view of this god which was held by its own communicants?"

"Scarcely that," said Garnett. "There is a simpler explanation. This, you see, was not my first experience with a god of this character. Of course the possibility of proof is gone, since Smith has made off with the head; but the head of the god which I was privileged to examine—in the East—had a mechanism for delivering poisoned barbs through a tiny hole in its head. This mechanism was tripped by bringing the idol into a horizontal position. In practice you see this was very effective. The communicant kneeling before the god was struck dead, as if by a stray shot from that malignant eye. An instrument unexcelled, I should think, for its effect upon the other worshipers. And I have no doubt a death now and then would be useful—*pour encourager les autres!* A hidden spring at its base could be touched, causing it to totter and fall at the appropriate moment."

We drew breath all round; and Garnett rose gently to his feet. Our eyes were turned, as if by a common impulse, toward the spot among the dunes where the house of Craigenside had risen. It was there no longer. We saw no more than the black maw of the great fireplace rising at the top of the terraces—an extinguished hearth. But farther to the left the house of Mercy Cobb was visible as before, flattened like a gray moth on the tawny sands. And while we stared the fat gulls went wheeling in the sunshine over that ruin of a noble house.

"Let them wrangle," muttered Garnett. "They were doomed—doomed from within. It needs no trampled-on spinster to explain their fate. The virtues of a whole family had to be concentrated in one fair person, the last of her race, and"—his eye lighted—"unless I am vastly mistaken, she is about to exchange the family name—for another."

"One last word," interposed Hawley hastily, seeing that Garnett was on the point of withdrawing; "you do not explain the phenomenon of the bells—the bells which you heard on that island, which tormented Ruel Craigenside on the return voyage of the Asphodel. How do you explain those?"

"I do not explain them," said the sailor somberly. "I can get no farther than to say I heard them."

"Here is my residual mystery then," said Hawley, twinkling. "The bells solace me. They at least are not to be accounted for."

"No, there is no getting literally to the bottom of the thing," answered the sailor. "They sounded, that is certain. I heard them as I hear your voices now. But this much I will say: I have heard that grisly clock strike, and I affirm to you that the sound was identical with that. Remember, the Tartar had placed the god on a shelf behind the pendulum, and draw your own deductions. Did the Christian curse go in aid of the Celestial? Or perhaps it was a sort of telepathy, the echo of a sound transported to the ends of the earth from the shivering solitude of that old lady's brain. I don't know."

"You leave us as you found us," commented Hawley, "with a salutary touch of the mysterious, the inexplicable."

"Inexplicable, yes, to a Western," returned Garnett.

And he favored us with his most reserved, his most Oriental smile.

(THE END)

ScotTissue Towels

WHEN you shake the water off your hands and reach for a towel, what do you get? We experimented for years to satisfy you at that moment—to give you a perfect towel—to make you unconsciously feel—*satisfied.*

You want a clean, soft, absorbent, individual towel that dries the hands quickly and thoroughly and leaves the skin refreshed. These are a lot of virtues to expect in a towel—one that fills all of these requirements economically must be perfect indeed.

Yet we have at last succeeded in meeting every one of these requirements.

ScotTissue Towels

These towels give the best service when used folded. To give them to you in this form the new ScotTissue Cabinet, here illustrated, has been perfected. A pull of the lever brings out one towel—pure white, invitingly clean, and folded—ready to make dripping wet hands dry and comfortable.

Every ScotTissue Towel bears the special ScotTissue trademark. Look for it. It's your guarantee of satisfaction.

For all public and semi-public washrooms ScotTissue is the logical, practical and most satisfactory Towel Service both for the user and owner. Heads of stores, office buildings, hotels, theatres, restaurants, factories, offices, schools and institutions should investigate ScotTissue and send for further interesting and valuable information.

Ten Reo Models —One Reo Quality

REO ENGINEERING is sound engineering. That is now recognized by buyers generally—conceded by other engineers.

REO POLICY is as stable, as sound, and as dependable as is Reo engineering.

THE GOOD INTENT which was the foundation of Reo policy, is still the guiding principle.

REO FACTORY FACILITIES have increased from year to year until now the total area is nearly forty acres—and the Reo factory has long been known in trade circles as "The model automobile plant."

WE REO FOLK make more parts of Reo cars and motor trucks than any other concern in the industry, of which we have any knowledge.

IN THE REO LABORATORIES we determine what materials shall constitute every part; here the formulae are worked out—here the tests made to ensure that every pound comes up to the Reo specifications.

THEN WE PUT "Just a little bit more for safety's sake" in every part.

"50 PER CENT OVERSIZE" in every vital part is not a mere catch phrase—compare and you'll find it is a statement of fact.

50 PER CENT EXTRA STRENGTH is the aim—and we achieve that by using the best of materials and more of them.

NOTHING IS LEFT TO CHANCE. The Reo guarantee is not based on a guess but a certainty that the quality is there—determined by the most rigid and the most painstaking tests.

WE HAVE NEVER BEEN ambitious to make all the automobiles—only the best.

MAKING FEWER WE CAN be more certain of making them better—provided of course, we make enough to enable us to avail ourselves of modern automatic machine tools and the most efficient methods.

THE REO VOLUME long since passed that point.

OUR CHIEF CONCERN now is to see that it does not pass the point where quality gives way to mere quantity considerations—that point where personal supervision gives way to a "system."

BECAUSE OF THAT POLICY there is at this moment, and always has been, an over-demand for Reos of all models.

ALWAYS HAS BEEN, we said—for it is a fact that, never since the first Reo was made and sold, has it been possible for us to make enough cars to supply all who wanted Reos.

A MORE REMARKABLE FACT is that the demand is for all ten Reo models alike. For motor trucks as well as for "pleasure" cars—demand for each is vastly greater than the possible supply.

SO THE ONLY WAY to be at all sure of getting a Reo—any model—is to see your Reo dealer at once, place your order and, at the earliest possible moment take delivery of your automobile or motor truck as the case may be.

PRICE IS SUBJECT to increase without notice.

REO DEALERS ARE FORBIDDEN to accept orders for future delivery at present prices—only for such as they can deliver immediately; or, on the expressed understanding that the delivery price shall be the list price at time delivery is specified or made.

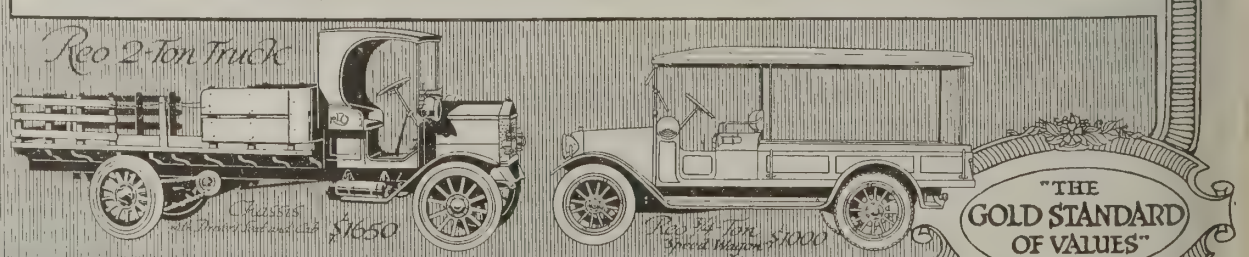
SO DON'T DELAY—the big spring rush is already upon us and there won't be—can't be—enough Reos to go round. Order and (if your dealer can supply you) take delivery of your Reo now.

WHEN YOU SELECT a Reo you know—and all experienced motorists will endorse your judgment—that you have chosen from among all that have been offered you, a thoroughly dependable automobile.

LET OTHERS EXPERIMENT if they will. For yours, the certain course. For yours the car that is conceded to be "The Gold Standard of Values."

Reo Motor Car Company, Lansing, Mich.

Send for catalogue describing and illustrating the various models of automobiles and motor trucks.



"THE GOLD STANDARD OF VALUES"

All prices are f. o. b. Lansing, Michigan, and are subject to increase without notice

BRINGING OUT BARBARA

(Continued from Page 5)

"You haven't told me yet who's coming," I said in the drawing-room. "How many are there?"

"Ten in all," mother answered: "Mrs. Apthorp-Brown; the Glynn Rollinses, who are motoring in from Westbury; Miss Bolles, a most charming woman; Mr. Emery Winship, an old friend of ours; another man who is staying with him, whose name I forget; and Allan Denning."

From her omission of data concerning them, no less than from a certain slight accentuation of tone upon their names, I inferred that the Alpha and Omega of the evening were Mrs. Apthorp-Brown and Allan Denning. Of Mr. Winship's privilege I was jealous; mother accepted his friend—why had she not accepted mine?

"Tell me about the nameless man," I demanded. "What's he like? Old or young?"

"I don't remember," she replied. "He does something, I believe."

"Stocks?" I suggested, out of sheer hostility.

"No; not stocks," she returned. "Writing or painting—something of that sort."

"Oh!" I cried, mollified. "I'm so glad it isn't stocks. I don't think I should like stockbrokers. What does Mr. Denning do?"

Mother drew back.

"Nothing!" she hastened to answer, as though she were denying a malicious allegation. "I've put you beside him, Barbara, and I do hope you won't ask impertinent questions or use slang. Let him do the talking. He's a man of the world and can talk to anybody. It's just luck that he happens to be in town. In the season he's almost impossible to get. I wonder where your father is?"

No sooner had she spoken than my father came in.

How faultlessly erect was his bearing, notwithstanding his height, and how aquiline his nose! Somehow I felt responsible for his entertainment; impelled to rise from my chair and engage him in conversation. He seemed so much more guest than host, so much less father than acquaintance.

"Mrs. Apthorp-Brown!" announced the butler at this point, and I saw him licking his lips as he withdrew.

The old woman who entered did not look the part assigned her. I wanted to cover up her poor neck with a little woolly shawl. There was nothing on it but jewels—not even flesh.

"How do you do?" she said, with no question in her voice, when mother presented me.

Perhaps she thought I ought not to be there. At any rate, she did not notice me further. The Glynn Rollinses came in next; and, mother having left them to me, I attempted conversation with diminished confidence, which they took no steps to restore. On the advent of Miss Bolles, a dried-up spinster with dyed hair and an enameled neck, whom they greeted effusively, they turned their backs upon me altogether; and I retreated, to stand propped against the paneling, examining my slippers and feeling very small.

"Mr. Winship!" I heard; and then: "Mr. R-m-m— —"

Oh, that butler! He had botched the name on purpose. The appellations of those who, according to his standards, were something, he rolled as sweet morsels under his tongue; but with that of him who merely did something he gave himself no concern.

Yet it was only the attitude of his employers that was reflected in the cloudy mirror of his mind.

Then and there I resolved that, as I had wished Miss Wier to be welcomed, so henceforth should every man, woman or child who set foot upon our threshold be welcomed here. Eager to act upon this determination, I noticed that the young man, having been briefly greeted by his hostess, was now standing by himself, perceptibly ill at ease. He was of medium height, lithe of body, alert of glance, and his awkwardness at the moment was due, I felt, not to any lack of poise but to a peculiar sensitiveness to the atmosphere of this gathering.

I crossed the room and went up to him.

"We were delighted that you could come," I said, holding out my hand.

He took it warmly and his every muscle relaxed.

"That's awfully good of you," he responded. "I was afraid my coming was rather an imposition. But it's all right if you say so."

Further standing about ensued. Presently mother rang a bell and I heard her say to the butler:

"We won't wait any longer for Mr. Denning, Parker. Telephone to his rooms and bring the cocktails at once."

Because this guest had not come, everybody save Mrs. Apthorp-Brown, who was duly escorted by father, had to walk in "informally." Mr. Denning had not forgotten, it appeared. He was merely half an hour late and came in entirely unruffled before we had finished our soup.

How graciously mother accepted the apologies of this drawing-room favorite! He was distinctly handsome, with crisp, backward-curling hair, white forehead and regular features, marred only by a slight puffiness under the eyes and an incipient heaviness just above the collar.

"Mr. Denning," said mother as the butler pulled out the vacant chair on my right, "this is my little daughter, just back from boarding school. She's come down to dinner for a great treat, because it's her first evening at home."

Such an introduction would have caused me inexpressible embarrassment an hour ago; but I had taken the initiative once since then and felt capable of doing so again.

"We came near not having anything to eat on your account," I told him.

"How's that?" he asked, smiling and sitting down.

"The Bible says," I explained: "'Give a portion to seven, and also to eight.' Mother is willing to give it to eight, but not to seven. Did you forget? Oh, never mind—don't answer."

"Why not?" he demanded.

"Because I was not to ask you impertinent questions," was my reply. "You were to introduce the subjects of conversation. You're a man of the world and can talk to anybody—even me."

"Ask me anything you like," he invited, bending his well-shaped head quite close, "and I'll give you a straight answer."

"How were the races on Saturday?" broke in Mrs. Glynn Rollins in her high, strained voice.

"Dull," he replied laconically, and turned again to me. "I've had one dinner already," he confided. "This one went clean out of my head. I had to lie out of it, didn't I? Of course you won't give me away."

Thus, at the outset of our acquaintance, by just being myself, as mother had warned me against doing, I had "hit it off" with this overrated but, I thought, essentially unpretentious young man. And, of course, it was amusing to note the icy regard of Mrs. Glynn Rollins at the shoulder he kept persistently turned in her direction.

"Who's that chap on your left?" he asked, *sotto voce*, with a full stare at Mr. Winship's protégé. "I don't remember having seen him anywhere before."

"Is that any reason for looking at him as though he were some strange species of animal?" I demanded. "What are dinners for, if not to meet new people? I should think just seeing the old ones over and over would be an awful bore."

He smiled, refusing to take up my challenge. His complacence rather nettled me.

"You haven't answered my question," he said.

"I don't know yet who he is," I replied. "All I know is that Mr. Winship brought him, and that he does something. When he's finished talking with Miss Bolles I'm going to ask him what. I don't think it'll be long; he doesn't seem to be getting on particularly well."

My neighbor was, in fact, playing with his bread between pauses of unconscionable length, crumbing it up shockingly with the most nervous, delicate hand I had ever seen.

"What do you do?" I finally came to his rescue by asking.

"Paint," he replied, turning upon me that alert glance. "What do you?"

"What do I look like a girl that could do?" I retorted.

"That's a wonderful sentence!" he laughed. "Let's translate it into English."

The play of expression on his face as he talked was astounding. In three minutes it had passed from seriousness to inquiry, and now it was all broken up into fun.

"What," I complied, "does a girl who looks as I do look as though she could do?"

He paused, and I felt myself flushing under a scrutiny that was yet in no sense a stare.

Intelligent Smokers
don't apologize to themselves

"I want to be known as a modern man, and abreast of a modern age. So I keep *fit*—and I find health, fun, profit—in business, in pleasure, in life.

"I smoke intelligently, too. I smoke *more moderate* cigars—that please my palate, yet leave my efficiency at par!

"I puff happily, in fact, my ROBERT BURNS. Never does he fuddle, never does he dull or blunt my edge. For all his fragrance, his sheer smoke-satisfaction, he leaves me as he finds me—*fit.*

"And he gives me, too, the feeling that I've *done well.* For I'm smoking—as today we're working and playing—*right.*"

* * * * *

There's no mystery about the ROBERT BURNS "efficiency Quality" of "fine palate appeal that won't fuddle." The blend and the curing explain it. Its Havana filler gives it fine flavor. Our own special curing gives that Havana rare mildness. The neutral Sumatra wrapper *helps* that mildness.

The result? A fully satisfying, ripe cigar, easy and pleasant in its effects.

And a cigar which—moving forward with the times—is better than ever today.

Have you tried one lately?

119 WEST 40TH STREET, NEW YORK CITY

Grow Younger As You Grow Older

Younger in Body, Younger in Spirit, Younger in Ambition, Younger in Every Characteristic that Gives Greater Earning and Living Power, Greater Thought Power, Greater Pleasure Obtaining Power and Greater Health Promoting Power

THE number of years a man has lived does not tell how old or young he is. A man is as old or as young as his energy, his vitality, his capacity for work and play, his resisting power against disease and fatigue.

A man is only as old or as young as his memory power, will power, sustained-thought power, personality power, concentration power and brain power. He is only as old or as young as his digestive power, his heart power, his lung power, his kidney power, his liver power. Age is measured by the age of our cells, tissues and organs, and not by the calendar!

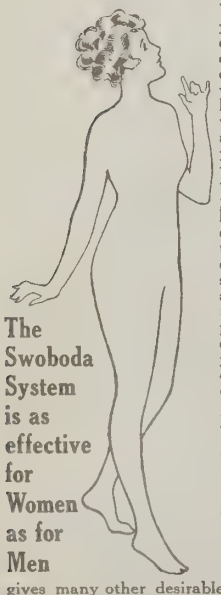
Cultivate the Cells

Everybody knows that the body and brain are made up of millions of tiny cells. We can be no younger than those cells are young. We can be no more efficient in any way than those cells are efficient. We can be no more energetic than the combined energy of those cells.

By conscious cultivation of these cells, it is as natural as the law of gravity that we become more efficient, more alive, more energetic, more ambitious, more enthusiastic, more youthful. By consciously developing the cells in our stomachs, we must improve our digestion. By consciously developing the cells in the heart, we must increase its strength in exact proportion. By consciously developing the brain cells, the result can only be multiplied brain power—and so with every organ in the body.

What we are and what we are capable of accomplishing depends entirely and absolutely on the degree of development of our cells. They are the sole controlling factors in us. *We* are only as young and as great and as powerful as *they* are.

There Is No Fraud Like Self-Deception

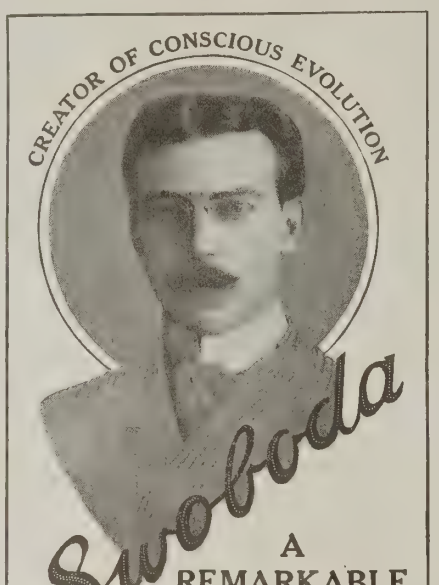


You may think you are young, strong, brainy, energetic, happy, yet when compared with other men or women, you are old, weak, dull, listless and unhappy. You do not know what you are capable of accomplishing because you have not begun to develop the real vital powers within you. The truth is you are only a dwarf in health and mind when you can easily become a giant through conscious development of every cell, tissue and organ in your body and brain. By accelerating the development of the powers within you, you can actually become younger, as you grow older—yes younger in every way that will contribute to your health, happiness and prosperity.

The Swoboda System is as effective for Women as for Men

Conscious Evolution —the Secret

Swoboda proves that Conscious Evolution gives energy and vitality to spare, digestive power to spare, self-reliance to spare, and gives many other desirable characteristics to spare. He proves that Conscious Evolution makes people disease-proof, fatigue-proof. He maintains that to possess sufficient vitality and energy and to keep the body in normal health under the most favorable conditions is no more health prosperity than to have only enough money from day to day to meet current expenses. Great *reserve* health, great *reserve* energy is what we must acquire if we are to successfully nullify the ravages of *time*, and to easily overcome every adverse condition and thus enjoy the benefit of our health power and the advantage of our energy.



A REMARKABLE PERSONALITY

Swoboda, himself, is perhaps the most perfect example of what Conscious Evolution can accomplish. As Swoboda gains in years, he is growing younger in enthusiasm, younger in vitality, younger in health; he is becoming stronger, more energetic, more confident, more dominant, more alive, by capitalizing his creative powers through Conscious Evolution. What Swoboda is accomplishing for himself, you can accomplish—every individual can accomplish, for every individual is governed by the same laws and principles, and every individual can make use of the same laws and principles. His mind and body are so alert and active that in his presence one feels completely overpowered. His personality dominates everything with which it comes in contact; yet Swoboda is real—there is absolutely nothing mysterious about him. He knows not what fatigue is—he is a tireless worker. He delights in making sick people well and weak people strong. He loves his work because he is of benefit to humanity—making a better, more vital, more potent race of men and women.

Beware of Health Poverty

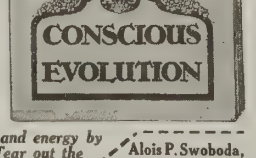
As Swoboda says, "there are individuals who seek work only when their last cent is gone. Likewise, individuals live from minute to minute and from day to day, seeking health and energy only as they need them badly."

Conscious Evolution is for them—for everyone. It is a simple scientific and practical system by means of which every part of the brain and body is energized, strengthened, awakened, so that we become possessed of a super health and mentality—the Swoboda kind of health and mentality. Conscious Evolution makes for good fortune by developing the resources and the ability and power of personality.

Strange as it may seem, this revolutionary method of consciously awakening and developing weakened and lifeless cells requires no drugs, medicines or apparatus of any kind. It does not require dieting, deep breathing, excessive exercising, cold baths, electricity or massage. It takes only a few minutes a day, yet so startling is the effect of Swoboda's system that you begin to feel younger, renewed, revitalized, re-energized after the first day.

AN AMAZING BOOK FOR YOU

Swoboda has published for distribution a remarkable book which explains his system of Conscious Evolution and what it has already done. Write for this book—not because Conscious Evolution has meant so much to 200,000 other men and women, not because there is scarcely a prominent family in the country that hasn't at least one member a pupil of Swoboda, including Chas. E. Hughes, Rockefeller, the Vanderbilts, the Goulds, the Huntingtons, the Armours, the Cudahys, the Swifts—but write for the book because it means so much to YOU in multiplied living power, earning power and resisting power. It is a big book filled from cover to cover with the vital facts about yourself and how you can acquire the degree of perfection in body and mind that you so much desire. It exposes the dangers of excessive deep breathing, excessive exercise, and excessive muscular development.



Regardless of how you may feel, of how efficient you may think you are—regardless of how active, energetic and alert you may consider yourself—regardless of how happy, how contented you may pride yourself on being—regardless of how healthy, wealthy or successful you may be, you cannot afford, in justice to yourself, to miss the interesting and instructive secrets explained for the first time in this startling new book.

A mere reading of "Conscious Evolution" will so fill you with enthusiasm and ambition, that you will not rest until you have yourself acquired the Swoboda kind of health and energy by cultivating and revitalizing intensely every cell, tissue and organ in your own system. Tear out the coupon on this page, write your name and address on it or write a letter or a postal card and mail it today. Even if you gain but one suggestion out of the 60 pages you will have been repaid a thousandfold for having read it. I urge you by all means not to delay, not to say "I'll do it later", but to send NOW, while the matter is on your mind. Remember, the book is absolutely free for you to keep—there is no charge or obligation now or later. Write NOW. Address

"Anything," he affirmed quietly. "Everything."

"I'd like to paint," I was moved to confess.

"Have you studied drawing?" he asked.

"We had it," I replied connotatively.

"That's a different matter," he smiled.

I smiled back. He looked altogether boyish when he smiled.

"I've finished now," I enlightened him.

"Finished what?" he cried. "Not drawing!"

"No," I returned. "School."

"What next?" he continued.

"Oh, next? The world, the flesh and the devil. But I'm not ready for those yet. It's going to take a year to break me in."

"By what means?" he demanded.

I hesitated. Following my eyes, he noticed their stare at the platter which was at that moment being brought in. Upon it was offered salmon, counterfeiting lobster—popeyes, feelers and all.

"See that wolf in sheep's clothing?" I said, nodding toward the triumph of culinary skill. "That's what they intend to do with me."

"What an outrage!" he said in a voice that was capable of as many gradations of expression as his face. It deepened by several tones as he added: "Don't let them! Please don't!"

"That's curious," I returned gravely. "Yours is the second warning I've had today. The first was from another friend of mine—my teacher, Miss Wier. 'I hope nothing will spoil you,' she said. I didn't understand what she meant, but I think I'm beginning to——"

As I spoke my gaze swept the table, and his followed mine as he said, very low:

"I'm glad you include me among your friends."

The night was stifling. In spite of the size of the room it smelt sickeningly of rich, heavy food. After a varied and exciting day I grew suddenly dizzy; and for several seconds the buzz of strident talk and shrill laughter sounded alternately far off and ear-splittingly near. The faintness passed, leaving me with a frown between my brows and a splitting headache. I felt that I could not endure another moment of this confusion of sound.

The hubbub amid which we ate at school had never bothered me. It was as spontaneous as the twittering of birds in an aviary. This was of a different quality—noise without gayety; laughter without mirth; mechanical, self-conscious and forced. When at last we got up, the only thing that kept me from making my escape to bed was the prospect of seeing my new friend for a few moments more at the end of the evening.

The men stayed out a long time. In their absence mother "took on" Mrs. Apthorp-Brown, who, I had observed, neither listened to what was said to her nor said anything herself. Miss Bolles and Mrs. Glynn Rollins went off together to sit on a sofa in a remote corner, where they conversed in tones inaudible to the rest.

The only book in the drawing-room was an unwieldy one with a parchment cover, marked Roma; so I settled myself in a fairly comfortable bergère with that, and was soon absorbed in the photographs of art treasures it contained. They roused my yearning to travel, to learn, to absorb.

"Yes," I heard mother saying as I turned over a page; "it came near being a bad accident. His horse refused, and he went off, striking the back of his head. Luckily he was only stunned."

I returned to my photographs, puzzled. Couldn't they—who had traveled and had countless other opportunities—find anything better to talk about than the spill of an acquaintance during a game of polo, the merest incident, a thing of no consequence to anybody? When I heard the men approaching to rejoin us my heart thumped agreeably.

To my disappointment it was Allan Denning who sought me out. He was very nice and said a good deal about seeing me at Newport, but I could not forgive him for not being somebody else. That somebody else was valiantly talking to mother; out of the corners of my eyes I could see how embarrassed he was.

Presently Mrs. Apthorp-Brown arose majestically; there was no clock in the room, but she apparently knew by instinct that it was half past ten.

At the door we found each other again—I and my new-made friend—and stood without speaking for several seconds, he looking down, I looking up; my hand in his.

"Won't you come to my studio," he asked eagerly then, "and see some of my work? I'm just moving—that's why Mr. Winship's taken me in."

"I'd love to!" I replied with enthusiasm.

"When will you come?" he went on.

"I'll come on Thursday," I specified, "at three. We're going away next week."

"Bully!" he cried, and gave the address.

"You've forgotten one thing," I reminded him.

"What's that?" he asked.

"To tell me your name," I smiled. "It might be convenient for me to know it."

He laughed.

"Randall," he said; "John Randall. Don't forget. Thursday, at three! Good night."

"Oh, mother!" I cried, when everybody had gone. "Isn't he wonderful!"

She regarded me curiously; and I detected an increase of consideration in her manner when she said:

"You got on with him surprisingly well."

"Anyone could get on with him," I replied.

"Most people do," she assented. "He knows everybody and goes everywhere. He's at every performance of the opera, every dance, every musicale. He's engaged months ahead for week-ends. Still, I hope to get him to spend a Sunday with us at Westbury in September."

During the foregoing my eyes had widened in dismay.

"Mother," I said solemnly when she paused, "I hate to tell you, but we're not talking about the same man."

Instantly she stiffened.

"To whom did you refer?" she asked coldly.

"To Mr. Randall," I replied, wondering. "I'm going to his studio on Thursday."

"Girls of seventeen don't go to artists' studios," she said in an icy tone. "You're a child and can't be expected to understand such things; but that he should ask it proves conclusively that he's not a gentleman. He was taking advantage of your inexperience—that's all. I shall never ask him inside this house again."

I felt myself turning still and white.

"He didn't know you'd feel that way about it," I said slowly, "any more than I did. Perhaps he isn't a gentleman—in your sense. But I don't care, because I'm not a lady. Good night!"

Half an hour later I was lying in my bed in the dark, limbs still rigid, eyes staring at nothingness. Little by little I relaxed—first my fists, then my legs and arms, then my eyelids; finally I was all a little limp heap, and then I began to sob as though my heart would break.

Nothing mattered if only your mother was real. What was the use of living if she wasn't? What joy would there be in loving if you couldn't confess your love with your face hidden on her breast?

From the day of my birth to this day I had had a succession of mothers, but no mother! The trained nurse had been the first to mother me; then, oh, happy years! had come my Irish Jane, with all the motherhood of all the ages reflected in the blue pools of her eyes. Then, because poor Jane had only the halting vehicle of her own brogue in which to give broken expression to the wealth of her soul, foreign governesses had succeeded; and finally, their variety of motherhood not being entirely adapted to the requirements of the situation—imagine Uncle Remus rendered with French or German accent!—had ensued the varied angularities of the patient, reserved, devoted mothers at school.

It was too much to expect of these unworldly women, spinster school-teachers from small towns, to turn me out a finished product, fitted to shine in metropolitan drawing-rooms! No one could have made a society woman of me but mother herself. Was it my fault that I had come back to her with ideals opposed to hers—that our standards were as wide apart as the poles?

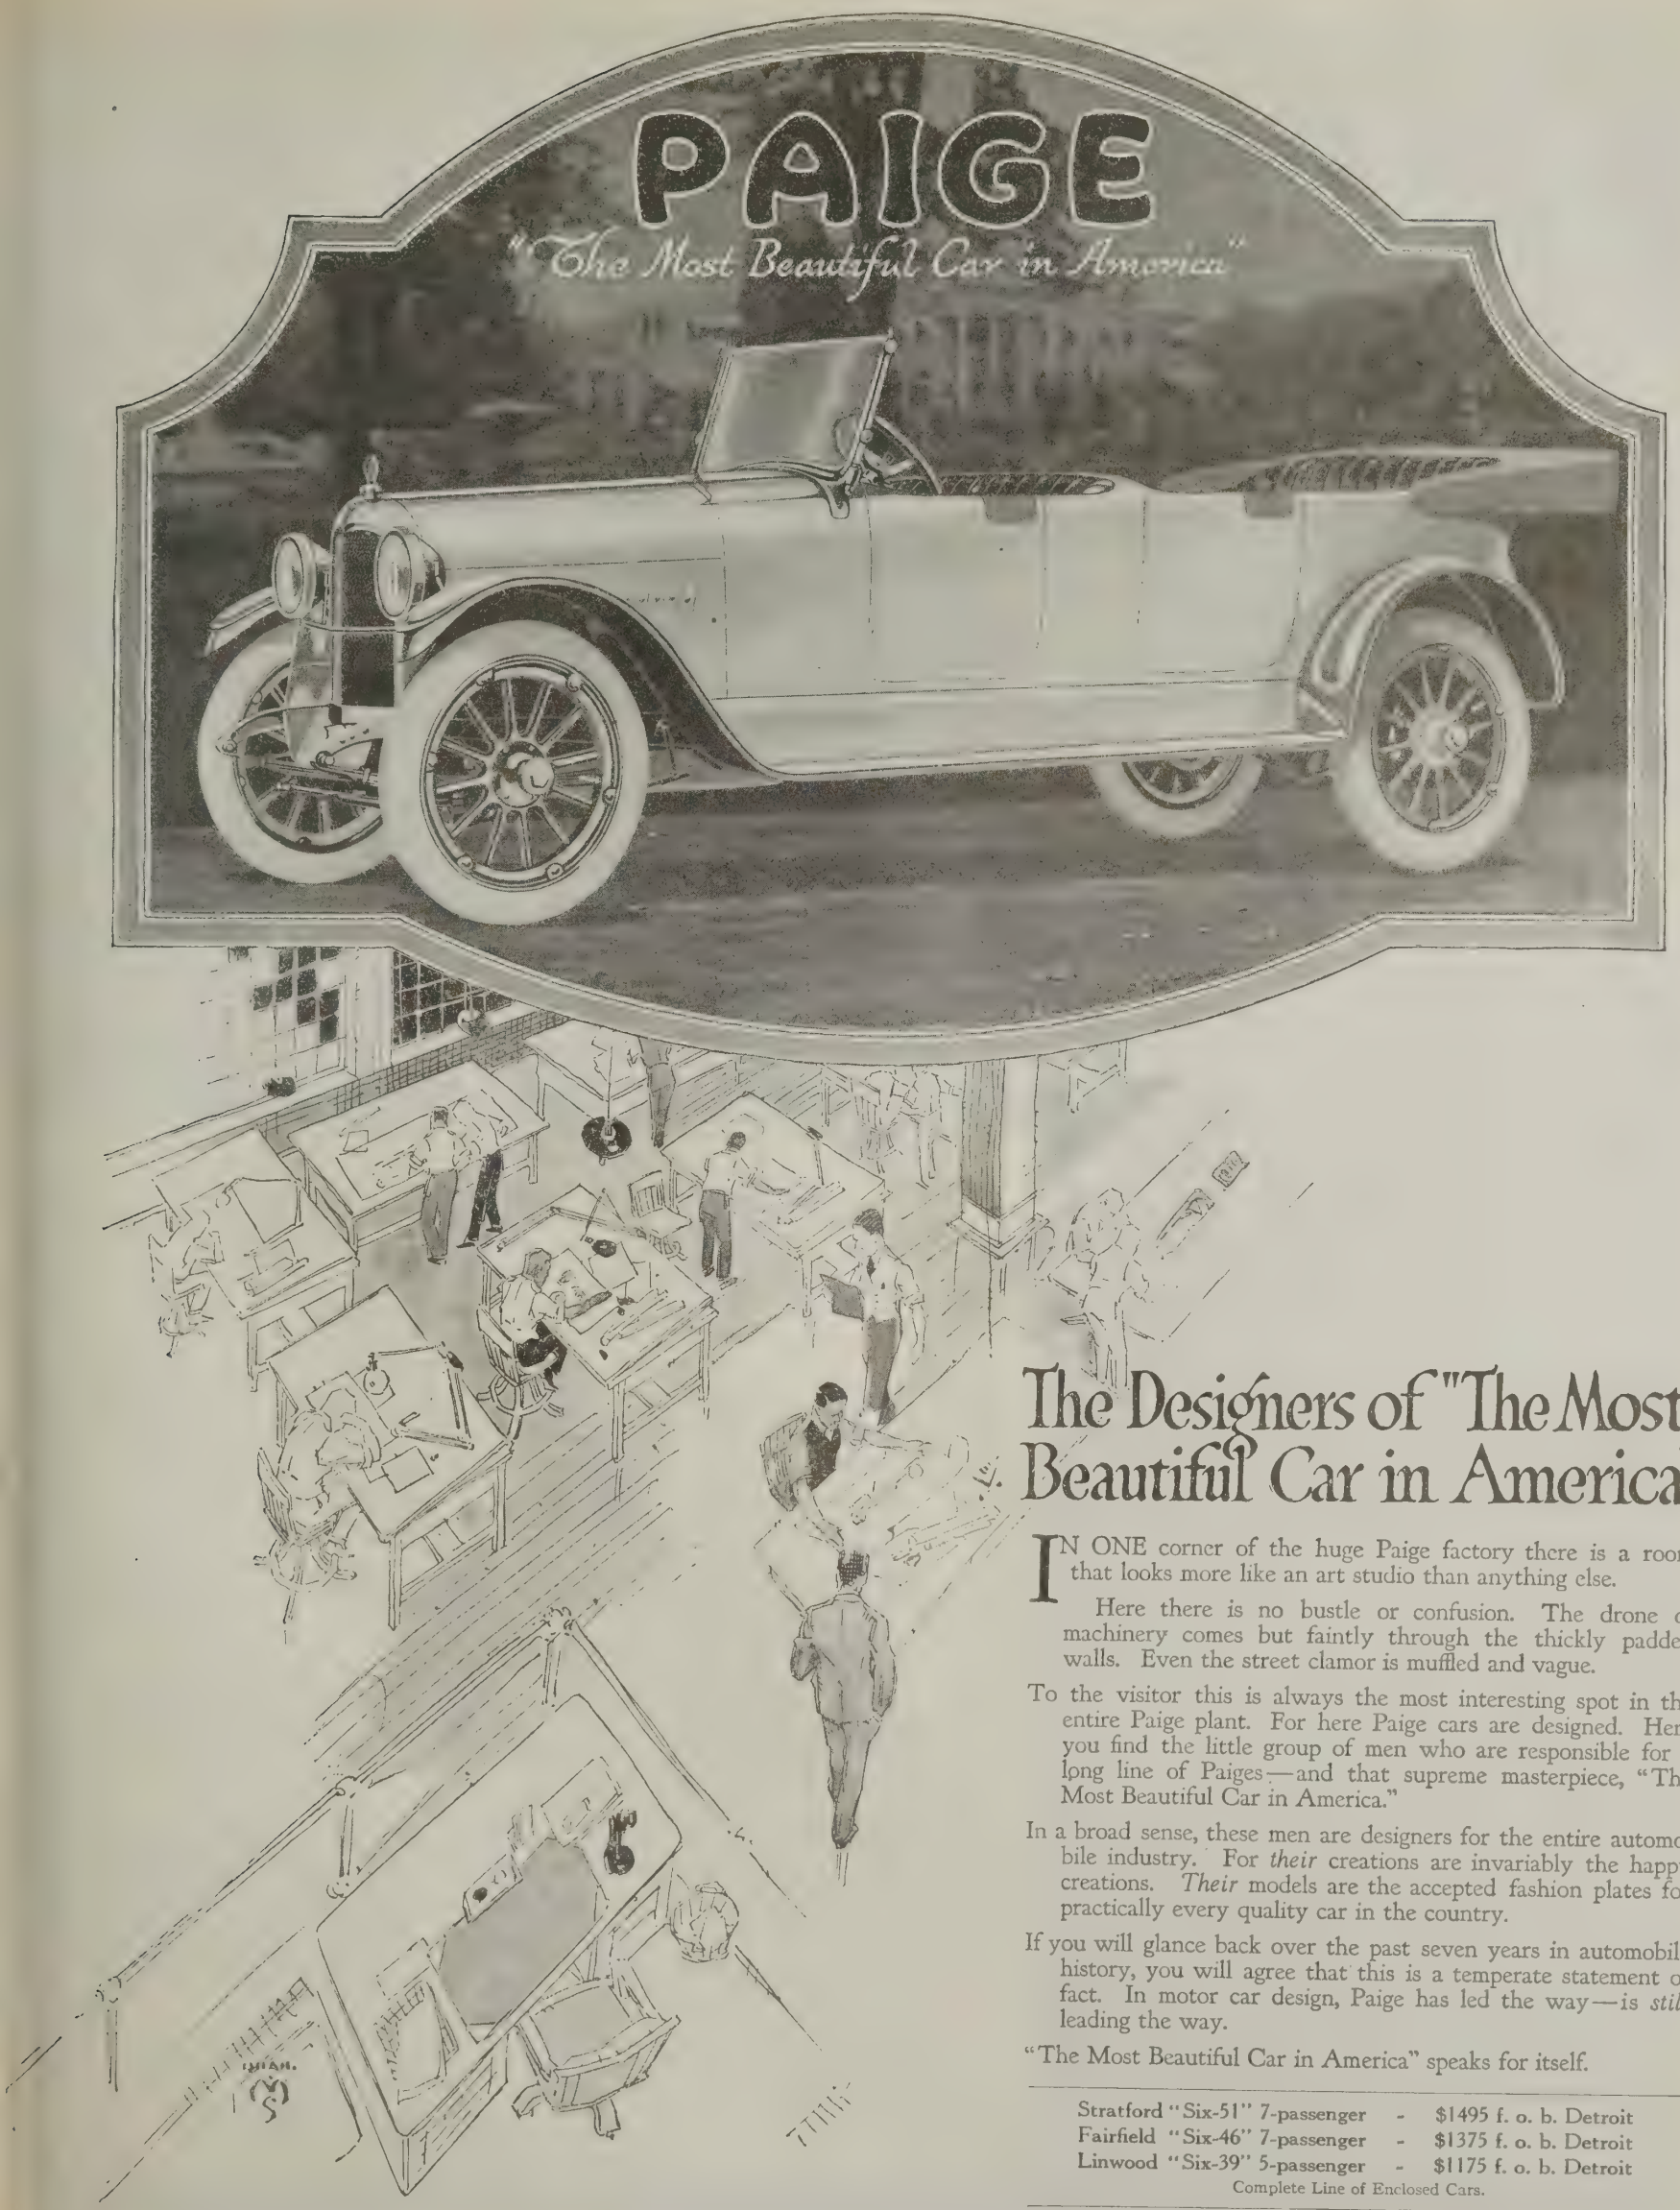
Only love could have wrought the miracle—bridged the chasm. Did my mother love me? It was a terrible question to arise in a young heart.

Oh, how I wanted her love! It was my natural right! I must have it, for I was bone of her bone, flesh of her flesh!

Far away, in a room as safe from intrusion as a fortress, she little guessed into what depths of anguished longing my resentment was breaking up. The starvation of the starved years was as nothing to the starvation of to-night.

My mother was in the same house with me—and yet I was alone!

(TO BE CONTINUED)



The Designers of "The Most Beautiful Car in America"

IN ONE corner of the huge Paige factory there is a room that looks more like an art studio than anything else.

Here there is no bustle or confusion. The drone of machinery comes but faintly through the thickly padded walls. Even the street clamor is muffled and vague.

To the visitor this is always the most interesting spot in the entire Paige plant. For here Paige cars are designed. Here you find the little group of men who are responsible for a long line of Paiges—and that supreme masterpiece, "The Most Beautiful Car in America."

In a broad sense, these men are designers for the entire automobile industry. For *their* creations are invariably the happy creations. *Their* models are the accepted fashion plates for practically every quality car in the country.

If you will glance back over the past seven years in automobile history, you will agree that this is a temperate statement of fact. In motor car design, Paige has led the way—is *still* leading the way.

"The Most Beautiful Car in America" speaks for itself.

FRIENDS, Mother Nature is a woman, so mere man might as well let her have the last word. Velvet is Nature's last word in tobacco. Let's put *that* in our pipes an' smoke it.

Velvet Joe

Nature Has Done Her Best in VELVET—

Only Nature Could Have Done So Well

IF your taste is anything like that of most pipe smokers we know, you won't *want* a better tobacco than Velvet.

To get a better—someone must invent a better variety of pipe tobacco than Kentucky Burley. That hasn't been done. Someone must beat Nature at Nature's own method—mellowing this tobacco by two years' patient ageing in wooden hogsheads. That's not likely to happen.

Put Velvet to any test *you* think will prove its quality. And make the test *today*.

JEEVES AND THE HARD-BOILED EGG

(Continued from Page 13)

his lordship's using the expression on the occasion—he was then a business gentleman and had not yet received his title—when a patent hair restorer which he chanced to be promoting failed to attract the public. He put it on the market under another name as a depilatory, and amassed a substantial fortune. I have generally found his lordship's aphorism based on sound foundations. No doubt we shall be able to discover some solution of Mr. Bickersteth's difficulty, sir."

"Well, have a stab at it, Jeeves!"

"I will spare no pains, sir."

I went and dressed sadly. It will show you pretty well how pipped I was when I tell you that I as near as a toucher put on a white tie with a dinner jacket. I sallied out for a bit of food more to pass the time than because I wanted it. It seemed brutal to be wading into the bill of fare with poor old Bicky headed for the bread line.

When I got back old Chiswick had gone to bed, but Bicky was there, hunched up in an armchair, brooding pretty tensely, with a cigarette hanging out of the corner of his mouth and a more or less glassy stare in his eyes. He had the aspect of one who had been soaked with what the newspaper chappies call "some blunt instrument."

"This is a bit thick, old thing—what!" I said.

He picked up his glass and drained it feverishly, overlooking the fact that it hadn't anything in it.

"I'm done, Bertie!" he said.

He had another go at the glass. It didn't seem to do him any good.

"If only this had happened a week later, Bertie! My next month's money was due to roll in on Saturday. I could have worked a wheeze I've been reading about in the magazine advertisements. It seems that you can make a dashed amount of money if you can only collect a few dollars and start a chicken farm. Jolly sound scheme, Bertie! Say you buy a hen—call it one hen for the sake of argument. It lays an egg every day of the week. You sell the eggs seven for a quarter. Keep of hen costs nothing. Profit practically twenty-five cents on every seven eggs. Or look at it in another way: Suppose you have a dozen hens. Each of the hens has a dozen chickens. The chickens grow up and have more chickens. Why, in no time you'd have the place covered knee-deep in hens, all laying eggs at twenty-five cents for every seven. You'd make a fortune. Jolly life, too, keeping hens!" He had begun to get quite worked up at the thought of it, but he slopped back in his chair at this juncture with a good deal of gloom. "But, of course, it's no good," he said, "because I haven't the cash."

"You've only to say the word, you know, Bicky, old top."

"Thanks awfully, Bertie, but I'm not going to sponge on you."

That's always the way in this world. The chappies you'd like to lend money to won't let you, whereas the chappies you don't want to lend it to will do everything except actually stand you on your head and lift the specie out of your pockets. As a lad who has always rolled tolerably freely in the right stuff, I've had lots of experience of the second class. Many's the time, back in London, I've hurried along Piccadilly and felt the hot breath of the toucher on the back of my neck and heard his sharp, excited yapping as he closed in on me. I've simply spent my life scattering largesse to blighters I didn't care a hang for; yet here was I now, dripping doubloons and pieces of eight and longing to hand them over, and Bicky, poor fish, absolutely on his uppers, not taking any at any price.

"Well, there's only one hope then."

"What's that?"

"Jeeves."

"Sir?"

There was Jeeves, standing behind me, full of zeal. In this matter of shimmering into rooms the chappie is rummy to a degree. You're sitting in the old armchair, thinking of this and that, and then suddenly you look up and there he is. He moves from point to point with as little uproar as a jellyfish. The thing startled poor old Bicky considerably. He rose from his seat like a rocketing pheasant. I'm used to Jeeves now, but often in the days when he first came to me I've bitten my tongue freely on finding him unexpectedly in my midst.

"Did you call, sir?"

"Oh, there you are, Jeeves!"

"Precisely, sir."

"Jeeves, Mr. Bickersteth is still up the pole. Any ideas?"

"Why, yes, sir. Since we had our recent conversation I fancy I have found what may prove a solution. I do not wish to appear to be taking a liberty, sir, but I think that we have overlooked his grace's potentialities as a source of revenue."

Bicky laughed what I have sometimes seen described as a hollow, mocking laugh, a sort of bitter cackle from the back of the throat, rather like a gargle.

"I do not allude, sir," explained Jeeves, "to the possibility of inducing his grace to part with money. I am taking the liberty of regarding his grace in the light of an at present—if I may say so—useless property, which is capable of being developed."

Bicky looked at me in a helpless kind of way. I'm bound to say I didn't get it myself.

"Couldn't you make it a bit easier, Jeeves?"

"In a nutshell, sir, what I mean is this: His grace is in a sense a prominent personage. The inhabitants of this country, as no doubt you are aware, sir, are peculiarly addicted to shaking hands with prominent personages. It occurred to me that Mr. Bickersteth or yourself might know of persons who would be willing to pay a small fee—let us say two dollars or three—for the privilege of an introduction, including handshake, to his grace."

Bicky didn't seem to think much of it.

"Do you mean to say that anyone would be mug enough to part with solid cash just to shake hands with my uncle?"

"I have an aunt, sir, who paid five shillings to a young fellow for bringing a moving-picture actor to tea at her house one Sunday. It gave her social standing among the neighbors."

Bicky wavered.

"If you think it could be done ——"

"I feel convinced of it, sir."

"What do you think, Bertie?"

"I'm for it, old boy, absolutely. A very brainy wheeze."

"Thank you, sir. Will there be anything further? Good night, sir."

And he floated out, leaving us to discuss details.

Until we started this business of floating old Chiswick as a money-making proposition I had never realized what a perfectly foul time those stock-exchange chappies must have when the public isn't biting freely. Nowadays I read that bit they put in the financial reports about "The market opened quietly" with a sympathetic eye, for, by Jove, it certainly opened quietly for us! You'd hardly believe how difficult it was to interest the public and make them take a flutter on the old boy. By the end of a week the only name we had on our list was a delicatessen-store keeper down in Bicky's part of the town, and as he wanted us to take it out in sliced ham instead of cash that didn't help much. There was a gleam of light when the brother of Bicky's pawnbroker offered ten dollars, money down, for an introduction to old Chiswick, but the deal fell through, owing to its turning out that the chap was an anarchist and intended to kick the old boy instead of shaking hands with him. At that, it took me the deuce of a time to persuade Bicky not to grab the cash and let things take their course. He seemed to regard the pawnbroker's brother rather as a sportsman and benefactor of his species than otherwise.

The whole thing, I'm inclined to think, would have been off if it hadn't been for Jeeves. There is no doubt that Jeeves is in a class of his own. In the matter of brain and resource I don't think I have ever met a chappie so supremely like mother made. He trickled into my room one morning with the good old cup of tea, and intimated that there was something doing.

"Might I speak to you with regard to that matter of his grace, sir?"

"It's all off. We've decided to chuck it."

"Sir?"

"My coal costs 40% less than yours, because I use a Spencer Heater"

"WHAT are you doing with all that small coal?" Perkins asked me as the coal wagon stopped at my house.

"That's the small coal I burn in my Spencer," I told him. "It costs about 40% less than your big coal costs you."

"How's that?" Perkins demanded, "I'm paying an awful price this year, but it's perfectly good coal. Is yours?"

"As perfectly good as yours and no more tons required," I explained. "But it's the small stuff that falls through the screen, and it costs a lot less because the Spencer is the only domestic heater that can burn it successfully.

A Self-feeding Heater

"You see," I went on, "the Spencer has a magazine-feed and sloping grates. The magazine is filled up in the morning with enough to last all day, even in cold weather, or 24 hours in mild weather. The coal just feeds down on the fire as it is needed. The sloping grates do the rest—they automatically distribute the coal at an even depth. That's why the coal is *all afire all the time.*

"The Spencer is made that way on purpose to burn this low-priced coal without loss of heat, and with only half the labor your boiler requires."

"You mean to say," said Perkins, "not only that your coal costs you 40% less than mine, but that your heater requires 50% less attentionthanmine?"

"Just about that," I answered. "You have to coal at least four times a day. Now, my Spencer needs just *half* that amount of attention, even in coldest weather."

Spencer Super-Standard Heaters
Steam Vapor Hot Water

Pays For Itself Quickly

"Well, if your Spencer is that much more efficient, it must cost more," remarked Perkins.

"As to that," I told him, "what I saved in coal cost the first year nearly paid the extra cost of the Spencer. Pretty quick it will pay the *entire* cost. After that I'll be having a dividend.

"Besides, I have the mighty comfort of perfectly even heat—never too hot—never too cold. That's another Spencer asset, because it feeds itself like clockwork."

The kinds of low-priced coal usable in a Spencer may be No. 1 Buckwheat or Pea in the East; Semi-Anthracite or Lignite in the West; Buckwheat and Pea-Coke anywhere. These coals cost from *one-third* to *two-thirds* less than the domestic sizes required for the ordinary heating-boiler.

Write for the interesting Spencer Super-Standard Booklet describing the construction and giving the pictures. Take it to your architect and heating contractor for consultation.

(R. & C. H. T. Co. Props.)
NEWARK, N. J.

"It won't work. We can't get anybody to come."

"I fancy I can arrange that aspect of the matter, sir."

"Do you mean to say you've managed to get anybody?"

"Yes, sir. Eighty-seven gentlemen from Birdsburg, sir!"

I sat up in bed and spilt the tea.

"Birdsburg?"

"Birdsburg, Missouri, sir."

"How did you get them?"

"I happened last night, sir, as you had intimated that you would be absent from home, to attend a theatrical performance, and entered into conversation between the acts with the occupant of the adjoining seat. I had observed that he was wearing a somewhat ornate decoration in his buttonhole, sir—a large blue button with the words 'Boost for Birdsburg' upon it in red letters—scarcely a judicious addition to a gentleman's evening costume. To my surprise I noticed that the auditorium was full of persons similarly decorated. I ventured to inquire the explanation, and was informed that these gentlemen, forming a party of eighty-seven, are a convention from a town of the name of Birdsburg in the state of Missouri. Their visit, I gathered, was purely of a social and pleasurable nature, and my informant spoke at some length of the entertainments arranged for their stay in the city. It was when he related with a considerable amount of satisfaction and pride that a deputation of their number had been introduced to and had shaken hands with a well-known prize fighter that it occurred to me to broach the subject of his grace. To make a long story short, sir, I have arranged, subject to your approval, that the entire convention shall be presented to his grace to-morrow afternoon."

I was amazed. This chappie was a Napoleon.

"Eighty-seven, Jeeves! At how much a head?"

"I was obliged to agree to a reduction for quantity, sir. The terms finally arrived at were one hundred and fifty dollars for the party."

I thought a bit.

"Payable in advance?"

"No, sir. I endeavored to obtain payment in advance, but was not successful."

"Well, anyway, when we get it I'll make it up to five hundred. Bicky'll never know. Do you suppose Mr. Bickersteth would suspect anything, Jeeves, if I made it up to five hundred?"

"I fancy not, sir. Mr. Bickersteth is an agreeable gentleman, but not bright."

"All right then. After breakfast run down to the bank and get me some money."

"Yes, sir."

"You know, you're a bit of a marvel, Jeeves."

"Thank you, sir."

"Right-o!"

"Very good, sir."

When I took dear old Bicky aside in the course of the morning and told him what had happened he nearly broke down. He tottered into the sitting room and buttonholed old Chiswick, who was reading the comic section of the morning paper with a kind of grim resolution.

"Uncle," he said, "are you doing anything special to-morrow afternoon? I mean to say I've asked a few of my pals in to meet you, don't you know."

The old boy cocked a speculative eye at him.

"There will be no reporters among them?"

"Reporters? Rather not! Why?"

"I refuse to be badgered by reporters. There were a number of adhesive young men who endeavored to elicit from me my views on America while the boat was approaching the dock. I will not be subjected to this persecution again."

"That'll be absolutely all right, uncle. There won't be a newspaper man in the place."

"In that case I shall be glad to make the acquaintance of your friends."

"You'll shake hands with them, and so forth?"

"I shall naturally order my behavior according to the accepted rules of civilized intercourse."

Bicky thanked him heartily and came off to lunch with me at the club, where he babbled freely of hens, incubators and other rotten things.

After mature consideration we had decided to unleash the Birdsburg contingent on the old boy ten at a time. Jeeves brought his theater pal round to see us, and we arranged the whole thing with him. A very decent chappie, but rather inclined to collar the conversation and turn it in the direction of his home town's new water-supply system. We settled that, as an hour was about all he would be likely to stand, each gang should consider itself entitled to seven minutes of the duke's society by Jeeves' stop watch, and that when their time was up Jeeves should slide into the room and cough meaningly. Then we parted with what I believe are called mutual expressions of good will, the Birdsburg chappie extending a cordial invitation to us all to pop out some day and take a look at the new water-supply system, for which we thanked him.

Next day the deputation rolled in. The first shift consisted of the cove we had met and nine others almost exactly like him in every respect. They all looked deuced keen and businesslike, as if from youth up they had been working in the office and catching the boss' eye and what not. They shook hands with the old boy with a good deal of apparent satisfaction—all except one chappie who seemed to be brooding about something—and then they stood off and became chatty.

"What message have you for Birdsburg, duke?" asked our pal.

The old boy seemed a bit rattled.

"I have never been to Birdsburg."

The chappie seemed pained.

"You should pay it a visit," he said. "The most rapidly growing city in the country. Boost for Birdsburg!"

"Boost for Birdsburg!" said the other chappies reverently.

The chappie who had been brooding suddenly gave tongue.

"Say!"

He was a stout sort of well-fed cove with one of those determined chins and a cold eye.

The assemblage looked at him.

"As a matter of business," said the chappie—"mind you, I'm not questioning anybody's good faith, but, as a matter of strict business—I think this gentleman here ought to put himself on record before witnesses as stating that he really is a duke."

"What do you mean, sir?" cried the old boy, getting purple.

"No offense, simply business. I'm not saying anything, mind you, but there's one thing that seems kind of funny to me. This gentleman here says his name's Mr. Bickersteth, as I understand it. Well, if you're the Duke of Chiswick, why isn't he Lord Percy Something? I've read English novels, and I know all about it."

"This is monstrous!"

"Now don't get hot under the collar. I'm only asking. I've a right to know. You're going to take our money, so it's only fair that we should see that we get our money's worth."

The water-supply cove chipped in:

"You're quite right, Simms. I overlooked that when making the agreement. You see, gentlemen, as business men we've a right to reasonable guarantees of good faith. We are paying Mr. Bickersteth here a hundred and fifty dollars for this reception, and we naturally want to know ——"

Old Chiswick gave Bicky the keen double-o, then he turned to the water-supply chappie. He was frightfully calm.

"I can assure you that I know nothing of this," he said quite politely. "I should be grateful if you would explain."

"Well, we arranged with Mr. Bickersteth that eighty-seven citizens of Birdsburg should have the privilege of meeting and shaking hands with you for a financial consideration mutually arranged, and what my friend Simms here means—and I'm with him—is that we have only Mr. Bickersteth's word for it—and he is a stranger to us—that you are the Duke of Chiswick at all."

Old Chiswick gulped.

"Allow me to assure you, sir," he said in a rummy kind of voice, "that I am the Duke of Chiswick."

"Then that's all right," said the chappie heartily. "That was all we wanted to know. Let the thing go on."

"I am sorry to say," said old Chiswick, "that it cannot go on. I am feeling a little tired. I fear I must ask to be excused."

"But there are seventy-seven of the boys waiting round the corner at this moment, duke, to be introduced to you."

"I fear I must disappoint them."

"But in that case the deal would have to be off."

"That is a matter for you and my nephew to discuss."

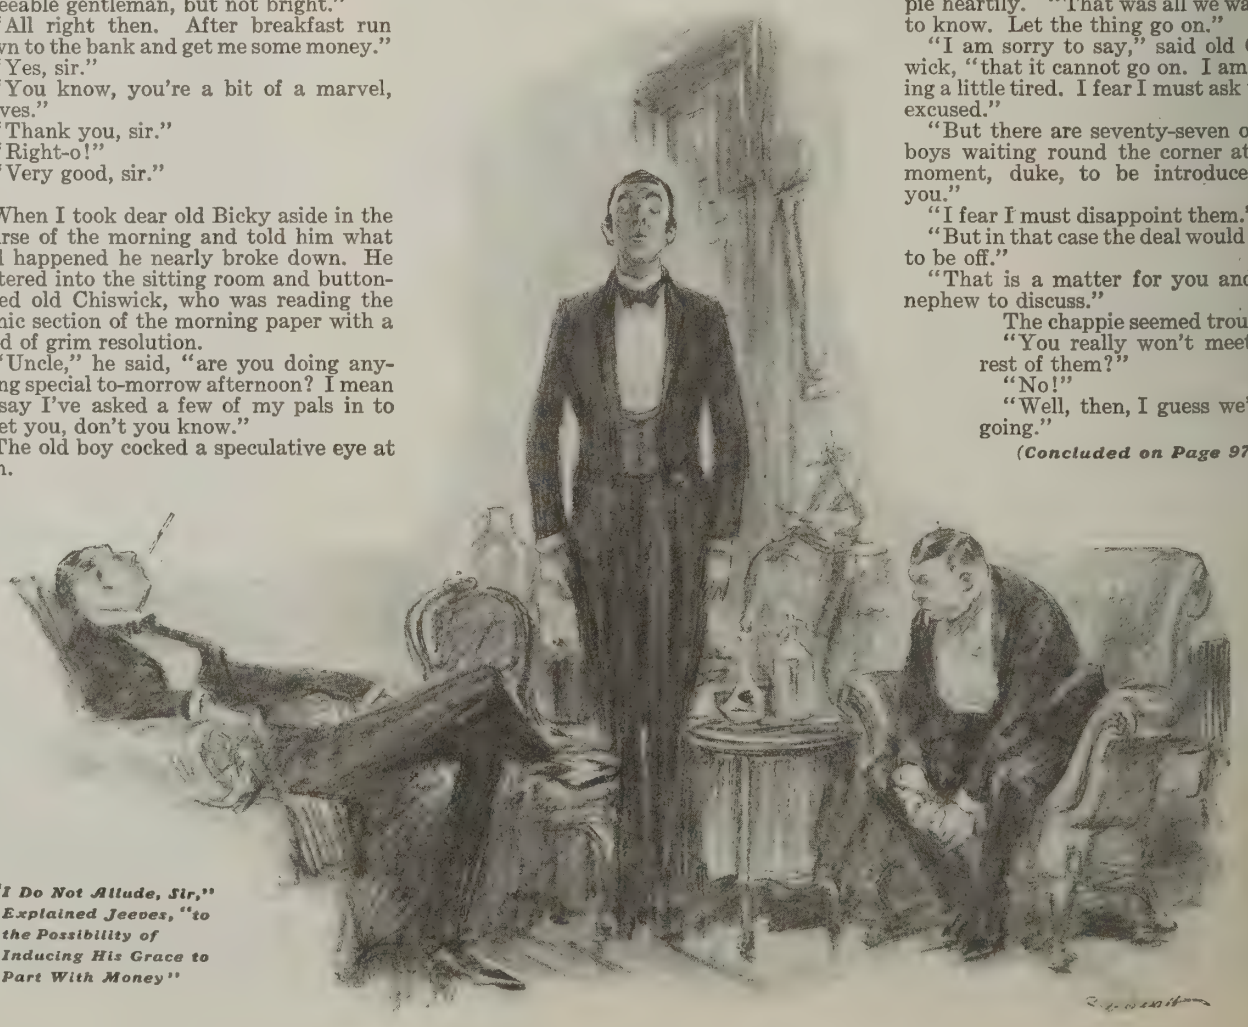
The chappie seemed troubled.

"You really won't meet the rest of them?"

"No!"

"Well, then, I guess we'll be going."

(Concluded on Page 97)

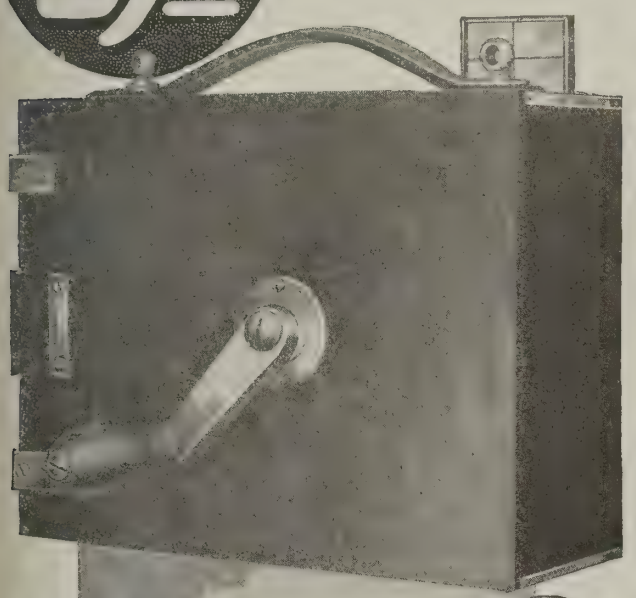


"I Do Not Allude, Sir," Explained Jeeves, "to the Possibility of Inducing His Grace to Part With Money"

Make Your Own Movies

$29.75

Equal in performance to the best professional machine costing $1000.00 or more.



Actual size of Movette Camera: 7" long; 5" high; 2½" wide.

The World's First and Only Moving Picture camera for the Amateur.

Movette Will Get YOU!

See what a famous young inventor has done! He has turned the world of photography topsy-turvy! No more dead, still pictures for you. Now you can make motion pictures—pictures that pulsate with the action and light of life—easier than an ordinary snapshot.

MOTION PICTURE MOVETTE CAMERA

EVERY DEALER SELLS IT—YOU CAN BUY IT EVERYWHERE!

Easier than a snapshot?—YES! No focusing—no adjustments. Sight your object in the finder—then turn the crank. Movette has got it for you—for all time—*any time.*

The scene is yours. You can make it re-live itself all over again—in clear cut, true-to-life action pictures—next week, next year—*yes, twenty years from now!*

See the flashing, dimpled smile of Baby—now grown to manhood or womanhood! Review the glorious days of childhood! See Father and Mother in almost flesh-and-blood reality.

And think of it! Movette is so simple—so "foolproof"—a child can operate it. It's the scientific wonder of the age.

Movette takes 50 feet of action pictures for $1.50—equal to two minutes of the best professional film. Sixteen hundred snapshots in all—*every one perfect;* 32 for 3c—any one of which can be enlarged for 25c. Send the coupon for full details of this newest, fascinating sport.

Studebaker
Established 1852

The 1917 Market Itself is the Best Proof of Studebaker's GREAT Value!

Facts and figures on the 179 cars made in America show that the whole motor industry endorses the Studebaker design —but dollar for dollar of the price, does not equal it in VALUE.

THIS last month has brought to light facts so unusual yet so convincing that no man who is even thinking of buying a car can dare to overlook them.

You have always thought that a $1,000 car was merely "a $1,000 car." You have read or listened to the story of Studebaker's wonderful increase in sales and manufacturing volume and the economies they produce—and passed it by because so many others said the same things. You have casually dismissed from mind the tremendous advantages given Studebaker by the fact that it is the world's largest maker of fine cars. You have sought to measure Studebaker QUALITY by Studebaker PRICE.

And now the National Shows and the entire industry itself present a series of facts that must be as unexpected as they will be enlightening in your effort to get the most for the price you pay.

Including all new cars announced and exhibited at the shows in New York, Chicago and San Francisco such leading motor journals as "Motor," "Motor World" and "Automobile" have completed a thorough study of the 179 makes of cars on the 1917 market. Comparisons of the figures demonstrate Studebaker VALUE in a way that has never been equalled. They show for example that

—to match what Studebaker offers in its FOUR at $940

- **—in POWER,** you must pay on the average . . . **$2753**
- **—in CAPACITY,** you must pay on the average . **$1802**
- **—in WHEELBASE,** you must pay on the average **$1812**
- **—in REAR AXLE Design,** you must pay on the average **$1742**
- **—in TIRE SIZE,** you must pay on the average . . **$2872**
- **—in FINISH,** you must pay on the average . . . **$2009**

More than this, they show that only in 5 cars on the market, of the 4-cylinder type, can you get ALL of these characteristics of this Studebaker FOUR—and they are all expensive cars, averaging $3687 as against Studebaker's price of $940.

In the case of the Studebaker SIX, study of the comparisons shows that

—to match what Studebaker offers in its SIX at . . $1180

- **—in POWER,** you must pay on the average . . **$4078**
- **—in CAPACITY,** you must pay on the average . **$2254**
- **—in WHEELBASE,** you must pay on the average **$2536**
- **—in REAR AXLE Design,** you must pay on the average **$1908**
- **—in TIRE SIZE,** you must pay on the average . . **$2308**
- **—in FINISH,** you must pay on the average . . . **$2031**

And what is even more demonstrative of Studebaker VALUE is the fact that the industry's own figures show only nine Sixes on the 1917 market that give ALL of these characteristics of the Studebaker SIX, and they are such high-priced cars that the average price of the nine cars is $3769.

Endorsed by the Majority of the Industry

Comparison of the chassis features shows that

—71.2% of the cars on the market endorse by use, the L-HEAD TYPE OF CYLINDER as Studebaker does;

—63.6% of the cars on the market endorse by USE the FORCE PUMP COOLING SYSTEM as Studebaker does;

—55.2% of the cars on the market endorse by use the FORCE PUMP and SPLASH SYSTEM OF OILING as Studebaker does;

—72.2% of the cars on the market endorse by use the BATTERY IGNITION as Studebaker does;

—62.9% of the cars on the market endorse by use the FULL-FLOATING REAR AXLE as Studebaker does;

—28.1% (representing the most expensive cars on the market) endorse by use the ¾-ELLIPTIC REAR SPRINGS as Studebaker does;

—74.6% of the cars on the market endorse by use the VACUUM FUEL FEED as Studebaker does;

—85.9% of the cars on the market endorse by use the TWO-UNIT STARTING AND LIGHTING SYSTEM as Studebaker does.

—but not Equalled in Value

What better proof can any man want of Studebaker VALUE? The industry's own figures demonstrate beyond the slightest doubt that Studebaker quality can NOT be judged by Studebaker large production price. They prove that any man who wants ALL the essentials that a Studebaker offers can get them ALL in any other car only by paying many hundreds of dollars more. They show that Studebaker design is in thorough accord not only with what the buying public wants but also with what the whole industry approves as GOOD engineering practice. And they prove indisputably that the day of high prices for fine cars has passed.

See your nearest Studebaker dealer and have him show you the car and the features that the whole industry *endorses but does not equal* in VALUE, dollar for dollar of the price.

More than 300,000 Studebaker Cars produced and sold

(Concluded from Page 94)

They went out, and there was a pretty solid silence. Then old Chiswick turned to Bicky:

"Well?"

Bicky didn't seem to have anything to say.

"Was it true what that man said?"

"Yes, uncle."

"What do you mean by playing this trick?"

Bicky seemed pretty well knocked out, so I put in a word:

"I think you'd better explain the whole thing, Bicky, old top."

Bicky's Adam's-apple jumped about a bit; then he started:

"You see, you had cut off my allowance, uncle, and I wanted a bit of money to start a chicken farm. I mean to say it's an absolute cert. if you once get a bit of capital. You buy a hen, and it lays an egg every day of the week, and you sell the eggs, say, seven for a quarter.

"Keep of hen costs nothing. Profit practically ——"

"What is all this nonsense about hens? You led me to suppose you were a substantial business man."

"Old Bicky rather exaggerated, sir," I said, helping the chappie out. "The fact is, the poor old lad is absolutely dependent on that remittance of yours, and when you cut it off, don't you know, he was pretty solidly in the soup and had to think of some way of closing in on a bit of the ready pretty quick. That's why we thought of this hand-shaking scheme."

Old Chiswick foamed at the mouth.

"So you have lied to me! You have deliberately deceived me as to your financial status!"

"Poor old Bicky didn't want to go to that ranch," I explained. "He doesn't like cows and horses, but he rather thinks he would be hot stuff among the hens. All he wants is a bit of capital. Don't you think it would be rather a wheeze if you were to ——"

"After what has happened? After this—this deceit and foolery? Not a penny!"

"But ——"

"Not a penny!"

There was a respectful cough in the background.

"If I might make a suggestion, sir?"

Jeeves was standing on the horizon, looking devilish brainy.

"Go ahead, Jeeves!" I said.

"I would merely suggest, sir, that if Mr. Bickersteth is in need of a little ready money, and is at a loss to obtain it elsewhere, he might secure the sum he requires by describing the occurrences of this afternoon for the Sunday issue of one of the more spirited and enterprising newspapers."

"By Jove!" I said.

"By George!" said Bicky.

"Great heavens!" said old Chiswick.

"Very good, sir," said Jeeves.

Bicky turned to old Chiswick with a gleaming eye.

"Jeeves is right! I'll do it. The Chronicle would jump at it. They eat that sort of stuff."

Old Chiswick gave a kind of moaning howl.

"I absolutely forbid you, Francis, to do this thing!"

"That's all very well," said Bicky, wonderfully braced, "but if I can't get the money any other way ——"

"Wait! Er—wait, my boy! You are so impetuous! We might arrange something."

"I won't go to that bally ranch."

"No, no! No, no, my boy! I would not suggest it. I would not for a moment insist it. I—I think ——" He seemed to have a bit of a struggle with himself. "I—I think that, on the whole, it would be best if you returned with me to England. I—I might—in fact, I think I see my way to doing—to—I might be able to utilize your services in some secretarial position."

"I shouldn't mind that."

"I should not be able to offer you a salary, but, as you know, in English political life the unpaid secretary is a recognized figure ——"

"The only figure I'll recognize," said Bicky firmly, "is five hundred quid a year, paid quarterly."

"My dear boy!"

"Absolutely!"

"But your recompense, my dear Francis, would consist in the unrivaled opportunities you would have, as my secretary, to gain experience, to accustom yourself to the intricacies of political life, to—in fact, you would be in an exceedingly advantageous position."

"Five hundred a year!" said Bicky, rolling it round his tongue. "Why, that would be nothing to what I could make if I started a chicken farm. It stands to reason. Suppose you have a dozen hens. Each of the hens has a dozen chickens. After a bit the chickens grow up and have a dozen chickens each themselves, and then they all start laying eggs! There's a fortune in it. You can get anything you like for eggs in America. Chappies keep them on ice for years and years, and don't sell them till they fetch about a dollar a whirl. You don't think I'm going to chuck a future like this for anything under five hundred o' goblins a year—what?"

A look of anguish passed over old Chiswick's face, then he seemed to be resigned to it. "Very well, my boy," he said.

"What ho!" said Bicky. "All right, then."

"Jeeves," I said. Bicky had taken the old boy off to dinner to celebrate, and we were alone. "Jeeves, this has been one of your best efforts."

"Thank you, sir."

"It beats me how you do it."

"Yes, sir."

"The only trouble is you haven't got much out of it—what!"

"I fancy Mr. Bickersteth intends—I judge from his remarks—to signify his appreciation of anything I have been fortunate enough to do to assist him, at some later date when he is in a more favorable position to do so."

"It isn't enough. Jeeves!"

"Sir?"

It was a wrench, but I felt it was the only possible thing to be done.

"Bring my shaving things."

A gleam of hope shone in the chappie's eye, mixed with doubt.

"You mean, sir?"

"And shave off my mustache."

There was a moment's silence. I could see the fellow was deeply moved.

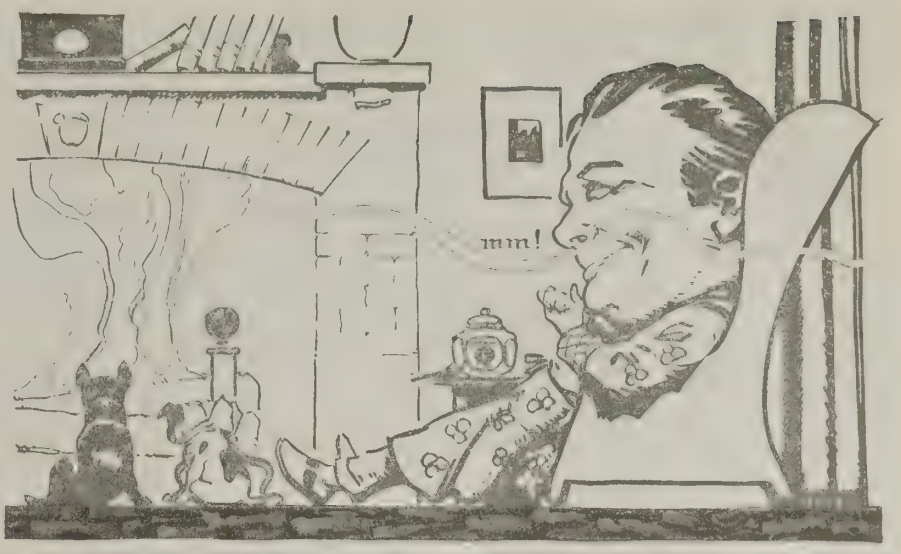
"Thank you very much indeed, sir," he said in a low voice, and popped off.

The Ghost

SOME day when willow buds are green
against a windy sky—
Some sweet-lipped April morning when the
clouds are white and high—
When the gray dew's rough as velvet where the
deepest shadows lie,
And the mocking birds would break your
heart a-grieving—
I'll find the little path that leads across the
years again,
Through uplands white with clematis and
lowlands sweet with rain,
And tap with fingers wistful-light against
Your windowpane,
As ghosts come back who had no heart for
leaving.

And I shall find them wondrous small, those
great remembered things,
Adown the little Path o' Dream that leads to
Other Springs—
The clover bloom less honey-sweet, less rare
the bird that sings,
Less magical the spells that used to bind me—
Until I come to stand again outside Your
open door,
A-looking in as ghosts must look where they
have dwelt before—
And knowing that the heart o' me and all the
world, and more,
Between Your two warm hands I'd left
behind me!

—*Dorothy Paul.*



HOW do you know it's a hickory log burning?

"Your Nose Knows"

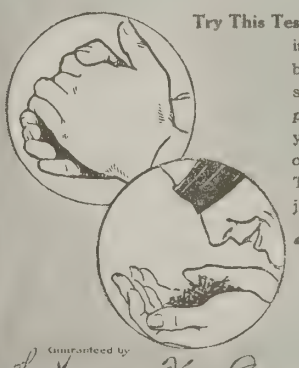
What a store of woodsey *fragrance* the flames set loose! How the warm, nutty breath comforts and rests you! Draw it in. Get it deep. It's Nature appealing to you in *fragrance*. It's the *pure fragrance* of a good tobacco, too, that satisfies and wins you. There's no doubting it—"Your nose knows."

There's such an appeal in

Tuxedo

The Perfect Tobacco

Its *pure fragrance* is the very soul of tobacco. The rich, ripe Burley leaves of which it is blended are the sunshine tips of the best of Old Kentucky's plants. For *pure fragrance* no tobacco can compare—"Your nose knows."



Try This Test: Rub a little Tuxedo briskly in the palm of your hand to bring out its full aroma. Then smell it deep — its delicious, *pure fragrance* will convince you. Try this test with any other tobacco and we will let Tuxedo stand or fall on your judgment—

Where's the Money Coming From?

THE children—the house—the butcher and the gas company—all need more and more and more money. You can't do any more work—and you can't do any different work. What are you going to do? That's your problem.

Your answer is here. You can get more money—for less work. When a corporation wants to make more money without increasing its plant it calls in a great Efficiency Engineer—like Harrington Emerson. Now—**you** can do the same for yourself; for Harrington Emerson has applied the principles which he has already given to 200 corporations to **you**, as an individual, in the

Course in Personal Efficiency

24 Lessons—With Charts—Records—Diagrams—Condensed—Clear—

Through this course already 12,000 men are on the way to get what they want in the quickest, shortest, easiest way. The Treasurer of the biggest bond house in the Northwest saves hours every day—an author in New York does twice as much work and has more time to sell that work—a State official saves his State $3,000 on one job.

The Efficiency Movement has swept the world because it has brought to men who saw no way out a new light to success. We in this country—with our abounding wealth—have been prodigal with natural resources, with mental resources, with time. Now we must stop and reorganize.

And above all, it is the individual who must reorganize himself, because it is he who is the basis of the trouble. Let The Emerson Course teach you to conserve your brains, your time—for these are your capital—just as money and machinery are the capital of a factory. Learn to invest them right. There's more coming to you out of life—Get it. Get the money and rest and success you ought to have.

You won't work longer—you'll work less. You are full of unused energy. The rapidity of the city man's life bewilders the country man. A day in New York is a terror. But give him a year in the city and he will keep the pace as well as anyone. He will get ten times as much out of himself—and he won't be working any harder. That's what Efficiency will do for you who are already in the city. It will attune you to a new gait—a new zest and snap—and things will leap along where now they crawl.

The scientific principles Mr. Emerson has developed in forty years of study. He has applied them in over 200 factories, railroads and other organizations. They are studied by other Efficiency Engineers all over the world who have learned them from Emerson. His big organization in New York (he has 40 assistants) has taught Efficiency to steel mills and railroads, factories and publishers.

It's too big to explain—too new and too vital. Send the coupon for the first lesson *free*. Follow its instructions. Then if you feel your work easier and its results bigger—you can have the whole course. We have seen the tremendous effects of this one lesson. We have before us the letter of the man who says it "woke him up,"—the letter of the man who was on the wrong road when this lesson set him right. We know—that's why we're glad to give you this lesson free—so you can be set on the right way without loss of time.

THE PHANTOM CIRCUIT

(Continued from Page 11)

You catch a glimpse of the vista she opened to me for an instant? Major Forsythe was going to die—before my camera. How? I dared not ask.

We duly landed on the shores of the little harbor of Bismarck Island. I had somewhat regained confidence. The officers on the transport steamer either had had no inkling of what was behind our expedition or were respectfully silent. They took the major at his own valuation, though he horrified me by continually hinting at his former services and his present close relations with high-up personages in the British Empire.

"He will ruin us all!" I warned Aileen. "You forget that I am still a representative of an American film company and intrusted openly with charge of a big feature. They don't know that you are my wife, it seems. They appear to be ignorant that your father is an impostor. We must step softly."

She heard me with indifference. From the moment she saw the flag flying above the smooth ramparts of the fortifications, saw the lines of soldiery drilling on the smooth sand and heard the music of the band, she was quite a different woman. She paid no attention to me.

So far as my work went, it was made easy. Officers and men put themselves out to make plain all the details of the engagement I was to reproduce, and the colonel in command said I might employ his men as I liked. He didn't even balk at my introduction of a feminine interest. My plan, as worked out by Aileen, was adopted. She was to represent an English girl held captive by the enemy, but managing to communicate valuable information to the attackers. She was to be caught in the act; condemned to die. The final assault was to be a desperate one, which would top the ramparts just in time to save her life.

The old colonel pursed his lips and remarked:

"My boy, I can't object. Real war is grim business. This will relieve the picture." He looked at me in a musing manner. "After all, a woman is at the bottom of all warfare."

The various episodes worked in well with the genuine stuff, which included having again the sudden arrival of the little flotilla from New Zealand, a sea fight ending in the retreat of the enemy under the protection of the fortress' guns, and at last the landing of the troops who were to make the final assault on the fortifications.

I found myself shortly in possession of a thousand feet of the best film ever made. My camera men—no novices—were enthusiastic. The colonel sat in the projecting room and grew husky with gratification at the way the picturing of his expedition was coming out. And I myself began to see that Aileen was the most wonderful actress I had ever handled. What picture values she had! Old as some of the stuff was that I had arranged, and indifferent as she had seemed when she acted it out, the film showed up with startling vividness; with a quality I had never seen before.

"The girl is a picture!" one of my camera men remarked. "Somehow she makes all this seem kind of big and important—as if it were true, and something big and important was to come."

The man was right. In every scene her splendid eyes looked out and beyond you, full of mystery. And in some subtle and obscure manner she gave color to every movement, as if her impetuous and regal spirit were indomitable by the limits of the camera. Her whole soul seemed burning toward a dénouement that was in the dark.

I must mention here that the colonel had strictly forbidden the use of any European enemy prisoners.

"Hardly fair," he growled. "Poor devils! You'll have to do the best you can with the natives."

So, when I came to stage the last episodes Aileen had been fully established as an admired and feared prisoner, and especially as holding a strange and uncanny influence over the natives who were her guards. Even the colonel observed that on the film our dark-skinned South Sea islanders were under her spell.

"Queer!" he muttered to me one evening as we sat before the screen while my men ran some of the stuff. "The picture gets something into it that a chap doesn't notice outside. Those black boys! I never noticed before how they watch Miss Forsythe. One would suppose, from looking at your film, that they—that she was a witch. Queer!"

Aileen listened to my instructions for the last scenes and offered no suggestions till I was through. Then she said:

"You forget that this picture is real! The film mustn't merely satisfy your picture sense. It must leave absolutely no doubt in the mind of the spectator that the thing happened. And father must be there—leading the final charge."

"I've already worked him into several scenes and a still," I urged her warmly. "I've done all I can. Offend these officers, and they'll simply take the film and destroy it. We may blind ourselves to some things, but to put your father at the head of the charge the colonel himself led and actually expects to lead this time will merely throw the fat into the fire."

"You promised," she said stoutly. "You promised me!"

"Listen," I said at last: "They know all about your father. They've been too polite to say a word. But they were informed by the Auckland people under what circumstances we came down here. Be wise!"

She prevailed on me to lay my camera lines and arrange my plans so that, in case anything occurred which would make it possible for the major to come into the picture, we should be ready. My last argument was spent. What she intended to do, I didn't know. But I received a curt intimation from the colonel on the evening before the taking of the assault that he himself would direct it. He quietly but firmly insisted that every disposition of the troops, the giving of the signals, and the timing of the scene must be in his hands.

I understood perfectly that the end was come. We had been permitted to pretend and play as long as was possible. The picture of the assault was to be out of our control. I realized that everything was spoiled when he remarked that we should have to do without a reproduction of the blowing up of a bastion, which I had arranged.

"But my wires are laid and the smoke bombs and pasteboard all set," I protested "It will be harmless and effective."

The colonel was obdurate.

"The affair will be a fizzle," I told Aileen later, standing outside that room of hers which I had never entered. "The picture will look like a drill! Better forget your notions about managing to put your father into it."

For the first time she grew violently agitated. She said nothing for a moment but when she began to speak I found myself listening to such a voice as—the voice of a woman praying. You understand? All her heart was wrapped up in this foolish, futile justification of that old impostor, her father. What was it to me what an old colonel ordered, when the setting off of a few smoke pots and a few feet of film of her old father running, with a sword, through the smoke, would make the girl happy?

I surrendered, consigning the colonel to perdition and myself—I knew—to a cell. I quietly took her out and indicated the switch, which I had buried in the sand, that would connect up my forbidden explosion; agreed to give her a signal in time to let her shove her father into the action at the close.

"Now run away!" I told her. "I've sealed my doom as a motion-picture man and an honorable gentleman. Whatever you do, don't break into this action till you get my signal. If I'm not mistaken, your father's appearance will close the performance."

She held two hands out to me in the starlit dusk.

"Kiss me!" she whispered.

Out of the corner of my eye I saw a couple of officers watching us. I drew back. I lost the only kiss she ever offered me. She swept away, waving her white hand.

The next morning I impressed a single thing on the minds of my camera men; they were to keep on turning, no matter what orders were given by others. Everything was ready.

You see? I had already filmed the action taking place behind the gray ramparts—the trial of Aileen; the sentence to death; the sudden call to arms breaking in on the grim court-martial; the hurry and tumult of men rushing to defend their wall-

(Continued on Page 101)

Why do Manufacturers waste Thousands discovering that Belts need not be "Stretchy" to be Flexible?

When the Experience of Eight Thousand Plants plus a Few Dollars will Prove It

Anaconda, 290 feet x 40 inches x 8 ply carrying shale

TO the day of his death the old philosopher marveled that men needs must pay gold for experience rather than profit by the wisdom of others.

* * *

According to the National Foreign Trade Council, to replace all the industrial equipment lost in France and Belgium during the war *will cost less than the outlay necessary just to keep the wheels of American industry moving in 1917.*

Outside of the actual coal burned, *the greatest expenditure will be for belting to transmit power and convey material.*

* * *

Up to a short time ago the greatest outlay for belting was spent for a material whose quality depended upon the temperament and habits of a domestic animal.

Owing to the war the source of *supply* became as uncertain as the *quality* of a natural product always must be, and the *quality became more uncertain than ever.*

* * *

The boasted initiative of the American business man becomes simply *fidgets* and nothing more when it doesn't know exactly what it wants to accomplish.

Manufacturers are looking for something different in belting but don't know what it is. As a result, they are simply switching from one belt to another and *arriving nowhere.*

Shortages in many materials are stimulating a search for other materials which will answer. *In the case of belting, however,* the shortage in traditional materials only *points the way to the scientific belting which has been developed over a period of thirty-odd years.*

"Stretchiness" in a belt sacrifices power, causes premature wear and costs money—*is demoralizing.* It is a result of depending too greatly upon natural material for belts, whether that material be either animal or vegetable.

Flexibility is a different matter. That is *built into* the scientific Leviathan-Anaconda Belting—placed on the market thirty-five years ago, whose production has now run into the millions, and with many remarkable records of *long life and endurance, of money saving and efficiency.*

A Leviathan Mule Drive

Leviathan-Anaconda belts are made in various ply of solid fabric impregnated with special compound, so treated, stretched and aged as to produce a strong pliable belting, well nigh indestructible.

* * *

Leviathan-Anaconda is not sold by the yard—it is sold as a *cost-reducing service.* Therefore it is sold *direct* to the user.

The men who represent it are specialists in laying out scientific transmission. Their services are available to the engineer of any plant in the United States or Canada.

You must know conditions in order to meet them.

Our book about belts is a valuable addition to any engineer's library.

Our special charts show how to keep transmission, conveying and elevating costs in your own plant. We send all these without charge.

* * *

Since half a million farmers in the United States have become manufacturers by virtue of the extensive use of threshers and other farm machinery, this belting question is a matter of importance to them also.

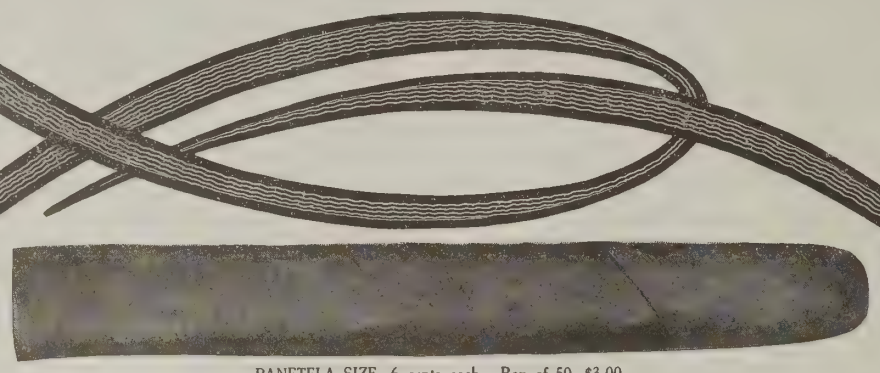
RICORO

The Famous "Self-Made" Cigar



PANETELA SIZE, 6 cents each. Box of 50, $3.00.

INVINCIBLE SIZE 7 cents each. Box of 50, $3.50.

CABINET SIZE 3-for-25-cents. Box of 50, $4.15.

Behind the Scenes

If a word picture could be made to serve the purpose of a visit to Porto Rico—the home of our famous RICORO, the "self-made" cigar—this advertisement would be worth a lot more than we pay for it.

You would be transported to the garden spot of the world. You would see tobacco growing, or being harvested in a climate that favored its bouquet from the planting of the seed to the maturity of the leaf; *for Porto Rico is in the fabled tobacco zone of the world.* Cuba's shores are washed by the same seas, and warmed by the same tropical sun; twin islands cradled side by side in the Caribbean.

You would go to San Juan and visit the RICORO factory, peopled by over a thousand skilled Spanish craftsmen, where the highest art in cigar-making is carried on in *the very climate that Nature has decreed to yield the finest cigars*—the atmosphere in which tobacco, bananas and oranges are grown and ripened as in the plan of Nature they should be.

You would see the cigars so produced take passage from their native soil direct to the docks of our warehouse. No ripening or seasoning on the voyage as tropical green fruits are ripened. *The cigars are perfect when shipped.*

If you came on the same ship, you would see that no Custom House officer levies tribute on them on arrival in New York—*for RICORO pays no duty*—an imported cigar to the cost of which nothing is added as a customs tax.

That's what you get when you buy RICORO, the "self-made" cigar, *made in and imported from Porto Rico—duty free.*

Only three of the many popular sizes of RICORO are shown on this page—every one of the same quality.

THANK YOU.

(Continued from Page 98)

Aileen had been left, under guard of a couple of natives, staring down at her manacled wrists. That was the scene I was going to cut into the assault picture. See? It was already taken; and now Aileen was waiting on one side of the bastion to make her appearance at the last minute, seize a machine gun, and turn it on her captors.

The British flag had been run down and an enemy flag hoisted in preparation for the picture. The colonel overlooked the last details and shot me a warning glance. Then he gave the signal. The cameras clicked.

At first I was most concerned in watching Aileen. Then gradually the grip of the scene seized me. Something in the dull and continuous boom of the big guns and the smart crackle of the small arms set my blood to throbbing. Moment by moment the action became more lifelike, more vivid, more real. Scarlet uniforms wove themselves in and out of the gray battle fumes; raucous cries pierced my ears; there poured back from the mimic field the slow, sluggish odor of human sweat. Foot by foot the film ran over the reels, taking the scene inch by inch. I forgot that this was all a show. I was oblivious to the fact that the up-pouring smoke was dimming the light from the sky. I forgot everything but that a battle was raging before me. I crept over to the switch hidden in the sand. No thought of orders now! I had but a single thought—to see the surging troops reach the blazing rampart and sweep over its wild defenders in one resistless flood.

Even the feel of that switch key, which would set off the paper mine, against the colonel's orders, did not recall Aileen to my mind distinctly. I saw the colonel advancing at the head of his men. They were twenty yards from the wall. A hundred dark and yelling natives held it, pointing their harmless weapons downward and blazing away like madmen.

Suddenly I saw the assault falter. The colonel halted and stared about him. He shouted an order. The fool was spoiling the picture! I bellowed a curse at him. His men looked suddenly disconcerted and mildly bewildered. I lost my head. I leaped up and waved my cap. How was I to remember that had been my agreed signal to Aileen? The picture was being ruined. Hell! I kicked the switch to.

Ha! I jumped up and down. I had done the trick. From below the wall my puny mine exploded the paper counterfeit and belched up a huge billow of yellowish smoke. I saw the colonel lift himself up and yell, waving his sword. His men, who had caught themselves in their rush, leaned far forward, trying to get started again. Here and there a man tossed his arms into the air and fell. Good acting, I thought. Then I heard a bitter, screaming cry that bored right down into my vitals:

"Treason! Treason!"
